A

GENERAL

BIOGRAPHICAL DICTIONARY.

BY

JOHN GORTON,

AUTHOR OF THE "GENERAL TOPOGRAPHICAL DICTIONARY," &c., &c.

A NEW EDITION.

TO WHICH IS ADDED A SUPPLEMENTARY VOLUME COMPLETING THE WORK TO THE
PRESENT TIME.

IN FOUR VOLUMES.

VOL. I.

LONDON:

HENRY G. BOHN, YORK STREET, COVENT GARDEN.

1851.

11

11

A GENERAL BIOGRAPHICAL DICTIONARY.

A A

AA (PETER VAN DER) a bookseller of Leyden, and a laborious publisher and compiler of voyages, travels, and geographical collections, in the Dutch and French languages. Among these is the "Galerie du Monde," an immense collection of maps and plates in 66 vols. folio. He also continued Grævius' "Thesaurus Antiquitatum Italiae," and carried on an extensive business from 1682 until his death in 1730.—*Nouv. Dict. Hist.*

AAGESEN (SUEND.) in Latin, *Suæno Agonis*, a Danish historian, much esteemed for his antiquity and accuracy, who flourished about 1186. He was secretary to Archbishop Absalon, under whose auspices he compiled—1. a history of Denmark, under the title of "Compendiosa Historia regum Daniæ, a Skioldo ad Canutum VI;" 2. "Historia legum castrensiû Regis Canuti Magni;" both which works have been often reprinted.—*Biog. Universelle.*

AARON, a presbyter of Alexandria in the seventh century, author of thirty books on medicine in the Syrian language, which he called "Pandects." These works include treatises on the small pox and measles, which diseases were propagated from Arabia.—*Friend's Hist. Med.*

AARON (BEN ASSER) a rabbi of the fifth century, author of a Hebrew Grammar, printed at Venice, to whom the invention of Hebrew points is very doubtfully assigned.—*Moreri.*

AARON (PIETRO) a Florentine and a canon of Rimini, was one of the composers in the chapel of Leo X, and an elaborate writer on music. The most considerable of his works is, "Il Toscanello della Musica," Venice, 1523, 1529, 1539, an able production. Pietro Aaron wrote in the Italian language, which rendered his labours more widely useful in his own country, almost all the musical writers before him having written in Latin.—*Burney's Hist. Mus.*

AARSENS (FRANCIS) Lord of Somelydk and Spycq, one of the ablest negotiators ever produced by the United Provinces, was born at the Hague in 1572. Being early introduced into public life by his father, who was registrar of the States, he first became resident, and subsequently ambassador to the court of France, where he remained fifteen years. Profoundly skilled in the arts of diplomacy, he seems to have occasionally much annoyed the French cabinet by the depth of his penetration; but was nevertheless, held in high esteem by Cardinal Richelieu. He was also employed in extraor-

EXC. DICT.—No. 1.

A B

inary embassies to England and Venice; that to England was to negotiate the marriage of William Prince of Orange with the daughter of Charles I—the commencement of a family connexion which led to the most important consequences. Aarsens died ennobled, at an advanced age, leaving an only son, the richest man in Holland. A volume of his negotiations has been printed.—*Bayle. Un. Biog.*

ABARIS, a Scythian, the son of Seuthes, priest of the Hyperborean Apollo, and probably a real personage; but the facts recorded of him are so fabulous and contradictory, that the time even of his existence is a subject of dispute. The least absurd of these accounts make him a sort of ambassador from the Scythians to the Athenians, at the time of a general plague, on which mission he is said to have disputed with Pythagoras, in the presence of Phalaris; a story that is contradicted by chronology. He is fabled to have been presented with an arrow by Apollo, astride of which he could fly through the air. This fiction has produced much figurative and humorous allusion to a character, which probably appertains rather to Mythology than to Biography.—*Bayle.*

ABATE (ANDREA) a Neapolitan painter, celebrated for his representation of flowers, fruit, and inanimate life. He was employed by Charles II King of Spain, to decorate the Escorial in conjunction with Luca Giordano. He died in 1732.—*Pilkington.*

ABAUZIT (FERMIN) a French writer of great merit, was born at Uzes, in Languedoc, in 1679. He lost his father, who was a French Protestant, at two years of age; and the Edict of Nantes being then revoked, his mother, under all the terrors of that perfidious and merciless persecution, contrived to have him conveyed to Geneva, for which act she was herself confined for two years in the castle of Somieres. On regaining her liberty, she repaired to Geneva, and expended the remains of a small fortune in the education of Abauzit, who made great acquirements in languages, history, antiquities, mathematics, natural history, physics and theology. To finish his education, he subsequently visited Holland and England, where he was introduced to Sir Isaac Newton, who quickly appreciated his great attainments, and sent him his "Commercium Epistolicum," accompanied with the following honorable testimony in writing—"You are well worthy to judge between Leibnitz and me." King William

B

made handsome offers to Abauzit to settle in England, but filial affection opposed his acceptance of them, and he returned to Geneva, where, in 1726, he was made public librarian. The literary labours of Abauzit, in number and importance, are not on a par with his high reputation, which seems to have been founded on his known great acquirements, universal information, great accuracy, and modest and amiable character, rather than on his actual productions. He published an improved edition of Spou's History of Geneva, with dissertation and notes; but his writings are chiefly theological. One of the most celebrated is "An Essay on the Apocalypse," which throws doubt on the canonical authority of that book. This essay was answered, in London, by Dr Twells, to whom the author sent it; and that so much to his satisfaction, that he stopped an intended impression, although this essay is included by the Dutch editors in their collection of his works. Abauzit has been highly eulogised both by Voltaire and Rousseau, being the subject of the only panegyric which the latter ever wrote on a living person. In his religious opinions, this learned man leaned towards Socinianism, or the modern Unitarian doctrine; but he was not distinguished as a partisan. He died, universally lamented, at the advanced age of 87 years.—*Hist. of Geneva. Un. Biog.*

ABBADIE (JAMES) a celebrated Protestant divine, born at Ilay in Berne, in 1654, or as one authority asserts, in 1658. He studied at Sedan, and obtained the degree of doctor of divinity; but the wretched policy of Louis XIV towards his Protestant subjects obliged him to repair to Holland, and subsequently to Berlin, where he became pastor of the French church, established under the patronage of the elector of Brandenburg. After the death of this prince, Abbadie returned to Holland with Marshal Schomberg, and accompanying that nobleman in the train of King William to England, was present when he fell at the battle of the Boyne. Rendered thus by connexion a zealous partisan of the English revolution, he wrote warmly in defence of it, in answer to Bayle; and after being for some time pastor of the French church in the Savoy, was promoted to the deanery of Killaloe, a preferment which has not been deemed equal to his theological pretensions. He died in London, in 1727, much esteemed as a man, and admired as a writer and preacher. His works are of course chiefly theological, of which the most celebrated, the "Traité de la Vérité de la Religion Chrétienne," bears a high character, and has been translated into English. His "Défense de la Nation Britannique" has already been noticed; and he is also author of another, at present very scarce, work, entitled "Histoire de la Conspiration dernière de l'Angleterre," which was written by command of William III, and contains all the particulars of the assassination plot. All the writings of this active and zealous, yet occasionally fanciful, divine, are in the French language; but several of them have been translated.—*Niceron. Biog. Brit.*

ABBAS, son of Abdal Mothleb, and uncle of

Mahomet. A man of strong character and determined spirit, he at first waged war against the pretensions of his nephew; but on being taken prisoner, either yielding to the ascendancy of that extraordinary impostor, or perceiving the advantages of compliance, he became one of his most devoted partisans, and saved Mahomet's life at the battle of Hénain. This chieftain was held in exceeding respect by the Caliphs Omar and Othman, who always alighted to salute him. He died in the 32nd year of the Hegira; and as his grandson Abul Abbas became Caliph one hundred years after his death, he may be regarded as the progenitor of the Abbasside dynasty.—*D'Herbelot.*

ABBAS (EBN ABBAS ABDALLA) son of the above, and cousin german to Mahomet, was the most considerable of the doctors called "Sahabah," or companions of the prophet. He is author of a commentary on the Koran.—*Ibid.*

ABBAS (ITALI, or ALI EBNOI ABBAS) a Persian physician and follower of Zoroaster, of the 10th century. He wrote a book on physic, entitled "Almaleci," or Royal Work, which was translated into Latin by Stephen of Antioch in 1127.—*Friend's Hist. Med.*

ABBAS I (SHAH) the Great. This celebrated Persian sovereign was born about the year 1558, and ascended the throne on the murder of his brother Ismael, in 1585. The character of Abbas was sanguinary, but politic and determined. When he assumed the sovereignty, Persia was divided into satrapcies or governments, the kahns or heads of which were nearly independent. Added to this source of weakness, a body of soldiery existed, similar to the Praetorian guards of Rome and the Janizaries of Turkey—a description of troops always dangerous to the throne they are nominally raised to protect. These, as well as the leading families, were of the race of Kurchi, or Turkmans, whose interests being the same, they formed a party for mutual support, which materially weakened the royal authority. Abbas commenced his reign with a determination to crush this source of weakness, and pursued his object with great ability, but at the same time with all the perfidy and cruelty which have ever characterised Eastern political expediency. In other respects, the life of Abbas was very warlike, and he enlarged his dominions by successful expeditions on every side. It was he who first removed the seat of government to Ispahan. One of the most remarkable exploits of Shah Abbas was the taking of Ormuz, in the Persian gulf, from the Portuguese: in this enterprise he was assisted by an English fleet, to which the place surrendered in 1622. The result of this exploit was a commercial treaty between Abbas and the English, that was very advantageous to the latter. A few years after this transaction, Shah Abbas died, at the advanced age of seventy, and was succeeded by his grandson Shah Sephi. In his family he displayed the same jealous rigour as elsewhere, having three sons by as many wives, the two youngest were deprived of sight, and he put

the eldest to death, in consequence of a conspiracy in his favour, which the dutiful prince had himself assisted to put down. This murder produced a great tumult among the people; and even the Shah, who excused himself on the score of self-preservation, affected or felt great remorse, and never would wear the insignia of royalty afterwards. It was the son of this prince who succeeded him. Notwithstanding the public and domestic rigour of Abbas, he was much esteemed by his subjects, and his memory is held by the Persians in great veneration. This is often the case in despotic governments, where cruelty and tyranny only extend to individuals or a small circle round the court, while the general policy is popular and beneficial. By putting down the independent kalas, the people were benefited, as also by the alliance of their sovereignty with European rulers, in furtherance of commercial intercourse. Abbas also patronized a rigid administration of justice between man and man, and adorned his dominions with many magnificent and useful works. As an eastern sovereign, politician, and conqueror, he may therefore merit the name of Great, which has been bestowed upon him. Craft and cruelty have not unfrequently distinguished the dominating sovereigns of Europe, but in Asia they form no small share of the art of government. Shah Abbas was a man of low stature, with a keen aspect, small and grey eyes, a high hooked nose, a pointed beardless chin, and thick mustachoes—a characteristic physiognomy.—*Mod. Un. Hist.*

ABBAS II (SHAH) great grandson of the above, succeeded his father Shah Sephi when only thirteen years of age. This prince has been made known to Europe by Tavernier and other travellers, who, in consequence of his taste for the arts, found access to him. He was humane for an eastern sovereign, and was thought to possess capacity, although obscured by his attachment to wine and women. His reign was signalized by nothing memorable; but a reply of his, when solicited to propagate Islamism by compulsion, deserves recording. "The Almighty alone," said Abbas, "is Lord of men's minds; and for my own part, instead of meddling with private opinion, I feel it my duty to administer justice impartially." This was the observation of a Mahometan prince not many years before Louis XIV revoked the Edict of Nantes.—*Mod. Un. Hist.*

ABBASSA, sister of the Caliph Haroun Al Raschid, who was betrothed by her brother to his celebrated vizier Giaffer, the Barmecide, but under a strict injunction that the marriage should never be consummated. The mutual affection of the lovers soon led to a neglect of this mandate, and a son was born, whom his parents contrived to forward to Mecca, but not with so much secrecy as to escape detection. The death of the unfortunate Giaffer and several of his kindred, was immediately pronounced by the irascible caliph, who also turned his sister, in a state of destitution, from the palace. The unhappy princess is said to have wandered about reciting her own story in verse, and to

have been relieved several years afterwards by a compassionate lady to whom she sang her misfortunes. The romantic nature of these incidents has rendered the loves of Giaffer and Abbassa celebrated throughout the East; and certain amatory poetry exists in the Arabic language, which is said to have been composed by the latter and addressed to Giaffer.—*D'Herbelot.*

ABBE (LOUISA L') wife of a ropemaker of Lyons in the sixteenth century, celebrated for her personal attractions and poetical talent. She was usually denominated "La Belle Cordonnere;" she was the author of several light poems.—*Nouv. Dict. Hist.*

ABBO (CENNIUS) a monk of St. Germain-des-Pres, and author, among other things, of "A poetical relation of the Siege of Paris by the Normans and Danes, towards the end of the Ninth Century." Abbo was an eye witness of the events which he describes, a fact that renders his work curious as a narrative, although the poetry is miserable. It is contained in the collection of Duchesne, as well as in the "Nouvelles Annales de Paris," by Duplessis. It has been translated from the original Latin into French.—*Vossius. Cave.*

ABBO (FLORIACENSIS) or Abbot of Fleuri, a Benedictine monk of the tenth century, highly celebrated for his learning. Abbo resided for some time in England, and became a great favourite with King Ethelred. He was subsequently employed by King Robert of France, to negotiate with Pope Gregory V, who had laid France under an interdict; and he was killed on his return, in 1004, in a fray originating in an attempt to restore the discipline of a monastery. He wrote an epitome of the lives of the Popes, a life of St Edmund the Martyr, and various ecclesiastical epistles.—*Cave.*

ABBOT (GEORGE) archbishop of Canterbury in the reign of James I and Charles I, was born at Guildford in Surrey, in October, 1562. He was the second son of Maurice Abbot, a clothworker, who, having suffered persecution for his religious opinions under the reign of Mary, naturally instilled into his children that aversion to popery by which the archbishop was all his life distinguished. The latter having passed through Guildford school, became a student at Baliol college, Oxford, and after a rapid attainment of academical honours, was elected master of University college, and three times vice-chancellor of the University; having in the mean time received the preferment of dean of Winchester. His early advancement has been attributed to his anticatholic zeal, which was a recommendation in the reign of Elizabeth; but his reputation for learning doubtless much assisted his promotion, as he was second in the list of the eight learned men of Oxford to whom the charge of translating the historical parts of the New Testament was intrusted. At Oxford, Dr Abbot displayed great zeal against the Arminian doctrines, and there commenced the hostility between him and Laud, by which their more public life was subsequently distinguished. A new path to ecclesiastical honours was soon after opened to Ab-

hot, who accompanied the Earl of Dunbar to Scotland, in order to effect a union between the churches of England and Scotland, the great wish of James. The success of this commission brought him into great favour with the king; and although, generally speaking, of an unbending character, he at this time stooped to the usage of the court, and fed James with extravagant adulation. The sapient monarch was "zealous as David; learned and wise; the Solomon of the age; religious as Josias; careful of spreading Christ's gospel as Constantine the Great; just as Moses; undefiled in all his ways as a Jhosophat or Hezekias; full of clemency as another Theodosius," &c. &c. In some other respects, Abbot also showed a more slavish spirit at this time than he afterwards displayed: for instance, when asked whether a Protestant king might assist the subjects of a neighbour labouring under tyranny and oppression, he replied—"No: for even tyranny is God's authority." James did not absolutely yield to this reasoning, which was given in reference to the propriety of his interfering as a mediator between the United Provinces and Spain; but the succeeding preferments of Abbot showed that it did not altogether displease him. In rapid succession, he became bishop, first of Lichfield and Coventry, then of London; and in about two years afterwards, archbishop of Canterbury, to the discomfiture of many rivals of the party opposed to him. As primate, Archbishop Abbot showed the rigid Calvinism of his opinions with too much of the tyrannical religious principle and bigotted spirit of the age, especially in asserting the full prerogative of his office, in the court of high commission, against the salutary restrictions which the chief justice, Sir Edward Coke, attempted to put on its oppressive jurisdiction. His Calvinistic zeal also led him to attempt to persuade the king to remonstrate with the states-general against the choice of the Arminian Vorstius for the professor's chair at Leyden. In other respects too he interfered with the religious parties in Holland, which induced the remonstrants to send over the celebrated Grotius to vindicate their conduct and tenets. Such was the prejudice of the archbishop, that he found nothing extraordinary in Grotius, whom he regarded, independently of his Latin eloquence, as a "simple fellow." In the affair of the Lady Frances Howard, so infamously divorced from the Earl of Essex to gratify James's minion Somerset, Archbishop Abbot, in a court of delegates consisting of bishops and civilians, resolutely voted against the divorce, and wrote a vindication of his conduct for so doing; which, although answered by James himself, produced no alteration in his conduct. From this time, it is thought that the king's favour abated towards the archbishop, notwithstanding it was he who had just then introduced to James his future powerful favourite, Buckingham. The latter however, so far from serving his early patron, subsequently became one of his most formidable opponents. The zeal of Archbishop Abbot for the Protestant interest induced him to forward with all his might the

marriage of the Princess Elizabeth with the Elector Palatine; an union which subsequently led to the Hanoverian succession. In the year 1621, an accident happened which occasioned him much trouble and vexation. His constitution requiring much exercise, he occasionally followed the diversion of hunting; and unfortunately discharging an arrow from a cross-bow at a deer, in Lord Zouch's park in Leicestershire, the archbishop shot an attendant game-keeper, who died of the wound. A very odious portion of theological rancour was displayed on this occasion, every attempt being made to misrepresent the affair to the king; who however sensibly maintained, that "an angel might have miscarried in this sort." A formal commission of inquiry was, notwithstanding, instituted; when it was determined that there had been an irregularity, and that it must be obviated, both by a pardon from the king and by a dispensation to reinstate Abbot in his metropolitan authority. Even after this purgation, so much scruple was felt by certain candidates for consecration, that they obtained the king's permission to receive it from the hands of sundry bishops, in lieu of the archbishop. In fact, Laud and the Arminian party sought to connect the misfortune of the archbishop with certain Jewish and Papistical theories relative to homicide or chance-medley by the priesthood, in order, if possible, to set him on the shelf. The zeal and courage of the primate were not however abated by this circumstance, as he strenuously opposed the projected match between Prince Charles and the Infanta of Spain, as unfavourable to the Protestant interest; which conduct did not injure him with James, whom he frequently attended during his last illness, being present when he expired. Under the next reign, the current of court favour changed to the ecclesiastical party to which Archbishop Abbot was directly opposed, and means were soon found to bring him into difficulties. A sermon was preached by a Dr Sibthorpe, the purport of which was to justify a loan that Charles demanded. The archbishop honourably and conscientiously refused to obey the king's command to license the printing of this sermon, which however received the sanction of the Bishop of London. For this refusal, the archbishop was suspended; but it was soon found necessary to recal him. No way daunted, he displayed the same firmness when the Petition of Right was under consideration; he gave it his decided support; and when Dr Mainwaring was brought to the bar of the house of lords, for maintaining, in two sermons, the right of the king to impose taxes without the consent of parliament, he officially reprimanded him, and declared his abhorrence of the doctrine. With similar determination, he acted contrary to various instructions which, through the influence of Laud, were sent to the bishops of the province; and, in short, persisted in the line that he deemed his duty until his death, which took place at his palace at Croydon, in 1633. From the foregoing sketch, it is obvious that, with certain defects, originating in the bigotry and intolerance of the times

Archbishop Abbot was a firm and conscientious character. It may be observed, without partiality to either opinion, that his Calvinistic tendencies were by no means remarkable; for it is obvious that the first hue produced by the Reformation was of that complexion; and, that during the reign of Elizabeth, and a part of that of James, many of the prelacy favoured that more rigid view of the articles; a fact which accounts for the ardent predilection of the bulk of the people, as displayed in the ensuing civil contests. In private life, Archbishop Abbot supported the character of an upright and worthy man; and several instances of his liberality and munificence still exist, particularly an hospital at Guildford, on which he expended considerable sums during his life time. As a general politician, the wisdom of his counsels, as opposed to the headstrong measures of Laud, subsequently so fatal to the king and nation, is exceedingly obvious, and possibly forms the best reply to a recent weak attempt to depress the one and exalt the other. His works are, "Six Latin Lectures on Divinity, at Oxford," 1598, 4to.; "Exposition of the Prophet Jonah," 4to. 1600; "A Brief Description of the whole World," 12mo. 1631; "Treatise on the Perpetual Visibility and Succession of the True Church," 4to. 1624; "A Narrative of the True Cause of his Disgrace and Sequestration at Court," written in 1627. This is printed in Rushworth's collection, as is his "History of the Massacre in the Valteline," in the third volume of Fox's Book of Martyrs. A few other pieces, besides letters and speeches, are also to be found in various collections.—*Biog. Brit.*

ABBOT (ROBERT) elder brother of the archbishop, shared in his good fortune. He was matriculated at the same college, and pursued the same course of education as his brother; and his talents as a popular preacher early produced him the living of Bingham in Nottinghamshire. He was also appointed one of the chaplains in ordinary to King James, who added a commentary of his own to his book "De Antichristo." In 1609, he was elected master of Baliol College, Oxford; which was favourably distinguished by his exertions. Like the archbishop, Dr Robert Abbot was a most zealous opponent of Popery; and in a sermon before the University of Oxford, at which Dr Laud was present, alluded with extreme keenness to the secret methods by which certain persons were attempting to undermine the Reformation; an allusion so personal to Laud, that he was under some doubt whether he ought not to openly resent it. Dr Robert Abbot died in the year 1617, being one of the five bishops who succeeded to the see of Salisbury in the course of six years. He wrote several commentaries on the Scriptures, which are not published; among others, a Latin commentary on the whole Epistle to the Romans, which remains in manuscript in the Bodleian Library. The published works of this prelate are almost altogether controversial. Comparing the two brothers, Fuller observes, that George was the more

plausible preacher; Robert, the greater scholar: George, the abler statesman; Robert, the deeper divine.—*Fuller's Worthies. Biog. Brit.*

ABBOT (MAURICE) youngest brother of the archbishop, was brought up to trade, and became an eminent merchant, and one of the first directors of the East India Company, in which capacity he displayed considerable talent. He was also one of the farmers of the customs, and a member of the council for settling the colony of Virginia. He served the city as sheriff, alderman, mayor, and representative in Parliament; and died in 1640.—*Biog. Br.*

ABBOT (THOMAS) a German writer, was born at Ulm in Swabia, in the year 1738. This extraordinary young man, when at the age of thirteen, wrote an ingenious treatise, entitled "Historia Vitæ Magistra," and studied at the University of Halle, where he applied himself chiefly to history and mathematics. From Halle, in 1760, he removed to the university of Frankfort on the Oder, and in consequence of being appointed extraordinary professor of philosophy, relinquished the study of divinity, for which he had been originally educated. At this place, the very centre of war, he wrote his treatise "On Dying for our Country." The year following he repaired to Berlin, where he formed an intimacy with the Eulers, Nicolai, and Mendelsohn, and accepted the situation of professor of mathematics at Rintelen in Westphalia. At this place he wrote his treatise "On Merit," to which he owed his chief celebrity. This work procured him the friendship and patronage of the Prince of Schaumbourgh Lippe, and a lucrative and honourable employment, which unfortunately he did not long enjoy, as he died at the age of twenty-eight. He was splendidly interred by his liberal patron, who wrote himself the inscription on his tomb. The works of Abbt abound in thought, fancy, and spirit; and it is believed that, had he lived, he would have become a leading German writer. His friend Nicolai published his works in six volumes, after his death.—*Appd. to Life of Mendelsohn.*

ABDALONYMUS, a descendant of the kings of Sidon, reduced to the condition of a husbandman at the time of the capture of that city by Alexander, who promoted him to the throne of his ancestors. A philosophical reply of this prince to his benefactor, has done much more to render him celebrated than his elevation. When Alexander asked him how he had borne his adversity, Abdalonymus answered, "Would to Heaven that I may bear my prosperity so well! I then had no cares, as my own hands supplied me with all that I wanted." This instance of equanimity and moderation increased the bounty of the conqueror, who added other provinces to his government.—*Quintus Curtius.*

ABDAS, a Christian bishop of Persia in the reign of Theodosius the younger, who, inflamed by absurd and intemperate zeal, destroyed the altar which the Persians dedicated to their representative of deity, Fire. This act of frenzy produced his own destruction and a massacre

of the Christians, as also a long and bloody war between the Persians and Theodosius the Younger. Bayle observes, that it is too common, in alluding to this Persian persecution, which lasted thirty years, to omit all advertence to the cause of it.—*Bayle. Mosheim.*

ABDERAME, or ABDERAHMAN, a governor of Spain for Ischam, Caliph of the Saracens in the eighth century, who endeavoured to extend the conquest of that people over France as well as Spain. He succeeded so far as to penetrate into the heart of the former country, and took Bourdeaux and other towns; but after several victories, was killed in battle and his army routed by Charles Martel in 732. This seasonable victory, as Gibbon well observes, probably produced a great alteration in the history of Europe, and more especially in that of France and Great Britain.—*Bayle. Gibbon.*

ABDIAS (of Babylon) a Christian writer of the first century, who pretended that he had been one of the companions of Jesus Christ. He compiled a legendary work, entitled "Historia certaminis Apostolici," which is deemed altogether spurious. It is peculiarly severe on St. Paul.—*Cave. Dupin.*

ABDOLLYTIPI, a Persian historian, born at Bagdad in the year 1167, who visited Egypt, and was honoured, rewarded, and protected by the Sultan Saladin and his successor. His writings are very numerous, but the only one known in Europe is entitled "Alsigar," or little book, being an abridgment of the history of Egypt. An edition of this treatise was, in 1806, published, with a Latin version and notes by Professor White, from a manuscript preserved in the Bodleian Library, Oxford.—*Month. Review, 1802.*

ABEILLE (LOUIS PAUL) a French writer on agriculture, commerce, and manufacture, who was born in 1719, and died in 1807. He was inspector-general of the manufactures of France before the French revolution. His principle works are—1. "Corps d'Observations d'Agriculture, Commerce, &c. établie par les Etats de Bretagne;" 2. "Principes sur la liberté du Commerce des Grains."—*Un. Biog.*

ABEL (CHARLES FREDERICK) a German musician, who was appointed chamber-musician to her late majesty Queen Charlotte, in 1759, through the patronage of the then Duke of York. He was the disciple of Sebastian Bach, and celebrated for his performance on the viol di gamba. He died in 1787.—*Burney's Hist. of Mus.*

ABELA (JOHN FRANCIS) commander of the order of the Knights of St. John of Jerusalem, was the latest descendant of an illustrious family of Malta, and obtained the highest honours of his order. Abela wrote the history of his native island, under the title of "Malta Illustrata," (Malta, 1747) which has been translated from the Italian into the Latin by Seiner, and published both separately and in Gravius' Thesaurus. It embraces the history and topography of Malta, together with the genealogy of the most ancient families.—*Noun. Dict. Hist.*

ABELARD or ABAILLARD (PETER) the

son of Berenger, an individual of noble family, was born A.D. 1079, at Palais, near Nantes, in the province of Brittany. His father, in the first instance, designed him for the profession of arms, but his vigorous capacity and predilection for learning altered that determination, and he was allowed to follow his own inclination and dedicate himself to letters. Unhappily, at that dark period, when genius and strength of mind were wasted on trifles, the art of verbal disputation formed the only road to learned eminence. After the usual grammatical preparation therefore, Abelard was placed under the tuition of Roscelinus, the founder of the metaphysical sect of Nominalists. On leaving this master, according to the custom of the times, he visited most of the schools of the neighbouring provinces, and at the age of twenty settled at the university of Paris, and became the pupil of William de Champeaux, the most famous professor of his day. Here he displayed so much eloquence and dialectic skill, that he frequently foiled his master, whose jealousy being excited, a separation ensued, and Abelard gave lectures himself, first at Melun, a town about ten leagues from Paris, and finally in Paris itself; when the rivalry between Abelard and his former teacher was renewed, until the promotion of the latter to a bishopric ended their wordy contest. So much ardent emulation and mental display began to affect his health, and possibly stimulated by a little envy at the elevation of his opponent, Abelard in his turn resolved to study theology, and removed to Leon, to become a pupil to Anselm. Here, as at the university of Paris, by his rapid acquirement, he quickly excited the jealousy of his master. Returning to the metropolis, he was soon as much followed for his theology as his philosophy, and scholars repaired to him, not only from the various parts of France, but from Spain, Italy, Germany, Flanders, and England. By this time Abelard, who possessed a fine person, had attained the age of forty, a period at which, if passions hitherto repressed break out, they obtain a greater mastery, and are possibly less governable than at a more youthful period. Be this as it may, satiated with fame and disputation, the philosopher and theologian suddenly became the votary of love. Among other acquaintances, he highly ingratiated himself with Fulbert, a wealthy canon of Paris, who had a beautiful and accomplished niece named Heloise. With this attractive girl Abelard became deeply enamoured; and, favoured by the avidity with which both uncle and niece seemed disposed for the latter to benefit by his philosophical instructions, he soon inspired her with an ardent passion in return. His subsequent proceeding was highly deceptive and dishonourable, as he premeditatedly exerted his influence over Fulbert, to become a boarder at his house, with the most indefensible views. The speedy consequence of this blameable stratagem soon discovered to the indignant uncle the deception of Abelard, who immediately quitted his abode. He was secretly followed by Heloise; and she

was soon after delivered of a son, who received the curious name of Astrolabius. On the birth of this child, Abelard proposed to Fulbert to marry his niece, provided the marriage might be kept secret. Fulbert consented; when, to his great surprise, Heloise herself objected, partly out of regard to the interest of Abelard, whose profession bound him to celibacy, and partly, it is supposed, from a romantic notion, that love is the strongest and purest when unshackled. These objections were finally removed, and they were privately married. Fulbert, however, who wished to make the affair public, became irritated at their joint refusal to gratify him, and in consequence treated his niece with an asperity so opposed to his former tenderness, that it furnished Abelard with a plea for removing her to an abbey of Benedictine nuns, the same at which she had been first educated. Fulbert, of opinion, and possibly with reason, that Abelard had taken this step with a view to remove an incumbrance to his future clerical prospects, meditated a most atrocious revenge. He employed several ruffians, who broke into the chamber of Abelard in the dead of the night, and inflicted a mutilation on his person, which put an effectual end to any future hopes of conjugal felicity. For this outrage the ruffians were punished according to the *lex talionis*, and Fulbert endured the loss of his benefice and confiscation of his goods. On his recovery, Abelard, with somewhat ungenerous anxiety, prevailed upon Heloise to take the veil in the abbey of Argenteuil, and a few days afterwards he himself took the habit in that of St Denys. It seems that he pointedly insisted on her taking the step first; an instance of distrust for which, in her correspondence, she tenderly reproaches him. "In that one instance," she writes, "I confess your mistrust of me tore my heart, Abelard; I blushed for you." (Epistolæ Helois. 1.) The romantic ardour of Heloise's affection seems indeed to have lasted with her life. After the stormy exhibitions of passion and revenge, Abelard resumed his lectures, and found himself again surrounded with pupils; a popularity which so much excited the jealousy of rival teachers, that they contrived to involve him in ecclesiastical censures for certain passages in his work "On the Unity of God," implying a gradation in the Trinity approaching to something like what is now called Arianism. After a very partial investigation, in which his enemies were triumphant, his book was condemned to be burnt with his own hand, and he was required to read a recantation, and be imprisoned in the convent of St Medard. His confinement was short; but he was soon involved in another persecution, for being so unpatiotic as to deny that St Denys of France was Dionysius the Areopagite. Abelard, for this dire offence, was accused to the king as a calumniator of his order, and an enemy to his country. The clamour was so great, that, apprehensive of danger to his person, he escaped by night, and fled to the convent of St Argent, in Champagne, the prior of

which was his friend. Here he remained until the anger in some degree subsided when he obtained leave to retire to some solitary retreat, on condition that he should never again become a member of a convent. The spot which he selected was a vale near Nogent, in the valley of Champagne, where, in 1122, he erected a small oratory, which he dedicated to the Trinity, and afterwards enlarged and consecrated to the Holy Ghost the Comforter, or Paraclete. Such was his fame, that he was quickly followed, and a rustic college gradually arose around his retreat. Jealousy was in consequence again excited to his discomfort, and he was about to seek another asylum, when the Duke of Bretagne procured his ejection to the vacant abbey of St Gildas. About this time, under a claim of ancient right, the convent of Argenteuil, of which Heloise had become prioress, was united to the abbey of St Denys, a proceeding that left her and her fellow nuns destitute of an habitation. On learning this misfortune, Abelard made over to them the Paraclete, which donation was sanctioned by royal authority in 1127. It was after this removal, that the celebrated correspondence took place, which has been additionally immortalised by the poetical epistle of Pope. Doomed never to remain tranquil, Abelard revised his theological works at the abbey of St Gildas, by which he was quickly involved in a controversy with St Bernard, who accused him of heresy to the pope, to whom, in the coarse controversial language of the period, he describes Abelard as an *infernal dragon*, and one who, in the art of ensnaring souls, was more dangerous than Arius, Pelagius, or Nestorius; in a word, a *persecutor of the faith* and a *precursor of Antichrist*. Abelard, whose only fault seems to have consisted in a foolish attempt to explain the Trinity and other religious mysteries syllogistically, on this representation of the holy Bernard, was at once condemned by the pope, who, without hearing any thing in the way of defence, sentenced him to perpetual silence. With his usual tenacity however, he resolved to set out for Rome to remonstrate against this sentence, but taking Cluni in his way, he was prevailed upon by his friend Peter the abbot to abide there, while the latter tried to reconcile him to the pope and St Bernard. In this kind office the venerable abbot succeeded, not however until Abelard had made a declaration of faith, in which he yielded to a torrent that he found himself unable to oppose. Allowed by the pope to remain at Cluni, he lived there for two years comparatively private, and then, for the benefit of his health, removed to the priory of St Marcellus, where this extraordinary man died in 1142. At the request of Heloise, who survived him twenty-one years, his body was removed, after interment, to the Paraclete, where the widow and abbess daily prayed over his tomb. Heloise died in 1163, and was deposited by the side of Abelard, who, in disinterestedness and devotedness of affection, had been much her inferior. In 1779, the bones of this celebrated pair were taken out of the

result by order of the Abbess Marie de la Rochefoucault, and placed in a leaden coffin, separated into two divisions, that they might not be confounded. They were then conveyed in procession, and deposited beneath the altar, where a monument of black marble, with a Latin inscription, was erected to their memory. When all these convents were destroyed in 1792, the inhabitants of Nogent sur Seine transported the remains of Abelard and Heloise to the vaults of their own church. Thence, in the year 1800, they were brought by the government to Paris, and placed in the museum of French monuments, in a neat sepulchral chapel, built by Lenoir out of the ruins of the Paraclete. In 1817, the museum being destroyed, they were finally removed to the burying ground of Pere la Chaise, where the sepulchral chapel has been re-erected, and is now to be seen. The works of Abelard convey no correspondent idea of his genius or his taste. The greater part, consisting of sermons and theological tracts, while they occasionally display a portion of wit, learning, and imagination, are disfigured with capricious notions, barren subtilities, and gross barbarisms in regard to style. Modern critics indeed go so far as to assert, that at present the fame of this renowned scholar rests almost exclusively on the high notion formed of the beauty, genius, and devotedness of Heloise, whose letters form the principal attraction of the ponderous volume which contains the productions of her lover. Yet Abelard could not have excited so much jealousy and admiration during a long life, unless he had been a man of extraordinary mental vigour. His works, all of which are written in Latin, are—1. "An Address to the Paraclete, on the study of the Scriptures;" 2. "Problems and Solutions;" 3. "A Treatise against Heresies;" 4. "An Exposition of the Lord's Prayer;" 5. "A Commentary on the Romans;" 6. "A System of Theology;" and lastly, his "Letters to Heloise" and others, all of which are collected and edited from the Manuscripts of Francis Amboise, 4to. Paris, 1616. Various false collections of the letters have been published separately, but the best edition of those which are genuine is that of London, 2 vols. 8vo. 1716—*Moreri. Bayle. Berrington's Lives of Abelard and Heloise.*

ABELL (JOHN) an English musician, who belonged to the chapel of Charles II, and was celebrated for a fine counter-tenor voice and for his skill on the lute. Being dismissed as a Papist at the Revolution, he went abroad, and sang in Holland and various parts of Germany. At Warsaw, he was sent for to court by the King of Poland, and refusing to go, was taken there by a guard of soldiers, seated in a chair in a spacious hall, and drawn up to a considerable height, while the king and his suite appeared in a gallery opposite. Several bears were then admitted into the area below him, and he was informed that he might take his choice, either to sing or be let down among the bears. He chose to sing; and, according to his own account, never sang better in his life. He subsequently returned to England

and in 1701 published a book of songs in several languages. In the fourth volume of "Pills to purge Melancholy," are two songs by Abell, who is said to have possessed some secret by which he preserved the tone of his voice to an extreme old age.—*Dictionary of Musicians. Hawkins' History of Music.*

ABEN EZRA (ABRAHAM) a celebrated Jewish rabbi, was born at Toledo in Spain, in 1099, and died at Rhodes in 1174. He obtained considerable reputation in his own time as an able commentator on the Scriptures, and his commentaries have continued to be much esteemed. He was also the author of "Elegantia Grammatica," 3vo., Venice, 1548; and of "Jesud-Mora," an introduction to the Talmud, which is now very scarce.—*Universal Biog.*

ABERCROMBIE (JOHN) author of several esteemed works on gardening, was the son of a gardener near Edinburgh, who, coming young to London, obtained employment in the Royal Gardens. The "Gardeners' Calendar," published under the borrowed name of Mawe, was written by Abercrombie. The "Universal Dictionary of Gardening and Botany," and other works, are published in his own name. He died in 1301.—*Gent. Mag.*

ABERCROMBY (PATRICK) of a good family of Forfar, in the county of Angus, was born in 1656, and took his degrees as a physician at St Andrew's in 1685. After travelling for some time on the continent, he returned to England, and, embracing the Roman Catholic religion, was appointed physician to James II. He compiled "The Martial Achievements of the Scots Nation, and of such Scotsmen as have signalised themselves by the Sword," in 2 vols. fol. 1711 and 1715; "The Campaigns in Scotland in 1548 and 1549." He died, according to some accounts, in 1716, while others say 1726.—*Biog. Brit.*

ABERCROMBY (SIR RALPH) a distinguished British general officer, was born in 1733, at Tillibodie in Clackmannanshire. His first commission was that of cornet in the third regiment of Dragoon Guards in 1756; and he gradually passed through all the grades of the service, until he became a major-general in 1787. On the commencement of the war with France, he was employed in Flanders and Holland with the local rank of lieutenant-general, and in that critical service displayed equal skill and humanity. In 1795, he received the order of the Bath, and was appointed commander-in-chief of the forces in the West Indies. In this expedition he captured the islands of Grenada, St Lucia, St Vincent, and Trinidad, with the settlements of Demerara and Essequibo. On his return, he was appointed commander-in-chief in Ireland, but, for reasons very honourable to himself, was quickly removed to the correspondent command in Scotland. In the attempt upon Holland in 1799, Sir Ralph had the sole command on the first landing, and both his troops and himself greatly distinguished themselves. His royal highness the Duke of York subsequently arrived, under whom Sir Ralph Abercromby

act d. The final fate of the expedition is well known. The next and concluding service of this able and meritorious officer was in the expedition to Egypt, of which he was commander-in-chief. Landing, after a severe contest, at Aboukir, on the 8th March, 1801, on the 21st of the same month was fought the battle of Alexandria, in which Sir Ralph Abercromby was unhorsed and wounded in two places, notwithstanding which he disarmed his antagonist, and gave the sword to Sir Sidney Smith. The general kept the field during the day, and was then conveyed on board the admiral's ship, where he survived about a week, when he expired. His body was conveyed to Malta, and interred beneath the castle of St Elmo, and a monument was voted to him by Parliament, in St Paul's Cathedral. His widow was also created Baroness Abercromby, with remainder to the issue male of her late husband; and a pension of £2000 a year was granted in support of the dignity. Sir Ralph Abercromby left four sons: George, a barrister at law; John, a major-general; James and Alexander.—*Brit. Peerage*.

ABERNETHY (JOHN) an eminent Presbyterian divine of Ireland, who distinguished himself by his zeal for religious liberty, and his resistance to what he deemed oppressive authority on the part of the Irish presbytery. Mr Abernethy, himself the son of a Presbyterian minister of Colerain, in the county of Londonderry, was born in that town on the 19th Oct. 1680. During the troubles occasioned by the insurrection of 1689, he was carried by a relation into Scotland, and finished his education, partly in Glasgow and partly in Edinburgh, with a view to engaging in the ministry. On his return to Ireland, he found the Irish synod, which was formed on the model of those of the kirk of Scotland, exceedingly arbitrary in respect to the destination of the preachers, by using its authority contrary to the wishes both of pastors and congregations, and acting very despotically in that particular. After enduring some inconvenience from its rigour, Abernethy, a close thinking man and of a determined spirit, resolved to resist this injudicious exercise of authority, and publicly declared his determination to accept an invitation from a congregation at Antrim, in opposition to the arrangement of the synod. This was a bold step, as the latter was supported by a powerful party; but Abernethy also possessed friends and adherents, and a society was soon formed to uphold the cause of religious liberty among this class of dissenters. Besides this particular subject of complaint, the new society turned its attention to the question concerning subscription to articles of faith, an attachment to which was so strong among the Irish dissenting clergy, that when, in the year 1715, the benefit of the Toleration Act was proffered them by government, they refused to accept it, unless, as a condition, it should require subscription to the Westminster Confession of Faith. Abernethy, for some years, endeavoured to stem the torrent in this direction, but was at length so far

obliged to yield to it as to quit Antrim, and accept an invitation from a society of Protestant dissenters in Dublin. He subsequently distinguished himself by strenuously joining in the efforts of the Irish dissenters, in 1731 and 1733, to obtain a repeal of the Test Act, a measure which was opposed with much zeal and asperity by Swift. The judgment, temper, facility and eloquence of Abernethy, gave him great weight both as a divine and a leader; which influence was still more confirmed by the steadiness and purity of his general conduct. He died in the year 1740. Besides occasional sermons and pamphlets, produced in his controversy with the synod, he composed "Discourses on the Being and Attributes of God," which are highly esteemed. His controversial tracts have also been collected since his death, and published in London, 1751. This zealous and indefatigable minister left a diary of his life, in six MS. quarto volumes.—*Biog. Brit.*

ABGARUS, a prince of Edessa in Syria. According to Eusebius, he wrote a letter to Jesus Christ, who returned an answer, accompanied by a haudkerchief on which he had impressed his portrait—a weak and now universally decried fabrication. Abgarus was a name common to a race of princes of Edessa.—*Eusebius. Moshem.*

ABGILLUS, son of a king of Friesland, who acquired the surname of Prester John, and was the reputed author of an absurd legendary history of Charlemagne's expedition into the East.—*Suffred. de Script. Fris.*

ABLE or ABEL (THOMAS) a divine of Oxford, who became domestic chaplain to Queen Catharine (of Arragon) on whom, it is said, he bestowed lessons in music and the languages. Able had the courage to write a tract against the legality of the divorce from his patroness so anxiously desired by Henry, entitled "De non dissolvendo Henrici et Catharinae Matrimonio." In 1534, he was attainted of misprision of treason, for taking part in the imposture of Elizabeth Barton, the holy maid of Kent, and sentenced to close imprisonment. Finally, so abundant were the snares in the way of the opponents of Henry, that he was hanged, drawn and quartered, in 1540, for refusing the oath of supremacy.—*Biog. Brit.*

ABNEY (SIR THOMAS) an able and upright alderman of London, chosen mayor and representative in parliament for the city, in the year 1700. He had a principal share in founding the Bank of England, of which he became a director. He is now, however, best known as the steady friend of Isaac Watts, who resided with him for several years at Stoke Newington. Sir Thomas died in 1722, aged 83.—*Hist. of Stoke Newington.*

ABRABANEL (ISAAC) a highly celebrated Jewish rabbi, was born at Lisbon, A. D. 1437, of a family which pretended to trace its descent from King David. He was in great credit at the court of Alphonso V king of Portugal, but experienced a reverse under his successor John, being accused of a plot against the state, which obliged him to take refuge in Castile. Here he commenced his commentary on the

books of the Old Testament: after which, he was employed by Ferdinand and Isabella, for eight years, until the Jews were expelled in 1492, when he and his family took their departure with the rest. He retired to Naples, and by his address acquired the good graces of the Kings Ferdinand and Alphonso, until the latter was driven out by Charles VIII of France. He then retired to Corfu, and finally to Venice, where, by his singular prudence and talents, he also obtained protection and public employment. He carried on his literary labours in all these situations, and died at Venice in the year 1508, aged 71, leaving three sons, all of whom became more or less distinguished. Such was the esteem in which this rabbi was held, his funeral was celebrated at Padua with great pomp, not only by the heads of his own tribes, but by Christians, being attended by many noble Venetians. The talents of Abrabanel were of the first order: some critics even rank him before the famous Maimonides. The Jews regard him as a triumphant opponent of Christianity; but setting aside controversy, all esteem him as a subtle, clear, learned, and honest commentator. "His great weakness," says Bayle, "was his sensibility to the persecutions of the Jews, of which he bore a considerable part." This may not justify the arguments which were produced under such an accumulation of indignant feeling; but it may surely excuse them. Moreover, the enmity to Christianity displayed by Abrabanel did not extend to his deportment, which was mild and obliging. His works are—1. "Commentaries on several Books of the Old Testament;" 2. "A Genealogical History, from Adam;" 3. "On Prophecy and Ezekiel's Vision, against Maimonides;" 4. "A Treatise on the Predictions concerning the Messiah;" 5. "A Treatise on future Rewards and Punishments;" 6. "A Rabbinical History of the Works of the Creation;" with various other productions, which show a profound knowledge of the Hebrew Scripture and great general learning.—*Bayle. Moreri.*

ABRADATES, a King of Susa, rendered memorable by conjugal affection. His wife Panthea being taken prisoner by Cyrus, that conqueror treated her with great courtesy, and returned her to her husband. This generosity so impressed Abradates, that he immediately joined Cyrus with his forces; but unfortunately falling in the first battle in which he engaged in his behalf, his devoted wife slew herself upon his body.—*Curop. Xenophon.*

ABRAHAM (USQUE) a Portuguese Jew, who published, in 1533, a Spanish translation of the Bible, which is exceedingly scarce.—*Moreri.*

ABRAMS (Miss). There were two celebrated English singers of this name, who took distinguished parts in the concerts of ancient music, at their original institution in 1776. The eldest will be long remembered as the composer of the popular air adapted to M. G. Lewis's celebrated ballad of Crazy Jane.

ABRESCH (FRED. LOUIS) an able critic and Greek scholar, was born at Hamburg in

1699, and died rector of the college of Zwol, Overysse, in 1782. His principal works are "Scholia on the Greek Authors," which are much esteemed.—*Univ. Hist. Dictionary.*

ABSTEMIUS (LAWRENCE) born at Macerata, in the territory of Ancona, towards the close of the fifteenth century. He was well versed in the Belles Lettres, of which he was professor at Urbino, as also librarian to Duke Guido Ubaldo. He is chiefly known by his work, entitled "Hecatomythium," or hundred fables, which have been frequently printed with those of Esop, Phædrus, Babrius, Avienus, &c. He assumes, like La Fontaine, much licence in this collection, as several of his fables attack the clergy, and partake of the nature of the tale. He is also author of a scarce book on some obscure passages in Ovid.—*Bayle. Moreri.*

ABUBEKER, the immediate successor of Mahomet, and the first who bore the name of caliph, signifying both vicar and successor. He was father-in-law to the prophet, who married his daughter Ayesha, whence his subsequent name, Abubeker, or "Father of the Virgin," having been previously called Abdulcaaba. Abubeker, who possessed all the primitive simplicity of the early followers of Mahomet, was by no means anxious for the dignity of succeeding him; but the great service he had done the prophet by his early countenance, added to the fact of having been his sole companion in the celebrated flight to Mecca, very naturally led to his election. Nothing could exceed the simplicity and modesty of Abubeker in his elevation; yet, although no warrior, during the two years of his reign that career of conquest began which was destined to produce such a change of fortune in a large portion of the globe. This caliph was 61 when he assumed the dignity, and died at the age of 63. Abubeker first collected the scattered verses of the koran, and divided them into chapters.—*D'Herbelot.*

ABUDAHER, a leader of the Karmatians, an unbelieving sect of Arabians, which sprang up in the third century of the Hegira, and having gradually become powerful in the early part of the fourth, profaned and laid waste Mecca, and murdered 1700 pilgrims within the very walls of the Caaba. This sacrilege, in the estimation of the devout Moslem, is the greatest misfortune that ever befel his religion. Abudaher carried away the celebrated black stone; but it was subsequently ransomed, or returned.—*D'Herbelot.*

ABULFARAGIUS (GREGORY) a learned physician, and prelate of the Jacobites; a native of Malatia, in Armenia, where he was born in the year 1226. It is doubted by some authors whether he ever acquired any reputation as a physician, as he took orders at the early age of twenty, became bishop of Lacabena in 1247, and some years afterwards, primate of the Jacobites. Although a Christian, his fame was so great, that several Mahometans overcame their scruples to study under him. Abulfaragius was a multifarious writer, but is chiefly known by "An Abridgment of Universal History," from the beginning of the world to his own time, which was published with a Latin

Version by Dr Pococke, in 1663, 2 vols. 4to. Oxford. He died in 1234.—*Un. Biog.*

ABULFAZEL, vizier to the celebrated Mogul emperor Akbar, by whose command he wrote a history of his reign, as also the famous geographical and statistical account of the Mogul empire, intitled "Ayeen Akberry." The latter was translated into English by Francis Gladwin, Esq, in 3 vols. 4to. Calcutta, 1735-6. Abul Fazel was basely assassinated in 1604, at the instigation, as it is said, of the heir apparent, who was jealous of his talents and celebrity.—*Ibid.*

ABULFEDA (ISMAEL) Prince or Emir of Hamah in Syria, and a celebrated Arabian geographer and historian, was born at Damascus in the year 1275, and succeeded his brother A. D. 1320. His principal works are—"Tokvim al Boldaan," or "Geographical Canons;" and "Al Mokhtasser, Fi Akbar Albaschar," or Universal History. The labours of Abulfeda are highly esteemed, and have been abstracted and translated by writers of considerable eminence. His geographical work was translated into Latin by Greuvius, and published with notes in London, 1650; and various other parts of his geography have been rendered into Latin by Muratori, Kochler, Michaelis, Eickhorn, and others. Gagnier published that portion of his history which relates to the life of Mahomet, in folio, Oxford, 1725; and the late professor White, in his edition of Pococke's "Specimen Historiæ Arabum," Oxford, 1806, gives likewise several chapters from Abulfeda.—*Moreri. Un. Hist. Dict.*

ABULGAZI (BAYADUR) Kahn of Kharasm, was born in the year 1605. He was the fourth of seven brothers, and was descended, both by father and mother, from Zingis Kahn. He began to reign at the age of forty, and reigned twenty years as a warlike and able prince, with great reputation. He then resigned the sovereignty to his son, and occupied himself in his retirement in writing "A Genealogical History of the Tartars," which, being incomplete at his death, was finished by his successor. The manuscript of this curious work falling into the hands of some Swedish officers during their imprisonment in Siberia, was brought to Europe, and translated first into Russian, and subsequently into German by Count Strahlenberg. A French version was printed at Leyden in 1726.—*Ibid.*

ACACIUS, bishop of Amida, or Constance, who sold the church plate, &c. to redeem and send home the Persian prisoners taken in the war between Theodosius the younger and Varraun's King of Persia. This benevolence so astonished the latter, that he requested to see the worthy bishop; which interview happily led to a peace, and thus a war, kindled by the intemperance of one prelate (see ABDAS) was terminated by the charity of another.—*Du Pin. Moreri.*

ACADEMUS, a citizen of Athens in the time of Theseus, who gave his name to the grove that formed the school of philosophy called after it. Three sects of philosophers sprang out of the academy, at the head of the

first of which was Plato; his successor Arcesilaus is deemed the founder of the second academy, and Carneades the chief of the third. (See their respective articles).—*Plut.*

ACCIUS (LUCIUS) a Latin tragic poet, who was born in the year of Rome, 584. He founded his tragedies on the Greek model, and apparently on the same catastrophes; which led to an opinion that he was chiefly a translator. One of his dramas, however, was on the expulsion of Tarquin, a Roman subject; and he was also the author of two comedies, entitled "The Wedding," and "The Merchant." Some miscellaneous poems and annals in verse are also given to Accius, but of all these there only remain a few fragments collected by Robert Stephens. Horace styles Accius, "altus," elevated; and Ovid, "animosus," spirited: strength and vigour seem to have formed his chief characteristics. Cicero was well acquainted with Accius.—*Vossius. Moreri.*

ACCOLTI (BENEDICT) an Italian lawyer, was born at Florence in 1415, and succeeded Poggio as secretary to that republic, in 1450. He was highly distinguished by the Popes Leo X, Adrian VI, and Clement VII, the latter of whom made him a cardinal. From his proficiency in the Latin tongue, he was entitled the Cicero of the age. He wrote a treatise, "De Præstantiâ Virorum sui Œvi," Parma, 12mo. 1639, in which he compares the ancients with the moderns, and asserts the equality of the latter. He also wrote a valuable work in Latin, "On the War carried on by the Christians against the Barbarians for the recovery of Christ's Sepulchre," 4to. Venice, 1532. This production was very serviceable to Tasso in the composition of his "Jerusalem Delivered." Accolti died in 1549. *Bernard Accolti*, son of the preceding, acquired great celebrity as a poet; his works were published at Florence in 1513. *Francis Accolti*, brother of Benedict, was a lawyer of distinguished eminence, wrote several learned legal commentaries and other treatises, and translated a part of the works of Chrysostom; but his great abilities were tarnished by his excessive parsimony. *Peter Accolti*, another son of Benedict Accolti, first studied law, but subsequently entered the church, and became cardinal, being the same cardinal (of Ancona) who composed the Papal Bull against Luther. He died in 1532.—*Moreri.*

ACCORSO or ACCURSIUS (FRANCIS) an eminent Italian lawyer, was born at Florence in 1182. Accorso is rendered famous by his "Perpetual Commentary," or "Great Gloss," in illustration of the code, the institutes, and the digests, in which all the opinions and decisions of preceding jurists are digested into one body, with the compiler's own annotations. The best edition of this laborious collection is that of Godefroi, in 6 vols. folio, Lyons, 1627. Accorso, who died rich in 1229, had a daughter, who read lectures in the university of Bologna. *Francis Accorso*, son of the above, and also an eminent professor of law, as the invitation of Edward I came to England in

1237, and read lectures at Oxford, but subsequently returned to Italy, where he died in 1321.—*Univ. Biog.*

ACCORSO (MARIANGELO) a learned critic, and native of Aquila in Naples, flourished in the sixteenth century, and resided for a considerable time in the court of Charles V, by whom he was much esteemed. To an intimate acquaintance with the Greek and Latin, he added a considerable knowledge of modern languages, which rendered him one of the most erudite and ingenious critics of his day. He particularly distinguished himself by the diligence with which he sought and collated ancient manuscripts. His labours in that department are exhibited to great advantage in the first work which he sent to the press, entitled "Diatribæ in Ausonium, Solinum, et Ovidium." In 1538, he printed at Augsburg an edition of Ammianus Marcellinus, as also the letters of Cassiodorus, with his treatise on the soul. In the "Corycinia," Rome, 1524, 4to, a poem of Accorso is printed, entitled "Protrepticon ad Corycium." He is also author of a ridicule on the affected antiquated Latin of several of his contemporaries, entitled "Osco, Volco, Romanoque Eloquentia interlocutoribus, dialogus ludis Romanis actus," &c. 1551, 8vo. Accorso has left a curious example of literary jealousy, in consequence of an unmerited accusation of plagiarism. In a fable called "Testudo," at the end of his "Diatribæ," is a formal oath or protestation, that he had not received the smallest assistance from the lucubrations of any other author, but that he had even expunged the thoughts of others from his works, although prior on his own part. Few modern authors will be disposed to follow his example; not to mention that such pure originality is both philosophically impossible, and opposed to the free play of the associative principle in the acquirement and delivery of ideas; a restraint for which mere originality would prove no compensation.—*Univ. Biog.*

ACHERI (LUKE D') a Benedictine of St Maur, born in 1609, who distinguished himself by his taste for antique research and the publication of scarce manuscripts, of which "The Spicelegium," a collection in 13 vols. quarto, 1653-1657, since republished in 3 vols. folio, 1725, forms a curious and prominent example. It contains historical pieces, chronicles, lives of saints, acts, charters, letters, &c. which had never before met the public eye. To the research of Acheri are also owing,—1. "The Epistle attributed to St Barnabas, 4to. 1645;" 2. "The Life and Works of Lanfranc, Archbishop of Canterbury, with the Chronicle of the Abbey of Bec, from 1304 to 1437;" 3. "Asceticorum, vulgo spiritualium opusculorum, quæ inter patrum opera reperuntur, Indiculus," quarto, 1648 and 1671; "The Life and Works of Guibert of Nogent," &c. &c. This laborious antiquary died at the abbey of St Germain-des-Près, in 1685, aged 76.—*Biog. Universelle.*

ACIDALIUS (VALLIS) a learned German, was born at Wistock in Braudenburg, in

1567. He published Latin poems at the early age of seventeen, and proceeding from the universities of Germany to those of Italy, published an edition of Paterculus at Padua, and embraced the Roman Catholic religion. In 1594, he printed "Animadversions on Quintus Curtius," and died the following year, while his observations on Plautus were in the press. His philosophical remarks on Tacitus, Ausonium, and Quintilian, have also been printed. A dissertation, which made much noise in its time, entitled "Mulieres non esse Homines," a covered satire on the Socinians, was falsely attributed to Acidalius.—*Ibid.*

ACKERMANN (JOHN CHRISTIAN GOETTLIEB) a native of Upper Saxony, and professor of medicine at Altdorff in Franconia, was born in 1756, studied under his father, and became an eminent physician and medical writer. His works are—1. "Institutiones Historiæ Medicinæ," 1792, 8vo.; 2. "A Manual of Military Medicine," in German, 2 vols. 8vo. 1794; 3. "The Life of J. C. Dippel," 1781. He also wrote the lives of the ancient Greek physicians, for Harle's new edition of Fabricius' Bibliotheca Græca.—*Ibid.*

ACONZIO or ACONTIUS (JAMES) a native of Trent, a philosopher, mathematician, and divine, originally of the Roman Catholic religion. Embracing the Protestant faith, he forsook his native country, and after passing some time in Switzerland, sought the patronage of Queen Elizabeth. To this sovereign, under the title of *Divæ Elizabethæ*, his principal work, "De Stratagematibus Satanæ," (on the Stratagems of Satan) was dedicated. The object of this work was to promote good will and toleration, by reducing the essential dogmas of the Christian religion to a small number, and by establishing a reciprocal toleration among all sects. It is unnecessary to say, that for a plan of this philosophical nature, the religious world of the age of Elizabeth was by no means prepared, and in consequence Acontius and his book were assailed by various Protestant divines, both in England and on the continent, with extraordinary bitterness. He was not however without his supporters even at that time, while his memory and labours have had much justice done them at a later period. The most generally approved work of Acontius is intitled "De Methodo sive recta investigandarum," &c. (Basil, 1558) on the Method of studying the Sciences; which logical work is ably and neatly written. The following passage is a proof at once of good sense and foresight: "I perceive that it is my lot to live in an exceedingly cultivated age; and yet I do not so much fear the decisions of the present race of learned men, as I dread the rising light of a period still more cultivated than the present; for although the present century has produced, and still continues to produce, many eminent men yet I think I perceive before us a degree of knowledge and refinement beyond our present conceptions." This language is worthy the contemporary of Bacon: Bayle speaks very highly of this work. Another treatise by

Acotius, entitled "Ars muniendorum oppidorum," in Italian and Latin, was printed at Geneva in 1585. This calm and philosophical writer was a member of the Dutch congregation in Austin Friars; but being suspected of Arianism, he was called before Bishop Grindall; the result however has not been stated. The exact time of his death is unknown; but it is generally thought to have taken place in 1565. The *Stratagemata* of Acotius was printed at Basil 1563; again in 1610; and at Amsterdam in 1610. A French translation appeared at Delft in 1626.—*Bayle. Tiraboschi.*

ACOSTA (**JOSEPH**) a Spanish jesuit and missionary, was born about the year 1540 at Medina del Campo in Leon. He was several years employed in converting the Indians of South America, and became a provincial in the jesuits' college in Peru. In addition to treatises on the subject of his missionary labours and other subjects, he wrote in Spanish, and published on his return to Spain, "The Natural and Moral History of the Indies," octavo, 1591; which work was translated into French in 1600. Dr Robertson, and other elaborate writers on America, frequently refer to this writer, who died rector of the university of Salamanca in the year 1609.—*Moreri.*

ACOSTA (**URIEL**) a Portuguese, born at Oporto towards the close of the sixteenth century, and the member of a respectable family of Jewish origin, which had been led to embrace Christianity. In the first instance, he appears to have united great simplicity of character with an investigative spirit, and that enthusiastic turn of mind which implicitly follows the result of conviction, whatever the consequences. Brought up a Roman Catholic, in early life he is said to have been a strict observer of the ceremonies of that church; but, struck with what he deemed difficulties and inconsistencies, he gradually indulged doubts both of Roman Catholic authority and the divine origin of Christianity. This disposition to inquiry naturally led him back to a consideration of the religion of his forefathers, which, on a comparison with Christianity, he deemed the most satisfactory, and in consequence, at the age of two-and-twenty, determined to profess himself a Jew. It must be presumed that, from origin and connexion, a secret predilection for Judaism prevailed in the family, as Acosta induced his mother and two brothers to follow his example. The extreme rigour of the Portuguese laws against this species of relapse, and the rigid superintendence exercised over Christians of Jewish descent, rendered this family change exceedingly dangerous; and on this account the whole of them contrived to escape from Portugal, and seek refuge in Holland. This step could not be taken without considerable sacrifices; and among other advantages, Acosta himself forfeited a post of some profit. His sincerity therefore cannot be doubted; but, unfortunately for himself, he carried into the Jewish persuasion the same restless spirit of inquiry which had dissatisfied him with

Christianity. Induced to compare the customs and practices of the modern synagogues by the law of Moses, he ventured to request from the rabbis a dispensation as to certain observances which were not authorised by the law. This indulgence was of course refused; and Acosta braved excommunication, on the presumption that spiritual, unaided by temporal authority, was not very formidable. He soon found out, as various offending Irish Catholics have done since, that it is no trifling punishment to become the object of universal neglect and insult on the part of all with whom a high-spirited individual has been most connected. Acosta was treated with the grossest contumely by the whole tribe of Israel, and even his own brothers dared not address or salute him. This resentment was further excited by a piece which he wrote on the Sadducean theory, denying that the resurrection of the dead is supported by the law of Moses. An exhibition of scepticism so unequivocal enabled his Jewish persecutors to cite him before the civil court of Amsterdam, for the promulgation of an opinion inimical at once both to Judaism and Christianity; and for this offence he was imprisoned eight or ten days, fined 300 gilders, and his book was confiscated. Those who have studied the composition of human character, will not be surprised to hear that the next step of Acosta was to deny the authority of Moses, as he had previously done that of Christ. The resolution of this extraordinary man was however at last worn out; and after enduring the Jewish sentence of excommunication for fifteen years, he sacrificed his conscience to his interest, and signed a confession of his errors in the public synagogue. The result is not uninteresting. being assiduously watched, he was detected in the inadvertent neglect of some ceremonial, again accused of infidelity, and prosecuted with the utmost rigour. Another sentence of excommunication was then passed upon him, which he endured for seven years, when he submitted to the most humiliating penance ever devised by intolerance and bigotry. Having a second time signed a public confession, his restoration to the synagogue was accompanied with the open infliction of thirty-nine stripes; after which he was laid on his back at the door, in order that all who came out might trample on him. The mortification produced by these indignities, some abatement of which he had probably expected, so worked upon the spirit of Acosta, that after attempting to shoot his principal adversary with a pistol which missed fire, he discharged another at himself, as some accounts say, in 1640, but according to others in 1647. The unhappy career of this unfortunate man shows the inutility of pursuing certain lines of inquiry without steady principles and a calm temperament. Acosta displayed considerable ingenuity against the persecution which he endured from the Jews, in their appeal to a Christian tribunal on account of his indifference to both religions; justly observing, that all their hatred was produced by his aban-

donment of their own, while they mainly sought to injure him through the indignation of others.

Life of Acosta. Bayle.

ACRON or ACRO (HELLENUS) a scholiast of Horace, who lived in the seventh century. A copy of his notes, which were published in 1474, 4to. was sold at Dr Askew's sale. They were also reprinted at Venice, 1490, tolo. His "Scholia" are likewise to be found in the edition of Horace, Basil, 1527, 8vo.—*Biog. Universelle.*

ACROPOLITA (GEO.) a Byzantine historian, who enjoyed the dignity of Logothete, or chancellor, to Michael Palaeologus, in the thirteenth century. His "Historia Byzantina" was discovered in the East by Douza, and published in 1614; but the best edition is that of the Louvre, in Latin and Greek, folio, 1651. This work, which is the more valuable as the author describes what passed under his own observation, commences where Nicetas terminates, and comprehends the period from 1205 to the expulsion of the Latin emperors in 1261. Acropolita was a man of merit and an able mathematician. He died in 1233.—*Biog. Universelle.*

ACTUARIUS, a Greek physician of the thirteenth century, who distinguished himself by the analysis and employment of the milder cathartics and simple water. Henry Stephens printed a complete edition of his works, in folio, 1547; and another edition appeared at Leyden, 3 vol. 12mo. 1556.—*Moreri.*

ACUNA (CHRISTOPHER D') born at Burgos in Spain, 1597, became a jesuit in 1612, and subsequently a missionary in America. On his return to Spain, he published "Nuevo Descubrimiento de gran Rio de los Amazonas;" A new account of the great river of the Amazons; Madrid, 4to. 1641. Of this work, all the copies were destroyed except two, one of which was translated into French by Gomberville, "Relation de la Riviere des Amazones," 4 vols. 12 mo. 1682. The narrative of Acuna is very curious, and it is accompanied by a dissertation that is not less so.—*Moreri.*

ADAIR (JAMES) serjeant at law, was born in London, and became eminent about the time that John Wilkes so equivocally, yet popularly, enacted the part of patriot. Mr Adair sided with the popular party, and in 1771 was chosen recorder of London, an office which he held for ten years. On the breaking out of the French revolution, Mr Adair, who deserted the whigs, was counsel for the crown in the state trials, and at the time of his death in 1793, chief justice of Chester. He published, anonymously, a pamphlet, intitled "Observations on the Power of Alienation in the Crown." 8vo. 1763.—*Gent. Mag.*

ADAIR (JAMES MARITTRICK) a physician and native of Scotland, who for several years practised at Bath, where he was quite as much distinguished for his querulous disposition as his medical skill, which was however deemed respectable. Among other persons with whom he disputed was the still more eccentric Philip Thicknesse. He was subsequently physician to the commander-in chief and the colonial

troops in the island of Antigua. Dr Adair was the author of several medical tracts, as also of a pamphlet entitled "Unanswerable Objections against the Abolition of the Slave Trade," which, it need not be added, has been long ago adequately replied to. He died at an advanced age, at Harrowgate, in 1802.—*Un. Biography.*

ADAIR (JAMES) a trader and resident among the North American Indians for more than forty years. This gentleman published a singular work, entitled "The History of the American Indians, particularly those nations adjoining the Mississippi, East and West Florida, South Carolina, Georgia, and Virginia," 4to. 1775. He advances the curious opinion, that the North American Indians are descended from the Hebrews.—*Gent. Mag.*

ADALARD or ADELARD, born about the year 753, was the grandson of Charles Martel, and cousin german of Charlemagne, whose conduct, in regard to a divorce, so wounded his ideas of propriety, that he took the habit of a monk in the abbey of Corbie, of which he was subsequently made abbot. After the death of Charlemagne, he was banished on some unmerited suspicion by Louis the Meek, who however, at the end of five years, recalled him. The disposition of Adalard was peculiarly pious and meditative, and he exercised upon himself all the austerities which in those days assumed the character of devotion. He is however most distinguished for the foundation of a distinct abbey, called New Corbie, as a nursery for missionaries to convert the northern nations. Adalard promoted learning in his monasteries, being himself a distinguished scholar. His principal work was "A Treatise on the French Monarchy," some fragments of which are extant. The ancient statutes of his abbey of Corbie are in the fourth volume of D'Acheri's "Spicilegium."—*Dupin.*

ADALBERON, a celebrated archbishop of Rheims and chancellor of France, who distinguished himself, as a prelate and politician, under Lothaire, Louis V, and Hugh Capet. He was the son of Geoffry, Count of Ardennes, and possessed great firmness of mind and love of learning, which he much encouraged in his diocese. Several of his letters are among those of Gerbert, afterwards Sylvester II. He died in 933.—*Adalberon (Ascelinus)* was ordained Bishop of Laon in 977, by the preceding. He was an ambitious prelate and servile courtier, but is only mentioned here as the author of a satirical poem in 430 hexameter verses, dedicated to King Robert, of which Adrian Valois gave an edition, in 1663, 8vo. It contains some curious points of history. This prelate died in 1030.—*Biog. Universelle.*

ADAM (ALEXANDER) a learned school master and grammarian, was born at Rafford in the county of Moray, 1741, of humble parents, who however contrived to give him a good education. In 1761 he became assistant master of the high school of Edinburgh, and in 1771, head master of the same, when a dispute arose between him and the under masters, in consequence of his endeavours to introduce

a new Latin grammar of his own, instead of that of Ruddiman. The difference being referred to Dr Robertson, principal of the university, he decided in favour of Ruddiman. Dr Adam's work was published in 1772, under the title of "The Principles of Latin and English Grammar." It possesses considerable merit, especially in the estimation of those who are of opinion that the grammars of both languages should be taught at the same time. Dr Adam also compiled a "Summary of Geography and History," 1794, 8vo.; "Roman Antiquities," 1791, 8vo.; "Classical Biography;" and an abridged dictionary, entitled "Lexicon Lingua Latinae Compendiarium," 8vo.; all of which are much esteemed in relation to education. Dr Adam, who loved liberty, incurred some censure at the commencement of the French Revolution for letting his sympathies in favour of Gallic freedom become evident to his scholars. The weight of his character however bore him up. He died of apoplexy in 1809, aged 68, and was honoured with a public funeral.—*Life of Dr Adam, Edin. 3vo. 1810.*

ADAM (of Bremen) canon of the cathedral of Bremen, lived towards the end of the eleventh century. There remains of this author—1. an Ecclesiastical History in four books, which treats of the propagation of the Christian Faith in the North, entitled "Historia Ecclesiastica Ecclesiarum Hamburgensis et Bremensis, ab Anno 783, ad Ann 1072," Copenhagen, 1579, 4to. and Helmstadt, 1670, 8vo.; and 2. "Chronographia Scandinavia," 1615, 8vo. The latter production was reprinted at Leyden under the title of "De Situ Daniæ et reliquarum, trans Daniam Regionum natura." Adam employed his whole life in the functions of his office as a missionary, and in the compilation of his history. The time of his death is unknown.—*Moreri.*

ADAM (LAMBERT SIGEBERT) an eminent French sculptor, born at Nancy, Feb. 10, 1700, was also the son of a sculptor of considerable note. He received his first instructions from his father, and after passing four years at Paris, proceeded as a royal pensionary to perfect himself in Italy, where he remained ten years. He finished, while in Italy, several considerable works, one of which was the restoration of the mutilated group of the family of Lycomedes, discovered by Cardinal Polignac in the ruins of the villa of Marius. He returned to Paris in 1733, and was extensively employed in palaces and gardens, one of the most celebrated of his works being the groupe of the "Seine and Marne," for the cascade of St Cloud. In 1737 he was elected a member of the French academy, and exhibited on his admission a "Neptune calming the Waves." He subsequently executed the groupe of "Neptune and Amphitrite" for Versailles, for which, besides the stipulated price, he obtained a pension of 500 livres. One of his most admired productions is a figure of St Jeromo at St Roch. In all his pieces he exhibits genius, but occasionally alloyed by deficiency in taste, owing to the then prevalent tendency to con-

found the provinces of painting and sculpture. In 1754 he published "Recueil de Sculptures Antiques Grecques et Romaines," folio, for which he made designs. He died of an apoplexy in 1759.—*D'Argenville, Vies de Jam. Sculp.*

ADAM (NICHOLAS SEBASTIAN) brother of the foregoing, was born at Nancy in 1705, and also studied under his father at Paris and at Rome. After a residence of nine years in Italy, he returned to Paris, and was admitted into the academy, on which occasion he exhibited his model of the "Prometheus chained," the statue from which was not finished until 1763, when the King of Prussia offered 30,000 francs for it; Adam said that it was executed for the king his master, and no longer his own property. He died in 1778, in his seventy-fifth year, with a reputation not inferior to that of his brother, and highly respected for the integrity and mildness of his character.—A younger brother, *Francis Gaspard*, also attained eminence as a sculptor, but none of his works are recorded.—*Ibid.*

ADAM (MELCHIOR) a German biographer, who lived in the 17th century, was a native of Silesia, and educated in the college of Brieg, where he became a firm Calvinist. In due time he was appointed rector of a college at Heidelberg, where he published his first volume of "Illustrious Men," in the year 1615. This volume consists of poets, philosophers, writers on polite literature, historians, &c. A second, treating of divines, was printed in 1619; a third followed, of lawyers; and a fourth, of physicians; the last two were published in 1620. All the learned men here treated of flourished in the sixteenth and beginning of the seventeenth centuries, and were either Germans or Flemings; while the divines are exclusively Protestant. An additional volume however, containing the lives of twenty divines of other countries, was subsequently published separately. Bred a Calvinist, he is deemed partial by the Lutheran Germans, who consider his selection of names to be very injudicious and unfair. His biographical labours were collected into one volume folio at Frankfurt, under the title of "Dignorum laude Virorum, quos musa vetat mori, immortalitas." He wrote several other works, but is chiefly known by his biography, which, although not very ably written, has been much used in every subsequent collection.—*Moreri. Bayle.*

ADAM (NICHOLAS) a French grammarian, born at Paris in 1716, was many years professor in the college of Lisieux. Through the patronage of the Duke of Choiseul, he resided at Venice as charge d'affaires for France nearly twelve years, and on his return published various elementary works on grammar, which procured him considerable reputation.—1. "La vraie manière d'apprendre une langue quelconque, vivante ou morte, par le moyen de la langue Française," 1787, 5 vols. 8vo. This work, which includes a French, Italian, Latin, English, and German grammar, has often been reprinted. 2. "Les quatre chapitres de la Caïson, de l'Amour de Soi; de l'Amour du Prochain, de la Vertu," &c. 8vo. 1780. H:

died in 1792, with the character of an able and amiable man.—*Biog. Universelle.*

ADAM (ROBERT) architect, was born in 1728 in the town of Kirkcaldy, Fifeshire, North Britain: he was the second son of Mr William Adam of Maryburgh, an architect of considerable reputation. Mr Adam was educated at the university of Edinburgh, where he formed distinguished literary connexions, and followed up his studies by all the advantages which a free access to the most approved models of elegance, both at home and on the continent, could ensure to him. As he advanced in life, too, he formed friendships and intimacies of the highest consequence, so that his attainment of eminence in his profession was peculiarly rapid and easy. On his return from Italy, in the year 1762, he was appointed architect to the king; an office which he held for six years, when he resigned it to become a member for Kinrossshire in the British parliament. In 1764 he published the result of his researches at the Emperor Dioclesian's villa at Spalatro in Venetian Dalmatia, in one large volume in folio, entitled "Ruins of the Palace of the Emperor Dioclesian, at Spalatro in Dalmatia," which production is enriched with seventy-one ably executed plates. In conjunction with his brother, James Adam, he now engrossed the business of the nobility and gentry, both in the construction of many modern edifices and in the embellishment of ancient mansions. In 1773 the brothers published "The Works of R. and J. Adam" in numbers. The noble improvement called the Adelphi (brothers) was their work, the name being adopted in reference to their fraternal connexion. So great was the professional lead taken by the subject of this article, that in the space of one year before his death he designed eight great public works, besides twenty-five private buildings; exhibiting so much variety in style and tasteful composition, that his character as an architect might have rested on them alone. Neither was his genius confined to the strict line of his profession; his numerous drawings in landscape have merited and obtained the highest praise. He died at his house in Albemarle-street, March 3, 1792, and was buried on the 10th of the same month in Westminster Abbey; his brother James, who was also very eminent as an architect, and the designer of Portland-place, survived him about two years and a half, dying October 17, 1794. *Un. Biog. Diet.*

ADAMS (JOHN), second President of the United States of America, and a political writer of considerable reputation, was born at Braintree in Massachusetts, October 19, 1735, being a descendant from one of the families which founded that colony. Before the Revolution he had attained great eminence as a lawyer, and published an essay "On Canon and Feudal Law." On the breach with the mother country, Mr Adams, along with most natives of leading reputation and influence, espoused the colonial cause, and employed his pen with great activity. He did not however act an extreme part, and even lost some credit with

the more violent of his party for underta' in the cause of Captain Preston, who was tried for his life for firing on a tumultuous assemblage of people, and—owing in a great measure to the spirit and eloquence of his advocate—acquitted. Being among the first to perceive the impossibility of a cordial reconciliation with Great Britain, he was one of the principal promoters of the memorable resolution passed July 4, 1776, declaring the American States free, sovereign, and independent. He subsequently proceeded with Dr Franklin to the court of France, in order to negotiate that treaty of peace and alliance which the Bourbon family have ever since had so much reason to remember. He was afterwards nominated plenipotentiary to Holland, and materially contributed to hasten a rupture between the United Provinces and Great Britain. Lastly, he was employed in negotiating a general peace at Paris, and was the first ambassador received by this country from America after it was effected. Mr Adams also took a great share, in conjunction with Washington, Hamilton, and other federal leaders, in forming the present constitution of the United States, in 1787, when General Washington was elected president and Mr Adams vice-president. On the breaking out of the French revolution the popular mind in America very naturally sympathised with the feelings which led to it; and in consequence the people exhibited some distaste to the more aristocratical and conservative parts of their own constitution. This manifestation of feeling induced Mr Adams to undertake his work, entitled "A Defence of the Constitution of Government of the United States of America," 1787-8, 3 vols. 8vo. which he afterwards re-published with the title of "History of the Principal Republics." This work exhibits an endeavour to investigate into the most eligible distribution of powers and functions in a state, in order to secure the highest degree of freedom and happiness. With some bias towards a preconceived theory, it is a sensible and able production. On the re-appointment of General Washington to the presidency, Mr Adams was again chosen vice-president; and on the retirement of that eminent character, was elected his successor in preference to Mr Jefferson. At the conclusion of his presidency Mr Adams retired from public life, with the character of an able, active, independent, and upright statesman, even among those whose party views were opposed to his opinions.—[Strange to say, his death was so formally announced as having taken place October 2, 1802, that we had abridged, from the Universal Dictionary, in 32 volumes (1812) the foregoing account, which may as well stand, although Mr Adams is still living in retirement at a very advanced age.]—Since the retreat of Mr Adams, however, the distinction between federalist and democrat has become much less prominent, owing to a considerable relaxation in party spirit on both sides; so that the recent election is not considered as a triumph by either. It may be as well to observe, th-

some American journalists place the date of Mr Adams' birth earlier than 1735, and make him fourteen years older.—*Morse's Geog.*

ADAMS (JOSEPH) a physician, who was brought up by his father, an apothecary in Bread-street, to his own profession; but who, in 1796, obtained a diploma from Aberdeen and proceeded to Madeira, where he practised several years; and on his return in 1805 was elected physician to the Small Pox Hospital. He died in 1818 of an accidental fall, aged 62. He is mentioned as author of "Observations on Morbid Poisons;" "A Tract on the Cancerous Breast;" "An Inquiry into the Laws of Epidemics;" "An Account of Maderia;" "A Treatise on the Hereditary Peculiarities of the Human Race;" "A Manual on Vaccination;" "Life and Doctrines of John Hunter;" "A Treatise on Epilepsy;" and various miscellaneous papers in medical and other journals.—*Gent. Mag.*

ADAMS (WILLIAM) a divine of the Establishment, born at Shrewsbury in 1707, was a prebendary at Gloucester, and in the enjoyment of other preferment. He was the friend of Dr Johnson, and besides a volume of sermons, wrote "An Answer to Hume's Essay on Miracles."—*Univ. Dictionary.*

ADAMSON (PATRICK) a Scottish divine, was born at Perth, in the year 1536, and studied at the university of St Andrews, of which see he subsequently became archbishop. On leaving the university he assumed the humble but useful occupation of a schoolmaster at a village in Fife, and was put into the road of preferment by a neighbouring gentleman, who sent him with his son to France, in the capacity of tutor. On the birth of a son to Mary queen of Scots, Adamson, who happened to be at Paris, thought he could do nothing better than publish a Latin poem on the occasion, in which he styled the infant James "most serene and noble prince of Scotland, England, France, and Ireland." This imprudence gave so much offence, that the author was confined for six months. During the massacre of St Bartholomew, Adamson escaped the general slaughter by lying concealed in a public inn for seven months, the master of which was thrown from the roof of his own house, at the age of seventy, for harbouring a heretic. During his concealment he turned the Book of Job into Latin verse, and in the preface to this work he narrates the foregoing atrocious circumstance. In 1573 he returned to Scotland, took orders, and became minister of Paisley. Being nominated in the commission for settling the jurisdiction and policy of the Scottish church, his zeal for episcopacy was rewarded with the primacy; an exaltation which naturally excited Presbyterian jealousy in the highest degree. The general assembly began by requiring him to submit to an examination, and then forbade the chapter of St Andrews to elect him; a mandate which was not obeyed, although he was not confirmed in his see until the assembly had sanctioned the validity of his election. The animosity to him however still continued, and in consequence of his taking, while suffer-

ing from a painful disease, some remedy from the hands of an old woman, the persecuted prelate was accused of dealing with witches, and to the equal discredit of religion, humanity, and common sense, the poor woman, after an imprisonment of four years, was burnt for witchcraft. From this species of persecution the archbishop was temporarily delivered by the favour of James, who sent him ambassador to the court of Queen Elizabeth, where, by the tenor of his mission and general conduct, he still further exasperated the Presbyterian leaders at home. On his return to Edinburgh, in 1584, he brought forward several acts in favour of episcopacy; but the presbytery proving triumphant, he was first excommunicated and then tried by the general assembly, under various acts of accusation, one of which was that, contrary to a law then existing in Scotland, he had married the earl to the countess of Huntley without requiring a confession of faith. The miserable prelate was now deserted even by James, who granted the revenue of his see to the duke of Lennox; so that, goaded by abject poverty, he wretchedly submitted to deliver to the assembly a formal recantation of his views in regard to church government; a humiliation which produced him nothing, as he was supported to the last by charitable contribution, and terminated his unhappy life in the year 1599. He was an eloquent preacher, but possessed not sufficient intrepidity for the arduous part which he aspired to play, or to enable him to stem the unrelenting rigour with which he was crushed to the earth by the stronger spirits opposed to him. His works were printed in a quarto volume, London, 1619, besides which he wrote several theological tracts, together with what has been deemed a comparatively candid history of his own times, which has never been published.—*Biog. Brit.*

ADANSON (MICHAEL) an eminent French naturalist, of Scottish extraction, was born at Aix in Provence, in April 1727. He was educated at the university of Paris, where he gave proofs of uncommon application; and appearing much younger than he really was in consequence of the smallness of his stature, his success in carrying off the university prizes excited considerable mirth. The celebrated naturalist, Needham, happening to be present at one of these examinations, presented Adanson with a microscope; and to this accident is attributed his first bias towards natural history. His parents intended him for the church, and had even procured him a prebend; but his thirst for general science induced him to resign it, and in 1748 he made a voyage to Senegal, the unhealthy character of which had prevented its being visited by preceding naturalists. Here he made a vast collection of specimens, which he classed in a manner that he deemed an improvement on the systems of Tournefort and Linnæus. He also extended his enquiries to the climate, geography, and manners of the people; and the result of his labours appeared in his "Histoire Naturelle de Senegal," 4to, 1757, of which an ill-executed abridgment was

published in London, 8vo, 1759. Soon after his return from Senegal he was elected a corresponding member of the academy of sciences, and was much esteemed, but might not have been able to persevere in these studies, except by the generous assistance of M. de Bombarde, a liberal patron of science. Thus aided, in 1763 he published his "Familles des Plantes," 2 vols. 8vo. an enlarged and improved edition of which appeared some years after. He subsequently laid down the plan of an immense general work upon natural history, for which undertaking however he failed in securing the expected patronage of Louis XV. Of an active and speculative turn of mind, in 1753 he laid before the French East India Company the plan of a colony on the coast of Africa, where all sorts of colonial produce might be raised without enslaving the negroes. This scheme was not attended to; but in 1760, when the English became possessed of Senegal, they made him a liberal offer to communicate his plan, which he patriotically declined to do. He also refused invitations to Spain and Russia on the part of Charles IV and Catharine II, and being appointed royal censor in 1759, from the emoluments of this place, that of academician, and several successive pensions, he might have rendered himself easy in his circumstances, but for his profuseness in the collection of materials for the great work which was always uppermost in his imagination. By stripping him of his places therefore, the Revolution reduced him to absolute poverty; so that when, on the formation of the Institute, he was invited to become a member, he answered that he could not accept the invitation, as he "had no shoes." The minister of the interior then procured him a pension, on which he subsisted until his death in 1806. He left behind him a great number of manuscripts, and the character of an indefatigable student of Nature, but somewhat over tenacious and self conceited. He considered himself the rival of Linnæus, and Haller thought him worthy to be so.—*Biog. Universelle*.

ADDISON (LANCELOT) an English divine, was born at Crosby Ravensworth in Westmorland, in 1632, and from Appleby school was removed to Queen's College, Oxford. In 1658 he was chosen one of the Terræ Filii; but his attachment to the Stuarts having led him in his oration to satirise the then depositories of power, he was compelled to ask pardon on his knees. He soon after quitted Oxford, and lived retired until the Restoration, when he accepted the chaplaincy of the garrison of Dunkirk, and subsequently that of Tangier. Returning to England, he was made chaplain to the King, and soon after obtained the living of Milston in Wilts, with a prebend in the cathedral of Salisbury. In 1683 he was promoted to the deanery of Lichfield, and died in 1703. Dean Addison is the author of—1. "A Description of West Barbary," 8vo. 1671; 2. "An Account of the Present State of the Jews," 1677; 3. "The Life of Mahomet, 8vo, 1678.—*Biog. Brit.*

ADDISON (JOSEPH.) The bearer of this

name, so highly celebrated in English literature, was the son of Dr Addison, the subject of the foregoing article. He was born May 1, 1672, at his father's rectory, Milston, Wilts. After receiving the rudiments of education at home, at Salisbury, and at Lichfield, he was removed to the charter-house, then under the guidance of Dr Ellis, where he contracted his first intimacy with Mr afterwards Sir Richard Steele. At the age of fifteen he was entered of Queen's College, Oxford, where he soon became distinguished for the ardour with which he cultivated classical literature, and for his skill in Latin poetry. His poems in the latter language he appears to have highly valued, as he himself collected the second volume of "The Musæ Anglicanæ," in which they were inserted. In the lighter of these efforts, a vein of that humour is discernible, for which he afterwards became so celebrated. It was not until his twenty-second year that he published any thing in English, when he sent out a copy of verses addressed to Dryden, which attracted considerable attention. His next production was a version of the fourth *Georgic*, which the same venerable poet highly commended. The able discourse on the *Georgics*, which is prefixed to Dryden's translation, rapidly followed; and various minor pieces continued to flow from his pen, until at length in 1695 he ventured to address a complimentary poem, on one of the campaigns of King William, to the lord keeper Somers, who procured for him a pension from the crown of 300*l.* per annum, to enable him to travel. In 1701 he wrote his epistolary poem from Italy, addressed to lord Halifax, which is by many esteemed the most elegant and finished of his poetical productions. On his return home he published his travels, which he addressed to lord Somers. This work was somewhat neglected in the first instance, but subsequently, as a classical and scholastic tour, became exceedingly popular. The death of king William deprived Mr Addison of the benefit of a small appointment as a confidential resident about the person of prince Eugene, then commanding for the Emperor in Italy, as also of his pension; so that on his return to England he found all his patrons displaced, and himself in a state approaching to indigence. This depression was happily not lasting; for lord Godolphin applying to lord Halifax to recommend to him a poet capable of celebrating the recent splendid victory of Marlborough at Blenheim, the latter named Addison, who produced his celebrated poem, "The Campaign," for which he was rewarded with the place of commissioner of appeals, in succession to Mr Locke. From this time he rapidly increased in consequence in 1705 he attended lord Halifax in his mission to Hanover, and in the succeeding year was made under-secretary of state. These employments did not engross him from the pursuit of literature; for while Steele attributed to him some of the best scenes in the comedy of "The Tender Husband," he composed and published the opera of "Rosamond," in order to discover if English poetry could not be made

compatible with that species of entertainment. Rosamond however failed on the stage, owing it is said to a defect of musical merit in the composer. When the marquis of Wharton was appointed lord-lieutenant of Ireland, Mr Addison attended him as secretary, and was made keeper of the records of Birmingham tower, with an increased salary of £300 per annum. During the absence of his friend in Ireland, Steele commenced his *Tatler*, the first number of which appeared April 22, 1709, and it is scarcely necessary to add, that Addison became a distinguished coadjutor. These pleasant papers became the precursors of a body of writing which, although not absolutely English in origin, has become essentially so in tone, spirit, effect, and social adaptation. Neither La Bruyere in France, whose labours were congenial, nor Casa nor Castiglione in Italy, all of whom preceded the *Tatler*, opened a field of observation at once so diversified and comprehensive, so important and yet familiar. The French and Italian writers confine themselves more to manners; the English unite, with an inculcation of decorum and the minor morals, the noblest lessons both for the heart and understanding—and that by a plan admixive of all the piquancy of wit and waywardness of humour. It may indeed be safely asserted, that much of the moral discrimination and practical good sense of the middle ranks of England are attributable to the timely prevalence of these very happy literary vehicles for general instruction and amusement. The assistance of Addison in the *Tatler* was considerable; for Steele, with great modesty, describes himself in the situation of a weak prince, who calls in a powerful auxiliary to his own annihilation. The ascendant character of Addison has induced many critics to credit Sir Richard too literally; for while destitute of the fine tact and eminently rigid keeping of the former, nothing can be more free, spontaneous, and felicitous than the greater part of the humorous sketching of Steele, however inferior in gravity and pathos. Two months after the cessation of the *Tatler* on March 1, 1711, the *Spectator* was undertaken, upon a more regular plan under the same happy auspices, in which memorable production the labours of Addison are distinguished by one of the letters composing the word *Clio*. Of this admirable and highly popular work, twenty thousand numbers were sometimes sold in a day. It ended on the 6th September 1712; and when laid down, another periodical work commenced under the same title, in which Addison took a share; but as the encouragement was not great it soon terminated. “*The Guardian*” followed, to which he also freely contributed. While acknowledging the share taken by Addison in periodical labours, it may be proper to observe, that he is generally esteemed the author of several numbers of the “*Whig Examiner*,” published in 1710, as a party paper opposed to the famous “*Tory Examiner*.” With kindred political views he also composed a short humorous piece in 1713, in exposure of the French Commerce Bill, entitled “*The late Trial and Conviction of Count Tariff*.” In the

same year was brought out the famous play of “*Cato*,” which he had commenced while on his travels, without any view to performance; but as the subject was deemed favourable to liberty and the principles of the Revolution, which were then much assailed both openly and covertly, he was prevailed upon to adapt it for the stage. The effect was extraordinary: both parties concurred in crying it up to the skies; the Whigs, as congenial with their genuine principles and sentiments; and the Tories as no way liable to the implied censure. To this play Pope wrote an admirable prologue, and Dr Garth a humorous epilogue. *Cato* ran thirty-five nights without interruption, received all sorts of poetical encomium, and the distinction of a furious critique by Dennis. The merit of this celebrated play is now estimated by quite another scale than is furnished either by the praise or the censure of its own days; and while passages are admired as oratorical and impressive, its dramatic pretension is at present altogether denied. After the death of Anne, Addison was again employed, being appointed secretary to the Lords Justices; and he subsequently visited Ireland a second time, as secretary to the earl of Sunderland. On the latter nobleman’s removal, he was made a lord of trade; and on the breaking out of the rebellion of 1715, wrote the most considerable of his political periodical works, entitled “*The Freeholder*,” in which the strife of party is very pleasantly softened by the admirable humour of the delineator of Sir Roger de Coverley. About this time too he published his admired poetical letter to Sir Godfrey Kneller, in which he so ingeniously adapts the heathen mythology to the English sovereigns, from Charles II to George I inclusive. In 1716 he married the countess of Warwick, which, owing to the jealous and tenacious spirit of the lady, proved a very unhappy match. In 1717 he was appointed one of the principal secretaries of state by Geo. I; but after holding the office for some time, resigned it on the plea of ill health, though unfitness for the duties of the situation is now known to have been the real cause. His intention at this time was to compose a “*Defence of the Christian Religion*,” a part of which work was published after his death, and is that known by the title of “*Addison’s Evidences*.” He also purposed to paraphrase the *Psalms of David*; but a long and painful relapse prevented the completion of these pious designs, and terminated his life at Holland House, Kensington, on the 17th June, 1719, in the commencement of the forty-eighth year of his age. When given over, Addison sent for his stepson, the young earl of Warwick, and grasping his hand, exclaimed impressively, “*See how a Christian can die*.” He left an only daughter by the countess of Warwick. Soon after his decease, an edition of his works was published by his intimate friend Tickel, in which, besides the productions already noticed, appeared several translations of Ovid’s *Metamorphoses*, and the admirable “*Dialogues on the Usefulness of Ancient Medals*.” Two papers, enti-

ted "The Old Whig," in defence of the celebrated bill for limiting the number of the peerage, which measure was vehemently attacked by Steele, were not included in this edition, but published separately. It is melancholy to remark that they treat his old friend and associate with very contemptuous asperity. Few men have received more praise than Addison, either as a moral or a literary character; and in both capacities much is due to him. Possessed of the qualities of discretion and self-government in the very highest degree, his career in society exhibits the eminence to which, in conjunction with high talents, they almost certainly conduct the individual who, like Addison, is favourably introduced to the world. His talents as a man of business and practical statesman have, with some appearance of reason, been denied; and indisputably the *caste* of his literary character seems altogether uncongenial with the bustling activity of office—a fact which may be admitted without subscribing to the hackneyed notion of the unfitness of men of genius for active pursuits. Yet however the refined taste and bashful temperament of Addison might impede him on special occasions, it is evident that he possessed considerable weight and influence in the way of confidence and advice. It is highly to his honour that his character commanded great respect from opponents as well as confederates, and that he was on terms of friendship with the most eminent men on both sides. That political feelings should occasionally interrupt the cordiality of these intimacies is by no means so surprising as that, under many of the circumstances, they should have existed at all. Literary jealousy and some of the airs of minor patronage, have been attributed to Addison; and ably as Judge Blackstone, in the "Biographia Britannica," has refuted the unqualified statement of Ruffhead, it is to be feared that some jealousy of the rising fame of Pope had to do with the untimely appearance of "Tickel's Iliad." Whether the celebrated character of Atticus was altogether merited, is to be doubted; but the publication of those very severe lines by Pope, after the death of Addison, announces the opinion, if not the generosity, of their author. Addison's treatment of Steele is also liable to animadversion, especially his causing him to be arrested, which however is said to have been done to startle him out of a career of reckless imprudence. It is highly to the honour of Addison that, while fervent and zealous in his own religious views, he was very tolerant towards dissent, and even patronised the learned but eccentric Whiston. In his manners this eminent man was bashful and reserved, except among his more direct intimates, who were chiefly composed of literary men of Whig principles, who sought his friendship and protection, and among whom it is to be feared he indulged a predilection for the bottle, which is said to have latterly much affected his health. As a poet the fame of Addison is now altogether eclipsed, and he is held to amount to little more than a tasteful, ingenious, and elegant versifier. As a critic, too he is thought to exhibit no

great skill in analysis or reduction to principle, although generally unerring in the display of taste. All this however is of minor consequence, as his literary character is firmly supported by the exquisite humour, the chaste imagination, the accurate taste, the correct sentiment, and the graphic power, displayed in the "Spectator," to which merit is also to be added the formation of a style which is evidently the model of the most felicitous that has ever since been prevalent. On these celebrated papers his fame will securely rest while there remains among us sufficient taste to appreciate the skill that created the De Coverleys, the Whimbles, and the Honeycombs, or the pathos and imagination which inspired the noble allegory of Pain and Pleasure, the Vision of Mirza, the stories of Marathon and Yaratilda, of Theodosius and Constantia, of Abdalla and Balsora, &c. Addison's productions also form a conspicuous instance of the possibility of satire without personality, and of wit without ill-nature; and when it is considered that his literary talents were uniformly exercised in the cause of virtue and of social ease and decorum, it is impossible not to regard him as at once an honour to his country and a benefactor to mankind.—*Biog. Brit.*

ADELARD, a Benedictine monk of Bath in the early part of the 12th century, was a man of considerable learning and science for the period. He travelled for information into Egypt and Arabia, and translated Euclid's Elements from the Arabic into the Latin before any Greek copies had been discovered. He also translated an astronomical work from the Arabic, and was the author of a treatise on the seven liberal arts, and of several mathematical and medical treatises, which are still in MS in Corpus Christi and Trinity Colleges, Oxford.—*Hutton's Math. Dict.*

ADELUNG (JOHN CHRISTOPHER) a learned German grammarian and philologist, was born in 1734 at Spantekow in Pomerania. He finished his education at the University of Halle, and in 1759 was appointed professor of the Academy of Erfurt, which office however he soon relinquished and settled at Leipsic, where he was made librarian to the elector of Saxony in 1787, and where he died in 1806. Adeling executed for Germany what the Academy della Crusca and the French Academy accomplished for Italy and France, and Dr Johnson for England, by the completion of his "Grammatical and Critical Dictionary," Leipsic, 1774-1786, 5 vols. 4to; of which work new editions much enlarged appeared in 1793-1801. He also wrote "Glossarium manuale ad Scriptores mediæ et infimæ Latinitatis," Halle, 1772-1784; three German Grammars; a "Treatise on German Style," 2 vols. 8vo; "Supplements to Jæcher's Dictionary of Literary Men," 2 vols. 4to; "History of Human Folly, or Lives of the most celebrated Necromancers, Alchemists, Exorcists, Diviners," &c., a species of Cyclopædia in four parts, a work of great merit; "Essay on the History of the Civilization of Mankind;" "The History of Philosophy," 3 vols.; "Treatise on German Orthography,"

8vo; "The History of the Teutones, their Language and Literature, before the general Migration," 8vo; "Mithridate, or a Universal Table of Languages, with the Lord's Prayer in one hundred Languages," 8vo. Adelong, notwithstanding the extent and profundity of his literary labours, to which he afforded fourteen hours a day, was of a strong constitution and gay temperament. He was never married, but loved the pleasures of the table, and his cellar contained forty kinds of wine. He is highly esteemed in Germany for the great utility of his researches.—*Biog. Universelle*.

ADHELM, a learned prelate under the Saxon Heptarchy. He was of royal birth, being nephew to Ina king of Wessex, and was author of several poetical as well as polemical writings, an edition of which was published at Mayence in the beginning of the 17th century. William of Malmsbury, who wrote his life, relates that he was the first English author who composed in Latin, and also the first English poet. He died bishop of Sherborne in the year 709.—*Biog. Brit.*

ADLERFELT (GUSTAVUS) a Swedish historian of the time of Charles XII, whom he accompanied throughout his campaigns. He is much esteemed for the minuteness and accuracy with which he details the battles, &c. of his royal master, to whose suite he was personally attached, and of the whole of whose military operations he was an eyewitness till his death, which took place at the battle of Pultowa, so fatal to the Swedes, in 1709. It is not a little singular that his history is continued up to the very day when a cannon ball deprived him of life. A translation of this work into the French language was published by his son, thirty years after his father's death, in four duodecim volumes.—*Nouv. Dict. Hist.*

ADOLFATI, an Italian composer, author of several operas. His most effective production was a piece written in imitation of Marcello, in which he united two sorts of time in the same air, one consisting of two notes, the other of three. He was a scholar of Galuppi.—*Burney*.

ADOLPHUS (Count of Cleves) celebrated by the institution of the Order of *Fools* in 1380, which consisted of the principal noblemen of Cleves. Each of the companions wore a silver fool or jester on his mantle; and like other buffooneries of this class, religious ceremonies were mixed up with the mummery. This order has long ceased to exist.—*Biog. Universelle*.

ADRETS (FRANCIS DE BEAUMONT, Baron des) a Huguenot leader, of a cruel, fiery, and enterprising spirit, such as civil commotions bring into activity in all countries. Resentment to the duke of Guise led him to side with the Huguenot party in 1562, and he signaled himself by many able and daring exploits, the skill and bravery of which were soiled with the most detestable cruelty. It formed part of his amusement to devise strange punishments for his Catholic prisoners, some of whom he compelled to leap from the tops of towers on the points of pikes held below to receive them. Like other ruffians of this description, he would occasionally be capricious on the side of mercy:

an anecdote is told of a soldier who, being reproached by him for twice hesitating before he took the leap, replied—"Monsieur le Baron, with all your bravery I defy you to do it in three," which sally saved his life. The chief excuse pleaded for these atrocities was the similitude of barbarities on the other side. In consequence of the odium produced by so much cruelty, he was refused the government of the Lyonnais by Conde and Coligni, and exhibited the strength of his religious principle by turning Catholic, but was seized at Romans, and would have been executed had not the peace saved him. He afterwards served on the Catholic side, but with little reputation, and lived for the remainder of his life abhorred yet unmolested, affecting the humour of Sylla, by going about carelessly and unarmed. Being informed that a young nobleman spoke injuriously of him, in consequence of the death of the latter's father in a battle against him, he repaired to Grenoble, and in the presence of the duke of Mayenne, to whose suite he belonged, exclaimed that he had left his solitude and had returned into the world to see if any one bore him a grudge, for in that case his sword was not so rusty, nor was he so impaired by age, as to refuse satisfaction to such individual. The hint was not attended to. Bayle suspects that the cruelty of Des Adrets has been much exaggerated by Maimbourgh, Brantome, Moreri, Daniel, and the Catholic writers generally, some of the facts alleged by them being incredible altogether, while others are known to be false. His aspect, like his character, was most forbidding. He had a son of a temper like his own, who took a part in the massacre of St Bartholomew. He died in 1587.—*Nouv. Dict. Hist.*

ADRIAN (PUBLIUS ÆLIUS) the Roman emperor, was born at Rome, A. D. 76. His father, who was the cousin german of Trajan, died when Adrian was ten years of age and left him in the guardianship of his illustrious kinsman. He began to serve very young, and was the person chosen by the army of Lower Mæsia to carry the news of Nerva's death to Trajan, whose grand niece and heiress Sabina he married, chiefly through the favour of the empress Plotina. His subsequent rise was rapid, being the companion of Trajan in most of his expeditions. He particularly distinguished himself in the war against the Dacians, and was successively appointed prætor, governor of Pannonia, and consul. After the siege of Atrax in Arabia, Trajan left him in command of the army, and when he found his death approaching, adopted him, although the reality of this adoption is disputed by some authorities, who attribute his elevation to the intrigues and good offices of the empress Plotina. On the death of Trajan he assumed the reins of government, with the concurrence of the Syrian army; and the senate readily ratified the act. The first care of Adrian was to make a peace with the Persians, and to restore all the provinces just taken from them. He had then to turn his attention to certain revolts and insurrections in Egypt, Lybia, and Palestine; and after quickly concluding a peace with the Parthians, he returned to Rome. He

would not accept of a triumph, but sought popularity by a repeal of fifteen years' accumulation of arrears of public debt, by a vast reduction of taxation generally, and by immense largesses to the people. He was less generous to certain senators accused of a plot against him, four of whom, although of consular rank and intimates of Trajan, he caused to be put to death. A year after his return to Rome, Adrian marched against the Alains, the Sarmatians, and the Dacians, but showed a greater desire to make peace with these barbarians than to extend the progress of the Roman arms. This policy has been attributed to envy of the fame of his warlike predecessor; but a due consideration of the subsequent history of the empire will amply justify him against the imputation; it having arrived to an extent which rendered all increase to its limits a source of weakness rather than of strength. Adrian was an active prince and a great traveller, visiting every province in the empire, not simply to indulge his curiosity, but to inspect the administration of government, repress abuses, erect and repair public edifices, and exercise all the vigilance of personal examination. In 120 he passed over from Gaul to Britain, where he caused a wall to be built from the mouth of the Tyne to Solway Frith, in order to secure the Roman provinces from the incursions of the Caledonians. Like Trajan he lived familiarly with his friends, but was much more suspicious, and could not repose in them the same confidence. When at Rome, he cultivated all kinds of literature, conversing with learned men, and giving and receiving information in their society, but not without occasionally displaying a degree of jealousy and caprice altogether unworthy his rank and talent. One of the friends of Favorinus asked the latter, who knew the Emperor's foible, why he improperly yielded to Adrian in an argument: "Wouldst thou not have me yield to the master of thirty legion?" was the reply. Adrian had again to visit the East, to repress the Parthians, who paid little regard to treaties. On his return he passed the winter at Athens, and was initiated in the Eleusinian mysteries. He published no edict against the Christians, yet they nevertheless endured considerable persecution until, upon the remonstrances of Quadratus, bishop of Athens, and of Aristides, an eminent Christian, he ordered the persecution to cease; but no credit is due to the unauthorised assertion of Lampridius, that he thought of building a temple to Christ. Jerusalem was however rebuilt by him, which he named *Ælia Capitolina*; but the Jews soon after revolting under the standard of the pretended messiah Barchochebas, he forbade them to enter Jerusalem, and insulted them by erecting a temple to Jupiter on Mount Calvary, and by causing images of swine to be engraven on the city gates. Adrian died at Baïæ in 138, in the sixty-third year of his age, of the dropsy, from which disease his sufferings were so great as apparently to affect his reason. He had some time before adopted Lucius Verus, who dying before him, he happily selected the virtuous

Titus Antoninus, on condition that he should in his turn adopt Marcus Annii Verus, the son of Lucius Verus. It is difficult to convey a genuine notion of this emperor, in whom virtues and vices, wisdom and weakness, were singularly intermixed. Although generally speaking a just and able ruler, he was often capricious, envious, and cruel, and displayed most disgraceful and discreditable predilections, especially in his attachment to the youth Antinous, who it is said devoted himself to death in pursuance of some magic rite which the excessive superstition of Adrian led him to suppose would benefit himself. The gratitude of the Emperor was boundless, and went so far as to erect images and temples to the deceased, and even to build a town to be called by his name. The credulity of Adrian was very great for a man otherwise so eminently gifted, yet it was accompanied with much scepticism in relation to the nature of a future state, as is evident from his light yet pathetic address to his soul, composed on his death-bed. It was with much difficulty that his successor Antoninus could obtain the compliment of a decree from the senate for allowing him the usual compliment of divine honours, but he finally succeeded. Adrian wrote several books, among others a history of his own life, under the name of Phlegon, one of his freedmen, which is no longer extant.—*Dion. Cassius. Bayle.*

ADRIAN I. There are several popes of this name; the first who bore it was a noble Roman, raised to the papal chair in 772. He had a taste for architecture, which he evinced in the embellishment of St Peter's church. The munificence of his disposition rendered him highly popular during the calamities occasioned by an inundation, from the Tiber overflowing its banks in his pontificate. Besides the damage done at the moment, a scarcity of provision was the consequence, which the pope's exertions and liberality did much to remove. His death took place on the 26th of December, 795.—*Nour. Dict. Hist.*

ADRIAN II succeeded to the pontificate in 867. During the five years in which he filled it, his ambitious and intriguing disposition did much towards the subjection of the European sovereigns to the see of Rome. Threats of excommunication and menaces of utter exclusion from the bosom of the church, were the weapons which he so successfully employed. These designs, and a contest for ecclesiastical superiority with the patriarch of Constantinople, occupied him fully till his death in 872.—*Nour. Dict. Hist.*

ADRIAN III enjoyed his elevation to the papal chair something less than one year, dying in 885, on a journey to Worms, whither he was proceeding to hold a diet.—*Nour. Dict. Hist.*

ADRIAN IV, the only Englishman that ever sat in the papal chair, was born towards the close of the eleventh century at Langley, near St Alban's in Herts. His name was Nicholas Breakspear, and in his childhood he was dependant for his daily subsistence on the charity of the monastery to which his father was a servitor. Unable through poverty to at-

tend the schools, he was refused admission into the monastery for deficiency in learning, and in consequence resolved to visit France, where, after passing through several cities, he became a servitor in the monastery of St Rufus near Avignon. Here his diligence, talents, and handsome person, so recommended him to the monks, that in due time he was admitted of the fraternity, and upon the death of the abbot in 1137, was unanimously chosen to succeed him. For some reason however the brethren became dissatisfied with him, and appealed to Pope Eugenius III, who, upon an examination of the cause of complaint, cleared the abbot, but was induced, by the talent he discovered in him, to take him into his own service, and allow the monks to choose another superior. Eugenius made him a cardinal in 1146, and in 1148 sent him legate into Denmark and Norway, where he made many converts. In 1154 he was chosen pope, and assumed the name of Adrian. When the news of his promotion reached England, Henry II sent the abbot of St Albans and three bishops to Rome, to congratulate him on his election, on which occasion he magnanimously forgave the slight put upon him in his youth, treated the abbot of St Albans with great courtesy, and granted the abbey extraordinary privileges. He also issued in favour of Henry the celebrated bull which sanctioned the conquest of Ireland. Adrian was an active and ambitious prelate, and very resolutely maintained his authority both against the attempts of the Roman municipality and people to recover a portion of their ancient freedom, and against others. He excommunicated the king of Sicily for ravaging the territories of the Church; and Frederic, king of the Romans, having entered Italy with a powerful army, Adrian met him near Sutrium, and concluded a peace with him. At this interview, Frederic held the Pope's stirrup, while he mounted his horse; after which the former was conducted to St Peter's church, where, to the great disgust of the Romans, he received the imperial crown. The next year the king of Sicily submitted; and Adrian, affecting something like a paramount authority over the Emperor, found his ambition at fault, and was obliged to retract. He died September 1159, in the fifth year of his pontificate. Of his private life little is known, except that he complained bitterly of the uneasiness attendant upon greatness. This however in his own case was increased by the restlessness of his personal ambition, which led him to endeavour to increase the temporal power of the papacy with all his might, and in these efforts he partly succeeded. Besides some writings attributed to this pope, which remain in MS, various of his letters and homilies are extant. The letter of licence to Henry II, to conquer Ireland, is in Wilkin's "Concil. Britan.;" and the famous treaty of peace which so concerns the Sicilian monarchy, is inserted in "Baronius' Annals." The death of Adrian was by some attributed to poison; but the general account is, that he was suffocated by the accidental intrusion into his throat of a fly.—*Biog. Brit.*

ADRIAN V, a Genoese. While a cardinal, he had been employed in the delicate office of mediator between Henry III of England and the refractory barons; in the execution of this commission he had made two voyages to England, in the capacity of papal legate, the first in 1254, the second in 1265, when the expulsion of several Italian ecclesiastics from their benefices, by the great nobles, had given as much umbrage to the Pope as pleasure to the nation. He was eventually raised to the pontificate in 1276, but survived his elevation little more than a month.—*Nouv. Dict. Hist.*

ADRIAN VI was born of mean parentage in Utrecht, A.D. 1459. He was placed among the poor scholars in the college of Louvain, where his application produced him the patronage and support of Margaret of England, sister of Edward IV, and widow of Charles duke of Burgundy. He became successively canon of St Peter's, dean of the church of Louvain, and vice-chancellor of the university; and recollecting his own commencement, generously founded a college for poor students. Appointed by Maximilian tutor to his grandson Charles V, the foundation of his future fortune was laid; for in 1517 he was made cardinal, and on the death of Leo X, the influence of Charles V obtained him the papal chair. Adrian was an honest and well-meaning man, but too simple and unostentatious in his habits for the sacred college. To his great credit, he refused to use fire and sword against the complaints and exposures of Luther, but sought to reform as many abuses as he was able. This policy, and his natural partiality to Charles V, rendered him a most unacceptable pope to the Italians, and he is therefore very unfavourably represented by the Roman Catholic historians. He enjoyed his dignity for a very short time, dying in 1523, not without a suspicion of poison. Some of his writings are against papal infallibility, and these he honestly reprinted, without alteration, after he became pope.—*Robertson's Reign of Charles V.*

ADRIAN (DE CASTELLO) an Italian of great learning and ability, born at Cornetta in Tuscany. From a very low origin, he raised himself by his talents to the purple, and was employed in repeated legatine missions to England and Scotland. During his stay in the former country he acquired, through his intimacy with Morton archbishop of Canterbury the friendship of Henry VII, who conferred on him the see of Hereford, whence he was afterwards translated to the more lucrative one of Bath and Wells. His English preferment however was not in his eyes of sufficient magnitude to induce him to a residence in that country; he had other and more ambitious views; committing therefore the care of his diocese to Wolsey, as his *locum tenens*, he dwelt almost entirely at Rome, a situation more convenient to the furtherance of his designs upon the popedom. A vague prophecy had gone abroad, that Leo X should be succeeded by an Adrian; and strong as the mind of Castello unquestionably was in other respects, he was so far the slave of superstition as to allow this absurd predic-

tion to influence him in organizing a conspiracy, the object of which was the dethronement of that pontiff and his own elevation to the vacant chair. Before the plot was matured, the vigilance of Leo detected his designs, and a fine of 12,500 ducats was imposed upon him, with a peremptory prohibition against quitting the Roman territories. This order, from the fear probably of ulterior and severer consequences, he was induced to disobey; and his withdrawing was immediately followed by a formal deprivation and confiscation of all his ecclesiastical honours and revenues; a sentence which was carried into execution in the year 1518. Much uncertainty prevails with regard to his subsequent history; by some it has been asserted, that passing over into Asia, he turned renegade and embraced Mahometanism; his friend and dependent, Polydore Virgil, whose opportunities of information from his intimate connexion with him give great weight to his testimony, affirms that he repaired to Riva, in the bishoprick of Trent, and died there. As the friend and patron of learned men his character stood high, both for ability and munificence. His own productions, written in the Latin language, were celebrated for the classical purity of their style, which has even been compared with that of Cicero for chastity and elegance of diction. Literature lost in him a distinguished patron.—*Biog. Universelle*.

ADRIANI (JOHN BAPTIST) was born at Florence of a noble family, and became secretary to that republic in 1511. He was a man of considerable attainments, but his chief work is entitled "Dell' Istoria de suoi tempi," or history of his own times, Florence, folio, 1583; Venice, 3 vols. 4to, 1537. This production, which forms a continuation of Guicciardini, is highly spoken of by Bayle and others. In 1567, he published "Lettera a Giorgio Vasari, sopra gli Autichi Pittore nominati da Plinio," 4to.

his letter, which is a dissertation on the ancient painters mentioned by Pliny, is inserted by Vasari in his lives of the painters. Adriani died at Florence in 1579.—*Moreri*.

ÆGIDIUS (DE COLUMNA) a general of the Augustines in the thirteenth century, styled *Doctor fundatissimus*. His writings have sunk into merited oblivion, except a treatise entitled "Tractatus brevis et utilis de Originale Peccato," Oxford, 1479, which is sought for as a specimen of early typography, being deemed the second or third book printed there.—*Dupin*.

ÆGINHARD, secretary to Charlemagne, wrote the life of his master, and also annals from 741 to 889, the first edition of which is that of Paris, 2 vols. folio, 1575. This writer is famous for a singular love adventure with the princess Inma, daughter to Charlemagne, who, carrying him on her back across a courtyard from her chamber, to prevent the traces of his footsteps in the snow, was observed by the Emperor, who generously agreed to their union.—*Moreri*.

ÆLFRIC, son of an earl of Kent, and archbishop of Canterbury in the middle of the tenth century, was a luminary for the dark age in

which he lived. After receiving the usual instruction of the time, he assumed the habit of the Benedictine order of monks in the monastery of Abingdon, over which Athelwold then presided, who, being subsequently made bishop of Winchester, took Ælfric with him to aid in the education of the youth of his diocese. With this view, the latter drew up his "Latin Saxon Vocabulary," and some Latin colloquies, the former of which is published by Somner, under the title of "A Glossary," Oxon, 1659. During his residence in Winchester, Ælfric also translated from the Latin into the Saxon language most of the historical books of the Old Testament, as also "Canons for the Regulation of the Clergy," which are inserted in Spehman's Councils. He subsequently became abbot of St Albaus, and composed a liturgy for the service of his abbey, which was used in Leland's time. In 989 he was created bishop of Wilton, and during his continuance in that see, wrote a second volume of "Homilies," and a Grammar as a supplement to them. In 994 he was translated to the see of Canterbury, where he exerted himself with great spirit and prudence in the defence of his see against the incursions of the Danes. This active and able prelate died in 1005.—*Biog. Brit.*

ÆLIAN (CLAUDIUS) an historian and rhetorician, was born at Praeneste in Italy, in the year 160. He was surnamed "Honey-tongue" on account of the sweetness of his style; and his writings show him to have been a man of sound principles and strict integrity. His most celebrated works are—"Various History," and "Of Animals." Of the former there have been several editions, but the best are that of Perizonius in 1701, and that of Gronovius 1731. His History of Animals is also an important work, although containing many errors and fables, like the similar labours of Pliny. All these productions are in Greek, which Ælian wrote with the greatest purity, although he never left his native country.—*Fabricius*.

ÆLIUS (SEXTUS POETUS CATUS) a celebrated Roman lawyer, lived in the sixth century of Rome. He was successively ædile, consul, and censor; and while in the former capacity he gained access to the legal formula entitled "Novella," which he published with his name; so that this collection obtained the name of Ælian Laws. He is also author of the "Tripartite," the most ancient treatise on jurisprudence at present known. He was appointed consul at the end of the second Punic war, and was distinguished for his abstemious life, simple manners, and great disinterestedness.—*Biog. Universelle*.

ÆMILIUS (PAULUS) an illustrious Roman general, was born of a patrician family about 228 B.C. He acquired reputation very early, and at the age of forty-six became consul. It was not however until his sixtieth year that he assumed the command in the famous Macedonian war, which ended in the subjugation and captivity of Perses, whom he led to Rome in triumph. The spoil in this warfare was so great that it freed the Romans from taxes

for one hundred and twenty-five years. Æmilius was subsequently chosen censor, and closed a highly patriotic and useful life in the sixty-fourth year of his age, amidst the general lamentations of his countrymen. Æmilius was one of the small band of illustrious Roman patriots, who by their talent, their patriotism, and disinterestedness, did so much to advance the Roman name. His two sons by his first wife, Papyria, were adopted into the families of Scipio Africanus and Fabius Maximus; and of the two by his second wife, which he designed to carry down his own name, the one died a few days before his triumph over Perses, and the other a few days afterwards. Æmilius made a speech to the Romans on this occasion, in which, adopting the notion of the ancients, that in the midst of prosperity misfortune is ever on the watch for a victim, he nobly expressed a hope that the stroke of adversity which had fallen on him would prove a security to the republic. This eminent Roman, who had so much enriched his country, left behind him a very moderate fortune.—*Plutarch*.

ÆMILIUS (PAULUS) an historian of some celebrity, born at Verona. Eighteen (some accounts say thirty) years of his life were employed in writing a history of France, from Pharamond down to the commencement of the reign of Charles VIII. This work was undertaken at the instance of Poucher bishop of Paris, and carried on under the auspices of Lewis XII. The celebrated Lipsius speaks highly of the manner in which it is executed. The style is pure and elegant, but the charge of affectation so generally brought against the authors of this period seems not inapplicable in the present case: a fastidious refinement and excess of eupheism, especially in names, &c., being its principal defect. Æmilius, who, from the testimony of his contemporaries, appears to have been a man of an amiable disposition, in whom integrity of heart was no less conspicuous than learning, died in 1529, and was buried in the cathedral of Paris. A continuation of his history was published by Arnould Ferronius, who brought down the thread of the narrative to the death of Francis I, adding nine books of his own to the original ten.—*Nouv. Dict. Hist.*

ÆNEAS SYLVIUS. See PIUS II.

ÆNEAS, or ÆNGUS, an Irish abbot or bishop of the 8th century, who compiled a curious account of Irish saints in five books: the first of which contains 345 bishops, 299 priests, and 78 deacons; the second, entitled the Book of *Homonomies*, comprehends all the saints who have borne the same name; the third and fourth give an account of their families, and particularly the maternal pedigree of 210 Irish saints; while the fifth contains litanies and invocations of saints. He is also said to have written the history of the Old Testament in verse; and a collection in prose and verse, Latin and Irish, concerning the affairs of Ireland. He is thought to have died some time between 819 and 830.

ÆNEAS (TACTICUS) a native of Stymphalus an ancient city of the Peloponnesus, and one of the oldest authors on the art of war. He is

supposed to have lived 361 B. C. and to have commanded at the battle of Mantinea. Casaubon published his work with a Latin translation, along with his edition of Polybius, folio. Paris, 1609. It was republished by Scriverius, Leyden, 1633, 12mo. with Vegetius and other authors on military affairs; and Beaussobre published a French translation, with a learned commentary, Paris, 1757, 2 vols. 8vo.—*Fabricius*.

ÆRSENS (PETER) an eminent painter, whom the Italians called *Pietro Longo*, in consequence of his tallness, was born at Amsterdam in 1519. He became celebrated at the early age of eighteen for his bold and spirited handling. He commenced with very familiar life, but at length assumed the loftier department of historical painting. His principal pictures in the latter department were, "The Death of the holy Virgin," which he executed for the town of Amsterdam, and "The Crucifixion," which he painted for the grand altar-piece of the new church of the same town. Unfortunately for his fame, the latter was destroyed in an insurrection, notwithstanding that a lady offered 200 crowns to preserve it. Ærsens, with the genuine feelings of an artist, risked his life by his strong expression of resentment for this outrage. Delft also contains two of his pictures, one of "The Nativity," the other of "The Wise Men's Offering," which show his talents to considerable advantage. He died in 1573.—*Nouv. Dict. Hist.*

ÆSCHINES, a Socratic philosopher of the fourth century B.C., was an Athenian of mean birth and indigent circumstances. He obtained instruction from Socrates, who honoured his zeal for knowledge and much esteemed him. After living at Athens some time in great poverty, he sought the protection of Dionysius the tyrant of Sicily, who liberally rewarded him for his Socratic dialogues. On his return to Athens he taught philosophy in private and received payment for his instructions, not presuming openly to rival Plato, or Aristippus. His "Socratic Dialogues," on the various virtues, are in number seven, entitled Miltiades, Callias, Rhinon, Aspasia, Alcibiades, Axiochus, and Telauges, of which three only remain. The best edition is by Le Clerc, Amsterdam, 1711, 8vo. There is also an edition with notes by Horæus, 1788.—*Fabricius*.

ÆSCHINES, a celebrated Greek orator, cotemporary with Demosthenes, to whom he was a worthy rival. His birth was respectable, although his opponent endeavoured to depreciate him as the son of a courtesan. His declamation against Philip of Macedon first brought him into notice. Having been vanquished in formal debate by Demosthenes, he repaired to Rhodes, and began his lectures by repeating the two orations which had caused his removal. That of Demosthenes being loudly applauded, Æschines nobly exclaimed, "Had you heard him thunder out the words himself, what would you have thought?" He subsequently removed to Samos, where he died at the age of seventy-five. There are only

three of his orations extant, which however have for their beauty been called the graces. They are against Timarchus, Demosthenes, and Ctesiphon, and were published by Aldus, 1513; by Henry Stephens, with the Greek authors, 1575; and since by Reiske. Twelve epistles are also attributed to Æschines, which Taylor has added to his edition of the Orations of Demosthenes and Æschines. They have also been published at Leipsic, 1772, 8vo, and by Wolfius in his esteemed edition of Demosthenes, with a Latin version and notes, 1604.—*Fabrius. Biog. Universelle.*

ÆSCHYLUS, an Athenian, and one of the most famous tragic writers of Greece. According to some authorities, he was born towards the end of the sixty-fifth Olympiad; but Stanley, who relies on the Arundelian Marbles, dates his birth in the sixty-third Olympiad; about 400 years before Christ. He was the son of Euphorion and brother to Cynegirus and Aminias, who distinguished themselves at the battle of Marathon and the sea-fight of Salamis, at which Æschylus was also present. His mind very early received an impulse from the poetry of Homer, to which he was enthusiastically devoted; and before his twenty-fifth year he composed pieces for public representation. The stage being then in a very rude state, he undertook its improvement by adding the masque, flowing-robe, and buskins, and substituting a stage or platform for the humble cart of Thespis. He also elevated the language of tragedy, exchanged recitation for dialogue, introduced action properly so called, retrenched the chorus, and gave it a connexion with the subject of the drama. So great was his fertility, he wrote seventy tragedies, of which twenty-eight gained the prize. In some of these however certain free expressions were regarded as impious by a party among the Athenians; and being condemned for impiety, he would have been put to death, had not his valiant brother Aminias interceded for him, and dexterously dropping his robe, shown the loss of his own arm at the battle of Salamis. This act of fraternal affection and presence of mind had the desired effect on the quick and impulsive temper of the Athenians, and Æschylus was pardoned. Either on account of this indignity, or as others suppose from jealousy of the rising fame of Sophocles, who obtained the prize from him in his first performance, he quitted Athens and retired to the court of Hiero king of Syracuse, where he soon after died at the age of sixty-nine. The tale of his being killed by an eagle letting a tortoise fall on his bald head is doubtless fabulous, in order to meet a supposed prophecy that he would meet his death from on high. The people of Gela raised a tomb to his memory, the inscription on which alluded only to his military renown. From the seven dramas of Æschylus, which alone have reached us, it appears that force, grandeur, and sublimity are his chief characteristics, and—as might be expected—occasional tumidity and obscurity his greatest defects. The leading characters are in general finely sustained, but his dialogue not unrequently wants interest,

and his plots are rude and artless. His genius was rather for the energetic and terrible than for the gentler emotions, it having been noticed that in his plays even women are never represented as in love, but generally under the influence of some baleful passion, engendering fury and revenge. Longinus highly praises Æschylus for his noble boldness of expression; and for energy of style and sentiment he may vie with the greatest dramatic writers of any age. The merit of this ancient is very skillfully analyzed by Cumberland in Nos. 132, 133, and 134 of "The Observer," as well as by the Abbe Barthelemy in "The Travels of Anacharsis." The editions of Æschylus are very numerous: one of the latest is that of Professor Porson, London, 1805, 2 vols. 8vo. This great father of the Grecian stage has been very ably, although somewhat too poetically, translated into English by Archdeacon Potter.—*Fossius. Bayle. Biog. Universelle.*

ÆSOP. The account of this fabulist is little more than that of a name, since the pretended life of him by Planudes, a monk of the fourteenth century, is universally regarded as a fiction. The imputed facts, which seem most deserving of credit, are, that he was born in Phrygia about 600 B.C., and was sold as a slave to Demarchus an Athenian, by which means he acquired a knowledge of the Greek language; that he afterwards passed successively into the service of Xanthus of Samos, and of Idmon of the same island; and that having obtained his freedom by the kindness of the latter, he travelled in Greece and Asia Minor, inculcating morality by his fables. The accounts of his conversations with Solon, Cræsus, and others, are deemed fabulous. He is said to have been put to death at Delphos for the freedom with which he censured the manners of the inhabitants, an event which Eusebius places 561 years B.C. His personal deformity rests entirely on the legendary account of Planudes, to whom however we owe the first collection of his fables as we now have them, mixed with many others that are more or less ancient. He wrote in prose, and Socrates is said to have amused himself in prison by forming some of his fables into verse; while Plato, who banished the poets from his commonwealth, admits Æsop in the quality of their preceptor. The German, Lessing, in his recent ingenious "Essay on Fable," of which a translation was published, London, 1824, 12mo, considers the Grecian model of Æsop to be decidedly the most pure and genuine. This critic, both as to construction and object, ably analyses the defective pretensions of the more modern and elaborate fabulists, who have departed from Æsop's effective simplicity, or rather that of the fables bearing his name, several of which cannot belong to him, as they exhibit anachronisms and other incongruities. The most genuine are thought to be the former part of those versified by Phædrus; but many are of eastern origin, which has induced some authors to conclude that Lokman, Pilpay, and Æsop were the same person. The best editions of Æsop are those of Milan, folio, 1476;

of Plantin, Antwerp, 1565, 12mo, of Aldus, Venice, folio, 1505; of Barlow, London, 1666; and of Hudson, under the name of "Marianus," Oxford, 1718. They have been translated into all modern languages: those of Croxall and Dodsley are deemed the best English versions.—*Bayle. Fabricius. Un. Biog.*

ÆSOPUS (CLODIUS) a Roman actor, who lived in the seventh century of Rome, and was contemporary with Cicero. His excellence was in tragedy, and he is said to have entered so thoroughly into his part, as occasionally to lose all recollection of his own identity. Plutarch in particular asserts, that once, when performing the character of Atreus, he was so transported with fury as to strike a servant with his sceptre and kill him on the spot. He was much addicted to luxury: according to Pliny the elder, a single dish at his table, composed of the rarest singing birds, cost him eight hundred pounds sterling; and Horace records, that he dissolved in vinegar a precious pearl, and swallowed it. Notwithstanding this ostentatious profusion, so well was he rewarded, that he left a fortune equal to 160,000*l.* sterling behind him, for a son no less capricious and luxurious than his father.—*Bayle. Un. Biog.*

ÆTION, a Grecian painter, celebrated for his pictures, and among others for one representing the nuptials of Alexander the Great and Roxana, which was exhibited at the Olympic Games, and obtained so much applause, that Proxenidas the president bestowed his daughter upon the artist. Lucian saw this picture in Italy, and gives a very accurate description of it, from which Raphael sketched one of his finest compositions.—*Biog. Universelle.*

ÆTIUS, a celebrated Roman general who lived under the third Valentinian. In the early part of his military career he had borne arms against the empire, but subsequently exerted himself nobly in its defence against the invasions of the Franks, Goths, and the Huns under Attila, whom, although at the head of 700,000 barbarians, he forced to repass the Rhine, and saved for a time the tottering throne. Returning to the capital, his popularity excited the jealousy of the Emperor, who, suspecting him of a design to possess himself of the imperial power, stabbed him at an unguarded moment with his own hand. He fell the victim of an ungrateful despot. A.D. 454.—*Nouv. Dict. Hist.*

ÆTIUS, a physician of Amida in Mesopotamia, studied at Alexandria towards the close of the fourth century. He is the first Christian physician whose medical writings have come down to us. A work of his, in sixteen books, entitled "Tetrabiblos," was printed in Paris, 1567, and at Lyons in 1549, folio, and 1560, 4 vols. 12mo. Of the Grecian original there are only eight books existing, printed by Aldus, Venice, 1534. It is a collection of the writings of Galen and of others who lived before him; and although but a compilation, he has included many things which are not to be found elsewhere. There have been various Latin versions.—*Biog. Universelle.*

ÆFER (DOMITIVS) a celebrated orator, born

at Nismes about fifteen years B.C. He was one of those despicable characters to be found in all ages—a corrupt and venal lawyer, who scrupled not to perform the part of informer in the detestable reigns of Tiberius, Caligula, Claudius, and Nero. Quintilian, who in his youth cultivated the friendship of Afer, speaks highly of his oratorical abilities; and his reputation, in the meridian of his exertions, was extremely high; but being an improvident man, he lost it by continuing to plead when his faculties were impaired by age. He was once in great danger from an inscription which he put upon a statue erected by him to Caligula. It stated that the Emperor had been twice consul before he attained the age of twenty-seven. Caligula regarded this record as a sarcasm, instituted a prosecution, and pleaded himself against Afer; when the miserable flatterer, instead of making a defence, repeated a part of the Emperor's speech with the highest marks of admiration, and declared on his knees that he dreaded more from the eloquence of Cæsar than his power. Caligula, equally contemptible, upon this adulation, not only pardoned Afer, but made him consul. He died in the reign of Nero, A.D. 59.—*Bayle.*

AFFLITTO (MATTHEW) an Italian lawyer, was born at Naples in 1430. He attained great eminence, and published several voluminous works on Sicilian and Neapolitan law, which have been held in great estimation by civilians, having passed through several editions. Two of them, "Codex Justiniani," and "De Consiliaris principum et officialibus eligendis, ad justitiam regendam," are still read.—*Un. Biog.*

AFFO (IRENEUS) a native of the duchy of Placentia, author of "Historia di Guastalla," on account of which work he was in 1776 made superintendent of the valuable library of Parma. Writing under the jealous eye of Don Ferdinand, the last infant of Parma, he was obliged to make great suppressions. He is also author of a "Historia di Parma," and left a manuscript history of "Peter Louis Farnese," which the Infant would not allow to be published. He was a diffuse writer, but his researches are deemed valuable and correct.—*Biog. Univ.*

AFRANIO, a Ferrarese, said to be the inventor of the bassoon. He lived in the early part of the 16th century.—*Mus. Biog. Diet.*

AFRANIUS, a Latin dramatist, who lived about 100 years B.C., and wrote several comedies in imitation of Menander, of which some fragments alone remain that are inserted in the "Corpus Poetarum" of Maittaire, 1713, folio, London.—*Vossius. Moreri.*

AFRANIUS (QUINTIANUS) a Roman senator, wrote a cutting satire against Nero, who put him to death for entering into the conspiracy of Piso. He died with great firmness, a species of courage displayed by more than one Epicurean.—*Biog. Universelle.*

AFRICANUS (JULIUS) a Christian historian of the third century, was a native of Nicopolis in Palestine. In order to convince the Pagans of the truths of Christianity, he con-

posed a Chronology in five books, which is a scale of universal history from the creation to the days of the emperor Macrinus, of which work a fragment only is extant in the Chronicon of Eusebius. He is also the author of an epistle to Origen, condemning the story of Susannah as spurious, and of another to Aristides with a view to reconcile the genealogical tables of St Matthew and St Luke. At his request the emperor Heliogabalus rebuilt the abbey of Nicopolis on the site of the ancient Emmaus. The remains of this author were printed among the "Mathematici Veteres," Paris, folio, 1693, and were translated into French by M. Guiscard in his "Memoires Militaires des Grecs et des Romains," Paris, 1774. The early part of the Chronology of Africanus is supposed to be an abridgment of the work of the famous ancient Egyptian priest Manetho, who lived 300 years B.C. The exact time of his death is doubtful.—*Lardner*.

AGANDURU (RODERIC MORIZ) a Spanish missionary of the seventeenth century, was a barefooted Augustin, and had a share with his brethren of that order in the rapid but ineffective conversions in Japan. He also assisted to convert the Tagalese, a people of Malayan descent, who inhabited Lucon, one of the Philippine Isles, and who remain Christians to this day. He wrote a "History of Conversions in Japan and the Philippine Isles," and a "General History of the Moluccas and the Philippines."—*Un. Biog.*

AGAPETUS I, pope in 535. This pontiff possessed great firmness of character, but was so poor that, in order to travel to Constantinople, he was obliged to pawn the sacred vessels of the church of St Peter. Some letters of his are in existence.—*Nov. Dict. Hist.*

AGAPETUS, a deacon of the church of Constantinople in the sixth century, who addressed a letter to the emperor Justinian on the duties of a Christian prince. It is to be found in "Bibliothèque des Peres," and has been frequently reprinted.—*Moreri*.

AGARD (ARTHUR) an English antiquary of great learning and research, one of the original founders and most conspicuous members of the Antiquarian Society. He was born in the year 1540 at Toston in Derbyshire. His situation as deputy-chamberlain in the exchequer office afforded him great facilities in his favourite study of the antiquities of his country, by the numerous and valuable documents which it placed within his reach. Domesday Book was a prominent object of his attention, in illustration of which record he composed a treatise entitled, "De usu et obscurioribus verbis libri de Domesday." Several of his inquiries, on subjects connected with the polity and constitution of England, were after his death published by Thomas Hearne among the papers of the Antiquarian Society. Mr Agard was also the author of a work intended exclusively for the use and direction of his successors in office, which was consigned to the care of the officers of the king's receipt. He died in August 1613, bequeathing to his friend and

brother antiquary, Sir Robert Cotton, twenty volumes, the fruits of his ingenuity and research, and was buried in Westminster Abbey.—*Biog. Brit.*

AGASIAS a sculptor of Ephesus, the scholar or son of Dositheus, of whose life no particulars are known, but who is celebrated in the history of the arts as the sculptor of the admired statue usually called the Gladiator, which was found with the Apollo of Belvidere at Nettuno, formerly Antium, where Nero had collected a great number of the best works, brought from Greece by his freedman Acratus. The form of the letters on the inscription marks the high antiquity of the statue, which however is no longer considered that of a gladiator, but one of a groupe. It was perfect with the exception of the right arm, restored by Algar.—*Un. Biog.*

AGATHARCHIDES, geographer and historian, was a native of Gmirus and tutor to Ptolemy Philadelphus, who reigned about the year 104 B.C. The numerous works of this author are all lost, except a few fragments preserved by Diodorus and Photius, which are printed by Henry Stephens, and collected more fully by Hudson in his "Geographi Minores." Among the works of Agatharchides the ancient writers mention the following: "On the Red Sea," in five books; "On Asia," in ten books; and a large work "On Europe." The rhinoceros was first described in the writings of this author.—*Moreri*.

AGATHANGELUS, an Armenian historian of the fourth century, who wrote a History of the introduction of Christianity into Armenia, with a life of the first Christian king Tiridates, to whom he was secretary. This work was published at Constantinople, 1709, 4to, but a much more complete manuscript copy is in the royal library at Paris.—*Hist. Dict.*

AGATHIAS, a Greek historian of the sixth century, who wrote a history of the reign of Justinian. It was printed with a Latin version and notes at Leyden, 1594 4to, and at Paris at the king's printing-house, 1660, folio, to accompany the other Byzantine historians. He is deemed prolix but accurate.—*Fabricius*.

AGATHARCUS, an ancient painter, was born at Samos, and lived about the 95th Olympiad, or 400 years B.C. Alcibiades employed him to decorate his magnificent house; and according to Demosthenes, in his oration against Midias, he contrived to seduce his mistress while so employed. This offence Alcibiades punished only by confining him until his work was finished, and then dismissed him with handsome presents. Vitruvius speaks of him as the first scene painter under the direction of Æschylus, which is either an anachronism, or two painters have existed of the same name.—*Moreri*.

AGATHEMER, a Greek geographer of little merit, who is placed by Saxius in the third century. His only known work, called "Hypotyposes Geographica," contains several particulars which have escaped Strabo, but is nevertheless in a very confused and imperfect state. It is to be found in Gronovius' edition &

Ancient Geography," as also in Hudson's "Geographi Minores."—*Fabricius*.

AGATHO or AGATHON, a Greek poet of Athens, who wrote several tragedies and comedies. Of these, fragments alone remain, which are to be found in the collection of Grotius. Aristotle speaks of one of his comedies, "The Flower," with great praise. He lived about 435 B.C.—*Vossius*.

AGATHOCLES, tyrant of Syracuse, was the son of a potter, a native of Rhegium, who settled in Sicily and married a Sicilian woman. He rose from a private soldier through all the grades of the military service, until at length he obtained the chief command, when by a series of intrigues and cruelties he contrived to make himself ruler of the Syracusans. Like many other ambitious usurpers, he showed more moderation in the exercise of power than in its attainment. The political and military abilities of Agathocles were very great, which he proved by one of those master-strokes that discover extraordinary genius, by conducting a daring expedition into Africa, while the Carthaginians were laying siege to Syracuse. This bold policy succeeded; the Carthaginians were obliged to withdraw, in order to succour their own territory, where Agathocles was carrying all before him, and had even invested Carthage itself. While his army lay before this capital, he himself returned to Sicily, where he struck such terror into the powers combined against the Syracusans, that he nearly mastered the whole island. On his return to Africa, he found affairs in great disorder: his African auxiliaries had deserted, and in a mutiny of his soldiers he nearly lost his own life, but escaped to sea in a small vessel, leaving two sons in the power of the mutineers, who cruelly murdered them. Agathocles soon raised forces in Sicily, and took the most signal and atrocious vengeance on the revolters in the African army, exterminating their very kindred. He again became the master of Sicily, and unable to exist in tranquillity, conducted an expedition into Italy in his old age, and according to several accounts was poisoned on his return in the ninety-fifth year of his age; a statement however which is very doubtful. He affected much humility in his greatness, always having an earthen vessel at his table to remind him of his origin.—*Univ. Hist.*

AGELNOTH, promoted to the see of Canterbury, A.D. 1020. This prelate distinguished himself by great religious zeal, and still more by the firm manner in which he refused, on the death of Canute, to crown Harold, who had seized the throne in the absence of his brother Hardicanute. Agelnoth pleaded his promise to the late king, that he would place the crown on no other head than the issue of queen Emma. Not only was this refusal given at the altar by the Archbishop as to himself, but he uttered imprecations against any other bishop who might perform the ceremony; and it is doubtful whether Harold was ever crowned at all. Agelnoth was author of a panegyric on the Virgin Mary, a letter on St Augustin, and other epistles.—*Biog. Brit.*

AGESANDER, a Rhodian sculptor, who is thought to have lived in the fifth century B.C. He is celebrated by having, in conjunction with his sons, Athenodorus and Polydorus, executed that admirable monument of Grecian art, the Laocoon, which was discovered in the sixteenth century in the baths of Titus, where, according to Pliny, it attracted admiration in his time. Julius II handsomely rewarded the discoverer of this invaluable work, which was carried away from Rome by the French army, but at the final peace restored. Lessing, from the exquisite finishing of this groupe, in comparison with other works of Grecian art, thinks it was executed under the Cæsars; but Borghini and Winkelman deem it a production of the finest era of Grecian art. In either case it has immortalized the names of its sculptors.—*Biog. Universelle*.

AGESILAUS, king of Sparta, one of the most striking characters of ancient Greece, was the son of king Archidamus, and on the death of his brother king Agis, was preferred to his nephew Leotychidas, in consequence of the suspected illegitimacy of the latter. His vigorous and energetic mind, set off as it was by consummate address, made ample amends for the smallness of his stature and his lameness in one leg. So ingratiating were his manners, that the ephori are said to have laid a fine upon him for monopolizing the affections of the Spartans. At the time of the accession of Agesilaus the Peloponnesian war subsisted, and the king of Persia had declared openly against the Lacedæmonians, and was preparing to reduce all the Greek cities under their protection. On this occasion Agesilaus was appointed generalissimo of Greece, and for two years, at the head of the Greek army, exhibited all the talents of a warrior, and all the virtues of a Lacedæmonian, in his endurance of hardship, contempt of luxury, and personal disinterestedness. These qualities prevailed: he obtained many signal advantages in Asia Minor, and might have preceded Alexander as the conqueror of Persia, had not the latter found means to excite enemies against the Lacedæmonians among their neighbours, which rendered the recall of Agesilaus necessary for the defence of his native land. He hesitated not to obey the order, but observed, with the brief and pregnant wit so peculiar to the Spartans, "that he had been driven out of Asia by thirty thousand of the great king's archers," alluding to the impression of an archer on the gold coin called a daric. On his return to Greece, he was met by an order from the ephori to invade Bœotia, with which command he complied, although contrary to his own judgment. A severe engagement ensued at Chæronea, in which Agesilaus was victor by the retreat of the Thebans, who however could not be broken. He was next employed against Corinth and the Acarnanians, until the conclusion of that discreditable peace with Persia, negotiated by, and called after, Antalcidas. After this event, the Spartans, with their usual hateful mixture of fraud and force, sought to attack the smaller states of Greece separately; and in a

most unjust manner seized upon the citadel of Thebes, an action abetted by Agesilaus from his hatred to the Thebans and his acquiescence in that detestable policy of Sparta, which seemed every action laudable that might prove beneficial to the state. In the foregoing instance however it turned out quite the reverse, as it led to the memorable war with the Thebans under Epaminondas, in which the victories of Leuctra and Mantinea proved so humiliating to Sparta, in the defence of which however Agesilaus exhibited all his usual bravery and activity. His passion for enterprise was further displayed by his accepting the command of a body of mercenaries in the service of Tachos, a competitor for the throne of Egypt, and engaging at an advanced age in an entirely new scene of action. On his arrival in Egypt, the natives eagerly crowded to behold a leader of whom they had heard so much, and could not conceal their disappointment on discovering a little old man, meanly clad, sitting on the grass by the sea-side. He soon however convinced them of his superiority, but sullied both his own and the Grecian reputation by going over on more advantageous terms to the other competitor, Nectanebis, whom he left firmly seated on the Egyptian throne. Returning with a large sum on the public account for the aid which he had afforded, he was driven by a storm to a place called the haven of Menelaus, on the coast of Africa, where he died in his eighty-fourth year (B.C. 360), after a reign of forty-one years. From this brief account, it will be seen that the virtues and vices of Agesilaus were altogether national, and the fruit of the iron education of his overpraised country, the operation of which his character peculiarly served to illustrate. His most censurable actions and policy seem never to have been produced with a view to mere personal advantage or aggrandizement, a truth which by no means detracts from the odious nature of the system by which they were deemed patriotic. Agesilaus, in other respects, exhibited the peculiar genius of his countrymen, by eking out the lion's skin with the fox's tail, by the extreme simplicity of his manners, by his contempt of luxury and vain-glory, and by the pregnant brevity of his wit. In the collection of apothegms, a number are attributed to this king, which display the genuine Spartan force and smartness. His pleasant reply to a friend, who caught him riding a stick with his children, is well known. "Tell nobody what you have seen," said Agesilaus, "until you are yourself a father." — *Plutarch. Univ. Hist.*

AGGAS (RALPH) a surveyor and engraver of the sixteenth century, who first drew a plan of London, which, although referred to the time of Henry VIII and Edward VI. appears not to have been made on wood until about the year 1560, in the early part of the reign of Elizabeth. It was re-published in 1618, and re-engraved by Verue in 1748. The plates, which were purchased by the Society of Antiquaries, were published in 1776. He also drew plans of Oxford, Cambridge and Dunwich

in Suffolk. He died in London A.D. 1579, aged about 60.—*Ames. Hist. of Printing.*

AGIS IV, king of Sparta, celebrated by his virtues and his death, was scarcely on the throne before he endeavoured to revive the ancient discipline of his country, and began with a proposition for a division of the land, which was strongly opposed by a party at the head of which was his colleague Leonidas. The latter, being persecuted for a breach of the laws by marrying a stranger, was deposed, and the joint sovereignty devolved to his son Cleombrotus, who entered into the views of Agis. Previously however to a partition of the lands, Agesilaus, who was deeply in debt, proposed the abolition of all debts, which would render the former measure more palatable. This proposal was agreed to, and all bonds and contracts were brought to the marketplace and consigned to what Agesilaus denominated a "glorious flame." This deed accomplished, the industrious and wily Spartan found means to postpone the other equalizing operation until Agis was obliged to march on an expedition. During his absence Agesilaus conducted himself so tyrannically, that a conspiracy was formed to restore the deposed king Leonidas; which succeeding, Agis, on his return, together with his colleague Cleombrotus, took sanctuary in a temple. Cleombrotus was immediately dragged forth and banished, but Agis remained a considerable time in safety, and was occasionally conducted by his supporters to the bath, and thence back again to the temple. At length his friends were bribed to betray him, and he was thrown into prison. When it was known that he was in custody, a crowd of people, with his mother and grandmother, assembled round the prison, and requested that he might have a fair and open trial. This solicitude hastened the fate of Agis, who suffered death with great magnanimity. His grandmother, being afterwards admitted into the prison, shared his fate. His mother followed next, and perceiving the fate of her son and mother, kissed the corpse of Agis and exclaimed, "My son, thy too great moderation and humanity have ruined both us and thee." Being told that, as she approved his actions, she must also die, she immediately prepared for death, exclaiming, "May all this be for the good of Sparta!" The virtues and good intentions of Agis are not to be doubted, but primitive forms and simple institutions can seldom be restored to a gradually corrupted people. These tragical events happened B.C. 241.—*Plutarch.*

AGNELLIUS, an archbishop of Ravenna in the ninth century, who wrote the history of his predecessors in that see with little attention to the character or interests of the court of Rome, which had put his grandfather or great-grandfather to death. This biography contains many curious facts, but is erroneous in regard to dates. It was published by Bacchini in 1708, and reprinted by Muratori in his collection of Italian historians.—*Moreri.*

AGNESI (MARIA GAETANA) an Italian lady celebrated for her learning, was born at

Milan in 1718. So profound were her mathematical attainments that, when in 1750 her father, who was a professor in the university of Bologna, was unable to continue his lectures, owing to the infirmity of his health, she obtained permission from the Pope to fill his chair. At the early age of nineteen she had supported one hundred and ninety-one theses, which were published in 1738 under the title of "Propositiones Philosophicæ;" and was also mistress of the Latin, Greek, Hebrew, French, German, and Spanish languages. Her principal work, entitled "Istituzioni analitiche," 1748, 2 vols. 4to, was translated in part by Antelmy into French, under the title of "Traité élémentaire du Calcul différentiel, et du Calcul intégral," 1775, 8vo, and into English by the Rev John Colson, Lucasian professor of mathematics in the university of Cambridge. This able mathematician deemed the analytical institutions of Agnesi so excellent, that he learnt Italian in order to translate that work into English, and at his death left the manuscript nearly ready for the press. In that state it remained for some years, until the late Mr Baron Maseres resolved to defray the expense of printing a handsome edition in 2 vols. 4to, 1801. Agnesi retired to the monastery of Blue Nuns, where she died at a very advanced age in 1799.—*Un. Biog.*

AGNESI (MARIA TERESA) sister of the above, a female musician of much genius, born at Milan about the year 1750. She composed three operas, "Sophonisba," "Ciro," and "Nitrocri," all which were successful, besides several cantatas and other pieces of great merit.—*Biog. of Mus.*

AGOBARD, archbishop of Lyons in the ninth century, an active and able prelate, who wrote several tracts against the Jews, and other treatises. His works were buried in obscurity until Papirius Masson found a manuscript of them by chance in a bookseller's shop at Lyons. Masso published this manuscript in 1603, but a more correct edition is that of Baluze, Paris, 1666, 2 vols. 8vo, which edition has been reprinted in the Bibliotheca Patrum.—*Moreri Cave.*

AGOSTINI (LIONARDO) an eminent antiquary of the seventeenth century, officially employed by pope Alexander VII. He published his works, which are now scarce and much valued, entitled, 1. "La Sicilia di Filippo Paruta, descrittta con Medaglie; con aggiunto di Lionardo Agostini," Rome, 1649, folio; 2. "Le Gemme Antiche figurate di Lionardo Agostini," part I, Rome, 1636 and 1657, 4to; part II, Rome, 1670. This work was reprinted in 1680, 1702, and 1707; the first edition however is still in the highest esteem, on account of the beauty of the plates.—*Biog. Universelle.*

AGOSTINO (PAUL) of Valerano, an eminent musician, born in 1593, who surprised the world with his productions for four, six, or eight choirs or chorusses, some of which might be sung in four or six parts only, without diminishing or weakening the harmony. Father Martini speaks with great admiration of an

Agnus Dei in eight parts, in which the different canons are carried on at the same time in the most clear and natural manner, both as to melody and harmony. Agostino died in 1629 in the prime of life.—*Burney's Hist. Mus.*

AGOULT (WILLIAM D') a Provençal gentleman of the twelfth century, who was one of the most pleasing poets and amiable persons of his time. He complains that in his days the passion of love had degenerated, and therefore wrote a treatise or poem entitled, "La Maniera d'Amar del temps passat," in which he maintains, with the fantastic sentiment of the period, that no one can be happy unless he is good, no one good unless he is in love, and no one in love who is not careful of the honour of his mistress. Agoult died A.D. 1181. The family still exists in Dauphny and Provence.—*Moreri.*

AGREDA (MARIA D') a Spanish visionary, was born at Agreda in Spain, 1602, and took the veil at the age of eighteen in a convent founded by her father and mother, dedicated to the "Immaculate Conception," of which she was chosen superior. She reported that she had express orders from God and the Holy Virgin to write the life of the latter. She accordingly commenced this legend; but by the advice of her temporary confessor in the absence of her ordinary director, it was consigned to the flames. On the return of the latter, however, he recommended her to begin again, and the fruit of her reveries was a work which she entitled, "The Mystical City of God, Miracle of the Almighty, Abyss of the Grace of God, Divine History and Life of the Most Holy Virgin, Mary, Mother of God; manifested in these last ages by the Holy Virgin to Sister Mary of Jesus, Abbess of the Convent of Immaculate Conception, of the City of Agreda." This piece of absurdity, written in her own hand, with an attestation that it was the offspring of Divine revelation, was translated by Father Crozet, a cordelier, into the French language in 1696, but was suppressed by a sentence of the Sorbonne, which decision however was not allowed to be promulgated in Spain, and the book of the poor crazy fanatic was absolutely republished in Brussels in 1718, in 3 vols. 4to. Although puerile and contemptible in the highest degree, the condemnation of this legend gave offence to certain zealots, who conceived that the worship paid to the Virgin by the Catholic church might be affected by it, in consequence of which a solemn declaration was made by the Sorbonne that such was not the intention. On the death of Mary, great interest was made at Rome to get her canonized, but without success. She died in 1665.—*Moreri. Bayle.*

AGRICOLA (CNEIUS JULIUS) an excellent Roman commander, born A. D. 40, in the reign of Caligula, by whom his father Julius Græcinus was put to death, for nobly refusing to plead against Marcus Silanus. His mother, to whom he owed his excellent education, was Julia Procilla, unhappily murdered on her estate at Liguria by a descent of freebooters from the piratical fleet of Otho. The first military service of Agricola was under Suetonius Paulinus

in Britain; and on his return to Rome he married a lady of rank, and was made quaestor in Asia, where in a rich province, peculiarly open to official exactions, he maintained the strictest integrity. He was chosen tribune of the people and praetor under Nero, and unhappily, in the commotion which followed the accession of Galba, lost his mother, as above mentioned. By Vespasian, whose cause he espoused, he was made a patrician and governor of Aquitania, which post he held for three years. The dignity of consul followed, and in the same year he married his daughter to the historian Tacitus. He was soon afterwards made governor of Britain, where he subjugated North Wales and reduced the Isle of Anglesea or Mona. He adopted the most wise and generous plans to civilize the Britons, by inducing the nobles to assume the Roman habit and have their children instructed in the Latin language. He also gradually adorned the country with magnificent temples, porticos, baths, and public edifices, of a nature to excite the admiration and emulation of the rude people whom he governed. With these cares however he indulged the usual ambition of a Roman commander, to add to the limits of the Roman territory by extending his arms northward; and in the succeeding three years he passed the river Tweed, subdued the country as far as the Frith of Tay, and erected a chain of protective fortresses from the Clyde to the Frith of Forth. He also stationed troops on the coast of Scotland opposite to Ireland, on which island he entertained views of conquest; and in an expedition to the eastern part of Scotland, beyond the Frith of Forth, was accompanied by his fleet, which explored the inlets and harbours, and hemmed in the natives on every side. His seventh summer was passed in the same parts of Scotland, and the Grampian Hills became the site of a decisive engagement with the Caledonians under their most able leader Galgacus. The latter made a noble stand, but was at last obliged to yield to Roman valour and discipline; and having taken hostages, Agricola gradually withdrew his forces into the Roman limits. In the mean time, Domitian had succeeded to the empire, to whose mean and jealous nature the brilliant character and successes of Agricola gave secret uneasiness. Artfully spreading a rumour that he intended to make the latter governor of Syria, he recalled him, received him coldly, and allowed him to descend into private life. The jealousy of this tyrant pursued him for the remainder of his life; and as after he had been induced to resign his pretension to the proconsulship of Asia or Africa, he was soon seized with an illness of which he died; Domitian, possibly without reason, has been suspected of a recourse to poison. Agricola died A. D. 93, in his fifty-fourth year, leaving a widow and one daughter, the wife of Tacitus, who has so admirably written his life and preserved his high character for the respect of posterity.—*Tacitus*.

AGRICOLA (JOHN) a polemical writer of celebrity, born at Isleben in Saxony in 1492.

From being the friend and scholar, he became the antagonist of Martin Luther, against whom, as well as Melancthon, he maintained a spirited controversy, advocating the doctrine of faith in opposition to the works of the law, whence the sect, of which he became the leader, received the name of *Antinomians*. These opinions he inculcated principally at Wittenberg, where he had obtained a professorship. In the early part of his career he had been chaplain to count Mansfeld, in whose train he had accompanied the elector of Saxony to the diets held at Spires and Augsburg in 1526 and 1530. His opinions however soon lost him the favour of both these patrons, which he never afterwards regained. The latter part of his life was spent at Berlin, where he became preacher to the court and acquired considerable reputation. Although of a restless and ambitious temper, his motives seem to have been good, and his conciliatory disposition is evinced by his constant though unavailing efforts to bring about a reconciliation between the Catholics and the Reformed Church. Some of his works possess merit, especially his collection of German proverbs. He also wrote a volume of Commentaries on St. Luke, a folio entitled "Historia Passionis J. C." and in 1548 composed, in conjunction with Heldingus and Philug, the famous *Interim*, which created so great a sensation. He died at Berlin in 1566, in the 74th year of his age.—*Nouv. Dict. Hist.*

AGRICOLA (RODOLPHUS) one of the most learned men of the fifteenth century, was born A. D. 1442, near Groningen, in Friesland. He is spoken of both by Erasmus and Bayle with great respect; but two works only of his remain: 1. "De Inventione Dialecticæ," Louvain, 1516, and Cologne, 1539; 2. An abridgement of history under the title of "R. Agricola Lucubrations," 2 vols. 4to.—*Melchior Adam. Bayle*.

AGRIPPA (HEROD) son of Aristobolus and Berenice, grandson of Herod the Great. He gave great offence to Tiberius, who threw him into prison for too openly expressing his wishes with regard to the succession. On Caligula's becoming emperor, however, he was not only released, but received from the favour of that emperor a golden chain, equal in weight to the iron one which he had worn in his confinement, as also the kingdom of Judea. He commenced a persecution of the Christians, in which the apostle St. James perished, and is the person represented to have been eaten up by worms, on account of his impiety in accepting the adoration of the people.—*Lardner*.

AGRIPPA (II) son and successor of the preceding, seventh and last of the Jewish monarch of the family of Herod the Great. In the war carried on by Vespasian against his own countrymen, he sent a succour of 2000 men to his assistance. It was before him, his sister Berenice, and the Roman governor, that St Paul made his defence and appeal to the Emperor, when in custody at Casarea. Agrippa lived to the year 100 of the Christian era, and died at Rome in the third year of the emperor Trajan.—*Suetonius*.

AGRIPPA (CAMILLE) a celebrated architect of Milan, in the sixteenth century, who, under the pontificate of Gregory XIII, accomplished the removal of a vast obelisk to St Peter's Square; an account of which labour he published. His other works, which are very scarce, are, 1. "Trattano di Scientia d'Arme," Rome, 1533, Venice, 1568-1604, 4to; 2. "Dialogo sopra la generazione de Venti," Rome, 1584, 4to; 3. "Dialogo del modo di mettere in Battaglia," Rome, 1585, 4to; 4. "Nuove invenzione sopra il modo de Navigare," Rome, 1595, 4to.—*Biog. Univer.*

AGRIPPA (HENRY CORNELIUS). This highly gifted but eccentric man of learning was born in the year 1486, at Cologne, of a noble family, which had long been in the service of the house of Austria. In his youth he was employed as secretary to the emperor Maximilian, and subsequently served in the army of Italy seven years, and obtained the honour of knighthood. The particulars of his education are unknown; but he himself relates that he was acquainted with eight languages. On his quitting the army, when he gave himself up to the pursuit of science, he rapidly attained the honours of doctor in law and physic, and began to assume the reputation of an acquaintance with the secrets of nature, which it is difficult to distinguish from intentional quackery. It is now thought, that by his alchemical and kindred pretensions, he had no other object than to excite admiration and court powerful protection. In the twenty-first year of his age he visited France, and the succeeding year passed into Spain, from which however he soon returned, and delivered lectures at the college of Dole in Burgundy, on the mystical work of Reuchlin, "De Verbo Mirifico." In these discourses he hazarded novelties which commenced a warfare with the monks, that lasted for the remainder of his life. In order to court the favour of Margaret of Austria, he wrote a treatise "On the Excellence of Women," which work monkish influence prevented him from publishing; he then went over to England, and wrote a "Commentary on the Epistles of St Paul." On his return he again joined the army of the emperor in Italy, which he left on an invitation to Pisa by the cardinal St Croix. In the year 1515 he read lectures upon Mercurius Trismegistus, at Pavia, from which town he was obliged to make a very hasty retreat, when his friends procured him the honourable employment of syndic and councillor for the city of Metz. Here, with his usual imprudence, he undertook to refute the vulgar notion that St Ann had three husbands, and—what was much more sensible as well as humane—defended and saved the life of a countrywoman accused of witchcraft. Obligated to quit Metz, he returned to Cologne, where he lost his first wife, a very amiable woman; after which he successively resided at Geneva, Fribourg, and Lyons, where he obtained a pension from Francis I, and was appointed physician to the Queen Mother. His latter appointment proved of no advantage to him, because he

did not like to be employed as an astrologer instead of a physician; and he vented his resentment with his usual unguarded impetuosity. He now resolved to remove to the Low Countries, but experienced much delay, owing to the mysterious character which he had so injudiciously assumed, the duke of Vendome refusing to sign the passport of a conjuror. In 1529 Agrippa was again in great request, invitations being transmitted to him from Henry VIII of England, from the chancellor of the emperor, from an Italian marquis, and from Margaret of Austria, governor of the Low Countries. He preferred the offer of the last, and received the appointment of historiographer to the emperor. His eccentric genius however was to be kept in none of the bounds that would allow of repose in the age in which he lived; and in the year 1530 he produced another storm by his celebrated treatise "On the Vanity of the Sciences," which was not an attack upon real learning, but a very caustic satire upon the inefficiency of the common modes of instruction, and upon the monks, theologians, and members of the universities. On the appearance of this work, the bishop of Liege withdrew his pension, and even permitted his imprisonment for debt at Brussels, from which enthrallment he was not released until the death of Margaret of Austria, which happened very opportunely, as the monks had fully succeeded in prejudicing her against him. Soon after his release he sent out another treatise at Antwerp, "On the Occult Philosophy." This was not a work on magic, but a sketch of mystical theology, explaining, on the principles of the emanative system, the harmony of the elementary, celestial, and intellectual worlds. The clergy, although unable to discover magic, detected heresy, and the father inquisitor at Ulm interfered to prevent a third edition. This prohibition was soon disregarded, for in 1533 a new edition appeared in Cologne, which was accompanied by an apology addressed to the senate, so replete with satire and invective, that Agrippa was once more obliged to withdraw from the effects of the resentment excited. He retired to Bonn, where, according to the account of Wier, who had been his domestic servant, he divorced his third wife, having buried his second, who had produced him five children, at Antwerp, in 1529. Resolved once more to try his fortune in France, he repaired to Lyons in 1539, where, instead of patronage, he met with imprisonment for some former satires on the Queen mother. He was however soon released, and returned to Grenoble, where he died in the course of the year, not in an hospital, as affirmed by some authors, but in the house of the receiver-general of the province. To the practised observer, the character of Cornelius Agrippa may be tolerably well estimated from his extraordinary adventures. His genius was striking, but irregular; his spirit was strong and penetrating, but restless and unquiet; and in his quarrels with the monks, what his vigorous understanding prompted him to think, he was

by no means backward in daring to say. Looking at the commencement of his life and his changeable fortune, the extent of his erudition was surprising, and his industry in composition most extraordinary. His reputation for necromancy, his attendant demon in the form of a black dog, and similar imputations, will now only provoke a smile. Ridiculous as it may at present appear, it is however obvious that his presumed skill in occult science, especially alchemy, led to the numerous invitations which he received from royal and exalted personages, and that his inability to answer their absurd expectations produced their subsequent neglect of him. On the other hand, Agrippa only reaped the fruit of his own disingenuousness, by encouraging the notion of his possession of endowments, of which he must have been conscious he was destitute. Yet so singularly constituted is the human mind, he was at the same time partly his own dupe; for it is proved that he belonged to cabalistical and other societies for magical pursuits; and if his assertions may be credited, he had attained that intercourse with the demoniacal natures, which was the boast of Plotinus and Jamblichus. Here the monks might have satirized in their turn; but these silly pretensions they believed, and instead of laughing at, would have burnt him. The works of Agrippa above-mentioned, with all his other productions, have been frequently published entire; but the edition of Lyons, by the Behrings, Leyden, 1550, 8vo. 2 vols., is deemed the best. This edition contains a fourth book of the Occult Philosophy, on magical ceremonies, which is not by Agrippa, but has probably done much to make after-times regard him as a magician. It must not be omitted, that this writer looked with great satisfaction at the bold attacks of Martin Luther upon the corruption of the church of Rome, although the patronage he sought for from Catholic princes would not allow him to quit the pale of the church in which he was educated.—*Moreri. Bayle. Brucker.*

AGRIPPA (MARCUS VIPSANIUS) the celebrated friend and general of Augustus Cæsar, whose life belongs rather to history than biography, in consequence of its complete amalgamation with the public events of an interesting period in Roman history. To the military abilities and faithful services of Agrippa, Augustus owed not only the empire, but the most felicitous portion of his subsequent creditable career. After the battle of Actium, Octavius, then possessed of supreme power, either really or affectedly consulted his friends, Mæcenas and Agrippa, whether he should retain his sovereignty, or resign it to the senate. Agrippa, contrary to Mæcenas, recommended the more magnanimous part; which it need not be said Octavius declined to adopt, although he was not so ungenerous as to be offended with Agrippa for his dangerous counsel. Gibbon, alluding to Agrippa, observes that he was almost the first model, in the ancient world, of the faithful courtier of the modern one, a character who is supposed to mix up personal devotion with the love of country,

and to unite both in the general term "loyalty." Agrippa married first the daughter of Pomponius Atticus, and afterwards Julia the widow of Marcellus and daughter of Augustus. By the first he had one daughter, married to Tiberius, and by the second three sons and two daughters, of which two of the sons died young, while the latter, Agrippa Posthumus, fell a sacrifice to the jealousy of Tiberius. Of the daughters, Julia was married to Lucius Paulus; and Agrippina, first to Tiberius, and then to the celebrated Germanicus.—*Suetonius. Univ. Hist.*

AGRIPPA (MENENIUS) consul of Rome in the year of Rome 251, B.C. 503, was distinguished for his urbane and well-principled mediocrity between the patrician and plebeian interests, in that early stage of the republic. Being chosen one of the deputies by the former to conduct a conference with the people, he addressed to them the celebrated political fable of the belly and the members. The latter insisted however on the establishment of the protective magistrates named tribunes, with which demand Menenius advised the senate to comply. Menenius died soon after, at an advanced age, universally esteemed for his wisdom and integrity, but so poor, that the people insisted upon taxing themselves to support the expense of a public funeral, and when the senate issued a sum from the treasury for the purpose, demanded that their money should be given to his children.—*Livy.*

AGRIPPINA, the elder daughter of Marcus Agrippa and of Julia, was married in the first instance to Tiberius, who divorced her; on which she became the wife of Germanicus. On the death of the latter, she returned to Rome with his ashes, and took advantage of the public grief for the death of her husband, to accuse Piso, who was suspected of having hastened it. The latter was so harassed by her persecutions, and the indignation of the people, that he was found dead in his bed. Tiberius, jealous of the affection of the people for Agrippina, banished her to a small island, where he allowed her to die of hunger, A.D. 35. This magnanimous woman, who exhibited the same elevated character in all fortunes, left nine children by Germanicus.—*Nour. Diet. Hist.*

AGRIPPINA (the younger) daughter of the foregoing, and mother of Nero, was at once cruel and licentious. After having two husbands, she married her uncle the emperor Claudius, and having run a career of perfidy and baseness, poisoned him in order to make way for Nero. She however lived bitterly to repent the exaltation of this monster, who soon deprived her of the imperial authority she had obtained under the stupid Claudius, and, resisting all her intrigues and blandishments, put her to death. The centurion employed as her executioner struck her on the head with his sword: "Strike rather at my womb," she exclaimed, "for having brought forth such a monster." Tacitus observes, that Agrippina left memoirs behind her, which had proved very serviceable to him in the compilation of his annals.—*Tacitus.*

AGUESSEAU (HENRY FRANCIS D') a French statesman of great worth and talents, was born at Limoges in 1668. He was the son of Henry d'Aguesseau, intendant of Limosin, a man of high character for integrity and learning, by whom he was educated in every species of knowledge which promised to qualify him for the magistracy. Admitted an advocate in 1690, he was a few months after made advocate-general of the parliament of Paris at the age of twenty-two. He performed the functions of this office with great reputation, and was made procurator-general, which enabled him to show his abilities for the public service, by introducing a great reform in the management of hospitals, and by greatly improving the administration of the criminal code. Towards the end of the reign of Louis XIV, however, he was threatened with disgrace for refusing to register the famous bull *Unigenitus*. He thought that it interfered with the rights of the monarchy, and determined to defend the monarch even against himself. "Is it thus you forge arms against Rome?" exclaimed Quirini, the Pope's nuncio. "They are not arms, but shields," replied D'Aguesseau. At the death of Louis he again became ascendant, and in 1717 succeeded Voisin as chancellor; but before a year expired the Regent deprived him of the seals, for opposing the royal bank and other delusive projects of the celebrated Law. The issue of this famous bubble is well known; and in the hour of embarrassment the Regent thought proper to restore the seals to D'Aguesseau, who immediately began to repair a portion of the mischief done in his absence, by ordering the payment of the notes issued by the bank as far as possible; which measure, although the loss to individuals was great, he deemed less odious than a total bankruptcy. A new storm however awaited him, for the Regent in his turn became solicitous for the registration of the bull *Unigenitus*; and with some modifications D'Aguesseau was finally induced to comply. Through the influence of cardinal Dubois, however, he was once more deprived of the seals, which were not restored to him until 1737, when he resolved to confine himself to his duties as a magistrate, and laboured incessantly to produce a reform in the laws, and uniformity in the administration of justice. So great are the impediments to reform in this grand direction, that he could only procure four or five ordinances that were really effective. Like many other great legal luminaries, it was thought that the habit of viewing things in every light, and formally discussing the arguments on all sides, produced in him a species of indecision, which is very unfavourable to the production of extensive plans of amelioration. His professional sympathies also interfered; for he frankly confessed to the count de Grammont, in a conversation on the great expense of law-suits, that he had begun a plan for reforming it, but was prevented by reflecting on the number of counsellors, attorneys, and inferior officers he should ruin by it; a feeling which might be much corrected by the recollection, that but one generation of these could

suffer, while the ruin of clients is continual. In 1750, having attained his eighty-second year, he tendered his resignation, which the king accepted, but continued to him his official rank, and granted him a pension of 100,000 francs, which he did not long enjoy, as he died February 9, 1751. D'Aguesseau is considered by Voltaire as the most learned magistrate that France ever possessed, as he was eminently versed in both ancient and modern languages, profoundly acquainted with history, and a master of jurisprudence in its most enlarged acceptation. He was also fond of the belles lettres, and even composed verses which passed the critical ordeal of Racine and Boileau, who were the frequent companions of his leisure. To conclude: he was a man of great genius and integrity, and so superior to avarice, that he left no other gains from his long possession of office than his very fine library. The works of D'Aguesseau are published in 13 vols. 4to, Paris, 1759-89. He has the character of thinking in them like a philosopher, and speaking like an orator: his style is deemed chaste and harmonious, but somewhat cold.—*Nouv. Dict. Hist.*

AGUJARI (LUCREZIA) a celebrated singer, wife of Colla the composer. She is said in her youth to have had a voice of most extraordinary compass. At the Pantheon in London her salary was fixed at 100*l.* a night for two songs. She died in 1783 at Parma.—*Mus. Biog. Dict.*

AIDAN, a monk who, by his zeal and preaching, converted a large portion of the northern part of Britain to Christianity. He was afterwards bishop of Lindisfern or Holy Island on the coast of Northumberland, where he died, highly revered, about the year 651. The mildness and benevolence of his disposition and manners appear to have gained him a great ascendancy over the untutored inhabitants of his diocese. Among the miracles attributed to Aidan, is that of calming the sea in a storm, by pouring consecrated oil upon it. Pliny and Franklin mention the operation of oil upon the waves; but the quantity in this case being so small, the alleged miracle stands unimpeached upon that score.—*Biog. Brit.*

AIGNAN (———) a gentleman of some repute in the list of modern French authors. His works, which are not numerous, are characterised rather by their elegance than their solidity. Besides a new translation of Homer, in the execution of which the critics accuse him of having done little more than present the public with a second edition of that of De Rochfort in a more polished form, he early directed his attention to the stage, and his tragedy called "Brunehaut" not only met with decided success, but was thought to afford much promise of the future excellence of its author in this particular department of literature. Soon after the coronation of Napoleon M. Aignan, then in the zenith of his reputation, was made choice of to furnish letter-press descriptions explanatory of the magnificent plates engraved to illustrate that ceremony; but the work was never published, the price

demanding for the manuscript (400*l.*) being far too high to produce any bidders. During the latter years of his life, he was known principally as the author of a periodical work, the "Bibliothèque Etrangere," a publication bearing some resemblance in its plan to that of the "Retrospective Review." In the three volumes which have appeared, many scarce and curious tracts in various languages, as well ancient as modern, have been translated by him, and rescued from the oblivion that was fast overtaking them in the obscurity of an immense national collection. Catapult's account of the massacre of St Bartholomew, originally written in Italian, is one of the last and most interesting of these documents. M. Aignan died at Paris in the beginning of 1825.—*New Monthly Magazine.*

AIKIN (JOHN, M. D.) born January 15, 1747, at Kibworth, Leicestershire, youngest child and only son of T. Aikin, D. D. a dissenting minister and schoolmaster. He commenced his education in the dissenters' academy at Warrington in Lancashire, whence he was apprenticed to the late Dr Garthshore, then a surgeon and apothecary at Uppingham in Rutlandshire. In 1764 he became a student in the university of Edinburgh, where he spent two years, and after three more passed as a pupil to Mr White of Manchester, settled in Chester as a surgeon, whence he afterwards removed to Warrington. During his residence in this place, in addition to numerous works on professional subjects, he published several miscellaneous pieces in conjunction with his sister Mrs Barbauld, and gave proof of his scholastic acquirements by an excellent translation of Tacitus' "De moribus Germanorum," and of that author's life of Agricola. Here too he commenced his acquaintance with Dr Priestley and Gilbert Wakefield. In 1784 he proceeded to Leyden, where he graduated, and afterwards had considerable practice as a physician at Yarmouth in Norfolk, till he gave offence to a portion of the inhabitants by two pamphlets on the failure of the dissenters in their attempt to procure the repeal of the Corporation and Test Acts, as also by the freedom of his opinions with respect to the French Revolution; when Dr Girdlestone was encouraged by the high church party to settle in the town, and Dr Aikin escaped the bitterness of impending personal controversy by removing to London in March, 1792. In 1796 he accepted an offer made him by Mr (now Sir Richard) Phillips, of editing the Monthly Magazine, which he superintended from its commencement till 1806, when the connexion was dissolved. In 1799 he published, in conjunction with Dr Enfield, the first volume of a "General Biographical Dictionary" in quarto; but in consequence of the death of his coadjutor, and other circumstances of a pecuniary nature, which materially retarded the progress of the work, the tenth and last volume was not completed till 1815. Dr Aikin died December 7, 1822, in his 75th year, at his residence in Stoke Newington. Dr Aikin is the author of a life of Huet bishop of Avranches, of essays on seve-

ral of the leading poets, and of various miscellaneous works, which unite good sense, an accurate knowledge of life, and considerable critical acumen. He was also a very sensible and entertaining essayist, as the early volumes of the Monthly Magazine will evince, as well as the periodical work entitled the *Athæneum*, and several kindred publications.—*Gent. Mag. Ed.*

AIKMAN (WILLIAM) a painter of eminence, who flourished in what has been termed the Augustan age of England. With most of the wits of queen Anne's time he enjoyed an intimacy, especially with Swift, Pope, Arbuthnot, Gay, Somerville, and his countrymen Thomson, Smollett, and Allan Ramsay. To the four last he is indebted for honourable mention and sundry poetic compliments in their works. Born in Scotland, he was originally intended for the same profession as that followed by his father, the law; but on reaching the age of manhood, his love of the fine arts induced him to relinquish so dry a study for one more congenial to his disposition; a change which the easiness of his circumstances enabled him to execute without detriment to his success in life. John duke of Argyle, and the earl of Burlington, ranked among his earliest friends and patrons. Portrait painting was the branch of his art to which he more particularly directed his attention. Among the best specimens created by his pencil, are portraits of several members of the Buckinghamshire family, and a large picture of the then royal family. The latter is now in the possession of the duke of Devonshire. He died in 1731, in the 49th year of his age, at his house in Leicester-fields.—*Walpole's Anec.*

AILLY (PETER D') a cardinal and legate in the time of Charles VI of France, with which monarch he was in high favour: he received from his munificence the see of Puy and Cambray, with the chancellorship of the university of Paris. Before his elevation to the purple, he presided at the famous council of Constance, which condemned John Huss to the stake. He was the author of several polemical works much patronized by pope John XXIII, an edition of which was printed at Strasburg. He died in August 1419.—*Moreri.*

AILRED, ETHELRED, or EALRED, abbot of Revesby, Lincolnshire, was born in the year 1109, and educated in Scotland. He was fond of study, and refused ecclesiastical preferment. Several of his historical labours in Latin remain: "A History of the War of the Standard in the reign of King Stephen;" "A Genealogy of the English Kings;" "A History of the Life and Morals of Edward the Confessor;" and "A History of the Nun of Walthun," are to be found in Twisden's "Deum Scriptores," London, 1652. Some sermons are also to be found in the "Bibliotheca Patrum."—*Biog. Brit.*

ALMON (of Aquitaine) author of a legendary history of France, is supposed to have lived in the ninth century. The history is brought down to 1165 by another hand; it may be seen in the third volume of the collection of Duchesne.—*Vossius. Moreri.*

AINSWORTH (HENRY) a nonconformist minister of deep reading and research. Having adopted the opinions of the well-known Robert Browne, founder of the sect called after his name, he followed his example in retiring before the arm of power to Holland, where, in conjunction with another divine of the same persuasion, named Johnson, he succeeded in collecting a congregation of Brownists. A quarrel shortly taking place between the two pastors, both were eventually dismissed from their situations, when Ainsworth retired to Ireland. His writings exhibited much learning and acuteness, and excited the attention of Hall, bishop of Exeter, who entered the lists against him. A singular story is told of the manner of his death, which took place at Amsterdam. It is said, that having found a jewel of considerable value, he restored it to its owner, a Dutch Jew, demanding only, as his reward, a conference with the leading men of his synagogue, for the purpose of entering into a disputation on the prophecies respecting the Messiah. This he was very readily promised; but the Jew, having probably over-rated his own influence with the rabbis, and being unable or unwilling to keep his word, smoothed all difficulties by poisoning his new friend rather than disappoint him. The only thing certain is, that he died in Holland, in the early part of the seventeenth century. His most esteemed works are—his Annotations on the Psalms, 4to, 1612; on the Pentateuch, and on Solomon's Song, 1627—1639, folio. His controversial publications are numerous.—*Biog. Br.*

AINSWORTH (ROBERT) a grammarian, and compiler of the celebrated dictionary of the Latin tongue which goes under his name: it was published by him originally in 1736, with a dedication to Dr Mead, in one volume 4to. Ten years afterwards Patrick published an improved edition, which was followed by another, in 1752, under the superintendance of Dr Ward of Gresham college, and the Rev W. Younge. This last is considerably augmented, and is in two folio volumes. Mr Ainsworth was a native of Lancashire, born in 1660, at Woodyeale near Manchester; he received his education at Lever's grammar school in Bolton, to the mastership of which he afterwards succeeded. Subsequently he opened an establishment for the instruction of youth at Bethnal-green, and more than one other place in the vicinity of London, by which having realized a handsome fortune, he retired some time previous to his death, to the enjoyment of literary leisure. His death occurred in London, April 1743, when he was interred at Poplar. A treatise on grammar, and a few specimens of Latin poetry, were also among his productions. *Biog. Br.*

AITON (WILLIAM) author of the *Hortus Kewensis*, an excellent botanist, born in Lankashire in Scotland. He was a great favourite with the late king (George III) who, on the recommendation of Mr Miller, appointed him head gardener to the royal demesne at Kew in 1759. In this situation one of the best collections of rare exotic plants in the known

world was formed under his care, a catalogue of which, bearing the above-mentioned title, he published in 1789. He died of a schirrous fever in 1793, and was succeeded in the situation by his son.—*Ann. Biog.*

AITZEMA (LEO) an historian of Friesland, born A.D. 1600, the author of "History of the United Provinces," in fifteen volumes 4to, and seven folio. As a large collection of authentic pieces, this work is extremely valuable.—*Nouv. Dict. Hist.*

AKBER (Sultan) the third of the descendants of Timour, who reigned in Hindostan. He succeeded his father in 1556, and the first action of his reign was to recover Delhi from the Patans. Akber, a warlike and able monarch, was ambitious that the transactions of his reign should descend to posterity; which desire induced him to employ his celebrated Vizier Abul Fazel to write an account of his life, as well as to compile the geographical, statistical, and constitutional account of the Mogul empire, entitled "Ayeen Akberry." He experienced the usual fate of an Eastern monarch in a rebellious son, whom he however pardoned on his becoming his only one. He died in 1605 by taking a poisoned pill, which he had intended for a courtier who had lost his favour.—*Univ. History.*

AKENSIDE (MARK) M.D. a writer who claims attention as a poet, and not from his professional fame, was born in 1721 at Newcastle-upon-Tyne, where his father was a substantial butcher. He received his early education at a grammar school, and finished his studies at the universities of Edinburgh and Leyden, in the latter of which he took his doctor's degree in 1744. In the same year appeared his most distinguished poem, "On the Pleasures of the Imagination," which raised him at once into poetical eminence. This poem was rapidly followed by the "Epistle to Curio," a warm invective against the political apostacy of the celebrated Pulteney earl of Bath; and in 1745 he published ten odes on various subjects, all of which labours distinguish him as a zealous votary of the Grecian intellectual philosophy, and an ardent lover of liberty. He continued, from time to time, to publish his poetical effusions, although in a more leisurely manner. Most of these appeared in Dodsley's Collection, but especially his celebrated "Hymn to the Naiads." His professional career, which was not eminently successful, presents few incidents worthy recording. He settled for a short time at Northampton, and subsequently in London, and was generously assisted, while his practice was forming, by an allowance of 300*l.* per annum from his friend Mr Dyson. He pursued the regular train to medical advancement, became doctor of physic by mandamus at Cambridge, and fellow of the College of Physicians. He wrote, on medical subjects, "Observations on the Origin and Use of the Lymphatics," and an "Account of a Blow on the Heart and its effects;" but his principal professional work, written in elegant Latin, is a "Treatise on the Epidemic Dysentery of 1764." By these

exertions his reputation and practice increased, and he became physician to the Queen. Dr Akenside was deemed haughty and ostentatious by his brethren of the faculty; and the ridicule cast upon him by Smollett, in the novel of *Peregrine Pickle*, where he figures as the giver of a feast after the manner of the ancients, is well known. He died of a putrid fever in June 1770, in the forty-ninth year of his age; and his books and prints, of which last he was an industrious collector, came into the possession of his friend Mr Dyson. The poetical fame of Akenside doubtless rests on his "Pleasures of the Imagination," which ranks him among those who have given the most finished models of blank verse. He is however sometimes stately even to stiffness, too redundant in ornament, and, from his solicitude to avoid simple and natural expression, occasionally obscure. His odes, which have never been public favourites, possess copiousness and elevation of thought, but are extremely deficient in grace and harmony. His "Hymn to the Naiads" decidedly ranks next to his "Pleasures of the Imagination," and is a beautiful and classical production.—*Biog. Brit.*

AKIBA, a Jew of low origin in the reign of the emperor Hadrian. His devotion to literature, incited it is said originally by the love he felt for his master's daughter, raised him to eminence and to the rank of a rabbi. On the defeat and destruction of the impostor Barcochebas, to whose faction he had joined himself, Akiba was taken prisoner, and put to death by torture, together with his whole family: himself and his son Pappus were flayed alive. A suppositious work, written under the name of the patriarch Abraham, has been ascribed to him, and he is said to have been the original compiler of the Jewish cabalistic traditions. After his execution, which took place in the year 135, he was interred on a mountain in the vicinity of Tiberias: many of his followers and disciples, to the number it is said of 24,000, afterwards chose the same spot for their burial place. His book, called *Jezirah*, was printed at Paris, 8vo, 1552, of which a Latin version with notes was published in 1642 by Rittangel, a converted Jew of Koningsburgh.—*Brucker. Lightfoot.*

ALABASTER (WILLIAM) an English divine of the Protestant church in Elizabeth's time, a native of Hadleigh in Suffolk. He was the author of several polemical tracts, though his confidence even in his own opinions could not be very strong, inasmuch as he found occasion to change them more than once, publicly abjuring the Reformed religion for Catholicism at one time, and subsequently returning to the faith he originally professed. The work which does him most credit is a "Lexicon Pentaglotton," which he published in folio. A Latin tragedy called *Roxana* was also written by him, and acted at Cambridge. In his youth he appears to have had a military turn, and accompanied the Earl of Essex on his expedition to Cadiz. He survived till the reign of Charles I, and died in 1640.

ALAIN: see CHARTIER.

ALAMANNI (LEWIS) a Florentine poet and statesman, born towards the beginning of the 16th century. His commencement in politics was unsuccessful, being engaged in a conspiracy to overthrow the power of the Medici family in his native city: the plot was discovered, one of the parties taken and executed, while Alamanni himself narrowly escaped by flight. The accession to the power of his enemies, by the elevation of Giulio de Medici to the papal chair in 1523, seemed to condemn him to a life of exile. The disgust however felt towards that pontiff by the emperor Charles V, from the part he took in consolidating the "Holy League," between Henry VIII of England and Francis I of France, produced a quarrel which ended in the occupation of Rome by the imperial forces. The popular faction at Florence, taking advantage of the situation of affairs, expelled the Medici, and Alamanni was recalled; but his popularity did not last long. A negotiation, which he set on foot with the Emperor, exposed him to suspicion; he was again compelled to fly, and the power of his rivals, after a short struggle, was re-established. From this time he continued in the service of the French court, by which he was employed in several embassies. His works are, 1. *Opera Toscana*, a collection of poems and a tragedy, 2 vols. 8vo; 2. *La Cultivazione*, an elegant poem, in imitation of the *Georgics*, 4to; 3. An heroic poem, entitled *Girone il Cortesi*, [*Cortesi*] 4to; 4. *L'Avarchide*, an epic poem; 5. *Flora*, a comedy. He died at Amboise, April 18, 1566, aged 66.—*Moreri.*

ALAN or ALLEN (WILLIAM) a cardinal, was born at Rossal in Lancashire, in the year 1532. Being educated at Oxford by a tutor warmly attached to the Roman Catholic religion, he early exhibited a strong prepossession in its favour, and while very young became principal of St Mary's college and proctor of the university. The accession of Elizabeth not only put a stop to his preferment, but, apprehending himself in danger, he withdrew to Louvain, where many English Catholics had already taken refuge. Here he wrote, in reply to bishop Jewell and others, several controversial treatises; and soon after, for the benefit of his health, privately returned to England, where he remained concealed for three years, disseminating from his retreat publications in favour of the ancient religion. In 1568, with some difficulty, he again escaped into Flanders, where he received several ecclesiastical appointments, and established a seminary for the education of English youth at Douay. He still continued to introduce his polemical tracts into England; and his zeal at length led him so far, that he connected the deposition of Elizabeth with the advancement of religion, and openly espoused the pernicious doctrine, now so honourably disclaimed by the Catholic church, that heresy absolved every natural duty, including allegiance to the sovereign. He had little further to proceed, and he soon went the remainder of the road by doing his best with his party to recommend the invasion

of England by Philip II; and when that gloriously defeated expedition sailed, he transmitted to England many thousand copies of a work which he had written to prove Elizabeth a heretic and schismatic, and to show that her subjects were absolved from the oath of allegiance. For these services, Allen was made a cardinal, and presented to an abbey of great value in Naples; and on the signal failure of that infamous attempt, he lost not his credit, but was appointed archbishop of Meclun, although from this time his residence was at Rome, where he was usually called the Cardinal of England. It is said, that towards the close of his life he repented of the measures which he had recommended against his country, and expressed dissatisfaction at the spirit and conduct of the Jesuits; and letters of his are extant, which advocate a reconciliation on the ground of a simple toleration of the ancient religion. On his death-bed he wished to address the English students at Rome, but was prevented by the attendant Jesuit. He died in the year 1594, and a strong suspicion went abroad that he was poisoned. Whatever charity may be extended to Allen for the sincerity of his convictions, happily in the present day there can be no difference of opinion in respect to his criminal practices against his country. As a writer he was undoubtedly one of the ablest advocates of Rome. His productions are exclusively polemical, the most admired of which is a piece written in answer to a book by lord Burleigh; it is entitled, "A true, sincere, and modest defence of Christian Catholics," and has been called by the learned Bolton, "A princely, grave, and flourishing piece of natural and exquisite English.—*Biog. Brit.*

ALAND (SIR JOHN FORTESCUE) lord Fortescue of the kingdom of Ireland, a baron of the Exchequer, and a puisne judge of the courts of King's Bench and Common Pleas in the reigns of George I and II, was descended from the famous Sir John Fortescue, lord chief justice and lord high chancellor of England in the reign of Henry VI. He was educated at Oxford, and being admitted a member of the Inner Temple, soon became an eminent pleader. In 1714 he was appointed solicitor-general to the prince of Wales, and ran through the usual course of legal promotion. He was appointed first a baron of the Exchequer, and afterwards one of the justices of the court of King's Bench. On the accession of George II his patent was not renewed; but some time after he recovered favour, and was appointed one of the justices of the court of Common Pleas. He resigned this last appointment after a service of thirty years, and was created an Irish peer under the title of Lord Fortescue of Creden.

The family is now extinct. The juridical writings of this judge are, "The Difference between an Absolute and a Limited Monarchy, as it more particularly regards the English constitution, written by Sir John Fortescue, Knt. Lord Chief Justice and Lord High Chancellor in the reign of Henry VI, with some remarks by Sir John Fortescue Aland, F. R. S.

London, 1714, 1719." In his preliminary remarks Sir John showed himself a proficient in Saxon learning. He is also the author of a volume of reports published after his death, London, 1743. Lord Fortescue lived in the habits of intimacy with Pope and the other wits of the day, and is author of the pleasant legal burlesque of "Stradling versus Styles."—*Biog. Brit.*

ALARD (FRANCIS) the son of a member of a noble family at Brussels, a zealous convert from the Roman Catholic religion, was born in that town, in the beginning of the sixteenth century. His father obliged him to enter into the Dominican order; but having privately obtained the works of Luther, he clandestinely forsook his convent, and studied divinity at Jena and Wittemberg. Destitute however of resources, he ventured to return to Brussels, and seek assistance from his father, but was discovered in the streets by his mother, a violent bigot, who denounced him to the Inquisition, and when no persuasions could induce him to recant, called for all the rigour of the law, and even offered to furnish wood to burn him. Sentence of death was accordingly pronounced; but by connivance, it is supposed, he contrived to escape, and arrived in safety at Oldenburgh, where he became almoner to the prince. He subsequently returned home to his native country, notwithstanding the persecutions of the duke of Alva, and in the end made a convert of his father. No longer safe in the Netherlands, he had a curacy given him in Holstein, where he died in 1578. His son William became rector of the college of Kremen, and his grandson Lambert compiled a Greek lexicon, together with theological works and Latin poems. The latter was inspector of the public schools of Brunswick, and died in 1672. He had also a great grandson who wrote his life.—*Moreri.*

ALARIC. This celebrated leader of the Visigoths crossed the Danube in 376, with the rest of his countrymen, who were driven forward by the Huns. He fought with great valour against the Romans until the year 382, when with his followers he was allowed by the emperor Theodosius to settle in Thrace, on condition of serving the empire when required. This peace was preserved during the life of Theodosius; but under his weak successor Arcadius, being refused preferment, Alaric revolted, and committed great ravages in Greece. The renowned general Stilicho checked his career in the first instance, but—as it was suspected, by connivance—allowed him to escape. He was soon after made formal master of the provinces he had so mercilessly oppressed, by the timid emperor of the East, and also chosen king by his own tribe. He then turned his arms into Italy, and carried away vast plunder and many captives; and although checked in a second attempt by Stilicho, was, by the advice of that general, taken into the service of the emperor Honorius; but owing to bad faith on both sides, soon broke his engagement, and at length, after a seeming truce, entered Rome in August

110, when a great portion of the wealth of the metropolis became the property of these Gothic spoilers. From Rome he proceeded to the extremity of Italy, with a view to the invasion of Sicily, where a short illness put a period to his life in the vicinity of Rhegium, A. D. 410. Alaric had great qualities and abilities, and his apparent want of faith is thought by some historians to have arisen from the little trust to be placed in the unwilling engagements of the weak emperors with whom he treated.—*Univ. Hist.*

ALASCO (JOHN) a nobleman nearly connected with the royal family of Poland in the sixteenth century. Embracing the doctrines of the Reformed religion, persecution drove him from his native country, to Embden, where he established a congregation, but the same cause still operating, he retired into England about 1551, where the protection of Edward VI, then upon the throne, secured to him a safe asylum. The publication of the famous *Interim* driving more Protestants to the same place of refuge, he collected about 380 of them, who, under his auspices, became naturalized, and obtained a charter of incorporation, with Alasco as superintendent, and four assistant ministers. The accession of Mary drove them back to Embden, where they settled in peace. Alasco, receiving an invitation from king Sigismund, returned after an absence of twenty years to Poland, where he died in 1560. He was in great esteem with most of the learned men of his day, and enjoyed the friendship of many of them, particularly of Erasmus, whose library he is said to have purchased. Two theological tracts of his, written in Latin on the subject of the Eucharist, have come down to posterity.—*Strupe's Memorial of Cranmer.*

ALBAN (St) regarded as the first or protomartyr of Britain, was born towards the end of the third century at Verulam, close to the site of the present town in Hertfordshire which bears his name. In his youth he visited Rome, in company with a monk of Caerleon named Amphibalus, and served seven years as a soldier under the emperor Dioclesian. On his return to Britain, renouncing Paganism, he embraced Christianity, and, it is generally agreed, suffered martyrdom in the great persecution under the above emperor, Bede says A. D. 286; others place it in 296; and Usher in 303. A number of legendary miracles are attributed to this saint, whose history altogether is possibly no more than a legend. The celebrated monastery of St Albans was not founded until between 4 and 500 years after his death, by Offa king of Mercia. In a repair of the church of St Albans, in 1257, a tomb was opened, which, according to an inscription found therein, contained some relics of St Alban.—*Biog. Br.*

ALBANI (ALEXANDER) an eminent virtuoso, was born at Urbino in 1692, and raised to the rank of cardinal by Innocent XIII. He died in 1779, aged 87, very highly esteemed. His house, known by the name of the Villa Albani, was famous for beautiful statues and other treasures of the fine arts. In 1762 his

late majesty purchased for 14,000 crowns the collection of drawings of cardinal Albani, amounting to three hundred volumes, one third of which were original and by the first masters, and the remainder most excellent engravings. This prelate was librarian to the Vatican, and is author of some literary and political works which possess reputation.—*Ann. Reg. Nouv. Dict. Hist.*

ALBANI (JOHN FRANCIS) also cardinal, and nephew and heir of the subject of the preceding article. He distinguished himself by his opposition to the suppression of the Jesuits, and to all concession on the part of the papacy, in favour of temporal innovation. In other respects, he was chiefly distinguished by his taste for the fine arts and patronage of its professors. He also increased the valuable library of his uncle from twenty-five to thirty thousand volumes; and in the year 1793 it was computed that the Villa Albani contained nearly two hundred thousand works of art and specimens of antiquity, all of which were dispersed or carried away when the French entered Rome. The latter are accused of a peculiar want of generosity in this instance, because the family of Albani had some affinity by marriage with that of Austria. After the election of Pius VII, cardinal Albani returned to Rome, but could never muster sufficient fortitude to visit his dilapidated villa. He died in 1803, with the character of being one of the eloquent, affable, and accomplished persons of the age.—*Athenæum, vol. iii.*

ALBANI (ALOISIA DE STOLBERG, Countess of) wife of Prince Charles Edward Lewis Casimir Stuart, commonly known by the name of the Pretender, was celebrated as the "Mia Douina" of Victor Alfieri, whose muse will hand her down to posterity. The life of this lady appears to have been throughout an unhappy one: in the possession of great beauty, mildness, and accomplishments, she was early in life united to a coarse, licentious, and intemperate character, who was altogether incapable of appreciating her merits. The disgusting habits of her husband, strikingly portrayed by the pen of her admirer, are confirmed by accounts from less questionable sources. She was compelled at length to take refuge from his brutality in a convent, where she remained till his death in 1788 released her from her yoke. Her own took place at Florence, Jan. 29, 1824, in her seventy-second year.—*Gent. Mag.*

ALBANO (FRANCISCO) a Bolognese, bred a silk merchant, which profession he soon quitted for that of a painter, and became the pupil of Denis Calvert, a Flemish artist of eminence, in whose painting-room the celebrated Guido Reni, his countryman, was his fellow-student. Quitting this master, the young men both subsequently placed themselves under the tuition of the Caracci at Rome, where they completed their studies. Albano is celebrated for the grace and elegance of his female figures, and the loveliness of his cupids, whose attitudes and arch expression are much admired. Connoisseurs remark a great same-

ness in his delineation of these subjects, which is accounted for by the fact that his wife Dorahice, a woman of extraordinary beauty, was his model in the first case, and the twelve children she bore him, in the second. Several of his landscapes also, and other pieces, are in great estimation, particularly one of the four elements, painted for the king of Sardinia. His works are to be found in most of the principal cabinets in Europe. Charles I of England, a great lover of the art, invited him over to visit him. He died at his native city, in 1660, at the advanced age of eighty-two, having been born in 1578; and was held in such esteem by his fellow citizens, as to be honoured by a general mourning. He had a younger brother, Giovanni Battista, also a landscape painter of some repute, who had profited by his instructions: the latter survived him eight years.—*Pilkington's Dict. of Painters.*

ALBEMARLE, see MONK.

ALBERONI (JULIUS) a Spanish statesman and cardinal, born in 1664, was the son of a gardener near Parma, who at the age of fourteen obtained a petty post in the cathedral of Placentia, and in time became priest and canon. The career of eminence was opened to Alberoni by an accident which happened to the poet Campistron, secretary to the duke of Vendome, who having fallen into the hands of robbers, was hospitably entertained and furnished with money and clothes. Campistron in return introduced Alberoni to the Duke, then commanding in Lombardy, whose good graces he secured by discovering the stores of grain concealed by the country people. By Vendome, when the latter took the command in Spain, he was fixed upon as a proper person to carry on his correspondence with the princess des Ursins, who then took the lead of affairs in that kingdom. Introduced for that purpose in the character of agent to the duke of Parma, he soon obtained a footing in the court of Philip V, and when that prince became a widower, carried into execution the measure of marrying him to the princess of Parma. His fortune was now established; for this princess, who obtained a great ascendancy over her husband, gave him all her confidence, caused him to be created a cardinal in 1717, and made him a grandee of Spain and prime minister. In this situation Alberoni quickly began to display the mixture of intrigue, ability, and restless ambition, for which his name is so celebrated. He aimed at once to excite the Turks to war against the Emperor; to set the Pretender on the throne of Great Britain, by the means of Peter the Great and Charles XII of Sweden; to annihilate the German princes in Italy; and lastly, to dispossess the duke of Orleans of the regency of France, in favour of Philip V, as the eldest representative of the family. This scheme being discovered by the Regent, France and England united, declared war against Spain in 1719, and would not consent to a peace except on condition of the immediate removal and banishment of Alberoni. In 1720 he was accordingly ordered to leave Spain, which he quitted, taking with him immense

riches, and the important will of Charles II, appointing Philip universal heir to the Spanish monarchy. When his abstraction of this celebrated document was discovered, a messenger was sent after him to recover it, and could only obtain it from him by force. On leaving Spain he retired to Genoa, where he was arrested by order of the Pope for his intrigues with the Turks; and proceeding to Rome, a formal inquiry was made into his conduct by the sacred college, the result of which was an order to retire for a year into a college of Jesuits. On his liberation he went to Parma, where he much occupied himself in the establishment of a school for the education of poor scholars: but having added to his own funds some lands which he recovered, as having been usurped from the church, his establishment was never very popular with his countrymen. He soon after went to Rome, and was appointed legate of Romagna by Clement XII, in which employment, at the age of seventy, his inextinguishable passion for political intrigue induced him to plot against the independence of the little republic of San Marino, which ended very ludicrously in the cardinal and his suite being driven out of the church and the territory in the expected moment of success. Alberoni died in 1762, aged eighty-seven, and left behind him the character of a bold and versatile intriguer rather than of a great politician, although he certainly created a strong temporary impulse in the Spanish monarchy and established many regulations which were favourable to arts, agriculture, and commerce. Happily for mankind, the field for politicians of the adventuring class of Alberoni is becoming every day more circumscribed, and able statesmanship is less and less connected in men's minds with the bold and unprincipled schemes of aggression and false aggrandizement by which his policy was distinguished. The temper of Alberoni was extremely haughty; and although lively and pleasant in conversation, he could not bear contradiction even in his advocacy. The publication, called his "Testament Politique," like most of the works under that suspicious title, is of no authority.—*Nouv. Dict. Hist.*

ALBERT (of Aix) or Albertus Aquensis, a canon of Aix la Chapelle in the twelfth century. He wrote in Latin what is esteemed an accurate "History of the Expedition to Jerusalem, under Godfrey of Bulloyn and other leaders." It was reprinted by Reineccius in 1662.—*Vossius.*

ALBERT (ERASMUS) a German divine of the sixteenth century, who collected many absurdities from a book entitled, "The Harmony between Jesus Christ and St Francis," and composed a work which he called "The Koran of the Cordeliers," which piece was printed in Latin without place or name of printer in 1531. Several editions have since appeared, the last of which is that of Amsterdam, 12mo. 1734.—*Nouv. Dict. Hist.*

ALBERT (LOUIS JOSEPH D') grandson of the constable de Luynes and the ninth child of Louis Charles duke de Luynes, was born

in 1672. After serving very gallantly in the armies of France, he entered into the service of the elector of Bavaria, who, on becoming emperor under the title of Charles VII, created him a prince of the Holy Roman Empire, by the title of Prince of Grimberghen. Amongst all his political and military engagements, he cultivated literature: his works are, "Le Songe d'Alcibiade," Paris, 1735, 12mo; "Timandre instruit par son Genie," and other pieces, published under the title of "Recueil de différentes pieces de littérature," Amsterdam, 12mo, 1759. He died in 1753, aged eighty-seven.—*Biog. Universelle*.

ALBERTET, a mathematician and poet of the thirteenth century, was a native of Provence. He was equally devoted to literature and the fair sex, and wrote several poems in honour of his Platonic mistress, the marchioness of Malespine. He left his poems to a friend in order to be presented to the lady, instead of which he sold them to Faber d'Uzes, who published them as his own. The plagiarism being discovered, D'Uzes was whipped for the appropriation, agreeably to a then existing law upon the subject, which it need not be added is not in force at present in any country.—*Vossius. Moreri*.

ALBERTI. There were two painters of this name, Cherubino and Giovanni, brothers, natives of the Florentine territory, who flourished about the close of the 16th century. Cherubino, who was also an engraver, died in 1615, in the sixty-third year of his age, surviving his brother about fourteen years. Giovanni was much admired for the excellence of his perspective.—*Pilkington's Dict. of Painters*.

ALBERTI (ARISTOTILE) better known by the name of Ridolfé Fioravente, a Bolognese, celebrated in the 15th century for his knowledge of mechanics. Many marvellous stories are told of his skill, such as erecting a steeple with all its bells, &c. He emigrated to Hungary and Russia, where he acquired great reputation by the erection of bridges, churches, &c.—*Nour. Dict. Hist.*

ALBERTI (DOMINICO) a Venetian composer and harpsichord player of eminence, who came to England in the suite of the Spanish ambassador early in the last century. Among other pieces, which were much admired at that time, he set to music the Endymion of Metastasio in 1737. He was a pupil of Biffi and of Lotti.—*Biog. Dict. Mus.*

ALBERTI (JOHN) a learned professor of divinity at Leyden, who in 1725 published "Observationes Philologicæ, in sacros Novi Fœderis libros," 8vo, which was soon after followed by another, entitled, "Periculum Criticum, in quo loca quædam cum V. ac N. I. tum Hesychie et aliorum," &c." 8vo. The first volume of his edition of Hesychius was published in 1746. He left it incomplete at his death in 1762, but it was perfected by Runkenius, Leyden, 1766.—*Univ. Biog. Dict.*

ALBERTI (JOHN WIDMANSSTADTUS) chancellor of Austria, and an oriental scholar of eminence. He edited in 1556 a Syriac version of the New Testament with great care and ex-

pense, the latter being defrayed by the emperor his master. This edition is remarkable for the omission of the Book of Revelations, the second and third epistles of St James, and the second of Peter. One thousand copies of this work were printed, half of which were sent to the East. He was also author of a Commentary on the Koran, which he abridged. He died in 1559.—*Moreri*.

ALBERTI (LEANDER) a Bolognese monk of the 16th century, author of a history of his native city, and another of Italy; the latter, entitled "Descrizione di tutta l'Italia," of which several editions have been published, is replete with curious facts. He also published memoirs of illustrious members of the Dominican order, to which he belonged. He died in 1552, at the age of seventy-four.—*Moreri*.

ALBERTI (LEON BAPTISTA) an eminent Italian architect, was born at Venice in the beginning of the fifteenth century. He was so early and complete a proficient in classical literature, that, at the age of twenty, he composed a Latin comedy under the name of Lepidus, which passed for genuine with the learned Aldus. He took orders, and became abbot of St Ermete at Pisa, but applied principally to the art of design, being a good painter and sculptor as well as architect. He was much employed by pope Nicholas V, as also by Lorenzo Medici, and his principal erections are at Florence, Mantua, and Rimini. This able artist was author of, 1. "Momus de Principe," Rome, 1520; 2. "Trivia sive de Causis Senatoriis," 1588, 4to; 3. "Fabies or Apologues;" 4. "Treatise on Scripture;" 5. "De Pictura," Basil, 4to, 1540, and Leyden (Elzevir) 1649; 6. "De Re Edificatoria," 1485. The last work has been translated into Italian by Lauro, and was handsomely published in Italian and English in 3 vols. folio, London, 1726. The invention of the Camera Obscura has been given to Alberti, concerning the time of whose death accounts differ, but the most probable date is 1475.—*Tiraboschi*.

ALBERTI (DI VILLANOVA FRANCIS) an able lexicographer, born at Nice in 1737. His principal work is entitled, "Dizionario universale Critico Enciclopedico della lingua Italiana," a new edition of which, in six volumes, was published in the year in which he died at Lucca, 1803.—*Un. Biog. Dict.*

ALBERTINI (FRANCIS) an ecclesiastic of Florence and an able antiquary in the beginning of the 16th century. He wrote, 1. "De Mirabilibus novæ et veteris urbis Romæ," 1505, 4to, and several times reprinted; 2. "Tractatus brevis de laudibus Florentiæ et Saonæ," added to the third edition of the preceding; 3. "Memoriale de molte Statue, e pectore sono nell' inclita cipta di Florentia, &c." Florence, 1510, 4to. These works of Albertini are still esteemed.—*Biog. Universelle*.

ALBERTUS (MAGNUS) one of the most celebrated doctors of the thirteenth century, was born at Lavingen in Swabia, in the year 1193, or as some accounts say in 1205. He was educated at Pavia, where he took the religious habit among the Dominicans, and be-

came provincial of his order. After having for some time taught the scholars of his society, he went to Paris and gave lectures on Aristotle with great applause. He soon became so distinguished for his extensive acquaintance with the subtle philosophy and obscure theology of the times, that in 1248 he was called to Rome by pope Alexander IV, and appointed to the office of master of the holy palace. In 1260, he was elected bishop of Ratisbon; but finding his episcopal duties inconsistent with his love of retirement and study, he resigned his bishopric and returned to Cologne to enjoy the leisure of monastic life. He was however drawn from his retirement by pope Gregory X, who sent him into Germany and Bohemia to preach the crusade. He afterwards attended the council of Lyons, and then returned to Cologne, where he remained until his death in 1280. The celebrity of Albertus is so clouded with the legendary tales related of his acquirements and performances in natural magic and in physics, that it is impossible to say what portion of it is duly merited. Neither is the difficulty lessened by a recourse to his works, as in the huge collection of them, in twenty-one volumes folio, Lyons, 1651, many pieces are inserted, which are now known not to have been composed by him. Many extraordinary things are attributed to him, such as that he framed an "Androis," or machine in the human form, of different kinds of metal, the various parts of which, being framed under celestial aspects and constellations, could speak and reveal to him the solution of his most difficult questions. It is added, that his famous pupil, Thomas Aquinas, in terror, broke this metallic oracle with his stick. Another tale makes this great magician reproduce the flowers of spring in the midst of winter, for the entertainment of William earl of Holland and king of the Romans, on his passing through Cologne. How far these fables may be connected with the possession of a degree of general knowledge of mechanics, or of chemistry beyond his contemporaries, it is not easy to determine; but in his writings he is for the most part merely a commentator upon Aristotle and a compiler from the Arabian writers. In divinity he followed Peter Lombard, and in philosophy sought to steer between the Nominalists and the Realists: his natural philosophy exhibits little beyond the usual ignorance of the period: astrology is treated as a sublime science, and all sorts of secret virtues are attributed to precious stones and other natural productions, and much labour is lost in accounting for them. At the same time he knew little of the Greek language, and was so ignorant of geography as to place Byzantium in Italy; so that his title to the surname of Great seems to rest more upon the ignorance of his contemporaries than on his own information. It is remarked by Brucker that the second age of scholastic philosophy, in which the metaphysics of Aristotle were obscured from Arabian sources, began with Albertus and ended with Durand. It forms a whimsical contrast in language, to state that Albertus Magnus was a very little man.—*Bayle. Brucker. Nouv. Dict. Hist.*

ALBINOVANUS (C. PEDO) a Latin poet in the reign of Augustus. Two elegies under his name are all that have come down to posterity, one on the death of Drusus, and the other on that of Mæcenas.—*Moreri.*

ALBINUS (BERNARD SIEGFRED) son of a celebrated physician of the same name, and one of the most famous anatomists of modern times, was born at Frankfort in 1697. He received his first instructions from Boerhaave and other able professors of Leyden, and in 1721 became himself professor of anatomy in the same university. In 1725 his first publication appeared, under the title of "Index supellectilis anatomicæ Ravianæ." His other works are, 1. "De Ossibus Corporis humani," Leyden, 8vo; 2. "Historia Musculorum Hominis," *ibid.*, 1734, the plates of which are deemed highly accurate and valuable; 3. "Treatises on the Vascular System of the Intestines, on the Bones of the Fœtus," &c; and "Annotationes Academicæ," 4 vols. 4to. He also published very correct editions of Harvey, Vesalius, and other anatomists; and lastly, the very fine plates of Eustachius. This able professor died at Leyden in 1770, after filling the chair for nearly fifty years. His brother, *Christian Bernard*, was professor of anatomy at Utrecht, where he died in 1752. He is author of 1. "Specimen anatomicum exhibens novam tentum Hominis Intestinorum descriptionem," Leyden, 4to, 1722, 8vo, 1724; 2. "De Anatomie errores detegente in Medicina," Utrecht, 1723.—*Biog. Univ.*

ALBO (JOSEPH) a learned Spanish rabbi, a native of old Castile, who assisted in 1412 at a famous dispute on religion between the Christians and Jews, held in the presence of the Anti-pope Benedict XIII. He wrote, in reference to the foregoing controversy, a work under the title of "Sepher Hikkarim," of which several editions have been published, the more modern of which omit the third book, being particularly pointed against Christianity.—*Biog. Univ.*

ALBOIN, also called ALBOVINUS, a king of Lombardy about the middle of the fourth century. The horde of which he was the chief having overrun Italy, he ascended the throne of that kingdom in 570. Cunimond, a neighbouring chieftain, resisting his arms, was overthrown and slain, when the conqueror compelled his daughter Rosamond to partake his throne and bed. The lady stifled her resentment for a while; but receiving fresh provocation by being, through her husband's orders, presented with wine in a drinking cup formed of her father's skull, she headed a conspiracy against him, and succeeded in putting an end to his life by assassination in his own palace at Pavia, which he had rendered the capital of his dominions.—*Gibbon.*

ALBON (JAQUES D') Mareschal St Andrie, a French general, who acquired great reputation about the middle of the sixteenth century. In the campaigns of 1552 and 1554 his skill and valour rendered him conspicuous. Quesnoy, St Quentin, Renti, &c. were the chief scenes of his exploits. Although bred a Calvinist, he joined eventually the Catholic fac-

tion, under Francis duke of Guise, whose party he supported against the house of Condé, but was at length killed in battle at Drex in the Isle of France in 1562.—*Moreri*.

ALBRET (JEANNE) daughter of Margaret queen of Navarre, married in 1548 to Anthony of Bourbon, duke of Vendome, was delivered in 1553 of Henry of Navarre, afterwards Henry IV of France. A characteristic incident occurred on this occasion: her father, who was present at her labour, promised to deposit his will in her possession, if she would sing him a Bearnoise song, with which request she immediately complied, by singing an old popular air in her native dialect. On her delivery, the King performed his promise, by giving her a golden box, containing his will; and at the same time placing a chain of gold around her neck, he exclaimed, "These are for you, but *this*," taking away the infant, "is mine." On the death of her father, in 1555, she became queen of Navarre, in which she established the Protestant religion. Invited to be present at the nuptials of her son with Margaret of Valois, she expired suddenly in the forty-fourth year of her age, not without suspicion of poison. She was a highly intellectual woman, and left several compositions in prose and verse.—*Bayle*.

ALBUMAZAR, an Arabian philosopher, who, like many others, combined the study of physics with that of judicial astrology and astronomy, an elementary work upon which latter science was printed under his name at Venice in 1489. A treatise on the revolutions of years, published in the same city, in one volume, 8vo, in 1526, is also ascribed to him. He flourished in the ninth century.—*Moreri*.

ALBUQUERQUE (ALPHONSO) the founder of the Portuguese empire in the East, born at Lisbon towards the close of the fourteenth century. In 1503 he headed an expedition sent out by Emanuel king of Portugal, and made a descent on the coast of Cochín, where he established himself. Returning to Europe for supplies, he visited India with increased authority; and after ravaging the coast of Arabia, subdued the whole of Ormuz, a considerable island in the mouth of the Persian gulph. This country being tributary to Persia, the sultan sent, as usual, ambassadors to demand the customary annual remittances, which the conqueror not only declined complying with, but added mockery to his refusal, intimating that gunpowder and bullets were the only coin in which the demand might hereafter be expected to be paid. After this he undertook and completed the subjugation of Goa, notwithstanding that the jealousy and dissensions of his principal commanders threw greater difficulties in his way than any which he experienced from the enemy. Malabar, Sumatra, and the Malaccas, next became subjected to his power, and he was meditating still farther conquests, when a period was put to his progress and his life together, by a sudden and violent illness, which carried him off in his sixty-third year. Like Cortez, Columbus, and other enterprising adventurers, he lived long enough to ascertain that gratitude is not the virtue of

princes: an order for his recall had been already issued, and even his successor in the command appointed, when death put an end to his career and mortifications at Goa in 1515. His son, who afterwards rose to high rank and honours in his native country, published a memoir of his father's campaigns, which was printed at Lisbon in 1576.—*Mod. Univ. Hist.*

ALCÆUS, the Lesbian, a lyric poet of antiquity, born at Mitylene, who flourished in the 44th Olympiad, 600 years before the Christian era. Liberty and an unconquerable hatred of tyranny form the principal subject and characteristic of his effusions. Like that of Horace however, his personal prowess in the field was not remarkable. There was also an early Athenian poet of this name, said to have been the author of some tragedies in the infancy of that species of composition.—*Vossius. Bayle*.

ALCIATI (ANDREW) a Milanese lawyer of eminence in the sixteenth century. He was a member of the universities of Pavia and Bologna, and subsequently a professor of jurisprudence at Avignon, whence Francis the First of France, who knew his value, succeeded in drawing him for a time to Bourges. The love of his native country however, seconded by the encouragement held out to him by the reigning grand duke of Milan, influenced him to return to Italy, where his lectures were attended by persons studying the profession, from all parts of Europe, and added much both to his reputation and emolument. De Thou gives him great credit for mixing much of polite literature with the dry study of law, and for his success in getting rid of many of the barbarous technicalities with which the writings upon that science were previously overwhelmed. Besides his professional works, he wrote a commentary upon Tacitus, which exhibits much elegance of diction as well as ingenuity. He died at Pavia, in the month of January 1550, aged 58, leaving the whole of his wealth to a distant relation, Francis Alciati, who afterwards succeeded him in his professor's chair, and sustained the reputation acquired in it by his predecessor. It has been said that Andrew Alciati had originally intended to have bequeathed the whole of his large property towards the foundation of a law college; a design from which he was diverted by a personal affront put upon him by some unthinking young men, students in the profession. His possessions however were not ill bestowed: his heir, rising to great eminence both as a lawyer and a divine, arrived at length, through the favour of Pius the Fourth, to the chancellorship of Rome, with a seat in the conclave. He died in the fiftieth year of his age, April 1580.—*Nouv. Dict. Hist.*

ALCIBIADES, a celebrated Athenian general and statesman, the son of Clinias, and descendant of Ajax of Salamis, was born B. C. 450. Possessed of every advantage of rank, fortune, personal beauty, vigorous intellect, commanding talent, and consummate address; he is generally quoted as one of the most striking instances on record of an individual uniting within himself all the gifts and graces both

of nature and fortune. The consequences of so much favourable endowment are not always correspondent; and Alcibiades in particular early began to exhibit strong passions, irregularity of conduct, and that mixture of levity and seriousness which is so often attendant upon lofty qualities and great mental superiority. The anecdotes of his youth, which display the vivacity of his temper and understanding, are very numerous; and as he grew up, his pursuit of pleasure in all its forms was equally conspicuous. Having excited the attention and affection of Socrates, that philosopher took great pains to instruct him, and bend his mind to honourable pursuit; and although not altogether successful, the benefit of his instructions were always traceable. He made his first campaign in the war against Potidæa, in company with Socrates, and, when Alcibiades, after fighting valiantly, fell wounded in the field of battle, he was indebted to the philosopher for the preservation of his life; an obligation which he some years afterwards repaid at the battle of Delium, when in the retreat he covered Socrates, who was on foot, and brought him off safe. In a constitution like that of Athens, it was impossible that a youth of fortune should not early engage in public life; and Alcibiades, who possessed considerable eloquence, and whose quickness of parts peculiarly adapted him for a popular course, soon united the career of ambition to that of pleasure. He began, in opposition to the policy of Nicias, then the most influential man in Athens, to disturb the good understanding which existed between Athens and Lacedæmon. He also promoted an expedition against Sicily, much against the wishes of Nicias; and in conjunction with that leader and Lamachus, he was appointed to command it. At this period however an occurrence took place which strongly illustrates the mixed character of this Athenian. On one night all the Hermæ, or half-statues of Mercury, in Athens, were defaced and mutilated; and information was given that this sacrilege was the work of Alcibiades and his dissolute companions, in one of their frequent moments of revelry and intemperance. A capital charge of impiety was therefore laid against him; but, from fear of the army, not until he had departed on the expedition against Sicily, from which he was ordered home again. He pretended to accompany the messengers back without reluctance, but contrived to escape into the Peloponnesus. He was in consequence condemned for non-appearance, his property confiscated, and all the priests and priestesses pronounced a solemn execration against him. He had now recourse to the Spartans, by whom he was well received, and whom he influenced to send succours to the Syracusans and to declare war against Athens. During his abode at Sparta, with his usual address, he adopted the Lacedæmonian discipline in its utmost rigour, and surpassed the natives themselves in the qualities which they most admired. Passing over into Ionia, he induced several of the cities to revolt from the Athenians, and engaged Tissaphernes, the king of

Persia's lieutenant, in a league with Sparta. A relic of his former manners however nearly proved his ruin; for having engaged in an intrigue with the wife of king Agis, the latter became his implacable enemy when it was discovered, and orders were sent to Ionia to procure his death. Apprised of his danger, Alcibiades took refuge with Tissaphernes, and so ingratiated himself with the satrap, that nothing was done without his advice; and he was so adroit as to make the friendship of the Persians an instrument of his own recal to Athens. He would not however return until he had made himself welcome by his services; and accordingly, in conjunction with the other Athenian commanders, he gained several signal victories over the Lacedæmonians, by which they lost Selybria, Byzantium, and various other towns on the Hellespont. He returned in triumph to Athens the following year, where, with the usual versatility of the Athenians, he was received with universal acclamation, solemnly liberated from all the execrations pronounced against him, and made absolute commander of the forces by sea and land. He did not long remain inactive, but put to sea again with a fleet of a hundred ships for the Hellespont, to assist some cities which still held firm to the Athenians. He first proceeded to the isle of Audria, where he gained a victory over the natives; but deeming it necessary to go in person to Caria to raise money, he left the fleet in charge of Antiochus, with orders by no means to hazard an engagement. The Spartan commander, Lysander contrived however to bring on a battle by superior skill, and the Athenian fleet was entirely defeated. Such discontent arose among the fickle Athenians at this disappointment, that although Alcibiades on his return contrived to recover the superiority at sea, the people stripped him of his command; and as it was a maxim with him rather to escape an accusation than defend himself against it, he collected a band of soldiers of fortune, and employed himself in a war against several of the Thracian tribes, from whom he collected considerable booty. By this prudent distrust, he avoided the fate of the ten new commanders whom the Athenians had appointed, several of whom were put to death for the unexpected defeat. While in Thrace, he warned his countrymen the danger their fleet incurred at Ægos Potamos, but was not attended to; a neglect the Athenians very soon had most fatal reasons to repent. Athens being soon after taken by Lysander, Alcibiades thought fit to retire to Bithynia, and subsequently to seek the protection of the Persian satrap, Pharnabazus, governor of Phrygia, by whom he was kindly received. In the meantime the sufferings of the Athenians, under the thirty tyrants established by Lysander, induced them to look for deliverance to Alcibiades. This manifestation proved fatal to him; for the tyrants immediately commenced an intrigue with Sparta to procure his death, and orders were accordingly sent from that unprincipled and iron government to open a negotiation with Pharnabazus to effect

it. The Persian consented, and the house of Alcibiades, who resided in a village of Phrygia, with his mistress Timandra, was surrounded by night and set on fire. He threw out a quantity of wet clothing to damp the flame, and then wrapping his robe about his left hand, with a dagger in his right (his sword having been removed) rushed forth and escaped the fire. The assassins dared not to encounter him hand to hand, but killed him by darts from a distance. When they were gone, Timandra took possession of the body, and buried it in a town named Melissa, where the emperor Adrian long after caused a tomb to be erected to his memory. This event occurred in the fortieth year of his age, B.C. 403. The foregoing account, while it forcibly proves the genius and talents of Alcibiades, goes but partially in support of his patriotism or his virtues. He seems indeed to have been one of those dazzling characters who, with every capability to serve mankind, by the waywardness of their humour and the strength of their passions, often essentially injure them;—meteors who blaze in a transient splendour which excites admiration, but who, calmly regarded, very seldom command respect.—*Plutarch. Diodorus. Xenophon.*

ALCIDAMAS, a Greek rhetorician, a native of Elea, lived about 400 B.C. Two of his orations are extant: "Ulysses contra Palamedem," published by Aldus in his edition of *Æschines, Lysias, &c.*; and "Contra Sophistas," annexed to Aldus's edition of *Isocrates.*—*Fabricius.*

ALCINOUS, a Platonic philosopher of the second century, who wrote an introduction to the philosophy of Plato, which is deemed a good summary. It was published by Aldus in Greek, Venice, 1521-23; and has been translated into English by Stanley.—*Fabricius. Aikin's Biog.*

ALCOCK (JOHN) bishop of Ely, and founder of Jesus college, Cambridge, and of the grammar-school at Kingston upon Hull, was a prelate distinguished for his love of learning and of learned men. He was a native of Yorkshire, being born at Beverley in the East Riding of that county. In 1471 he was raised to the see of Rochester, whence he was afterwards translated, first to that of Worcester, and subsequently to Ely. His temporal honours kept pace with his ecclesiastical dignities, the favour of the king, Edward IV, who highly esteemed him, conferring on him the presidency of Wales and the chancellorship of England. Several of his treatises on subjects connected with divinity are yet extant. After his decease, which took place in 1500, his body was conveyed to Hull, and there buried in a chapel of his own erection, which he had attached to his school with a liberal endowment. Bishop Alcock wrote "Mons Perfectionis," London, 1501, 4to; "Galli Cantus ad Confratres suos Curatos in Synodo apud Barnwell," 1498, 4to, which curious book, to bear out the pun with the bishop's name still more closely, contains a print of his preaching with a cock on each side of him; 3, "Abbatia Spiritus," 4to, &c. &c.—*Biog. Brit.*

ALCOCK (JOHN) Mus. Doct. born at London in 1715, died in 1806 at Lichfield, of which place he was organist. Dr Alcock is known as the composer of many excellent pieces of choral music, as well as of glees, one of which, "Hail, ever-pleasing Solitude," gained a medal at the noblemen's catch-club.—*Biog. Dict. of Mus.*

ALCUINUS (FLACCUS) also called Albinus, a learned prelate of the 8th century, born in Yorkshire, and educated under Egbert, archbishop of that province, and the venerable Bede. His reputation as a polemic procured him an invitation from the emperor Charlemagne, under whose auspices he wrote seven volumes of controversial divinity, levelled principally against the heretical opinions of Felix bishop of Urgel. While on the continent he became a member of the council of Frankfort, but being more devoted to literature than ambition, obtained at length a reluctant consent from the Emperor to pass the remainder of his life in tranquillity at the abbey of St Martin in the city of Tours, which had been presented to him, and where he had founded a school. His writings, most of which are yet extant, are remarkable for their elegance, the liveliness of their style, and the comparative purity of their Latinity. An edition of them was, in 1617, printed at Paris in one volume folio, under the superintendence of Andrew Duchesne.—*Biog. Brit.*

ALDEGRAEF, a Westphalian, born at Zoust, in 1502. He was a good painter, but latterly devoted almost the whole of his attention to the more lucrative profession of engraving. His principal work is a large picture of the Nativity, which is in high esteem. His pen engravings are very fine.—*Nouv. Dict. Hist.*

ALDINI (TOBIAS) a physician and botanist of Cesena, in whose name was written a description of the plants in the Farnesian garden: "Descriptio Plantarum Horti Farnesiani, Rome, 1625." This account was composed by Peter Castelli, but published under the name of Aldini, because he was superintendent of the garden.—*Biog. Univ.*

ALDHUN, the first bishop of Durham, A. D. 990. Aldhun was bishop of Lindisfarne, or of the Holy Island, in Northumberland; but in consequence of the ravages of the Danes, he removed to Dunelm with his followers and the body of St Cuthbert, which Dunelm, then scarcely a village, is the present Durham. This prelate educated Etheldred's two sons, Alfred and Edward, and when their father was driven from his throne by Sweno king of Denmark, conducted them, together with their mother Emma, to Richard duke of Normandy, the Queen's brother. Aldhun enjoyed the see of Durham twenty-nine years.—*Biog. Brit.*

ALDRED, an English prelate in the reigns of Edward the Confessor, Harold, and William the Conqueror. With the first of these monarchs he was a great favourite, and was employed by him in his negotiations with Griffith prince of Wales, and Swaine, son of earl

Godwin. His mediation was effectual, and peace crowned his efforts in both instances. For his good services he was raised, in 1046, from his abbey of Tavistock to the see of Worcester, when he undertook a pilgrimage to the holy sepulchre, and is recorded as being the first English bishop who visited Jerusalem from devotional motives. Notwithstanding his piety, however, he seems to have laid himself open to attack on the score of ignorance, as well as the more serious fault of trafficking with his preferment; these charges at least were adduced against him on his return to Europe; and the archbishopric of York, which he was then aspiring to, was refused him by the Pope in consequence. Aldred at length by perseverance found means to overcome the scruples of his Holiness, obtained his wish, and was duly installed. In this capacity he assisted, on the death of the Confessor, at the coronation of his successor; but Harold falling in battle, he was again called on to officiate at that of William, on whose head he placed the crown. With this king, Aldred, who understood thoroughly the arts of a courtier, was in great esteem, and enjoyed an influence which he contrived to employ to the increasing the church revenues. So great indeed was his ascendancy over him, that having received some real or supposed affront from a nobleman in his diocese, and the King delaying to punish the offender, in compliance with his request, Aldred went so far as to imprecate a curse upon the head of the sovereign himself, which, upon the promise of receiving ample satisfaction upon the original offender, he was at length with difficulty induced to revoke, and metamorphose into a benediction. Harold and Canute, the grandsons of Godwin, landing at this period in the north of England, the archbishop again set out for the purpose of trying to induce them to discontinue their ravages, but died on the road, some accounts say of grief, on the 11th of September, 1068.—*Biog. Brit.*

ALDRICH (HENRY) dean of Christ Church, Oxford, 1689: a man of deep erudition, and distinguished also for his love and knowledge of music. To him our cathedrals are indebted for many admirable adaptations of works of the older masters, originally composed for the service of the Romish church, to English words, suited to the Liturgy of the church of England; in addition to which nearly forty original services and anthems of his are still to be found in Tudway's collection. Few pieces are better known in the musical world than his lively round, "Hark, the bonny Christ Church Bells." Independent of his musical abilities, dean Aldrich was a man of high character, great learning, and acknowledged taste in polite literature. His polemical works are remarkable for elegance of style, and acuteness of argument. His system of logic is held in much esteem, and is still the manual consulted in the university of which he was so distinguished a member. At his death, which took place in 1710, he bequeathed to the college over which he had presided upwards of twenty years, a large and valuable collection of music,

of which Dr Burney, in his *History of Music*, speaks very highly, particularly of the specimens contained in it of the choral music of the sixteenth and seventeenth centuries.—*Biog. Brit.*

ALDHELM, see ADHELM.

ALDROVANDUS (ULYSSES) a celebrated natural historian, born at Bologna in 1522, where he was professor of philosophy and physics. In the pursuit of his favourite study he became a great traveller, sparing neither trouble nor expense towards its illustration; but although he succeeded in forming a most superb collection of minerals, plants, animals, &c. his finances were eventually so exhausted that, in the latter part of his life, he was forced to take refuge in a public hospital, where he died in blindness and poverty, in 1605, at the age of eighty. Previous to his decease, the result of his labours was published in six folio volumes, a posthumous continuation of which appeared subsequently upon the same scale. The natural history of birds and insects, of which he described an immense variety, was the principal subject of the work.—*Moreri.*

ALDUS, see MANUTIUS.

ALEANDER (JEROME). There were two of this name, the first standing in the relation of great uncle to the second. He was a prelate of great learning and ability, and assisted, in the capacity of papal nuncio, at the Diet of Worms, on which occasion his eloquence did much towards procuring the condemnation of the writings of Luther, which were then sentenced to the flames. His services were rewarded, first with the archbishopric of Brindisi, and afterwards with a cardinal's hat, which latter elevation he obtained from Pius III, whose favour, as well as that of his predecessors Alexander VI, Leo X, and Clement VIII, he had contrived to conciliate. His death in February 1542 was occasioned by taking a medicine in which some poisonous ingredient had been mixed by mistake. His great nephew, who was a favourite with pope Urban VIII, inherited the ability of his ancestor, and was eminent as a scholar and an antiquary. The law was his profession, and poetry his recreation. He died of a surfeit in 1631, and was buried by his connexions, the Barberini family, with great splendour.—*Bayle. Moreri.*

ALEMAN (MATTHEW) author of the once popular history of "Guzman d'Alfarache, the Spanish rogue." He was born in the neighbourhood of Seville, and during the reign of Philip II was much about the court. His novel, which was not composed till towards the latter period of his life, exhibits, with much humour, a curious picture of the manners and morals of the age and country in which he lived. There are few European languages into which it has not been translated. There was another person of the name of Aleman, an archbishop, a cardinal, and eventually a saint, who officiated as president of the council of Basil, and was, for his opposition to Eugenius IV, degraded from the purple, and excommunicated. Nicholas V however reversed the sentence, and after his death in 1450, con-

ferred on him the honours of canonization.—*Nouv. Dict. Hist.*

ALEMBERT (JOHN LE ROND D') an eminent French philosopher, born at Paris, Nov. 17, 1717. He was the illegitimate son of Des-touches Canon and Madame Tencin, the last of whom unfeelingly caused him to be exposed as a foundling near the church from which he was named John Le Rond. Informed of this discreditable fact, his father listened to the voice of nature, took measures for his instruction, and insured for him a suitable independency for life. He received his early education from the Jansenists, in the college of Four Nations, where he showed early marks of genius and capacity; and as he composed in the first year of his philosophical studies a commentary on the epistle of St Paul to the Romans, his teachers flattered themselves with the hopes of maturing another Pascal. With this view the attention of the pupil was directed both towards the mathematics and theology; but his attachment to the former soon absorbed all his faculties, to the complete disappointment of the Jansenist party. The temperament of D'Alembert was strictly philosophical, in every sense of the term; for on his quitting college, desiring nothing more than a quiet retreat, where he might pursue his studies with tranquillity, he took up his residence in the family of a glazier's wife, his nurse. Here he lived with great simplicity of manners for thirty years, and shared his rising advantages with those whose kind attentions had supplied the place of parental affection. With the quiet humour that so often attends great calmness of temper, he concealed from these good people his growing reputation, and amused himself with the compassion his sedentary occupation excited in his hostess, who told him one day, with infinite pity, that he would never be any thing but a philosopher, whom she went on to describe, as a fool who toils during his life, that people may talk of him after he is dead. In order to enlarge his income, D'Alembert at first turned his thoughts towards the law, and took his degrees. He soon found this profession unsuitable, and next applied to medicine; but his fondness for the mathematics absorbed every other consideration, and he finally abandoned himself entirely to that pursuit, the first fruit of which appeared, at the early age of twenty-four, in a masterly correction of the errors in Reyneau's "*Analyse Démontrée*." In 1741 he was elected a member of the Academy of Sciences, and two years afterwards published his celebrated "*Treatise on Dynamics*," in which he established the principle of an equality each instant between the changes which the motion of a body has undergone, and the forces which have been employed to produce them. The discovery of this principle was followed by that of a new calculus of partial differences, the first application of which appeared in a "*Discourse on the General Theory of the Winds*," a treatise that obtained him the prize medal in the academy of Berlin. In the year 1749 he furnished a method of applying his new prin-

ciple to any given figure, and so'ved the problem of the precession of the equinoxes. In 1752 appeared his treatise on the resistance of fluids; and about the same time he published, in the Memoirs of the Academy of Berlin, his "*Researches concerning the Integral Calculus*," which is greatly indebted to him for its subsequent rapid progress. Other pieces, published at various times, by the two academies of Paris and Berlin, were afterwards collected under the title of "*Opusculs Mathématiques*." D'Alembert also wrote "*Recherches sur differens points importants du System du Monde*;" which numerous and original productions rank him among the most celebrated mathematicians of the age. In addition to these particular claims, he is also understood to be the projector of that vast undertaking, the able precursor of many more of the same kind, the "*Encyclopedie*," which great work was begun, in 1750, by himself, Voltaire, Diderot, and others. To D'Alembert the world is indebted for the excellent preliminary discourse, so distinguished at once for just thinking and fine writing. Uniting with the character of an eminent mathematician that of a refined and polished scholar, he displayed his talents in many other literary productions, a list of which will conclude this article: one of these, "*On the Destruction of the Jesuits*," is peculiarly caustic. His "*Elements of Philosophy*" also produced no small controversy; and the enmity excited by this work, and the article "*Geneva*" in the *Encyclopedie*, was so great, that the king of Prussia, whose flattering notice he had previously secured by a dedication to him of his "*Theory of the Winds*," offered him a retreat at Berlin. This offer he however declined, as he had previously done an invitation from Catharine of Russia to superintend the education of her son, the grand duke, with a pension of a hundred thousand livres. In 1772 D'Alembert was elected secretary to the French academy, and continued its history by Pelisson and Olivet, by writing, in the form of panegyrics, or *eloges*, a history of the members deceased from 1700 to 1771. His influence in the Academy of Sciences, and still more in the French Academy, concurred to give him great importance during the latter part of his life; and although called by his enemies the *Mazarin* of literature, in consequence of this influence, it was undeniably acquired by real weight of character, as no one courted patronage or countenance throughout life with more disinterestedness. Gratitude indeed induced him to dedicate two of his works to the Messrs d'Argenson, to one of whom he owed the pension of 1200 livres granted him by Louis XV in 1756; but he made no sacrifice of probity or consistency in so doing, while to worthy men in adversity and under persecution he was a firm and constant friend. His sensibility towards those who had guarded his almost unprotected infancy, has already been recorded; and when his growing fame induced Madame Tencin to inform him of the secret of his birth, he feelingly exclaimed, "*Al, Madame, what do you tell*

me? You are but a step-mother; the glazier's wife was my real parent." The death of this distinguished man took place October 29, 1783, in the sixty-sixth year of his age, and in the very zenith of his reputation. D'Alembert exhibited the rare mental combination of mathematical genius with an elegant taste for polite literature and great powers of general application. It is not to be denied, that his aversion to superstition and priestcraft led him into the regions of scepticism; and that in consequence of his labours in the Encyclopedia, and his writings against the Jesuits, he is considered one of the most earnest of the band of philosophers who laboured so potently against priestly influence and monkish domination in France. It is unnecessary to advert to the imputations which, in common with Voltaire and others, he has thereby incurred, of producing the Revolution. The justness of these unqualified censures, as party spirit subsides, begins however to be doubted; and while it is impossible to deny the corruption, misgovernment, and oppression which reigned in France previous to that great convulsion, it is absurd to attribute to philosophical and literary influence a reaction which our Chesterfield clearly foresaw, before such influence had materially operated, and which even Louis XV so far anticipated as to express himself consoled by his conviction, that the disordered national system which he administered would at worst last *his own time*. The profligacy of the court and noblesse, the gross irregularity and baneful influence of the clergy, the disgusting mixture of levity and fanaticism in the provinces, illustrated every now and then by legal murders, like those of Calas and De Barre;—these, with a degree of misgovernment, oppressive even to wretchedness, and productive of financial disorder which had become utterly unmanageable, may sufficiently account for the French revolution, without recourse to the complexion of a literary association which was as much an effect of national disorder as the great event so disproportionately connected with it. Corruption and misrule are too much favoured by theories which pertinaciously ascribe the evils produced by them to contingencies and second causes. What is usually called the French philosophy coloured, but did not create, the revolutionary crisis, which clearly originated in a long course of bad government; an observation that pretends not to settle its speculative claims or demerits in other respects. The following is a list of the principal works of D'Alembert, to which is to be added a great number of interesting papers in the Memoirs of the Academies of Paris and Berlin, and his important share in the Encyclopedia: 1. "Traité de Dynamique," Paris, 1743, 1750, 4to; 2. "Traité de l'Equilibre et du Mouvement des Fluides," Paris, 1744, 1770; 3. "Reflexions sur la cause générale des Vents," Paris, 1747, 4to; 4. "Recherches sur la Precession des Equinoxes, et sur la Mutation de l'Axe de la Terre dans le Systeme Newtonien," Paris, 1749, 4to; 5. "Essais d'une nouvelle Théorie du Mouvement des Fluides," Paris, 1752, 4to; 6. "Recherches sur

differens points importants du Systeme du Monde," Paris, 1745 56, 3 vols 4to; 7. "Elements de Philosophie," Paris, 1759; 8. "Opuscules Mathematiques, ou Memoires sur differens Sujets de Geometrie, de Mechaniques, d'Optiques, d'Astronomie," Paris, 9 vols. 1761 to 1773; 9. "Elements de Musique, théorique et pratique, suivant les Principes de M. Rameau," Lyons, 8vo; 10. "De la Destruction des Jesuites," 1765.—*Biog. Univ. Dutton's Math Dict.*

ALER PAUL; a learned French Jesuit, a native of Luxembourg, who died in 1727. His best known work is the "Gradus ad Parnassum," so long in established use in the public schools of Europe.—*Moreri*.

ALEXANDER THE GREAT, (king of Macedon) to whom the lead in ancient warlike heroism is universally ascribed, was the son of Philip king of Macedon, by his wife Olympias, daughter of Neoptolemus king of Epirus. The most authentic accounts place his birth in the 106th Olympiad, B. C. 356. It was the good fortune of Alexander to be contemporary, in his youth with some of the greatest men in Greece, and more especially with Aristotle, who became his tutor, and who in a high degree engaged his esteem. It is presumed that the poems of Homer contributed much to produce his passion for military glory, especially as the character of Achilles seems to have been selected by him for a model. He gave several proofs of manly skill and courage, while very young: one of which, the breaking in of his fiery courser, Bucephalus, which had mastered every other rider, is mentioned by all his historians as an incident which convinced his father Philip of his future unconquerable spirit. Alexander was much attached to his mother Olympias, and sided with her in the disputes which led to her divorce from Philip. The latter however, who had previously intrusted him with great command, in which he had much distinguished himself, especially in the battle of Charonea, was reconciled to him, when in full preparation for his march into Asia, as the generallissimo of Greece, against the Persian monarchy. The assassination of the able and ambitious Philip by Pausanias, at that eventful crisis, excited some suspicion against Alexander and Olympias; but, as it was one of his first acts to execute justice upon the murderer, who had also been actuated by revenge for acknowledged ill treatment on the part of Philip, this imputation rests on little beyond surmise. Alexander, who succeeded without opposition, was at this time in his twentieth year; and his youth, in the first instance, excited several of the states of Greece to endeavour to set aside the Macedonian ascendancy. By a sudden march into Thessaly, he however soon overawed the most active; and when, on a report of his death, chiefly at the instigation of Demosthenes and his party, the various states were excited into great commotion, he punished the open revolt of Thebes with a severity which effectually prevented any imitation of its example. Induced to stand a siege, that unhappy city, after

being mastered with dreadful slaughter, was razed to the ground, with the ostentatious exception of the house of the poet Pindar alone; while the unfortunate surviving inhabitants were stripped of all their possessions and sold indiscriminately into slavery. Intimidating by this cruel policy, the Macedonian party gained the ascendancy in every state throughout Greece, and Athens particularly distinguished itself by the meanness of its submission. Alexander then repaired to Corinth, where, in a general assembly of the states, his office of superior commander was recognized and defined; and in the twenty-second year of his age, leaving Antipater his viceroy in Macedon, he passed the Hellespont to overturn the Persian empire with an army not exceeding 4500 horse and 50,000 foot. The first battle was fought on the Granicus, where the Persians made a spirited resistance, but were unable to withstand the united skill and valour of the Greeks, inspired by the daring personal courage of their leader. The immediate consequence of this victory was the freedom and restoration of all the Greek cities in Asia Minor. The battle of Issus in Cilicia was the next great general advantage obtained by Alexander over the Persians, in which struggle the camp of Darius, with his mother, wife, and children, fell into the hands of the victor. His humane and generous treatment of his illustrious captives has been always highly praised by historians; a panegyric that implies no great compliment to ancient gallantry, which no doubt was sufficiently barbarous to captives of every rank. From Cilicia, Alexander marched to Phœnicia; and all the country surrendered to him except Tyre, which cost him a siege of seven months. This delay so exasperated him, that he put many thousands of the inhabitants to death, and even carried his cruelty so far as to crucify two thousand for the crime of bravely defending their country—an act of atrocity which, with his treatment of Thebes, has incurably darkened the character of Alexander. After the reduction of Tyre, according to Josephus, he went to Jerusalem, where he was received by the high-priest and offered sacrifice in the temple; but as that writer is the only one who mentions the transaction, which at the same time is inconsistent with the accounts of other historians; and as the narrative is otherwise marvellous and contradictory to known facts, the more judicious of the modern critics deem it unworthy of confidence. Alexander next proceeded to Gaza, where he acted with as little credit to his character as at Tyre, sacrificing the inhabitants after its capture, and, in puerile imitation of his chosen hero Achilles, dragging the body of its valiant governor Betlis round the walls of the place. He then visited Egypt, and marked out the plan of the city since so flourishing under the name of Alexandria. His next step was a romantic expedition to the temple of Jupiter Ammon in the desert, where priestly adulation bestowed upon him the title of Son of Jupiter. He subsequently crossed the Euphrates and the Tigris, and after reject-

ing fresh overtures from the humbled Darius, fought the decisive battle of Arbela, which determined the fate of Asia. Babylon was soon entered by the victor, as also Susa and Persepolis, the last of which cities was burnt to gratify the cruel caprice of his courtizan Thais. He then marched into Media, in pursuit of Darius, but was stopped by an account of the execrable assassination of that unfortunate monarch by his own subject Bessus. About this time the army, enriched by spoil and indulgence, began to fall into factions; and a formidable conspiracy against Alexander broke out in his own camp, of which Philotas, and eventually his father, the veteran Parmenio, became the victims. This domestic danger surmounted, he pushed his conquests in the countries north-east of Persia, and captured in a fortress the famous Roxana, daughter of the Sogdian prince Oxyartes, whom he formally espoused. He then marched southward, and about 327 B.C. crossed the Indus, when several petty princes of the country submitted; but a king of greater consequence, named Porus, valiantly withstood the invader; and although conquered and made prisoner, the victor, (with the generosity by which he was occasionally distinguished) pleased with his spirit, restored him his dominions, and made him an ally. The last place that he took was the city of Sangala, after which he was preparing to pass the Hyphasis, now the Bevah, when the discontent of his army obliged him to terminate his progress, and return. He accordingly erected twelve altars of an extraordinary size, to mark the limits of his progress, remnants of which are said to be still in existence. Retreating to the Hydaspes, he built on its banks two cities, Nican and Bucphala, and embarked himself and his light troops on board the fleet commanded by Nearchus, leaving the main army to march by land. After a severe contest with the Malli, in which he was wounded and his whole army nearly lost, he proceeded down the river to Patala, an island formed by the branching of the Indus. Having entered the Indian ocean, and performed some rites in honour of Neptune, he left his fleet; and after ordering Nearchus, as soon as the season would permit, to sail to the Persian gulf, and thence up the Tigris to Mesopotamia, he himself prepared to march to Babylon, towards which capital he proceeded in a kind of triumphal progress. Reaching Susa, he began to give way to a passion for pleasure and joviality; and with the view of uniting his Grecian with his Persian subjects, he himself with eastern licence married Statira, daughter of Darius, and Parasatis, daughter of Ochus, and promoted similar matches among his nobles. Desirous of exploring the maritime parts of his empire, he descended with a fleet into the Persian gulf, and sailed up the Tigris to the camp of Hephæstion, where he quelled a dangerous insurrection among his Macedonian troops with great address and magnanimity. At Ecbatana he lost by disease his favourite Hephæstion, his grief for which event approached to extravagance. At length he reached Babylon, where

he gave orders and set about inquiries, all indicating future undertakings of great magnitude and importance, when he was seized with a fever in consequence of excess in drinking, and died in the thirteenth year of his eventful reign, and the thirty-third of his life, B. C. 323. When required to name his successor, he is said to have replied, "To the most worthy." By his various wives he left but one son, who, with his mother Roxana, was murdered by Cassander. Pursuant to his own direction, his body was conveyed to Alexandria in a golden coffin, and enclosed in a sarcophagus, which is now said to be in the British Museum. No character in history has afforded matter for more discussion than that of Alexander; and the exact quality of his ambition is to this day a subject of dispute. By some he is regarded as little more than an heroic madman, actuated by the mere desire of personal glory; others give him the honour of vast and enlightened views of policy, embracing the consolidation and establishment of an empire in which commerce, learning, and the arts, should flourish in common with energy and enterprise of every description. Each class of reasoners find facts to countenance their opinion of the mixed character and actions of Alexander. The former quote the wildness of his personal daring, the barren nature of much of his transient mastery, and his remorseless and unnecessary cruelty to the vanquished on some occasions, and capricious magnanimity and lenity on others. The latter advert to facts like the foundation of Alexandria, and other acts indicative of large and prospective views of true policy; and regard his expeditions rather as schemes of discovery and exploration, than mere enterprises for fruitless conquest. The truth appears to embrace a portion of both these opinions. Alexander was too much smitten with military glory and the common self-engrossment of the mere conqueror, to be a great and consistent politician; while such was the strength of his intellect and the light opened to him by success, that a glimpse of the genuine sources of lasting greatness could not but break in upon him. The fate of a not very dissimilar character in our days shows the nature of this mixture of lofty intellect and personal ambition, which has seldom effected much permanent good for mankind in any age. The fine qualities and defects of the man were, in Alexander, very similar to those of the ruler. His treatment of Parmenio and of Clytus, and various acts of capricious cruelty and ingratitude, are contrasted by many instances of extraordinary greatness of mind. The anecdote of the manner in which he swallowed the draught administered by his friend and physician Philip, while he gave the latter the letter to read, informing him it was poison, has been admired in every succeeding age. He was also a lover and favourer of the arts and literature, and carried with him a train of poets, orators, and philosophers, although his choice of his attendants of this description did not always do honour to his judgment. He however encouraged and patronised the artists Praxiteles, Lysippus, and

Apelles; and his munificent presents to Aristotle, to enable him to pursue his inquiries in natural history, were very serviceable to science. Alexander also exhibited that unequivocal test of strong intellect, a disposition to employ and reward men of talents in every department of knowledge. In person this extraordinary conqueror, monarch, and man, was of the middle size, with a neck something awry, but possessed of a fierce and majestic countenance. His death immediately divided his empire; and in one or two generations his successors dwindled into as mere Asiatics and Egyptians as the subjects whom they ruled.—*Q. Curtius. Univ. Hist.*

ALEXANDER (SEVERUS) Roman emperor, was born at Acre in Phœnicia, in the year 205. He was the son of Genesius Marcianus and of Mamæa, niece to the emperor Severus. He was admirably educated by his mother, and was adopted and made Cæsar by his cousin Heliogabalus, then but a few years older than himself, at the prudent instigation of their common grandmother Mæsa. That contemptible emperor however soon grew jealous of his cousin, and would have destroyed him, but for the interference of the prætorian guards, who soon after put Heliogabalus himself to death, and raised Alexander to the imperial dignity in his seventeenth year. Alexander adopted the noble model of Trajan and the Antonines; and the mode in which he administered the affairs of the empire, and otherwise occupied himself in poetry, philosophy, and literature, is eloquently described by Gibbon. On the whole he governed ably, both in peace and war; but whatever he might owe to the good education bestowed by his mother, he allowed her a degree of influence in the government, which threw a cloud over the latter part of his reign, as is usually the case with the indirect exercise of female political influence in all cases. Alexander behaved with great magnanimity in one of the frequent insurrections of the prætorian guards; but either from fear or necessity he allowed many of their seditious mutinies to pass unpunished, although in one of them they murdered their præfect, the learned lawyer Ulpian, and in another compelled Dion Cassius the historian, then consul, to retire into Bithynia. At length, undertaking an expedition into Gaul to repress an incursion of the Germans, he was murdered, with his mother, in an insurrection of his Gallic troops, headed by the brutal and gigantic Thracian Maximin, who took advantage of their discontent at the Emperor's attempts to restore discipline. This event happened in the year 235, after a reign of twelve years. Alexander was favourable to Christianity, following the predilections of his mother Mamæa, and he is said to have placed the statue of Jesus Christ in his private temple, in company with those of Orpheus and Apollonius Tyaneus. In return the Christian writers all speak very favourably of him. Herodian, on the contrary, accuses him of great timidity, weakness, and undue subjection to his mother; but exhibits a disposition to detract from his good character

on all occasions, in a way that renders his evidence very suspicious. He was thrice married, but left no children.—*Gibbon. Crevier.*

ALEXANDER I (pope) succeeded Eoaristus in the see of Rome in the tenth year of Trajan, while the persecution in which Ignatius perished was at its height. He subsequently himself suffered martyrdom in 119, during the fourth persecution under Hadrian. The epistles yet extant under his name, are unquestionably the forgeries of a later age; but the tradition that he first introduced the use of holy water into the Romish church rests on better foundation.—*Nouv. Dict. Hist.*

ALEXANDER II (pope) assumed the tiara, and succeeded in establishing himself on the papal throne in 1061, notwithstanding the strenuous opposition of the Emperor, who supported the pretensions of the bishop of Parma, and even recognized him by the title of Honorius II. The faction of Alexander prevailing, his rival was driven into exile. The new pope was a man of a humane and tolerant disposition, though the licentiousness of his life and manners caused great scandal. The better part of his character was evinced in the protection he afforded the persecuted Jews, by whom in particular his death was much lamented. It took place in April 1073, at Rome, in the twelfth year of his pontificate.—*Ibid.*

ALEXANDER III succeeded Adrian IV in the papal throne in 1159. He was a pontiff of great ability, and deservedly popular with his subjects. His elevation was not unattended either with difficulties or dangers, but his perseverance and talents surmounted them all. Two rivals for the popedom were successively started against him by the emperor Frederic; first Victor, appointed at Pavia; and after his decease, cardinal Guy, who assumed the name of Paschal III. Alexander, who was for a while compelled to yield to the storm, having procured the recognition of his pretensions by the courts of France and England, took measures towards asserting them in earnest. The Venetian states were prevailed upon to arm in his cause, and the then powerful weapon of excommunication was also hurled against his imperial antagonist, whose subjects were formally released from their allegiance. This strong measure brought his enemy to terms, and a reconciliation was effected between them, in which the interdicts were mutually removed. Alexander, who was born at Sienna, died at Rome, August 30, 1181.—*Ibid.*

ALEXANDER IV was raised to the papal throne in 1254. He followed the policy adopted by his predecessor, Innocent IV, in opposing the pretensions of Mainfroy to the crown of Sicily, and having failed in a negotiation for that kingdom with Richard earl of Cornwall, finally concluded a bargain with Henry III of England, who advanced him large sums on condition of his securing the Sicilian succession to his second son, Edmund earl of Lancaster. The Pope received the money, but was either unable or unwilling to perform his part of the agreement, Mainfroy maintaining himself in spite of their united

efforts. Alexander died in May 1261 at Verbo.—*Ibid.*

ALEXANDER V was raised to the papal throne in 1409 by the council of Pisa. He was a Milanese of the lowest origin, his parents being so poor, that he himself, while a child, was forced to beg for his subsistence. Having the good fortune to attract the notice of a monk, he was through his interest admitted into his order. Distinguishing himself afterwards by his love for learning, opportunities were afforded him of prosecuting his studies both at Oxford and Paris. On his return to his native country he became, through the favour of the reigning duke, bishop of Vicenza, and subsequently archbishop of Milan. His next step was to the purple, which he attained through the favour of Innocent VII, whose legate he was in Lombardy. Cardinal Cossa, to whom he had committed the reins of government, was suspected of being the cause of his death, which took place abruptly, May 3, 1410, under circumstances inducing a belief that it was occasioned by poison.—*Ibid.*

ALEXANDER VI, one of the greatest monsters of profligacy and debauchery that ever disgraced the papal or any other throne. Through the interest of his uncle, pope Calixtus III, Roderic Borgia, as he was then stiled, obtained a cardinal's hat, with the archbishopric of Valencia. Notwithstanding the notoriety and enormity of his crimes, among which might be ranked incest and murder, his intrigues raised him to the popedom on the death of Innocent VIII in 1492. One of the first acts of his reign was to load his four illegitimate sons with dignities and honours. Of these the infamous Cæsar Borgia was the second, who, like a true descendant of so worthy a sire, not only assassinated his elder brother, Francis duke of Gandia, but is said to have shared with him and with his father the embraces of his own sister Lucretia. As an ecclesiastic, Alexander was in the highest degree ambitious, bigotted, and intolerant. The dissensions he managed to excite among the potentates of Europe, his crooked policy contrived to turn entirely to his own profit; while the execution of Savanarola, whom he burned at the stake in 1498 for denouncing the crimes of the clergy from the pulpit, is a proof of the unrelenting savageness of his disposition. The death of this monster was suitable to his life. At a banquet which he, in conjunction with his favourite son Cæsar, had prepared for Corneto and eight other newly created cardinals, the poison intended to take off one or more of them, for the sake of appropriating their revenues, was by some mistake administered to the contrivers of the plot. The Pope died the next day, August 8, 1503, in great agony; his son, by the timely application of powerful antidotes and his own natural strength of constitution, escaped, but only to perish as miserably four years afterwards at the siege of Vianza. Two accounts of the life of this pope have appeared, the one written in Latin by Burchard, the other in English, published in 1729 by Alexander Gordon.—*Ibid.*

ALEXANDER VII (FABIO CHIGI, pope) was born at Sienna in 1599. Through the interest of the Pallavicini family, he was introduced to the notice of Urban VIII, and by him appointed, first, inquisitor at Malta, afterwards vice-legate to Ferrara, and eventually raised to the purple, and sent as nuncio into Germany. cardinal Mazarin, though at first opposed to him, was at length won over to his party, through the mediation of their mutual friend Sacchetti; and, by their joint intrigues, Chigi was, on the death of Innocent X, placed in St Peter's chair by the unanimous vote of the conclave, which consisted of sixty-four cardinals. His disposition was liberal, and even magnificent; to which his patronage of learned men, and the embellishments he lavished on his capital (especially the college Della Sapienza, which he completed and furnished with a noble library,) bear testimony. He was himself an author; and a collection of his poems, in one volume, has come down to us. His death took place in May 1667, in his sixty-eighth year.—*Ibid.*

ALEXANDER VIII, the last pope of that name, succeeded Innocent XI in 1689. He sprang from a Venetian family named Ottoboni, and was in his eightieth year when he exchanged his cardinal's hat and the bishopric of Brescia and Frescati, for the triple crown. The immediate promotion of his nephews to offices of trust and dignity excited much conversation, which is said to have drawn from the pontiff the observation, that "he had no time to lose, it being twenty-three and a half o'clock with him already;" in allusion to the Italian method of counting the hours. The truth of his remark was established by his decease within two years, at the age of eighty-two.—*Nouv. Dict. Hist.*

ALEXANDER (DE MEDICI) the natural son of Lorenzo de Medici, became first duke of Florence, by the influence of Charles V, who married him to his natural daughter, Margaret of Austria. He was no sooner installed than he governed with the greatest tyranny, and insulted not only the best families, but the very cloisters of Florence, with the grossness of his unbridled licentiousness. Among the companions of his debauchery was Lorenzo de Medici, a relation, a young man of the age of twenty-two, who allowed himself to be excited by the indignant republican, Philip Strozzi, to undertake the assassination of the Duke. This scheme was accomplished by seducing him into a private chamber, in the expectation of meeting a lady with whom he was enamoured. He had no sooner entered than he was poniarded. This murder took place in the twenty-sixth year of his age, in 1537. Assassination seldom brings about the desired result; and the crime of Lorenzo was useless, for the Florentines did not recover their liberty. The assassin made his escape, first to Venice, and then to Constantinople, but was himself assassinated ten years after by two soldiers who had been guards to the duke, both of whom refused a very considerable sum which had been placed upon the head of the murderer.—*Nouv. Dict. Hist.*

ALEXANDER, an abbot in Sicily, who wrote a history of the life and reign of Roger king of Sicily, which is to be found in the collection entitled "Hispaunia Illustrata." He lived in the 12th century.—*Dupin.*

ALEXANDER, an English abbot, sent to Rome by Henry III, in order to support the rights of the English nation; for which, on his return to England, he was imprisoned and excommunicated by Pandulphus the papal legate. He wrote several works, among which are "Victoria a Proteo; de Potestate Ecclesie; de Cessione Papali," &c.—*Biog. Brit.*

ALEXANDER (AB ALEXANDRO) a Neapolitan juriconsult; celebrated, however, more for his attachment to polite literature than for eminence in his profession. He died in the early part of the 16th century. An edition of his principal work, "Dies Geniales," written in imitation of the "Noctes Atticæ" of Gellius, was published in 1587, with notes, by his commentator Tiraqueau.—*Vossius.*

ALEXANDER (NOËL) a French dominican, and a doctor of the Sorbonne, in the seventeenth century. He wrote a treatise on the conformity of the Chinese ceremonies with those of Greece and Rome, and various theological works of more or less magnitude. The production, however, by which he is most known, is "An Ecclesiastical History of the Old and New Testament," in Latin, 8 vols. folio. Having written in defence of the Gallican church, his works were proscribed by the court of Rome, which however much respected him. This very laborious writer died in the year 1724.—*Nouv. Dict. Hist.*

ALEXANDER (OF PARIS) a Norman poet of the twelfth century, who removed to Paris, and was esteemed in the court of Philip Augustus. He wrote a metrical poem called "Alexander the Great," in verses of twelve syllables, and gave the first idea of what could be done in that measure in the French language. It is supposed, that from Alexander and his poem, lines of twelve syllables are called Alexandrines.—*Moreri.*

ALEXANDER (НЕВСКОИ) a grand duke of Russia in the early part of the thirteenth century, whose merits civil, military and religious, procured him, eventually, the honours of canonization, and the institution, by Peter the Great, of an order of knighthood consisting of 135 members, bearing his name, and recognising him as their patron saint. The most celebrated act of his life was a great victory obtained by him over the more northern tribes on the banks of the Neva, where his remains were deposited with great pomp, and a monastery and mausoleum, since become the favourite burial place of the sovereigns of Russia, raised over them by Peter the Great and Catherine II. He was born in 1218, but the date of his decease is uncertain.—*Mod. Un. History. Cox's Travels.*

ALEXANDER (TRALLIANUS) a physician of Tralles, in Lydia, in the sixth century. His works in Greek have come down to us, and in medical estimation they prove him the best

Grecian physician after Hippocrates. They are published both in the original Greek and in Latin. Of the latter version, Haller gave an edition at Lausanne in 1772.—*Friend's Hist. Phys.*

ALEXANDER (sir WILLIAM) earl of Stirling, an eminent Scottish statesman and poet, in the reigns of Charles and James I. He first commenced as an amatory poet, with a complaint of his unsuccessful suit to a lady whom he names Aurora, which poem he published in 1604. He then repaired to the court of James, and in 1607 published some dramas which he entitled "Monarchic Tragedies," and dedicated to the king. In 1613, he became gentleman usher to prince Charles, and received the honour of knighthood; and in 1621 king James made a grant to him of Nova Scotia, with a view to colonization. This scheme was further sanctioned by Charles I, who appointed him lord lieutenant of that colony, and founded the order of Nova Scotia baronets in Scotland, the members of which were to contribute to the formation of the settlement. Sir William Alexander was subsequently made secretary of state for Scotland, and created viscount Canada and earl of Stirling. He died in 1640. His poems, which make one volume folio, possess much merit of the graver kind. James I used to call him his philosophic poet.—*Biog. Brit.*

ALEXANDER (WILLIAM) an able artist, born at Maidstone in 1768. His father, who was a coachmaker, gave him a good education, and sent him at an early age to study the fine arts in London, which he did with so much success, that he was selected to accompany the embassy of lord Macartney to China. On his return, besides his drawings in illustration of the work of sir George Staunton, he published a splendid one of his own, entitled "The Costume of China," which obtained so much notice that he was induced to publish a second part. At the time of his death, in 1816, he was keeper of the antiquities at the British Museum, where he made drawings of the ancient marbles and terra cotta, published in 3 vols. 4to, by Mr Taylor Combe.—*Gent. Mag.*

ALEXIS, a Greek comic poet, born at Thurium, a colony of the Athenians, in Lucania. He came to Athens when young, and instructed Menander, who was his nephew, in dramatic composition. He flourished in the time of Alexander, B. C. 323. A few fragments of his works alone remain, which are to be found in the "Vetustissimorum Authorum Græcorum Poemata," 1570.—*Vossius.*

ALEXIS (MICHAELOVITCH) czar of Russia, was born in 1630, and succeeded his father Michael in 1646. Alexis, who was predecessor and father to Peter the Great, was an able monarch, and the first Russian ruler who acted on the policy of a more intimate connexion with the other states and nations of Europe. He preceded his celebrated son in measures for the civilization and political and commercial improvement of Russia. Alexis, by his diversion of the Turkish arms, much contributed to the celebrated victory of John

Sobieski at Choksim. He died A. D. 1677, aged forty-six. Peter the Great was his son by his second wife Natalia, daughter of a captain of hussars.—*Mod. Univ. Hist.*

ALEXIS (PETROVITCH) son of Peter the Great and his first wife Eudoxia. This unhappy prince, unfortunately for himself opposed the new policy of his father, and expressed an unalterable attachment to the ancient barbarous usages and customs of his country. His private habits were as gross and intemperate as his public views were ignorant and bounded; and Peter, having in vain endeavoured to inspire him with his own sentiments and with a more enlightened love of his country, at length resolved to disinherit him, in order to avoid the certain overthrow of all his plans, if followed by such a successor. The Czarovitch appeared to consent; but taking advantage of the absence of his father from Russia, he made his escape to the emperor of Germany, his brother-in-law. The imperial court concealed him some time at Vienna, from which place he retired, first to Inspruck, and subsequently to Naples, until, his retreat being discovered by the Czar, he was induced to return to Moscow. On his arrival, his sword was taken from him; he was conducted as a criminal into the presence of his father; and in an assembly of the clergy and nobility the czar caused him formally to renounce the succession. At the same time, all his confidants were arrested, some of whom were executed; and his mother Eudoxia was transferred to a monastery near the lake of Ladoga. At last the unhappy prince was tried, and by an excess of rigour which it is difficult on any theory to vindicate, condemned to death. His sentence was reported to him, and the next day he died in prison, a victim to his own weakness and the merciless severity of his extraordinary parent. Alexis left a son, who ascended the throne after the death of the empress Catherine. Opinion is much divided as to the motives and necessity for this unnatural sacrifice. It was of course vindicated by Peter, as demanded by the interests of his rising empire. The fate of Alexis forms at once a comparison and contrast with that of Don Carlos of Spain, the inmolated son of Philip II. The former suffered for his predilection for ancient institutions and ideas; the latter, for his implied attachment to the new light that was then rising up in Europe.—*Nour. Dict. Hist.*

ALEXIS (WILLIAM) a Benedictine monk and prior of Bussi-au-Perche was living in 1505. He left various pieces of poetry which in his own time were much esteemed. For a monk his subjects are curious, the following being his principal works: 1. "Four Chants royaux, presented at the games du Puy at Rouen," 4to; 2. "Le Passetems de tout Homme et de toute Femme," Paris, 8vo and 4to, which is a grave performance on the misery of man from the cradle to the grave; 3. "Le grand Blason des Fausses Amours," 4to, Paris, 1493, being a dialogue on the evils produced by love. Alexis is very circumspect on these subjects, which, says one of his bio-

graphers, was not always the case with even monkish writers in the age in which he lived.—*Biog. Universelle*.

ALFARABI, an eminent Arabian philosopher in the tenth century, a native of Farab, in Asia Minor. He wrote many treatises on the different parts of the Aristotelean philosophy, which were read not only among the Arabs, but by the eastern Jews, who then began to attend to the works of Aristotle. His treatise "De Intelligentiis" was published with the works of Avicenna, Venice, 1496; another, "De Causis," is in Aristotle's works, accompanied by a commentary by Averroes. His "Opuscula varia" were printed at Paris, 1638; and he obtained much reputation in his day by a species of Encyclopedia, the MS of which is in the Escurial, wherein he gives a brief definition of various branches of science and art. He died at Damascus in 950.—*Biog. Univ.*

ALFENUS VARUS (PUBLIUS) a celebrated Roman lawyer, born in the year of Rome 713. He became consul, and is mentioned by Horace, and with great approbation by Virgil. He first made those collections of the civil law which are termed digests; he is quoted by Aulus Gellius, but none of his works are extant.—*Ibid.*

ALFIERI (VITTORIO) an Italian poet of a noble family, born at Asti in Piedmont, January 17, 1749. He was educated at Turin, where, with great strength of temper, he exhibited very little talent, and still less industry. At the age of sixteen he quitted his studies with the acquirement of no accomplishment but that of riding, and along with it an excessive attachment to horses. His next pursuit was travelling; and in the three or four succeeding years he visited nearly all the Christian countries of Europe. To England he repaired twice in the course of that period, and during the last visit of seven months, distinguished himself merely by affairs of gallantry. On his return to Turin, a passionate attachment to a lady of quality first turned his attention to literature and poetry; and after some imperfect attempts, he completed a tragedy called Cleopatra, which he procured to be acted at Turin in 1773, with a small piece by way of farce, also written by himself, which he named "The Poets." The partial success of these attempts opened a new existence to Alfieri, who with characteristic ardour immediately resolved assiduously to cultivate his own language and the Latin, to study the best authors in both, and to follow up dramatic composition upon certain principles invented by himself. The result of this determination was the production of fourteen dramas in the following seven years, together with several pieces in prose and verse, a translation of Sallust, "A Treatise on Tyranny," "Etruria Avenged," a poem in four cantos, and five odes on the American Revolution. In the course of this time, Alfieri had obtained the hand of the widow of the last miserable Pretender, a princess of the house of Schomberg, usually called the countess of Albany (see ALBANY); and in her company he visited France, in order to print his

theatre to which he continued to add new tragedies. Alfieri beheld the opening of the Revolution with the feelings of a lover of liberty, and even strongly recorded them in an ode on the taking of the Bastille. The horrors produced by the melancholy reaction of centuries of bad government soon however drove him from France, leaving behind him property in the funds, furniture, paper, and books, all which were confiscated. From this time, with more resentment than philosophy, he always expressed the most decided antipathy to the French people, and even disavowed such of his early works as breathed the language of political freedom. At the age of forty-eight he began to study the Greek language, from which he made several translations, and dedicated himself so laboriously to literature, especially satire and the drama, as to produce a disorder of which he died at Florence on the 3d October 1803. He was interred in the church of St Croix in that capital, where his widow erected a splendid monument to his memory, executed by Canova, and had it placed between the tombs of Michael Angelo and Machiavel. Alfieri wrote the somewhat too flattering inscription for his own tomb, &c also his life, published at Paris, 1809, and in English, at London, 1810. These memoirs, if somewhat too self-complacent, are not without interest, and show, like more recent instances, the mixed operation of early notions of rank, fortune, and self-consequence, on the principles and conduct of men of genius who are born to inherit them. The character of Alfieri was too strong and impulsive to be either philosophical or amiable; and his political opinions followed the bent of his temper, being hastily taken up and as hastily laid down. That mind, however, which can follow up a life of early dissipation by a steady determination to become distinguished in literature, with much of the preparatory attainment to acquire, is one of extraordinary energy; and such was that of Alfieri. His posthumous works were published at Florence in 1804, and his dramas have been translated both into French and English. His tragedies, the dramatic personæ of which are for the most part Greek and Roman, exhibit strength of conception and great occasional energy; but looking to nature, they aim too much at lofty expression and forcible thoughts. They have of late however excited considerable attention; and more than one dramatist has sought after comparative originality by the study of them.—*Biog. Univ. Life by himself.*

ALFORD (MICHAEL) an English Jesuit born in London in 1587, who, after studying at Louvain and residing at Rome, remained in the English metropolis as a missionary from the Society of Jesus for thirty years. He died at St Omers in 1652, and left two books on ecclesiastical history, "Britannia illustrata," 4to, Antwerp, 1641, and "Annales Ecclesiastici Britannorum, Saxonum, Anglorum," *ibid.* 4to.—*Nicolson's Eng. Hist. Lib.*

ALFRED (THE GREAT.) This Anglo-Saxon monarch, one of the most illustrious

rulers on record, was the youngest son of Ethelwulf king of the West Saxons, and born at Wantage, Berks, A. D. 849. At the early age of five years he was sent by his father with a large retinue to Rome, when he was confirmed, or, as some writers assert, royally anointed by pope Leo IV. Soon after his return he accompanied his father again to the same capital; and it is supposed that by this early travelling his dawning faculties received the favourable direction by which they were subsequently so admirably distinguished. Ethelwulf died when Alfred was in his tenth year, and was succeeded successively by his elder sons Ethelbald, Ethelbert, and Ethelred, by the last of whom Alfred was employed as his chief minister and general. In 871 a Danish force, which had successfully invaded England in 866, under the command of Hinguar and Hubba, marched to Reading, and mastered both town and castle. Ethelred and Alfred immediately collected a force, which they led against the Danes, and obtained a victory, but were soon after routed, in return, near Devizes, when Ethelred received a wound which terminated his existence, leaving to Alfred, then in his twenty-second year a crown in defence of which he was called into immediate action. His first conflict with his formidable enemies the Danes, at Wilton, was unsuccessful; but they subsequently agreed to a peace which they violated, and, in consequence of a great naval victory obtained by Alfred, came to terms a second time. - The arrival of new hordes, however, so increased their number in Wiltshire, that the Saxons, in despair, could not be brought to make head against them; and Alfred himself, laying aside all marks of royalty, took shelter in the house of one of his own neatherds. While in this obscure retreat, a little adventure occurred to him of which most of our English historians take notice. The woman of the house having placed some cakes before the fire to toast, as Alfred was sitting by, trimming his bow and arrows, she took it for granted that he would attend to them. Intent on what he was doing, the King suffered the cakes to burn without observation, which so enraged the good woman, that she rated him soundly, and doubted not that he would be ready enough to eat what he was so little inclined to attend to. Soon after, collecting a few faithful followers, he took possession of the small isle of Athelney, formed by the confluence of the Tone and the Parrot, in Somersetshire, whence he sallied out occasionally with profound secrecy, and beat off the unguarded quarters of the Danes in his neighbourhood. At length, understanding that Odun earl of Devonshire had obtained a signal victory over the Danish leader Hubba, and taken the famous magical standard of the raven, he left his retreat, and proceeding towards the camp of Guthrum, the Danish prince, in the disguise of a harper, remained several days making his observations at leisure. He then summoned his nobles with their followers to a general rendezvous on the borders of Selwood Forest, and first defeating the enemy in battle he surrounded their camp and compelled

them to surrender. Such were their numbers, that Alfred, with equal policy and humanity sought to transform them into subjects, and gave them settlements in East Anglia and Northumberland, on condition of allegiance to him, and conversion to Christianity. The expedient succeeded; Alfred himself stood sponsor for Guthrum at the font; and, with the exception of one incursion up the Thames, the country was for a long time free from Danish ravages. On this happy re-establishment, Alfred exerted himself with all the energy of his wise and persevering character to adopt measures to defend his kingdom from future depredations. He erected castles and fortresses in proper situations, formed a militia, and above all got together an armed fleet of one hundred sail of the ships of war of the period, which he manned partly with his own subjects, and partly with Frisians. He also besieged and recovered the city of London from the Danes, which he found in a miserable condition, but repaired and maintained as a fortress. In 893, an interval of some years having elapsed, a Danish fleet, after ravaging the coast of France, disembarked a large force in Kent, which was checked by Alfred. He had then to turn his attention to the rebellious operations of his new subjects in East Anglia and Northumberland, who appeared suddenly with a fleet on the western coast. All these annoyances however were finally put down by the vigour and abilities of the king; and he closed the whole warfare by the capture of some Northumbrian Danes, who were ravaging in the west, and whom, after a legal trial at Winchester, he executed as pirates and enemies of civilized society. The remainder of the life of Alfred was peaceable; for such was now his high character, that the Danish settlers on the east and the north, on his approach, humbly submitted. The Welch also acknowledged his authority; and at the expense of fifty-six battles, in which he had been personally engaged by sea and land, he found himself undisputed king of the island as far as the frontiers of Scotland. Great and active however as Alfred appears in warlike exploits, as a legislator, a reformer of manners, and a promoter of learning and the arts, his exertions were still more extraordinary. Without entering into the controversy regarding the originality of many of his admirable institutions, or how far they were modifications of laws and usages common to the Saxon and German tribes, he undeniably embodied them into a system, and thereby, according to the antiquary Spelman, laid the foundation of the common law of England. The institution of the trial by jury, attributed to him, Sir William Blackstone conjectures that he only adopted and improved; and the same observation is extended by Whitaker and others to the division of the country into shires, hundreds, and tithings, for purposes of judicature and police. It is certain however that the general survey of the kingdom, called the "Winchester Book," the origin of that of Domesday, was compiled by the order of Alfred. Judicial administration

seems to have engaged no small share of the attention of this patriotic monarch; for, in addition to his regulations in favour of general and equal justice, he severely punished delinquency in any of its functionaries. The political constitution of England is also presumed to be indebted to Alfred for the settlement of one of its principal features—a regular convocation of the states. His great council, consisting of bishops, earls, aldermen, and thanes, was by an express law called together twice a year in London, for the better government of the realm. In other circumstances he also showed a most paternal regard for the welfare of his people, dedicating a large portion of his revenues to rebuilding the cities ruined by the Danes, erecting new ones, and rebuilding and restoring the monasteries and other religious foundations. His encouragement of learning was as distinguished as his own proficiency, considering the age in which he lived, when, whatever received the name, was confined to the ecclesiastics, and even of these Alfred complained that there were very few south of the Humber who understood the service of the church, or could translate a single piece of Latin into English. To remedy this defect, he invited men of learning to his court, from all parts, and placed them at the head of seminaries in various parts of his kingdom. He has been called the original founder of the University of Oxford, or at all events is said to have founded University College, Oxon; but there is reason to believe, from the recent researches of Whitaker and Smith, that these assertions are not absolutely correct. However these antiquarian points may be settled, it is admitted that he greatly improved the system of education there. Alfred himself may be said to stand at the head of the list of royal authors; so many works indeed are attributed to him, that in order to keep within the bounds of credibility, it must be presumed that he only patronized many of the voluminous translations into Anglo-Saxon which bear his name. Versions of Orosius, of Bede, of Boëthius, of several pieces of St Gregory, of Æsop's Fables, of various religious works, including the Psalter, together with several collections of legal and historical matters are attributed to the pen of Alfred. In the translation of Orosius is also an account of a voyage, made under his patronage, for the discovery of a north east passage; and he even fitted out an expedition to carry alms to the Christians of St Thomas in the East Indies, in which ships he received back commodities of the country. To accomplish all these things, as the nicest distribution of his time and his revenue was essential, he appears to have entered into the most strict arrangement for the employment of both. To crown his great public character, Alfred is described as one of the most mild and amiable of men in private life; of a temper serene and cheerful, affable, kind, and merciful; and although eminently pure in his own conduct and manners, not averse to society, or to innocent recreation. He was also personally well-favoured, possessing a handsome and vigorous

form, and a dignified and engaging aspect. After reigning twenty-eight years and a half, this illustrious prince died, according to some accounts A.D. 900; others say 901. By his queen Ælswitha he had three sons and three daughters; one of his sons died in his father's lifetime; the second, Edward the Elder, succeeded him. One of his daughters, named Æthelfleda, married to an earl of Mercia, seems to have inherited the greatest portion of his talents. In this age of critical research, some doubts have been thrown on the accuracy of the unmixed panegyric of the monkish authors, from whose writings this history of Alfred is chiefly collected. But however his benefactions to the church and to religious and learned men may be supposed to have influenced them—as if borne away by the strength of a character, it was scarcely in their nature to conceive or consequently to invent—the qualities and actions ascribed to him are of a far higher class than such as usually form themes for monkish praise. Neither is there any contradiction of their general testimony from other quarters; and it would not be well to cavil away the attributes of an exalted character, whose name is associated with the origin of some of the healthiest institutions in the country, in compliment to hypercriticism on the one hand, or a party bias on the other. At present, the history of Alfred, attending to the times in which he lived, presents the picture of the most perfect union of monarch, patriot, and man, on record;—one of those fine examples of a kindly admixture of the elements of greatness and of goodness, which are so seldom witnessed among mankind, but which occasionally exist as blessings in their own age, and models for all succeeding ones.—*Biog. Brit. Hume.*

ALFRED, an English bishop of the tenth century. He possessed great learning for his time, and is author of a treatise "De Naturis Rerum," "Life of Adelmus," and a "History of the Abbey of Malmesbury."—*Biog. Brit.*

ALFRED, an Englishman of the thirteenth century, surnamed "the Philosopher." He was much esteemed by the court of Rome, and attended cardinal Outoboni the legate to England. He is author of five books on the Consolations of Boethius, and others upon portions of the Physics of Aristotle. He died 1170.—*Ibid.*

ALGAROTTI (FRANCIS) an able, critical writer, the son of a rich merchant at Venice, where he was born in 1712. Having finished a learned and liberal education at the university of Bologna, he commenced his travels early, and his visit to England most likely led to his work entitled, "Newtonianismo per le Dame," or Newtonianism for the Ladies, in which the "Plurality of Worlds" of Fontenelle, on the philosophy of Descartes, was doubtless his model. Like that well-known production, it forms, in the way of dialogue, a good popular view of the subject, a little disfigured by an affectation of wit and gallantry, pardonable in an Italian and a young man. He afterwards visited Berlin, where he was much caressed by Frederic the Great, who bestowed on him

the post of chamberlain, the order of merit, and the title of count; and he was afterwards very similarly entertained and noticed by Stanislaus king of Poland. In both these circles he was regarded as a man of letters, a wit, a philosopher, and one of the first connoisseurs of the day in the fine arts. He did much to reform the Italian opera, and wrote verses with sentiment and elegance. He died with philosophical composure at Pisa in 1764, where he erected a mausoleum for himself, on which he directed the inscription of the following words: "Hic Jacet Algarottus, sed non omnis"—"Here lies Algarotti; but not all of him;" an allusion to the vitality of his fame, obviously taken from the *Non omnis moriar* of Horace. His works are collected in four volumes 8vo, Leghorn, 1765. They are literary, critical, and philosophical, and display spirit and depth, but sometimes at the expense of nature and simplicity. They have been translated into French, English, and most of the modern languages.—*Nour. Dict. Hist.*

ALI, the son of Abu Taleb, uncle of Mahomet. When the impostor assembled his kinsmen, and declared his prophetic mission, he asked which among them would be his vizier: "I am the man," exclaimed the youthful Ali, then of the age of fourteen; "whoever rises against thee, I will dash out his teeth, tear out his eyes, break his legs, rip up his belly; O prophet, I will be thy vizier over them." Ali kept his word; distinguished both by eloquence and valour, he became one of the main pillars of the new faith, and obtained the name of the "Lion of God, always victorious." He also received Fatima, the daughter of the prophet, in marriage, by whom he had children, during the life time of their grandfather. He was thus on every account deemed the successor of the prophet, but was notwithstanding preceded by Abubeker, Omar, and Othman; and even when recognized caliph after the death of the last of the three, he had to contend for the dignity with Moawiyah, and finally lost his life by assassination at Kufa, in the sixty-third year of his age. There was something of grandeur in the primitive simplicity and fanatical heroism of the first followers of Mahomet, and Ali formed one of the most conspicuous examples of the conjunction. The Mahometan schism caused by the murder of Ali is well known; and his sect is called Shiites or heretics, by the Sunnites or orthodox. The Persians, a part of the Usbec Tartars, and some of the princes of India, remain followers of Ali to this day. From Ali a numerous posterity has descended, who alone are allowed to wear green turbans, in honour of their descent from the prophet. There is extant, among various writings attributed to Ali, a collection of a hundred maxims or sentences, which have been translated by Gollius and Ockley.—*D'Herbelot.*

ALI (BEY) a man of extraordinary learning and attainments, considering the disadvantages under which he laboured. He is said to have been born in Poland, of Christian parents, but was kidnapped in his infancy by a horde of

roving Tartars, who sold him to the Turks, in whose language and religion he was educated. His skill in languages procured him at length the post of chief dragoman or interpreter to the court, while his leisure hours were employed in translating the Bible into the tongue of his adopted country. Dangerous as the avowal would have been, he had unquestionably a strong bias towards the faith of his ancestors, and but for his death, which took place suddenly in 1675, would have abjured Mahometanism. The work by which he is principally known to Europeans is a very interesting account of the religious ceremonies, pilgrimages, &c. of the Turks. Of this treatise there is a Latin translation by Smith.—*Moreri.*

ALI (BEY) a Greek, son of a Natolian priest, was born in 1728. By his valour and abilities he raised himself from the condition of a slave to supreme power in Egypt. At the age of thirteen he became the prey of robbers, and was sold by them to a subaltern officer of janissaries, who reared and adopted him, and succeeded in gaining his attachment. This he evinced on the murder of his patron by a Circassian named Ibrahim, on whom he retaliated the assassination with his own hand. The Porte sentencing him in consequence to lose his head, Ali avoided the execution of the firman by flight, first to Jerusalem, and subsequently to Jaffa. The well-known mutability of affairs and opinions in that quarter of the globe soon restored him not only to safety but to power. The Circassian faction was destroyed, and Ali obtained the reins of government, which he contrived for a while to render popular; his decisions and actions being marked by far greater humanity and equity than is the usual characteristic of Eastern despotism. In 1768, during the hostilities then raging between the Turks and the Russians, he dispatched an auxiliary force of 12,000 men to the aid of the Ottoman cause, but so little gratitude did his efforts excite, that his death was even at that moment determined upon in the divan. Gaining intimation of this resolution, Ali, as a measure at once of safety and revenge, declared open war against the Porte, and even marched his troops against the Grand Seigneur's dominions in Syria and Arabia; but a Mameluke, to whom he had confided the command of them, by name Abou Dahab, revolting with many of the subordinate beys, in the hope of rising on the ruins of his master, Ali was again forced to fly from Cairo to Gaza. Here he succeeded in organizing a considerable army, which he led into action against his antagonists on the thirteenth of April 1773. Treachery and desertion, however, again pervaded his troops in the moment of battle; and Ali rushing in despair into the thickest of the fight, was at length cut down, after defending himself with a degree of desperate valour that has never perhaps been exceeded. Although disabled, he was not killed upon the spot, but died of the wounds he had received, about a week subsequent to the action, in the hands of his conquerors. He was possessed of a

strong mind and considerable genius, with more generosity of temper and less ferocity than are common among his compatriots. He was slain in the prime of manhood, having just attained his forty-fifth year.—*Volney's Syria*.

ALISON (RICHARD) one of the ten composers who, by command of Elizabeth, adapted the Psalms to music. They were first published in 1594.—*Biog. Dicr. Mus.*

ALKMAAR (HENRY D') a satirical poet of Germany, who flourished in the fifteenth century. His name acquired great reputation on account of a production entitled "The Fable of Reynard," though it has been doubted whether Nicholas Baumann, a native of Friesland, was not the real author of the poem sent into the world under this assumed appellation. Baumann died in 1503. The book, which is ingeniously put together, has since been edited by Coltshead.—*Nouv. Dict. Hist.*

ALLAIS (DENIS VAIRASSE D') author of a fictitious history of the Sevarambians, a political romance, published in 1677, and some other pieces which met with a success much inferior to that of the former. He was born in Languedoc, at the place whence he took his surname. Coming to England in 1663 he entered the navy, and served in the fleet commanded by the duke of York, afterwards James II. He subsequently returned to his native country, and gained a livelihood by teaching the English language at Paris, where he died.—*Ibid.*

ALLAN (DAVID) a Scottish portrait and historical painter of the preceding century, born at Edinburgh. After a long study at Rome, where he was honourably distinguished, he was in 1730 appointed master of the academy established in Edinburgh for diffusing a knowledge of the principles of the fine arts. There are several engravings from his pictures, one of which, entitled the "Origin of Painting, or the Corinthian Maid drawing the Shadow of her Lover," is well known. Mr. Allan died in 1796, highly esteemed.—*Supplement to Walpole's Painters*.

ALLAN (GEORGE) a respectable attorney of Darlington in Yorkshire, distinguished by his pursuits and acquisitions as an antiquary. He had a printing-press in his own house, where he superintended the printing of many curious tracts, the first of which was "The Recommendatory Letter of Oliver Cromwell to William Lenthall, Esq. speaker of the House of Commons, for erecting a College and University at Durham," &c. 4to. Being possessed of twenty manuscript volumes, relating to the counties of Durham and Northumberland, bequeathed to him by the compiler, the Rev. Thomas Randale, he published an address to the public relative to the completion of a civil and ecclesiastical history of the county palatine of Durham; and when Mr Hutchinson carried this plan into execution, Mr Allan liberally communicated his MSS and advice. He also presented to the Society of Antiquaries of London twenty-six quarto volumes of MSS chiefly got together by the Rev. Wil-

liam Smith, formerly of University College, and rector of Melsby in Yorkshire. Mr Allan died in 1800.—*Gent. Mag.*

ALLATIUS or ALLACCI (LEO) a Greek physician and man of letters, afterwards librarian of the Vatican at Rome, and a professor in the Greek college there. He was born in the island of Scio in the latter end of the sixteenth century, and attained to much eminence in polite literature as well as in polemical divinity. He died in 1669 at the age of 83. Nothing could exceed the devotion of Allatius to the see of Rome. His talents were considerable and his learning extensive; but his endless digressions and the irrelevancy of many of his arguments to the subject matter on which he is treating, detract much from the value of his writings, which are numerous, and relate principally to theological questions and points of discipline. An anecdote is told of him rather beneath the dignity of a philosopher,—that he used but one pen for upwards of 40 years, and shed tears when it at length became utterly unserviceable. Bayle alludes with some humour to his vacillating disposition and indecision of character, and relates that when the question was put to him by pope Alexander VII, why he declined taking holy orders? his reply was, that he refrained in order that he might not be precluded from marrying. "Why then do you not marry?" was the rejoinder. "That I may not be prevented from taking orders," returned Allatius. The principal works of Allatius are—1. "De Libris ecclesiasticis Græcorum," Paris, 1645; 2. "De Ecclesiæ Occidentalis et Orientalis perpetua consensione," Cologne, 1648; 3. "De Templis Græcorum recentioribus," Cologne, 1645, 4to; 4. "Græciæ Orthodoxæ Scriptorum," Rome, 1652 and 1657, 2 vols. 4to; 5. "Eustathius Antiochenus in hexameron et de Engastrimitho," Lyons, 1624, 4to; 6. "Symmicha et synmiha, sive opusculorum Græcorum ac Latinorum Vetusiorum ac recentiorum," Cologne, 1653, fol; 7. "Apes Urbanæ," Rome, 1633, an account of all the learned men who flourished at Rome from 1630 to 1632; 8. "Dramaturgia," an alphabetical collection of all the Italian dramatic works of his time; 9. "Poeti antichi raccolti da Codici manuscritti della biblioteca Vaticana e Barberina," Naples, 1661, 8vo, &c.—*Bayle. Moreri*.

ALLEGRI (ALEXANDER) an Italian satirical and humorous poet, of the latter end of the sixteenth century. He was born at Florence, and served in the army, but afterwards became an ecclesiastic. His principal works in burlesque poetry are—"Rime piacevoli," "Lettere di ser poi Pedante," and "Fantastica Visioni di Parri da Pozzolatico." These productions are published together in a volume, which has become very scarce. Allegri left other poetry in the hands of his family, which has never been published, together with a tragedy called Idomeneus, and several Latin poems of considerable pretension in that species of composition.—*Biog. Univ.*

ALLEGRI, see CORREGGIO.

ALLEGRI (GREGORIO) a celebrated Ro-

man musician, the Miserere of whose composition is still sung during passion week in the papal chapel. Excommunication is the penalty denounced on any who shall copy it: nevertheless it was printed in London, under the superintendance of Dr Burney, in 1771. Mozart is said to have written it down in score correctly from memory, after a second hearing. Allegri, who was of the family of Correggio, died in 1652, and is buried at Rome in the Chiesa Nova.—*Biog. Dict. Mus.*

ALLEIN (JOSEPH) a non-conformist minister in the reign of Charles II, author of a work entitled "An Alarm to unconverted Sinners," which has gone through several editions. His learning, piety, and inoffensive manners could not preserve him from the persecution levelled against all who held similar opinions at the Restoration. He was not only ejected from his benefice of Taunton in Somersetshire, but, persisting in officiating, was amerced by judge Foster in a fine of 100 marks, and committed to Ilchester jail till the payment of the penalty. At the expiration of little more than twelve months he was released, his friends raising the money; but his health being already ruined by confinement, his constitution gave way under it, and after lingering a few months, he died November 1688, at the early age of thirty-six, and was buried in the church at Taunton of which he had been the incumbent. He was born in 1623 at Devizes in Wiltshire, and was educated at Oxford, in which university he was a member, first of Lincoln, afterwards of Corpus Christi college.—*Biog. Brit.*

ALLEN (THOMAS) an eminent scholar of the reign of Elizabeth, considered the first mathematician of his day. His skill in this his favourite pursuit laid him open to the same suspicion among the vulgar which had fixed itself upon Roger Bacon. He was generally reputed to be a dealer in the black art, while his intimacy with Robert Dudley earl of Leicester, who patronized and consulted him, drew down on him the accusation of endeavouring to bring about a marriage between his patron and the Queen, through the force of enchantment. Allen was a native of Staffordshire, born at Uttoxeter, and in the prosecution of his studies went at an early age to Oxford, where he graduated, and obtained a fellowship in Trinity College. In 1570 he removed to Gloucester Hall, where he remained till his death in 1632, although a bishopric was at one time offered in vain to tempt him from his retirement. He is the author of several astronomical treatises written in the Latin language, and he published an edition of Ptolemy's second and third books on Judicial Astrology. He also wrote a commentary on Lilly, and on Bale's account of British Authors.—*Ibid.*

ALLESTREE, or ALLESTRY, was born in 1619, at Uppington, in Shropshire, and was a student of Christ Church, Oxford, under Busby. During the civil wars he joined the Cavaliers, and was present at the battle of Keinton, fought between Sir John Byron and the parliamentary forces. When Charles II was

driven from the kingdom, Allestry was employed as an emissary between him and the royalist party at home, on one of which expeditions he had a narrow escape, being seized at Dover on suspicion, which however he found means to obviate, and after a few weeks' confinement, was restored to liberty. After the Restoration, he took orders, and was made successively canon of Christ Church, king's chaplain, regius professor of divinity, and provost of Eton, from which latter situation he retired in 1678, but survived his resignation only two years. A treatise on the privileges of the university, of which he was so distinguished a member, and some sermons, are all that remain of his writings. He lies buried in Eton Chapel.—*Ibid.*

ALLEYN (EDWARD) a celebrated actor in the reigns of Elizabeth and James; still better known as the founder of Dulwich College. He was born A. D. 1566, in London, in the parish of St Botolph Bishopsgate. His predilection for the stage, for which he was eminently qualified by person and deportment, led him to embrace the theatrical profession very early. According to the testimony of Ben Jonson and the other dramatists of the age, he was the first actor of the day, and of course played leading characters in the plays of Shakespeare and Jonson; although, in consequence of the names not being set against the parts in the old editions of those authors, his particular share in them is not ascertained. The celebrity of Alleyn was such, that he drew crowds of spectators after him wherever he performed, so that, possessing some private patrimony, with a careful and provident disposition, he soon became master of an establishment of his own, called the Fortune playhouse, in Whitecross Street. He was likewise appointed keeper of the royal menagerie and bear garden, which offices are said to have produced, for that age, the considerable income of 500*l.* per annum. He was thrice married, and received portions with his two first wives, who produced him no issue to inherit it. Growing rich from these various sources, he was led to distinguish himself by the foundation of Dulwich College, or hospital of God's gift, for the maintenance of one master, one warden, and four unmarried fellows of the name of Allen, three whereof were to be clergymen, and the fourth a skilful organist; also six poor men and as many women; and twelve poor boys, to be educated until the age of fourteen or sixteen, and then put out to some trade or calling. The credulous gossip Aubrey tells a ridiculous story of the origin of this donation in a fright endured by Alleyn, who saw a real devil on the stage, while himself performing a fictitious one in a drama by Shakespeare. After the college was built, he met with some difficulty in obtaining a charter for a settlement of the lands in mortmain, owing to the opposition of the lord chancellor Bacon, who doubted the utility of the institution, in comparison with others for which a similar favour had been refused. The very rational letter of this great man to the marquess of Buckingham on this subject is extant; and

the interest of Alleyn must have been great to get the better of such an opponent. He was the first master of his own college; and dying in 1626, was buried in the new chapel belonging to it. The lands forming the endowment of this singular institution having now become of great value, with no extension of the charity, a fellowship in it has become a very desirable object. Within these few years it has been brought into great additional notice by the admirable collection of pictures of the best masters, bequeathed by Sir Francis Bourgeois, for which a handsome gallery has been erected and with due precaution, the public are freely admitted all the year round. A diary kept by Alleyn himself is in existence.—*Biog. Brit. Malone's Shakespeare.*

ALLIBOND (JOHN) D. D. of Magdalen College, Oxford, and afterwards rector of Bradwell, in Gloucestershire, where he died in 1658. He is chiefly known by a Latin poem of considerable humour, on the visitation to Oxford by the parliamentary visitors, entitled "Rustica Academiæ Oxoniensis, nuper reformatio descriptio; una cum comitis ibidem, 1648, habitis." A translation in verse was subsequently added, and three editions were printed; but the book is nevertheless very scarce.—*Wood's Fasti.*

ALLIONI (CHARLES) a celebrated physician and professor of botany in the university of Turin, who was born in 1725, and who died in 1804. His works, of which the following are the principal, are much esteemed: 1. "Pedemontii stirpium rariorum specimen primum," Turin, 1755, 4to; 2. "Oryctographiæ Pedemontanæ specimen," Paris, 1757, 8vo, an account of the fossils of Piedmont; 3. A medical treatise entitled "Tractatio de Miliarum origine, progressu, natura, et curatione," Turin, 1758, 8vo; 4. "Stirpium præcipuarum littoris et agri Nicæensis enumeratio methodica," Paris, 1757; 5. "Synopsis methodica horti Taurinensis;" 6. A splendid and useful work, with ninety-two plates, descriptive of 2813 plants, of which many are new, which he found growing wild in Piedmont, entitled "Flora Pedemontana," Turin, 1785, 3 vols, fol, 7. Some correction of and addition to the foregoing, under the title of "Auctuarium ad Flora Pedemontana," Turin, 1789. Haller highly regarded Allioni, whose labours have materially contributed to the advancement of medical and botanical science.—*Biog. Univ.*

ALLIX (PETER) born at Alençon in France, a minister of the Reformed church at Rouen, and afterwards at Charenton. The repeal of the Edict of Nantes drove him to England, where he soon discovered a wonderful aptitude at acquiring the language, and afterwards distinguished himself by some theological disquisitions levelled principally against popery. Among his writings, which are numerous, the most esteemed are his reflections on the Scriptures, dedicated to James II, first published in 1683, and since reprinted among bishop Watson's theological tracts. Bishop Horsley, in his letters to Dr Priestley, speaks highly of his defence of the antient Jewish church against

the objections of the Unitarians, printed in 8vo in 1691. He also published, after the Revolution, a quarto work on the history of the churches of Piedmont, which he inscribed to William III. Allix was held in much esteem for his learning and unaffected piety, which procured him the lucrative situation of treasurer of Salisbury, after he had taken the degree of doctor in divinity at an English university. This he enjoyed to his death, which took place in London on the 21st of February, 1717, at the age of seventy-six.—*Biog. Brit.*

ALLY (Vizier) ex-nabob of Oude. This unfortunate individual, a striking example of Eastern vicissitude, was the adopted son of Ausuf ad Dowlah, late nabob of Oude. He was born in 1731, being, as it is said, the son of a menial of the lowest description. His reputed father, a wealthy and eccentric prince, who had succeeded to the musnud or throne of Oude, under the protection of the East India Company, was in the habit, whenever he saw a pregnant woman whose appearance pleased him, to invite her to his palace to lie in: one of these women was the mother of vizier Ally, who, being a sprightly child, engrossed the affections of the nabob, and, in conformity with Mahometan custom, was by him finally adopted as his successor. Vizier Ally succeeded accordingly, but was soon deposed by the English government in favour of the brother of the late nabob. A pension of two lacks of rupees, or 25,000*l.* sterling, was settled on the deposed prince, who was ordered to remove from Lucknow to the presidency. He accordingly proceeded to Benares, to which place Mr Cherry the Company's agent was despatched, to make arrangements for his proceeding to his destination. Shortly after his arrival, Mr Cherry having invited him to breakfast, he came attended by an armed retinue, and, after complaining bitterly of the treatment which he had received from the Company, gave a signal, on which his followers rushed in and cut to pieces Mr Cherry and his assistant Mr Graham. They then proceeded to the house of Mr Davis, another European resident, who found means to hold them at bay until succour arrived. On this, vizier Ally made his escape into the territory of the rajah of Berar, who, being pressed by the East India Company, at length agreed to give him up, on condition that his life should be spared. This proposal was acceded to, and the unhappy man was for the remainder of his days, seventeen years and three months, confined in a kind of iron cage, his death taking place in May 1817, at the age of thirty-six. The adoption of any receptacle that might with propriety be called a cage, has been objected to as unbecoming the English name and character.—*Ann. Biog. Forbes' Oriental Memoirs.*

ALMAGRO (DIEGO) a Spaniard of very low origin, one of the original adventurers who accompanied Francis Pizarro in his enterprize against the inhabitants of the New World. In this expedition, his valour, profligacy, and cruelty were pretty equally displayed. In 1525 he took Cusco, the antient capital of the Incas,

by storm; when the barbarity exhibited by him towards the unfortunate Atahualpa, or Atabalipa, as he is sometimes called, the last monarch of the race of Manco Capac, and the horrid death to which he eventually put him, must ever hand down his name to the execration of posterity. Quarrelling with his companion about the division of their spoil and power, a schism ensued; and, both factions taking arms, Almagro was defeated, made a prisoner by his rival, and strangled in 1538, at the age it is said of seventy-five. His son however succeeded in avenging him: the friends of his father rallying round him, assassinated Pizarro in his turn, after an obstinate resistance, in his own palace, on the 26th July 1541. This outrage excited the attention of De Castro, viceroy of Peru; and young Almagro, falling into his power, was, with a considerable number of his party, executed by his orders in the following year.—*Biog. Universelle.*

ALMAMON, caliph of Bagdat, and second son of Haroun Alraschid, succeeded his elder brother Amin in the year 814. Born at a time when a love of science began to gain ground among the Saracens, he was carefully educated, and distinguished his reign by an assiduous encouragement of the cultivation of the sciences. For this purpose, he collected from Greece all the works on science in that language, and procured skilful interpreters to translate them into Arabic. Almamon was himself an able astronomer, and made many observations on the obliquity of the ecliptic. He also caused a degree of the meridian to be measured, and revived the sciences in the East, to the production of many learned men in his own time, and long after him. A strong body of orthodox Mussulmen, in the narrow spirit of a bigotry which has by no means been confined to Mahometanism, opposed the learned and philosophical views of their ruler on the ground of innovation and danger to the true faith; but Almanon, as became his character, after exhibiting some disposition to resentment, wisely adopted the just expedient of universal toleration. The conduct of this learned prince was also honourably exempt from the cruelty and ferocity of the Eastern despot; magnanimously pardoning a rebellious uncle, and showing great generosity to the depressed house of Ali. In all respects indeed he appears to have been a mild, clement, and philosophic character. He unfortunately died at the age of forty-eight or forty-nine, after a reign of twenty years, by partaking too freely of dates and cold water, on his return from an expedition; which catastrophe the zealots, who were offended at his religious liberality, called a judgment. This event took place in 833.—*Univ. Hist. Brucker.*

ALMEIDA. There were two of this name, Francisco and Lorenzo, father and son. In the earlier period of the Portuguese discoveries and conquests in the New World, Francisco the father, who had served with much reputation in the wars of Grenada, was the first that received the appointment of viceroy of India, which was conferred upon him by Emanuel in

1505. After ravaging the coast of Africa in the course of his expedition, he subjected to the Portuguese dominion Quiloa, Onor, Cananor, with other petty states, and in a desperate struggle carried by storm and burnt the strong fortress of Panama, though defended by a resolute garrison of 4000 men, while his own force scarcely exceeded 700. His son, who accompanied him, being now detached on a separate expedition, subdued the island of Ceylon, carried off 250,000 lbs. weight of cinnamon as the first fruits of his success, and imposed on the country an annual tribute to the same amount. In a subsequent expedition against the combined fleets of the Arabians and Egyptians, he was less fortunate; and his own ship, overwhelmed by the superiority of the force opposed to him, running aground, he and the whole of his crew, with the exception of about twenty who were overpowered and made prisoners, fell in the action. His father bore the intelligence of his death with much firmness, declaring his intention to revenge rather than to lament him; and, neglecting the orders for his recal which arrived about this time from Europe, sailed for Dabul with the full determination of putting his threat into execution. Nor was this menace a vain one: coming up with the enemy's fleet, he engaged and defeated it with a loss of upwards of 4000 men. A difference had for some time existed between him and the rival of his glory, the celebrated Albuquerque: by the interposition of their mutual friend, Contigna, a reconciliation now took place; and Almeida, resigning his command to the other, sailed for Portugal. Landing however during the voyage on the African coast, in the neighbourhood of the Cape of Good Hope, a dispute arose between his sailors and the natives, which terminated in hostilities; and Almeida, receiving a thrust in the throat from the spear of a native, fell mortally wounded, while some of his companions, in an endeavour to rescue his body, were massacred to a man.—There was also a Portuguese bishop, a Jesuit, called APOLLINARIUS, of the same name and family, who suffered martyrdom in Ethiopia, whither he went out as a missionary in 1568, his companions, two other monks belonging to the same society, suffering with him.—*Mod. Univ. Hist.*

ALMELOVEEN (THEODORE JANSSEN D') born in Holland, where he flourished in the early part of the 18th century. He was a man of deep reading and research, the fruits of which he gave to the world, not only in his learned illustrations of several authors of antiquity, but also in his "Vita Stephanorum," "Fasti Consulares," and other classical works. He was a good Greek scholar, and held a professorship of Greek, history, and physic, at Harderwick. He died at Amsterdam in 1742.—*Nouv. Dict. Hist.*

ALMON (JOHN) a political writer and publisher, was born at Liverpool about the year 1738, and educated at Warrington. In 1748 he was apprenticed to a bookseller at Liverpool, but in 1756 went to sea for some time, and on his return in 1758 came to Lou-

tion, where he soon became known as a political writer and pamphleteer, and some time after as a bookseller. Of these labours the most distinguished were—"The Conduct of lord George Sackville Examined;" "A Review of the Reign of his late Majesty," (Geo. II) on his resignation in 1761; "A Review of the Administration of Mr Pitt." He also published "A Letter to the Right Hon. George Grenville;" "A Review of lord Bute's Administration;" "A Letter to the Earl of Bute;" "A Letter to the Right Hon Charles Jenkinson," &c. &c. Most of these pamphlets were sent out anonymously; and it has been thought that he was rather the editor and publisher than the author of them. His best known avowed works are, "Anecdotes of the Life of the Earl of Chatham," 3 vols. 8vo; and "Biographical, Literary, and Political Anecdotes of the most eminent Persons of the present Age," 3 vols. 8vo, 1797. As a compiler he was very industrious, and among other things published a collection of Treaties of Commerce; a Military Dictionary of Battles and Sieges; the New Foundling Hospital for Wit; a collection of pieces by various authors in prose and verse, &c. &c. His last publication was a collection of the pamphlets and letters of Mr Wilkes, to whom he had been a constant partisan, and during whose equivocal popularity, as a writer and a publisher he was much in vogue. In his edition of Junius, he laboured to prove that Mr Hugh Boyd, an undistinguished young man of letters at that time, was the author of those celebrated epistles, and of course was believed by no one. He retired from business in 1782, but subsequently injured his fortune in a newspaper speculation, and died in depressed circumstances in Hertfordshire in 1805.—*Gent. Mag. Public Characters*, 1803.

ALMUYADAD (ISMAEL) an Arabian writer, and author of a narrative of the proceedings of the Saracens in Sicily, from 843 to 940, the original MS of which is in the Escorial, and a Latin version in Muratori's "Rerum Italicarum Scriptores."—*Moreri*.

ALOADIN, prince of the Assassins, or Arsacides, commonly called the Old Man of the Mountains. He was the shiek of a Syrian tribe professing the Mahometan religion, but blindly devoted to the will of their chief, with whose temporal superiority was also mingled a sort of ecclesiastical character. Uniting as it were, in his own person, the pretensions of prince and prophet, the slightest of his commands was always executed, though at the expense of certain loss of life to the emissary; a circumstance which made this chief a most formidable enemy. Many fabulous stories are related of this prince, from whose followers the word assassin has its derivation.—*D'Herbelot*.

ALPHONSO (the Wise) king of Leon and Castile, succeeded his father Ferdinand in 1251. As a ruler he was misguided and unfortunate, but as a patron and encourager of learning, he obtained the reputation which has given him the surname of Wise, being himself no mean proficient in science, for the age in

which he lived. He completed a code of law, began by his father, still known under the title of "Las Partidas," and preceded the other nations of Europe in substituting the vernacular tongue for the Latin in law proceedings. He also caused the Bible to be translated into Spanish, and a history of Spain to be written in the same language. His favourite pursuit however was astronomy, and during his father's time, in 1240, he employed the most celebrated astronomers, Jew, Christian, and Mahometan, to draw up the celebrated tables called after him *Alphonsine*, which were first published at Venice in 1483. Alphonso, like most princes of an inquiring character, who will seek knowledge wherever it is to be found, was attacked by bigotry, and charged with irreligion. In confirmation of the imputation, he is accused of exclaiming, that if he had been consulted in the creation of the world, he would have advised God for the better; an observation rather to be interpreted into a sarcasm upon the absurd system of Ptolemy, which then prevailed, than into irreligion. Alphonso died in 1284 at the age of 81.—*Mod. Univ. Hist.*

ALPINI (PROSPERO) a Venetian physician, the greatest botanist of his day, was born in 1553. He was the first who explained the impregnation and generation of plants by the sexual system, and is the author of many valuable works replete with much curious information on the subject of his favourite pursuit. His principal productions are a Latin treatise, in four books, on the state of medicine in Egypt; and another on the botanical history of that country, to which he accompanied George Hemi the Venetian consul, and spent three years in the investigation of the natural productions of the banks of the Nile. On his return to Italy, he accepted the appointment of physician to prince Andrew Doria, and took up his temporary residence at Genoa, whence the solicitations of his countrymen, joined to his own secret inclinations, induced him after a short time to withdraw for the purpose of filling the honourable situation of professor of physic in the then celebrated university of Padua. Here his abilities were held in much esteem, and he filled the chair with equal credit to himself and advantage to his pupils, who were numerous. This situation he retained till his death, which took place Feb. 5, 1617, in the twenty-fourth year of his professorship and the sixty-fourth of his age. In addition to his botanical works, he is the author of many valuable tracts on pharmacy, among which are his treatises "De Balsamo," "De Prasagiendâ Vitâ et Morte Egorotorum," "De Medicinâ methodicâ," "De Rhapoutico Disputatio," &c. &c. all composed in the Latin tongue, which he wrote with great purity and elegance.—*Moreri*.

ALSOP (ANTHONY) an eminent English divine and scholar, who flourished in the early part of the last century. He took the degree of bachelor in divinity at Oxford in 1706, and was subsequently appointed domestic chaplain to bishop Trevelney, who gave him the living of Brightwell, Berks, with a stall in his cathedral; but a prosecution for a breach of promise

of marriage being instituted against him in 1717, the heavy damages which were awarded forced him to a temporary absence from his country. How long he remained abroad is uncertain, but he returned to England some time previous to his death, which took place in 1726. His principal work was a selection from *Æsop*, entitled, "*Fabularum Æsopicarum Delectus*," published in 8vo in 1698. The preface to this book, in which the author espouses the part of Boyle in his controversy with Bentley, made a great sensation at the time, though it is now little known. A quarto volume of his Latin odes, edited by Sir F. Bernard, appeared in 1752; and several of his English poems are to be found in the collections of Dodsley and Pearch.—*Nichol's Life of Bowyer*.

ALSOP (VINCENT) a Northamptonshire clergyman, ejected in 1662 from the living of Welby in that county, for non-conformity. He was a member of St John's College, Cambridge, and at one period of his life acted as assistant in Oakham Grammar School. James II esteemed him much, and at his entreaty pardoned his son, convicted of treasonable practices. A book written by him, in reply to dean Sherlock, and entitled "*Antisozzo*," from the Italian name of Socinus, displays some humour and felicity of diction. At his death, in 1703, he was minister to a dissenting congregation in Westminster.—*Biog. Brit.*

ALSTON (CHARLES) a respectable Scottish physician and botanist, born 1683. In conjunction with Dr Alexander Munro, the first of that name, Dr Alston projected the revival of medical lectures and studies in Edinburgh. For this purpose they associated themselves with Drs Ruthaford, Sinclair, and Plummer, and laid the foundation of that high character which Edinburgh, as a medical school, has so long enjoyed. Dr Alston's department was botany and the materia medica, which he continued to teach until his death in 1760, in the sixty-sixth year of his age. He published several botanical works, the principal of which is "*Tirocinium Botanicum, Ediburgense*," 1753, in which he attempted to overthrow the system of Linnæus. He has also some papers in the Edinburgh Medical Essays, and his "*Lectures on the Materia Medica*," in 2 vols. 4to, were published after his death.—*Pulteney's Prog. of Botany*.

ALSTROEMER (JONAS) the reviver of industry and commerce in Sweden, was born in 1685, of poor parents, in the province of West Gothland. After struggling with poverty for a long time in his native country, he visited London, where he paid particular attention to the commercial and manufacturing sources of British prosperity. Sweden was at this time endeavoring to make some progress in the arts of industry, and, having formed his plan, Alstroemer resolved to return and aid the beneficial impulse. In 1723 he obtained a license to establish manufactures in the town in which he was born, and it soon became the seat of industry and activity which afforded an example to the whole kingdom. In order to collect further information, and obtain able

workmen, he then visited Germany, Holland, and Flanders. He also established a sugar house at Gottenburgh, and traded to the Indies and the Levant. He likewise improved rural economy, cultivated plants proper for dyeing, and extended the culture of the potato, then a novelty in Sweden. He moreover improved the wool trade, by importing sheep from Spain and England, and even the Angora goat. Some of his schemes were deemed too theoretical, and not sufficiently adapted to local circumstances; but his country was not backward in acknowledging the benefits accruing from his patriotism and example. He was made knight of the polar star, received a patent of nobility, and was chosen a member of the Academy of Sciences. The states also decreed him a statue, to be placed on the exchange at Stockholm, with an inscription denominating him the reviver of Swedish manufactures. He died in 1761, leaving a considerable fortune, and a name and character honourable for patriotism, energy, activity, and talent; furnishing by his history one of the most inspiring examples on record of the successful union of public spirit and private industry in the useful class to which he belonged.—*Biog. Universelle*.

ALTER (FRANCIS CHARLES) a German Jesuit and laborious scholastic critic, was Greek teacher in the school of St Anne at Vienna, in which capital he died in 1804. He was the author of no less than 250 volumes of dissertations, one of the principal of which is "*Novum Testamentum ad codicem Vindobonensem Græce expressum*," 2 vols. 8vo, the merits of which edition has been learnedly examined by Dr Herbert Marsh, in his preface to Michaelis. Among his other works are "*Various Readings from MSS in the imperial library, used in the editions printed by him at Vienna of Lysias, Lucretius, Homeri Ilias, Cicero's Tusc. Quæst. &c.*" He also published editions of "*Some of Plato's Dialogues*," of "*Thucydides*," and of the "*Greek Chronicle of George Phranza*," never before printed. He is also author of "*Notices (in German) of the Literary History of Georgia*."—*Ibid.*

ALTHUSIUS (JOHN) an eminent German civilian, author of several political treatises, in one of which, "*Politica Methodice digesta*," he lodges the supreme power in the people, and maintains their right to punish or depose their princes. This doctrine created much ill will against him, in 1603, when it appeared. Beside this he published a work on the jurisprudence of the Romans, and another entitled "*De Civili Conversatione*." He held a law professorship at Herborn, and at the time of his death was syndic of Bremen.—*Bayle*.

ALICOZZI (LORENZO) a Jesuit of Cortona, born in the year 1689, author of several polemical treatises, especially one in reply to Beausobre on Manicheism. The work however by which he is most known is the "*Sum of St Augustine*," in six quarto volumes, in which he gives a curious account of the rise and progress of the Pelagian heresy. He died in 1777, at Rome.—*Biog. Universelle*.

ALTILIO (GABRIEL) a native of the king-

lom of Naples, and preceptor of king Ferdinand the younger. He was distinguished for the excellence of his Latin poems, which are printed in the "Deliciae Poetarum Italorum," at the close of the works of Sannazarius. His merit as a poet made him bishop of Polecastro in 1489; and he died in 1501.—*Ib.*

ALTING (HENRY) an eminent German divine, born at Embden in 1583. Having made a very early progress in letters, he became tutor to three young noblemen who studied at Sedan with the electoral Prince Palatine, and subsequently attended the young elector to England, when he came to marry Elizabeth, daughter of James I. He much distinguished himself at the synod of Dort; and after enduring great danger when the savage Tilly took Heidelburgh by storm, he retired with his family to Embden, and soon after became professor of divinity at Groningen, and died in 1644. He was an able and active divine, who did much in advancement of the Protestant interest in Germany by his temperate conduct and abilities as a reasoner. His works are—1. "Notæ in Decadem Problematum Jacobi Behm de glorioso Dei," Heidelbergaë, 1618; 2. "Locī Communes," 3 vols, 1646; 3. "Exegesis Augustanae confessionis," 1647; 4. "Historia Ecclesiastica Palatina," 1644, 4to, &c.—*Moreri.*

ALTMANN (JOHN GEORGE) a Swiss pastor at Inns in Berne, of which canton he was a native. He assisted Breitinger in the compilation of his "Tempe Helvetica," in 6 vols. 8vo, and published "A Description of the Glaciers," 8vo; a work called "Principia Ethica," in 2 8vo. volumes; and a commentary on the New Testament, entitled "Metemata philologico-critica." He died in 1753, in the sixty-first year of his age, being, at the time of his decease, professor of Greek and of moral philosophy at Berne.—*Biog. Universelle.*

ALTDORFER (ALBERT) a Bavarian painter, architect, and engraver, of great merit in all those departments of art, born at Altdorf in 1488. Holbein made him not unfrequently his model; and his works, both on wood and copper, are now extremely valuable. He raised himself by his merits to the rank of senator of Ratisbon, which city he adorned with many handsome edifices, and where he died in 1578.—*Strutt's Dict. of Painters.*

ALURED, an ancient English annalist, who flourished in the beginning of the twelfth century, was a canon and treasurer of the church of St John of Beverly, his native town. His annals, which comprise the ancient history of the Britons, Saxons, and Normans, down to his own times in the year 1129, are valuable, both on account of the matter and of the concise and elegant style in which they are written. Some writers have deemed them an abridgment of Jeffery of Monmouth; but, looking to dates, there is reason to believe that the latter wrote subsequently to Alured, who is also supposed to be the author of "The History of St John of Beverly," a collection of records preserved in the Cottonian library which has never been printed.—*Biog. Brit.*

ALVA (FERDINAND ALVAREZ, Duke of) a representative of one of the most illustrious families of Spain, and a famous general under the emperor Charles V and his son Philip II. In 1555 he was made generalissimo of all the Emperor's armies in Italy, and the next year, being ordered to enter the territories of the Pope, made himself master of the Campagna Romagna, after which he repaired to Rome, to beg the haughty pontiff's pardon, such being one of the conditions of the peace which followed. Alva however is far better known to loathing posterity as the merciless executioner of his detestable master Philip, in the Netherlands, where he landed in 1567 with ten thousand men, and immediately began to attempt to crush the rising spirit of religious freedom and of resistance by a series of cruelties as dire as the worst recorded in modern, or indeed in any history. He annihilated every remaining privilege of the people, beheaded the two popular leaders, the counts Egmont and Horn, and filled the whole country with horror and dismay. With a vanity as detestable as his cruelty, on his successful resistance to the noble efforts of the prince of Orange, he placed a statue of himself in Antwerp, in which he was figured trampling on the necks of two statues representing the two estates of the Low Countries. The progress of that war is however an affair of history rather than of biography; it is sufficient therefore to observe that at length, exhausted in his fruitless attempt, in which he had massacred his prisoners in cold blood, put the inhabitants of most of the places which he took by storm to the sword, and, as he himself boasted, consigned 18,000 persons to the executioner, he was obliged from broken health to solicit his recall. He was subsequently employed against Don Antonio, who had assumed the crown of Portugal, and drove him from that kingdom, the whole of which he reduced to Philip's authority. He seized an immense treasure at Lisbon, of which he would never give an account, and suffered his soldiery to treat the inhabitants with the most merciless violence and rapacity. He died soon after in the seventy-fourth year of his age. Spanish inflexibility in this execrable ruffian was untempered by the magnanimity and generosity with which it has often in more favourable instances been qualified. He has been praised indeed for the spirit and impartiality of his discipline, as no one punished the *unlicensed* barbarities of his soldiers with more severity; a fact which makes him the direct author of all the enormities in which they so freely indulged. In a word, he was worthy of the master whom he served: two more detestable portraits than Philip and Alva have possibly never been furnished by the page of history.—*Mod. Univ. Hist.*

ALVAREZ (FRANCIS) a Portuguese priest, born at Coimbra towards the end of the fifteenth century, who was sent by Emanuel king of Portugal, to whom he was chaplain, on a mission to David king of Abyssinia. Alvarez continued six years in that country, and when he returned, brought letters to king John the

successor to Emanuel, and to pope Clement VII, to whom he gave an account of his embassy in the presence of the emperor Charles V. He also left behind him a narrative of the same, which was published at Lisbon in 1540, the year in which he died. It is deemed the first accurate account of Abyssinia, and has been much valued for that reason.—*Moreri*.

ALVAREZ (FERDINAND DE ORIENTE) an officer of the Portuguese navy, in which he held the rank of captain under Tellez. He was a native of Goa, and early in life evinced a talent for poetry. The old romance of "Palmerin of England" is indebted to him for its fifth and sixth parts; but his fame rests principally on his "Lusitania Transformada," a poem which appeared at Lisbon in 1607 in one 8vo volume.—*Biog. Universelle*.

ALVENSLEBEN (PHILIP CHARLES, Count d') son of a counsellor of war at Hanover, of which city he was a native. He received his education with the Prince Royal of Prussia (afterwards Frederic William II), with whom he was brought up at Magdeburg, and completed it at Halle. He early distinguished himself as a diplomatist, and in 1791 was placed at the head of the department for foreign affairs. He died in 1802 in the 57th year of his age, leaving behind him a "History of the War from the Peace of Munster to that of Hubertsbourg," published in 1792 in one vol. 8vo.—*Ibid*.

ALXINGER (JOHN BAPTISTE D') a poet of some celebrity in Germany, born in 1755 in the capital of the Austrian dominions. His early studies were directed to the law, in which profession his father had risen to be a counsellor of the consistory to the bishop of Passau. So dry a pursuit however soon disgusted him, and he accordingly relinquished it for the service of the Muses. The productions which established his reputation are—"Doolin of Mentz" and "Blomberis," written in imitation of Wieland. He died in 1797, having given to the world a collection of his poems, originally published in 1784.—*Ibid*.

ALYPIUS, a geographical writer of antiquity, an edition of whose description of the world was published in 1628 at Geneva. He flourished in the reign of Julian, who employed him in his capacity of an architect. He was subsequently banished on an accusation of practising the black art, and died in exile. Alypius was a native of Antioch in Syria.—*Ibid*.

AMAK, a celebrated poet of Persia, known also by the name of Abulnagie al Bokhari. His principal production is a poetical "History of the Loves of Joseph and Zolakah." Amak was the first president of the academy of poets instituted in the fifth century by Khedar Khan, who placed him at its head. He lived to a very advanced age.—*D'Herbelot*.

AMARASINGHA a Hindoo author of great antiquity. Part of a dictionary of the Sanscrit language by him (an entire manuscript copy of which still exists in the royal library at Paris), was published in 1798 at Rome. This work was originally written during the century

which preceded the birth of Christ. Amara was of the caste of the Bralmins, and attached to the court of a rajah called Vikramaditeya.—*Nouv. Dict. Hist.*

AMATI, a celebrated violin maker of Cremona, who lived about the year 1600. His two sons, Jerome and Anthony; and his grandson Nicholas, son to the latter, equalled him in skill and reputation. The Amati violins, generally known by the name of Cremonas from the place of their manufacture, are still considered, with the exception perhaps of Stainers, the first in the world, and hence are not unfrequently counterfeited.—*Biog. Dict. Mus.*

AMATUS, a Portuguese Jew, born in 1511, at Castel Bianco. He studied medicine with great success at the university of Salamanca, and afterwards gave lectures on the science at Ferrara, Ancona, and other places, which were much attended. He also published two treatises on subjects connected with his profession; one of which, "Curiationum medicinalium centurie septem," was held in great repute, and though originally published in duodecimo, went rapidly through several editions, and was increased eventually to the size of a folio. His other work, which preceded the latter in point of time, is entitled "Exegemata in priores duos Dioscoridis de Materia Medica libros." His religious principles becoming suspected by the "Holy Office," he was compelled to fly first to Pesaro and afterwards to Ragusa, whence, still not thinking himself safe, he finally retired to Thessalonica, and there openly avowed his tenets. When he died is uncertain.—*Moreri*.

AMBERGER (CHRISTOPHER) a pupil of Hans Holbein in the early part of the sixteenth century, a native of Nuremberg. His principal paintings are a series of twelve pictures, the subject of which is the History of Joseph, &c. In these productions he has imitated the style of his master with great success. He also painted a portrait of the emperor Charles V, who esteemed it as fully equal to one taken of him by Titian, and trebled the promised gratuity to the artist, bestowing on him, at the same time, a valuable chain and medal. Amberger united the art of engraving on wood, in which he attained to great eminence, with his other pursuit. His death took place in 1550.—*Pilkington*.

AMBOISE. There were two brothers of this name who flourished at Paris in the latter part of the sixteenth century. The elder, FRANCIS, was the author of several poems in the French and Latin languages, but is now principally known as the collector and editor of the works of the celebrated Abelard. He was bred to the law, and became an advocate in the parliament of Paris and a counsellor of state. JAMES, the younger, practised medicine, and died in 1606, rector of the university of Paris.—*Moreri*.

AMBOISE (GEORGE D'). There were also two cardinals of this name, uncle and nephew, of a noble family in France. The elder acquired great popularity as minister to Louis XII, by his reduction of the taxes, &c. The conquest of the Milanese by that prince was

also undertaken at his suggestion. His attention as cardinal legate in France was much directed towards the monastic houses, in which he effected great reforms. It is recorded however, that on his death bed he regretted the exalted station which he had attained, and exclaimed to the confessor who attended him, "Brother John, ah! why have I not all my life been brother John?" He died in 1510, being succeeded in his archbishoprick of Rouen by his nephew, who also attained to a cardinal's hat, and survived his uncle six-and-thirty years.—*Moreri*.

AMBOISE (MICHAEL D') an illegitimate son of Amboise, admiral of France, born at Naples. He was the author of numerous poems in the French language which are yet in existence, but are better known as the works of the Signior de Chevillon, a name which he assumed. He died in great poverty in 1547.—*Ibid*.

AMBROSE (St) bishop of Milan in the fourth century, and one of the latest and most distinguished of what are denominated the Fathers of the Christian church. He was born at Ailes, then the metropolis of Gallia Narbonensis, according to some authorities in 333, and to others in 340. His father was the emperor's lieutenant in that district, and after his death, Ambrose, who was the youngest of three children, returned with the widow and family to Rome. Here, under the instructions of his mother, and his sister Marcellina, who had vowed virginity, he received a highly religious education, and that bias in favour of Catholic orthodoxy by which he was subsequently so much distinguished. It may also be inferred from his writings, that he was early instructed in Greek and Roman learning. Having studied law, he pleaded causes in the court of the pretorian prefect, and was in due time appointed proconsul of Liguria, and took up his residence at Milan, where a circumstance occurred which produced a sudden change in his fortunes, and transformed him from a civil governor into a bishop. Auxentius, bishop of Milan, the Arian leader in the west, died and left that see vacant, when a warm contest for the succession ensued among the Arians and Catholics. In the midst of a tumultuous dispute, Ambrose appeared in the midst of the assembly, and exhorted them to conduct the election peaceably. At the conclusion of his address a child in the crowd exclaimed, "Ambrose is bishop!" and whether accidentally or by management, the result throws a curious light upon the nature of the times; for the superstitious multitude, regarding the exclamation as a providential and miraculous suggestion, by general acclamation declared Ambrose to be elected. The latter expressed great reluctance to accept the office, and adopted expedients to induce a change, which seem singular enough at present; such as acting with unwonted harshness and severity in his magisterial capacity, and receiving women of bad character into his house. The people saw through this artifice and persevered; on which Ambrose secretly left the city by night, in order to retire to Ti-

cinum, but, as we are gravely informed, missed his way and wandered up and down until morning, when he found himself at the gates of the city. He was then detained until his flight could be made known to the Emperor, who peremptorily ordered the election to be carried into effect. After all this and much more in the way of "Nolo episcopari," Ambrose finally acquiesced; and whatever the real character of this transaction, he conducted himself in his new station with great firmness and ability. He began by disposing of his personal property in favour of the church, with the exception of a life interest to his sister, and immediately dedicated himself to a course of theological studies. He was soon called into the exercise of his new acquirements; for, on the death of the elder Valentinian, his widow, the empress Justina, openly espoused Arianism; and her son, the younger Valentinian, now associated with Gratian in the government of the empire, resisted all the attempts of Ambrose to withdraw him from the opinions of his mother. Although discountenanced by Theodosius in the East, and notwithstanding the election of Ambrose in the West, Arianism had numerous able leaders in both churches. The bishops Palladius and Secundianus, in particular, called for a general council to decide upon the merit of the two systems; but Ambrose managed that the council should consist of western bishops only, and by his influence and popularity succeeded in ejecting the two prelates from the episcopal office. Upon the accession of Valentinian II, the remains of the pagan party, among which were many senators, made a formal attempt to re-establish paganism; and Symmachus, a wealthy senator of talent and eloquence, was in the year 384 employed to prepare and present a petition for the restoration of the altar of Victory in the senate, and for public funds in support of the seven Vestal Virgins. To this petition Ambrose made an eloquent reply, in which, with great reason, he attributed the Roman conquests devoutly ascribed by the pagan orator to the goddess Victory, to the valour of the Roman warriors; and, in respect to the Vestal Virgins, placed them infinitely beneath the votaries of virginity among Christians. Both the petition and the reply are in existence, and display equal intemperance. Ambrose, at the head of by far the stronger party, soon disposed of the prayer of Symmachus, but found himself much more strongly assailed by the Arians, headed by the Emperor and his mother, who modestly demanded the use of two churches in the city for the exercise of their own worship. Ambrose refused; and although one of them was taken by force, such was the clamour produced by that step, and the popularity of the bishop, there was little disposition to repeat it. In one of these tumults, Ambrose humanely saved an Arian ecclesiastic from the hands of the populace, but himself vituperated against the Empress as a Jezebel, an Herodias, &c.; and when fair means were again resorted to, declared that he would die at the foot of the altar rather than abandon his post: "The tumult of the people I will not

encourage," said the prelate, "but God alone can appease it." Sermons, assuming the absolute authority of the catholic bishops over the churches, followed; and although force was in the end once more resorted to, such was the superstitious terror inspired by the energy of the bishop's character, that a party of Arian Goths were paralysed in the very moment of attack by his threat of excommunication. Ambrose subsequently declined a dispute with the Arian bishop of Milan; and resting principally on his influence with the people, sought assiduously to improve it, and that by no means to the exclusion of the production of what are called pious frauds. Thus, at a moment when he particularly required popular support, he was directed by a dream to the remains of two martyrs, Gervasius and Protasius, which had lain for upwards of 300 years under the pavement of the church. Two perfect skeletons were accordingly found sprinkled with blood, and the head of one severed from the body. A harvest of miracles immediately followed: a blind man was restored to sight on touching the bier, demoniacs were dispossessed, and sick persons cured. Dr Cave, in his "Lives of the Fathers," makes no doubt "but that God suffered these miracles to be wrought at the time to confront the Arian impieties;" but since the publication of Dr Middleton's "Free Inquiry," few Protestant doctors are disposed to such avowals. The strength and ability of Ambrose were such that, although opposed to him on ecclesiastical points, Valentinian and his mother respected his talents, and in moments of political exigency, required his assistance. It is equally to the honour of Ambrose, that on such occasions he never failed to render it; and when Maximus, after the assassination of Gratian, usurped the province of Gaul, and was preparing to cross the Alps, Ambrose accepted an embassy to him, and dissuaded him from his purpose. Although not equally successful, he a second time made the endeavour with great zeal and patriotism; and when Maximus actually entered Milan, and Justina and her son fled to seek the protection of Theodosius emperor of the East, he remained at his post, to assuage the calamities produced by the invading army. His intolerance however never gave way; for when, after reinstating Valentinian, Theodosius, on receiving an account of an act of violence and injustice against the Jews by a Christian bishop who had burnt down their synagogue, ordered it to be rebuilt at his expense, Ambrose threatened the Emperor with exclusion from the altar, unless he reversed the edict; and it was reversed accordingly. His interference was more honourable to him when, in consequence of a tumult at Thessalonica, Theodosius—himself subsequently very near being canonised—sent an order for a general massacre, in consequence of which 7000 persons were slaughtered in cold blood. When the Emperor, in the anguish of self-reproach, was about to enter the great church of Milan, Ambrose met him at the porch, and sternly forbade him to appear in the holy place. The Emperor pleaded the ex-

ample of David. "You have imitated David in his crime, imitate him in his repentance," was the reply; and Theodosius was consigned to a retirement of eight months, and not absolved even then, until he had signed an edict which ordained that an interval of thirty days should pass before any sentence of death or even of confiscation should be executed. After having paid the funeral honours to Theodosius, who died soon after obtaining peaceable possession of the entire Roman empire, the bishop departed from this world with a composure worthy of his firm character, in the year 397. With an equal avoidance of the superstition or indiscriminate contempt with which the characters of the fathers are now regarded or assailed, it is evident that Ambrose was one of those men of great energy of mind and temperament who, in the adoption of a theory or a party, hold no middle course, but act with determination towards the fulfilment of their purposes. Regarded within their own circles, there is generally something in such characters to admire; and beyond that, as certainly much to condemn. Thus, a partizan who regards the object of Ambrose as above all things important and laudable, will be blind to the evident artifice of his election, and trickery of his discovered relics; nay his very intolerance will be sanctified, while his really great qualities will be exalted beyond all comparison. Persons of a more philosophical description will simply admire the force of character, and lament the application of it. In the mean time, it must be conceded, that men resembling Ambrose effected most to advance the Roman Catholic church to the power to which it afterwards attained, and by necessary sequence to the abuse of it which produced the Reformation. The writings of this father are numerous, and the great object of almost all of them was to maintain the faith and discipline of the Catholic church, while some of them are written to recommend celibacy as the summit of Christian perfection. His best work is "De Officiis," intended to explain the duties of Christian ministers. It contains some good morals pointedly expressed; but Gibbon and others think that Ambrose could act much more forcibly than he could write. The most accurate edition of his works is that of the Benedictines, Paris, 2 vols. folio, 1682-90.—*Moreri. Cave. Gibbon.*

AMELOT DE LA HOUSSAYE (N:ncnc-LAS) a French historian, born at Orleans in 1634. He was the author of a History of the Government of Venice, in which city he resided some time as secretary to the French embassy. He also translated into his native language the "Prince" of Machiavelli, the "Annals" of Tacitus, the "Courtier" of Gratian, and the "History of the Council of Trent," by father Paul. He died in obscurity at Paris in 1706, in the seventy-second year of his age.—*Moreri.*

AMERICUS, see **VESPUTIUS**.

AMES (JOSEPH) the historian of British Typography, was born at Yarmouth, 1683-9, and apprenticed by his father, the master of a Yarmouth trading vessel, to a plane-maker in

London. After serving out his time, he became a ship-chandler in Wapping, which business, notwithstanding his antiquarian pursuits, he carried on until his death. He early discovered a taste for English history and antiquities; and in 1730, the composition of a history of printing in England being suggested to him, after a labour of twenty-five years, he brought out in one vol. 4to, 1749, "Typographical Antiquities, being an historical account of Printing in England, with some memoirs of our ancient Printers, and a register of the books printed by them from 1471 to 1600; with an appendix concerning Printing in Scotland and Ireland to the same time." He inscribed his work to lord chancellor Hardwicke, and was at the same time fellow of the Royal and Antiquarian Societies, being chosen secretary to the last of them. Sir Hans Sloane in particular showed him very great countenance, and left him trustee to his will. Mr Ames died in 1759, much esteemed. Besides his great work, he wrote—1. "Catalogue of English Printers from 1471 to 1700," 4to; 2. "An Index to Lord Pembroke's Coins;" 3. "A Catalogue of English Heads; or an account of 2000 English prints, describing what is peculiar to each;" 4. "Parentalia, or Memoirs of the family of Wren," 1750, folio. An enlarged edition of the "Typographical Antiquities" was published by the late Mr W. Herbert, vol. 1, 1785, vol. 2, 1786, and vol. 3, 1790. A new and splendid edition of Ames and Herbert has since been presented to the world by the Rev. T. F. Dibdin.—*Gough's Life of Ames.*

AMES (WILLIAM) an English controversial divine in the reigns of James and Charles I. In consequence of his rigid Calvinism, on the ascendancy of the Arminian party of the church he repaired to Holland, and was for many years divinity professor in the university of Franeker. His treatises are very numerous; but he is chiefly known by his "Medulla Theologica," translated into English, and by his "Treatise on Conscience, with the power and cases thereof." He died at Rotterdam, in 1633, aged fifty-seven.—*Biog. Brit.*

AMHERST (JEFFERY lord) a distinguished British general officer, was descended from an ancient Kentish family, and born in 1717. He early devoted himself to the profession of arms, receiving his ensign's commission when only fourteen years of age. At the age of twenty-five he acted as aide-de-camp to lord Ligonier in the battles of Dettingen and Fontenoy, and afterwards served on the staff of the duke of Cumberland at those of Laffeld and Hastenbeck. In 1756 he received the coloncy of a regiment, and was appointed major-general, and in the summer of 1758 commanded the expedition against Louisburgh which, together with the whole island of Cape Breton, surrendered to his arms. The capture of Fort du Quesne, Niagara, and Ticonderoga, in due time followed; and in 1760, the whole of Canada being reduced, for his share in these exploits, general Amherst received the thanks of the House of Commons and the order of the

Bath. In 1763, he was made governor of Virginia; in 1770, governor of the isle of Jersey; and in 1772, lieutenant-general of the ordnance, and officiating commander-in-chief of the English forces. Besides these and several other military honours, he was in 1776 created a peer by the title of baron Amherst of Holmesdale in the county of Kent. On the breaking up of the North administration, lord Amherst was removed from the commandership-in-chief, and the lieutenancy of the ordnance, and in 1787, received another patent of peerage as baron Amherst of Montreal, with remainder to his nephew, William Pitt Amherst; and on the staff being re-appointed in 1793, he was once more called upon to act as commander-in-chief. In 1795 he resigned the commandership-in-chief to the duke of York, and in 1796 received the rank of field marshal, dying in 1797 in the eighty-first year of his age. He was twice married, but left no issue, being succeeded by his nephew as aforesaid. Lord Amherst was regarded as a man of a collected and temperate mind, without brilliancy or parade; a strict officer, yet the soldier's friend. He had two brothers, one an admiral of the blue, the other a lieutenant general: it is the son of the latter who has succeeded him.—*Gent. Mag.*

AMHURST (NICHOLAS) author of the *Terræ Filius*, a satirical work on the University of Oxford, from which he had been expelled for improper conduct, was born at Marden, Kent, in 1701. He was originally brought up at Merchant Taylors' School, of which secondary his grandfather was head master, and proceeded in due course to St John's College, on a scholarship belonging to that foundation. In after life he became celebrated as a political writer, and published, with the assistance of Pulteney and lord Bolingbroke, the work by which he is most known, entitled the "Craftsman." He was much neglected, in the sequel, by those who employed him, and died in 1742.—*Biog. Brit.*

AMIOT (father) one of the most learned of the French missionaries to China, was born at Toulon in 1718. This zealous Jesuit, who arrived at Macao in 1750, was invited to Peking in 1751 by the emperor of China, and remained in that capital forty-three years. By continued application he soon became acquainted with the Chinese and Tartar languages, and from time to time remitted to France the result of his labours, which were—1. "A Chinese Poem in Praise of the City of Moukden by the emperor Kien Long," translated into French with plates and notes, Paris, 1770, 8vo; 2. "The Chinese Military Art," 1772, 4to, reprinted in vol. vii. of "Memoires sur les Chinois;" 3. "Letters on the Chinese Characters," inserted in vol. i. of the "Memoires sur les Chinois;" 4. "On the Music of the Chinese," inserted in vol. vi. of the "Memoires;" 5. "A Life of Confucius," with a long account of his ancestors, and a genealogy embracing four centuries; 6. "Dictionnaire Tatar-manchou, Français." Father Amiot died in Peking in 1794, aged seventy-seven.—*Biog. Univ.*

AMMAN. There were three celebrated physicians of this name. The first, JOHN CONRAD, a native of Schaffhausen, born in 1669, distinguished himself by his success in teaching persons born deaf and dumb to speak. On this subject he published two scarce treatises, called "Surdus loquens," 8vo, Haarlem, 1692, and "De Loquela," 12mo, Amsterdam, 1700. He also published an edition of "Cælius Aurelianus," in quarto, 1709, and died in 1724 at Marmund in the Netherlands. His son JOHN was a fellow of the Royal Society in London, and a member of the Academy of Sciences at Petersburg, where he lectured on botany, a science in which he was eminent. He published a work "Sürpium rariorum in imperio Rutheno Sponte provenientium icones et descriptiones," in 4to, and died in 1740. The third (PAUL) was a native of Breslaw, who settled in 1674 at Leipsic, where he gave lectures on physiology, natural history, and botany. He wrote a treatise on the latter science published in 1676, and entitled "Character naturalis plantarum;" as also of "Irenicum Numæ Pompilii cum Hippocrate," 8vo; "Parænesis ad docentes occupata circa institutum medicarum emendationem," in duodecimo; and "Archeas Synopticas, Eccardi Leichneri." His death took place in his fifty-seventh year in 1691.—*Ibid.*

AMMIANUS (MARCELLINUS) a Roman historian of the fourth century, but of Greek parentage, and, as appears by a letter addressed to him by Libanius, born at Antioch. In his youth he followed the profession of arms, and was enrolled among the "Protectores Domestici," or household guards, consisting chiefly of young men of family. He served in the East, in Gaul, and in the Persian expedition of Julian. In the year 374 he visited Rome, where he wrote his history of Roman affairs, from Nerva to the death of Valens in 378. The whole consisted of thirty-eight books, of which eighteen alone remain, and begin at the seventeenth year of Constantius, 363. The style of Ammianus is deemed rude; which is not extraordinary, considering that he was a Greek who wrote in the Latin language, and one who had passed much of his life in active pursuits. The candid manner in which he speaks of Christianity has induced some writers to deem him a Christian; but the emperor Julian and Paganism are treated of by him in terms which would be still more extraordinary in a Christian. The probability is, that Ammianus was zealous in neither belief, and addressing himself to all parties, spoke with moderation on religious points of difference, which a sensible pagan might readily do. His general accuracy and honesty have received the unqualified suffrage of Gibbon, and indeed of most other writers. There are many editions of his history, but that of Gronovius, Leyden, 1693, is generally preferred.—*Jossius. Gibbon. Lardner.*

AMMIRATO (SCIPIO) an eminent Italian historian, born at Lucca in the kingdom of Naples in 1531. His father designed him for the profession of the law; but he chose the

church, and became a canon in the cathedral of Lucca. Not however meeting with the preferment he expected, he repaired to Venice, and was entertained by Alexander Contarini, who becoming jealous of the pleasure taken by his wife in the conversation of Ammirato, the latter was obliged to quit Venice; and after various vicissitudes in his own country, he finally visited Florence, and was induced by the grand duke to settle in that capital and write its history. Here he was made easy in his circumstances by the presentation of a canonry in the cathedral, and henceforward applied himself vigorously to his studies until his death in 1601, in the sixty-ninth year of his age. His principal works are—1. "Il Decalione dialogo del poeta," Naples, 1560, 8vo; 2. "Istorie Fiorentine," Florence, 1600, 2 volumes folio; 3. "Delle famiglie Nobili Napolitani," Florence, 1580, folio; 4. "Delle famiglie Fiorentini," Florence, 1615, folio; 5. "Opusculi varii," Florence, 1583, 8vo; 6. "Pesi Spirituali," Venice, 1634. He also left a MS. history of his life, which has never been published. His history of Florence is deemed a work of great accuracy and credit.—*Moreri.*

AMMONIUS, an eminent philosopher of the peripatetic school, who flourished at Alexandria in the sixth century. Proclus of Constantinople was a disciple of his, as well as several other eminent scholars. He wrote notes on the works of Porphyry and Aristotle, which have descended to posterity.—*Bayle.*

AMMONIUS SACCAS, a native of Alexandria, where he instituted the eclectic school of philosophy, the object of which was the amalgamation of the doctrines of Aristotle and Plato. The celebrated Longinus, secretary to queen Zenobia, was a disciple of his. Clemens Alexandrinus, Athenagoras, and Pantæus, instructed him early in the tenets of Christianity; a religion he is charged by Porphyry with having subsequently abjured, though, if we are to credit Eusebius, the accusation is without foundation. His death took place about the middle of the third century.—*Fabricius.*

AMORY (THOMAS) a dissenting minister of eminence, was born at Taunton in 1701, and obtained considerable reputation both in his native place and in the metropolis, by his eloquence and practical ability. His opinions were those of the celebrated Dr Samuel Clarke, and in 1770 he became the colleague of Dr Price at Newington-green. The talents and character of Dr Amory gave him a great lead among the dissenting interest, and he was a very efficient member of the Committee for Procuring an Enlargement of the Toleration Act. He died in 1774 in the seventy-fourth year of his age, leaving behind him some volumes of sermons. He also wrote the lives of Groves, Benson, and Chandler, with some minor poetry.—*Biog. Brit.*

AMORY (THOMAS) a very singular character, and the son of counsellor Aiury, who, in consequence of becoming secretary to the forfeited estates in Ireland, acquired considerable property in the county of Clare. It is conjectured that the subject of this article was

brought up a physician, but it is not known that he followed that or any other profession. It is ascertained that in 1757 he was married, and resided in a very retired manner in Orchard-street, Westminster; as also that with the appearance of a gentleman, he was a person of peculiar aspect and of singular habits. On the publication of lord Orrery's life of Swift, in 1751, Mr Amory inserted in the Whitehall Evening Post an announcement of a letter to that nobleman, in objection to his praise of Swift's sermon on the Trinity, by which it appears that he was a zealous Unitarian; but whether the letter was ever published is doubtful. In 1755 he published a very peculiar work, entitled "Memoirs, containing the Lives of several Ladies of Great Britain; a History of Antiquities, Productions of Nature, and Monuments of Art; Observations on the Christian Religion, as professed by the Established Church and Dissenters of every Denomination; Remarks on the Writings of the greatest English Divines, and a Review of the Works of the Writers called Infidels, from lord Herbert of Cherbury to the late Lord Viscount Bolingbroke; with a variety of Disquisitions and Opinions relative to Criticism and Manners; and many Extraordinary Actions: in several Letters," 8vo. The ladies celebrated in this extraordinary production are presumed to be the creatures of the author's fancy, being all not only beautiful, learned, ingenious, and religious, but strict of his own persuasion. A second volume was promised, with an account of dean Swift and Mrs Grieson, but it never appeared; although from a sort of originality and raciness in the composition and opinions of the first, as well as for the matter pledged, the public would have received it with satisfaction, as they would do now, if the MS is in existence. In 1756 he published the first volume of the life of John Bunce, and in 1766 the second. This work, in which it is thought that the author intended to sketch his own picture, is in some sort a continuation of the "Memoirs." Both have been reprinted, the latter a second time in the present year (1825). Mr Amory was also author of a letter to the Monthly Reviewers, on the merits of their critique on his "Memoirs," as also of various religious tracts, poems, and songs. From the eccentricity displayed in his writings, a conclusion has been insinuated of his mental derangement; but the truth of the matter seems to be, that while he excluded himself from much actual intercourse, he was very busy in an ideal world of his own, in which the company of visionary hours of a peculiar intellectual and religious caste formed no small part of his enjoyment; and tea and bread and butter, his nectar and ambrosia. Possibly most minds which avoid contact with the general tide of society, receive some peculiar tinge or other; and to predicate insanity in all such instances is neither charitable nor philosophical. Mr Amory died in 1789 at the advanced age of 97.—*Gen. Biog. Gen. Mag.*

AMYN AHMED, a learned Persian of the seventeenth century, author of a geographical

and biographical work under the title of "Heft Iclym," or "The Seven Climates," containing a description of the principal countries and cities of the East, with biographical notices of eminent persons, which are said to be very correct. There was a very fine copy of it in the royal library at Paris.—*Biog. Universelle.*

AMYOT (JAMES) bishop of Auxerre and grand almoner of France, was born at Melun in 1514, of obscure parents, who nevertheless managed to bestow on him a learned education, so that he was early an industrious student in the university of Paris, where he obtained the degree of master of arts at the age of nineteen. At twenty-three he left Paris, and went to Bourges with the abbot of St Ambrose in that city, at whose recommendation one of the king's ministers took him into his house as a preceptor to his children. The progress of his pupils induced their father to recommend him to Margaret duchess of Berry, sister to Francis I, through whose patronage he was made public professor of Greek and Latin in the university of Bourges. It was during this time that he translated "The Loves of Theagenes and Chariclea," from the Greek of Heliodorus; with which work Francis I was so well pleased that he presented the translator with the abbey of Bellosane. He then accompanied Morvillier to Venice, in his embassy from Henry II to that republic; and then visited Rome, where he was patronised by the bishop of Mirepoix, with whom he resided for two years. Soon after he was recommended by cardinal Tournon to the King, to be preceptor to his two younger sons. While in this employment, he finished his translation of "Plutarch's Lives," which he dedicated to the King, and afterwards undertook a version of the same author's "Morals," which he finished in the reign of Charles IX, and dedicated to that prince. On the accession of this, his elder pupil, honours and emoluments flowed in upon him. He received the abbey of St Cornelius de Compeigne, and was appointed grand almoner, and curator of the university of Paris. By his other pupil he was also made commander of the order of the Holy Ghost; and it is highly to the credit of Amyot that in the midst of these dignities he did not neglect his studies, but revised all his translations with the greatest care. He has been accused of ambition and avarice; and so many preferments, and the great riches which he left behind him, may in some degree countenance the charge. In a literary point of view his merits are conspicuous, as his translations, in the opinion of Vaugelas, did much towards regulating and refining the French language; and although not always faithful to his original, Racine was of opinion that his native style is peculiarly attractive. Not long before his death, which took place in 1573, in the seventy-ninth year of his age, he was requested to write the history of France; but his answer was, "I love my sovereigns too well to write their lives." His works are,—1. "Translation of the Romance of Heliodorus," 1559, folio; 2. Of "Diodorus Siculus," Paris, 1554 and 1587, folio; 3. Of "Daphnis and Chloe," from

Longus, 1559, 8vo, of which there have subsequently been several very splendid editions; 2. Of "Plutarch's Lives and Morals," of which Vascosan's edition of 1574, in 13 vols. 8vo, was held to be the best, until the appearance of one in 1783-7, with the notes of Brotier and Vauvilliers, and another in 1801-6, edited by Clavier; 5. "Lettre à M. Morvillier," containing an account of the author's journey to Trent, printed in Vargas and Dupuy's histories of the council of Trent; 6. "Œuvres Mêlées," Lyons, 1611, 8vo; 7. "Projet de l'Eloquence, composé pour Henri III, roi de France," printed for the first time in 1805, 8vo and 4to.—*Gen. Dict.*

AMYRAUT (MOSES) a learned French theologian, was born at Bourgueil in Touraine in the year 1596. Having gone through a course of philosophy, he was sent to Poitiers to study law, but was subsequently induced to remove to Saumur with a view to divinity, and in due time became the professor of divinity there himself. In 1631 he was sent deputy to the national council at Charenton, and by this assembly was appointed to lay before the King their complaints against the infraction of the edicts; which appointment brought him acquainted with cardinal Richelieu, by whom he was ever after much esteemed. Soon after he published a work upon grace and predestination, which involved him in a controversy with Peter du Moulin and the rigid Calvinists, who accused him of Arianism; but Mosheim calls his work rather Arminian or Semi-pelagian. Amyraut, by his temper and moderation, produced an honourable cessation of the dispute, and died very generally respected, not only for his moderation and abilities, but for his beneficence and charity, which for the last ten years of his life absorbed his whole salary, and flowed equally on Protestant and Catholic. His works are chiefly theological and very voluminous. He died in 1664.—*Bayle. Morevi.*

ANACHARSIS, a Scythian philosopher, who flourished nearly six centuries B.C. was the son of a Scythian prince, who had married a native of Greece. Early instructed by his mother in the Greek language, he became desirous of acquiring a portion of Greek wisdom, and obtained from the king of Scythia an embassy to Athens, where he arrived in the year 592 before Christ, and was introduced to Solon by his countryman Toxaris. On sending in word that a Scythian was at the door and requested his friendship, Solon replied that friends were best made at home; "Then let Solon, who is at home, make me his friend," was the smart retort of Anacharsis: and, struck by its readiness, Solon not only admitted him, but finding him worthy his confidence, favoured him with his advice and friendship. He accordingly resided for some years at Athens, and was the first stranger whom the Athenians admitted to the honours of citizenship. He then travelled into other countries, and finally returned into his own country, with a view to communicate the information he had received, and introduce the laws and religion of Greece. The attempt was however unsuccessful, for the

Scythians were not only indisposed to receive them, but it is said that Anacharsis was killed by an arrow from the king his brother's own hand, who detected him performing certain rites in a wood, before an image of Cybele. Great respect was however paid to him after his death, which is not unusual. The invention of the potters' wheel has been ascribed to Anacharsis, but it is mentioned in Homer. The apophthegms attributed to him are shrewd, and better worth quoting than many of the ancient saws, which are often indebted for their celebrity much more to their antiquity than to their wisdom. His repartee to an Atheian, who reproached him with the barbarity of his country, is well known: "My country is a disgrace to me, but you are a disgrace to your country." Certain letters published under his name, in Greek and Latin, Paris, 1552, are unequivocally spurious.—*Brucker.*

ANACREON. But little is actually known of the life of this celebrated Greek poet. It is however generally admitted that he was born at Teos, a city in Ionia, in the early part of the sixth century before the Christian era, and that he flourished in the sixtieth Olympiad. Polycrates, the tyrant of Samos, received him at his court, which however he afterwards quitted for Athens, where he remained in great favour with Hipparchus, who then possessed the power which his father Pisistratus had usurped. The death of his patron caused him to return to his native city, whence he retired to Abdera on the breaking out of the disturbances under Histæus. The time and manner of his death are uncertain and variously reported: the most popular opinion is, that he died of suffocation from a grape-stone, while in the act of drinking. The bacchanalian turn of his poetry is however, and not without some appearance of reason, supposed by some to be the sole foundation of this tradition. In the poetry generally attributed to him a great difference as to quality is easily discernible, a circumstance which may perhaps have contributed not a little to strengthen the supposition that the whole is not genuine. Many of the pieces are singularly beautiful and elegant, with a degree of liveliness and delicacy of expression seldom paralleled. To decide from the internal evidence contained in his writings, as well as from the general tenor of the meagre accounts handed down to us, he was himself an amusing voluptuary and an elegant profligate. Few Grecian poets however have obtained greater popularity in modern times, for which in England he is indebted to some excellent translations in part by Cowley, and altogether by Fawkes, not to mention the point and elegance of the more paraphrastic version of Mr T. Moore. Of the editions in the original Greek the most celebrated is the quarto printed at Rome in 1781 by Spaletti. This was followed by another, three years afterwards, scarcely inferior to it, and printed at Padua on vellum by Bodoni. Mat. aire, Baxter, and Barnes, have also published excellent editions of the works of this favourite poet.—*Biog. Univ.*

ANASTATIUS surnamed **BIBLIOTHECARIUS** a Roman abbot of Greek origin, one of the most learned men of the ninth century. His situation of principal librarian in the Vatican gave him great opportunities for study, of which he eagerly availed himself. The canons of the council of Constantinople, in 865, were translated into the Latin language by him, but the book is now scarce, if extant. His "*Liber Pontificalis*" went through several editions. The best is in 4 vols. folio, printed in 1718.—*Biog. Univ*

ANAXAGORAS of **CLAZOMENE** one of the most eminent of the ancient philosophers; was born in the first year of the seventieth Olympiad, B.C. 500. He was of noble extraction, and inherited a handsome patrimony, but such was his thirst for knowledge, that he left his estate in the care of a relation, and repaired in the first instance to Athens. Here he cultivated his studies for some time, until led by the fame of the Milesian school to attend the public instruction of Anaximenes. He remained some years at Miletus occupied with intense speculations concerning natural bodies and the origin of things, during which time his estate ran to waste (a loss that he said was his gain), and then returned to Athens, where he taught philosophy in private. Some authors assert, that he numbered not only the tragedian Euripides, and the statesman Pericles, among his pupils, but also Socrates and Theophrastus. As usual, the boldness of his speculations alarmed the bigotry of the multitude; and after being persecuted for some opinion in regard to the substance of the sun, which interfered with the vulgar notion of the divinity of Apollo, he was condemned to death. By the reasonable interference of Pericles, however, his sentence was changed from death to banishment; on which he retired to Lampsacus, where he taught philosophy in the school of his deceased master Anaximenes until B.C. 428, when death terminated his labours. He bore all the vicissitudes of life with philosophical composure, and in reply to a message from the senate of Lampsacus, requesting to be informed in what manner he would wish them to honour his memory, he replied with placid cheerfulness, "Only let the day of my death be annually kept as a holiday by the boys in the schools of Lampsacus;" which request was complied with. Many anecdotes are related of this philosopher which are evidently fabulous; nor is it easy to acquire a due notion of his peculiar doctrines, from the ill-digested fragments collected by Diogenes Laërtius. In natural philosophy, amidst some strange conceptions, he held opinions which show no inconsiderable knowledge of nature; for although he regarded the heavens as a solid vault, and the sun and other luminous bodies as fiery stones, he was so acute as to discover the cause of the rainbow, and that wind is produced by the rarefaction of air. One of his opinions concerning the principles of nature is explicitly alluded to by Lucretius; namely, that the peculiar form of the primary particles of which any body is composed is the same

with that of the composed body itself—an evident absurdity. That part of his system which explains the active principle of nature is less opposed to reason; he being, according to Diogenes Laërtius, the first philosopher who superadded mind to matter. Both Plato and Aristotle testify the same thing; and the latter adds, that he held that of all things the mind alone was pure and uncompounded. Cicero and Plutarch confirm these accounts; so that it may be reasonably concluded, that this philosopher was the first among the Greeks who conceived a primary active principle of pure intelligence existing separately from, but operating upon matter, in the arrangement of all things.—*Bayle. Brucker. Moreri.*

ANAXARCHUS, a Grecian philosopher, was a native of Abdera, and of the Eleatic sect of Leucippus. He was a friend and companion of Alexander the Great, who appears to have admitted him to great freedom. A story is told of his having been pounded to death in an iron mortar, after the decease of Alexander, by Nicocreon king of Cyprus, and of his having borne the torture with invincible patience; but the same tale is also related of Zeno, and it is probably a mere invention in both instances.—*Stanley. Brucker.*

ANAXIMANDER, the friend and disciple of Thales of Miletus, was born in the forty-second Olympiad, B.C. 610. He was the first among the Greeks who taught philosophy in a public school. He also composed a compendium of geography, and first delineated a species of map of the earth, in which he marked the divisions of land and water. His doctrine of the principles of things is too vaguely related to merit detail; but the best authorities identify it with that of his master Thales.—*Brucker.*

ANAXIMENES, a philosopher of Miletus, a disciple of the foregoing, but still better known as the master of Anaxagoras. He held that air is God, and that all souls are air; but whether, as Lactantius supposes, he deemed the air a subtle æther animated by a divine principle, is doubtful. At all events he fell short of that idea of a governing mind which was subsequently entertained by Anaxagoras.—*Ibid.*

ANAXIMENES of Lampsacus. This philosopher was the son of Aristocles, celebrated for his skill in rhetoric, and the disciple both of Zoilus, notorious for his hypercriticisms on Homer, and of Diogenes the cynic. Anaximenes was one of the preceptors of Alexander the Great. He accompanied his illustrious pupil through most of his campaigns, and afterwards wrote the history of his reign, and that of his father Philip. It is recorded that, during the Persian war, his native city having espoused the cause of Darius, Alexander expressed his determination of punishing the inhabitants by laying it in ashes. Anaximenes was deputed by his countrymen as a mediator; but the conqueror, guessing his intention, when he saw him entering the royal tent as a supplicant, cut short his anticipated petition by a declaration, that he was determined

to refuse his request, whatever it might be. Of this hasty expression the philosopher availed himself, and immediately implored that Lamp-sac might be utterly destroyed, and a pardon refused to its citizens. The stratagem was successful; Alexander was unwilling to break his promise, and the presence of mind exhibited by its advocate saved the town. He was also the author of a history of Greece.—*Ibid.*

ANCILLON (DAVID) an eminent scholar, born at Metz in 1617, received the rudiments of his education at the Jesuits' College, which he quitted for Geneva, where he took holy orders. On the revocation of the edict of Nantes, he retired from Meaux, of which he had been some time the pastor, to Frankfort, where however he not long remained, leaving it in the course of the same year for Hanau. Here he attained to great celebrity by his theological writings and discourses; but differences arising between himself and others joined in the ministry with him, he finally accepted a situation offered him in the French church at Berlin. He was the author of several polemical treatises, the principal of which are—his "Apology for the Lives of Luther, Zuinglius, and Beza;" his "Life of William Farel;" and his "Account of the dispute concerning Traditions." His death took place in 1692.—*Bayle, G. Dict.*

ANCILLON (CHARLES) eldest son of the subject of the last article, published two volumes of "The Conversations" of his father. During his father's ministry at Berlin he obtained through his influence the situation of historiographer to the king of Prussia, and was afterwards made inspector of the French courts of justice. He was a man of much general reading, and wrote "Critical Remarks on the public Edifices of Berlin," "The Life of Solomon the Magnificent," a tract "On the Revocation of the Edict of Nantes," by which his father had suffered, and "Memoirs of the Lives and Writings of the most celebrated modern Characters in the Republic of Letters." He also published a strange book "Upon Eunuchs," in one duodecimo volume. He died in 1715.—*Biog. Univ.*

ANCOURT (FLORENT CARTON D') a celebrated French actor and dramatic writer, was born at Fontainebleau in 1661. He was educated in the Jesuits' College at Paris, and after he had gone through a course of philosophy, was admitted an advocate at the age of seventeen, but falling in love with an actress, he married her and went upon the stage. Being eminently fitted for his new profession, he soon distinguished himself, and began to write for the theatres. His dramatic merit procured him the patronage of Louis XIV, and his sprightly turn and pleasing manners, set off by his superior education, rendered his company agreeable to persons of the first consideration. D'Ancourt was one of several instances of a retirement from the gay existence of a leading actor to a life of almost ascetic devotion, a transition which in Catholic countries may be aided by theological doctrines in regard to theatrical performances. Retiring in 1718

to his estate in Berry, he applied himself almost wholly to religion, and composed a translation of the Psalms in verse, and a sacred tragedy, which have never been printed. He died in 1726. He wrote fifty-two dramatic pieces, of which about one half still keep the stage. They were published in 1710 and 1730, in 9 vols. 12mo, and the best of them under the title of "Chefs d'Œuvres de D'Ancourt," in 3 volumes 12mo.—*Nour. Dict. Hist.*

ANDERSON (ADAM and JAMES) two brothers descended of Scottish parents. The former was many years a managing clerk in the South Sea House, a trustee for the settlements in Georgia, and in the court of the Scotch corporation in London. His work on the Historical and Chronological Deduction of Trade and Commerce has gone through two editions, the first being in 2 vols. folio; the second in 4 vols. quarto. He died at the advanced age of seventy-five, in 1765. His brother was a minister of the Kirk of Scotland to a congregation in Swallow-street, and left behind him a treatise on the Con-titutions of Freemasonry, and a folio volume entitled "Royal Genealogies."—*Gent. Mag.*

ANDERSON (ALEXANDER) an eminent scholar of the seventeenth century, born at Aberdeen, and afterwards professor of mathematics at Paris. He was the author of various treatises principally connected with his favourite science. Of these his "Supplementum Apollonii Redivivi," 4to, was published in 1612; "Αιτιολογια, pro Zetetico Apolloniani problematis," and "Francisci Vietæ de Equationum recognitione," both in 4to, in 1615. He also published "Vietæ Angulares Sectiones," 4to.—*Biog. Dict.*

ANDERSON (SIR EDMUND) an eminent lawyer, lord chief justice of the Common Pleas under queen Elizabeth, to which high situation he was promoted in 1682. He afterwards sat on the trials of the unfortunate Mary queen of Scots, and of Davison for issuing the warrant under which she was executed. Anderson's Reports, folio, 1644, is still a book of authority. His "Resolutions and Judgments in the Westminster Courts" were also published in 1653, fifty-two years after his decease. He was a native of Lincolnshire, and received his education at Oxford in the college which takes its name from that county.—*Biog. Brit.*

ANDERSON (GEORGE) a Buckinghamshire peasant, born in 1760 at Weston in that county. Having the good fortune to attract the notice of the Rev. Mr King of Whitchurch by the genius he early displayed in arithmetic, that gentleman not only placed him at a grammar school, but afforded him the means of prosecuting his studies at Wadham college, Oxford, and afterwards, on his declining to take priest's orders, procured him a place under the Board of Control, in 1785, whence he rose to be accom-pant general. He published a "General View of the Affairs of the East India Company, since the conclusion of the war in 1784," in quarto; and translated from the Greek of Archimedes "Arenarius, or a

Treatise on numbering the Saud." He died in 1796.—*Annual Necrology*.

ANDERSON (GEORGE) a native of Tundern in the duchy of Sleswick. During 1644 and the six following years he spent his time in travelling through the East, and visited the Arabias, Persia, India, China, the Japanese Islands, Tartary, and the Holy Land. The duke of Holstein Gottorp, on his return, having vainly endeavoured to induce him to commit his adventures to writing, employed his librarius Olearius, himself a traveller, to take down the account from his own mouth as he related them to his highness, the scribe being concealed behind the tapestry of the apartment. This work was afterwards published at Sleswick in 1669.—*Biog. Univ.*

ANDERSON (JAMES) an advocate at the Scottish bar, eminent for his learning and antiquarian research. He was born in the metropolis of Scotland in 1662, and graduated at the university there. His first work, an "Essay proving the independence of the Crown of Scotland," published in 1705, gained him great credit, and procured him the thanks of the Scottish parliament, under whose auspices he subsequently produced a series of the "Charters and Seals of the Scottish Monarchs from the earliest Antiquity down to the Union with England in 1707." In 1727 came out his "Collections relating to the History of Mary queen of Scotland," in four quarto volumes, a work which throws great light on the occurrences of the period of which it treats. But the book which gained him the greatest reputation, "Selectus Diplomatum et Numismatum Scotiae Thesaurus," did not appear till twenty-one years after his death, which took place in 1728 by an apoplectic stroke. The celebrated grammarian Ruddiman wrote a preface to this work, which is beautifully illustrated by Sturt's engravings. It is in one volume folio.—*G. Biog. Diet.*

ANDERSON (JAMES) a Scottish miscellaneous writer, was born at Hermiston near Edinburgh in 1739. He was brought up to agriculture, and lost his father at the age of fifteen, and notwithstanding his youth, carried on the farm which had belonged to him with considerable advantage. He was equally successful with a large uncultivated farm in Aberdeenshire, which he brought into excellent condition. Although he had not received a liberal education, such was his application and assiduity, he contrived, in the midst of his agricultural pursuits, to acquire a considerable portion of general learning, and published a series of "Essays on Planting" in the Edinburgh Weekly Magazine. These papers, which were collected in a volume in 1777, produced him considerable reputation as an agriculturist; and in 1780 the university of Aberdeen conferred on him the degree of LL.D. In 1783 he removed to Edinburgh, and projected the establishment of the North British Fisheries, for which purpose he was employed by government to survey the coast of Scotland, and received great commendation for his services. He afterwards undertook a periodical work

called "The Bee;" and in 1797 removed to London, and began another journal called "Recreations in Agriculture," which ended with the sixth volume. He died in 1808, leaving a widow and six children. Dr Anderson wrote several articles for the Encyclopaedia Britannica, and was also a monthly reviewer. Of his more formal publications, the following are the principal: 1. "Observations on National Industry," 8vo; 2. "Essays relating to Agriculture and Rural Affairs," 8vo; 3. "The True Interest of Great Britain considered, or a Proposal for establishing North British Fisheries," 8vo; 4. "An Enquiry into the Nature of the Corn Laws," 8vo; 5. "Thoughts on the Privileges and Power of Juries," 8vo; 6. "Remarks on the Poor Laws in Scotland," 4to; 7. "A Practical Treatise on Peat Moss," 8vo; 8. "An Account of the different Breeds of Sheep in the Russian Dominions," 8vo; 9. "Practical Treatise on Draining Bogs and Swampy Grounds," 8vo; 10. "On an Universal Character," 8vo; 11. "Select Correspondence with General Washington," 8vo; 12. "Observations on Negro Slavery," 8vo. The writings of Dr Anderson did much to excite that attention to agriculture, which before his death became so prevalent throughout Great Britain.—*Gent. Mag.*

ANDERSON (JOHN) the son of a rich merchant at Hanburgh, of which city he himself became the principal magistrate in 1725. In his youth he had received a liberal education at Halle and Leipsic, which he completed at Leyden. His proficiency in literature gained him early in life the esteem of his fellow citizens, while his acknowledged integrity secured him their confidence. His talents for diplomacy were called into play on various missions which he accepted to different European courts; during his residence there he cultivated an acquaintance with all whom he found distinguished for their literary attainments, and kept up a voluminous correspondence with them after his return. Of his published works the principal are—a Glossary of the antient Teutonic and German Languages, a Commentary on the Bible, and the Natural History of Greenland and other parts of the Arctic Region, in two 8vo vols. Besides these he left behind him a variety of manuscripts, especially one entitled Remarks on the Jurisprudence of Germany. His death took place in 1743, in his seventy-ninth year.—*Gent. Mag.*

ANDERSON (D.D. WALTER) a Scottish clergyman and historian of the last century. The writings by which he is principally known are his history of the reigns of Francis II and Charles IX of France, published in two quarto volumes in 1769, a work which he followed up four years afterwards by a history on a similar plan of France, from the beginning of Henry III's reign to that of Henry IV, down to the period of the Edict of Nantes, one vol. quarto. This in 1783 he again continued in two subsequent volumes, bringing the history down to the peace of Munster. He also produced an essay in quarto, on the Philosophy of Ancient Greece, and a life of Cræsus king of Lyia.

in duodecimo. He died in 1800 at the manse of Churnside, of which parish he had been the incumbent more than half a century.—*Gen. Biog. Dict.*

ANDRADA (DIEGO DE PAVVA D') a learned Portuguese divine, sent by Sebastian king of Portugal to the council of Trent in 1562. He distinguished himself at the council by his talents and eloquence, and wrote an elaborate defence of it against the attack of Chemnitius. He died in 1575. His brother FRANCIS was author of a "History of John III king of Portugal," Lisbon, 1525; and a second brother, THOMAS, an Augustine friar, attending Don Sebastian in his unfortunate expedition against Muley Moloch emperor of Morocco, was taken prisoner by the Moors, and while in their custody wrote a book called "The Sufferings of Jesus."—*Moreri.*

ANDRE (JOHN) a self-taught musician of Offenbach in Germany, born in the year 1741. Witnessing at an early age the French and Italian operas at Frankfort, he was induced to attempt composition for the theatre. His two first pieces, "The Porter," and "Erwin and Elmira," were so successful, that the author was appointed composer to the theatre at Berlin, where also he followed up his studies under the tuition of the celebrated Marburg. He died in his native place, Offenbach, in 1800, leaving several children, of whom John Anthony, the third son, inheriting the talents of his father, has lately introduced with much success the art of musical lithography.—*Biog. Dict. of Mus.*

ANDRE (JOHN) a major in the British service in the unhappy American war, to him still more unfortunate; for being led to offer his services to negotiate between the noted general Arnold, about to betray the trust reposed in him by his countrymen, and general Sir Henry Clinton, he was taken prisoner by the Americans within their lines; and, owing to his disguise and the nature of his mission, was tried and executed as a spy, Oct. 2, 1780. He was originally a merchant's clerk, and possessed some literary ability, being the author of an ingenious poem entitled "The Cow-chase." A monument is erected to him in Westminster abbey.—*Ann. Register.*

ANDREAS (ONUPHRIUS) a Neapolitan poet who flourished in the early part of the 17th century. Besides his poetical works, which are written principally in the ottava rima, he was the author of several prose essays on moral and philosophical subjects, which were published in 1636 in a quarto volume. His works which remain are—"Italia Liberata," an epic poem, printed at Naples in one volume 12mo, in 1626; and "Aci," in 1628. He was also the author of several lyric effusions afterwards collected and published together, and of two dramatic pieces called "La Vana Gelosia" and "Elpino." He died in 1647, being not quite fifty years old.—*Biog. Universelle.*

ANDREAS (VALERIUS) surnamed Desselius, from the place of his birth, Desschel in the Netherlands. Having gone through a course of study at Antwerp under Hontius,

and at Douay, he obtained the professorships of civil law and Hebrew at Louvain, about the year 1628, and ten years afterwards added to these appointments that of University Librarian. His works are various, in biography, topography, philology, and antiquity. The principal of these are—"Clarorum Catalogus Hispaniæ Scriptorum;" "Bibliotheca Belgica," or memoirs of eminent personages born in the Netherlands, published originally in 1623—of which valuable work Foppens printed an amended edition in 1739, in two quarto volumes; "Imagines doctorum virorum e variis gentibus, elogiis brievis illustratæ" 12mo; "De initiis ac progressu Collegii Trilinguii Buslidiani, deque vita et scriptis professorum ejusdem collegii;" "Topographia Belgica;" "Bibliotheca Lovaniensis primordia," and "Fasti Academici studii generalis Loaniensis," 4to; "Orthographiæ ratio," 12mo; "De Lingue Hebraicæ laudibus," 4to; and a treatise "De Toga et Sago, 8vo. He died in 1656, in the seventy-second year of his age.—*Geni. Biog. Dict.*

ANDREINI (FRANCIS and ISABELLA) a celebrated Italian comedian, and his wife, whose fame both as a performer and a writer was even superior to that of her husband. Francis, in addition to his histrionic talents, was noted for a most retentive memory, and the ease with which he acquired and retained many modern languages, as well as those in common use as the less familiar dialects of the Ottoman empire. In 1611 he gave to the stage two pieces which were afterwards published, the one entitled "L'ingannata di Proserpina;" the other "L'Alterazza di Narcisso," both in duodecimo. Two years previous to this he had printed a quarto volume at Venice, "Le Bravure del capitano Spavento," and another, "Ragionamenti fantastici posî in forma di dialoghi rappresentativi," soon followed. His merits as an actor were held in much esteem, but, as before mentioned, fell short of those of Isabella, who was by far the finest performer of her day. Her poetic effusions were much admired, especially by cardinal Aldobrandini, whose patronage they procured her, as well as the honour of being admitted a member of the Intenti academy at Pavia. Just before her death she visited Paris, where she attracted great attention, and was favourably received at court, but died on her return at Lyons in 1654. She was a native of Padua, and had just attained her forty-second year at the time of her decease. Her printed works are—"Rime," one vol. 4to; "Lettere," 4to, (not published till three years after her death); "Frammenti d'alcune Scritture," 8vo; and "Mirtilla favola pastorale," also in octavo. Her husband survived her nearly sixteen years. They left a son (GIOVANNI BATTISTA) born at Florence in 1578, who inherited the talents of his parents both in acting and composition. His best piece, "Adamo," produced in 1613, is said to have suggested to Milton the idea of his "Paradise Lost." The time of his death is uncertain.—*Biog. Universelle.*

ANDREA DEL SARTO, an eminent Tus-

can painter, was so called from being the son of a tailor of Florence, where he was born in 1483. He has obtained great credit for his colouring, for the beauty of his heads, the correctness of his design, and the delicacy of his draperies. He was still more distinguished for the extreme accuracy with which he could copy the works of other masters. His copy of the portrait of Leo X by Raphael, was taken for the original by Julio Romano, although the latter had painted the drapery of it himself. He was a very imprudent man; for on visiting France under Francis I, that prince would have had him settle there, and when recalled to Italy by the solicitation of his wife, trusted him with large sums for the purchase of pictures, which he squandered away in worthless pursuits, and could never re-appear at Paris. He died of the plague in his forty-second year, in a state of poverty and destitution.—*Nouv. Diet. Hist.*

ANDREW or ANDRE (YVES MARY) a learned French Jesuit, born 1675, was for several years professor of mathematics in the university of Caen. He died at an advanced age in 1764, and is principally known by his "Essai sur le Beau," and his "Traité sur l'Homme," both of which are to be found in his collected works, 5 vols. 12mo, 1766.—*Ib.*

ANDREWS (JAMES PETTIT) a well known miscellaneous English writer, was younger son of Joseph Andrews, esq. of Shaw House, Berks. He was born in the year 1737, and received a private education, but was early distinguished by an attachment to literature and the fine arts, to the former of which he may be said to have been professionally attached until his death, which took place at his house in Brompton in 1797. His principal works are—1. "Anecdotes, ancient and modern, with Observations," 1789, and a supplement, 1790, several editions of which have since appeared; 2. "Continuation of Henry's History of England," 4to, and 2 vols. 8vo; 3. "The History of Great Britain, connected with the Chronology of Europe, with Notes containing Anecdotes of the Times, Lives of the Learned, and Specimens of their Works, from Cæsar's Invasion to the death of Henry VIII," 1794-5. He also wrote several antiquarian papers, which appear in the *Archæologia*. On the new regulation of the police of the metropolis, Mr. Andrews was appointed one of the commissioners of Queen's-square, Westminster, which situation he held until his death.—*Gent. Mag.* 1797 and 1801.

ANDREWS (LANCELOT) an eminent English divine, bishop of Winchester in the reigns of James I and Charles I, was born in Londo in 1565, of a respectable family of Suffolk. Having passed with credit through the grammar school, he removed to Pembroke Hall, Cambridge, and became much distinguished at that university for his theological acquirement and skill in cases of conscience and casuistry; and his lectures as catechist of the college were very numerously attended. At length his reputation for learning, and talents, as a popular preacher, procured him

the patronage of the earl of Huntingdon and Sir Francis Walsingham; and he passed from one preferment to another, until he became dean of Westminster. His interest was also much advanced by queen Elizabeth herself, to whom he was chaplain in ordinary, and who much delighted in his preaching. Though as a prebendary and residentiary at St Paul's, he lived chiefly in London, he continued master of his college, to which he was a most liberal benefactor. His quaint and pedantic style of composition and preaching being peculiarly adapted to the taste of James I, it is not wonderful that he was chiefly looked up to by that sovereign to withstand the covered attacks of cardinal Bellarmine, who, in reply to James's "Defence of the Rights of Kings," had written a tract under the fictitious name of "Matthew Tortus." This piece Andrews, who had previously been raised to the see of Winchester, refuted with considerable animation in a Latin work, in the quibbling spirit of himself and his master, which he entitled "Tortura Torti," (Tortus tortured) 1609. This service was so acceptable to the King, that he was translated to the bishopric of Ely the same year. He was also appointed a privy counsellor first in England and then in Scotland, to which country he accompanied James. In 1618 he was again translated to the rich see of Winchester and to the deanery of the king's chapel, which preferment he held until his death. This prelate was as much esteemed by Charles I as by his father; and lord Clarendon exceedingly laments that he did not succeed to the province of Canterbury, after the death of archbishop Bancroft. He died at Winchester house, Southwark, in the year 1626, in the seventy-first year of his age. The high character of bishop Andrews as a learned, able, and beneficent member of the establishment, is acknowledged on all sides; but the great change which since his time has taken place in the public taste, in regard to pulpit composition, will leave few readers of his sermons, even among those who revere the prelate and the man. Pedantry and tortuous attempts at wit infect all his compositions, to the destruction of the effect of much good sense, sound discrimination, and natural shrewdness. In conversation he was the Dr South of his day, and famous for his readiness at retort and repartee; a pleasant instance of which is afforded in his well-known arch reproof of the servility and adulation of Neale bishop of Durham. The two prelates were standing behind the King's chair, when James asked the bishops "My Lords, cannot I take my subjects' money when I want it, without all this formality in Parliament?" The bishop of Durham immediately replied, "God forbid, sir, but you should; you are the breath of our nostrils." Upon which the King turned to the bishop of Winchester and added, "My lord, what say you?" "Sir," replied the bishop, "I have no skill in parliamentary cases." The King then said, "no put-offs, my lord; answer me presently." "Then, sir," rejoined the bishop, "I think it lawful for you to take my brother

Neale's money, for he offers it;" which answer much diverted the King. The charity of bishop Andrews was very extensive, and his munificence in the encouragement of learning showed a noble sense of the only sound purpose for which revenues like those of the see of Winchester could be bestowed on an individual. Milton at the age of seventeen wrote a Latin elegy on the death of this distinguished prelate, which exhibits his usual richness of fancy. The works of bishop Andrews which are now best known are—1. "A Volume of Sermons," 1628-1631, folio; 2. "The Moral Law expounded, or Lectures on the Ten Commandments," 1642, folio; 3. "Collection of Posthumous and Orphan Lectures delivered at St Paul's and St Giles's, London," 1657, folio. His controversial replies to cardinals Perron and Bellarmine are now little attended to. His speeches in the star-chamber against the judicial opinions of Trashe, were published after his death by Dr Laud in 1629, and dedicated to Charles I.—*Biog. Brit.*

ANDREWS (MILES PETER) was the son of an eminent merchant in the city of London, in whose counting-house he was brought up; but having a strong turn for theatrical amusements, and coming into a considerable fortune by the death of an elder brother, a principal proprietor of the powder-mills at Dartford in Kent, he bade adieu to mercantile pursuits altogether, and amused himself by writing for the stage. In dramatic composition however he cannot be considered very successful, none of his pieces having kept possession of the boards, though one or two of them met with partial and temporary favour. In his prologues and epilogues, of which he wrote several, he was more happy. His acknowledged dramas are nine in number: "Belphegor," a comic opera; "Summer Amusements," ditto; "Fire and Water," ditto; "Best Bidder," a comedy; "The Election," a musical interlude; "The Mysteries of the Castle," a comedy; "Dissipation," ditto; "Baron of Kinkervankotsdarsprackengotchedern," ditto; "Better Late than Never," ditto. Mr Andrews in the late war accepted the lieutenant-colonelcy of the St Martin's volunteers, and maintained in his house-keeping a style of splendid and dignified hospitality, men of letters being ever welcome at his table. His death, which was sudden, took place in 1814.—*Gent. Mag.*

ANDRONICUS of Cyrrestes a Greek architect, celebrated for having constructed at Athens the tower of the winds, an octagonal building, on each side of which was a figure representing one of the winds. On the top of the tower was a small pyramid of marble supporting a brazen triton, which turned on a pivot, and pointed with its rod to the side of the tower on which was represented the wind that was then blowing. As each of the sides had a sort of dial, it is conjectured that it formerly contained a clepsydra or water clock. From the bad style of the sculpture, it is supposed to have been erected posterior to the time of Pericles. Until very recently it served as a mosque to some Turkish dervises.—*Spon. Stuart. Biog. Univ.*

ANDRONICUS (LAVRUS) a dramatic author,

supposed to be the oldest in the Latin language. He composed for the Roman stage B.C. 240. He was a player as well as a writer, but all his pieces are lost, with the exception of a few fragments of verses in the "Comici Latini," the "Corpus Poetarum," and the "Collectio Pisarenis."—*Vossius. Biog. Univ.*

ANDRONICUS of Rhodes, a follower of Aristotle, who lived B.C. 63, and wrote commentaries on that author. He also restored and published the works of that philosopher, which Sylla had brought from Greece.—*Bayle.*

ANDROUET DU CERCEAU (JAMES) an eminent French architect of the 16th century, who commenced the Pont Neuf at Paris by order of Henry III, which however, in consequence of the civil wars, was not finished until the reign of Henry IV, by William Marchand. He was also employed by Henry IV to carry on the gallery of the Louvre, began by Charles IX; but in consequence of his religion, being a zealous Protestant, he was obliged to quit that undertaking and leave France: where he died is unknown. Androuet is as much distinguished for his knowledge of principles as for his practice. He wrote, 1. "Livre d'Architecture," 1559-1611, folio; 2. "Second Livre d'Architecture," 1561, folio; 3. "Les plus excellents Batimens de France," 1576-1607, folio, with several other works of merit. Androuet engraved his own plates in a correct but not in a finished style.—*Moreri. Biog. Universelle.*

ANDRY (NICHOLAS) a physician of Lyons in the 17th century, afterwards dean of the faculty of medicine in the royal college of Paris, where he also filled a professor's chair. Like many other men of genius, Andry, though skilful and eminent in his profession, was haughty, violent and dogmatical; qualities which raised him many enemies amongst his brethren, and led to contests by no means deficient in virulence on either side. His works, all on subjects connected with the study of medicine, are—"Remarques de Medicine sur differents sujets," 12mo; "Le Regime du Careme," 3 vols. 12mo; "Thé de l'Europe ou les proprietes de la veronique," 12mo; "Remarques de Chemie touchant la preparation de certaines remedes," 12mo; "Examen de differents points d'Anatomie," 8vo; "Orthopedie," or the art of preventing and correcting bodily deformities in children, in two duodecimo volumes; "Cleon à Eudoxe," a disquisition on the superiority of medicine over surgery; and "Traite de la generation des vers dans le corps de l'homme," 8vo. This last work was printed at Paris in 1710. Andry, in spite of the vexatious assaults which his own impetuosity drew upon him, attained the advanced age of eighty-four, and died in 1742.—*Biog. Universelle.*

ANELLO (THOMAS) better known as Masaniello, a fisherman at Naples, was born in 1623, at which time Naples was subject to the house of Austria, and governed by a viceroy of its deputation. The Neapolitans behaved with great loyalty and liberality to their foreign rulers, and supported many heavy taxes without murmuring, until the year 1646, when a

new donative was projected, which suddenly roused up a mass of slumbering indignation among the common people. This impost assumed the form of a tax upon all sorts of fruits, dry and green, such as mulberries, grapes, apples, pears, figs, &c. which supplied their chief food to the bulk of the population. The people expressed their sorrow and anger by loud cries and lamentations as the viceroy passed through the market-place; and petitioned him, through the medium of the archbishop, cardinal Filomarino, to remove the tax from fruits. This favour he promised; but the farmers of the revenue contrived to make him break his word, and to treat the discontent as the mere clamour of a rabble. What the result might have been had not a leader started up, it is difficult to say; but at this moment a spark from the combustion ignited one of those energetic minds, which circumstances will sometimes call into activity from the very lowest ranks of society. Thomas Anello, by an Italian familiar mode of abbreviation usually called Massaniello, at that time in his twenty-fourth year, dwelt in a corner of the great market-place of Naples. He was a stout man of good countenance and of the middle stature, whose profession was to buy fish and retail them; and, in conformity with the meanness of his condition, usually appeared in a coarse shirt, a blue waistcoat, a mariner's cap, and with naked feet. Observing the general murmurs of the people, and while in the highest state of exasperation himself, he met a famous bandit called Perone, with one of his companions, who asked him what ailed him. He replied in great wrath, "I will be bound to be hanged but I will right this city." Those whom he addressed of course laughed at him; but he contrived to make them see the possibility of an effective resistance, and they engaged themselves to assist him. He first applied to the owners of the fruit-shops, and recommended them to come the next day to the market, but to decline to purchase from the growers any portion of their taxed fruit; and in the mean time instructed, and to a certain extent enrolled, many hundreds of the more youthful lazzaroni who frequented the market-place, teaching them to utter cries and to clamour in concert as he should direct. Of this militia he made himself the leader; and at a signal being given by a fruiterer in the confederacy throwing his taxed fruit to the ground in a rage, and exclaiming, "God gives plenty and the government dearth," a tumult ensued, and a general cry of "No Tax" burst from the assembled multitude, who pelted the magistrate, sent to appease them, from the market-place. The immediate consequence was a large concourse of people of all descriptions; when Massaniello leaped upon the table of one of the fruiterers and harangued the crowd, comparing himself to Moses, who was sent to deliver the Israelites from the Egyptians, and to Peter, also a fisherman, who had rescued the world from the dominion of Satan. His oratory was completely successful; and, under his direction, the toll-houses for fruit were

first burnt down; thence the people proceeded to the other toll-houses, and lastly assailed the palace of the viceroy, which they entered and rifled, notwithstanding the resistance of the guards. The viceroy got into his coach to make his escape, but the people surrounded it with naked swords, and made him promise to take off the taxes. By distributing money and by fair promises, he at length contrived to get into the church of St Lewis, and ordered the gates to be shut. The populace then applied to the prince of Bisignano, who was much beloved by them, to be their defender and intercessor. He at first complied; but finding himself, after the most strenuous exertions, unable to restrain their outrage and fury, he retired, and the people called out for Massaniello to be their leader, at the same time appointing Genoino, a priest of temper and abilities, and the aforesaid bandit Perone to attend his person. Massaniello at first assumed the part assigned to him with considerable spirit and good sense. A stage was erected in the market-place, where, clothed in white like a mariner, he with his counsellors gave public audience, received petitions, and decided all causes, civil and criminal. At this time he had no less than 150,000 men under his command, besides an incredible number of women, many of whom were also armed. By a formal decree, the houses and goods of sixty farmers of the taxes were burnt, and the punishment of death was inflicted upon those who attempted to purloin or save from the flames the smallest article. At length, convinced of the formidable nature of the confederacy, the viceroy gave the original popular charter of Charles V over to the bishop, who induced Massaniello to assemble the people and their leaders together to effect an accommodation. The design proved abortive in the first instance, owing to an attempt to destroy him by an armed force, brought apparently in honour of the occasion. At last however a treaty was completed, and he went in state to visit the viceroy, habited in cloth of silver, and mounted upon a lofty charger, with 50,000 persons in his train, who attended to his smallest sign with the most devoted obedience. On the following Sunday the capitulation was signed and solemnly sworn to; and had Massaniello now retired, as he had declared his intention to do, he might have presented some claim to the title of a friend to his country; but unhappily he was induced to maintain his authority, and the usual effects of unlimited power began to display themselves in acts of caprice and tyranny, which at length were of so extraordinary a nature that they were attributed to frenzy arising out of that high state of excitement which he had experienced since the commencement of these transactions, during which he supported his unremitting exertions with little either of food or rest. The strong wines, that he drank after his elevation, are also supposed to have produced a species of delirium which unsettled his reason. Be this as it may, he was so capriciously tyrannical, that a scheme was laid for his assassination, and as he fell he only ex-

cizimed, "Ungrateful traitors." His head was thrown into one ditch, and his body into another; but (and the lesson is salutary) the temper excited by these events did not cease until Naples was freed from the yoke of Spain.—*Mod. Univ. Hist.*

ANEURIN, supposed by some authors to be the same with Gildas the historian, a British poet and chieftain of the sixth century. He took a part in the battle of Cattraeth, which he made the subject of a poem; and this, with another poem, entitled the "Odes of the Months," form the whole of his known works. They are to be found in the Welsh Archaeology.—*Owen's Camb. Biog.*

ANFOSSI (PASQUALE) a Neapolitan composer of eminence in the last century, a pupil of Sacchini and Piccini, the latter of whom he completely superseded in the favour of the Roman cognoscenti. After however composing several operas, which met with the most unqualified success, his "L'Olympiade" encountered a reception as unfavourable as unexpected. From this moment the decline of his reputation in Italy seems to have been as rapid as its rise. Anfossi in consequence visited Paris in 1780, where his *Caius Marius* was performed with some success, and afterwards London. He died at Rome in 1795. The opera of *l'Avaro* is considered his chef d'œuvre.—*Biog. Dict. of Mus.*

ANGELI (BUONAVENTURA) a Ferrarese, educated for the law, in which profession he attained to great eminence about the middle of the 16th century, being consulted by the government on all matters of importance, and obtaining for a while a principal share in the administration of public affairs. Circumstances however at length induced him to quit the state of which he was a native, and to settle at Parma, where he compiled his history of that city, printed in one volume quarto, as well as a topographical description of it. He also published memoirs of Ludovico Catti, a distinguished member of his own profession. Angeli died in 1573.—*Moreri.*

ANGELI (PETER) a distinguished modern Latin poet, was born at Barga in Tuscany, in the year 1517. He was a proficient in Latin and Greek at a very early age, and was sent to Bologna to study the law, but neglected it for the belles lettres. Having written some satirical verses to oblige a lady of quality, he thought it prudent to quit Bologna, to avoid consequences, and repaired to Venice, where he employed himself in copying Greek manuscripts for the French ambassador, resident there as the representative of Francis I. He subsequently visited Constantinople, under the protection of another ambassador from the same prince; and made the tour of Greece and Asia Minor. In 1546 he became professor of Greek at Reggio, and subsequently was invited to take the chair of belles lettres at Pisa. In 1575 he was invited to accompany cardinal Ferdinand de Medici to Rome, who entertained him with great liberality, and rewarded him with a gift of 2000 gold crowns for a dedication of his poems. When Ferdi-

mand became grand duke, he also followed him to Florence, and being enriched with additional pensions, passed the remainder of his life with ease and opulence at Pisa, enjoying great reputation until his death in 1596. The principal works of this author are—1. "De ordine legendi scriptores historia Romanæ;" 2. "Poemata Varia;" 3. "Syrias," a Latin poem in twelve books, on the same subject as the "Jerusalem Delivered" of Tasso; 4. "Cynegeticon," or the Chase; 5. "De privatorum publicorumque urbis Roma eversoribus epistola," 4to; 6. "Poesie Toscani," 8vo; 7. "Letters in Latin and Italian," to be found in various collections; 8. "Memoirs of his own Life," &c.—*Moreri.*

ANGELIERI (BONAVENTURE) a Sicilian monk of the rule of St Francis, who became vicar-general of his order at Madrid. He lived at the latter end of the seventeenth and beginning of the eighteenth centuries. He is author of two curious performances, entitled "Lux magica celestium, terrestrium, et inferorum," 1685, 4to, "Lux magica academica, pars secunda," 1687, 4to. These extraordinary treatises were to have been followed by many more. The time of this writer's death is uncertain.—*Nour. Dict. Hist.*

ANGELONI (FRANCESCO) a native of Terni in Italy, of which place he wrote the history, 4to, 1646. He is principally known by an elaborate work published in one folio volume, in 1635, on the history of Rome, which he illustrated by a reference to ancient medals. He died in 1652 at Rome.—*Nour. Dict. Hist.*

ANGELUCCI (THEODORE) a native of Belforte in the march of Ancona. Though a physician, and of great eminence in his profession, he found leisure to apply himself to the cultivation of the belles lettres, and is the author of several poetical effusions, as well as of sundry treatises connected with the art of medicine. Among the former are his "Deus, canzone spirituale di Celio magno," and a translation of Virgil's *Aeneid* into Italian in "verso sciolto," 12mo. He is the author also of a work entitled "Capitolo in code della Pazzia;" of "Sententia quod metaphysica sit eademque physica," 4to; of "Ars Medica," 4to; "Exercitationum cum Patricio;" and of a treatise on the nature and method of curing malignant fevers. He died in 1600.—*Biog. Univ.*

ANGELUS (CHRISTOPHER) a Greek who, being driven from his own country by Turkish persecution, found an asylum in England in 1603. Through the bounty of the bishop of Norwich, he was enabled to enter himself, first of Trinity College, Cambridge, and afterwards of Balliol, Oxford, where he gained a comfortable livelihood by acting as tutor to junior students, especially in his native language. He evinced his gratitude to the English for the protection afforded him, by publishing an encomium on the nation and its two splendid universities, in Greek and Latin, 1619, having previously written an account of the persecutions which drove him from Athens, in the same tongues. He was a man of some learning, and his "Echiridion de institutis

Græcorum," Greek and Latin, 4to, has been well spoken of. In the year 1624 he published "Latin prophecy on the overthrow of the religion of Mahomet, which is to take place, according to his calculation, in 1876. He died at Oxford in 1638.—*Athen. Ozon.*

ANGERSTEIN (JOHN JULIUS).—This distinguished patron of the fine arts was born at St Petersburg in 1735, and came over to England under the patronage of the late Andrew Thompson, Esq, with whom he continued in partnership upwards of fifty years. Mr Angerstein exhibited much public spirit on several occasions, and was the first who proposed a reward of 2000*l.* from the fund at Lloyds to the inventor of the life-boats. His celebrated collection of paintings, esteemed inferior to none of the same extent in Europe, has been purchased since his death by the English government at an expense of 60,000*l.* as the nucleus of a national gallery. Mr Angerstein died at Woodlands, Blackheath, January 22, 1822, aged eighty-seven.—*Gent. Mag.*

ANGHIERA (PETER MARTYR D') better known by the name of Peter Martyr only, an Italian scholar of a noble Milanese family. He was born in 1455, and early patronised by the archbishop of Milan. In 1487 he visited Spain, and was presented to Ferdinand and Isabella, who employed him, after his taking orders, in an errand of considerable delicacy to the sultan of Egypt, during which mission he visited the pyramids. On his return he received various valuable appointments in the church; and on the accession of Charles V, that monarch also presented him with a rich abbey. He died at Grenada in 1526, leaving several historical works which are usually quoted under the name of Peter Martyr. His principal productions are—1. "Opus Epistolarum," 1530 and 1607 (Elzevir) folio. This work, which contains the whole of his political life, is much esteemed for information not to be obtained elsewhere. 2. "De rebus Oceanicis et orbe novo Decades," Paris, 1536, folio, being a history of the discovery of America, from the manuscript of Columbus; 3. "De Insulis nuper inventis et incolarum moribus," Basil, 1521, 4to, 1533, folio; 4. "De Legatione Babylonica," which work contains an account of his embassy to Egypt.—*Biog. Univ.*

ANGILBERT (St) son-in-law to Charlemagne, and afterwards abbot of St Riquier. He had a great taste for poetry, but nothing remains of him except a history of his monastery, inserted by Mabillon in his "Annals of the Order of St Benedict." He died in 814.—*Moreri.*

ANGIOLELLO (JOHN MARIO) a Venetian historian of the fifteenth century. Being taken captive by the Turks, he followed Mahomet II in the dreadful war which, at the head of an army of 200,000 men, he waged against Ussun Cassan. He wrote a history of the Turkish monarch in Turkish and Italian, for which that fierce prince very amply rewarded him. He also wrote "Della vita et fatti di re Persia," Venice, 1553, and "Relatione della vita e de fatti del Signor Ussun Cassan," inserted in the

second volume of Ramusio's Voyages, 1559, fol. By the latter work it appears, that Angiolello was living in 1524, half a century after the battle of the Euphrates, at which he was present. Some accounts say that he died in 1530.—*Moreri.*

ANGOULEME (CHARLES DE VALOIS, Duke of) was the natural son of Charles IX. Catherine de Medicis bequeathed to him her estates, but the will was set aside in favour of Margaret de Valois. He was however allowed to retain the title of Count d'Auvergne, and was subsequently created Duke of Angouleme. He was twice charged with treason, and the second time was condemned to death, a sentence which was changed into perpetual imprisonment. He was however once more pardoned and employed, both in a military capacity and in various embassies. He wrote his own memoirs, printed in 1662, as also a collection of the speeches delivered in the assembly of the Protestants in Germany, &c. He died in 1650.—*Biog. Universelle.*

ANNA COMNENA, daughter of Alexius Comnenus I, emperor of the East. After his death she endeavoured to secure the succession to her husband, Nicephorus Briennius, but was baffled by his want of energy and ambition. She dedicated herself to learning and literature, and wrote a life of her father Alexius, which, in the midst of much fulsome panegyric and inaccuracy in regard to dates, contains some curious facts, and is very smart upon the pretensions of the see of Rome to a paramount spiritual sovereignty. An edition of the life of Alexius was printed at the Louvre, 1651, folio, with notes by Hoeschelius. The time of her death is unknown.—*Bayle.*

ANNE, queen of Great Britain, second daughter of king James II by his first wife, Anne Hyde, was born in 1664, and married to prince George of Denmark in 1683, by whom she had several children, none of whom lived to maturity. On the death of William III in 1702, she succeeded to the crown; and her reign composes one of the most splendid periods of English history, with little other assistance from her own personal character than what arose from her tendency to yield to the ascendancy of stronger spirits than her own. To the arbitrary influence of the celebrated Sarah duchess of Marlborough may possibly be attributed the steadiness with which, in the earlier part of her reign, she pursued the projects of her predecessor for reducing the power of France; and the celebrated treaty of Utrecht in 1713, which terminated this policy, has uniformly been attributed to a similar influence gained by Mrs Masham, a tool of the opposite faction. The contention of parties during the reign of Anne was extremely violent, in consequence of the hopes entertained by the Jacobites that she would be induced by natural feelings to favour the succession of her brother the Pretender. These expectations after her husband's death were by no means ungrounded; and possibly had her own been much longer delayed, measures would have been taken to defeat the claim of the house of Hanover. The reign of

Anne may be deemed the triumph of the English high church party, owing to the strong and possibly natural predilection of the queen for the principles of government by which it has always been actuated; the only personal bias exhibited by her that tended much to influence the state of affairs. Her private character was amiable and well-intentioned, and it is said that she possessed much passive good sense, which was obscured by indolence and want of energy. It is generally agreed, that she appeared to more advantage during the life-time of her husband than after his death. The known easiness and good nature of her disposition obtained for her the title of "The good queen Anne;" and as she was an excellent wife and mother, and a kind and generous mistress and friend, it was pretty generally bestowed. The reign of Anne was as distinguished for literature as for arms; but although her administrations, both Whig and Tory, contained eminent scholars and patrons, her own taste and opinions had little share in calling forth the literary genius and talent which has obtained for the age the title of Augustan. Anne died in 1714, in her fiftieth year, of a dropsy, rendered incurable by an unfortunate species of self-indulgence. Owing to the good opinion generally entertained of her, she was much lamented by her subjects at large, but more particularly by the partizans of the house of Stuart, possibly at that time the majority of the nation. In person Anne was of the middle size, and she possessed a countenance ruddy and comely, although not handsome, with a very pleasing voice.—*Smollett*.

ANNESLEY (ARTHUR) earl of Anglesea and lord privy seal in the reign of Charles II, was born at Dublin in 1614, and finished his education at Oxford. In 1640 he was chosen knight of the shire for Radnor, but subsequently lost his seat. At the commencement of the civil wars he inclined to the royal cause, but afterwards reconciled himself to the parliament, and was appointed a commissioner for the settlement of Ulster, and also for negotiating with the duke of Ormond for the surrender of Dub.in. After the death of Cromwell he took little share in the confusion that followed; but when events pointed towards the Restoration, he was chosen president of the council of state, and opened a correspondence with Charles II. Soon after that event he was created earl of Anglesea, expressly for his services in bringing it about. In 1667 he was made treasurer of the navy, in 1672 a commissioner for inspecting the settlements in Ireland, and in 1673 lord privy seal. In 1682 this nobleman drew up and presented to the King a smart remonstrance on the danger and inconvenience of the duke of York's being a papist; which step gave great offence but did not remove him from office, although he was soon after dismissed, in consequence of a charge against him by the duke of Ormond. He then retired to a country house, and meddled little with public affairs until the reign of James II, whose favour he so much recovered, that it was generally believed he was about to be made lord chancellor

of England, but for the intervention of death in 1680, being then in the seventy-third year of his age. His works are—1. "A Treatise on Transubstantiation;" 2. "A Letter to the earl of Castlehaven, on his Memoirs concerning the Wars in Ireland" 1681, 8vo; 3. "A True Account of the Proceedings between James Duke of Ormond and Arthur earl of Anglesea, before the King in Council," 1682, folio; 4. "A Letter of Remarks on Jovian," 1683, 4to; 5. "The Privileges of the Houses of Lords and Commons argued and stated in two Conferences, April 18 and 22, 1671;" 6. "The King's Right of Indulgence in Spiritual Matters," 1688; 7. "Memoirs, intermixed with Moral, Political, and Historical Observations," 1693, 8vo.—*Biog. Brit.*

ANNETT (PETER) a deistical writer, was a native of the town of Liverpool and educated for a dissenting minister. He first distinguished himself as an opponent of Christianity, by an attack on bishop Sherlock's tract on the Resurrection, but his best known production is "The History of the Man after God's own Heart," occasioned by a comparison made by Dr Chandler between George II, then just deceased, and king David. This piece has received answers from the pens of dean Delany, Dr Chandler, and Dr Porteus. In 1762 he published a paper entitled "The Free Enquirer" for which he was prosecuted and sentenced to the pillory and imprisonment. His spirit was very high; for when Mr Newberry the bookseller, in order to relieve his necessities while in gaol, would have employed him to complete a grammar, he refused because his name was not to appear on the title-page. He died in 1778.—*London Mag.*

ANNIUS of Viterbo, or JOHN NANNI, a Dominican friar, was born at Viterbo in 1432. He was highly distinguished among his brethren for his learning, and was made master of the sacred palace by pope Alexander VI. He died, as was suspected, of poison, at the instigation of Cæsar Borgia in 1502. He is only mentioned here for his ingenuity in the art of forgery and imposture, having employed his learned leisure in the construction of fragments of his own invention, which he afterwards palmed on the world as the remains of several ancient writers, in "Seventeen Books of Antiquities." The first edition of this work, dedicated to Ferdinand and Isabella, was printed at Rome in 1493, and in 1552 republished in 8vo at Antwerp. The imposition passed for some time; and when discovered, the Dominicans, anxious to save the credit of their order, pretended that Annius copied his inventions from a manuscript which they had found in the Colbertine library: but as this manuscript was never produced, the dishonour was ineffaceable. The success and magnitude of the forgery render it exceedingly remarkable as an instance of great but unprincipled ability.—*Aikin's Gen. Biog.*

ANQUETIL (LOUIS PIERRE) born in 1728, distinguished himself early in life as a theologian, obtained in 1759 the rank of prior in the Abbey de la Roe in Anjou, and shortly

afterwards became director of the college of Senlis. At the breaking out of the Revolution, being then curé of La Villette near Paris, he in common with many other ecclesiastics was thrown into prison, where he lessened the tedium of confinement by projecting and commencing his universal history, a work he afterwards gave to the world in twelve duodecimo volumes. At the formation of the French Institute, Anquetil became one of the original members, and obtained a situation under the government. His other works are—"L'Esprit de la Ligue," composed at Senlis; "Intrigue du Cabinet sous Henri Quatre et Louis XIII, in 4 vols. 12mo; "Louis XIV, sa cour, et le Regent, 4 vols. 12mo; "Vie du Marshal Villars," 4 vols. 12mo; an 8vo volume, entitled "Motifs des guerres et des traités des paix de la France, pendant les régnes de Louis XIV, XV, et XVI," a voluminous history of France in 14 duodecimo volumes; the "Almanac de Rheims;" and the civil and political history of that city in 3 vols. 12mo. He died in 1808.—*Biog. Univ.*

ANQUETIL DU PERRON (ABRAHAM HYACINTH) brother of the subject of the last article, was born in 1731. Smitten with a considerable thirst after Oriental literature, in order to gratify it he quitted all thoughts of the ecclesiastical profession, in which, through his interest with the bishop of Auxerre (de Caylus) he had very fair prospects, and actually joined the expedition fitting out for India in 1754, as a private soldier. At Chandernagore, Pondicherry, and Surat, though interrupted for a time by a serious fit of illness, he employed every moment of his leisure in the study of the Sanscrit, and made sufficient progress in that tongue to translate the "Vendidad Sade," a dictionary of the language. On the taking of Pondicherry by the English, he returned to Europe, visited London and Oxford, and in 1762 succeeded in conveying the various manuscripts he had obtained to Paris. He was then appointed Oriental interpreter in the king's library, with a pension, and devoted himself to the publication of his researches. His works are—"A Life of Zoroaster," prefixed to a translation of the celebrated "Zend Avesta," attributed to that sage, in 3 vols. 4to, 1771; "Legislation Orientale," 4to, 1778; "Recherches Historiques et Géographiques sur l'Inde," 1786; "A Treatise on Commerce," 1789; "L'Inde au rapport avec l'Europe," 1798, 2 vols. 8vo; and "Secrets not to be Revealed," a Latin translation in two 4to volumes from the Persian. Eagerly attached to Oriental literature as this persevering man must have been, still, if we are to believe our own countryman Sir W. Jones, his attainments in that abstruse department of knowledge were rather showy than solid, although his brother, in the memoirs which he published of him, is naturally enough of a very different opinion. Whatever may have been his abilities, his industry at least is unquestioned. He died 1805, three years before his brother.—*Ibid.*

ANSART (ANDREW JOSEPH) a French historian and ecclesiastical writer, born in 1723.

He became a Benedictine monk, and being appointed procurator of one of the houses of that order, disappeared with the funds. How he contrived to avoid the disgraceful consequences of this misconduct is not known; but he attached himself to the order of Malta, became an advocate and doctor of laws of the faculty of Paris, and finally prior of Villanova. His principal works are—1. "Dialogues sur l'utilité des moines rentés," 1763, 12mo; "Exposition sur les Cantiques des Cantiques de Solomon," 1770, 12mo; "The Histories of St Maur, St Reine, d'Alise, St Fiacre," &c.; and the "Bibliothèque Littéraire du Maine," 1784, 8vo. He died in 1790.—*Ibid.*

ANSEGIUS, abbot of Lobies, an old Benedictine monastery in the diocese of Cambrai in France, lived in the ninth century, and was much esteemed for his learning and abilities in his own days. In the year 827 he made a collection of the capitularies of Charlemagne and of Louis his son, entitled "Capitula seu Edicta Caroli Magni et Ludovici pii Imperatorum," of which work various editions have been published. He died in 834.—*Moreri.*

ANSELM, archbishop of Canterbury in the reigns of William Rufus and Henry I, was born at Aost in Piedmont in 1033. He took the monastic habit of St Benedict at the abbey of Bec in Normandy, of which, in succession to Lanfranc, removed to the see of Canterbury, he became prior. Visiting England several times during his abbacy, he was called to attend William Rufus in a fit of sickness at Gloucester, which led to his appointment to the primacy. He would not however suffer himself to be invested until William had promised a restitution of the lands which he had abstracted from the see of Canterbury on the death of Lanfranc. No agreement could long subsist between a prelate so tenacious as Anselm and a monarch of the unruly temper of William, who, like his father, asserted his right to supreme ecclesiastical power in his own dominions. Causes of hostility soon arose, which were carried to a high pitch, in relation to the rival candidates for the papacy, Clement and Urban, of whom the King acknowledged the one and the archbishop the other. After an arrangement of this dispute, another quarrel ensued in consequence of the King's levy on the archbishop for a larger quota than he was disposed to furnish for the war against Wales. Anselm treated the demand of the King with contempt, and in opposition to his express prohibition, quitted England to make an appeal to Rome. William instantly confiscated the temporalities of the archbishopric, while Anselm was received by pope Urban as a zealous defender of the rights of the holy see, and a meritorious sufferer in the cause of religion. He attended Urban to the council of Bari, and distinguished himself in defence of the Catholic tenets against the Greek church, in respect to the procession of the Holy Ghost. He also, in allusion to his own case, advocated in the same council the claims of the clergy to the exclusive right of election to church preferment, without doing homage to laymen. On

his return to Rome, he found an ambassador from England, sent by the King to vindicate his conduct, who ably adopted an argument which has seldom been entirely without efficacy at the court of Rome, by bribing his Holiness into an abandonment of his friend. Finding himself deserted even in a public council in which his case was mentioned and discussed, Anselm quitted Rome in disgust, and remained at Lyons until the death of William in 1100. On the seizure of the crown by Henry I, that monarch, who sought every means to establish his authority, aware of the popularity of Anselm, immediately invited him to resume possession of his see, and when he complied with the invitation, received him with the greatest respect. The old disputes however quickly revived between the archbishop and Henry, the latter claiming homage as his brother had done, and the former as positively denying it. In other matters the prelate was very serviceable to the King. He smoothed the way to his popular marriage with Matilda, daughter of the king of Scotland, who through her mother was of the Saxon blood royal, and also used all his eloquence and influence with the barons to support Henry against his brother Robert. When this danger was over however, the King, notwithstanding the peremptory negative of the new pope, Paschal II, upon lay investiture, was determined not to give up the important prerogative of granting church preferment within his own dominions. After a long course of disputation therefore, Anselm once more went to Rome; but the policy of the Pope, who had lately been engaged in a similar contest with the Emperor, rendered him averse to proceed to the extremity of excommunication; and at length the disagreement was terminated by a compromise, in which it was agreed that the see of Rome should retain its spiritual power of investiture, and the King receive homage for the temporal properties and privileges. On this adjustment Anselm embarked for England, and was received with singular demonstrations of joy and respect. The remainder of this prelate's life was taken up in the enforcement of his own religious views; and among other regulations he was the first who rigorously enforced clerical celibacy in England. By a canon of the national synod held at Westminster in 1102, it was provided, "That no archdeacon, priest, deacon, or canon, shall be allowed to marry, or to live with his wife already married." Anselm was also singularly austere in the article of dress, and preached zealously against long hair and curled locks. His private life was pious and exemplary, but he showed his jealousy for the privileges of the clergy and his see in the minutest particulars: and a dispute on the paramount authority of his province over that of York was left undecided at his death, which took place at Canterbury in the year 1109. Anselm is another of those episcopal characters who have devoted considerable talents and strong energies to the advancement of the temporal and spiritual pretensions of the see of Rome; and allowing for the views of the

age in which he lived, we are not hastily to conclude, that he acted not conscientiously in what he supposed to be the cause of religion. The real merit of the disputes in which he was engaged has been settled by the common sense of mankind long ago. Anselm was a learned man for the age in which he lived, and among his metaphysical works is a treatise on the existence of God, which is established by arguments drawn from the abstract idea of Deity, in the manner afterwards adopted by Descartes. His works, which are numerous, were first published at Nuremberg in 1491, folio, and subsequently at Cologne, Lyons, and Paris. The metaphysical portion on truth, free will, predestination, &c. is acute, and contributed much to prepare the way for the scholastic system which soon after universally prevailed; but the devotional pieces abound with austerity and mysticism. Anselm was canonized so long after his death as the reign of Henry VII, at the instigation of cardinal Morton.—*Biog. Brit.*

ANSELME of Paris, a French monk of the Augustine order, was born in 1602. He was the author of a very elaborate work entitled "Histoire genealogique et chronologique de la Maison de France, et des grands Officiers de la couronne," 1673, 2 vols. 4to. This work was continued by the fathers Ange and Simplicien of the same order, which continuation, in 9 vols. folio, first appeared in 1726. Anselme had made preparations for a general history of the sovereign states of Europe, part of which he left in manuscript. He died in 1694.—*Moreri. Bayle.*

ANSELME (GEORGE). There were two of this name; the elder, a mathematician of some eminence in the early part of the 15th century, died in 1440. His grandson, who, from his relationship to the preceding, assumed the name of NEPOS, was a physician at Parma, of which city he was a native. His first work was a commentary on the plays of Plautus, which is to be found in Sessa's edition of that poet, published in 1518. He also wrote a book of epigrams; "Palladis Peplus;" "Eclogæ," 8vo, 1523, and a life of Cavicio. His death took place in 1528.

ANSON (GEORGE LORD) an eminent naval commander, was the third son of William Anson, Esq, a gentleman of an ancient and respectable family in Staffordshire, and was born at his father's seat in the parish of Colwick in that county, on April 23, 1697. He went early into the navy, and passed regularly through the minor grades of the service, until in his 27th year he was raised to the rank of post-captain and to the command of the Scarborough man of war. He was ordered to the South Carolina station, where he remained several years; and while he resided in that province erected a town called Anson Burgh, and gave name to a district which is still called Anson county. On the breaking out of the Spanish war in 1739, he was selected as a proper person to command the fleet destined to attack the Spanish settlements in the Pacific Ocean, which intention gave rise to the memorable expedition

so well described in the very popular book called "Anson's Voyage." He set sail Sept. 18, 1740, with a squadron of five men of war, a sloop, and two victuallers, all very wretchedly fitted out as the sequel proved, for the nature of the service; and after passing along the eastern coast of South America, doubled Cape Horn in the midst of a series of storms and tempests that separated his whole fleet, only a small part of which ever again joined him. After refitting at the island of Juan Fernandez, he proceeded to the coast of Peru, and took the rich town of Païta. On this coast he also captured some valuable prizes, on board of which were passengers of distinction of both sexes. His treatment of these was so generous and honourable, and of the women in particular so delicate and polite, that impressed as the parties had been, in conformity with Spanish policy in those countries, by accounts of the insolence and barbarity of English seamen, they were exceedingly surprised, and expressed their respect and gratitude in the highest terms. He afterwards sailed with the Centurion and Gloucester to the coast of Mexico, to intercept the annual Acapulco ship, but was obliged to unite the crews and abandon his second vessel; and so thinned and weakened were the seamen by the scurvy, it was with difficulty they reached the pleasant uninhabited island of Tinian, one of the Ladrões. Here, while the commodore with most of his officers and crew were on shore, the Centurion was blown out to sea, and so little prospect was entertained of her reaching the island again, that much labour was employed to lengthen a small vessel found on the shore, the commodore himself taking the axe in hand like a common man. So calm and equable was his deportment in these difficulties, that he never allowed any extraordinary marks of emotion to escape him, until informed that the Centurion was in sight again. From Tinian he went to refit at Macao, and was so fortunate as to fall in with and capture the Manilla galleon, although greatly superior to his own ship in size and number of men. At the very moment of victory he had another danger to encounter, in consequence of a fire which broke out near the Centurion's powder room; but he gave his orders and surmounted the disaster with his usual coolness. He sailed back with his prize to Canton, where he sold it; and having circumnavigated the globe, arrived with great riches at Spithead in June 15, 1744. He was immediately made rear-admiral of the blue, and not long after a commissioner of the admiralty. In May, 1747, he commanded the channel fleet, and captured a French squadron of six men of war, which were convoying a large fleet bound to the East and West Indies. Two of these prizes were called the *Invincible* and the *Glory*, which induced the captain of the first of them to say, on giving up his sword: "Sir, you have conquered the *Invincible*, and *Glory* follows you." For this and other services he was in the June following raised to the peerage, by the title of lord Anson, baron of Soberton in the county of Southampton; on which oc-

casion he took the very appropriate motto *et nil desperandum*. In 1748 he married Elizabeth, daughter of lord chancellor Hardwicke who died without issue in 1760. In 1751 he was made first lord of the admiralty, from which he retired on a change of administration in 1756, but was again appointed in 1757 and remained at the head of the admiralty during the whole of that spirited war. In 1761 he was raised to the principal naval dignity of admiral and commander-in-chief of the fleet, for the purpose of bringing over queen Charlotte. His death took place at Moor Park, Hertfordshire, in June 1762; and having no issue, his entire property devolved upon his brother, Thomas Anson, Esq, of Staffordshire. The foregoing brief sketch will be sufficient to show that lord Anson possessed that cool, steady, and intrepid order of mind which is eminently calculated for the naval service united to general abilities of a highly respectable rank. His private character was also unimpeached, except that it has been asserted he was fond of gaming, which imputation, in its most offensive sense, has however been denied. Among the merits of this able commander was that of having brought up many excellent naval officers, who afterwards effected considerable services for the country.—*Biog. Brit.*

ANSTEY (CHRISTOPHER) an ingenious poet of the eighteenth century, was the son of the Rev. Christopher Anstey, D.D. and born in 1724. He was educated at Bury St. Edmunds, whence he removed to Eton, and succeeded in 1742 to a scholarship in King's College, Cambridge, and in due time to a fellowship. In 1754 he succeeded to his patrimonial property, when he resigned his fellowship, and married Ann, daughter of Felix Calvert, Esq, of Albury Hall, Herts, by whom he had thirteen children, eight of whom survived him. He then devoted himself to the life of a country gentleman, with a taste for literary pursuits, but after a while resided for the most part at Bath. He had long cultivated poetry, but most of his early productions were Latin translations of English popular poems, one of which was Gray's elegy. It was not until 1766 that his humorous production, the "New Bath Guide," was published, which at once became highly popular for its pointed and original humour, and as usual led to numerous imitations. He also wrote "An Elegy on the Death of the Marquis of Tavistock," 1767; "The Patriot," 1768; "An Election Ball," 1776; "A. C. W. Bamfylde, Arm. Epistola," 1777; "Envy," 1778; "Charity," 1779; all of which, with many other productions, are collected in a splendid edition of his entire works, edited by his son, with a judicious sketch of his life. He died at Bath in 1805, in his eighty-first year.—*Life by his Son. G. Dict.*

ANSTIS (JOHN) a Cornish man, eminent for his knowledge in the antiquities of his country, born in 1659, at St Neots, originally educated for the bar at Exeter College, Oxon, and afterwards at the Mid-

de Temple. Being of a good family and possessed of an easy fortune, he sat in the Parliament of 1702 as member for St Germans. In 1713 he was appointed Garter king at arms, in which office his son, Dr John Anstis, of Corpus Christi College, Oxon, was afterwards associated with him. He died in 1744, having presided in the Herald's College thirty-one years. He published "A Letter on the Honour of the Earl Marshal," 1706, previous to his appointment, and afterwards the "Form of the Installation of the Garter," in 8vo, 1724. In the same year appeared "The Register of the Order," in two folio volumes, which in 1725 were followed by a quarto volume entitled "Observations introductory to an Historical Essay on the Knighthood of the Bath." His son survived him ten years, having succeeded in 1725 to the office of registrar and genealogist of the order of the Bath.—*Nichols' Bowyer.*

ANTELMI (JOSEPH) canon of Frejus in Provence during the latter moiety of the seventeenth century. He published an investigation into the origin of the Athanasian creed, and an historical account of the cathedral of which he was a member. Antelmi was born in 1650 and died in 1697.—*Dict. Hist.*

ANTHEMIUS, an eminent architect of the sixth century, a native of Tralles in Lydia. The genius of Anthemius produced a monument that will not easily be destroyed, meaning the celebrated church of St Sophia at Constantinople, which he built by order of the emperor Justinian, and completed in somewhat less than six years. Gibbon has given a splendid description of this edifice, now the principal mosque in the Turkish empire. Anthemius is said to have written on mechanics and dioptrics; and in a fragment of his, published by Dupuy, secretary to the French academy of inscriptions in 1777, an endeavour is made to explain the nature of the mirrors employed by Archimedes to burn the Roman fleet.—*Biog. Univ. Gibbon.*

ANTHONY (St) the founder of monastic life, was born in Egypt in the year 251. Understanding the gospel precepts literally, he disposed of a rich inheritance, and after distributing the produce among the poor, retired into the desert, where, agreeably to the legends, he was tempted by the devil in all sorts of forms and guises. It is more a matter of history, that he was after a while so beset with disciples, as to be under the necessity of erecting many monasteries in the neighbourhood of his solitude. Here his followers passed their time in prayer, labour, and acts of the most severe mortification. He only left his retreat, once in order to assist the Christians then under persecution by Maximin, and another time, at the request of Athanasius, to refute the Arians, who had claimed him as one of themselves. His death is fixed in the year 356, in the one hundred and fifth year his age. He corresponded with Constantine at that emperor's request, and seven of his letters are extant in the Bibliotheca Patrum. His life was written by St Athanasius.—*Moreri. Cave.*

ANTHONY (FRANCIS and JOHN) two notorious charlatans, father and son, natives of London, who, in the latter part of the 16th and beginning of the 17th centuries, realized considerable wealth by the pretended discovery of an invaluable elixir which they styled "Aurum potable." Being twice imprisoned and fined for imposture, the father, who had studied at Cambridge, and appears to have been a man of some learning, published in 1610 a defence of himself and his art in the Latin language, under the title of "Medicina Chémica;" this book was printed at Cambridge. The son, who graduated at that university, was also the author of some devotional treatises, and died in 1655, surviving his father thirty-two years.—*Biog. Brit.*

ANTIAGENIDES, a celebrated Greek musician, born at Thebes, flute master to Alcibiades, until his pupil, seeing himself in a mirror, discarded the instrument on account of the distortion it produced in his countenance. Antiagenides is said to have held the taste of the commonalty in such contempt, that hearing on one occasion a flute-player at a distance saluted with a violent burst of applause, he observed, "There must be something very bad in that man's performance, or those people would not be so lavish of their approbation."—*Biog. Dict. of Mus.*

ANTIGONUS CARYSTHIUS, a philosopher and historian, who flourished in the reign of the two Ptolemies. He wrote a history of philosophers, which is quoted by Eusebius; and other works are mentioned by Athenæus and Hesychius, but they are all lost, except a collection of not very probable stories, entitled "Historiarum Mirabilium Collectio," printed by Meursius in 1619, and by Backmann, Leipzig, 1791, 4to. Some authors deny this work to Antigonus, and deem it the production of some grammarian of the Lower Empire.—*Vossius.*

ANTIGONUS SOCHEUS, a Jew, and head of the sanhedrim in the third century before Christ. Out of the school of this rabbi rose the sect of the Sadducees, who denied a future state, and who in their tenets generally agreed with the Epicureans.—*Brucker.*

ANTIMACHUS, a poet, a native of Colophon, who is supposed to have lived in the fifth century before Christ. He had so high a reputation as to be ranked next to Homer; and the emperor Adrian, who placed Ennius before Virgil, even preferred him to that great poet, a circumstance which renders the loss of his writings a subject of some regret. The names of two of his works, "The Thebaid" and "The Lydian," are preserved. A fragment of Antimachus is to be found in the *Analecta* of Brunck; and all the rest of his remains were published in 1786 by Schellenburgh, under the title of *Antimachi Colophonii Reliquias*.—*Vossius. Fabricius.*

ANTINE (MAUR FRANÇOIS D') a French Benedictine monk, was born in 1688. He published the first five volumes of the *Glossary of Ducange*, and an *Essay on the art of verifying dates*, 4to, 1750, and folio, 1770. He died in 1746.—*Dict. Hist.*

ANTIPATER, a native of Macedon, the able minister both of Philip and of his son Alexander the Great. The great political talents of Antipater seem to have been unalloyed, from first to last, with mere personal ambition; and in consequence his services were as steady and faithful as they were able. Of this truth Philip was so sensible, that on once coming late to a levee, he said, "I have slept soundly this morning, but I knew that Antipater was awake." On another occasion it was observed to him, that all his ministers wore purple except his prime minister. "Antipater is all purple within," replied that discerning monarch. On the departure of Alexander on his expedition against Persia, Antipater was left to govern Macedon, a task of no small difficulty, on account of the high spirit of Olympias; but notwithstanding his affection for his mother, Alexander very properly supported his minister against her. On the death of Alexander, in the distribution of governments, Greece and the European provinces fell to the share of Antipater; and while he maintained their allegiance to the Macedonian empire, such was the general moderation and sound policy of his conduct, that he even secured the attachment of the virtuous Phocion. To the very last he employed his care for the public; and, passing over his son Cassander, bequeathed his great offices of protector and governor of Macedon to Polysperchon, the senior of Alexander's captains present, on whom he also bestowed a piece of advice, gathered no doubt from his experience with Olympias: "Never on any account to allow a woman to meddle in state affairs." He died, aged eighty, B.C. 381. *Plutarch. Univ. Hist.*

ANTIPATER (LÆLIUS CÆLIUS) a Roman historian, who lived in the times of the Gracchi, and wrote an account of the second Punic war, of which an abridgment was made by Brutus. Fragments of Antipater are added to Havercamp's edition of Sallust, 1742, as also to several other editions of the same author.—*Vossius. Moreti.*

ANTIPHILUS, a painter, who was the contemporary and rival of Apelles. Several fine pictures of his are alluded to by different authors, and especially one of a boy blowing a spark of fire, usually quoted as a proof that the ancients were not ignorant of the chiaro scuro.—*Plin. Nat. Hist.*

ANTISTHENES, a Greek philosopher, founder of the sect of the Cynics, was born at Athens, B. C. 423. His first preceptor was Gorgias the sophist, but he subsequently obtained great reputation in the school of Socrates. Laërtius mentions ten volumes of his works, but a collection of apothegms alone remains, some of which are exceedingly pointed. For instance, he recommended the Athenians to elect horses into asses; and when they exclaimed at the absurdity of the proposal, he replied, "And yet you chuse men for your generals who have no other qualifications for the office than your votes." Antisthenes affected great austerity, and often attended Socrates in an old ragged cloak; which that philosopher per-

ceiving, he took great pains to expose, said "Why so ostentatious, Antisthenes? through your rags I discover your vanity." The school of Antisthenes resembled that of Socrates, in being rather an institution of manners than a theory of opinions. Cicero, mentioning his book on physics, cites from it this memorable sentence: "The Gods of the people are many, but the God of nature is one." A long list of books on various topics, written by Antisthenes, is given in Diogenes Laërtius; but nothing remains beyond two orations in the character of Ajax and Ulysses, published in the collection of Ancient Authors by Aldus in 1513, the authenticity of which is much doubted.—*Stanley.*

ANTONIDES, a Dutch apothecary, a native of Goes in Zealand, whence he acquired the designation of Vander Goes, born in 1647. He was a man of much reading and some genius, who studied with avidity the best classical authors, some of whose works he afterwards translated. He is principally known by his poem in honour of the river that flows through Amsterdam, in which city his works were collected and published in 1714, in one quarto volume, just thirty years after his death. They consist of the poem above named, "The Invasion of China," a tragedy, and a poetical effusion on the peace of 1667, entitled, "Bellona chained." For some time previous to his death he enjoyed a post at the Dutch admiralty board.—*Moreti.*

ANTONINUS PIUS (TITUS AURELIUS FULVIUS BOTONUS) emperor, was born at Lanuvium in Italy, A.D. 86. His family, which was originally of Nismes, was highly respectable, both his grandfather as well as his own father having been consuls. He was first made proconsul of Asia, then governor of Italy, and in the year 120 consul; in all which employments he displayed the same virtue and moderation as afterwards distinguished him on the imperial throne. When Adrian, after the death of Verus, determined upon the adoption of Antoninus, he found some difficulty in persuading him to accept of so great a charge as the administration of the Roman empire. This reluctance being overcome, his adoption was declared in a council of senators; and in a few months afterwards he succeeded by the death of his benefactor, who had caused him in his turn to adopt the son of Verus, then seven years of age, and Marcus Annius, afterwards Aurelius, a kinsman to Adrian, at that time of the age of seventeen. The tranquillity enjoyed by the Roman empire during the sway of Antoninus affords not many topics for history; and in respect to the Emperor himself, his whole reign was an exhibition of his moderation, talents, and virtues. The first act of his sovereignty was to release a number of persons, whom his predecessor had condemned to die; and though he could not divert the course of justice from the principals in conspiracies against himself, yet he forbid all inquiry after accomplices, and took the son of Atilius, the chief of them under his own protection. The few disturbances which arose in different parts of the empire, were easily subdued by his lieutenants; and in Britain the boundaries of the Roman pro-

vinces were extended by building a new wall to the north of that of Adrian, from the mouth of the Esk to that of the Tweed. On the whole however the reign of Antoninus was uncommonly pacific; and he was left at leisure fully to protect the Roman people and advance their welfare. While he governed the race of informers was altogether abolished, and in consequence condemnation and confiscation were proportionably rare. In all public calamities of fire, earthquake, and inundation, his beneficence was conspicuous, although extremely averse to laying burthens on the community, and frugal and careful in the distribution of the public revenues. With all this economy, he was conscious of the necessity of adequately promoting public works of magnificence and utility; and it is thought that Nismes is indebted to him for the amphitheatre and aqueduct, the remains of which so amply testify their original grandeur. His new decrees were all distinguished for their morality and equity; and if his rescript in favour of the Christians, addressed to the people of Asia Minor, be authentic (and there is much argument in its favour), no better proof of his philosophy and justice, on the great point of religious toleration, can be afforded. No accusations were to be admitted against persons merely for being Christians; and if any such were preferred, the *accuser* was to be punished. The high reputation acquired by Antoninus for virtue and wisdom gave him great influence, even beyond the bounds of the Roman empire; and neighbouring monarchs spontaneously made him the arbiter of their differences. His private life was frugal and modest, and in his mode of living and conversing, he adopted that air of equality and of popular manners, which in men of high station is at once so rare and so attractive. Too much indulgence to an unworthy wife is the only weakness attributed to him, unless we include a small share of ridicule thrown upon his minute exactness, by those who are insensible of its value in complicated business. He died in 161, aged seventy-three, having previously married Marcus Aurelius to his daughter Faustina, and associated him with himself in the cares of government. His ashes were deposited in the tomb of Adrian, and his death was lamented throughout the empire as a public calamity. An undeniable proof, indeed, of the esteem in which his name was held, is to be found in the fact that all succeeding Roman emperors chose to bear the name of Antoninus, as the most popular appellation they could assume. The sculptured pillar erected by Marcus Aurelius and the senate to his memory, under the name of the "Antonine column," is still one of the principal ornaments of Rome.—*Univ. Hist. Gibbon. Crevier.*

ANTONINUS (MARCUS ANNIUS AURELIUS) was born at Rome, A. D. 121. Upon the death of Cæsonius Commodus, the emperor Adrian turned his attention upon Marcus Aurelius; but he being then too young for an early assumption of the cares of empire, Adrian, as already shown, adopted Antoninus on condition

that he in his turn should adopt Marcus Aurelius. His father dying early, the cares of his education devolved on his paternal grandfather, Annus Verus, who had him very generally instructed; but philosophy so early became the object of his ambition, that he assumed the philosophic mantle when only twelve years old. The species of philosophy to which he attached himself was the stoical, as being most connected with morals and the conduct of life, and such was the natural sweetness of his temper, he exhibited none of the pride which sometimes attended the artificial elevation of the stoical character. This was the more remarkable, as all the honour and power that Antoninus could bestow upon him early became his own, having been practically associated with him in the administration of the empire for many years. On his formal succession to the sovereignty, his first act was of a kind which at once proved his great disinterestedness, for he immediately took Lucius Verus as his colleague, who had indeed been associated with him by adoption, but who, owing to his defects and vices, had been excluded by Antoninus from the succession, which, at his instigation, the senate had confined to Marcus Aurelius alone. Notwithstanding their dissimilarity of character, the two emperors reigned conjointly without any disagreement. Verus took the nominal guidance of the war against the Parthians, which was successfully carried on by the lieutenants under him, and during the campaign married Lucilla, the daughter of his colleague. The reign of Marcus Aurelius was more eventful than that of Antoninus. Before the termination of the Parthian war, the Marcomanni and other German tribes began those disturbances which more or less annoyed him for the rest of his life. Against these foes, after the termination of hostilities with Parthia, the two Emperors marched; but what was effected during three years' war and negotiation, until the death of Verus, is little known. The sudden decease of that unsuitable colleague, by an apoplexy, restored to Marcus Aurelius the sole dominion; and for the next five years he carried on the Pannonian war in person without ever returning to Rome. During these fatiguing campaigns he endured all the hardships incident to a rigorous climate and a military life, with a patience and a serenity which did the highest honour to his philosophy. Few of the particular actions of this tedious warfare have been fully described; although, owing to conflicting religious zeal, one of them has been exceedingly celebrated. This was the deliverance of the Emperor and his army from imminent danger by a victory over the Quadi, in consequence of an extraordinary storm of rain, hail, and lightning, which disconcerted the barbarians, and was by the conquerors regarded as miraculous. The Emperor and the Romans attributed the timely event to Jupiter Tonans; but the Christians affirmed that God granted this favour on the supplications of the Christian soldiers in the Roman army, who are said to have composed the twelfth or

Maletine legion; and as a mark of distinction, we are informed by Eusebius that they received from an emperor, who persecuted Christians, the title of the "Thundering Legion." Yet this account, not of a fact, but of the cause of one, and that of such a nature as no human testimony can ever determine, was made the subject of a controversy, in the early part of the last century, between Mr Moyle and the eccentric Whiston, the latter of whom elaborately supported the assumed miracle. The date of this event is fixed by Tillemont in A.D. 174. The general issue of the war was, that the barbarians were repressed, but admitted to settle in the territories of the empire as colonists; and a complete subjugation of the Marcomanni might have followed, had not the Emperor been called off by the conspiracy of Avidius Cassius, who assumed the purple in Syria. This usurper was quickly destroyed by a conspiracy among his own officers; and the clemency shown by the Emperor to his family was most exemplary. Such was his magnanimity, that when, after a concealment of some years, his secretary Manilius was discovered, Marcus would not see him, but ordered his papers to be destroyed. After the suppression of this revolt, he made a progress through the East, in which journey he lost his wife Faustina, daughter of Antoninus Pius, a woman as dissolute as beautiful, but whose irregularities he never seems to have noticed, which blindness or insensibility has subjected him to much ridicule. While on this tour he visited Athens, added greatly to its privileges, and, like Adrian, was initiated in the Eleusinian mysteries. His return to Rome did not take place until after an absence of eight years, and his reception was in the highest degree popular and splendid. After remaining in the capital for nearly two years, and effecting several popular reforms, he was once more called away by the necessity of checking the Marcomanni, and was again successful, but fell ill, at the expiration of two years, at Vindobonum, now Vienna. His illness arose from a pestilential disease which prevailed in the army; and it cut him off in the fifty-ninth year of his age and nineteenth of his reign. His death occasioned universal mourning throughout the empire: without waiting for the usual decree on the occasion, the Roman senate and people voted him a god by acclamation; and his image was long afterwards regarded with peculiar veneration. Marcus Aurelius however was no friend to the Christians, who were persecuted during the greater part of his reign; an anomaly in a character so universally merciful and clement, which may be attributed to an excess of Pagan devotion on his own part, and still more to the influence of the sophists by whom he was surrounded. In all other points of policy or conduct he was one of the most excellent princes on record, both in respect to the salutary nature of his regulations and the temper with which he carried them into practice. Compared with Trajan or Antoninus Pius, he possibly fell short of the manly sense of the one, and the simple and unostentatious virtue

of the other; philosophy and scholarship on a throne always more or less assuming the appearance of pedantry. It was something more than appearance, if it be true as related, that before his last departure from Rome, he listened to a request from the court philosophers, to indulge them before his departure in a course of lectures on his sublime philosophy, with which request he complied. The Emperor was also himself a writer; and his "Meditations," composed in the Greek language, have descended to posterity. They are a collection of maxims and thoughts in the spirit of the stoic philosophy, which, without much connexion or skill in composition, breathe the purest sentiments of piety and benevolence. Several editions of this work have appeared, both in Greek and Latin, the best of which is that of Galatin, Cambridge, 1652. Marcus Aurelius left one son, the brutal Commodus, and three daughters. Among the weaknesses of this good Emperor, his too great consideration for the former is deemed one of the greatest; for although he was unremitting in his endeavours to reclaim him, they were accompanied by much erroneous indulgence, and especially by an early and ill-judged elevation to titles and honours, which uniformly operate injuriously upon a base and dissolute character. Parental indulgence is however a pardonable failing; and the emperor and man, who was tender and regardful of every one else, may be pardoned for extending his too great consideration to an only son. Gibbon delivers some sensible observations on the character of Marcus Aurelius, some of the hypercritical attacks on which he justly decries.—*Crevier. Univ. Hist. Gibbon.*

ANTONINUS, a geographical author, the writer of a valuable *Itinerarium*, whose age is not to be exactly traced. It is often by the general reader erroneously regarded as a production either of one of the Antonines, or of some writer compiling under their authority. The best edition of this work is that of Gale, London, 1709, 4to. An able commentary upon it, as far as relates to Britain, has been published by Burton, in folio.—*Vossius. Harwood.*

ANTONIO, or ANTONELLO, said to have been the first artist who introduced oil painting into Italy. He was born at Messina in Sicily, whence the name by which he is commonly known, about the year 1426. His master, John Van Eyck, is reported to have accidentally found out that his colours amalgamated better with oil than with water and to have communicated the discovery to his pupil. His own claim to the merit of the invention has been disputed.—*Pilkington. Strutt.*

ANTONIO (NICHOLAS) a native of Seville in Spain, born in the year 1617. After twenty-two years spent at Rome in the capacity of agent-general for Spain, he returned to Madrid and obtained a seat at the council-board. His works are—"Bibliotheca Hispana Vetus," in 2 folio volumes; "De Exilio Lib. iii," folio, published in 1659; "Bibliotheca Hispana Nova," 2 vols. folio, 1672, reprinted in 1783; and "Censura de Historicis Fabulis," folio,

1742. His library was of great value, and at the time of his death, which took place in 1684, is said to have contained upwards of thirty thousand volumes.—*Biog. Universelle*.

ANTONIUS (GODFREY) a celebrated German lawyer, a native of Westphalia, who died in 1618. He wrote a great many treatises on almost every branch of the civil law, the principal of which are—1. “*Disputationes Feudales*,” Marpurgh, 1604, 4to; 2. “*De Camera imperialis jurisdictione*.”—*Moreri*.

ANTONIUS (MARCUS) a Roman orator, and the most truly illustrious of the Antonian family, flourished about the middle of the seventh century of Rome. After rising successively through the various orders of the commonwealth, he was made consul in the year of the republic 655, and then governor of Cilicia, in quality of pro-consul, where he performed so many valorous exploits in the army, that a public triumph was decreed to him. In order to improve his talent for eloquence, he became a scholar to the most able men in Rhodes and Athens. He was one of the greatest orators among the Romans; and according to Cicero, who in the early part of his life was a contemporary, it was owing to him that Rome became a rival in eloquence to Greece. The same great authority has given us the character of his oratory, from which it appears that earnestness, acuteness, copiousness, and variety, formed his distinguishing qualities; and that he excelled as much in action as in language. By his worth and abilities he had rendered himself dear to the most illustrious characters of Rome, when he fell a sacrifice in the midst of the bloody confusion excited by Marius and Cinna. Taking refuge at the house of a friend from their relentless proscription, he was accidentally discovered, and betrayed to Marius, who immediately sent an assassin with a band of soldiers to bring him the orator's head. It was brought accordingly, and that sanguinary leader, after making it the subject of his brutal ridicule, ordered it to be stuck upon a pole before the rostra, and on the whole treated it as Mark Antony the worthless, grandson of Antonius, treated the head of Cicero. This event occurred B. C. 87. He left two sons, Marcus and Caius, both of whom discredited their parentage. The eldest, surnamed in derision Creticus, from the defeat he sustained in an unprincipled and perfidious attack upon Crete, was the father of the triumvir. He never raised himself beyond the praetorship, but enjoyed extraordinary authority in that office, and was guilty of gross extortion. He died soon after his disgraceful defeat. Caius governed Macedonia with such violence and cruelty, that the senate recalled, tried, convicted and banished him.—*Bayle. Cicero de Oratore. Univ. Hist.*

ANTONIUS (MARCUS) the celebrated triumvir, was the son of Marcus Creticus, and of Julia, a lady of the Cæsarian family of distinguished merit. Losing his father when young, he launched early into an excess of riot and debauchery with Curio and Clodius, and had wasted his whole fortune even before he as-

sumed the manly gown. He afterwards visited Greece, where he studied eloquence and arms, and being invited by the proconsul Gabinus, to make a campaign with him in Syria, received the command of the cavalry. Here he displayed his courage and activity against Aristobulus, who headed a revolt in Judea, and subsequently assisted in the restoration of Ptolemy to the throne of Egypt, on which occasion he prevented that monarch from massacring the inhabitants of Pelusium. In this warfare he gained high reputation as a commander, and greatly ingratiated himself with the soldiers by his liberality and the affected grossness and familiarity of his manners. From Egypt, instead of returning home, where his debts much annoyed him, he repaired to Cæsar in Gaul, and being furnished by that general with money and credit, repaired to Rome to obtain the quaestorship, in which suit he succeeded. In due time he was also chosen tribune, and in that capacity he acted so warmly in the party of Cæsar, that he became obnoxious to the senate, and deemed it expedient, with Curio and others, to take refuge in the camp of Cæsar in Gaul. This flight of the tribunes, by furnishing the latter with a pretext to exclaim against the tyranny of the senate, led at once to the civil war and to his celebrated march into Italy. Having made himself master of Rome, Cæsar gave Antony the government of Italy, where he contrived to ingratiate himself with the soldiery, and in several instances acted with so much bravery and skill, that his military abilities were deemed inferior only to those of Cæsar himself. After the defeat of Pompey at Pharsalia, Cæsar made him his master of the horse. In this office he lorded it over the senate, and behaved very oppressively. This conduct, together with his very dissolute life, prevented his patron from immediately admitting him his colleague in the consulship. About this time he married Fulvia, the turbulent widow of Clodius, who long made him feel the weight of her imperious temper. On the return of Cæsar from Spain, Antony sought to recover his slackened favour, by the grossest subserviency and adulation; and being then admitted consul, was guilty of an act of baseness which hastened the fate of the dictator. At the feast of the Lupercalia he thrice offered Cæsar an imperial diadem, which the latter as often refused, with the loud applause of the multitude, who were not yet quite prepared to endure the forms of royalty. This being deemed a concerted scheme to try the inclination of the people, the conspiracy was formed, which terminated in the death of Cæsar, with whom Antony would have been sacrificed, but for the conscientious hesitation of Brutus. The result proved the correctness of those who deemed his death necessary to the success of this ill-fated attempt to preserve a corrupted republic; for by his insincere, temporizing, yet able and artful management, he first obtained a confirmation of Cæsar's acts, and then getting Cæsar's register into his possession, proposed as such whatever suited his own purpose. He also procured a

public funeral for Cæsar, and in addressing the soldiery and people, contrived so to inflame them against the conspirators, that Brutus and Cassius were obliged to quit Rome. Antony then became master of the city, and at first seemed disposed to put himself in Cæsar's place. Having obtained the interest of Lepidus and the army, he treated the young Octavius, the heir of Cæsar, in such a manner as threw him into the arms of the senate. The patriots, with Cicero at their head, espousing the cause of Octavius, in order to destroy Antony, the latter was obliged to change his measures; and after several breaches and reconciliations with his rival, each being desirous of heading the Cæsarian faction, he endeavoured to extort the provinces of Macedonia and Syria from Brutus and Cassius; but not succeeding, he levied forces and retired to Cisalpine Gaul, the government of which had been decreed to him, and besieged Decimus Brutus at Mutina. The senate now declared him a public enemy; and the new consuls, Hirtius and Pansa, accompanied by Octavius, were sent against him. Although defeated by superior numbers in the battle that ensued, both the consuls fell in it; an event which left Octavius at the head of the republican army. After this defeat, Antony was obliged to quit Italy; and as it was a part of his mixed character to endure adversity better than prosperity, he sustained with great fortitude the dreadful hardships which he and his troops encountered in crossing the Alps. Arrived in Gaul, he repaired as a suppliant to the camp of Lepidus, and by his influence over the soldiery, quickly obliged the latter to join him, by which event he was enabled to re-enter Italy at the head of a large army. Octavius, who, it became apparent, was acting secretly in concert with him, then threw off the mask; and advancing to meet Antony and Lepidus, they held a conference together in a river island near Bologna, settled a partition of the Roman world; and—what will ever render them detestable in honourable and virtuous estimation—agreed upon the bloody proscription which immediately followed. The life of Cicero was one of the principal sacrifices required by Antony, who in return gave up his own uncle, Lucius Cæsar. They soon filled the capital with rapine and murder in their most odious forms; and Antony, in vile imitation of the similar treatment of his own grandfather, enjoyed the base satisfaction of fixing the head and right hand of Cicero upon the rostra which had so often witnessed the triumph of his eloquence. Upon the defeat of Brutus and Cassius at Philippi, a victory chiefly due to his skill and bravery, Antony showed an instance of that generosity which occasionally broke through the thick veil of his vices, by embracing Lucilius as a friend, who had passed himself off for Brutus, in order to give the latter time to escape; and by the sensibility which he showed on viewing the dead body of that patriotic and virtuous Roman. After the battle of Philippi, Antony went first into Greece, and then into Asia, where he indulged in ex-

traordinary splendour, and held a court which was attended at times by most of the resident Asiatic kings and princes. With great policy, he showed unusual lenity to such of the partisans of Brutus as fell into his hands; but he severely fleeced several of the cities, and divided the spoils of many respectable and peaceable citizens among his panders and buffoons. While in Cilicia, he summoned the famous queen Cleopatra to give an account of some conduct which had displeased the triumvirate; and her presence captivated him in such a manner, that the sequel of his extraordinary career may be solely attributed to her baneful influence on his actions and affections. Chagrined at his open infatuation, the restless Fulvia quarrelled with Octavius, and even levied troops against him, it is supposed with a view to recal Antony into Italy. Octavius had however put an end to the insurrection before his arrival; and the opportune death of Fulvia, who died on her journey to meet her husband, facilitated a reconciliation between Antony and Octavius, which was cemented by a marriage between the former and Octavia, the virtuous sister of his colleague. A new division of the empire now took place, in which the East was assigned to Antony, the West to Octavius, and Africa alone to the insignificant Lepidus. The transactions in which Antony was engaged, until his infatuated attachment to Cleopatra produced an open rupture with the watchful and politic Octavius, are rather historical than biographical. In his attachment to that imperious queen, all prudence and policy seemed to forsake him; and he prepared for a contest for the possession of the world, in the midst of a round of riotous luxury and folly, like any thing but a man who had such an interest at stake. He even carried his neglect of the good opinion of the Romans so far as to divorce the estimable Octavia, and turn her out of her house at Rome. War was at length declared against the Egyptian queen, and Antony was formally deprived of his consulate and government. When affairs had reached this extremity, he began to experience the consequences of his insane conduct in the desertion of his friends, several of whom, of leading consequence, went over to Octavius. The famous battle of Actium ensued, which was fought contrary to the advice of the best officers of Antony, and chiefly through the persuasion of Cleopatra, who was proud of her own naval force. The flight of that very force while victory was still doubtful, decided the fate of the day; and the fascinated Antony meantly followed his mistress in a small vessel, and covered himself with perpetual ignominy. His gallant land forces stood out for several days, unable to believe in his total desertion of them; but at length, abandoned by all their principal officers, they went over to Octavius. For some days Antony was indignant against the author of his ruin, but was then reconciled and proceeded with her to Lybia, where on his arrival he found that a considerable body of troops, on whom he had depended, had gone over to Octavius. He returned to Egypt, and with a

total loss of energy and reason, blindly assumed his former style of festivity, until interrupted by the invasion of Octavius, who refused all offers of accommodation. Some sparks of his former courage were exhibited by Antony before Alexandria, where, at the head of his own cavalry, he routed that of Octavius; but being afterwards abandoned both by the Egyptian fleet and his aid and forces, he fell into utter despair, and deeming himself betrayed by Cleopatra, rushed to her palace in order to take vengeance, which she eluded by flight. Resolved upon death, he then called upon his faithful servant Eros to perform his promise of killing him when he required it. The latter, pretending to comply, requested him to turn away his face, on which he stabbed himself, and fell dead at his master's feet. Affected by this proof of attachment, Antony then inflicted on himself a wound which was not immediately mortal; and desirous of taking a last farewell of Cleopatra, he was carried to the bottom of a tower in which that queen had taken refuge from his fury, and was drawn up to her by ropes, she herself assisting her women in the task. There, after many expressions of tenderness, and expressing joy that he, a Roman, had yielded only to Romans, he expired in her arms in the fifty-sixth year of his age, B.C. 30. The romantic cast of Antony's conduct and adventures has rendered him much more conspicuous in history than the real weight of his character justifies, although he possessed many splendid talents and acquirements. A luxurious sensualist can never be decidedly a great man, and still less a good one; accordingly all such persons, however highly endowed, are usually characterized by transient exhibitions of vigour and ability, rather than by consistent and steady purpose. The ruinous attachment of Antony to Cleopatra is naturally enough quoted as a most extraordinary proof of the force of love; but when his age is taken into consideration, it merits little beyond the name of dotage, and coupled with the abject want of conduct and ability displayed in his final contest with Octavius, may infuse a just suspicion that his various excesses had broken down both body and mind. Few men however have created stronger attachments to themselves than this unprincipled Roman; a very common result of frank and jovial manners, attended with indiscriminate profusion and great occasional generosity. Antony left seven children by his three wives—for he had lawfully married Cleopatra, after his divorce from Octavia. Of these there were two sons by Fulvia, two daughters by Octavia, and a daughter and two sons by Cleopatra. Octavia took the most generous care of her step children, and married the daughter of Cleopatra to Juba king of Mauritania. The eldest son of Antony by Fulvia was raised to the highest honours by Augustus, but being suspected of a conspiracy against him, killed himself. This Antonius is said to have been the author of a poem entitled "Diomedea."—*Plutarch. Univ. Hist.*

ANTONY (St) of Padua, a member of the religious order of St Francis, was born at

Lisbon in the year 1195. He set sail to Africa with the view of obtaining the crown of martyrdom; but being driven by a storm on the coast of Italy, he remained in that country, where he studied theology, and preached with extraordinary reputation. His long stay at Padua obtained him the surname by which he was distinguished. The fraternity of flagellants are said to have partly owed their origin to his sermons. He died in 1231, in the thirty-sixth year of his age, and was canonized the following year by pope Gregory IX. His works, containing sermons, commentary, and a moral concordance to the Bible, were published at the Hague, in 1641.—*Moreri. Cave.*

ANVARI, a Persian poet of the twelfth century. He has the credit of being the first who freed the Persian poetry from licentiousness; and he acquired such renown, that the surname of the king of Khorasan was bestowed upon him. He was much attached to astrology, and in high favour on that account; but having made a false prediction, he retired from court, and wrote a poem in which he renounced astrology and prediction altogether. He died at Balk about 1200.—*D'Herbelot.*

ANVILLE (JEAN BAPTISTE BOURGUIGNON D') a native of Paris, born 1697, died 1782. In the pursuit of his favourite study, geography, he is said to have laboured so incessantly, that for more than half a century he devoted fifteen hours daily to its improvement, while acting in the capacity of principal geographer to the French king. His maps and charts, especially those connected with ancient geography, are in great esteem for their accuracy, and the learning and research evinced in their composition. Of his other works there remain—"Illustrations of ancient Gaul, from the Remains of the Romans;" "Ancient and modern Egypt, with a description of the Arabian Gulf;" a treatise "on the Extent and Topography of ancient Jerusalem;" an Abridgment, in 3 vols. of "Ancient Geography," a companion to his maps; a dissertation on "Ancient and modern Itinerary Measures;" "On the European Governments which arose out of the fall of the Roman Empire;" a "Proposition for the Mensuration of the Globe;" "A Geographical Analysis of Italy;" "Considerations on the Ottoman Empire;" "Memoirs of the Empire of China;" "Treatise on the Caspian Sea," &c. &c.—*Nouv. Dict. Hist.*

ANYSIUS, or ANISO (GIOVANNI) an Italian poet of some celebrity about the close of the fifteenth and beginning of the sixteenth centuries. He is supposed to have been born at Naples about the year 1472, and died there in 1540. His brother Cosmo, who practised physic in their native city, had also a turn for poetry, and published several of his productions there in 1557. The works of Giovanni are written in the Latin language, and consist of "Poems and Satires," in two quarto volumes, printed in 1531 and 1532, and addressed to cardinal P. Colonna; "Protogenos Tragedia," 4to, 1536; "Commentariolus in tragediam;" and "Letters on Religion."—*Ibid*

ANYTUS, an Athenian rhetorician who, in conjunction with Melitus, distinguished himself by the rancour with which he persecuted the philosopher Socrates. His machinations at length succeeded in procuring the condemnation and death of his enemy; but popular opinion soon veering, the persecutor in his turn became the object of its vengeance, was condemned to exile at Heraclea, and, according to some accounts, stoned to death in that city. The ridicule thrown upon Socrates by Aristophanes, in "The Clouds," is said to have originated in his instigation.—*Plutarch*.

APEL (JOHN) called by the schoolmen Apellus, a native of Nuremberg, born in 1486. He was one of the earliest advocates of the doctrines of the Reformed Church, having, like Luther, contracted marriage with a nun while he himself enjoyed a canonry of Wurtzburg. For this offence he was arrested by order of the bishop, but succeeded, through the interference of the troops, in escaping from ecclesiastical vengeance to his native city, where he continued until his death in 1586. Apel had been originally bred to the law, and published a treatise on Roman jurisprudence in 4to, during the year 1535. He also wrote a spirited defence of his marriage, to which Luther himself contributed a preface; this work, which is also in 4to, was printed in 1523.—*Biog. Universelle*.

APELLES, the most celebrated painter of antiquity, was born, according to Pliny, in the island of Cos; or, as Lucian and Strabo say, at Ephesus, in the fourth century, B. C. being contemporary with Alexander the Great. The distinguishing characteristic of Apelles was grace; and his great mastery appeared to consist more in the unison than in the extent of his powers. As he spoke very freely of his own faults, as well as of those of others, he would concede to one painter the superiority in disposition, to another in symmetry, but uniformly decreed the pre-eminence in grace or beauty to himself. His celebrated picture of the "Venus Anadyomene" was considered by the ancients as a most exquisite exemplification of the style in which this great artist excelled. It remained at Cos until the time of Augustus, who purchased it from the inhabitants by a remission of their tribute, and placed it in the temple of Julius Cæsar at Rome. This painter was a great favourite with Alexander the Great, who would be painted by him only. Many stories of the freedoms taken with him by Apelles are on record, but, as Bayle justly remarks, are so coarse and rude as to merit very little attention. Of these tales the most agreeable is related by Pliny, who states, that Alexander, having directed his favourite painter to make a portrait of the most beautiful and beloved of his concubines, Campaspe, on finding that he had fallen violently in love with her, generously gave her up to him. Of the many pictures of Alexander painted by this great artist, the most celebrated was in the temple of Ephesus, in which he was represented as the thundering Jove. Various of the other works of Apelles

representing gods, goddesses, heroes, and graces, formed the chief ornaments of the temples and edifices which they decorated. He is also said to have written several volumes on his art, none of which have been preserved. Apelles was fond of society, agreeable in conversation, and much attached to the fair sex, many anecdotes being told of his gallantries with Lais and others. When and where he died is not known.—*Bayle. Fuseli's Lectures*.

APELLICON, a philosopher of the Peripatetic school, who flourished about ninety years before the Christian æra. He was at great pains in collecting and preserving the works of Aristotle, which he succeeded in doing, not without great expense. These books were afterwards seized by the dictator Sylla, in Athens, and conveyed by him to Rome.—*Strabo. Bayle*.

APER (MARCUS) was a Gaul by birth, and one of the finest orators of the first century. Although considered a foreigner at Rome, he rose to some of the highest offices of the commonwealth. He is most known by his "Dialogue on the corruption of Eloquence," which has been attributed both to Quintilian and to Tacitus, but the proofs, on investigation, appear to be in favour of Aper. A dissertation on this dialogue may be seen in the fourth volume of Murphy's edition of Tacitus.—*Moreri. G. Dict.*

APHTHONIUS of Antioch, a rhetorician of the third century. He wrote a treatise on rhetoric, entitled "Progymnasnata Rhetorica," (Rhetorical Exercises) the best edition of which is that of Elzevir, Amsterdam, 1645, 12mo. To the same author are attributed fables printed with those of Æsop, Frankfort, 1610.—*Fabricius. Moreri*.

APIAN (PETER) an eminent mathematician and astronomer of Germany, who flourished during the greater part of the fifteenth century. He was born in 1495, in Misnia, and the reputation he acquired by his skill in the sciences obtained him early in life a mathematical professorship at Ingoldstadt, where, in 1540, he published his "Astronomicum Cæsareum," in folio, the work by which he is principally known. He was also the author of a treatise entitled "Inscriptiones Sacrosanctæ vetustatis variæ," folio; and another called "Cosmographia," in 4to; the latter was printed in 1529. Apian was the first who discovered that the tails of comets are always projected in a direction from the sun, and records his observations upon five which appeared in the years 1531, 1532, 1533, 1538, and 1539. He was treated with singular respect by the emperor Charles V, who both enriched and ennobled him. He died in 1552, leaving a son, Philip, also a good mathematical scholar, who gave lectures in that science at Tübingen, and who survived his father thirty-seven years.—*Hutton's Math. Dict.*

APICIUS. There were three patricians of this name at Rome in different æras, all noted for their gluttony, to which the second and most infamous of the three added almost every

other vice. The first lived in the time of the dictator Sylla, the second under the emperors Augustus, Tiberius, and Nero. The whole of his immense property was dedicated to the luxuries of the table, in which he is said to have consumed more than two millions and a half sterling. Seneca, Juvenal, Martial, and other satirists, frequently allude to his epicurism, of which he formed a kind of school, and certain viciads of his own inventing were called after his name. Falling at length into comparative poverty and merited contempt, he is reported to have put an end to his life by poison, through fear of ultimate starvation. He was accused of having early in life administered to the infamous pleasures of Sejanus, the favourite of Tiberius. The third of this name is principally known as the inventor of an admirable receipt for pickling oysters. A treatise "De re culinaria," falsely ascribed to Caius Apicius, is yet extant, having been twice printed in the last century at London in 1705, and again in 1791 at Lubec; both editions are in 8vo. The name is grown into a proverb.—*Bayle. Fabricius.*

APION, a learned grammarian and historian, was born at Oasis in Egypt, during the first century, and was a professor at Rome in the reign of Tiberius. Although unquestionably a man of learning and research, he was in many respects an arrogant boaster, and in others a mere pretender. He is renowned for much trifling on the subject of Homer, in order to trace whose family and country, he had recourse even to magic, asserting that he had successfully invoked the appearance of shades to satisfy his curiosity, whose answers he was not allowed to make public. These pretensions, silly as they were, made him very popular in Greece, although something might be owing to his commentaries on the same great poet, which are mentioned by Eusthatius and Hesychius. Pliny makes particular mention of the ostentatious character of this critic, who used to boast that he bestowed immortality on those to whom he dedicated his works, whereas it is only by the mention of others that these works are now known to have existed. One of the chief of them is "On the Antiquity of the Jews," to which people he opposed himself with the hereditary resentment of an Egyptian. The reply of Josephus, "Against Apion," has survived the attack, the author of which showed his enmity to the Jewish people, by other means besides writing against them, he was employed by his fellow citizens of Alexandria to carry a formal complaint of their conduct to Caligula. Apion also wrote an account of the Antiquities of Egypt, in which work he is supposed to have treated largely on the Pyramids, Pliny quoting him as the principal authority on the subject. It is in allusion to Apion that Bayle observes, "how easily the generality of people may be deceived by a man of some learning with a great share of vanity and impudence."—*Vossius. Bayle.*

APOLLODORUS. There were several persons of this designation; so numerous indeed were they, that it gave occasion to a Ne-

apolitan author, Scipio Testi by name, to write a treatise on the lives and actions of the different Apollodori, which he printed at Rome in 1555. Our own countryman, Dr Thomas Gale, in 1675 published a similar account and edited the only three books now extant of the Bibliotheca of one of them—a treatise on the origin of the gods, which originally consisted of twenty-four. This Apollodorus was a celebrated grammarian of Athens, the son of Asclepiades and the pupil of Aristarchus. Several other pieces of his are to be found in the Bibliotheca Græca of Fabricius. He flourished about 104 years before the Christian era. The next in eminence was a native of Damascus, and an architect of great ability in the reigns of Trajan and Adrian, by the former of whom he was employed in constructing the famous stone bridge over the Ister or Danube, 104. Falling into disgrace with Adrian, he lost his life through that emperor's caprice. The occasion is variously related; by some it has been ascribed to an old grudge which originated in the time of Trajan, when Adrian, giving an ignorant opinion in presence of the then Emperor respecting some architectural designs, his vanity was so seriously mortified by a sarcastic rebuke from Apollodorus, that he never forgave him. Bayle however, from other sources, attributes his ruin to an ill-timed remark upon the design of a recently built temple of Venus, submitted to him by that prince for his approbation; his sincerity, it seems, got the better of his policy, and drew from him an observation, in allusion to the want of proportion between the edifice and the statue it contained, that if "the goddess wished to rise and go out" of her temple it would be impossible for her to accomplish her intention. It is not improbable that both circumstances combined to draw on his destruction. Another **APOLLODORUS** was a celebrated Athenian painter who flourished so early as B. C. 408. Pliny mentions two pictures of this master as existing at Pergamo in his days, the one a priest worshipping, the other an Ajax struck with lightning; and adds that the works of no master before Apollodorus merited critical attention.—*Fabricius. Pliny. Bayle.*

APOLLONIUS COLLATIUS, a monk and poet, a native of Navarre, who in the fifteenth century published an epic the subject of which is the siege of Jerusalem, and other poems. His works were collected and printed at Milan in one octavo volume, A. D. 1692.—*Moreri.*

APOLLONIUS DYSCOLUS, an eminent grammarian, a native of Alexandria. Two editions of a treatise of his on Syntax are yet extant; one printed at Venice in 1495; the other at Frankfort, 1590. A collection of historical curiosities has also been attributed to his pen; this work was published in 1568 at Basle, and again at Leyden in 1620. He flourished in the second century. There was another grammarian of this name, the compiler of a Lexicon Homericum, printed at Paris in 1773, 2 vols. 4to, who lived during the reign of Augustus Cæsar.—*New. Dict. Hist.*

APOLLONIUS of PERGA a celebrated mathematician who studied at Alexandria under the disciples of Euclid, B. C. 240, about thirty years after the death of Archimedes. He composed several curious geometrical works, of which his book on conic sections alone exists. This production, which takes the lead on the subject of conic sections among the ancients, is still much esteemed. The first four books alone reached modern times in the original Greek, the remaining four having been recovered from Arabic versions. A magnificent edition of the whole eight books was published by Dr Halley at Oxford in 1710.—*Hutton's Math. Dict.*

APOLLONIUS RHODIUS, so called from the city of Rhodes, in which he presided over a school of rhetoric. He was a native of Alexandria, where he afterwards became, through the favour of Ptolemy Evergetes, keeper of the celebrated library there, in which situation he remained till his death, which took place about the 137th olympiad, or 240 years before the Christian æra. His poem on the Argonautic expedition has received the praise of both Quintilian and Longinus for a moderate and sustained elevation; the latter in particular, in his treatise on the sublime, speaks of it in terms of great commendation. It is evident also, that Virgil has profited by the story of Jason and Medea, in his loves of Dido and Æneas. It has appeared repeatedly in an English dress, having been translated by Dr Ekins, Mr Fawkes, and Mr Preston. The Oxford edition of the original work, in two vols. 4to, 1777, is considered the best. The ancient scholia upon the poem, yet extant, are highly valuable. Apollonius was a pupil of Callimachus, towards whom he is accused of having acted with much ingratitude.—*Vossius.*

APOLLONIUS TYANEUS, a Pythagorean philosopher, one of the most extraordinary of those pretenders to divinity who have more or less imposed on the common sense of mankind. He was the son of a rich citizen of Tyana in Cappadocia, and was born about the Christian æra. He studied under Pythagorean preceptors from his infancy; but his masters falling short of the rigid austerity of the original school, he forsook them, and took up his residence in the temple of Esculapius at Ægæ. Here he strictly practised all the self-denial of his sect, and encouraged by the priesthood around him, who favoured his pretensions, formally commenced his character of mystic and sage. On the death of his father, he gave up the greater part of his fortune to his brother, and returning to Ægæ, established a school of philosophy; but in order to qualify himself more completely for the office of preceptor in the Pythagorean doctrines, he enjoined himself a strict silence of five years. When the term of his probation expired, he visited Antioch, Ephesus, and other places, associating chiefly with the priests, but holding public assemblies in the evening, in which he addressed the multitude at large, with attic neatness, yet with great force and persuasion. His mysticism increased with his reputation; and

certain religious rites which he performed at sunrise he would disclose to those only who had passed through the discipline of silence. He next resolved to visit Babylon and the Indies, in order to converse with the Brahmins. His disciples, seven in number, refusing to accompany him, he repaired to Ninus with two servants only, and then took for his associate Damis, a native of that city, who kept an account of the events of the journey. At Babylon he conversed with the magi, and by his sage discourses obtained the favour and admiration of the King, who furnished him with camels and provisions for his journey over Caucasus. He was equally patronised by Phraotes, an Indian king, and after four months residence with the Indian sages, returned to Babylon, and thence into Ionia. Various miracles of his performance in the cities of Greece are gravely related. Among other feats, he pretended that he had raised the shade of Achilles. At Athens he is said to have cast out a demon, who at its departure threw down a statue; at the isthmus of Corinth, to have predicted the attempt of Nero to cut through it; and in the island of Crete, during an earthquake, to have exclaimed that the sea was bringing forth land, at the very time that an island was rising out of the sea between Crete and Thera. From Crete he repaired to Rome; but the edict of Nero against professors of magic not allowing him to remain there, he proceeded to Spain, where he staid until the death of that emperor. He then returned to Greece, and soon after to Egypt, where Vespasian was endeavouring to establish his power. That politic prince knew how to make use of a man like Apollonius, and accordingly affected to consult him as a divine oracle; in return for which he was of course oracular in favour of Vespasian. From Egypt he made a journey into Ethiopia, and probably obtained as much from the gymnosophists as the Brahmins. On his return he was very favourably received by Titus, who had succeeded his father Vespasian. Upon the accession of Domitian, he was accused of exciting a sedition in Egypt in favour of Nerva; when he voluntarily repaired to Rome to meet the accusation, and was acquitted. He finally settled at Ephesus, where he established a school, and had many disciples. Here a story is related of him which, if true, implies that he was acquainted with the conspiracy against Domitian. At the moment when that tyrant was cut off at Rome, Apollonius is said to have made a sudden pause in the midst of a public disputation at Ephesus, and, changing his tone, to have exclaimed, "Well done, Stephen! take heart; kill the tyrant—kill him;" and then, after a short pause, to have added, "the tyrant is dead; he is killed this very hour." After this we hear little of him, except that Nerva wrote to him on his accession; but it is probable that he died at Ephesus during the short reign of that emperor, at the very advanced age of ninety-seven. The sources of information concerning this extraordinary man are very uncertain. His life by Philostratus, from which the foregoing

sketch is selected, was compiled 200 years after his death, by the order of the empress Julia, widow of Severus, which prince regarded Apollonius as a divinely inspired personage, and is said to have associated his image in a temple with those of Orpheus, Abraham, and Jesus Christ. Philostratus, a mere sophist, received as materials the journal of Damis, his companion and disciple, who was ignorant and credulous, and a short and imperfect memoir by Maximus of Egæ, now lost. All sorts of fables and traditinary tales are mixed up with the account of Philostratus, who only merits attention for a mere outline of the facts upon which he must necessarily have formed his marvellous superstructure. The claim of the whole to notice rests chiefly on the disposition of the Pagans, when Christianity began to gain ground, to assimilate the character and merits of Apollonius with those of the founder of the rising religion. Something is also due to a life so singular as that of Apollonius, who certainly contrived to pass for a divinely favoured person, not only in his own days, but as long as Paganism prevailed. The inhabitants of Tyana dedicated a temple to his name; the Ephesians erected a statue to him under the name of Hercules Alexiachus, for delivering them from the plague; Adrian collected his letters; the emperor Severus honoured him, as already described; Caracalla erected a temple to him; and Aurelian, out of regard to his memory, refrained from sacking Tyana; lastly, Ammianus Marcellinus ranks him among the eminent men who, like Socrates and Numa, were visited by a demon. All these prove nothing of the supernatural attributes of Apollonius, but they are decisive of the opinion entertained of him. At the same time Dr Lardner clearly shows that the life by Philostratus was compiled with a reference to the history of Pythagoras rather than to that of Christ. On the whole, as his correct doctrines appear to have been extremely moral and pure, it may be the fairest way to rank him among that less obnoxious class of impostors, who pretend to be divinely gifted, with a view to secure attention and obedience to precepts which, delivered in the usual way, would be generally neglected. Of the writings of Apollonius, there remain only his apology to Domitian, and eighty-four epistles, the brevity of which is in favour of their authenticity. They were edited by Commelin in 8vo. 1601, and by Stephens in his "Epistola," 1577.—*Philostratus. Bayle. Lardner.*

APOXO (PETIR'D) a celebrated physician of the thirteenth century, was born at Apono, or Abano, a village near Padua, in 1250. He studied at the university of Paris, where he was created a doctor in philosophy and medicine. While at Paris, he made himself celebrated by a work entitled "Conciliatorum Differentiarum Philosophorum et precipue Medicorum," in which he attempted to connect philosophy with medicine, and astrology with natural magic. His reputation as a physician became so great that, prompted by a rapacious disposition, he exacted the most enormous fees

for his attendance. His rivals, envious of his celebrity, gave out that he was aided in his cures by evil spirits, and brought him under the notice of the Inquisition, from the fangs of which he escaped by a timely death in the sixty-sixth year of his age. His body would have been consigned to the flames but for the attachment of a female domestic, who had it privately disinterred and secretly re-buried; so that the enlightened holy brotherhood were obliged to rest satisfied with an execution in effigy. His memory however received honours more than adequate to this attempted disgrace, for the duke of Urbino and the senate of Padua afterwards erected statues to his honour. Besides the work already mentioned, which was published at Padua in 1490, and reprinted at Florence and at Venice, this author wrote "De Venenis eorumque Remediis," Marburg, 1517, and Venice, 1550; "De Medicina Omnimoda;" "Questiones de Febribus," and various other works.—*Bayle.*

APPIAN, an eminent historian, a native of Alexandria, who flourished at Rome under the emperors Trajan and Adrian. Here he distinguished himself by his forensic abilities, acquired the post of a procurator of the empire and the government of a province. A part only of his Roman history, written in the Greek language, has come down to us. The work was not originally a continuous narrative, so much as separate accounts of the different nations which submitted to the Roman arms, and the progress of their subjection. His details of the Punic, Syrian, Partbian, Mithridatic, and Spanish wars, of those against Hannibal, the civil wars, and those in Illyricum, are what remain. He is remarkable for the plainness, simplicity, and perspicuity of his style; but his partiality to the Romans renders it necessary to read him with caution. His works have gone through several editions, the principal of which are the folio, Geneva, 1592; one in two vols. 8vo, Amsterdam, 1670; and another, printed at Leipsig in 1784, in three vols. 8vo.—*Fossius. Fabricius.*

APREECE, AP RHYIS, or RHESE (JOHN) a native of Wales, eminent for his knowledge of the antiquities of his native country. He was born in the early part of the 16th century, and in 1534 graduated in civil law at Oxford. He was the author of several works connected with his favourite study, one of which, entitled "Fides Historiæ Britannicæ," is preserved in manuscript in the Cottonian collection. His other productions are: "Historia Britannicæ Defensio," printed in 1573; "A Description of Wales," in quarto, 1663; a treatise "De Variis Antiquitatibus," and a vindication of the existence and deeds of king Arthur, entitled "Defensio Regis Arthuri." He died in the reign of queen Mary.—*Wood's Athen. Oxon.*

APROSIO (ANGELICO) a learned Italian monk of the order of St Augustin, born at Ventimiglia in the republic of Genoa, 1607. He taught philosophy at Genoa, and lectured on polite literature at Venice. He published an account of the library of the Augustines at

Ventimeglia, which is much sought after by the curious, as also "Bibliotheca Aprosiana," Bologna, 12mo. 1673. He was likewise the author of various satirical and humorous pieces, which were not deemed altogether congenial with his profession, under fictitious names. Aprosio died in 1681.—*Moreri*

APTHORP (EAST) a native of New England, eminent in the last century as a scholar and a theologian. He was born in 1732, received his education at Cambridge, where he graduated as M.A. in 1758, and became fellow of Jesus College in that university. The Society for the Propagation of the Gospel in Foreign Parts sent him out as one of their missionaries to Cambridge in Massachusetts, in which state he resided for a short period; but not being altogether satisfied with his situation, returned to England, and, through the favour of archbishop Secker, obtained the living of Croydon in Surry, about the year 1755. In 1778 he took the degree of doctor of divinity, and obtained the rectory of St Mary-le-Bow in the city of London, both which pieces of preferment however he gave up on being appointed to the valuable stall of Finsbury, in St Paul's cathedral. His printed works are—"A Review of Dr Mayhew's Remarks on Archbishop Secker's Answer to his Observations," 8vo, 1765; "Letters on Christianity, in reply to Gibbon," 8vo; "Select Devotions for Families," 12mo; "Discourses on Prophecy," preached at the Warburtonian Lecture, two vols. 8vo; and several occasional discourses, the principal of which are—"The Constitution of a Christian Church," preached at the opening of the new church at Cambridge in New England, Oct. 9, 1761; "The Felicity of the Times, on the Peace," 1763; "A Fast Sermon," 1777, and one on "The Liturgy," all in 8vo; "The Character and Example of a Christian Woman," 1763; "On Sacred Music and Poetry," 1764, and "The Consecration Sermon for Halifax bishop of Gloucester," all in 4to. Dr Apthorp died at Cambridge in the year 1816.—*Gent. Mag.*

APULEIUS, a Platonic philosopher of the second century, was a native of Madaura, an African city on the borders of Numidia and Gaetulia. His family was respectable both in station and property, his father being chief magistrate of Madaura. He received the early part of his education at Carthage, where he imbibed his first knowledge of the Platonic philosophy, and thence moved in succession to Athens and Rome. Apuleius, who inherited a handsome fortune, began life with that contempt for riches, which in the ancient world in particular so frequently distinguished aspirants after learning and philosophy. He liberally rewarded all those who had any share in his instruction, and was otherwise so generous and profuse, that on his return home, after his travels, he found his patrimony exhausted; and being exceedingly desirous to enter into the fraternity of Osiris, was obliged to part with his cloaths to pay the necessary expense of the inaugural ceremonies. He now began to acquire a more prudent estimate of the value of

property, and undertook the profession of a pleader, in which he acquired considerable fame and emolument. Not only so, he embraced an opportunity which offered of improving his condition by marrying Pudentilla, an elderly widow of considerable property, to whom his youth and agreeable qualities had strongly recommended him. This union exceedingly exasperated the relations of the lady; and Æmilianus, the brother of her former husband, instituted a very infamous suit against Apuleius before the pro-consul of Africa, for employing magical arts to obtain her love. The apology which he delivered on this occasion is still extant, and it is regarded as a performance of considerable merit. It was of course successful; for it was not very difficult to convince a sensible magistrate, that a widow of thirteen years' standing may be induced to marry a handsome, eloquent, and accomplished young man, without being moved thereto by philters or magic. Of the remainder of the life of Apuleius nothing is known, except that several cities honoured him with statues for his eloquence, and that he wrote much both in prose and verse. Like Apollonius Tyaneus, miracles have been ascribed to him, which have been placed in comparison with those of the gospel. The origin of these reports, which did not circulate until after his death, is by no means ascertained, as, with the exception of the foregoing foolish accusation, he does not appear to have been charged with the practice of magic in his life time; although it is not impossible that his anxiety while on his travels to get initiated in the secret mysteries and religious ceremonies of the different places which he visited, might have laid a foundation for the opinion entertained after his death of his supernatural acquirements. Be this as it may, Marcellinus, in the fifth century, requested of St Augustin to exert his utmost efforts in refuting those who falsely asserted "that Christ did nothing more than what was done by other men, and who produced their Apollonius, Apuleius, and other masters of the magical art, whose miracles they assert to have been greater than his." Perhaps this notion has been grounded on a misapprehension of his story of "The Golden Ass," in which a Milesian fable, invented by Lucius of Patras, and abridged from him by Lucian, is enlarged and embellished. This humorous production was by many believed to be a true history, and among the rest St Augustine entertained his doubts, while bishop Warburton deems it a work written in opposition to Christianity, and with a view to recommend the Pagan religion "as a cure for all vices." The same learned author also explains the beautiful allegory of Cupid and Psyche, which makes a long episode in the "Golden Ass," upon the same principles. Dr Lardner was of a different opinion; and probably Bayle comes nearest the truth, who regards this eccentric production as a mere satire on the frauds of the dealers in magical delusion, and on the tricks of priests, and other crimes, both of a violent and deceptive character, which are so frequently

committed with impunity. While some readers have erred on the supposition of concealed allusion and imaginary signification, others, altogether obtuse to humour, have gravely condemned the "Golden Ass" as a mere nursery tale, like the distinguished person who is said to have entitled the Gulliver of Swift a silly parcel of lies, and without a word of truth from beginning to end. Apuleius indeed appears from the greater part of his writings to have been more of a wit than a philosopher, in the ancient acceptation of the character; his productions, with the exception of his view of the doctrines of Plato, being too florid, oratorical, sportive, and sometimes even wanton, for the gravity of philosophy. His printed works have gone through forty-three editions. The first, which is much mutilated by the Inquisition, is very rare; it was printed at Rome by order of cardinal Bessarion, 1467. Among those which succeeded may be mentioned the editions of Henry Stephens, 8vo, 1585; of Elmenhorst, 8vo, 1621; of Scriverius, 12mo, 1624; and in Usum Delphinii, 2 vols. 4to, 1688. The "Golden Ass" has been translated into almost all the modern European languages; and of the episode of Psyche, there have been many separate editions and translations, some of which are superbly ornamented. Möller published a dissertation on the life and writings of Apuleius, Altdorf, 8vo, 1681.—*Atkin's G. Dict. Biog. Universelle. Sæxi Onomasticon.*

AQUAVIVA. There were several eminent men belonging to a noble family of this name in Italy, during the fifteenth and sixteenth centuries. **ANDREW MATTHEW**, duke of Atri in the kingdom of Naples, born about the year 1456, was celebrated both as a soldier and a scholar. He wrote a treatise on hunting, and another on fowling; the latter of which was first printed in folio at Naples in 1519, and again at Basil in 8vo, 1578. A quarto volume, entitled "Disputationes de virtute morali," is also the production of his pen, as well as a fragment of a projected Encyclopedia. He died at the age of seventy-two in 1528. **CLAUDIO AQUAVIVA**, born in 1542 at Naples, became general of the order of Jesuits, and died in 1615. He wrote a treatise entitled, "Ratio Studiorum," printed in 8vo in 1586, which, from the liberality of its sentiments, came under the censure of the Inquisition, and was in consequence suppressed. He afterwards published "Industria ad curandos animæ morbos," 8vo, 1603. **OCTAVIO AQUAVIVA**, a prelate of great reputed piety and learning, died archbishop of Naples in 1612.—*Nour. Dict. Hist.*

AQUILA, an architect and eminent mathematician in the time of Adrian, by whom he was employed in the rebuilding Jerusalem. While thus engaged, he was induced by some Christian converts to embrace their religion; but falling into disrepute among his new associates, and being excommunicated by them as a magician, he apostatized to Judaism. A few fragments are yet extant of a translation of the Old Testament by him into the Greek language.—*Fabricius.*

AQUINAS (St THOMAS) a celebrated scholastic divine, descended from the counts of Aquino, in Calabria, in the kingdom of Naples, was born in the year 1224. He acquired the rudiments of education at the school of Mount Cassino, and was thence removed to the university of Naples. At the age of seventeen he entered a convent of Dominicans, much against the will of his mother, who persevering in her wishes to recover him, the monks, anxious to secure so honourable an addition to their fraternity, determined to send him out of the kingdom to Paris. He was however arrested by his two brothers on his way, and refusing to give up his intention, was shut up in a castle belonging to his father for two years. He at last however found means to escape to Naples, and in the year 1244 was conducted by John, master of the Teutonic order, to Paris, whence he soon after departed to Cologne. At Cologne he studied under Albert, an eminent teacher of philosophy, who foresaw his future celebrity. In 1246, he visited Paris in company with Albert, and at the age of twenty-four became a preceptor, at the university of that capital, in dialectics, philosophy, and theology, and acquired the highest reputation. Princes and popes held him in the greatest estimation, and he was invited by St Louis, then reigning in France, to his court and table. On a visit to Rome, Aquinas distinguished himself by a neat repartee: being in a closet with Innocent IV, when an officer brought in a large sum of money produced by the sale of absolutions and indulgences: "You see young man," said the Pope, "the age of the church is past, in which she said 'Silver and gold have I none.'" "True, holy father," replied the angelic doctor, "but the age is also past, when she could say to a paralytic—'Rise up and walk.'" In 1263 he returned to Italy, when Pope Clement IV offered him the archbishopric of Naples, which he refused. A general council being summoned at Lyons in 1274, for the purpose of uniting the Greek and Latin churches, Aquinas was called thither, to present the council with a book which he had written on the subject; but died on the way, near Terracina. After his death, the honours paid to his memory were prodigious: besides the title of angelic doctor, bestowed on him after the absurd fashion of the times, he was called the "Angel of the Schools," the "Eagle of Divines," and the "Fifth Doctor of the Church;" and, at the request of the Dominicans, he was canonized by John XXII, his tomb of course supplying the necessary testimony of miracles. His writings, which were held in the highest estimation in the next century, gave rise to a sect called, after him, Thomists. The celebrity of Aquinas was altogether confined to scholastic divinity, and his talents were exclusively wasted in the useless disputes which in those days were connected with it. His writings, which are exceedingly numerous, make seventeen volumes folio. His principal work, "Summa Theologiæ," bears a high reputation in the Romish church; and

whatever may be thought of the value of its metaphysical acuteness in doctrinal points, the second section on morals is universally esteemed. The latest edition of his works at large is that of Antwerp, 1612; but his *Summa Theologiæ* has passed separately through various editions. The resemblance in thinking and writing between Augustin and Aquinas is so marked, that it has been fancifully said, that the soul of the one had passed into the body of the other.—*Cave. Moreri. Brucker.*

AQUINO (CHARLES D') a Neapolitan Jesuit, born 1654. He was eminent for his proficiency in rhetoric, which art he taught at Rome in the college belonging to his order. He was also advantageously known as a poet and historian, having in the former character given to the world three volumes of poems, printed 1702, and in the latter a "History of the War in Hungary," besides a work entitled "Historical Miscellanies." He also published two octavo volumes of Orations in 1704, a Military Lexicon in 1724, 2 vols. folio, and a quarto volume entitled "Nomenclator Agriculturæ." He died in 1740.

AQUINO or **AQUIN** (LEWIS CLAUDE D) a musician of eminence, a native of Paris, born 1694, died 1772. He at a very early age became a pupil of Bernier, and such was the precocity of his talent that, before he attained his ninth year, his master frankly avowed his own incompetency to proceed any further in his instruction. In his twelfth, he obtained a situation as organist to a church in the French metropolis, whither Handel is said to have gone purposely to witness his performance. Two of his compositions only have appeared. His son, PIERRE LOUIS DE CHATEAU LYON D'AQUIN, practised physic at Paris with some reputation, and was the author of "Siccle Littéraire de Louis XV," a work printed originally under the name of "Lettres sur les Hommes célébrés dans les Sciences," in two octavo volumes. He also published in 1775 some poetic trifles entitled "Contes mis en vers, par un petit cousin de Rabelais;" "Semaine Littéraire," in four duodecimo volumes; and edited a Literary Almanack. He died in 1797 at Paris.—*Dict. Hist.*

ARABELLA (STUART) commonly called the lady Arabella. This unhappy and innocent victim of reigning jealousy and state policy, was the only child of Charles Stuart earl of Lennox, younger brother to Henry lord Darnley, the husband of Mary queen of Scots. She was therefore cousin-german to James I, to whom, previously to his having issue, she was next in blood for the crown of England, from Henry VII, by the second marriage of his eldest daughter Margaret. James himself had a priority under both marriages; by his mother on the first, and by his father on the second. The earl of Lennox died young; and, as if to add to the mournful peculiarity of her lot, she received an excellent education. Her proximity to the throne was the source of all her misfortunes. Elizabeth, who never lost sight of the claims which might arise out of hereditary pretensions, for some time before

her decease, held the lady Arabella under restraint, and refused the request of the king of Scotland, to give her in marriage to the duke of Lennox, his kinsman, with a view to remove her from England and a party unfavourable to the Scottish succession. The Pope had likewise formed the design of raising her to the English throne, by espousing her to the duke of Savoy; which project is said to have been listened to by Henry IV of France, from a wish to prevent the union of England and Scotland. Whatever jealousies these rumours or intentions might have excited before the accession of James, they would possibly have subsided afterwards, but for the ill-concerted conspiracy of some English noblemen, who, indignant at the Scottish ascendancy, plotted to set aside James in favour of Arabella. The detection of this plot, of which the latter was altogether innocent, ultimately proved her destruction; for although left at liberty for the present, when it was some time after discovered that she was secretly married to the grandson of the earl of Hertford, both husband and wife were committed to the tower. After a year's imprisonment, although under the care of different keepers, they contrived to make their escape at the same time; but missing each other, the unhappy lady, already embarked, was retaken, her husband getting safe to the continent. Remanded to the Tower, the remainder of her life was spent in close and melancholy confinement, which finally deprived her of her reason, in which situation she expired on the 27th September, 1615, aged thirty-eight. While the fate of Mary queen of Scots has procured universal sympathy, that of her more innocent and ill-fated kinswoman has been but little regarded, although sacrificed by James to precisely the same state maxims to which his mother fell a victim; and it may be incidentally remarked, that in Westminster Abbey the coffin of the one rests on that of the other. The lady Arabella possessed talents of a superior order, as is proved by her manuscript productions in the possession of the marquis of Hertford, and by others which have been printed in the Harleian Miscellany. From a picture of her, taken when thirteen years of age, it appears that she was then in person very pleasing, possessing a fair complexion, full grey eyes, and long flaxen hair flowing to her waist. Her husband was subsequently recalled; and adhering to the Stuarts through all their fortunes, was by Charles II restored to his great grandfather's (the Protector's) title of duke of Somerset.—*Biog. Brit. Ballard's Learned Ladies.*

ARAGON (TULLIA D') a poetess of the sixteenth century, descended from an illegitimate branch of the royal family of Spain. Her father, Pietro Tagliava, cardinal d'Aragon, whose natural daughter she was, placed her first at Ferrara and afterwards at Rome, where her fine natural talents received the highest degree of cultivation. Her works which remain are—"Rime," in one 8vo vol. printed in 1547; "Dialogo dell' infinita d'Amore," which appeared in the same year;

and "Il Meschino o il Guerino," 4to, in 1560. Her beauty and accomplishments were the theme of several of the poets of her age, who celebrated them both in prose and verse, as well during her life-time as after her decease, which took place at Florence near the close of the sixteenth century.—*Biog. Universelle*.

ARAJA (FRANCISCO) a Neapolitan musician and composer, who entered the service of the empress Catherine of Russia, and in 1755 produced at St Petersburg "Cephalo et Procris," the first opera ever written in the Russian language. Araja afterwards composed several other pieces of merit, and having amassed considerable property, returned to Italy in 1759, and settled at Bologna, where he died.—*Biog. Dict. Mus.*

ARAM (EUGENE) the son of a market gardener at Newby in Yorkshire, of which county he was himself a native, being born at Rams-gill in Netherdale. Possessed of very good natural talents, he so far improved the few opportunities which fell in his way, as to make himself intimately acquainted with the principal Latin authors, and also to acquire a tolerable proficiency in Greek. Through the kindness of a Mr Norton he was in 1734 enabled to set up a school at Knaresborough, where he married. About the year 1745, one Daniel Clarke, a shoemaker of that place, was suddenly missing under suspicious circumstances; but as his affairs were known to be in a deranged state, he was generally supposed to have absconded from his creditors, till full thirteen years afterwards, when an imprudent expression dropped by one Richard Houseman respecting a skeleton then discovered in a cavern called St Robert's cave, caused him to be taken into custody as one concerned in the murder of Clarke. From his confession an order was issued for the apprehension of Aram, who had long since quitted his native county, having been usher, first in a school in London, and afterwards in another at Hayes in Middlesex, and in 1757 at the grammar school at Lynn. During the whole of this period he had prosecuted his studies with great diligence; and besides cultivating a vein for poetry, had obtained a partial acquaintance with Hebrew and several Oriental tongues, as well as with history, botany, and other sciences. In the latter end of 1758, he was arrested and lodged in York castle on the charge above mentioned, brought to trial on the 3d of August 1759, and, notwithstanding a very able, eloquent, argumentative, and pathetic defence, satisfactorily convicted on the testimony of Houseman (who was admitted a witness for the crown) corroborated by strong circumstantial evidence. Before his execution, Aram acknowledged his guilt, and attributed the perpetration of the crime to jealousy; other motives were however supposed to have weighed no less powerfully with him at the moment. On being summoned to his fate, it was discovered that he had contrived to wound the veins of his arm in two places with his razor; life however was not extinct, and being conveyed in a state of stupor to the gallows, he under-

went the sentence of the law, and was afterwards gibbeted in Knaresborough forest. His trial produced at the moment a sensation fully equal to that excited by Thurtell's in later times.—*Gent. Mag. Ed.*

ARATOR, an author of the 6th century, born in Liguria. His principal work, a translation of the Acts of the Apostles into Latin verse, was written under the auspices of pope Vigilius, with whom he was a great favourite. This book has gone through several editions. Arator died in the year 556.—*Moreri*.

ARATUS, a Cilician poet and astronomer, lived about the 124th Olympiad. A poem of his in the Greek language, entitled "Phænomena," which is still extant, was translated into Latin by Cicero, who speaks highly of his versification. An edition, Greek and Latin, was published by Grotius in 4to, at Leyden, in 1600. Another and a better appeared at Leipsic in 1801, 2 vols. 8vo. The work is quoted by St Paul, and gives a favourable idea of the author's knowledge of astronomy, considering the age in which he lived.—*Hutton's Math. Dict.*

ARATUS of Sicyon son of Clinias, was born B.C. 273. His father fell in a tumult excited by Abantidas; and the escape of the young Aratus, then only seven years old, arose from his taking refuge unobserved, and without knowing it, in the house of the tyrant's sister, who, struck with the circumstance, humanely preserved him, and forwarded him secretly to his relatives at Argos. Here he was liberally educated, and as he grew up was regarded by the exiles from Sicyon as their future restorer; nor were they disappointed, for he had scarcely reached his twentieth year, when he formed a scheme for delivering his native city from its then tyrant Nicocles, which he executed with equal art and boldness. Having scaled the walls by night, he made known his presence at day break, by the voice of a herald proclaiming, "that Aratus, the son of Clinias, invited the citizens to resume their ancient liberty." The summons was joyfully obeyed, and the tyrant making his escape from the city, Aratus would not allow the restored liberty of his country to be stained with the blood of a single citizen. He found many difficulties to contend with in the administration of the affairs of Sicyon, owing to the contentions between the restored citizens and those who had obtained possession of their property, as also from Antigonus, king of Macedon, who espoused the party of the deposed Nicocles. Under these circumstances he deemed it expedient to join Sicyon to the Achæan league, the only remaining support of freedom in Greece. By his influence with Ptolemy, king of Egypt, he obtained a sum of money sufficient to settle the various claims of the returned citizens, and being vested with the supreme constitutional power in Sicyon, he governed with equal virtue and moderation. In due time, being made general of the Achæan league, he recovered the almost inaccessible fortress of Corinth from the king of Macedon, by a plan which is one of the most admired

instances of ancient military stratagem. In the end however, owing to a hostile league against the Achæans between the Etolians and Spartans, Aratus, in opposition to his own principles, was obliged to call in the assistance of Antigonus, king of Macedon. This turned the tide of affairs for a while, but on the death of Antigonus, similar difficulties occurring, his successor Philip was in the same manner called to the aid of the Achæans. In the course of this war Philip, who at first much venerated Aratus, was gradually estranged from him by the ill offices of his ministers, and the difference of their characters and designs. The alienation proceeded so far, that when, on the peace, Aratus returned to Sicyon, it was believed that Philip had caused a slow poison to be administered to him; such at least was the opinion of Aratus himself, who, spitting blood in the presence of a friend, exclaimed, "Behold the effect of a friendship with kings." Aratus died in his fifty-seventh year, B. C. 216, and was interred with the highest honours by his countrymen. He is generally regarded as one of the most virtuous and able men that reflected lustre on the declining days of Greece. Polybius speaks in high terms of "Commentaries" written by him on his own actions and the affairs of the Achæans, which it is much to be regretted have not reached posterity.—*Plutarch. Polybius.*

ARBRISEL (ROBERT D') founder of the celebrated abbey of Fontevraud, was born about the year 1047, in the village of Arbrissel in Brittany, and studied and received the degree of doctor of divinity in the university of Paris. The fame of his talents and sanctity having reached the bishop of Rennes, that prelate constituted him archpriest and official in his diocese, where he laboured with much zeal for the reformation of the priesthood. On the death of his patron, the canons, who were by no means pleased with his plans of reform, regarded him with so much ill will, that he retired to teach divinity at Angers. At length, disgusted at the general corruption of manners, he withdrew into a desert, in order to lead a life of solitary austerity; which conduct produced the usual result of similar resolutions in the middle ages, by rapidly surrounding him with disciples and admirers. Moved by one of his sermons, the baron of Craon founded an abbey for him; and his reputation reaching pope Urban II, that prelate appointed him Apostolical Preacher. Holding the latter appointment to be inconsistent with his abbacy, after two or three years he gave it up, and resumed his avocation of promiscuous preaching. The multitude of his followers of both sexes became so great in a short time, that to avoid the disorder of such a moving train, he resolved to fix them in the forest of Fontevraud, where, aided by pious benefactions, he was soon enabled to form an establishment, and to erect the monastery which rapidly became so rich and flourishing. Having effected this object, he once more resumed his itinerant preaching; and of his influence in the conversion of libertine women in particular, the most extraordi-

nary tales are related. The fame of his conversions now produced a bull in favour of his rising institution from pope Paschal II, and convents of the order were founded in most of the provinces of France. The peculiar conduct of Robert in the management of his female converts, produced some extraordinary reports in his own time. Curious letters have come down to these days, addressed to him on this subject by Geoffry abbot of Vendome and Marbodius bishop of Rennes; from which it appears, that he was accused of the vain-glory of frequently passing the night with his female followers, simply in order to evince his strength in the resistance of temptation. The reverend scribes, in expostulating with him on the scandal and imprudence of the practice, are particularly shocked by the rumour that he preferred undergoing mortifications with the most agreeable and handsome of his votaries, to whom he was mild and urbane, although churlish and austere to all the rest. Some very natural disorders arising from the promiscuous concourse of the sexes, are also hinted at. The production of the letters of prior Geoffry, by father Sirmond in 1610, produced a violent controversy, and the interference of an abess of Fontevraud, of the blood royal, to get the original MS destroyed, only served to confirm its authenticity. The spiritual attachment of Robert to female devotees, was conspicuous in the constitution of his order, both monks and nuns being placed under the supreme authority of an abess; and in 1704 there were no less than fifty-seven priories in France under the sway of the thirty-third abess of the order, a lady of the noble house of Mortemar. The vindication of this arrangement, on the principle of the obedience of Jesus Christ to his mother, and of the influence of the latter in heaven, is whimsically managed by several of the Catholic writers. Robert D'Arbrissel died in 1117, and was buried in his own abbey.—*Bayle.*

ARBUTHNOT (ALEXANDER) a Scottish divine, the son of the baron of Arbuthnot, was born in the year 1538. He was a zealous promoter of the Reformation, and was much employed by the church of Scotland in its tedious disputes with the regency during the minority of James VI. The part taken by Arbuthnot offended James, who took further offence at his editing the publication of Buchanan's History of Scotland; and by an oppressive act of arbitrary power he was confined to his college, a treatment which is supposed to have hastened his death in 1583. His only existing work is an elegant Latin treatise entitled "Orationes de origine et dignitate Juris." Edin. 4to, 1572.—*Biog. Brit. Spottiswoode.*

ARBUTHNOT (DR JOHN) a celebrated physician in the reign of queen Anne, and one of the most conspicuous of the brilliant constellation of wits by which that reign is so honourably distinguished. He was the son of an episcopal clergyman in Scotland, and was born soon after the Restoration, at Arbuthnot, near Montrose. He went through a course of academical studies at Aberdeen, where he also

took the degree of doctor of physic. On repairing to London, with a view to the acquirement of independence, he first occupied himself in teaching the mathematics, in which science he was a great proficient. He soon became known to the learned world by his "Examination of Dr Woodward's Account of the Deluge;" and his reputation was still further increased by an able treatise "On the Advantage of Mathematical Learning." Another curious and instructive dissertation, "On the Regularity of the Births of the two Sexes," communicated to the Royal Society, led to his election into that body in 1704. During this time he was also rising in his profession, and in consequence of a casual attendance on prince George of Denmark, in which his services proved beneficial, was first appointed physician extraordinary, and afterwards in ordinary to the Queen. It was about this time that he became acquainted with Swift, Pope, and Gay, with whom he continued in habits of mutual kindness, friendship, and esteem, for the remainder of his life. In 1714, he engaged with Pope and Swift in the extensive scheme of a satire on the abuses of learning in every branch. This plan was never completed; but the "Memoirs of Martinus Scriblerus," published in Pope's works, is a part of it; and of that the first book is deemed the production of Dr Arbuthnot. The death of queen Anne, which was fatal at once both to his personal and political views, of course removed him from St James's, and thereby rendered a more assiduous general pursuit of his profession necessary. He did not however altogether neglect his literary efforts, although his publications were less frequent. His principal learned work, entitled "Tables of Ancient Coins, Weights, and Measures, explained and exemplified," 4to, appeared in 1727; and two professional treatises—"On the Nature and Choice of Aliments," 1732, and "On the Effects of Air on Human Bodies," 1733, close the list of his serious performances. The productions springing out of that fine feeling of humour which he so largely possessed, are for the greater part so intimately blended with those of his confederates, it is not easy to distinguish them; but the celebrated "History of John Bull," which is attributed to him alone, places him high in the ranks of wit. "A Treatise concerning the Altercation or Scolding of the Ancients," and "The Art of Political Lying," with a few more in the same spirit, are also among his acknowledged pieces. The greater part of two posthumous volumes, published as "The Miscellaneous Works of Dr Arbuthnot," are now known not to be his. The satire of Dr Arbuthnot is pleasant and good humoured, but sometimes strongly tinged with the spirit of party, although seldom embittered with rancour or gall. If author, as asserted, of the "Memorandum of the Six Days preceding the Death of a late Right Reverend," (bishop Burnet) this praise must however, in that instance at least, be qualified. Possibly a writer who embraces party sentiments very strongly, cannot on all occasions treat an oppo-

nent with due candour; nor was the school of Pope and Swift very forbearing in these points. The well-known epitaph on colonel Chartres is a more defensible piece of severity, for nothing could be too bitter upon the infamous subject of it. Dr Arbuthnot failed in verse, and, after an attempt or two, wisely abstained from it. No man was more beloved by his associates: Pope dedicated to him his "Prologue to the Satires," and Swift affectionately adverts to him in more than one of his poems. In alluding to the plan of the satire, of which Martinus Scriblerus is a specimen, bishop Warburton regards its non-completion as a great misfortune to literature; while Dr Johnson deems it a failure in consequence of its wasting ridicule upon follies already exploded. The part executed may appear to countenance the last opinion; but it is to be recollected that it amounts to little beyond a commencement. Sterne possibly borrowed the idea of his Walter Shandy from Cornelius Scriblerus, doubtless the conception of Arbuthnot, the most learned of the associates. For some time before his death, Dr Arbuthnot was afflicted with an incurable dropsy, and prepared for the expected event in a manner altogether becoming his virtuous and respectable character; his latest letters exhibiting his habitual piety and disdain of vice and meanness, with pathetic earnestness. He died at his house in London, in February 1734-5, leaving behind him a son, who was one of the executors of Pope, and two daughters.—*Biog. Brit.*

ARCESILAUS, a Greek philosopher, was born at Pitane in Æolia, B.C. 316. After the death of Crates, he took charge of the academy, and introduced innovations which led to a new school, distinguished by the name of the second or middle academy. It was sceptical in a very high degree, and particularly opposed to that of the Stoics. The gross intemperance of Arcesilaus was very incompatible with the philosophical character; but he was at the same time magnanimous even in his enmities, and exceedingly liberal and humane. The Athenians honoured him with a magnificent funeral. More than one of the Christian fathers have vehemently assailed his doctrines.—*Brucker. Bayle.*

ARCHILAUS, a Greek philosopher, and a disciple of Anaxagoras, whom he succeeded at Lampsacus, but, subsequently removed to Athens, and became the master of Socrates. Like his predecessors, he chiefly applied his attention to physical questions on the origin and nature of things, and of course was equally visionary. In morals he taught, that all actions were indifferent until human institution made them good or evil; an opinion which soon yielded to the wiser doctrines of his disciple Socrates.—*Diog. Laërt. Brucker. Bayle.*

ARCHILOCHUS, a Greek poet, a native of the isle of Paros, who flourished about the 29th Olympiad. The invention of the iambic metre is attributed to him; and so caustic was the tone of his satires, that Lycambes, who had incurred the poet's indignation by breaking a promise to give him the hand of his daughter

In marriage, hanged himself on becoming the object of his attack. So virulent indeed were his verses, that they were at length formally prohibited by the Spartan government. None of them have descended to posterity.—*Vossius. Sæxi Onomasticon.*

ARCHIMEDES, the most celebrated mathematician among the ancients, lived about 250 years before Christ, and was a native of Syracuse in Sicily, and related to Hiero, the king of it. Under what masters he studied, or how much of his extraordinary knowledge he acquired from his predecessors, is not known. That he travelled into Egypt, appears certain; but it is probable that, in his scientific acquaintance with that country, he communicated more than he received, and that he owes the great name which he has transmitted to posterity to his own vigorous and inventive intellect. He was equally skilled in the sciences of astronomy, geometry, mechanics, hydrostatics, and optics, in all of which he excelled, to the production of many extraordinary inventions. His ingenuity in solving problems had in Cicero's days become proverbial; and his singular ingenuity in the invention and construction of warlike engines is much dwelt upon by Livy. His knowledge of the doctrine of specific gravities is proved by the well-known story of his discovery of the mixture of silver with gold in king Hiero's crown, which fraud he detected by comparing the quantity of water displaced by equal weights of gold and silver. The thought occurred to him while in the bath, on observing that he displaced a bulk of water equal to his own body; when, at once perceiving a train of consequences, he ran naked out of the bath into the street, exclaiming *Εἰρήκα*, I have found it! To show Hiero the wonderful effect of mechanic power, he is said, by the help of ropes and pulleys, to have drawn towards him, with perfect ease, a galley which lay on the shore manned and loaded. His grandest efforts of mechanic skill were however displayed during the siege of Syracuse by Marcellus, when he contrived engines of annoyance of the most stupendous nature, and among other applications of science, is said to have fired the Roman fleet by means of reflecting mirrors; of which story, long treated as a fable, Buffon has proved the credibility. Eminent as this great mathematician was for his knowledge of mechanics, he was still more so for the rare talent which he possessed of investigating abstract truths, and inventing conclusive demonstrations in the higher branches of pure geometry. According to Plutarch, intellectual speculations of this nature most delighted him; and on his discovery of the ratio between the sphere and the containing cylinder, he requested his friends to place a sphere containing a cylinder on his tomb, with an inscription expressing the proportion between them; a desire that afterwards led to its discovery by Cicero. It is painful to relate, that when Syracuse was taken by storm, to the great regret of Marcellus, who had given orders to spare him, he was killed by a brutal Roman soldier, while in the act of drawing a geome-

trical figure on the sand, so wholly absorbed as to be altogether unconscious of the confusion around him. The Roman general took upon himself the charge of his funeral, and protected and honoured his relations. The discovery of his tomb in Sicily by Cicero, 140 years after, was a striking incident; and on reading the fact, as related by the latter, the fate of both these illustrious ancients will excite many affecting associations. Several valuable remains of this celebrated mathematician are preserved. In abstract geometry there are two books "On the Sphere and the Cylinder;" a treatise "On the Dimension of the Circle;" two books "On Obtuse Conoids and Spheroids;" a book "On Spiral Lines;" and another "On the Quadrature of the Parabola." Besides these geometrical works, he wrote a treatise entitled "Arenarius," in which he demonstrates, that the sands of the earth might be numbered by a method somewhat similar to that of logarithms. In mechanics he has left a treatise "On Equiponderants or Centres of Gravity;" and in hydrostatics, a treatise "On Bodies floating in Fluids." Other works of Archimedes are mentioned by ancient writers, which are now lost. Of those that remain various editions have appeared, the best of which issued in 1792 from the Clarendon Press in Oxford, with a new Latin translation, a preface, notes by Torelli of Verona purchased of his executor Albertini, and with various readings. An English translation of the "Arenarius," has been furnished by G. Anderson.—*Hutton's Math. Dict. Aikin's G. Dict. Sæxi Onomasticon.*

ARCHINTE, the name of a noble family in the Milanese, which boasted several distinguished members during the 16th and 17th centuries. **OTTAVIO ARCHINTE**, born about the close of the 16th century, published memoirs of the family under the title "Epilogati raconti della antichita e nobilita della famiglia Archinti," printed in folio in 1648, and an account of the antiquities preserved in the family collection, also in folio. He was long in the service of Spain. **CHARLES**, another eminent scion of the same race, was born in 1669. On his return from his travels in 1700, he enriched his native city by the foundation of an academy for the cultivation of the arts and sciences, endowing it with an excellent library and extensive mathematical apparatus. He was also principally instrumental in the organization of the Palatine Society. Philip IV of Spain, who held him in great esteem, created him a grandee, and conferred on him the order of the Golden Fleece. A posthumous work of his, treating of his favourite studies, and entitled "Tabulæ præcipua artium et scientiarum capita digesta per ordinem," &c. was printed at Venice.—*Biog. Universelle.*

ARCHON (LEWIS) a native of Riom in Auvergne, born in 1645, died 1717. His history of the Royal Chapel of France, printed in 1711 at Paris in two vols. 4to, evinces much learning and antiquarian research. He was an ecclesiastic, and abbot of St Gilbert Neuffontaines in Clermont.—*Dict. Hist.*

ARCHYTAS of Tarentum, a soldier, and a philosopher of the Pythagorean school, eminent alike for his valour and wisdom. He was repeatedly chosen general of the Tarentines, and was Plato's instructor in geometry. He was one of the first who applied the theory of mathematics to practical purposes; and many marvellous stories are related of his skill in mechanics, such as his constructing a wooden pigeon which could fly, &c. He flourished about 400 years before the birth of Christ, and is said to have been shipwrecked in the Adriatic, and thrown upon the Apulian coast. A treatise on the Universe, ascribed to him, has been twice printed, at Leipsic, 1564, and at Venice, 1571, both in 4to.—*Vossius de Mathem.*

ARCQ (PHILIP AUGUSTUS CHEVALIER D') supposed to be the natural son of the count de Thoulouse, was born at Paris. He is the author of—1. "Loisirs," 1755, 8vo; 2. "Le Temple de Silence;" 3. "Lettres d'Osman," 3 vols. 12mo; 4. "General History of Wars," 2 vols. 4to; 5. "History of Commerce and Navigation." He died in 1779.—*Biog. Universelle.*

ARDEN (EDWARD) a Roman Catholic gentleman of an ancient family in Warwickshire, executed for treason in the reign of queen Elizabeth. This unfortunate person is now generally supposed to have fallen a victim to the vengeance and implacable malice of that unworthy favourite of Elizabeth, the insolent and oppressive earl of Leicester. His marriage into the family of the Throckmortons, so inimical to the succession of that queen, doubtless afforded facility to the machinations of the iniquitous enemy who, irritated by his independent spirit in a county which he affected to entirely sway, took advantage of a suspicious and unhappy circumstance to effect his destruction. Mr Arden had married one of his daughters to a young man of ancient family, of the name of Somerville, who is thought to have been a little insane. This unfortunate individual was seduced by a wretched popish priest, in the family of his father-in-law, to undertake the assassination of Elizabeth; but such was his madness that, in his way to London, he drew his sword and wounded several Protestants. Arrested for this outrage, his wife showed her father a treasonable letter from the priest Hall, which she threw into the fire; and it is only the hearsay of the existence of this letter which produced his destruction. Somerville, Hall, Mrs Somerville, Elizabeth Somerville, a sister, and Mr and Mrs Arden, were all within a few days committed to the Tower for high treason. Hall and Mr Arden were racked; and some sort of disclosure having been produced by these execrable means, Mr and Mrs Arden, Somerville, and Hall, were tried and convicted of high treason. Somerville and Arden being removed to Newgate the night previous to execution, the former destroyed himself, as was given out; but the public thought very differently of the matter. The next day, Dec. 20, 1583, Arden was executed in Smithfield, protesting his innocence, and meeting death with the same high spirit which he had shown during the whole of his life. Hall, the

priest, was pardoned; and Leicester wished Sir Christopher Hatton to send him out of the country; which that statesman refusing to do, the practices of the earl, in making use of this wretched tool to effect the destruction of a personal enemy, began to be generally suspected. Mrs Arden was pardoned; but the queen gave the estates which fell to her by her husband's attainder, to Darcy, a creature of Leicester's. It is pleasant to be able to add, that the son and heir of the ill-fated pair being bred a lawyer, and turning out an influential and able person, subsequently recovered the greater part of these estates by course of law. Holingshed, Stowe, and other chroniclers speak of Arden as a convicted traitor; but Camden was too honourable to conceal his opinion. Lord Burleigh is not held to be blameless in this affair, as he admits that Somerville was mad; while Camden, who avowedly thought Arden innocent, wrote under his patronage. There is but too much reason indeed to believe, that the high spirit and known opinions of the victim formed the chief grounds of the license in this instance afforded to the base devices of his arrogant enemy.—*Biog. Brit.*

ARDERN (JOHN) an eminent surgeon of the 14th century, said to have mainly contributed to the revival of surgery in this country. He practised at Newark, and besides a manuscript treatise, "De Re Herbaria, Physica, et Chirurgica," is the author of a work on Fistulae, 1588.—*Pulteney's Sketches of Botany.*

ARDERNE (JAMES) dean of Chester, of which palatinate he was a native. He was the author of a learned work entitled, "Conjectura circa *επινομιην* Clementis Romani," and "Directions concerning Sermons." His death took place in 1691.—*Athen. Oxon.*

ARETEUS, an ancient physician of great eminence. Several editions of his works, which are much valued, have been published, especially one in folio, edited by Wigan at Oxford in 1723, and another by the celebrated Boerhaave in 1731 at Leyden. There is a translation of them by Mofat in 8vo, 1776. He was a Greek by birth, and lived under Vespasian.—*Vossius. Friend.*

ARETINO (GUIDO or GUIDONE) a Benedictine, born at the town whence he took his name. He is said to have first reduced the science of music to a fixed system, and to have been the inventor of the monosyllables of the Solfeggio, ut, re, mi, fa, sol, la, drawn from the words of a line in a Latin hymn. It is far from improbable, that Aretino was merely the restorer of the true principle of the ancient Greek music, with which, in the course of his studies, he became acquainted through sources which have escaped modern research. It is unnecessary to add that the monosyllable *si*, whence the modern scales of the two modes, major and minor, is a later invention.—*Burney's Hist. of Mus.*

ARETINO (LEONARD) a learned Italian historian, born at Arezzo in Tuscany in 1370. At the period of the revival of learning, he was a very distinguished scholar, and being chosen secretary to the republic of Florence, amassed

a large fortune. He died in that capital, highly respected, in the year 1443. He translated Aristotle's Ethics and Politics, and Plutarch's Lives, into elegant Latin. His original works, also in Latin, are—1. "A History of Ancient Greece," Venice, 1543; 2. "An Attempt to supply the Defect of the Second Decad of Livy," 4to, Augsburg, 1537; 3. "A History of the Transactions of his own Times in Italy," 4to, Lyons, 1539; 4. History of Florence," folio, 1476; 5. "On Studies and Letters," 1642; 6. "Epistles," republished in 1741, 8vo, with his life by Melius. The latter publication is deemed of considerable historical value.—*Moreri. Nouv. Dict. Hist.*

ARETINO (PETER) surnamed the Scourge of Princes, born in 1492, was the natural son of a gentleman of Arezzo in Tuscany. His education was neglected, and he was unacquainted with the learned languages; yet few literary characters have excited more notice during their lives. It is no honour to his contemporaries, that this celebrity was chiefly acquired by virulent satire and scandalous indecency. He began, after the manner of Italian wits, with attacks on the clergy, and proceeded to princes and sovereigns, whom he held in such awe, that most of the European potentates, including the emperor Charles V and Francis I, were among his tributaries. When the former returned from his ill-planned expedition into Africa, he sent Aretino a golden chain: "A trifling gift," exclaimed the satirist, "considering the greatness of the folly." As was natural, his success made him vain and insolent in the extreme; and he even went so far as to issue a medal bearing on one side his head, with an inscription, "The divine Aretino," and on the other his figure, seated on a throne, receiving the envoys of princes. Like most of the wretched tribe who praise and censure for money, he was best corrected with a cudgel; a secret discovered by some of the petty princes of his own country, who kept him in greater awe than foreigners. He wrote in a variety of ways, prose and verse, letters, discourses, dialogues, sonnets, cantos, and comedies; in which extravagant conceits, coarse gibes, with a mixture of ingenious turns and forcible expressions, compose the substance of works now sunk into merited oblivion. His name has been rendered particularly infamous by the letters and sonnets accompanying the celebrated "Postures," engraved by Marc Antonio of Bologna, from designs by Julio Romano. Strange to say, while engaged in these licentious productions, he was also writing the lives of St Thomas Aquinas, and of St Catherine of Sienna, and composing penitential hymns and other pieces of devotion. Aretino died at Venice in 1556. In an epitaph written for him by an Italian wit, it is observed, "that he satirized every one except God, whom he spared only because he did not know him."—*Moreri. Bayle. Tiraboschi.*

ARETIUS (BENEDICT) an ecclesiastic of Berne in Switzerland, eminent as a botanist and theologian. In the former science he published an account of Alpine plants, which

is highly spoken of. In divinity, on which he gave lectures at Marburg, his works are—"A Commentary on the New Testament," and "Examen Theologicum," in folio. He also wrote the life of Gentilis, and died in 1574.—*Haller.*

ARGELLATI (PHILIP) a printer of Bologna, of which city he at length became a magistrate, born in 1685, died 1755. His first undertaking of any note was the quarto edition of Bedori's poems, printed in 1715; after which, settling at Milan, he superintended the publication of the "Scriptores Italicarum rerum," by Muratori, under the auspices of the emperor Charles VI, who granted him a pension, and made him one of his secretaries. His editions are in general valuable, especially his "Sigonius," 6 vols. folio.—*Biog. Univ.*

ARGELLATI (FRANCIS) son of the preceding, died the year before his father. He was an able mathematician and a good scholar, and took the degree of doctor of law. He is principally known by his "Decamerone," a work in imitation of that by Boccaccio, which he published at Bologna in 1751.—*Ibid.*

ARGENS (JOHN BAPTIST DE BOYER, Marquis of) a French miscellaneous writer, was son to the solicitor-general of the parliament of Aix, and born in that city in 1704. Against the wishes of his father, he chose the profession of arms, and passed his youth much in the inconsiderate manner of the young French military noblesse of that day. Returning to his family, his father obliged him to enter the bar; but, rapidly disgusted, he quitted it, and returned to the military service, for which he finally became disabled by a fall from his horse. For some time afterwards he lived in Holland on his literary efforts; but, being invited to Prussia by Frederick, was appointed one of his chamberlains. He resided at the court of Berlin for about twenty-five years, during which time he married, and supported the character of a good husband, friend, and master. He was much distinguished among the literati that surrounded Frederick, whom he particularly pleased by the originality and vivacity of his conversation, although occasionally liable to a great depression of spirits. He at last returned to his native city, where he lived in philosophical retirement until 1771, when he unexpectedly died, while on a visit to his sister, the baroness de la Garde, near Toulon. As a writer, the marquis d'Argens sought to establish himself on the model of Bayle, but fell far short of that eminent writer in erudition and profundity. In other respects he is to be ranked among that free and vivacious class of speculators in religion and morals, with whom the continent abounded for nearly the whole of the last century. D'Argens particularly shared in the tendencies of the French division of this class, both in respect to freedom in the articles of morals, and in a disposition to attack fanaticism and priestcraft, with too little reference to general religion, or to due discrimination. His writing display learning and reflection. His acquaintance with languages was extensive and he

possessed no inconsiderable knowledge of anatomy and painting. His various productions, collected under the title of "The Works of the Marquis d'Argens," are in 24 vols. 12mo. These chiefly comprise his "Jewish Letters;" "Chinese Letters;" "Cabalistic Letters;" and "The Philosophy of Good Sense." A number of indifferent romances, and among the rest his own "Memoirs," composed not altogether in the best taste, are separate publications; as are likewise some translations from the Greek of Ocellus Lucanus and Timæus Locrensis, with "The Discourse of the emperor Julian on Christianity," which versions are not deemed altogether accurate. He also wrote "Secret Memoirs of the Republic of Letters," the great attraction of which consists in the word "secret." His Jewish and Chinese Letters have proved the most popular of his labours.—*Nouv. Dict. Hist.*

ARGENSOLA (LUPERCIO or LOBERGO, and BARTHOLEMEW D') two brothers, natives of Balbastro in the kingdom of Arragon, the one a poet, the other an historian. The former, born in 1565, is the author of three tragedies; he died in 1613 at Naples. The latter wrote a history of the conquest of the Molucca Islands, and "Annals of the Kingdom of Arragon." He was a monk, and died in 1631 at Saragossa, surviving his brother eighteen years. After his decease, some minor poetical works of both the brothers were collected and printed in one quarto volume at Saragossa in 1634.—*Biog. Universelle.*

ARGENSON (MARC RENE LE VOYER DE PAULMY Marquis d') a distinguished statesman of the reign of Louis XIV. was born in 1652 at Venice, while his father was then ambassador from France. He was brought up to the law, and admitted a counsellor of parliament in 1669. After passing through various offices, he was created, in 1697, lieutenant-general of the police of Paris; and it was his conduct in this office which procured his equivocal celebrity. By a system of regulated espionage, he managed the vast and intricate system of the police of the French capital, so as to render it the admiration of the very showy period in which he acted. This may be some praise to him, as an agent of despotism; but he was no minister for a country of positive or even of comparative freedom. Sheltered by royal authority, he often set aside both the forms and substance of law, to the great displeasure of the parliament of Paris; and to crown his accomplishments as a minister, he introduced the use of lettres de cachet into the French police, the subsequent abuse of which infamous expedient did much to increase the indignation which led to the Revolution. That in the exercise of so much appalling power he occasionally exhibited consideration and humanity, may be conceded; but his chief object at all times was his own interest, which he sought, in the declining years of Louis, by paying his court to the Jesuits, and becoming a willing instrument in their wretched persecutions. It is no great compliment to his sagacity, that he favoured the scheme of the pro-

jector Law, and was in consequence made by the Regent president of finance, and keeper of the seals when taken from D'Aguesseau. He soon however lost both these appointments, and retired under some discredit, in 1721, to a monastery, where he died. He was more a man of business than a statesman; and it was rather to his taste for letters and political consequence, that he owed his seat in the French Academy, than to his general acquirements. He however raised his family to consequence, and left two sons, each of whom occupied high posts under the French government.—*Moreri. Nouv. Dict. Hist.*

ARGENTRE (CHARLES DUPLESSIS D') bishop of Tulle in France, a prelate of the last century, in high estimation for his talents and learning. He is principally known as the compiler of a polemical work entitled "Collectio judiciorum de novis erroribus," in 3 folio volumes. He was king's almoner, and died in 1740.—*Biog. Univ.*

ARGENTVILLE (ANTOINE JOSEPH DESALLIER D') a native of Paris, in which city his father was a bookseller. He was one of the members of the French Academy engaged in the compilation of the "Encyclopédie," and a corresponding associate of most of the European literary societies. His other works are—a Treatise on Gardening, 1747, 4to; a Catalogue of French Fossils; and "The Lives of eminent Painters," 1755, 3 vols. 4to. His death took place in the year 1766.—*Nouv. Dict. Hist.*

ARGOLI (ANDREW) a mathematician, born at Tagliacozzo in the Neapolitan territory in 1579. In his sixty-sixth year he obtained a professor's chair in mathematics at the university of Padua, and received the honour of knighthood. His works are "Ephemerides" and "De Diebus criticis," 1652, 4to. He died in 1653, leaving behind him a son (JOHN) a law professor at Bologna, who survived his father not more than seven or eight years. He published several works, especially one entitled "Endymion."—*Moreri.*

ARGONNE (NOEL, called DOM. BONAVENTURE D') a Carthusian monk, was born at Paris in 1640. In his religious retirement at Gaillon, near Rouen, he kept up an active literary correspondence with many distinguished persons, whose friendship he had acquired by his talents and learning. The work by which he is best known, is published under the name of Vigneul de Marville, and entitled "Melanges d'Histoire et de Littérature." It is a curious and interesting collection of anecdotes, and of poignant and satiric remarks, exhibiting some occasional partiality and incorrectness, but much esteemed by Bayle, who first made known the real name of the author. Dr Warton also pronounced these miscellanies superior in learning to the Menagiana and other kindred works. They were reprinted in 1725, 3 vols. 12mo; the last of which volumes contains some additions by the Abbé Banier. Besides the foregoing publication, he is also author of "Traité de la Lecture des Peres de l'Eglise," 1697, 12mo; and "L'Education Maximes et Re-

ÆLIIANUS," 1691, 12mo.—*Biog. Universelle. Mœveri.*

ARGYROPYLUS (JOHN) one of the first of the learned persons who sought an asylum in Italy, some time before the taking of Constantinople by Mahomet II in 1454. Under the patronage of the Medici, he materially contributed, by his lectures at Florence, to the revival of Greek learning: he also passed some time in France and at Rome. His personal character appears to have been intemperate and unamiable, although possessed of considerable strength of mind and fortitude. His translations of Aristotle, which are to be found in the more ancient editions of that philosopher, are deemed valuable; and he is also author of "A Commentary on Aristotle's Ethics," Paris, 1541. He died in his seventieth year, of eating a melon.—*Bayle. Fabricius.*

ARI FRODE, a native of Iceland, who lived in the eleventh century. He was one of the most learned men of his age, and the earliest northern historian. All his works are lost, except the *Schedæ* and *Landnamabok*, the latter of which has been continued by other writers.—*Henderson's Iceland.*

ARIOSII (ARTILIO) a Bolognese composer of eminence. He is said to have given lessons to Handel in his childhood, in conjunction with whom and with the celebrated Bononcini, he afterwards produced the opera of *Muzio Scævola*; Ariosti setting the first act, Bononcini the second, and Handel the third. He likewise composed several other operas in England about the year 1721, at which time the Royal Academy of Music was established; and is said to have introduced into this country for the first time the instrument called the viol d'amour, on which he performed a new symphony at the sixth representation of Handel's *Amadis* on the 12th July, 1716, soon after his arrival in this country. He then went abroad, but again returned in 1720, and composed several operas. He once more left England, after publishing a book of cantatas by subscription; and the place and date of his death are unknown.—*Burney's Hist. of Mus.*

ARIOSTO (LUDOVICO) one of the most celebrated poets of Italy, was born in 1474 at Reggio in Lombardy, of a noble family allied to the dukes of Ferrara. He received an excellent education; and his imagination being excited by a greedy perusal of the Provençal and Spanish romances, his attachment to poetry was early and spontaneous, much against the inclinations of his father, who anxiously wished him to study the law, but who at length, after a long exercise of his influence to no purpose, allowed him to follow his own course. His conversation gave great pleasure to the duke of Ferrara, who invited him to court, and he became a still greater favourite with the cardinal Hippolito d'Este, his brother, in whose service he remained for fifteen years. Being thoroughly versed in the Latin tongue, cardinal Bembo wished him to compose in that language only, which advice, with a judicious anticipation of a more open road to fame, he declined to follow. Although employed by

the house of Este in several critical missions, and even intrusted with the government of an unruly province in the Apennines, and other public business, his reward was by no means lavish. His more immediate patron the cardinal, in particular, exacted a most harassing degree of attention, and is said to have been so ungenerous as to deprive him of a small pension, because, owing to his indifferent health, he declined to accompany him to Hungary. Neither did pope Leo X, although he countenanced him both before and after his advancement to the papacy, treat him with his usual munificence. Upon the whole however, for a man of his studious and contemplative temper, the life of Ariosto was not unfortunate. On his return from his government, he was enabled by the duke of Ferrara to purchase land, and build a small but convenient house, in which, after he had settled certain vexatious family disputes and lawsuits, he lived with philosophic simplicity for the remainder of his days, and completed those works, begun in the midst of active pursuits, which have rendered his name immortal. The character of Ariosto, taken altogether, was peculiarly amiable, mild, benevolent, and humane; he was extremely sensible to all the charities of social life, and his affection and respect for his mother in her old age was most exemplary. It is thought that he was secretly married, in the latter part of his life, to a widow named *Alessandra*; but the anomalous state of society in Italy which confined the views of almost all literary men to church preferment, prevented him from open wedlock. He was however engaged in more than one passionate attachment; but his gallantry was secret, chivalric, and in general accordance with the character of the poet and the man. To the house of Este he was a zealous friend and faithful retainer; and although his eulogy is occasionally too exalted for veracity, much allowance is due to the custom and style of the times. Few poets have enjoyed more of their fame during their lives: soon after its publication, the *Orlando Furioso* became so popular, that it was sung and repeated even by the lowest classes. It is said indeed, that having wandered in a studious mood from the fortress in the Apennines in which he resided as governor, he was surprised by a body of freebooters who, when informed that their prisoner was the author of *Orlando*, immediately reconducted him to the castle, and informed him that they respected the governor for the sake of the poet. The health of Ariosto, which was always delicate, altogether declined as he approached old age, on the verge of which he died with great tranquillity, in his fifty-ninth year. The works of this great poet, one of the modern classics of Europe, consist of satires, comedies, sonnets, songs, small pieces of poetry, and his grand heroic poem of "*Orlando Furioso*." While all the works of Ariosto are much valued, and especially his satires, the great comparative pretensions of the *Orlando* engross the chief attention of modern readers. It was first published at Ferrara, in forty cantos, in 1516, not being

completed in forty-six cantos until 1532. It is scarcely necessary to add, that it is a tissue of chivalric adventures in love and arms, with all the wild accompaniments of enchantment, transformation, supernatural events, and sometimes of even moral and religious allegory. So various and versatile is the genius of the poet, that he steps from tragic to comic scenery and character, from pathos to burlesque, and from the serious and heroic to the most airy and vivacious adventures, with inimitable ease, grace, and sportiveness. So slight however is the connexion, that the various narratives rather form a collection of stories than an epic poem; but while inexhaustible invention, boundless facility, and poetical beauties of the most different kinds, can charm, the "Orlando Furioso" must ever maintain a lofty rank among the productions of human genius. It is not altogether free from the licentiousness of the age, and has some strokes of satire upon subjects in his own days deemed sacred; but modern readers will not be materially shocked at his discovery of the document containing the grant of Rome by Constantine to pope Sylvester in the moon, or with similar palpable hits at priestly frauds and forgeries. Ariosto was about thirty years of age when he commenced his great work, to which he was led by the Orlando Innamorato of Boiardo. He had first designed a poem in praise of the house of Este in terza rima, after the model of Dante, but finally adopted the subject of Orlando and the ottava rima. In person Ariosto, as appears from an admirable picture by Titian, was rather above the middle size; with a countenance grave and contemplative; his head partly bald; his hair dark and curling; his forehead high; his eyes black and sparkling; his nose large and aquiline; and his complexion inclining to the olive. It has been said, that he was crowned poet with laurel at Mantua by Charles V, which is however doubtful, although that emperor granted him some exclusive privileges, and other marks of his esteem. The best editions of Ariosto are those of Venice, 1584, folio, and of Molini, 1772, 2 vols. 4to. He has been translated into English with no great felicity by Sir John Harrington and Mr Hoole, but from the great attention recently paid to Italian literature, specimens and notices of other versions have been recently (1825) rendered probable; while one by Mr Stewart Rose has been formally announced. Ariosto left two natural sons.—*Roscoe's Leo X. Saxii Onomasticon. Biog. Universelle.*

ARIOSTO (GABRIEL) brother of the above, was a good Latin poet. His poems were published at Ferrara, in 1582. His son Horace wrote an heroic poem in Italian called "Alphæus," and was also author of some comedies, and of a defence of the Orlando of his great relative against the criticisms of Pellegrino.—*Biog. Univ.*

ARISI (FRANCIS) an eminent advocate of Cremona, born in 1657, author of several works, among which the principal are—A List of the most celebrated musicians of the seven-

teenth century, printed in 1706; "Ia Tirannide Soggiogata," an oratorio, in 4to; "Senatorum Mediolanensium," folio; "Cremona Literata," in 3 folio volumes; and "Rime per le sacre stimate del Santo Patriarca Francesco," 4to. He died in 1743.—*Biog. Univ.*

ARISTÆNETUS, a Greek Pagan writer of the fourth century. He was the friend of the rhetorician Libanius, who speaks of him in his orations; and he is also alluded to in respectful terms by Ammianus Marcellinus. He is only known to modern readers by two books of amatory epistles, written with elegance and tenderness, and adorned with quotations from Plato, Lucian, and others. These letters, which assimilate ancient with modern gallantry more than might be imagined, have been partly translated in the works of Tom Brown; and Messrs Halded, and Sheridan gave a version of the first book in 1771. Of the original, the first edition was that of Mercer, Paris, 8vo, 1595, which was reprinted in 1600 and 1610.—*Fabricius. Aikin's Gen. Biog.*

ARISTARCHUS, a learned critic and grammarian, a Samothracian by birth, who flourished about 160 years before the Christian era. The severity of his remarks is alluded to by Horace and Cicero, and his name has since become proverbial as a rigid censor. He revised Homer's poems; and having settled at Alexandria, Ptolemy Philometor committed to his care the education of his son. He died in the island of Cyprus at the age of seventy-two, it is said by voluntary starvation.—*Bayle.*

ARISTARCHUS, the Samian, a Greek philosopher, the era of whose existence is not sufficiently ascertained: he is however supposed by some to have lived in the early part of the fourth century which preceded the birth of Christ, and is said to be the first who discovered the rotatory motion of the globe upon its own centre. There is a work of his yet extant on the magnitude and distance of the sun and moon, of which a translation into the Latin language was published by F. Commandine in 1572, with Pappus' annotations. An edition of the same work in Greek and Latin has since been published by Dr Wallis in 1688. He is also spoken of as the inventor of a dial, to which Vitruvius alludes.—*Hutton's Math. Diet.*

ARISTEAS, the name of a Jew, who is said to have taken a prominent part in the Greek translation of the Bible which goes under the name of the Septuagint. He lived in the reign of Ptolemy Philadelphus, under whom he served. A history of the translation alluded to, yet extant, is ascribed to him, but on questionable grounds. In 1692, this work was printed at Oxford in 8vo, and reprinted in 1705, in folio, by Dr Hody, who has annexed a confutation of its authenticity.—*Fabricius G. Diet.*

ARISTIDES, a virtuous and patriotic Athenian, from his rigid integrity surnamed "the Just," was the son of Lysimachus, a man of middle rank in that republic. From his youth he exhibited a steady and determined character, and early began to meditate on subjects

of government. Led into an admiration of the laws of Lycurgus, he attached himself rather to the oligarchical than to the popular party of his countrymen, but always evinced the strictest political integrity. Themistocles, on the other hand, headed the more democratic party; and hence these great men were in constant opposition to each other. Aristides perceiving what it has so often been found difficult to avoid in party conflicts, that he was occasionally called upon to oppose the measures of his opponent when even salutary, one day exclaimed, that the Athenians would never prosper until both he and Themistocles were consigned to the *Barathrum* (the dungeon for condemned criminals). His integrity in the administration of the office of public treasurer, by leading to the detection of peculation on the part of Themistocles and his partisans, excited a party spirit against him, which would have ended in a prosecution, but for the interposition of the Areopagus; and by a happy stratagem he subsequently contrived to expose the real cause of the enmity against him. At the battle of Marathon, Aristides was second in command to Miltiades, and highly distinguished himself by his valour and integrity. The following year he was archon or chief magistrate; soon after which, Themistocles contrived to alarm the people with his growing influence, and succeeded in obtaining his banishment by the *ostracism*, that singular expedient in Athenian policy to get temporarily rid of an eminent citizen, whose popularity might be deemed dangerous. On this occasion a very characteristic incident occurred. A rustic citizen, unable to write, who came up to vote against him, not being acquainted with his person, asked Aristides himself to write his name on the shell which was to signify a concurrence in the sentence. "Did Aristides ever injure you?" said the patriot. "I do not so much as even know him," returned the man, "but I am tired with hearing him every where called the *Just*." Aristides wrote his name, and returned the shell in silence to the voter. From this banishment he was recalled on the invasion of Xerxes, when he honourably proposed to Themistocles to bury their animosities during the contest, for the good of their country, and used all his influence to second the views of the latter at the battle of Salamis. He was also of the greatest service, before the battle of Plataea, in preserving concord among the confederates; and after that conflict, in which he behaved with the greatest valour and conduct, he terminated a dangerous quarrel concerning the honour of the day, by giving the palm to the Plataeans, and inducing the Lacedaemonians to do the same. The war with Persia continuing, a signal proof of the high character of Aristides throughout Greece for integrity and justice was given, by the unanimous nomination of him to lay a proportionate assessment on all the states for the support of the general war. When Themistocles fell under the displeasure of the ruling party, Aristides refused to concur in sentencing him to a capital punishment; and on his ba-

nishment, instead of triumphing over a fallen enemy, ever after spoke of him with the greatest respect. After having borne the highest offices in peace and war, this virtuous politician died in great poverty. His funeral was conducted at the public expense; and death having silenced party animosity, the Athenians bestowed a pension and an estate in land on his son Lysimachus, and portioned his daughters from the public treasury. This great man died at an advanced age while on public business at Pentus, B. C. 467.—*Plutarch. Vitæ. Hist.*

ARISTIDES (ÆLIUS) a native of Adrianum in Mysia, flourished in the latter part of the second century, during the reigns of Antoninus, Aurelius, and Commodus. He was an orator of great skill and ability; and his orations, which were mostly chosen subjects, having little connexion with public business, are written with laboured accuracy, and abound with fine moral sentiments. When Smyrna had been overthrown and almost destroyed by earthquake, Aristides so pathetically described the calamity to Antoninus, that that emperor immediately ordered the city to be rebuilt, for which benevolent service the inhabitants honoured their intercessor with a statue. The fine qualities of this rhetorician were sullied in a small degree by vanity, but he was a good and able man. The entire works of Aristides were published in two quarto volumes by Jebb, Oxford, 1722.—*Fabricius. Aikin's G. Dict.*

ARISTIDES, a Christian philosopher of Athens, who lived in the second century. He presented an "Apology for the Christian Faith," to the emperor Adrian, which is praised by Jerome; but nothing from the pen of this writer has reached modern times.—*Eusebius. Lardner's Credibility.*

ARISTIDES, a Theban painter, contemporary with Apelles, flourished B. C. 240. He is said to be the first who distinguished himself by exhibiting the emotions of mind, and the operation of the affections and passions. A famous picture of this kind is spoken of by Pliny, representing a mother in a captured town, mortally wounded, with an infant sucking at her breast, whom she is apprehensive will suck blood instead of milk: it became the property of Alexander the Great. Several other very famous pictures of his are also mentioned, for one of which Attalus king of Pergamus is said to have given one hundred talents. Expression seems to have been the great excellence of this ancient artist.—*Pliny Nat. Hist.—Biog. Dict. of Mus.*

ARISTIDES (QUINTILIANUS) an ancient Greek musician, who flourished about the year 130. He was the author of a treatise upon the music of his country in three books, which has come down to posterity, and may be found with a Latin translation in the "Antiquæ Musicæ Auctores," printed by Meibomius at Amsterdam in 4to, 1652.

ARISTIPPUS, a Grecian philosopher, founder of the Cyrenaic sect, was born at Cyrene in Africa, and flourished about 400 B. C. Attending the Olympic games when

young, he heard so much of the fame of Socrates, that he was induced to quit his native city, where he held large possessions, and take up his residence at Athens, in order to attend the school of that philosopher. At first he was a docile pupil; but his constitutional temperament, which disposed him to pleasure and enjoyment, soon led him to deem the moral system of his new master too severe, while his luxurious and effeminate manner of living equally displeased Socrates, who was thereby induced to compose the excellent lecture on Pleasure, preserved by Xenophon (*Memorabilia* lib. II.) The expensive manner of living of Aristippus induced him to open a school of rhetoric, with a view to gain, being the first of the Socratic school who took money for teaching. His doctrine, like his practice, proving seductive, he soon acquired great emolument, and would have given part of it to Socrates; but, instructed by his *demon*, the latter declined it. The avowed partizan of pleasure, Aristippus now visited the Isle of Egina, where, meeting the celebrated courtesan Lais at the games of Neptune, he declared himself her admirer, and accompanied her to Corinth, where he lived with great voluptuousness. At the time that the court of Dionysius of Syracuse was the resort of philosophers, Aristippus appeared in the train of the tyrant, and by the ease of his manners and graceful sportiveness of his repartee, was in higher favour than most of his brethren. When he quitted Syracuse is not known; but the last incident concerning him, which deserves credit, is that he was teaching at Athens about 366 B. C. The number of jests and witticisms, good and bad, which have been assigned to Aristippus, are very great; some of them being very pointed and characteristic. Being asked why philosophers frequented the houses of the great, while the great disregarded those of the philosophers, he replied, "because the former know what they want, and the latter do not." A wealthy citizen complained, that in demanding 500 pieces for the instruction of his son, he required as much as would purchase a slave. "Purchase one with the money then," replied Aristippus, "and you will possess two." The following anecdote exhibits his amenity of manners to much advantage. In the midst of a dispute with Æschines, when both were growing warm—"Let us give over," he said, "before we make ourselves the talk of servants: we have quarrelled, it is true; but I, as your senior, have a right to make the first motion to a reconciliation." Of the school founded by Aristippus at Cyrene, very little is really known, but that it was continued in succession by his daughter Arete, Hegesias, Anaxeris, Theodoros, and Bion; and expired about a hundred years after its foundation, or probably rather merged into the more formal sect of Epicurus. The doctrine of Aristippus, according to the scanty information acquired of it, made pleasure the ultimate object of human pursuit, but palliated the licence of the theory by rendering virtuous emotions and praiseworthy actions essential to pleasure. Looking

to the practice of the founder himself, he appears to have been the Chesterfield of the ancient world; and the system of the latter, it taught in the Grecian manner, would possibly appear very similar to that of Aristippus. It is unnecessary to observe on the danger of a theory which prescribes enjoyment in lieu of forbearance, and formally dispensing with moral restraint, places a mere visionary barrier between virtue and sensuality.—*Stanley. Brucker.*

ARISTO of Chios a stoic philosopher, who flourished about 260 years B. C. He dismissed from his plan of study both logic and physics; the former as useless, and the latter as above our comprehension. There was also another philosopher of the name, a native of Ceos, who filled the Aristotelean chair B. C. 230, and was the author of a book entitled "Amatory Similes," cited by Athenæus.—*Stanley.*

ARISTOGITON, a citizen of Athens, whose name is rendered famous by a conspiracy formed in conjunction with his friend Harmodius, against the tyrants Hippias and Hipparchus, the sons of Pisistratus. They succeeded in killing Hipparchus; but not being seconded by the people, Harmodius was despatched by the guards, and Aristogiton secured. Hippias, instituted a severe inquisition into the plot, and tortured Aristogiton to discover his accomplices, who naming all the best friends of the tyrant in succession, they were immediately put to death. On being asked by Hippias if there were any more? "There now remains," said Aristogiton with a smile, "only thyself, worthy of death." Hippias being expelled three years after, the Athenians, from motives of policy, paid the most unbounded honours to the two friends Harmodius and Aristogiton, placing in the forum their statues by Praxiteles, singing hymns to their praise at the Panathenæa, and decreeing that no slave should ever bear their names. These events took place B. C. 516.—*Plutarch. Thucydides.*

ARISTOMENES, a celebrated Greek hero and patriot, was the son of Nicomedes, a descendant from the royal family of Messene. Indignant at the grievous servitude in which the Messenians were held by the Spartans, he excited them to take up arms in conjunction with the Argives and Arcadians, and commenced the second Messenian war, B. C. 685. After a struggle of the most arduous nature, rendered more than commonly interesting by the heroic deeds and extraordinary personal adventures of Aristomenes, the Messenians, under the conduct of his son and another leader, passed over to Sicily, where they founded the city of Messina. He himself however remained in Greece, and was planning new exertions against the Spartans, when death freed them from their inveterate and able enemy; and the independence of his country expired with him. Such was the high character of Aristomenes, that a person at the head of the state at Rhodes, being directed by the oracle of Delphos to pay his addresses to the daughter of the most worthy of the Greeks,

espoused, by way of obedience, the daughter of Aristomenes. He died at Rhodes, while on a visit to this son-in-law, who erected for him a magnificent monument in that island.—*Diod. Sic. Pausanias.*

ARISTOPHANES, a celebrated comic poet of Athens, and most likely an Athenian by birth, although his enemies sought to represent him as a stranger. He was contemporary with Socrates, Plato, Sophocles, Euripides, and some of the greatest men in Greece; and wrote most of his comedies during the Peloponnesian war. His imagination was quick and lively, and his talent for satire and railery unrivalled. He commenced his career by an exposure on the stage of those whom he deemed the enemies of the commonwealth; and such was his wit and severity, that his attacks were formidable to the most powerful, especially as the licence of the Athenian drama then allowed him to be undisguisedly personal. So agreeable was his exercise of this freedom to the temper of the Athenians, that they led him through the city, and decreed that he should be honoured by a crown of the sacred olive tree in the citadel, the greatest honour a citizen could receive. His descriptions of the sentiments and manners of the Athenians were deemed so accurate, that when Dionysius of Syracuse desired to learn the manners and language of Athens, Plato forwarded to him the comedies of Aristophanes, as the most faithful representation of them. In the employment of his extraordinary gift of comic railery, he appears in the first instance to have been patriotic and judicious, exercising it in general against the ambitious and corrupt; but, as usual with party satirists, he was seduced into indefensible personalities, and especially into a malignant attack upon the reputation and morals of Socrates. His comedy of "The Clouds" was expressly written in derision of that philosopher, whom he endeavours not only to ridicule by his buffoonery, but to load with the most serious accusations. The Athenians had sufficient sense and feeling to be displeased with this license in the first instance; but it is nevertheless supposed to have operated in the end towards preparing the people for that unjust decree which deprived Athens of its greatest ornament in Socrates. His calumnious attacks at length induced Alcibiades to procure a law against representing any character by name in comic personation; a regulation that led to what was called the "middle comedy," in which satire was obliged to assume the decent veil of fiction. Aristophanes is said to have written fifty-four comedies, but eleven only remain, of which "The Clouds" is one. Of these "Plutus" is deemed the best; and whatever his merit in other respects, his wit frequently degenerates into scurrility, his humour into mere buffoonery, while common decency is often very grossly violated. Nor are these faults to be deemed the result of the different criterion of judgment afforded by modern manners, being often censured by the ancients themselves. Latterly however even his almost universally

decried attack upon Socrates has been palliated by certain party writers in this country, for no other reason that can be discovered than a sort of sympathy with the champions of Athenian orthodoxy, with whose administration and interests the independent exertions of Socrates, as a reformer, might be presumed to interfere. It is more in favour of Aristophanes to remark that, in ages much better qualified to judge of his merits than any modern times can be, he has been thought to unite all the peculiar elegancies of the Attic muse with an inimitable talent for wit and humour. The most eloquent of the Greek fathers, St Chrysostom, thought so highly of his style, that he always slept with his works under his pillow; and the learned Madame Dacier was scarcely less enthusiastic. The exact time of his death is not known; but it is ascertained that he survived the expulsion of the thirty tyrants by Thrasybulus. The best editions of Aristophanes are those of Kuster, Amsterdam, 1710, folio; Bergler, 1760, 2 vols. 4to; Brunck, Strasburg, 1783, 3 vols. 8vo; Invernizi, Leipzig, 2 vols. 8vo, 1791. An English version of "The Clouds" has been published by Cumberland, and of some of his other comedies more recently by Mitchell.—*Vossius. Nouv. Dict. Hist. Ed.*

ARISTOTLE, one of the most celebrated philosophers of Greece, and the founder of the Peripatetic sect, was born at Stagyra, a town of Thrace, B.C. 384, being the son of Nicomachus, physician to Amyntas king of Macedon. His parents dying during his childhood, he was brought up by Proxenus of Atarna in Mysia, and at the age of seventeen became the disciple of Plato, who used to call him "the mind" of his school. Upon the insufficient evidence of Aristoxenus, who regarded him with personal enmity, Aristotle is said to have treated his aged master with disrespect and ingratitude, by setting up a rival school during his life-time. The accusation is however refuted by other authorities, and is further discountenanced by the fact of his honouring Plato by a funeral eulogy, and erecting a monument to his memory. On the election of Speusippus to the vacant chair of the academy, Aristotle retired from Athens, and went to reside with his friend Hermias, king or governor of Atarna; and when in the sequel that ruler was taken prisoner and put to death by Artaxerxes king of Persia, he gratefully married his sister Pythia, then reduced to poverty by his ruin, and took up his residence at Mitylene. A short time after these events, Philip of Macedon, impressed by his great fame, respectfully invited him to superintend the education of his son Alexander, which office he accepted, and fulfilled in such a manner as to acquire the friendship of both father and son. According to Plutarch and Aulus Gellius, Alexander was not only instructed by his great preceptor in eloquence, physics, ethics, and politics, but even in the more abstruse or esoteric doctrines of his philosophy, including metaphysics. In recompense of the merits of Aristotle, who attended to the instruction of Alexander for five years, king Philip rebuilt

the town of Stagyra, which he had dismantled, and restored the inhabitants to their former privileges. Upon the accession of Alexander to the throne of Macedon, Aristotle declined to accompany him on his grand expedition into Asia, but left with him his kinsman Callisthenes, and returned after a long absence to Athens. This separation did not produce any coolness between them; but on the contrary, in order to furnish Aristotle with materials for his Natural History, Alexander supplied him with a great variety of animals, collected at a vast expense from different countries. On the subsequent disgrace of Callisthenes, a mutual alienation indeed took place, but appears not to have led to any actual ill offices. At Athens, Aristotle found the academy occupied by Xenocrates, but obtained leave from the magistrates to occupy the Lyceum, a large open building in the suburbs of the city, previously used for military exercises. Here, about 355 B. C. he opened a school, and founded a new sect of philosophers; and as he usually walked as he lectured, his followers were called Peripatetics, and his system the Peripatetic philosophy. The superiority of Aristotle's abilities, and the novelty of his doctrines, as usual, created him rivals and enemies; and after having taught for thirteen years in the Lyceum with the highest reputation, he was accused by Eurymedon, a priest, of impiety. The express nature of this accusation is not known; but, according to Diogenes Laërtius, it consisted in some alleged prostitution of divine honours to his deceased friend Hermias. Whatever the nature of the charge, perceiving that his situation resembled that of Socrates, he withdrew with a few of his friends to Chalcis, after delivering, according to Ælian, this pithy remark: "I am not willing to give the Athenians an occasion of being a second time guilty of injustice against philosophy." He remained at Chalcis until his death, the manner of which is variously reported; but nothing seems certain except the fact that he expired in that city in the 114th Olympiad, or B. C. 323, in the sixty-third year of his age. Aristotle was twice married; first, as before observed, to Pythia, the sister of Hermias, and afterwards to Herpilis, a native of Stagyra, by whom he had a son called Nicomachus. In his person he was slender and of middle stature; he had a shrill voice, small eyes, and—if the bust found at Rome by Ursinus be authentic—a prominent nose. His constitution was delicate, but he corrected the natural weakness of his stomach by temperance. As the enemies of this great man appear to have been able to muster up nothing against him beyond vague and suspicious imputations of impiety, it is fair to conclude that nothing more specific could be supplied. His services to his country and gratitude to his early friends and benefactors are on record; and his love of truth is emphatically expressed by the adage commonly ascribed to him, "Amicus Plato, amicus Socrates, magis tamen amica veritas." Of the vast extent of his intellect, his writings remain an indubitable

testimony: they may be classed under the several heads of rhetoric, poetry, politics, ethics, physics, mathematics, logic, and metaphysics. On rhetoric he has written three books, in which the principles of eloquence are investigated with so much depth of thought and accuracy of arrangement, as to form the basis of all that has been since afforded by Quintilian, Cicero, and later writers. On poetry he furnishes a correct analysis of the constituent parts of the drama and the epic, the chief excellence of which consists in the scholastic precision and philosophical closeness with which the subject is handled, without any address to the passions or imagination. On politics, although the opinions of Aristotle may not very closely apply to modern theories and forms of government, they still possess a general value. The leading doctrine of his "ethics" is, that virtue consists in an avoidance of two extremes, the one of which is vicious through excess, the other through defect. His morality is less fanciful than that of Plato, and less pure than that of Socrates, receiving a worldly tincture from his residence in the court of Philip. Of logic Aristotle may be almost deemed the inventor—of the art of syllogistic reasoning especially; and whatever may now be thought of its absolute utility, it was in itself a great effort of ingenuity. The mathematical pieces of Aristotle which have reached us are deemed imperfect, and less valuable than his other labours. His "physics" partake of the defects of all the ancient schools, but yet contain, especially in the history of animals, many useful descriptions, the result of much accurate observation. With respect to the seat or principle of animal and rational life, he wisely chose to employ himself in defining its faculties rather than in explaining its specific nature; and whether he deemed it immortal or otherwise does not appear. Under the title of "metaphysics," which he calls the "First Philosophy," he treats of ontology, or the doctrine of Being, and speaks of a "First Cause or Mover," which he conceives to be simple intelligence or God, that by the exertion of its energy originates motion, and is perpetually and necessarily occupied in doing so. Attending to the general claims of the philosopher, he is doubtless the first in the class of eminent inquirers who, previous to the introduction of the inductive philosophy, sought, by an acute and elaborate exertion of pure intellect, to elicit results and discoveries to which mind alone, without experiment, can never be adequate. It follows that, in those branches of inquiry which are in their nature more reflex, meditative, and critical, he most excels, possessing a profound and penetrating genius and a wonderful power of classification, definition, and analysis. Neither can it be denied that he possessed an extensive acquaintance with natural objects, and was a far more diligent observer of physical and moral phenomena than most of the philosophers who preceded him: thus, while the subtleties of his metaphysics and of his logic are of little value, his descriptions in natural phi-

tosophy, and his observations on political, moral, and critical subjects, form a valuable treasure. After all therefore, the comparative solidity of his labours, as compared with those of his predecessors, is exceedingly conspicuous; and he was a sort of Bacon in his own day, who, strange to say, was called a dangerous innovator by a similar class of religious and pedantic alarmists to that by which the decline of his philosophy was so long resisted. As to the extravagant admiration of him during the long twilight of the middle ages, it is to be principally attributed to the weapons furnished by his dialectics for attack and defence, in those airy disputes concerning the Trinity, the relation of its three persons to each other, the procession of the Holy Ghost, the intricacies of grace, predestination, and free-will, together with a thousand other points, heretical and orthodox, in regard to which men can never think alike, and yet can seldom with patience differ. So intimate an union was established between the Peripatetic philosophy and the Christian religion, that Aristotle became the interpreter, and even the judge of Paul, and second only to Jesus Christ. All this has been a stage in the history of civilization, although difficult to be regarded as a necessary one. His fame was also doubtless very great in the ancient world, although his writings appear to have been soon neglected; and when, having been buried in a cave by Theophrastus, his heir and successor, they were recovered by Apellicon, and sent by Sylla to Rome, few persons attached themselves to his sect, although Cicero undertook to explain a portion of his labours. Under the Cæsars his philosophy revived, and was kept alive until seized with so much avidity as a weapon of Christian warfare. His school, notwithstanding certain attempts to restore it under other names, is now however to all practical purposes defunct; and men no longer neglect substantial knowledge in pursuit of the phantoms and abstractions of the Peripatetics; which however, like all other established errors, were long tenaciously maintained and defended by persecution and bloodshed. The principal writings of Aristotle have separately passed through various editions. Of his entire works the principal are—"Editio Princeps," in Greek, Aldus, 6 vols. folio, 1495; of Casaubon, Lugd. 1590, 1646, 2 vols. folio; and of Duval, Paris, 1629, 1634. An English version of Aristotle's "Ethics and Politics" has been supplied by Dr Gillies, 2 vols. 4to, 1791; of his treatise "On Government," by Mr Ellis, 4to, 1778; and of his "Poetics," by Mr Pye, in 1788, and Mr Twining, in 1789. A translation of his "Metaphysics," by Mr Thomas Taylor, was also published in 1801. As to the commentators on Aristotle, they are innumerable; a fact which, combined with the distortion of his philosophy to purposes which he could never have contemplated, furnished Swift with a neat piece of satire in his Gulliver. The shade of Aristotle is first made to appear by the governor of Glubbubrib, and then those of his various commentators, who were regarded

by him as *utter strangers*.—*Brucker. Stanley. Aikin's G. Dict.*

ARISTOXENUS. There were two ancient musicians of this name, the one, *as name* SELINUNTUS, flourished in the 28th Olympiad, and is quoted by Eusebius; the second, and most celebrated of the two, was born at Tarentum, three hundred years later, and about 350 before the Christian æra. He was a philosopher as well as a musician, and a pupil of Aristotle. Although he has the credit of having composed 453 volumes on different subjects, only three of them, his "Harmonic Elements," (considered the oldest musical treatise in the world) are now extant. Menrsius printed an edition of it at Leyden in 1616, 4to. In the works of Aristoxenus, in the midst of much repetition and apparent corruption of the text, there is to be traced an Aristotelian precision and accuracy, not to be found in musical writers of a much later date. *Moreri. Burney's Hist. of Mus.*

ARIUS, a presbyter of the church of Alexandria in the fourth century, was, according to Epiphanius, a native of Lybia, and to Photius, of Alexandria. Of his early life few particulars are known; but in the preface of Alexander, in contradiction to an harangue from that bishop, affirming that the Father and the Son were of the same essence, he maintained that the Son was essentially distinct, and did not exist from all eternity, but was created out of nothing by the will of the Father. This being an age of controversy, the doctrine of Arius soon found partisans; and Alexander, observing with displeasure the growth of opinions which he deemed heretical, called a council in Alexandria of the bishops of Egypt and Lybia, in which the tenet of Arius was condemned, while Arius himself, and the clergy who adhered to him, were excommunicated from the church, and expelled the city. He withdrew into Palestine, where, supported by numerous and respectable followers, among which were several of the bishops of Asia, he exhibited considerable fortitude. The clergy being divided, the contest was carried to such a ridiculous excess, as to furnish matter for ludicrous exposure in the public theatres. The emperor Constantine, struck with the absurdity of the conflict, assumed the office of moderator, and—possibly in the first place following his own unbiassed judgment—called such distinctions cobwebs, which however useful as exercises of ingenuity for the learned, ought not to be made a subject of popular contention. His priestly advisers however gradually found means to convince him of the importance of the subject; and in the year 325 he assembled three hundred bishops at the celebrated Council of Nice, in order to settle it. Here, it being decided that Christ was *consubstantial* with the father, the Nicene Creed was signed as the established formulary of orthodox belief, and the doctrine of Arius was condemned, and himself banished into the remote province of Illyricum. An angry edict followed, in which his adherent were

stigmatized with the name of Porphyrians, and his writings were ordered to be burnt. So little however did Constantine know his own mind in this matter, that Eusebius of Nicomedia, by means of a presbyter who enjoyed the confidence of the Emperor's sister, convinced him that the conduct and faith of Arius had been misrepresented. Upon this information, the Emperor recalled him from banishment, and recommended the bishops then assembled at Jerusalem, who were for the most part concealed Arians, to re-admit him into the community of the church. Nothing now remained to complete the triumph of Arius, but that he should be restored to the church of Alexandria, from which he had been ejected; but Athanasius, who by the death of Alexander had become bishop of that see, steadily refused. At Constantinople however, a day was appointed, by the express command of the Emperor, for the solemn re-admission of Arius into the communion, when, according to the historian Socrates and to Athanasius, on that same day, as he was walking in the city, on retiring to obey a sudden call of nature, he discharged his entrails, and died on the spot. This detail of the affair of course is doubted; and, as Mr Gibbon observes, "Those who press the literal narrative of the death of Arius must make their option between poison and miracle." The tenets of Arius call for no remark here: the credit of considerable talents and learning has not been denied him, and the incidents of his life afford no presumption that he was not a firm and conscientious adherent of what he deemed the truth. It does not appear that he wrote much beyond small pieces in verse, for the instruction of the more ignorant, one of which, entitled "Thalia," is spoken of by Athanasius as abounding in coarseness and buffoonery. Two epistles of his are now alone extant. The theory of Arius did not expire with him, but in succeeding ages gradually yielded to the power and influence of the Catholic church on one side, and to Socinianism on the other. Among those who still profess this system, his opinions are also much modified; and it is evident that the doctrinal extremes of the express divinity or humanity of Christ will sooner or later divide the religious world, to the exclusion of the less perceptible distinctions either of Arius himself or of those who are still called after him.—*Bayle. Lardner. Mosheim. Gibbon.*

ARKENHOLZ (JOHN) a native of Helfingfors in Sweden, born 1695, died 1777. While on his travels, he wrote a sharp attack on cardinal Fleury, then at the head of affairs in France, in a publication entitled "Considérations sur la France par rapport à la Suede;" on which that minister lodged a complaint against him with the Swedish government. He was appointed to the post of secretary of finance in 1743, and three years afterwards put in charge of the cabinet of curiosities collected at Cassel. A History of Gustavus Adolphus, written by him, appeared some time after his decease, in 2 vols. 8vo. He also published *Memoirs of Christina queen of Sweden, with*

the letters addressed to her by the celebrated Grotius.—*Biog. Universelle.*

ARKWRIGHT (SIR RICHARD) an English manufacturer, the contriver of that wonderful piece of mechanism, used by cotton manufacturers, called the spinning frame, which, when put in motion, performs the whole process of spinning, leaving to man the office only of supplying the material, and of joining or piecing the thread when it happens to break. The extraordinary person to whom we owe the compilation and completion into a connected whole of the different parts of this invention, was born at Preston in Lancashire, in the year 1732. In the year 1760, he lived at Bolton-le-Moors in the same county. At this time he was a barber, but soon after he travelled through the country, buying human hair. Living in a manufacturing district, his attention was drawn to the operations carrying on around him; and hearing from every one complaints of the deficient supply of cotton yarn, assisted by the ingenuity of one John Kay, a clock maker of Warrington, he set about contriving a plan for changing the mode of spinning. He had great difficulty in giving his ideas a practical form, from his total want of mechanical skill and experience; and his important discovery was likely to have been lost to the world, from his not being able to find any person willing to embark the capital that was necessary to give the undertaking a fair trial. At last, he however prevailed on Mr Smalley of Preston to afford him pecuniary assistance, to enable him to build a factory, but being driven from Lancashire by the fear of violence from those who earned their subsistence by the old mode of spinning, he removed in 1768 to Nottingham, where he built a mill and used horses. While at Nottingham, he prevailed upon the Messrs Wrights, bankers, to advance him the sums of money necessary to enable him to go on with his experiments; but as these gentlemen found the amount required larger than they had expected, Mr Arkwright applied to Mr Need of Nottingham, as a person likely, from his being already engaged in other patent discoveries, and acquainted with such undertakings, to take a share in the advantage in lieu of them. Mr Need desired him to carry the model of his machine to Mr Strutt of Derby, his partner in the stocking patent, by whose report he would be guided. Mr Strutt, a man of great mechanical skill, seeing at a glance the merit of the invention, and how little was required to render it complete, told Mr Need that he might with great safety close with Mr Arkwright; the only thing wanting to his model being an adaptation of some of the wheels to each other, which, from a want of skill, the inventor, with all his powers of contrivance, had not been able to accomplish. In the year 1769, therefore, Mr Arkwright obtained his patent for spinning with rollers; and Mr Need and Mr Strutt became his partners in the concerns to be carried on under it. He erected his first mill at Nottingham, which he worked

by a horse power; but this mode of giving motion to the machinery being expensive, he in the year 1771 built another mill at Cromford, in the parish of Wirksworth, in the county of Derby, which was turned by a water wheel, after the manner of Messrs Lombe's silk mill at Derby. At this time the jenny spinners were earnestly employed in improving the machines used for carding and roving; and many ingenious contrivances were found out to shorten those operations. Mr Arkwright kept an attentive eye on these contrivances, and by combining a number of them into a series of engines, he formed a complete system of carding and roving by machinery, for which he took out a second patent, dated December 16, 1775, and in 1781 he commenced actions against a number of persons for invading it. Only one cause was tried, that against Colonel Mordaunt in the court of King's Bench, in July, 1781. Colonel Mordaunt's defence was, that Mr Arkwright had not fully communicated his inventions in the specification as required by law, and that therefore the patent was invalid. Several witnesses proved to the satisfaction of the judge and the jury, that, instead of disclosing his inventions in the specification, he had described them in a confused and unintelligible manner; and a verdict was in consequence given against him. In February, 1785, nearly four years after the first trial, which overturned the patent, a second action was tried in the court of Common Pleas, in which Mr Arkwright brought a number of artists to prove, that they could make machines from his specification; in consequence of which he obtained a verdict. This verdict producing great alarm among many who had at a great expense erected machines for cotton-spinning, from whom an acknowledgment of so much a spindle was demanded, in order to settle the dispute, a process on *scire facias* was brought against Mr Arkwright in the court of King's Bench, in which the whole question was brought to issue, not only on the point of the unintelligibility of his specification, but on the less technical and more important ground of his not being himself the inventor of the machines for which he had obtained a patent. The ablest lawyers of the time, amongst whom were Mr Bearcroft, Mr Serjeant Adair, Mr Baron Wood, the late Mr Justice Chambre, and Lord Erskine, all then leading counsel, were arrayed on each side. After a long, minute, and ably conducted trial, a verdict was given against Mr Arkwright, which, upon a subsequent motion for a new trial, being held by the court to be perfectly satisfactory, judgment was finally given against him in November, 1785, and the patent cancelled. On the attempted assassination of his late majesty George III by Margaret Nicholson, Mr Arkwright presented an address from the hundred of Wirksworth, and was knighted. In the following year, 1787, he was high sheriff of Derbyshire. The habits of thinking of this able and extraordinary man were intense, he seldom allowed himself time

for recreation, and never gave up the pursuit of what he deemed useful. The originality and comprehension of his mind were perhaps marked by nothing more strongly than the judgment with which, although new to business, he conducted the great concerns his assiduity gave rise to, and the systematic order and arrangement which he introduced into every department of his extensive works. His plans of management, which must have been entirely his own, as no establishment of a similar nature then existed, were universally adopted by others; and after long experience, they have not yet, in any material point, been altered or improved. To conclude, he deserved well of his country, and was one great means of forwarding her manufactures. To combine, to arrange, to put in execution, though secondary to the merits of original invention—to which he probably had a much better claim than the jealousy of his contemporaries would concede to him—are nevertheless necessary to the perfection of art. Without him, the water-frame would probably have had a slow and tedious introduction, or might have perished with its author, and been lost to the world. Sir Richard Arkwright died at Cromford in Derbyshire, in August, 1792, aged fifty-nine.—*Original Communication. Ed.*

ARLAUD (JAMES ANTONY) a native of Geneva, born in 1668, died 1743. He attained to great perfection in the art of painting. A copy of his chef d'œuvre, the subject of which is Jupiter's amour with Leda, sold for six hundred guineas, in London, in his life time; but no offers could tempt him to part with the original, which, in a fit of enthusiasm, he at length anatomically cut to pieces. He taught the Regent duke of Orleans drawing, and was much esteemed by that prince, who assigned him apartments at St Cloud.—*Pilkington.*

ARLOTTO, an Italian droll of the clerical profession, was born at Mugello near Florence in 1395. His natural talent of diverting in conversation by humour and repartee, not only obtained him church preferment, but rendered him acceptable to such men as Lorenzo and Giuliano de Medici. He filled Italy and other countries with stories of his pleasantries and singularities, which anecdotes partake of the coarseness of the age. After his death, a collection of his jests, adventures, and witticisms, was made under the title of "Facetie, Fabuli, et Motti, del Piovano Arlotto, Prete Fiorentino," which has been often reprinted. He died in 1483.—*Taraboschi. Nouv. Dict. Hist.*

ARMELLINI (MARIANO) a learned Benedictine of Ancona, born in the latter part of the 17th century, died 1737. His works are, "The Life of Saint Margaret Corradi," published in 1726, 12mo; "Bibliotheca Benedictino Casinensis," in two parts, folio, 1731; "Three Catalogues of eminent Monks, Bishops, Reformers," &c. folio, 1733; and a list of Addenda et Corrigenda to his former work the Bibliotheca Benedictino Casinensis, folio, 1735.—*Nouv. Dict. Hist.*

ARMINIUS, called the Deliverer of Ger-

many, was the son of Sigimer, a powerful chieftain of the Catti. He served with great reputation among the Roman troops, and was rewarded by Augustus with the citizenship and knighthood of Rome; which did not prevent him from fomenting the discontent prevailing among the German nations, and producing a wide confederacy for revolt. By a train of artful suggestions, he drew Varus, the Roman commander on the Rhine, into an ambuscade, where he perished with almost all his forces, A.D. 10. Germanicus marched with a powerful army to revenge the slaughter of Varus; but it required more than one campaign, and several battles, before he obtained any decided advantage; and at last Arminius fell a sacrifice only to the civil feuds in which he was involved with his own countrymen and kindred, by whom he was assassinated in the thirty-seventh year of his age. It is observed by Tacitus, that this chief headed the armies of his country for twelve years, and contended, not like other kings, with the juvenile force of Rome, but with its mature strength. He was long celebrated in the rude songs of his countrymen, and even received divine honours under the title of the god Irmin.—*Taciti Annal. Aikin's G. Diet.*

ARMINIUS or HARMENSEN (JAMES) a Christian divine and leader of the sect of Arminians or Remonstrants, was born at Oudewater in Holland, in the year 1560. He lost his father in his infancy, and was secretly educated by a priest favourable to the Reformed Religion, through whose liberality he became a student at Utrecht. On the death of his patron he repaired to Marpurg, but had scarcely arrived there, when he received intelligence that his native town had been pillaged by the Spaniards. Distressed at this intelligence, he immediately repaired to Holland, and found that his mother, sister, brothers, and other relations, had been put to the sword. In all the anguish of grief, he returned on foot to Marpurg, and soon afterwards renewed his studies in the university of Leyden. Here he obtained so much reputation, and was thought so deserving of encouragement by the magistrates of Amsterdam, that they sent him, at the public expense, to finish his studies at Geneva, where his chief preceptor in theology was Theodore Beza. Adopting in philosophy the new doctrines of Peter Ramus, he privately taught them, which innovation gave so much offence, that he was obliged to quit Geneva. He then took up his residence in Basil, where his talents for disputation were highly admired, and after a while again returned to Geneva, and acted with greater caution. Anxious to attend a celebrated lecture at Padua, he next visited Italy; which journey produced many false reports against him at Amsterdam of a predilection for popery. These being gradually dissipated by his zeal for the Reformed Religion, and talents as a preacher of its doctrines, he was chosen by Lydius, professor of divinity at Franeker, to undertake the refutation of a work written against Beza's doctrine of predestination. Unfortunately for his employer,

Arminius was converted by the work which he had undertaken to refute. He honestly avowed his change of opinion, and renouncing the Calvinistic doctrine concerning the decrees of God and divine grace, maintained that the merits of Christ extended to all mankind, and that the grace necessary to salvation is attainable by every one. As this was dissenting from the established doctrine, he would have been involved in much trouble, had not the magistracy protected him. After having exercised the ministry in Amsterdam for fifteen years, notwithstanding his new convictions, he was elected professor of divinity at Leyden, where he openly declared his opinions, which rapidly spread both among the clergy and laity. The adherents to the Calvinistic system, however, caused him much vexation: he was several times summoned to the Hague to give an account of his doctrines, and his colleague Gomarus was among the most violent of his enemies. These contests, with the continual attacks on his reputation, at length impaired his health, and brought on a complicated disease, of which he died in 1609. The character of Arminius with posterity has been little affected by the calumny which assailed him while living, it being now generally admitted, that he was candid, amiable, sincere, and possessed of great integrity. He was also a friend to universal toleration, and established it as a fundamental principle, that Christians are accountable to God alone for their religious sentiments. His followers, who obtained the name of Remonstrants from a petition which they addressed to the states of Holland in 1610, rapidly increased after the decease of their leader, both in number and consequence, and included some of the first men in Holland, as Barneveldt, Hoogerbeets, and Grotius, the latter of whom visited England to remove the prejudices of archbishop Abbot and James I.—(see article *ABBOT*). The subsequent condemnation of them by the synod of Dort, and persecution under prince Maurice, are a very disgraceful portion of Dutch history. The Arminians still remain a distinct sect in Holland; and it is scarcely necessary to add that, particularly from the time of Laud, the opinions of Arminius have been espoused by the predominant party in the church of England. Editions of the whole of the writings of this divine were published in one volume, 4to, Leyden, 1629; Frankfurt, 1631, 1634; and often afterwards. The principal piece in this collection, entitled "Dissertationes de Diversis Christianæ Religionis Capitibus," will afford the best specimen both of the doctrine and style of this eminent controversialist.—*Brandt Hist. Vet. Armin. Mosheim.*

ARMSTRONG M.D. (JOHN) a poet and physician, was born about 1709, at Castleton in Roxburghshire, where his father was minister. He studied for the medical profession at Edinburgh, and took his degree in 1732. He settled in London, where he appeared in the capacity both of author and physician, a conjunction which is seldom favourable to much progress in the latter character. His first pub-

lication was a humorous attack upon empiric, in the manner of Lucian, entitled "An Essay for abridging the Study of Physic." He followed this, in 1737, with a serious professional essay on a prevalent disorder, and soon after appeared his well-known poem entitled "The Economy of Love," which met with a success that in the sequel was possibly more injurious to the author than otherwise. Regarded in a literary point of view, it is an elegant and vigorous performance; but although pruned of much of its luxuriance in a second edition, a license, inseparable from the author's mode of considering the subject, has excluded it from the more reputable collections of poetry. In 1744 he published his leading work, a didactic poem entitled "The Art of preserving Health," and at once established a literary reputation that his subsequent efforts were scarcely sufficient to sustain. His next productions, a poem "On Benevolence," and "Taste, an Epistle to a Young Critic," were little noticed; but greater success attended a prose volume, displaying considerable humour and knowledge of the world, called "Sketches or Essays on various Subjects, by Lancelot Temple, Esq." 1758. The celebrated John Wilkes was supposed to have had some share in this production. In 1760 Dr Armstrong was appointed physician to the army in Germany, from which country he wrote "Day," a poem, and an "Epistle to John Wilkes, Esq." A reflection upon Churchill, in this letter, drew from the latter a severe retort in his "Journey." Party and national animosity now ran so high, that a native of Scotland could scarcely remain on terms of intimacy with an opponent of the court; and in consequence the intercourse terminated between Wilkes and Dr Armstrong. At the peace of 1763 he returned to London, and resumed the practice of physic; but his indolent, reserved, and independent temper proved an insurmountable obstacle to his success. In 1771 he made the tour of Italy in company with the late Mr Fuseli, of which tour he gave a short account under the name of Lancelot Temple. His last publication was "Medical Essays," in which he accounts for his limited practice, and complains of the critics. He died in 1779, leaving considerable savings from a very limited income. The poetical reputation of Armstrong rests almost exclusively on his "Art of preserving Health," one of the best didactic poems in the English language, in which he thinks boldly, feels strongly, and expresses himself poetically. The fact must not be omitted, that he contributed to Thomson's admirable poem of "The Castle of Indolence," the fine stanzas describing the diseases to which the votaries of indolence become martyrs. He is also himself depicted there in the sombre personage who "thanks heaven the day is done," a sketch which but too correctly portrayed the morbid sensibility that preyed on his temper, obscured his goodness of heart, and cramped his intellectual energies.—*Biog. Brit. Aikin's G. Plog.*

ARMYNE (Lady MARY) a lady eminent for her learning and piety, as well as rank, in

the 17th century. She was the wife of S. William Armyne, and daughter to Henry, fourth son of George Talbot earl of Shrewsbury. She was well read both in the ancient and modern languages, and left behind her several monuments of her munificence in hospitals and other charitable foundations. Her death took place in 1675.—*Bullard's British Ladies.*

ARNALD (RICHARD) a clergyman of the church of England and a native of London. He was brought up at Bishop Stortford grammar-school, whence he proceeded, in 1714, to Bene't college, Cambridge, but quitted it for a fellowship at Emanuel in 1720. He was the author of a very learned "Commentary on the Apocryphal Books," and died in 1756.—*Nichols' Hist. of Leicestershire.*

ARNALL (WILLIAM) a political writer during the administration of Sir Robert Walpole. He was bred an attorney; but began, at the early age of twenty, to write political papers, and succeeded Concanen in the "British Journal." His principal paper was the "Free Briton," in defence of the measures of Sir Robert Walpole; and, according to the report of the secret committee, he received no less than 11,000*l.* in four years from the treasury. Dr Warton thought that he possessed considerable talents, although vain and careless; but Mr Coxe is of opinion that, in common with all Walpole's writers, he was altogether inadequate to the task of combating Pulteney, Bolingbroke, and Chesterfield. Falling into want from his extravagance, this young man terminated his life in 1741, aged only twenty-six.—*Coxe's Memoirs of Sir Robert Walpole. Maty's Chesterfield.*

ARNAUD de Mereuil a Provençal poet of the thirteenth century, who entered into the service of the viscount of Beziers, and fell violently in love with the countess of Burlas his consort. After the Platonic manner of this species of poetical attachment in the middle ages, he displayed his passions only in songs and sonnets, which he published in a book entitled, "Las Recastenas de sa Comtessa." He died in 1220.—*Biog. Universelle.*

ARNAUD (FRANCIS) abbé of Grand Champ, a French miscellaneous writer, was born at Aubignan near Carpentras, in 1721. He possessed considerable learning and taste, but was too much a man of the world for the complete development of his talents as a man of letters. He was employed in the "Journal Etranger," the "Gazette Littéraire de l'Europe," and contributed to various other journals and collections. He was elected a member of the French Academy in 1771, and died in 1784.—*Ibid.*

ARNAUD (FRANCIS THOMAS MARIE BACULARD D') a miscellaneous French writer, of a noble family, was born at Paris in 1716. He was educated among the Jesuits, and in his youth composed three tragedies, one of which, on the subject of the murder of admiral Coligni on St Bartholomew's day, recommended him to Voltaire, who gave him advice and pecuniary assistance. Some of his early productions were also favourably noticed by Fre-

deric of Prussia, who invited him to Berlin, and in some verses styled him his Ovid, to the excitement of much ridicule among the other wits of the same circle. From Berlin he went to Dresden, and then returned to Paris. His writings, which are very numerous, consist of novels, poems and plays, of which there are two editions, one in 24 vols. 12mo, and another in 12 vols. 8vo.—*Ibid.*

ARNAUD (GEORGE D') a learned critic, was born at Franeker in 1718, of a family of French refugees. At the early age of twelve he wrote Latin and Greek poems, which were much admired, and went afterwards to study at the university of Franeker. By the advice of his master, the celebrated Hemsterhuis, he published, in 1728, "Specimen Animal. Criticarum ad aliquot Scriptores Græcos," &c. 8vo, Harling, which in two years afterwards was followed by another volume. In 1732 appeared his learned dissertation "De Diis adsectoribus et conjunctis," 8vo, Hague. Being recommended to study the law, he discovered so much ability in defending a thesis, "De Jura servorum apud Romanos," that he was appointed law reader. In 1738 he published a volume of disquisitions on civil law, entitled "Variæ conjecturæ," Franeker, 4to. and Leuwarden, 1744. On Weiling's quitting the university of Franeker for that of Leyden, Arnaud was appointed to succeed him, but died in his twenty-ninth year, before he could take possession. Various lesser pieces of this extraordinary young man appeared in the "Miscellanæ Observat." of Amsterdam, and he also left behind him a dissertation on the family of Scævola, published by Arntzenius, Utrecht, 1767.—*Ibid. Saxii Onomasticon.*

ARNAULD (ANTOY) a French lawyer, born at Paris in 1550, was attorney-general to Catherine de Medici. He obtained great reputation by his pleadings against the Jesuits in 1594. He wrote "Anti Espagnol," printed in a collection of discourses on the present state of France, 1646, 12mo; "La Fleur de Lys," 1593, 8vo; "Avis au Roi Louis XIII pour bien regner," 1615, 8vo, &c. He died in 1619, leaving ten children out of twenty-two which he had by his one wife Catharine.—*Ib.*

ARNAULD D'ANDILLI (ROBERT) the eldest son of the preceding, was born at Paris in 1589. After holding some honourable offices, which he filled with great reputation, he retired, at the age of fifty-five, to the convent of Port Royal, and there occupied himself with study and rural amusements, until his death in 1674, aged eighty-six. He translated the "Confessions of St Augustin;" the "Lives of the Saints;" "Josephus;" and the "Works of St Theresa;" and also wrote "Memoirs of his Times," and several other works.—*Bayle. Biog. Universelle.*

ARNAULD (ANTOY) doctor of the Sorbonne, was the twentieth child of Antony Arnauld the advocate. He was born in 1612, and studied at the college of Calvi, on the ruins of which the Sorbonne was built, and in 1641 took his doctor's degree. In 1643 he published his treatise "On Frequent Commu-

nion," which highly displeased the Jesuits, and the controversy between them and the Jansenists being at its height, he took part very zealously with the latter. For his writings on this side the question he was expelled the Sorbonne, and he went into a retirement, that lasted twenty-five years, during which time he composed his various works on grammar, geometry, logic, metaphysics, and theology. When the controversy of the Jansenists was ended, he left his retreat, was presented to the King, kindly received by the pope's nuncio, and still more so by the public. He now resolved to combat with the Calvinists, and published his book, entitled "La Perpetuité de la Foi," which gave rise to the grand controversy between him and the minister Claude. The Jesuits however still remained his implacable enemies; and in 1679 their intrigues again rendered it prudent for him to retire into the Netherlands, whence he attacked them with great acrimony. He died in 1694; and his heart, at his own request, was deposited in the Port Royal. A catalogue of his works may be seen in Moreri, and a complete collection of them was published at Lausanne, 1777, 1783, in 15 quarto volumes, no small proof of the adventurous spirit of modern booksellers. They consist of belles lettres and philosophy; his controversial writings respecting grace; his writings against the Jesuits, and the Calvinists; and his theological works.—*Moreri. Bayle.*

ARNAULD (HENRY) brother of Robert and Antony, was born at Paris in 1597, and in 1649 he was made bishop of Angers. He was an excellent prelate, a father to the poor, and a comforter of the afflicted; who attended to all his duties with the most unremitting attention. One of his intimates observing to him that he ought to take one day in the week for recreation—"Tell me the day on which I am not a bishop, and I will do so," replied Arnauld. His negotiations at the court of Rome, where he was sent to quiet the disputes between pope Innocent X and Barberini, were published so lately as 1743, Paris, 5 vols. 12mo, possibly in consequence of their abounding with curious anecdotes, related in the peculiar style which distinguished all the Arnaulds.—*Biog. Univ.*

ARNOLD. There were two brothers of this name, (CHRISTIAN and JOSHUA) who successively filled the chair of logical professor at Rostock in Germany. CHRISTIAN, the eldest, was born in 1623. The works by which he is principally known are—"Observations on the true use of Logic in Divinity," 1650, 4to; "A Dissertation on the Philosophy of the Antients," also in quarto, printed in the same year; and a political treatise, "De principis constituentibus et conservantibus rempublicam," 4to, 1651. He died in 1683. JOSHUA, his brother, was born at Gustrow in 1626, and died in 1685, being, in addition to his professorship, chaplain to the duke of Mecklenburg. He is the author of a pedigree of the Scaliger family, 1648; "A Dictionary of Ecclesiastical Antiquities," 4to; a volume of Sacred Miscellanies 8vo; & treatise entitled "Trutina

Statuum Europæ Ducis de Rohan," 8vo ; " Laniena Sabaudica," 4to, 1655 ; and remarks on Vavassour's work " De forma Christi," 8vo.—*Morevi. Biog. Universelle.*

ARNDT (CHARLES) son of Joshua, born 1673, was a man of considerable learning, and at the time of his death (1721) Helrew professor at Rostock. He published a life of his father in 4to, and several other learned works, among which are—" Schediasma de Phalaride," 4to, 1702 ; " Schediasmata Bibliothecæ Græcæ difficilioris ;" " Bibliotheca politico-heraldica," 8vo ; " Systema Literarium," 4to ; and a quarto volume of Philological Discourses.—*Ibid.*

ARNDT (JOHN) a native of Ballenstadt in Anhalt, born 1555. Having officiated as a pastor, at Quedlinburg, Brunswick and Isleben, he at length, through the favour of the duke of Brunswick Lunenburg, became in 1611 superintendent of all the churches in his duchy, with the valuable benefice of Zell. He is the author of a work on " True Christianity," published in parts, the first in 1605, the remainder in 1608. Mr Boehm printed an English translation of this treatise, which went through two editions, dated in 1712 and 1720, both in three octavo volumes. John Arndt died in 1621.—*Ibid. Sævi Onomasticon.*

ARNE (THOMAS AUGUSTINE) Dr of music, was born in King-street, Covent-garden, where his father was an upholsterer. Young Arne's musical propensities very early developed themselves, much to the annoyance of his father, who designed him for the law, and with this view, after a short course of education at Eton, removed him to an attorney's office. By mere accident however, the old gentleman calling on a friend one evening, then engaged with a musical party at home, to his astonishment discovered his own son as the principal violin player. The interference of this friend, and the encomium passed upon the young man's abilities as a performer, finally drew from the father a reluctant consent to his following music as a profession, in which he soon made rapid progress. Dr Arne's compositions are at once so numerous and so well known, that it would be equally difficult and unnecessary to recapitulate them all. Those which appear to have gained him the greatest reputation are—his conversion of Fielding's " Tragedy of Tragedies, or the Life and Death of Tom Thumb the Great," into a burletta, in which form it still keeps the stage ; the admirable manner in which he set Milton's masque of Comus ; and, above all, his Artaxerxes, an opera paraphrased rather than translated from Metastasio. Miss Brent, the original Mandane, was his pupil ; and into this part especially he contrived to introduce all the divisions and difficulties of the Italian school, so that the character has ever since been considered as the touchstone of the pretensions of every female singer that aspires to the first rank in English opera. The copy-right of this opera was sold for sixty guineas, the largest sum which had ever been given at that period for a piece of a similar description.

The style of Dr. Arne's melodies cannot be said to be either Italian, English, or Scotch, but rather a happy amalgamation of the three. A modern critic of eminence has pronounced that Arne's compositions exhibit a natural ease and elegance, a flow of melody which steals upon the sense, and a fulness and variety which satisfy without surprising by any new, affected, or extraneous modulation. He has not, it is true, the vigour of Purcell, but in secular music he must be allowed to have surpassed him in ease, grace and fertility. He apparently aimed only at pleasing, and he succeeded. Dr Arne died in 1778, having arranged for the stage upwards of thirty musical pieces.—*Burney's Hist. of Music.*

ARNE (MICHAEL) son of the preceding, and, like his father, a precocious musician ; but although many of his compositions are still favourites, he never attained the same eminence. In 1764, he produced " Alcmena," an opera, at Drury Lane, written in conjunction with Mr Battishall, but with indifferent success. His " Cymon," subsequently brought out at the King's Theatre, added more both to his reputation and profits. He is said to have had a strong turn towards alchemy, and to have wasted much time and money in the search after the " grand secret," which unprofitable pursuit he had afterwards the good sense to renounce.—*Biog. Dict. of Music.*

ARNGRIM, see JONAS.

ARNIGIO (BARTHOLOMEW) the son of a blacksmith of Brescia in Lombardy, born 1523, died 1577. Having a turn for literature, he at the age of eighteen abandoned the humble business of his father, to which he was brought up, and succeeded so well in his studies, as at length to obtain a doctor's degree, which was conferred on him by the university of Padua. The study of medicine, to which he applied himself, proved however less congenial to his disposition than the service of the Muses, nor did he ever obtain half the reputation as a physician which he acquired as a poet. He is the author of " Lettere, Rime, e Orazione," in 4to ; " Meteorica," 4to ; " Lettura letta pubblicamente sopra il sonetto del Petrarca," 8vo ; " La Medicina d'Amore ;" " Dieci Veglie degli ammenitati costumi dell' umana vita," 4to ; and " Le Rime," the last published in one 8vo volume in 1555.—*Biog. Universelle.*

ARNOBIUS, an African professor of rhetoric at Sicca in Numidia, in the third century. He embraced the Christian religion while under persecution, and his work " Adversus Gentes," which is a formal defence of it, has been frequently reprinted.—*Mosheim. Lardner.*

ARNOLD, a monk and a reformer, born at Brescia in Lombardy in the early part of the twelfth century. He was a pupil of the celebrated Peter Abelard, and on his return from France promulgated the unpalatable doctrine, that temporalities were inconsistent with ecclesiastical vows and duties, and that all clerical persons enjoying such were of necessity excluded from salvation. These opinions were in 1139 pronounced " heretical and damnable," in a council held at the church of St

John Lateran, at which near a thousand prelates attended, pope Innocent II presiding in person. Arnold on this fled to Switzerland, where he remained until the death of that pontiff favoured his return to Italy. Adrian IV, who succeeded to the papal chair, was not however more disposed to tolerate the Arnolds than his predecessor; and taking advantage of some popular ferment in which they were said to be implicated, he laid the whole city of Rome under an interdict till the obnoxious sect was expelled. Their leader retired again to Tuscany; but after a while returned again to Rome, and perished there by the hands of the executioner in 1155.—*Mosheim. Berington's Life of Abelard. Gibbon.*

ARNOLD (CHRISTOPHER) a native of Nuremberg, professor of history, rhetoric, and poetry, at Altorf, born 1627, died 1686. He was a man of great reading and information, having travelled much in England and other parts of Europe. He published—"Oratio de Jano et Januario;" "Ornatus Lingue Latine;" "De Parasitis;" "A Treatise on the Testimony of Josephus respecting Christ;" "Epistola ad Nicolaum Heinsium;" "Nota ad Joh. Ep. Wagenseelii commentarium in Sotam;" and "Catonis Grammatici dicta cum commentario perpetuo," Leyden, 1652.—*Biog. Universelle.*

ARNOLD (JOHN) an ingenious watchmaker of London, born 1744, author of several tracts illustrative of the principles and recent improvements in his trade. The Board of Longitude voted him several premiums for repeated inventions, calculated to facilitate the more perfect mensuration of time. He died at Eltham in Kent, in 1799.—*Gent. Mag.*

ARNOLD (DR SAMUEL) a composer of celebrity, born at London in 1739. His opera of the Maid of the Mill was long a favourite with the public, and is still occasionally performed. In his oratorios, of which he wrote several, he was still more successful; the "Prodigal Son," especially, being selected to form part of the ceremony at the installation of lord North as chancellor of the university of Oxford, in 1773, on which occasion an honorary degree was offered and refused by him till he had gone through the usual academical course. Ten years afterwards, Dr Arnold was appointed to succeed Dr Nares as organist to the chapel royal at St James's; and in 1786 he gave to the world an edition of Handel's works, as well as four volumes of Services and Anthems in Score. His death took place October 22, 1802, in Duke Street, Westminster, at the age of sixty-three.—*Biog. Dict. of Mus.*

ARNOLD (THOMAS) an eminent physician of Leicester, born 1742. He was celebrated for his skill in administering to patients afflicted with mental hallucination, and presided for many years over an establishment dedicated to their reception. He was a member of the colleges of London and Edinburgh, from the latter of which he received his first diploma. He is the author of several treatises on medical subjects; among others, a "Dissertation on Pleurisy," 1766, 8vo; "Observations on Leucania," in two 8vo volumes, 1782; "A

Case of Hydrophobia successfully treated," 1793; and "Observations on the Management of the Insane," 8vo, 1809. He died in 1816.—*Gent. Mag.*

ARNOLDE (RICHARD) an ancient English chronicler, was citizen of London, and lived about the year 1519. From his own book it appears that he was a merchant trading to Flanders. This work, which has been sometimes called "The Customes of London," and sometimes "Arnolde's Chronicle," contains information respecting the magistrates, charters, municipal regulations, assizes of bread, &c. of the metropolis, and is mostly taken from a work of the same kind still among the Cottonian MSS. It was printed at Antwerp, as supposed, in 1502, but the latest edition is that of London, 1811, forming part of a series of English Chronicles, undertaken by the leading booksellers.—*Preface to London Edition of Arnolde's Chronicle.*

ARNOUL, bishop of Lisieux, an eminent prelate in the twelfth century. He was present at the coronation of Henry II in England, and travelled there a second time to effect a reconciliation between that king and Becket, in which effort he was unsuccessful. He wrote several works and verses, which may be seen in the Bibliotheca Patrum and in the Spicilegium of D'Acheri. Among these is a volume of letters, which are valuable for the views they afford of the history and manners of the times.—*Dupin. Saxii Onomasticon.*

ARNOULT (JEAN BAPTISTE) a French ecclesiastic, a member of the Jesuits' College, born in 1659. He is principally known as the author, or rather compiler, of a work entitled "Le Precepteur," on the model of which Dodsley's "Preceptor" was afterwards constructed. Arnoult's work was published in 4to, 1747. Previous to this he had published an amusing collection of the proverbs in general use among the Italians, Spaniards, and his own countrymen, which first appeared in 1733, and was reprinted in 1738, in one volume 12mo. He also wrote a "Dissertation on Grace," under the fictitious appellation of Dumont, a name which he also prefixed to his "Proverbs." He died in 1753 at Besançon.—*Biog. Universelle.*

ARNTZENIUS. There were several learned men of this name, nearly connected with each other in point of consanguinity, during the last century. HENRY, the father, was director of the schools at Utrecht, Wesel, and Arnheim, and died in 1728. His eldest son, JOHN, was born in 1702 at Wesel, and after completing his education at Utrecht, became first director of the schools, and eventually professor of history and rhetoric at Nimeguen, which latter situation he obtained in 1728. From this place he, in 1742, removed to Franeker, as successor to the learned Brunnmann, and died there in 1759. He published in 1726 a treatise "De nuptiis inter fratrem et sororem," originally composed as an exercise for his doctor's degree. His other writings are—"Dissertationes de colore et tinctura comarum, et de visitate Romanæ Apostoli Pauli,"

870; "An Oration on the Causes of the Corruption of Eloquence," 4to; and another "On the Selection of Authors for the Instruction of Youth in Schools." These, together with some Latin poems, were, after his death, collected and published by his eldest son. He also edited the works of Aurelius Victor, and the Panegyrics of Pliny and Pacatus. He left one son (JOHN HENRY), born at Nimeguen in 1734. The latter published in 1765 sundry orations, collected under the title of "Miscellanies," and a work on the jurisprudence of the Netherlands. He also edited the works of Seditius and of Arator, 8vo; and the "Panegyrici Veteres," 2 vols. 12mo; and died in 1797, professor of law at Utrecht, having previously held the same appointment at Groningen. OTHO ARNTZENIUS, his paternal uncle (brother to John) was a native of Arnheim, born 1703, and held successively the professorship of the belles lettres at Utrecht, Gouda, and Amsterdam. He published an edition of Cato's *Distichis cum notis variorum*, a few orations, and a dissertation "De Milliaro Aureo." His death took place in 1763.—*Biog. Univ. Savii Onomasticon.*

ARNULPH, or ERNULPHUS, a monk of Beauvais, afterwards bishop of Rochester in the reign of Henry I, to which see he was raised in 1115, through the patronage of Lanfranc archbishop of Canterbury. He collected and digested an account of the various endowments, charters, statutes, &c. connected with the cathedral over which he presided, a work well known to antiquaries as the "Textus Roffensis." Sterne has made use of a curious form of excommunication, extracted from this book, in his *Tristram Shandy*. An edition of it was printed by Mr Thorpe in folio, 1769. Ernulfus died in his 84th year, A.D. 1124.—*Biog. Brit.*

AROMATRI (JOSEPH) a native of Assisi in Italy, born in 1586, took the degree of doctor of medicine at Padua, and practised physic more than half a century at Venice. He was the author of a botanical treatise, published in 1625, 4to, reprinted by Richt in his select epistles in 1662 at Nuremberg. A translation of it may be found in the two hundred and eleventh number of the Philosophical Transactions of the Royal Society of London. He also entered into a literary controversy with Tasso, who replied to a work of his, entitled "Riposte alle considerazioni di Alessandro Tassoni sopra le rime del Petrarca," 8vo. 1611. He died in 1660.—*Hutler. Bibl. Med.*

ARPINO (JOSEPH D') a native of Rome, born 1560. The precocity of his talent for painting caused him to be employed, at a very early age, in ornamenting the Vatican, as assistant to the artists engaged in that design; when luckily attracting the attention of pope Gregory XIII, that pontiff not only made him a handsome allowance, but gave him every opportunity of perfecting himself in his favourite art. He afterwards rose to great eminence in the profession, and became a member of an order of knighthood. His death took

place in his native city in 1640, in his eightieth year.—*Moreri. Pilkington.*

ARRIA, a Roman lady, immortalized by her elevated courage and conjugal affection, was the wife of Cæcina Pætus, a man of consular dignity, who joined Scribonianus in a rebellion against the emperor Claudius. When her husband, who was taken and carried prisoner to Rome, received orders to put himself to death, Arria perceiving him hesitate, took a dagger, and plunging it into her bosom, drew forth the bloody weapon, and presented it to her husband with these words, which have extorted admiration from all antiquity: "Pætus, it is uot painful." Martial has made this scene the subject of an epigram, but has destroyed the noble simplicity of the original exclamation by an ingenious turn, implying that her own wound was uot painful to Arria, but that only which Pætus would soon inflict on himself.—*Pliny. Secund. Tacitus.*

ARRIAN, a Greek historian, a native of Nicomedia, flourished in the second century under the emperors Adrian and Antoninus. In his own country he was a priest of Ceres and of Proserpine; but taking up his residence at Rome, he became a disciple of Epictetus. He was honoured with the citizenship of Rome, and appointed prefect of Cappadocia by the emperor Adrian, who patronised him on account of his learning and his talents. In this capacity he distinguished himself by his prudence and valour in the war against the Massagætæ, and was afterwards advanced to the senatorial, and even consular dignities. Like Xenophon, he united the literary with the military character, was conversant with philosophy and learning, and intimate with those who cultivated them. No less than seven of the epistles of Pliny the younger are addressed to Arrian. His historical writings are numerous; but of these, with the exception of some fragments in Photius, only two remain. The first is composed of seven books on the expedition of Alexander, which being principally compiled from the memoirs of Ptolemy Lagus and Aristobulus, who both served under that king, are deemed proportionably valuable. Arrian, himself a soldier and a politician, possessed a sounder judgment than Quintus Curtius, and indulged less in the marvellous. To this work is added a book on the affairs of India, which pursues the history of Alexander, but is not deemed of equal authority with the former. An epistle from Arrian to Adrian is also extant, entitled "Periplus Ponti Euxini," probably written while he was prefect of Cappadocia. There are besides, under the name of Arrian, a Treatise on Tactics; a Periplus of the Red Sea, of which the authority is doubtful; and his "Enchiridion," an excellent moral treatise, containing the discourses of Epictetus. The best editions of Arrian are that of Gronovius, Greek and Latin, 1704, folio; of Raphelius, Greek and Latin, Amsterdam, 1750, 8vo; and of Schneider, Leipsic, 1798. Of his "Enchiridion," the most valuable edition is that of Upton, London, 2 vols. 4to, 1739. The Expedition of Alex-

ander has been translated into English by Rooke, in 2 vols. 8vo, London, 1729; and Dr Vincent, in his able work on Oriental Geography, has ably demonstrated the authenticity of the voyage of Nearchus.—*Vossius de Hist. Græc. Aikin's G. Dict.*

ARRIGHETTI (PHILIP) a learned ecclesiastic of Florence, son of an eminent mathematician of that city, born 1532. He translated into Italian the Rhetoric and Poetics of Aristotle, and published a treatise on prayer, as well as four academic discourses. He was also the author of a life of St Francis. He died in 1662, surviving his father twenty-three years. A philosophical work on the "Theory of Fire" was published in 1750, in 4to, by a Jesuit of this name, who died in 1767.—*Dict. Hist.*

ARRIGHETTO, sometimes called Arrigo, a Florentine poet of the twelfth century. He was in holy orders, and possessed of the benefice of Calvazo, which he lost from some irregularity. He made his misfortunes the subject of his poems, printed first in 1684, which are still popular for the elegance of their style, and the pensive melody of their versification.—*Ibid.*

ARROWSMITH (AARON) hydrographer to his Majesty, an individual of high celebrity for his productions in that peculiar branch of science which he cultivated. As a constructor of maps and charts, his learning and skill have been generally acknowledged, both at home and abroad; and his many valuable works, which are frequently adverted to as standards for comparison and reference, sufficiently attest the extent of his researches and the general accuracy of his observations. He published "A new General Atlas," 4to, 1817, to accompany the Edinburgh Gazetteer, besides a vast number of maps and charts of the world and of various regions, many of which are noticed with approbation in the catalogue at the end of Pinkerton's Geography. He was also the author of a pamphlet, entitled "A Companion to a Map of the World," containing much useful information. Mr Arrowsmith resided in Soho-square; and while engaged in constant study and application, was a man universally esteemed and respected in the society in which he moved. His death happened April 23, 1823, at the age of seventy-three. *Literary Gazette*, No. 328.

ARSILLI (FRANCESCO) an Italian physician, born at Sinigaglia, in the beginning of the sixteenth century. He graduated at Padua, and afterwards settled at Rome, but is principally known by a poem dedicated to Paulus Jovius, and entitled "De Poetis Urbanis." A copy of this work may be found in "Roscoe's Life of Leo X;" the first edition was printed at Rome in 1524, 4to, in the Coryciana. He died in 1540.—*Biog. Universelle.*

ARFALIS (JOSEPH) a Sicilian, knighted for his valour at the memorable siege of Candia, born 1628 died 1679. He was a good poet, as well as a gallant soldier, and besides sundry minor pieces, left behind him an opera called "La Pas te;" "La Bellezza atterata;"

and a work in two parts, entitled "Dell' Encyclopædia Poetica," all in 12mo.—*Morevi.*

ARTEAGA (STEPHEN) a learned Jesuit, a native of Spain, born about the year 1744, and died in 1799. He was the author of several treatises written in the Spanish and Italian tongues; and a work of his on Ideal Beauty has been published in both those languages. He printed in 1785 an account of the revolutions in the style of the theatrical music of the Italians, from its origin down to that period, in three 8vo volumes, and left behind him several valuable manuscripts on the poetry of the ancients.—*Dict. Hist.*

ARTEDI (PETER) A Swedish physician, the friend of Linnaeus, equally eminent for his knowledge of chemistry and natural history. He was born in 1705, and received his education at Upsal. Linnaeus profited by his discoveries in the classification of umbelliferous plants, to the consideration of which, as well as to the study of ichthyology, he more particularly directed his attention. He visited various parts of Europe in the pursuit of his favourite study, and was at length accidentally drowned in 1735, by falling into a canal at Amsterdam. Three years after his death two works of his, entitled "Bibliotheca Ichthyologica," and "Philosophia Ichthyologica," were edited by his friend Linnaeus.—*Nour. Hist. Dict.*

ARTEMIDORUS. There were two of this name, natives of Ephesus. The most celebrated is also sometimes called DALDIANUS, from Daldis, the birth-place of his mother. He lived in the reign of Antoninus Pius, and was the author of a curious treatise on dreams, first printed in 8vo, 1513, at the Aldine press. The other lived about a century before the Christian era, and wrote a geographical work, of which a few fragments only have come down to posterity.—*Vossius de Hist. Græc.*

ARTEMISIA, a queen of Caria, who was one of the allies of Xerxes in the sea-fight of Salamis. She commanded her gallees in person, and behaved with so much bravery, being among the last to fly, that Xerxes exclaimed, that the women behaved like men, and the men like women. There was also another Artemisia, queen of Caria, still more famous for her affection to her husband Mausolus, to whom she erected a monument of so much magnificence that it has given a name to all future structures erected in honour of the dead. She died B.C. 351.—*Pliny Nat. Hist.*

ARTHUR, a British prince, whose history is so mingled with the most extravagant fiction, that little can be extracted with any certainty. According to these accounts, he was the son of Uther, the pendragon or dictator of the Britons, whom he succeeded A.D. 516. He was immediately engaged in warfare against the Saxons, in which he was successful; as also against the Scots and the Picts, whom he subdued. He is likewise said to have conquered Ireland and the western isles of Scotland, and then to have reigned twelve years in glory and peace. These latter conquests are however altogether improbable.

and much more that is related of his invasions of Norway, Denmark, and France, is unequivocally fabulous. He received his death-wound in a contest with his rebellious nephew Mordred, A.D. 542. Arthur is rendered immortal by romance rather than by history; but the ingenious antiquary Whitaker believes in his institution of the celebrated order of the round table, as also that it was the origin of all others of the like kind on the continent of Europe.—*Biog. Brit.*

ARTUSI (GIOVANNI MARIA) an ecclesiastic of Bologna, author of a musical treatise called the "Art of Counterpoint," printed at Venice, 1598, in which he reduces Zerlino's directions into tables. This work he continued in 1603. He endeavoured to prove from Plato, that counterpoint was not unknown to the ancient Greeks. He also wrote on the imperfection of modern music.—*Biog. Dict. of Mus.*

ARUNDEL (MARY, countess of) a lady eminent in the sixteenth century for her learning and accomplishments. Being left in 1566 a young widow by the death of her first husband Robert Ratcliffe, she remarried with Henry Howard earl of Arundel. She made a Latin translation of the Apothegms of the Seven Wise Philosophers from the original Greek, and rendered the Wise Sayings and Deeds of the emperor Alexander Severus into English.—*Bullard's Brit. Ladies.*

ARUNDEL (THOMAS) archbishop of Canterbury in the reigns of Richard II, Henry IV, and Henry V. He was the second son of Robert Fitzalan, earl of Arundel and Warren, and born in the year 1353. By a kind of feudal authority, claimed by the pope in England, he not only assumed the right of bestowing benefices, but even of nominating them by provision or anticipation, before they became actually void. This usurpation was taken away by 25 Edw III; but the Pope still continued to exercise the power, and by an extraordinary exertion of it, Arundel became bishop of Ely at the age of twenty-two. Thence by the same patronage he was in due time advanced to the see of York, and finally to the primacy of Canterbury. For ten years previous to his last translation, he also acted as chancellor, and was exceedingly active and busy in the civil affairs of his time. Having taken a leading part in the first attempt to deliver the nation from the oppression of Richard II, he was banished both from his see and the kingdom. Pope Boniface IX, in resentment of the attempt to deprive him of his "provisional" patronage, received the exiled prelate kindly, gave him the archbishopric of St Andrews, which however he never enjoyed, and declared his intention of gracing him with English preferments. On the king's strenuous remonstrance, however, he desisted from his intention, and Arundel, leaving Rome for Brittany, became the medium through which the invitation of the discontented nobles reached Henry, duke of Lancaster. The revolution which followed restored to him all his honours; and he distinguished himself during the entire reign of Henry IV by his zealous defence of the tem-

poralities of the church, and his rigorous persecutions of the Lollards or Wickliffites. This intolerant prelate even went so far as to request a bull from the Pope to dig up the bones of Wickliffe, which however was wisely refused him; but it is to be presumed that his influence much contributed to pass the horrid act for burning heretics, which degraded this reign. The first sufferer, William Sawtre, was executed in 1410; and the commencement of the reign of Henry V was signalized by the condemnation and execution of Sir John Oldcastle, lord Cobham. Soon after passing the sentence of excommunication upon that nobleman, the archbishop was seized with an inflammation in the throat, which speedily put an end to his life, in 1413. This incident, with a pardonable degree of superstition, considering the times, the Lollards transformed into a special judgment. Arundel possessed strong talents and a courageous spirit, and supported the exclusive doctrines of the church of Rome in all the plenitude of the most lofty ecclesiastic pretension. His resistance to Richard II was popular, but scarcely patriotic in a pr late at once so personally arrogant and ambitious. He was very munificent to his various cathedrals; he rebuilt the archiepiscopal palace at York, and was otherwise a considerable benefactor to the church. It must not be omitted, that this prelate passed a synodical decree which forbade the translation of the Scriptures into the vulgar tongue.—*Biog. Brit.*

ARUNDEL (BLANCHE, lady) daughter of the earl of Worcester, and wife of Lord Arundel, bravely defended Wardour castle against the parliamentary army commanded by Sir Edward Hungerford. The besiegers consisted of 1300, and the little garrison of only 45; yet she maintained the place for six days, and then capitulated upon terms which it is said were not adhered to. She died in 1649, aged sixty-six.—*Seaward's Anecdotes.*

ARUNDEL (Earl of) see HOWARD, Thomas.

ASAPH (St) a British monk, who flourished about the year 500, and gave name to the see of St Asaph in Wales. He wrote the "Ordinances of his Church," and the life of Kentigern, a Scottish bishop, who presided in the convent of Llan Elvy; which afterwards came under the care of St Asaph, and took his name.—*Bayle. Biog. Brit.*

ASCHAM (ROGER) a learned Englishman of considerable reputation in the sixteenth century. He was a native of Yorkshire, and the third son of respectable parents, who had interest sufficient to get him educated in the family of Sir Anthony Winston, in company with the sons of that gentleman. His progress under a private tutor was so great, that his patron sent him to Cambridge, where he acquired high reputation, and became Greek professor. He turned out many distinguished pupils, among others Grindal subsequently preceptor to the lady Elizabeth. While at Cambridge, he composed his treatise on archery, entitled "Toxophilus," which book materially contributed to the improvement of

English prose, and has the merit of being written expressly for that purpose, as declared by the author in a letter to bishop Gardiner. This production procured from Henry VIII a yearly pension of 10*l.*, equal to 100*l.* at the present time, which allowance was for some time discontinued under Edward VI, renewed again by that monarch, and doubled by Mary. The name of Ascham having by this time obtained considerable celebrity, upon the death of his pupil Grindal, the lady Elizabeth, to whom he had already taught writing, called him from his college to direct her studies. He remained in this office for two years, when some cause of offence arose, which induced him to take an abrupt leave of the princess; but he was not long in disfavour, being appointed secretary to Sir Richard Morison, then about to depart on an embassy to Charles V. In this capacity he spent three years abroad in Germany and Italy. On the death of Edward VI, Ascham returned to his college with little support but his fellowship; but although known to be a Protestant and attached to Elizabeth, as he behaved with great circumspection, Gardiner had him appointed Latin secretary to Mary. The uncommon elegance and facility of his Latin composition is supposed to have led to this preference. On the accession of his pupil Elizabeth, he was of course continued in his employment, and was moreover daily admitted into the presence of the Queen, to read with her in the learned languages; and of her diligence and proficiency he has borne a very emphatic testimony. The remuneration of Elizabeth however never went beyond his salary of 20*l.* per annum and a prebend in the church of York. Careless and irregular habits, and especially a fondness for cock-fighting, very singular in such a person, are pleaded in defence of the Queen's parsimony. In 1563, an accidental conversation among certain learned persons and statesmen in the chamber of Sir William Cecil, induced Ascham to compose his excellent treatise, entitled "The Schoolmaster," a work strongly expressive of the author's good sense and extensive and accurate erudition. This treatise, which was not published until after his death in 1571, was reprinted in 1711 by Upton, London, 8vo. He died in his fifty-third year, in December 1568. His "Epistles," which contain valuable historical matter conveyed with great classical elegance, were published after his death by Grant, and dedicated to Elizabeth. Various writings, and other memorials of Ascham, make him a very amiable and benevolent man; somewhat careless and indiscreet in worldly matters, but highly to be honoured as a scholar and a promoter of correct taste and sound learning. His works were collected and published by Bennet in one volume, 4to, 1769, enriched with a life by Dr Johnson.—*Biaz. Brit.*

ASCLEPIADES, a Greek physician, born at Prusa in Bithynia, who went to Rome and attained eminence in his profession, in the time of Pompey. He was at first a rhetorician, which pursuit he relinquished for the study of medicine, and made such innovations in the

practice of his art, that he was considered as the founder of a new sect. It is said that he displayed his skill by preserving his health to extreme old age; and he was at last killed by a fall, subsequently to the year 63 B.C. He had many followers, and was the author of several treatises, some fragments of which are preserved in the works of Celsus, Galen, Aëtius, &c. His commentaries on Hippocrates were esteemed very valuable.—*Le Clerc Hist. de la Médecine.*

ASCOLI (CROCO DI) a professor of mathematics at Bologna in the fourteenth century. He was author of a commentary on the sphere of John Holywood, and of a poem on the system of Empedocles, for which he was accused of heresy, and with merciless cruelty burned alive at Florence in 1323, aged seventy.—*Moreri.*

ASELLI or ASELIUS (CASPAR) an Italian anatomist of the 17th century. He was born at Cremona, and studied medicine and became professor of anatomy in the university of Pavia, where he highly distinguished himself by discovering the lacteals, a system of vessels, the office of which is to absorb the chyle formed in the intestines, and thus contribute to the support of animal life. Aselli first observed these vessels in dissecting a living dog. He drew up a Latin dissertation, containing the result of his investigations, illustrated with coloured engravings, which was published after his death at Milan in 1627.—*Haller. Biblior. Anatomic.*

ASGILL (Sir CHARLES, bart.) a general in the army and colonel of the 11th regiment of foot, entered the army in 1776 as an ensign in the 1st foot guards. While a captain in that regiment, he was taken prisoner at the siege of York Town in Virginia; and the captains being ordered by Washington to draw lots, that one might be selected to suffer death by way of retaliation for the death of captain Hardy, the lot fell upon Asgill, who was in consequence conveyed to the place intended for his execution in the Jerseys, where he remained nearly half a year, expecting daily that his sentence would be put in force. At length, through the intercession of the French queen, to whom his mother had made a most pathetic appeal, Sir Charles was released by act of congress, and returned to England on his parole. Sir Charles passed through a great variety of staff situations, and every intermediate grade of the army, till in June 1814 he obtained the rank of general, having seen in America and during the Irish rebellion. He died in the summer of 1823, at an advanced age.—*Genr. Mag.*

ASGILL (JOHN) an English barrister and very singular writer and humourist, was born about the middle of the seventeenth century. In 1698 he published a work entitled "Several Assertions proved, in order to create another Species of Money than Gold and Silver," and "An Essay on a Registry for Titles of Lands." These productions, in the year 1700, were followed by a singularly fanciful and enthusiastic

work, entitled "An Argument proving that, according to the Covenant of Eternal Life, revealed in the Scriptures, Man may be translated from hence without passing through Death, although the Human Nature of Christ himself could not be thus translated until he had passed death." This publication raised an outcry against the author as an infidel and a blasphemer; and after he had gained an estate in Ireland, and a seat in the Irish house, by the successful practice of his profession, he was expelled from it on account of this work when he had taken his seat only four days. He then returned to England, and obtained a seat in the British parliament in 1705; but owing to a great neglect of economy, having got into debt, he was imprisoned in the Fleet during a cessation of privilege. On the opening of the next Session, he was demanded out of custody by the serjeant-at-arms, but this being the first parliament after the Union, some of the new Scottish members thought themselves disgraced by the proceeding, and made the unfortunate book of Asgill a second time a ground for his expulsion. A committee was appointed, who declared it blasphemous; and, after a spirited and able defence, the author was expelled. From this time he became more deeply involved in debt, and soon took up his residence in the King's Bench prison, where he remained for thirty years, supporting himself by writing political pamphlets against the Pretender, and other works, and by practising his profession. His high spirits and vivacity never forsook him, and he exhibited the most entertaining powers of conversation until his death, in the rules of the above-mentioned prison, in 1738, aged upwards of fourscore, or, as some accounts say, near a hundred. After all, his book was rather absurd than impious, and a mere piece of singular enthusiasm, unworthy of all serious notice on the part either of divine or legislator.—*Biog. Brit.*

ASH LL.D.(JOHN) an Anabaptist divine, born in 1724. He was at one period coadjutor with Dr Caleb Evans in the management of an academy at Bristol, for the education of theological students of his own persuasion; and he subsequently became pastor of a congregation at Pershore, where he died in 1779. Besides some religious publications, he was the author of a Dictionary of the English language, in the compilation of which he displayed more industry than judgment; and he also wrote an Introduction to Lowth's Grammar, which has passed through a vast number of editions.—*Gent. Mag.*

ASHLEY (ROBERT) an English writer of the 17th century. He was educated at Oxford, travelled in France, &c. and became a member of the legal profession; but he is only known at present as the translator or compiler of "A Relation of the Kingdom of Cochin China," and the "Life of Almanzor, King of Spain." He died in 1641.—*Biog. Brit. Wood's Athen. Oxon.*

ASHMOLE (ELIAS) a celebrated English antiquary and virtuoso. He was born at Lichfield, A.D. 1617, of respectable parents, and

after a common education, was sent to London at the age of sixteen, where he was received into the family of his kinsman, Mr Paget, a baron of the Exchequer. Under this favourable protection, he not only studied law but various other branches of knowledge; and in 1638 married and practised as a Chancery solicitor. On the breaking out of the civil wars he retired to Oxford, and entered himself of Brazenose college, where he engaged in the studies of natural philosophy, mathematics, and astronomy, and also served the King in the ordnance department, both at Oxford and Worcester. On the ruin of the King's affairs, he came to London, and formed a close intimacy with the celebrated astrologers, Moore, Lilly, and Booker, but shared only in their absurdity, not in their roguery. He subsequently so ingratiated himself with lady Mainwaring, a rich widow, that she first conveyed to him an estate, and in 1649 married him. On this accession of fortune, he gave up his profession, and his house in London became a resort of all the proficients and professors in the pretended sciences called occult. Encouraged by this delusive tribe, Ashmole about this time published, under another name, a treatise on alchemy, by the celebrated Dr Dee, and undertook to prepare for the press a complete collection of the manuscript writings of English chemists. This work appeared in 1652, under the title of "Theatrum Chymicum Britannicum," when all the chemistry turned out to be alchemy, which did not prevent it from adding considerably to his reputation among certain learned classes of adepts. His wealthy marriage now began to involve him in legal disputes; until at length an attack was made upon him in chancery by the lady herself, from which however he honourably extricated himself, his conduct being acquitted of all blame, and the bill dismissed. Having for some time attached himself to the study of antiquity and the perusal of records, he took a civil leave of the Hermetic philosophy in the preface to a treatise on the philosopher's stone, which he edited, and began to collect for his celebrated "History of the Order of the Garter." His love for botany having induced him to lodge with the celebrated gardener of Lambeth, John Tradescant, he obtained by purchase or otherwise the curious collection of rarities got together by that person and his father. On the Restoration, Ashmole was very graciously received, both as a loyalist and man of learning, and gratified with the post of Windsor herald. He was also made a commissioner of excise, and received other appointments both honourable and lucrative, being called to the bar, admitted a fellow of the Royal Society, and—why is not known—favoured with the diploma of a doctor of physic from the university of Oxford. His second wife dying, he took for a third the daughter of his friend, Sir William Dugdale. In 1672 he presented to the King his work on the "Order of the Garter," and in 1675 resigned his office of Windsor herald in favour of his brother-in-law, Mr Dugdale declining the proffered office of Garter

king-at arms, which was given to Sir William Dugdale. His ambition was to be appointed historiographer to the order; but some objection was made, which he could not surmount. An accidental fire in the Temple destroyed a library which he had been upwards of thirty years collecting, with a cabinet of 9000 coins, and other valuable antiquities. In 1683 he presented to the university of Oxford his Tradescantian Collection of rarities, to which he afterwards added his books and MSS, thereby commencing the Museum Ashmoleanum at Oxford. He died in May 1692, aged seventy-six. Besides the work already mentioned, he left behind him a number of MSS, several of which have been printed, and a "Diary of his Life," which has afforded copious materials for his biographer. By writers possessing similar predilections to his own, he has been called one of the greatest men in the seventeenth century, which praise he merited neither by the strength of his understanding nor the nature of his studies. He was however endued with perseverance, curiosity, and exactness in a high degree, and admirably meets the idea at present attached to the word *Virtuoso*, under which class indeed he is ranked by Anthony Wood. Of all his works, his "History of the Order of the Garter," which procured him so much honour and emolument during his life-time, has been alone much attended to since his death.—*Biog. Brit. Aikin's G. Biog. Wood's Athen. Ozon.*

ASHTON (CHARLES) a learned critic and divine, who was master of Jesus college, Cambridge, in the beginning of the 18th century. He was chaplain to Dr Patrick, bishop of Ely, through whose interest he obtained preferment in the church: and in 1702 he held the office of vice-chancellor of the university to which he belonged. He died in 1752, aged eighty-seven. His acquaintance with classical and ecclesiastical archæology was accurate and extensive, as appears from his unpublished manuscripts. The only distinct works of this writer were—"Origen de Oratione," 4to, and "Hieroclis in Aurea Carmina Pythagorea Comment," 1742, 8vo. He also published some criticisms in the *Bibliotheca Literaria*.—*Aikin's G. Biog.*

ASHWELL (GEORGE) an English divine, born in 1612. He was educated at Wadham college, Oxford, and became rector of Hamwell in Oxfordshire. His literary productions consist of several treatises in defence of the doctrines and rites of the church of England; and "The Self-taught Philosopher, or the Life of Hai Ebn Yokdan," an Arabian philosophical romance, which he translated from the Latin version of Dr Edward Pocock.—*Wood's Athen. Ozon. Biog. Brit.*

ASKEW (ANNE) daughter of Sir William Askew, knr, of Kelsey in Lincolnshire, was born in 1529. She was married to Mr Kyme, a wealthy and bigotted Roman Catholic, who was so exasperated by her conversion to the opinions of the reformers, that he turned her out of doors. Conceiving herself at liberty to sue for a separation, she came to London, and was favourably received by the queen (Katharine Parr) and some leaders of the court, who

secretly favoured the Reformation. At last, being accused by her husband and the priests, she was apprehended, and repeatedly examined by the lord mayor, bishops, the chancellor, and others, to whose questions she replied in a firm and unconstrained manner, and even with some degree of wit and ridicule. She was for a short time admitted to bail, but was soon apprehended again, and committed first to Newgate, and then to the Tower, where she was inhumanly put to the rack, in order to discover the ladies with whom she held correspondence at court. On this occasion, Wriothesley the chancellor devoted his name to eternal execration by applying his own hands to the rack when the lieutenant of the Tower refused to strain it with more violence. By this atrocious act of unmanly rage, all the limbs of the innocent victim were dislocated, yet she maintained her heroic fidelity, and when recovered from her swoon, sat for two hours on the ground, calmly reasoning with her persecutors. Pardon was afterwards offered if she would recant, but she steadily rejected every offer of the kind, and was in consequence condemned to the stake, which punishment she endured with extraordinary courage and constancy, July 16, 1646.—*Ballard's Brit. Ladies.*

ASKEW (ANTHONY) a physician distinguished as a classical scholar and patron of learning in the last century. He was born at Kendal in Westmoreland in 1722, and was educated at Cambridge and Leyden. About 1746 he went to Constantinople with the English ambassador; and on his return home he took the degree of M.D. at Cambridge. He was admitted a fellow of the College of Physicians and also of the Royal Society. Being possessed of an ample fortune, he indulged his taste in studying the writings of the Greek and Roman classics, and collecting the best editions and most valuable manuscripts of their works. After his death, which happened in 1774, his library was sold by auction, and produced more than 5000*l.* An Appendix to the Greek Lexicon of Scapula was published from the manuscripts of Dr Askew in 1769, 8vo; and he had meditated an edition of the Tragedies of Æschylus, of which nothing was ever made public but a small specimen of the work, printed in 1746. In the Life of Reiske, professor of Arabic at Leipsic, are published some letters of Askew to that learned critic, from one of which it appears that the subject of this article entertained a mean jealousy of Toup, the editor of Longinus, as he offers to get any thing which Reiske might think proper to publish anonymously against Toup printed in London.—*Dibdin's Bibliomania. Nichols's Literary Anec. of the 18th Cent.*

ASPASIA, a Grecian courtesan, celebrated for her beauty, talents, and influence, was the daughter of Axiochus, a native of Miletus. She appears to have excited as much admiration by her intellect and accomplishments as by her beauty, being a proficient in philosophy and well versed in politics. She even numbered Socrates among her acquaintance, and

Pericles was so much attached to her, that he divorced his wife and married her. Over the policy of this statesman she was supposed to exercise considerable influence, and even the Peloponnesian war has been indirectly attributed to her resentment of an affront from the Megarians. After the death of Pericles, she attached herself to a man of mean condition, whom, by her interest, she raised to the first offices of the state. The name of Aspasia became so famous throughout Asia that Cyrus, brother of Artaxerxes Mnemon, gave it to his beautiful Grecian mistress Milto, whose accomplishments and attractions were of a kindred nature. If Xenophon and Plutarch are to be relied upon, the history of the second Aspasia was full as extraordinary as that of the first; for, falling into the hands of Artaxerxes, on the defeat and death of his brother, she assumed the same power over him as over the deceased, and after all inspired his son Darius with a passion equally great. Time however sets much of the latter part of this tale at defiance, which possibly is no more than a mere love story, exalted into matter of fact.—*Plutarch. Xenoph. Bayle.*

ASSELYN (JOHN) a Dutch painter of the 17th century. He was a pupil of Isaiah Vanderveelde, and afterwards improved himself by studying at Rome. On his return to Holland, he stayed some time at Lyons, where he married the daughter of a merchant of Antwerp. Settling at Amsterdam in 1645, he obtained great reputation by the productions of his pencil, which consist principally of historical paintings, battle-pieces, and landscapes with ruins, and are distinguished for their adherence to nature and correct style of colouring. A set of his landscapes (twenty-four in number) has been engraved by Perelle. He died in 1650, aged about forty.—*D'Argenville—Vies des Peint. Gen. Biog.*

ASSEMANI (JOSEPH SIMON) a learned Maronite, archbishop of Tyre, librarian of the Vatican, &c. He was born in 1687, and died at Rome, January 14, 1768. He was deeply skilled in the Oriental languages, and devoted his life to literary pursuits, the fruits of which were the following works—"Bibliotheca Orientalis Clementino-Vaticana," Romæ, 1719-28, 4 vols. folio. This, which was printed at the Propaganda press, was his principal work, and affords ample proof of his learning and industry, in the numerous notices it contains of Syriac, Arabic, and Persian manuscripts, with lives of their authors. Assemani also published—"S. Ephræm, Syri, Opera omnia, quæ extant, Græce, Syriace, et Latine," Romæ, 1732-34, 6 vols. folio; "Italica Historia Scriptorum ex Bibl. Vat." Romæ, 1751-53, 4 vols. 4to; "Kalendaria Ecclesie Universæ, &c." Romæ, 1755-57, 6 vols. 4to.—*Biog. Un.*

ASSEMANI (STEPHEN EVODIUS) archbishop of Apamea, nephew of the foregoing, whom he succeeded as keeper of the Vatican library. He likewise distinguished himself by his knowledge of the Oriental tongues, and the learned works which he produced, among which are—"Bibliotheca Mediceo-Lauren-

tiana et Palatina Codd. MSS. Orientalium Catalogus," Florentiæ, 1742, 2 vols. folio "Acta Sanctorum Martyrum Oriental et Occidental." Romæ, 1748, 2 vols. folio.—*Ibid.*

ASSER, or ASCE, a Jewish rabbin of the fifth century, who, in conjunction with others, compiled the collection of Hebrew traditions called the Babylonian Talmud. This work was printed at Leyden, 1630, in 4to; but the most complete edition of the Talmud is one published in 1744, at Amsterdam, 12 vols. folio with ample commentaries. Asser died in 427, aged 74.—*Nouv. Dict. Hist. Godwini. Moses et Aaron, lib. iv. cap. 8.*

ASSER, or ASSERIUS MENEVENSIS, a learned British ecclesiastic, distinguished as the instructor, companion, and biographer of Alfred the Great. He was probably a native of Wales, and was educated at St David's, of which see he at length became archbishop. About the year 880, king Alfred invited Asser to his court; and on his objecting to quit his situation, it was proposed that he should reside half the year with the King, and the other half at St David's, to which arrangement he acceded. He is said to have assisted Alfred in founding an university at Oxford, and to have been professor of grammar at that place. But though it is uncertain whether such an establishment was formed, there can be no doubt that Asser materially aided the efforts of his royal patron for the diffusion of knowledge among his subjects. The services of this learned man were rewarded with the donation of two rich monasteries, and other valuable presents. He was afterwards promoted to the bishopric of Sherborne, a situation probably of greater importance and emolument than his Welsh archbishopric. Mr Cassan, in his "Lives and Memoirs of the Bishops of Sherborne and Salisbury," 8vo, 1824, places this promotion of Asser in 885. He survived Alfred, and is mentioned in his will as bishop of Sherborne. His death took place in 909. To this ecclesiastic we are indebted for the most interesting and authentic account of the life and reign of Alfred. The "Annals" of Asser were first published by archbishop Parker, at the end of his edition of Walsingham's History, London, 1574; and afterwards in Camden's Historical Collection at Frankfort. A separate edition of the Annals, with the life of Asser prefixed, by Francis Wise, A.M. was published at Oxford in 1722. Several other works are ascribed to this writer, and among them the Chronicle of St. Neot; but apparently without sufficient authority. Leland has misled some later authors into an opinion that there were two Assers, and that the archbishop of St David's and the bishop of Sherborne were different persons. Sir John Spelman has fallen into this error, which is satisfactorily refuted by Dr Smith, the editor of Bede, and by Mr Cassan, in the work above cited.—*Nicolson's English Historical Library. Cave Historia Literaria.*

ASTELL (MARY) an English lady who attained considerable eminence as a public writer in the early part of the last century.

She was born at Newcastle on Tyne in 1668, and instructed by her uncle, a clergyman, in Latin, French, philosophy, mathematics, and logic. When about twenty, she removed to London, where and at Chelsea she spent the remainder of her life, devoting her leisure to literary composition. Her first production was "A Serious Proposal to the Ladies, wherein a Method is offered for the Improvement of their Minds," London, 1697, 12mo. The establishment of a seminary for female education on a large scale was the object of this work, which attracted much notice. The rest of her works relate chiefly to the religious controversies of the times. She advocated high church principles, attacked the writings of Locke and archbishop Tillotson, and was complimented by Dr Waterland. To the partizans of the cause which she supported, she probably owed her celebrity, as neither her talents nor her learning were such as to entitle her to much distinction. She died in 1731, of a cancer in the breast.—*Ballard's Memoirs of British Ladies*, 1775.

ASTLE (THOMAS) an eminent writer on archaeology. He was a native of Yoxall, in Staffordshire, and was educated for the legal profession, which he followed for some time, and in the course of his practice acquired a strong taste for the study of antiquities, and a peculiar facility in deciphering ancient records. His talents recommended him to government, and he was appointed one of the keepers of the paper office. In 1783, he was made keeper of the rolls and records in the Tower, and in 1787 chosen a trustee of the British Museum. He was elected a fellow of the Royal and Antiquarian Societies of London, and of several learned societies abroad, and was much esteemed among his contemporaries for his profound and accurate acquaintance with historical and antiquarian literature, especially that of his native country. Mr Astle contributed several papers to the *Archæologia*, and published some valuable works. His most important production was a treatise "On the Origin and Progress of Writing, as well Hieroglyphic as Elementary," 1784, 4to, illustrated with engravings. Of this work an improved edition in folio was published a short time previous to his death, which took place at Battersea, December 1, 1803, in the sixty-eighth year of his age. Mr Astle owed his first official situation to the patronage of Mr George Grenville, who about 1763 employed him in a commission instituted for the regulation of the records at Westminster; and he was afterwards engaged in other similar undertakings. After his death, his library was purchased as a foundation for that of the Royal Institution.—*Gent. Mag.*

ASTLEY (JOHN) a native of Wem in Shropshire, who adopted the profession of a portrait painter, and was a pupil of Hudson, the master of Sir Joshua Reynolds. Astley also studied at Rome, and afterwards settled at Dublin; but on marrying the widow of Sir William Daniel, who brought him a large estate, he relinquished his profession, in which

he never attained much eminence, though he is said to have possessed considerable talents. He died in 1787, at his seat at Duckenfield in Cheshire. This gentleman, who displayed a lively temper and manners, was known among his acquaintance by the title of beau Astley.—*Edwards's Anecdotes of Painting*.

ASTLEY (PHILIP) the founder of the royal amphitheatre near Westminster Bridge, and the author of some ingenious literary productions. He was born at Newcastle-under-Line in 1742, and bred a cabinet maker. In 1759 he enlisted in Eliot's Light Horse, and served seven years in Germany, where he acquired the reputation of a good soldier, and an adept in the art of horsemanship. On his return home, he began to exhibit equestrian performances; and in 1780 he erected a building which he called the amphitheatre riding house, and for which he subsequently procured a license, under the act of 25th George II, through the influence of lord Thurlow. In 1794 Mr Astley went to the Continent as a volunteer in the army. This campaign led to the publication of his "Descriptive and Historical Account of the places now the theatre of war in the Low Countries," with plans of fortifications, London, 1794, 8vo; and "Remarks on the Profession and Duty of a Soldier." Besides the original structure already mentioned, Mr Astley built amphitheatres at Dublin and at Paris, and the Olympic Pavilion near the Strand. He closed an active and diversified life at Paris, October 20th, 1814, at the age of seventy-two. He published a useful work entitled "A System of Equestrian Education, exhibiting the Beauties and Defects of the Horse," 1800, 4to.—*Britton's Illustrations of the Public Buildings of London*, vol. i, 1825. *Watt's Bibliot Britan.*

ASTORI (JOHN ANTHONY) born at Venice in 1672. He attached himself particularly to the study of classical literature, and refused some advantageous posts which were offered to him, that he might not be interrupted in his literary occupations. He was secretary of the academy of the Animosi at Venice, and also of that of the Arcades at Rome; and he carried on an extensive epistolary correspondence with the most celebrated scholars in Italy. Astori entered into orders, and became canon of the church of St Mark. His death took place June 23, 1743. He published a great number of letters and dissertations on Greek and Roman literature and antiquities.—*Biog. Universelle*.

ASTORINI (ELIAS) a native of Cosenza in the kingdom of Naples, who entered into the order of Carmelites, and was made professor of mathematics and natural philosophy at Cosenza. He died in 1702, having published a Dissertation on the Life of the Fœtus, 1686 a Translation of Euclid's Elements; and another of Apollonius Pergeus on Conic Sections.—*Nour. Dict. Hist.*

ASTRONOME (L') appears to have been the title of an anonymous writer of the ninth century, who held some office at the court of Louis le Debonnaire. He wrote the "Life"

of that prince, which is published in the original Latin, in the second volume of Du Chesne's historical collection; and there is a French translation by the president Cousin.—*Nouv. Dict. Hist.*

ASTRUC (JOHN) a French physician, born at Sauve in Languedoc, in 1684. He studied at Montpellier, and became very eminent in his profession. Such was his reputation, that the King made him one of his consulting physicians, and appointed him professor in the Royal College at Paris. He subsequently accepted the post of first physician to Augustus king of Poland, which, after a few years, he quitted, and retired to Paris, where he died in 1766. His writings are very numerous. In 1735 he published "*Libri sex de Morbis Venereis*," a work much esteemed, and hardly yet become obsolete. It was afterwards enlarged, several times reprinted, and has been translated into French, English, and other European languages. He also wrote on the natural history of Languedoc, and two tracts on theological subjects; but most of his works relate to medicine.—*Nouv. Dict. Hist. Haller. Bibliot. Med. tom. iv. Gen. Biog.*

ATAHUALPA or ATABALIPA, last Inca of Peru. He had usurped his authority by the deposition of his elder brother Huescar; and he sought to secure it by the murder of all the Children of the Sun whom he could get into his power. During the course of this civil war, the Spanish adventurer Pizarro arrived in Peru, and was suffered without opposition to penetrate to the neighbourhood of the camp of Atahualpa. Confiding in the friendly professions of the Spanish leader, the unhappy Peruvian, with a splendid and numerous train of followers, was induced to visit the Spanish quarters. Here it was with much modesty at once proposed to him to embrace the Christian religion, and acknowledge himself a vassal of the king of Castile. The astonished prince demanded where was the authority on which all this was required of him. "In this book," replied the friar Valverde, reaching him his breviary. The Inca took the book, turned over the leaves, put it to his ear, and saying, "This is silent, it tells me nothing," threw it to the ground. "To arms!" exclaimed the execrable Valverde, "and revenge the profanation of our holy religion." All this having been concerted, a prepared band of Spaniards attacked and massacred the innocent Peruvians, and secured the person of the Inca. For some time they kept him in respectful custody, to issue such orders as they dictated, all which his subjects implicitly obeyed; but at length, to prevent contention about the division of his ransom, between those who had seized him and the newly arrived forces under Almagro, his death was resolved upon. The expedient adopted was agreeable to the rest of their conduct: the unfortunate prince being accused of treachery, was brought to trial on a number of mock charges, and sentenced to be burned. He was instantly led to the place of execution, where, in order to mitigate the punishment, he consented to be baptised; and as soon as

Biog. Dict.—No. IX.

the ceremony was ended, was strangled at the stake, A. D. 1533.—*Robertson's Hist. of America.*

ATANAGI (DENIS) a native of the duchy of Urbino, who was one of the most celebrated Italian literati towards the middle of the 16th century. He went to Rome about 1532, and devoted himself to study. After spending there twenty-five years without obtaining the patronage he expected, he returned to his native country in 1557, and was almost immediately invited to court, to review the *Amadis*, a poem written by the father of the celebrated Tasso. He then went to Venice, where *Amadis* was printed; and in that city he passed the remainder of his life, employed as an editor and corrector of the press. The year of his death is uncertain, but it happened between 1567 and 1574. Among his publications are an edition of Aristotle's *Rhetoric*, and of the *Letters and Poems* of several Italian writers; a treatise on the *Excellence and Perfection of History*, Venice, 1558, 8vo; and an Italian translation of the "*Lives of Illustrious Men*," which has been ascribed to Pliny the younger, but is now generally acknowledged to have been written by Aurelius Victor. The publication of this last work is said to have drawn upon Atanagi personal chastisement from a student who claimed the translation as his own, and published a violent diatribe against the unfortunate Atanagi, representing him as a barefaced plagiarist.—*Biog. Universelle.*

ATHANASIUS (St) a celebrated Christian bishop of the fourth century. He was a native of Egypt, and a deacon of the church of Alexandria, under Alexander the bishop, whom he succeeded in the dignity A. D. 326. During the life of his predecessor, he had entered with great vehemence into the dispute by which the Christians were then agitated, concerning the nature of Christ; and at the council of Nice had distinguished himself by a violent speech against Arius. On his advancement to the prelacy, he dedicated all his time and talents to the defence of the doctrine of the Trinity, and resolutely refused the request of Constantine for the restoration of Arius to the Catholic communion. In revenge for this refusal, the Arian party brought several accusations against him before the Emperor. Of these he was acquitted in the first instance; but on a new charge of having detained ships at Alexandria, laden with corn for Constantinople, either from conviction or policy, he was found guilty, and banished into Gaul. Here he remained an exile eighteen months, or, as some accounts say, upwards of two years, his see in the mean time being occupied. On the death of Constantine, he was recalled, and restored to his functions by Constantius; but the Arian party again acquiring ascendancy, he was once more deposed, and a new prelate chosen in his place, whom the Emperor directed his authorities to support. On this occasion, Athanasius fled to Julius bishop of Rome, who, disapproving of the conduct and doctrine of the Eastern churches, gave him welcome protection. He resided three

years at Rome, and was then summoned by the Western emperor Constans, who favoured the Catholic party, to Milan, in order to concert the measure of another general council, to settle the disputes which had not been terminated by the council of Nice. Sardica, in Illyrium, was the place fixed upon, where the bishops of the Eastern and Western churches accordingly met; but the former requiring that Athanasius should be excluded from the assembly, the Western bishops refused, and the parties separated. Constans was however so intent upon his restoration, that he threatened Constantius with war in case of refusal, and that timid emperor accordingly recalled him. On this occasion the latter ruler requested the use of one church in Alexandria for the Arians, to which Athanasius consented, but stipulated that the Catholics might be favoured in the same manner where Arianism prevailed. This proposal however the partisans of the Arian doctrine being now ascendant, coldly declined—a striking proof of the general intolerance of the times. On his restoration, Athanasius continued to exhibit his wonted zeal for the admission of the word “ consubstantial,” and enjoyed a short period of repose, until the death of his faithful friends, the emperor Constans and pope Julius, again exposed him to persecution. Liberius, the successor of Julius, being induced to call councils at Arles and Milan, Arian influence prevailed in both instances; and the bishops, refusing to sign the sentence of his condemnation, were banished, the bishop of Rome among the rest, who however in the sequel purchased his return by compliance. So great however was the popularity of Athanasius, it was only by the aid of soldiery he could be safely ejected, and, after evincing the most calm intrepidity in the midst of blood and slaughter, he prevailed upon to retire. At length, a price being fixed upon his head, he suddenly disappeared altogether, and took refuge in the deserts of Thebais, among the disciples of the monk Anthony, where he was lost to the world for upwards of six years, during which time his see was occupied by George of Cappadocia. In this retreat however he was not inactive, but frequently assailed his enemies and consoled his friends by his writings and in an “ Apology for his Flight,” addressed to the Emperor, loaded the latter with the most vehement invectives. On the death of Constantius and accession of Julian, George of Cappadocia being killed in a popular tumult, Athanasius boldly returned to Alexandria, and re-assumed his episcopal functions amidst a crowd of devoted adherents. Not only so, but with unabated zeal he summoned a council, and settled the terms upon which the Arian party might be readmitted into the church. When informed of these steps, Julian expressed the utmost astonishment at his return without waiting for an imperial edict; and as he regarded him with the greatest aversion, not only ordered him to depart instantly, but when the prefect, through caution or negligence, delayed the execution of the order, expressed the utmost anger. Athanasius, who understood the character of

his new enemy, after narrowly escaping seizure in his way to the desert, returned and lay concealed in Alexandria until the death of Julian, A. D. 363. His successor Jovian, being a Christian, not only restored all the exiled bishops to their sees, but being at the same time a favourer of the Catholic faith, requested from Athanasius an orthodox statement of it, which the latter presented in a synodical letter, and the Nicene Creed again became the general formulary of the churches. Under Jovian, the intrepid and zealous prelate enjoyed ten years of unmolested authority; but on the accession of the emperor Valens, an Arian, all the bishops restored by Jovian were again banished, Athanasius included, who is said to have lain concealed for four months in the monument of his family. The Emperor however, either from policy or respect, soon gave up the contest; and the prelate, returned from what has been termed his fifth exile. He passed the remainder of his days with tranquillity, terminating a life not easily paralleled, in the forty-sixth or forty-eighth year of his prelacy, at the age, as it is supposed, of nearly eighty, A. D. 373. The character of Athanasius is sufficiently manifested by the course of his experience, and affords one of numerous instances of a firm and conscientious adherence to principle, which is respectable, whatever the quality of the principle itself. In the shadowy dispute concerning the divine nature, between Athanasius and Arius, similar zeal, tenacity, and intolerance, were displayed on both sides; and it is difficult to bestow the praise of steadiness and consistency on the one party, and deny it to a precisely similar exhibition of qualities by the other; which observation may possibly be extended to zealous doctrinal religious disputants of all creeds and ages. With respect to Athanasius, he would evidently have evinced an ascendant mind in any situation; his patience of labour, jealousy of fame, fearlessness of danger, and extraordinary intrepidity, could under no circumstances have been lost on society. Uniting to religious zeal a personal conduct, regular, discreet, and generous, his canonization by the church, the opinion of which he did so much to render triumphant, is not so offensive to common sense as the majority of the prostitutions of that posthumous honour. With more enlarged views, he might not have been a saint, but probably somewhat more of a great and good man. He wrote many books, which are chiefly defences of himself and invectives against his enemies, in a style which is not destitute of dignity and ornament. “ The Life of Saint Antony,” and “ The Abridgment of the Scriptures,” are among the most valued of his performances. It may be as well to observe here, that the celebrated creed, called the Athanasian, is ascribed by all later and sounder critics to Vigilius, an African bishop of the fifth century, who published several things under the name of Athanasius. The best edition of the works of Athanasius is that of Montfaucon, Paris, 1698, 3 vols. folio, and that of Padua, 1777, 4 vols. folio.—*Dupin. Mosheim. Milner.*

ATHELSTAN, king of England, succeeded his father Edward the Elder in 925. Although of illegitimate birth, his mature age and acknowledged capacity caused him to be preferred to the lawful children of Edward, at a season which required considerable political talents and warlike experience. He answered the expectations of his supporters by repressing the Danes of Northumberland, and defeating a considerable combination of that people, with the Scots and the Welch, who united in a league against England. After this event, he enjoyed his crown in peace, and governed with great ability. A remarkable law was passed in his reign for the encouragement of commerce: every merchant who made three voyages to sea on his own account was deemed a thane or noble. Athelstan died after a reign of sixteen years, and was succeeded by his brother Edmund.—*Hume. Turner's Hist. of the Anglo Saxons.*

ATHENAGORAS, an Athenian philosopher of the second century. From Athens he went to Alexandria, where he was converted to Christianity, and became master of the Christian catechetical school in that city. Clement of Alexandria and Pantanus were among his scholars. The writings of Athenagoras consist of "An Apology for the Christians," addressed to the emperor Marcus Aurelius and his son Commodus, and therefore probably composed about A.D. 177 or 178; and a treatise "On the Resurrection of the Dead." These pieces have been several times printed together. The best edition is that of Dechair, with the notes of various critics, Oxford, 1706, 8vo. The time and circumstances of his death are not known.—*Lardner. Fabricii Bibliot. Græc.*

ATHENÆUS, a Greek grammarian, a native of Naucratis in Egypt, flourished in the third century. He was one of the most learned men of his time, and has been called the Varro and the Pliny of the Greeks. The only work of this author which has reached modern times is entitled "The Deipnosophists, or the Table Conversation of the Sophists." It is a collection of facts, anecdotes, and observations, which are valuable chiefly in consequence of the loss of the original authors from which they are taken. It consisted of fifteen books, but the two first and the beginning of the third are wanting; which however, with other hiatuses, have been partly supplied by an extant abridgment. The best editions are—that of Casaubon, Leyden, 1657, 1664, 2 vols. folio, and that of Schweighæusen, Strasburgh, 1801, 1807, 14 vols. 8vo.—*Biog. Universelle. Dublin's Classics.*

ATHENÆUS of Byzantium, an engineer under the emperor Gallienus, and the reputed author of a treatise on "The Machines of War," printed in the collection of the works of the ancient mathematicians, Paris, 1693, folio, Greek and Latin.—*Fabricius.*

ATHIAS (JOSEPH) a Jewish printer of Amsterdam, who edited and published a Hebrew Bible, the text of which was formed from collections of ancient MSS, and the best previous editions. He printed it first in 1661, 2 vols. 8vo, and again in 1667. Both impressions are scarce and valuable. The states of

Holland rewarded his editorial labours with a medal and gold chain. Athias also printed the Bible in English, Spanish, and German.—*Moreri.*

ATKINS or **ATKYNS** (SIR ROBERT) an English gentleman of an ancient family in Gloucestershire, who distinguished himself as a lawyer and a patriot in the reigns of Charles II and his successors. After an academical education at Oxford, he entered at one of the inns of court, and, the usual probation undergone, was called to the bar. He soon attained eminence in his profession; and on the restoration of Charles II he was created K. B. In 1672 he was raised to the bench, becoming one of the judges of the Common Pleas, which post he kept till 1679; when, disgusted at the arbitrary measures pursued by the king's ministers, he gave in his resignation and retired into the country. In the busy scenes of the eventful period which followed, Sir Robert acted with firmness and consistency as a constitutional lawyer, without however committing himself as a decided opponent of government. In 1683, he was applied to for advice by the friends of lord William Russel, and readily gave his opinion. He subsequently published remarks on the trial of that personage, in which he inculcates the position, that "there is not, nor ought to be, any such thing as constructive treason, as it defeats the very scope and design of the statute of the 25th of Edward III, which is to make a plain declaration on what shall be adjudged treason by the ordinary courts of justice." He also defended Sir W. Williams, speaker of the House of Commons, who was prosecuted by the crown for signing the order for printing Dangerfield's narrative of the Popish Plot. In the reign of James II he published two tracts against the dispensing power assumed by that monarch, one of which involved him in a controversy with the chief justice, Sir Edward Herbert. When the Revolution took place, the principles and conduct of Sir R. Atkyns recommended him to the new King, who made him lord chief baron of the Exchequer. The same year, 1689, he was chosen speaker of the House of Lords, and held that office till 1693. He resigned his judicial situation in 1695, and retreated entirely from public life, residing chiefly at his seat at Sapperton in Gloucestershire, where he died in 1709-10, aged eighty-eight. The private character of this gentleman was very respectable. The only circumstance recorded at all discreditable to him, is a report that his last resignation of office was the effect of pique at being disappointed of the lucrative post of Master of the Rolls. His law "Tracts," which have been collected and published in one volume, are much esteemed. He is said to have written against the exorbitant power of the court of Chancery.—*Biog. Brit.*

ATKYNS (SIR ROBERT, jun.) the only son of the subject of the preceding article. The state of his health, or his natural disposition, probably prevented him from taking such an active part in public affairs as might have been expected from a man of his rank and con-

nexions. He spent nearly the whole of a long life as a retired country gentleman, devoting his time to the composition of a work of considerable value, which has preserved his name from oblivion. It relates to the history and topography of his native county, and was completed, but not published, a short time previous to his death, which took place in 1711, at the age of sixty-five. He was assisted in this undertaking by Dr Parsons, chancellor of the diocese of Gloucester; and in 1712 the work appeared in one volume folio, entitled "The Ancient and Present State of Gloucestershire." It was reprinted in 1768; and in 1779 Mr Rudder, a printer of Gloucester, compiled, partly from the materials afforded by Sir R. Atkyns's book, "A New History of Gloucestershire," folio, in the preface to which he acknowledges the general accuracy of his predecessor, particularly in recording the descent of landed property. Sir Robert derived his accounts from the escheators' books, original fines, and other records, to which he had free access, and, excepting a few mistakes, which might happen in transcribing, he abstracts them very faithfully.—*Rudder's Pref. Noble's Continuation of Granger's Biog. Hist. of England, vol. ii.*

ATKYNs (RICHARD) a writer on bibliography in the seventeenth century. He was of the same family with the foregoing, and was a native of Gloucestershire. He was educated as a lawyer, and appears at one time to have been a man of property; but engaging imprudently in a law suit which involved some questions relative to the royal prerogative, and being unsuccessful, his affairs became deranged, and he was arrested and thrown into the Marshalsea prison, where he died September 14, 1677. He was buried at St George's church, Southwark, at the expense of his relative, judge Atkyns. His book, entitled "The Original and Growth of Printing, collected out of history and the records of this kingdom; wherein it is demonstrated that printing appertaineth to the prerogative royal, and is a flower of the crown of England," Lond. 1664, 4to,—was intended to support the now exploded hypothesis, that the art of printing was introduced into this country prior to the time of Caxton.—*Wood's Athen. Oxon. Dibdin's Edit. of Ames's Typographical Antiquities, vol. i.*

ATRATUS (HUGO) or Hugh the black, an English cardinal of the thirteenth century, famous for his acquaintance with philosophy, mathematics, and medicine. He was so skilful in the last-mentioned branch of knowledge, that he was termed the phoenix of his age. He was invited to Rome by pope Nicholas III, and made a cardinal by Martin II in 1231. He died of the plague in 1237. Several works are ascribed to Atratus, among which are—"De Genealogiis Humanis;" "Problemata;" "Canones Medicinales."—*Pitseus de Scriptor. Anglican. Moreri.*

ATTAIGNANT (GABRIEL CHARLES de l') a French poet of the eighteenth century. He was educated for the church, and became canon of Rheims; but the gaiety of his manners,

and the character of his compositions, savoured little of the ecclesiastical profession. His principal works are—"Pieces derobées à un Ami," 2 vols. 12mo, published by another person, with a dedication to the author; and "Poesies de l'Abbe l'Attaignant," in 4 vols. 12mo, to which a fifth was afterwards added. He died in 1779, aged eighty-two; and he is said, towards the close of his long life to have become a penitent.—*Biog. Univ.*

ATTARDI (BONAVENTURE) a native of Sicily, an Augustine friar, who was made provincial of the order in Sicily and Malta. He was professor of ecclesiastical history at Catania, and his writings relate to that branch of literature. In 1738 he published "Bilancia della Verita," in support of the common opinion, that Malta was the island called Melita, where St Paul was shipwrecked; which had been controverted by F. Georgi, a Benedictine. He also wrote against Muratori's assertion—"that it was not necessary to defend the immaculate conception by force of arms."—*Biog. Univ.*

ATTENDOLO (DARIUS) a Neapolitan soldier and poet of the sixteenth century, who was for some time in the service of the emperor Charles V. He was the author of a History of Duelling, 1560; a Discourse concerning Honour, 1562; and some Italian poems.—*Ibid.*

ATTENDOLO (JOHN BAPTIST) a native of Capua in the kingdom of Naples, who became a secular priest, and distinguished himself as a critic and a poet. He lost his life owing to the overturning of a carriage in 1592. He published a volume of Poems, with an Essay on Epic Poetry; and Observations on the Odes and other Poetical Works of Petrarch, whose productions he held in high estimation.—*Ibid.*

ATTERBURY (FRANCIS) a celebrated English prelate, was the son of Lewis Atterbury, rector of Milton, Bucks, a churchman who, both under the Protectorate and the Restoration, secured his preferments by a compliance with the times. He was born at his father's rectory in 1662, and received his education at Westminster, where he was elected a student of Christ's Church College, Oxon. He rapidly distinguished himself at the university as a classical scholar, and gave some proofs of an elegant taste for poetry. In 1687 he took his degree of M. A., and for the first time appeared as a controversialist in a defence of the character of Luther, entitled "Considerations on the Spirit of Martin Luther," &c. He was also thought to have assisted his pupil, the hon. Mr Boyle, in his famous controversy with Bentley on the epistles of Phalaris. He continued some time longer at college, exceedingly discontented, feeling with truth, that he was adapted to act on a wider theatre, and possessing all the ambition and restlessness by which his subsequent career was so much distinguished. His father, to whom he made these complaints, advised him very characteristically to marry into some family of interest, "bishop's, or archbishop's, or some court-

tier's, which may be done with accomplishments and portion too." To this parental council the future bishop duly attended, for he soon after married Miss Osborn, related to the duke of Leeds, a lady distinguished for beauty, and possessed of a fortune of 7000*l*. Having taken orders in 1691, he settled in London, where he became chaplain to William and Mary, preacher of Bridewell, and lecturer of St Bride's. In the fulfilment of these duties he soon became distinguished by the spirit and elegance of his pulpit compositions, but not without incurring opposition on the score of their tendency and doctrine, from Hoadly and others. Controversy however was altogether congenial to the disposition of Atterbury, who in 1706 commenced one with Dr Wake, which lasted four years, on the rights, privileges, and powers of convocations. In this dispute he took the side of high ecclesiastical authority, and with a fierce and contentious spirit, if his opponents are to be at all credited, discovered infinitely more address and dexterity than candour and adherence to fact. For these services however, which possibly hastened the extinction of the very assemblies they were intended to support, he received the thanks of the lower house of Convocation, and the degree of doctor of divinity from Oxford. The reign of Anne was eminently calculated for the advance of a divine of Atterbury's principles, who, soon after the accession, was made dean of Carlisle. Other preferments quickly followed; nor was his activity confined to the pulpit, for besides his dispute with Hoadly on the subject of passive obedience, he aided the defence of the famous Sacheverell, and in his character of prolocutor to the lower house of Convocation, wrote "A Representation of the present State of Religion," which was deemed too violent to be presented to the Queen, although privately circulated. In 1712 he was made dean of Christchurch, and in 1713, by the recommendation of the earl of Oxford, bishop of Rochester and dean of Westminster. The death of the Queen in 1714, put an end to all further hopes of advancement; for the new King treated him with great coolness, doubtless aware of either the report or the fact of his offer, on the death of Anne, to proclaim the Pretender in full canonicals, if allowed a sufficient guard. This dislike operated like oil on the inflammable mind of Atterbury, who not only refused to sign the loyal declaration of the bishops in the rebellion of 1715, but suspended a worthy clergyman for lending his church for the performance of divine service to the Dutch troops brought over to serve against the rebels. Not content with a constitutional opposition, he entered into a correspondence with the Pretender's party, in favour of the dispossessed family; for which offence he was apprehended in August 1722, and committed to the Tower; and in the March following a bill was brought into the House of Commons, for the infliction of pains and penalties. This measure, which on constitutional grounds can scarcely be defended, and which indeed was supported chiefly on the ur-

gency of the particular time and case, met with considerable opposition in the Lords, and was resisted with great firmness and eloquence by the bishop, who maintained his innocence with his usual acuteness and dexterity. His guilt however has been tolerably well proved by documents since published; and nothing more is necessary to warrant a confirmed moral distaste to this species of churchman, than the contemplation of such a scene of smooth dissimulation and hypocrisy. By this bill the bishop was deprived and outlawed, and no British subject was permitted to visit him abroad, without the King's sign manual; which however was not refused to his relatives. He left England in June 1723, and went first to Brussels, and afterwards to Paris, where he chiefly occupied himself in study, and in correspondence with men of letters. But even here, while he professed resignation, retirement, and a love for the existing constitution, in his letters to Pope and others, it has been incontestably proved, that in 1725 he was actively engaged in fermenting discontent in the Highlands of Scotland, with a view to another rebellion. In 1729 he lost his favourite daughter, Mrs Morice, who died in his arms, by which event he was deeply affected. His own death took place in 1731, and his body was allowed to be privately interred in Westminster Abbey. The character of this restless and aspiring prelate unhappily can find many parallels in the history of most churches; yet few of equal ambition and daring have been able to disguise their contentious spirit by so much amenity and moderation in their epistolary correspondence and personal address. From his intimacy with those who, in his day, were the chief dispensers of literary celebrity, his character in that respect has possibly been too much exalted; although as a composer of sermons, he still retains a great portion of his original reputation. His letters also are extremely easy and elegant; but as a critic and a controversialist, he is deemed rather dexterous and popular, than accurate and profound. If an anecdote told by Pope to Chesterfield be correct, he was a sceptic early in life; but the same authority also states, that he ceased to be so. Attending to his anxiety to restore a Catholic family, the strength of his Protestantism may be called in question; but it is scarcely necessary to remark, that in the career of interest and ambition, modes of faith are often rendered extremely subservient; and the general character of this eminent prelate by no means exempts him from the application of the general rule. Of four children born to bishop Atterbury, his son Osborn, rector of Oxhull in Warwickshire, alone survived him. Mrs Atterbury died in 1722, just before the prosecution of her husband.

Bios. Brit.

ATTERBURY (LEWIS, LL.D.) the elder brother of the above, was born in 1656, was educated at Westminster, and was elected to Christ's Church, Oxon, in the same manner. He early took orders, and became preacher of Highgate chapel, and rector of Shepperton and

of Hornsey in Middlesex, which livings formed the extent of his rise in the church. He was a plain, practical, and benevolent divine, and much attached to his brother, although thinking he had some reason to complain of neglect from him. He founded a female school at Newport-Pagnell, and published two volumes of sermons, and some writings against popery. He died in 1731.—*Ibid.*

ATTICUS (HERODES) or TIBERIUS CLAUDIUS ATTICUS HERODES, an Athenian philosopher and statesman of the age of the Antonines. His father, Julius Atticus, descended from the family of Miltiades, was raised from indigence to wealth, by the discovery of a hidden treasure. Herodes received an education suitable to the condition to which his father had been advanced by the fortunate accession to his property. Scholastic rhetoric, or the art of declamation, then esteemed a most fashionable accomplishment, became his principal study; and he prosecuted it under the first wasters of the age, with such success as to acquire great reputation as an orator. After travelling abroad, he settled at Athens, and gave public lectures on eloquence, which were attended by sophists and rhetoricians, whose admiration of his talents was perhaps not altogether disinterested, as his hospitality and munificence were lavishly extended to his followers. The fame of Herodes reached from Athens to Rome; and he was invited by the emperor Titus Antoninus to become rhetorical tutor to Marcus Aurelius and Lucius Verus, the adopted sons and destined successors of Antoninus. This promotion led to his being created consul A.D. 143. He was also made prefect of the free cities of Asia Minor, and president of the Panhellenic and Panathenian games, at which he was crowned. He testified his sense of this honour by building a marble stadium, or course for running matches, one of the grandest works ever executed by a private individual. He also erected a theatre at Athens, and repaired and embellished the Odeon of Pericles. These and other splendid monuments of his wealth and liberality have perpetuated his name, while his literary productions have perished. The latter part of the life of Herodes was embittered by the ingratitude of his fellow-citizens, who preferred accusations against him in his public capacity; but they were quashed by the friendship of his pupil Marcus Aurelius, then emperor. He passed his latter days at Marathon, his birth-place, where he died about A.D. 185, aged seventy-five; and his remains were interred at Athens, with public honours.—*Aulus Gellius. Gibbon.*

ATTICUS (TITUS POMPONIUS) an eminent Roman knight in the decline of the republic, who has acquired great celebrity from the peculiar benevolence and amenity of his private character. Descended from an ancient family, he inherited vast wealth from his father and uncle, and being liberally educated, devoted himself with enthusiasm to the cultivation of literature and philosophy. It may be gathered from the general conduct of Atticus, that with

a due study of his own taste and the factious state of the expiring commonwealth, he early formed the plan of a general line of conduct, which he pursued with admirable address and prudence during the whole of a long life. Avoiding public business altogether, he as studiously evaded official dignities and aggrandisement, as others sought them; and without joining any party himself, enjoyed the intimacy of the leading men of all parties. He had scarcely reached manhood, when the bloody factions of Marius and Cinna began to rage; to avoid which, he retired to Athens, whither he conveyed the greatest part of his property, and where he drank deeply of Grecian literature, and lived in the most liberal exercise of public and private benevolence. His retirement from the scene of political contention did not however make him indifferent to the welfare of the actors in it, or timid in serving his friends of the distressed party. He supplied young Marius with money to escape from his foes; and when Cicero, to whom he was strongly attached, was banished, accommodated him also with a large sum of money. He returned to reside at Rome, when affairs were settled, but steadily pursued his original plan of avoiding public business; and being sixty years of age when the war broke out between Cæsar and Pompey, he gladly availed himself of the pretext of age, to avoid engaging on either side. On the death of Cæsar, although upon the most intimate terms with Brutus, he opposed the establishment of a private treasury for the use of that party; yet he largely assisted that highly esteemed Roman, when obliged to leave Italy. He also extended his services to Antony, when that leader was compelled to quit Rome with no prospect of a restoration of his affairs. Even in the bad times of the triumvirate, he caused all the proscribed who fled to Epirus to be liberally relieved from his estates in that country, and by his interest recovered the forfeited property of several of them. Such was his credit with Octavius, that his daughter was preferred to all the great matches of Rome, as a wife for his friend Agrippa. Octavius himself cultivated the closest intimacy with Atticus, who at the same time maintained an equally intimate correspondence with Antony. The mode of living of Atticus was that of a man of great fortune, whose mind was devotedly attached to literary and philosophical pursuits. His domestics were not numerous, but choice; his table was elegant, but not costly; and he delighted in what would now be called literary suppers. He was extremely studious, much attached to inquiries relative to the antiquities of his country, its laws, customs, and treaties, and wrote several works on these subjects, which appear to have been much valued. The conclusion of his life was conformable to the principles of the Epicurean philosophy, by which it had been all along governed. Having reached the age of seventy-seven with little assistance from medicine, he was seized by a disorder in the intestines, which terminated in an ulcer deemed incurable.

ble. Convinced of the nature of his case, he ordered his son-in-law Agrippa, and other friends to be sent for, and declared his intention to terminate his life by abstaining from food. When, in spite of their affectionate entreaties, he had persisted in this resolution for two days, some of the unfavourable symptoms of his complaint abated; but not thinking it worth while to take the chance of a cure, he persevered, and the fifth day closed his existence B. C. 33. In modern times the character of Atticus has been the subject of much curious discussion, and his neutrality in the midst of civil contentions has by some politicians been termed selfish and criminal. From the fearless generosity which he exhibited to the unfortunate on all sides, it may however be presumed, that looking on the state of the commonwealth without passion, he was convinced of the inutility of attempting to stop an inevitable career. Certain it is that, as a medium of friendship, a reconciler of differences, and a protector against the ferocity of party hatred, he was eminently serviceable in the calamitous times in which he lived; and possibly, with his cast of temper and talents, could scarcely have acted more beneficently for his country as well as for himself. His line of conduct has been attributed to his Epicurean philosophy; but native disposition and temper, must have formed his peculiar character much more than speculative principles. The correspondence between Cicero and Atticus, whose sister became the wife of Quintus Cicero, the orator's brother, is highly honourable to both parties, especially as the latter was also intimate with his rival Hortensius, and a mediator between them. According to Cicero, Atticus wrote annals of great value, comprising a sort of universal history for 700 years.—*Aikin's Gen. Dict. Corn. Nepos.*

ATTILA, king of the Huns, surnamed the Scourge of God, deduced his lineage from the ancient Huns, who dwelt on the confines of China. In the death of their uncle Rugilas, who reigned in modern Hungary, the brothers Attila and Bleda succeeded to the throne of the Huns. After they had forced the emperor Theodosius the younger to purchase an inglorious peace, Attila caused Bleda to be assassinated, and reigned alone over the whole nation and its subject territories, including the extensive kingdoms of Germany and Scythia, taken in their largest signification. Able to bring into the field from 5 to 700,000 men, his great passion was war; and, in addition to his real power, he sought to add the influence of superstition, by boasting the possession of a sword said to have belonged to the Scythian Mars, the possession of which was supposed to convey a title to the whole earth. His portrait, as described by Jornaudes, was that of a modern Calmuc, with a large head, swarthy complexion, flat nose, small sunken eyes, and a short square body. His looks were fierce, his gait proud, and his deportment stern and haughty; yet he was merciful to a suppliant foe, and ruled his own people with justice and lenity. A scheme was laid in the court of

Theodosius to assassinate him under the cover of a solemn embassy, which intention he discovered, and without violating the laws of hospitality, in the persons of the ambassadors, wisely preferred a heavy ransom for the principal agent in the plot and a renewed treaty at the expense of fresh payments. On the accession of Marcian, he demanded tribute, which was refused; and although much exasperated, he resolved first to turn his arms against the Western emperor Valentinian, whose licentious sister Honoria, in revenge for being banished for an intrigue with her chamberlain, sent an offer of herself to Attila. The Hun, perceiving the pretence this proposal supplied, preceded his eruptions into Gaul by demanding Honoria in marriage, with a share of the imperial patrimony. Being of course refused, he affected to be satisfied, and pretended he was only about to enter Gaul to make war upon Theodoric king of the Ostrogoths. He accordingly crossed the Rhine, A.D. 450, with a prodigious host, and marked his way through Gaul with pillage and desolation, until gloriously defeated by Theodoric and the famous Ætius in the bloody battle of Chalons. He was however allowed to retreat; and having recruited his forces, he passed the Alps the next year, and invaded Italy, spreading his ravages all over Lombardy. This visitation was the origin of the famous republic of Venice, which was founded by the fugitives who fled at the terror of his name. Valentinian, unable to avert the storm, repaired from Ravenna to Rome, whence he sent the prelate Leo with a solemn deputation, to avert the wrath of Attila, who consented to quit Italy, on receiving a vast sum as the dowry of Honoria, and an annual tribute. He did not much longer survive these transactions, and his death was singular, being found dead in consequence of suffocation from a broken blood-vessel, on his marriage-night with a beautiful young virgin named Ildico. This event took place in 453. With Attila ended the brief and bloody empire of the Huns; for his sons, by their divisions and civil wars, mutually destroyed each other, or were dispossessed by the arms of other chieftains of the barbarian races.—*Univ. Hist. Gibbon.*

ATTIRET (JOHN FRANCIS) a French Jesuit and painter. He was born in 1207, and practised painting with great reputation until the age of thirty, when he entered the Society of Jesus. In 1737 he was appointed missionary to Pekin, where he acquired great favour with the emperor Kien Long, who made him a mandarin. He died in that capital in 1768, and his pictures are highly esteemed by the Chinese. Attiret wrote a very amusing account of the emperor of China's gardens, of which a translation by Spence, under the name of Sir Harry Beaumont, was published in 1752.—*Biog. Universelle.*

ATWOOD (GEORGE F.R.S.) an eminent mathematician, who was educated at Westminster school, and afterwards at the university of Cambridge, where he took the degree of M.A. He was for some time a tutor and many years a fellow of Trinity college, in which si-

tuation he became much distinguished for his acquaintance with mathematics and natural philosophy. In 1784 he published, in one volume 8vo, "A Treatise on the Rectilinear Motion and Rotation of Bodies; with a Description of Original Experiments relative to that Subject;" a work remarkable for its perspicuity, and the extensive information which it affords. About the same time he made public an "Analysis of a Course of Lectures on the Principles of Natural Philosophy, read at the University of Cambridge," which is not less valuable than the preceding. The late Mr Pitt, having attended Mr Atwood's university lectures, conceived such an opinion of his talents and scientific information, that he engaged him to devote a considerable part of his time to financial calculations; and that he might be enabled to do so without injury to his fortune, bestowed on him a sinecure office, the income of which he retained from 1784 till his death in 1807, at the age of sixty-two, when the office which he had held was abolished. Mr Atwood published "A Dissertation on the Construction and Properties of Arches," 1801, 4to, and several other valuable treatises relating to mathematics and mechanical science.—*Month. Mag.*

AVALOS (FERDINAND FRANCIS D') marquis of Pescara, descended from one of the first houses of Naples, was a distinguished captain under Charles V. He married Vittoria Colonna, so celebrated for her beauty and accomplishments, with whom he lived in perfect harmony, so that being taken prisoner at the battle of Ravenna, he employed the hours of captivity in composing a "Dialogue on Love," dedicated to his wife. On recovering his liberty, he was of great service to the Emperor at the battles of Biquoqui and Pavia, and died at Milan at the age of thirty-six, without issue, in 1525. He was a patron both of letters and of science.—*Moreri.*

AUBAIS (CHARLES DE BASCHI, marquis of) an ingenious Frenchman, distinguished as the patron as well as the cultivator of literature. He published a work of reputation on historical geography, and furnished the materials for Menard's collection, entitled "Pieces fugitives pour l'Histoire de France," 3 vols. 4to. He died in 1777, at the age of ninety-one.—*Dict. Hist.*

AUBENTON, see DAUBENTON.

AUBERT (WILLIAM) sieur de Massouignes, a native of Poitiers, who embraced the legal profession, and became an advocate of the parliament of Paris. He died in 1601, aged sixty-seven. He published "Histoire des Guerres des Chrétiens contre les Turcs, sous Godefroy de Bouillon," 4to, and some pieces of minor importance.—*Ibid.*

AUBERT DU BAYET (—) a native of Louisiana, who entered into the French army, and served in America during the war between Great Britain and the United States. He was in France at the commencement of the Revolution, and soon began to take an active part in public affairs. In 1789 he published a pamphlet against admitting the Jews to the

rights of citizenship. He afterwards became one of the principal advocates for innovation and in 1791 was chosen a member of the Legislative Assembly. In 1793, he resumed his military profession, and was made governor of Mayence, which, after an obstinate defence, he was obliged to surrender to the king of Prussia. Aubert then commanded in La Vendée, and being defeated at Clisson, he became the object of denunciations, against which he successfully defended himself. Employed again at Cherbourg, he was called by the Directory to the post of minister of war, which he held only three months, when he was appointed ambassador of the republic at Constantinople, where he closed a life of active service, December 17th, 1797, at the age of thirty-seven.—*Nouv. Dict. Hist. Biog. Univ.*

AUBERY (ANTHONY) an industrious French historian, born in 1617. He was educated to the law, but preferred the pursuit of literature. He wrote 1. "History of Cardinals," 5 vols. 4to; 2. "History of cardinal Richelieu," 2 vols. folio; 3. History of cardinal Mazarine, 4 vols. 12mo; 4. "On the Pre-eminence of the kings of France;" 5. "On the Pretensions of the kings of France to the Empire." Of these works, the life of Richelieu, having been written under the patronage of his niece, the duchess of Aiguillon, is deemed a flattering production. For his treatise on the empire he was imprisoned in the Bastille, in order to allay the anger of the German princes, who imputed his sentiments to the king: he was however treated with kindness, and soon released. Aubery was a mean writer, but his industry was great, and his works are not deficient in authentic anecdote and useful information.—*Moreri. Hist. Dict.*

AUBERY (LOUIS DE MAURIER) a French historian of the seventeenth century. When young, he accompanied his father, who was sent ambassador to Holland, which residence led to the production of two historical works still held in some esteem, entitled, "Memoirs for the History of Holland;" and "Memoirs for the History of Hamburg, Lubec, Holstein, &c." These productions were printed together at Amsterdam in 1736.—*Nouv. Dict. Hist.*

AUBIGNE (THEODORE AGRIPPA D') a Calvinist gentleman, much attached to Henry IV of France, was born at St Maury in 1550, and distinguished himself by his early progress in literature. Being left very young with little or no inheritance, he quitted letters for arms, and entered into the service of Henry, then king of Navarre, whose favours he enjoyed in a high degree, being appointed a gentleman of his bedchamber, and holding various other places. D'Aubigne did not acquire this countenance by meanness or subserviency, being one of the most frank, and at the same time the most inflexible of courtiers. The necessity felt by Henry of conciliating the Catholic lords by courtesies and appointments, to the exclusion of his faithful adherents in adversity, naturally appeared ungrateful to the latter; and D'Aubigne never hesitated to speak his mind on the occasion. At length however,

although he always treated him with the external respect due to a tried and zealous friend, the blunt sincerity of his manners became distasteful even to this best of the French kings; and D'Aubigne finally quitted the court and kingdom, and retired to Geneva. Here he spent the remainder of his life in lettered freedom, and died highly honoured and respected in 1630, having reached the advanced age of eighty. He left several children, one of whom, Constant d'Aubigne, a very worthwhile character, was father of the famous Madame Maintenon. He wrote several works, the principal of which is "An Universal History from 1550 to 1601, with an abridged account of the death of Henry IV," 3 vols, folio, 1616-1626. This book is written with much dignity of sentiment, but is deemed partial and defective in style. In many respects however it conveys a due notion of the peculiar humour of the author, which is still further displayed in "The Confessions of Sancy," and "The Baron of Feneste" two satirical pieces which evince considerable powers of raillery and ridicule. He is also author of miscellaneous pieces, tragedies, poems, &c. with "Memoirs of his own Life," not published until 1731. The latter, which has been translated into English, abounds with free and curious anecdotes, affording a lively picture of the man.—*Moreri. Nouv. Dict. Hist.*

AUBLET (JOHN BAPTIST CHRISTOPHER FUYE) a French botanist, born in 1720. He evinced an early predilection for the study of natural history; and after passing some time at Montpellier, he went to the Spanish colonies of America, where he practised pharmacy, and continued his favourite pursuits. Returning home, he was sent in 1752 to the isle of France, to establish a botanic garden. He continued there nine years, and in 1762 he was employed to make botanical collections at Guiana, whence in 1764 he passed to the island of St Domingo. In the following year he returned to France, and, with the assistance of the celebrated botanist Bernard de Jussieu, he arranged the materials which he had collected in the course of his travels, and in 1775 laid them before the public under the title of "Histoire des Plantes de la Guiane Française," 4 vols. 4to, two of which consist of plates. Out of about eight hundred plants described in this work, nearly half were new discoveries. The herbarium of Aublet was sold to Sir Joseph Banks. He died at Paris, May 6th, 1778. Linæus commemorated this botanist by naming a species of vervain, *Verbena Aubletia*; and M. Richard has since given the name of *Aubletia* to a new genus of tropical plants.—*Biog. Universelle.*

AUBREY (JOHN) an English antiquary and topographer of eminence in the 17th century. He was born about 1626, at Easton Piers in Wiltshire, and was the eldest son of a gentleman possessed of considerable landed property in that county. He studied at Oxford, entered in 1646 at the Middle Temple, and resided there and at the university alternately, till the death of his father, which took

place in October, 1652. On this event he succeeded to the possession of estates in the counties of Wilts, Surrey, Hereford, Brecknock, and Monmouth; but his inheritance was burthened with mortgages, and involved him in law-suits, which his legal education had by no means qualified him to manage. While at Oxford, he devoted his time to historical and archæological researches, and was engaged in collecting materials for "Sir William Dugdale's Monasticon Anglicanum." He afterwards afforded very important assistance to Wood, the Oxford antiquary, who acknowledges his extensive obligations to Aubrey; though, on a subsequent quarrel taking place, Wood aspersed his coadjutor as a mere pretender to antiquarian science, "who was so credulous that he stuffed his letters with fooleries and misinformations." After the death of his father, Aubrey lived for some years on his Wiltshire estates, making visits to London in term time, probably on account of his law-suits. He purposed a journey to Italy, which seems to have been prevented by the state of his affairs. However, he visited Ireland in 1660, and France in 1664; having, in the interval between these tours, become a Fellow of the Royal Society, then newly established. The remaining part of his life was passed in a state of indigence, protected from the miseries of want only by the benevolence of friends, residing principally at the house of lady Long, of Draycot, in Wiltshire, who did herself honour by her patronage of the improvident antiquary. The time and circumstances of his death are not precisely known, but it is probable that he died while on a visit at Oxford, in the year 1700. Few men of letters ever published less than Aubrey; for the only work which he printed was a small volume intitled "Miscellanies," a collection of popular superstitions relative to dreams, portents, ghosts, witchcraft, &c. It would be doing him great injustice to appreciate his character and abilities from this production only. His manuscripts, preserved in the Ashmolean Museum at Oxford, in the library of the Royal Society, and in some private repositories, furnish abundant proof of the extent of his researches and he by no means deserves the harsh censure of Gifford, who in his life of Ben Jonson, says "Whoever expects a rational account of any fact, however trite, from Aubrey, will meet with disappointment." "Aubrey thought little, believed much, and confused everything." In opposition to these remarks, it may be stated that a considerable part of the papers of our antiquary consists of collections of matter, much of which would probably have been rejected had the author prepared his manuscripts for the press. Sir Richard Hoare made considerable use of the manuscripts of Aubrey in his splendid work on the antiquities of Wiltshire, particularly in his account of the curious ancient monument at Abury. Among the manuscript collections of Aubrey was a topographical treatise on the county of Surrey, published with additions by Dr Rawlinson in 1718, 5 vols. 8vo. In 1813 appeared "Letters written by eminent Persons

in the seventeenth and eighteenth centuries, &c. with Lives of eminent Men, by John Aubrey," 3 vols. 8vo; and in 1821 was printed, in a thin 4to volume, "Aubrey's Collections for Wilts." It may safely be asserted, that much valuable intelligence might still be gleaned from the unpublished remains of this writer, whose talents and learning, if they did not place him on a level with Spelman and Dugdale, at least rendered him equal to Ashmole, Wood, or Hearne.—*Biog. Brit. Ed.*

AUBRIET (CLAUDE) an ingenious French painter of subjects belonging to natural history. He went with the celebrated Tournefort to the Levant, and exercised his talents in illustrating the works of that traveller. After his return home, he was appointed painter at the Jardin du Roi, at Paris. He died at a very advanced age in 1740. His works are extremely numerous.—*Nov. Dict. Hist.*

AUBRIOT (HUGH) a French merchant, who became superintendent of finances to Charles V, and mayor of Paris. He erected several buildings in Paris for use and ornament, and among the rest the famous Bastille, as a fortress against the English. Being accused of heresy, he was tried and sentenced to perpetual imprisonment, but was released by the insurgents against the taxes, termed Maillotins, who broke open his prison and placed him at their head; he however immediately quitted them and fled into Burgundy, where he soon after died. From Hugh Aubriot the French reformers received the name of Hugonots.—*Nov. Dict. Hist.*

AUBRY (JOHN BAPTIST) a French writer on metaphysics and morals, was born in 1736. He was a Benedictine monk, and became prior of the convent of Commercy, of which situation he was deprived, in consequence of the suppression of monastic establishments at the revolution. He died in 1809, aged seventy-three. Among his works are "Questions philosophiques sur la Religion Naturelle;" "Theorie de l'Âme des Bêtes;" and "Questions metaphysiques sur l'existence et la nature de Dieu."—*Dict. Hist.*

AUBRY (JOHN FRANCIS) a French physician, known as the author of an ingenious work entitled "Les Oracles de Cos," published at Paris in 1775, and reprinted with additions in 1781. This book exhibits a review of the practice of Hippocrates and other physicians of antiquity.—*Dict. Hist.*

AUCHMUTY (SIR SAMUEL) lieut.-gen. G.C.B. col. of the 78th regt. of foot. This distinguished officer entered the army, August, 1776, as a volunteer in the 45th regt. of infantry, then with Sir W. Howe in North America, where he served the three following campaigns. In 1783 he held a company in the 75th foot in the East Indies, and was present at the first siege of Seringapatam, under lord Cornwallis. In 1801 he joined the expedition to Egypt, when he was appointed adjutant-general. Returning to England in 1803, he was ordered out to South America in 1806, where he assumed the command of the troops, with the rank of brigadier-general, and in

February, 1807, took by assault, after a most determined resistance, the fortress and city of Monte Video, for which he received the thanks of Parliament. In 1809 he was appointed commander in chief of the Carnatic, and in 1811 reduced the valuable settlements of Java and Batavia under the dominion of Great Britain, for which he again obtained the thanks of both houses. On his return to Europe Sir Samuel succeeded Sir D. Baird, as chief of the staff in Ireland. His death was sudden, being occasioned by apoplexy, Aug. 11, 1822, in the sixty-sixth year of his age. His remains, after lying in state at Kilmansham Hospital, were interred on the 21st of the same month in the royal vault in Christ Church cathedral, Dublin.—*Gent. Mag.*

AUCKLAND (WILLIAM EDEN, LORD) was the third son of Sir Robert Eden, Bart., of West Auckland, in the county of Durham. He was educated at Eton and Oxford, and called to the bar by the Society of the Middle Temple in 1769. He accompanied the earl of Carlisle in 1778, to negotiate terms with the revolted colonies of America, and was chief secretary during the same nobleman's viceroyalty in Ireland. In 1785 he was sent ambassador extraordinary to negotiate a commercial treaty with France, and in 1788 performed a similar service with Spain. In 1789 he was sent to the Hague, where he concluded a treaty between Great Britain, the Emperor, and the king of Prussia, in settlement of the affairs of the Netherlands. In the same year he was created baron Auckland, in the kingdom of Ireland, and in 1793 was advanced to the English peerage by the same title. He was an able diplomatist, and is the author of the following political and other works: "The Principles of Penal Law," 8vo, 1771; "Five Letters to the earl of Carlisle," 8vo; "On the Population of England, in Answer to Dr Price," 8vo; "View of the Treaty of Commerce with France," 8vo; "The History of New Holland," 8vo; "Remarks on the War," 8vo, 1795; and various speeches in the House of Lords. He died in 1814.—*Brit. Peerage.*

AUDEBERT (GERMAIN) a French lawyer and writer of Latin poetry, in the sixteenth century. His works are, "Roma, poema," Paris, 1555, 4to; "Venetia, poema," Venet. 1583, 4to; and "Partenope, poema," Paris, 1585; published together in 1603. The Venetian government conferred on him the order of St Mark, as a reward for his panegyric poem on the republic. He died in 1598, aged about eighty.—*Moreri.*

AUDEBERT (JOHN BAPTIST) a native of Rochefort, who became an engraver. He studied natural history, and distinguished himself by the beauty and accuracy with which he represented subjects of the animal kingdom. His principal productions were—"Histoire Naturelle des Singes et des Makis, suivie de celle des Galeopithiques," Paris, 1800, folio; and "Histoire Naturelle des Colibris, Oiseaux Mouches, Jacamars, et Promeros, aussi des Grimpeaux et des Oiseaux de Paradis."

1802, 2 vols., folio, both with coloured plates of the most splendid description. This last work was executed in conjunction with L. P. Viellot, and was not published till after the death of Audebert, which happened in 1800, at the age of forty-one.—*Dict. Hist.*

AUDIFREDI (JOHN BAPTIST) an eminent mathematician and bibliographer, born near Nice in Provence, in 1714. He entered at an early age into the Dominican order, and, amidst the shades of monastic life, devoted himself to the cultivation of science. His earlier works consist of tracts published at different times, containing the results of astronomical observations. But he is chiefly known in England as the author of "Catalogus Historico-criticus Romanarum editionum Sæculi XV.," Romæ, 1783, 4to; and "Specimen Historico-criticum editionum Italicarum Sæculi XV.," Romæ, 1794, 4to. He also published a catalogue, in four volumes folio, of curious books in the Casanatensian library, of which he was keeper for many years previous to his death, which took place July 3, 1794. "Audifredi," says Dibdin, in his *Bibliomania*, "has left behind him a most enviable reputation; that of having examined libraries with a curious eye, and described the various books which he saw with scrupulous fidelity." His catalogue of the earliest productions of the Roman press, is one of the best bibliographical works extant.—*Dict. Hist.*

AUDIGUIER (VITAL D') a French nobleman, who united literary studies with the profession of arms. His adventures and his writings were numerous. Among the latter is "A Treatise on the true and ancient Usage of Duels," Paris, 1617, 8vo; in which he recommends the revival of the old judicial combats, as a means of suppressing duelling. He also wrote poems and romances. He lived to be upwards of sixty, and is said to have been assassinated about the year 1630.—*Moreri. G. Biog.*

AUDLEY or AWDELY (THOMAS) chancellor of England under Henry VIII. He was born of a noble Essex family, in 1483, and possessed considerable learning and abilities, and a large fortune. With all these advantages however he was, for the whole of his public life, one of the most base and servile tools of his imperious master. After long acting as a mere instrument, in the capacity of speaker of the parliament, so significantly termed the "Black Parliament," he was selected to succeed Sir Thomas More as chancellor; and he subsequently sat in judgment, both on his predecessor and bishop Fisher, as also on queen Anne Boleyn, although she had been in some respects his patroness. He was likewise made serviceable in the affairs of Anne of Cleves and Catharine Howard, and in short refused no task, however miserable and contradictory, which the wayward Henry imposed on him. For these base compliances he was created lord Audley of Walden, and received the order of the garter. He was a great benefactor to Magdalen College, Oxford, and died in 1544.—*Biog. Brit.*

AUDRAN, the name of a celebrated family of French artists. The first of the name who is mentioned in this capacity, is CLAUDE Audran, who was born in 1592, and died in 1677. He acquired no great distinction by his works, and is chiefly known as the father of Germain, Claude, and Gerard Audran. CHARLES, generally supposed to be the brother of the foregoing, was born at Paris in 1594. He applied himself to the art of engraving, and went to Italy to perfect himself. He was a laborious and excellent artist; and in order to distinguish his works from those of his brother Claude, whose style was inferior, he marked them with the letter K., whence he is often called Karles. He died in 1674. GERMAIN, the eldest son of Claude, was born in 1631 at Lyons, where his parents resided. He studied under his uncle Charles, and became an engraver of considerable eminence. He died in 1710. CLAUDE, the second son of the elder Claude, was born in 1639, and devoted himself to historical painting, of which he became professor at the Royal Academy of Paris. He entered under Le Brun at the Gobelins, and was employed by him in several pieces for the staircase at Versailles, especially in the four great pictures of the battles of Alexander. He died in 1684. GERARD, brother to the preceding, and the most famous of the family, was born at Lyons in 1640, and also studied under Le Brun. He entirely devoted himself to the art of engraving, and, visiting Italy, acquired so high a character, that Louis XIV. recalled him to Paris, where he engraved Le Brun's pictures of Alexander's battles in so noble a style, that he was immediately placed at the head of his profession. He has also engraved many pictures from the principal masters of France and Italy. He is distinguished for the correctness of his outlines, and the strength and grandeur of his manner of working. He died in 1703, aged sixty-three. CLAUDE, the third of the name, the son of Germain, was born at Lyons 1658, and became celebrated as a painter of grotesques and arabesques, in which his invention was admirable. One of his principal works was the twelve months of the year, represented as goddesses, with their proper attributes, intended to be copied in tapestry for the queen of France. He was head painter to the king, and died in 1734, aged seventy-four. JOHN, another son of Germain, was born at Lyons in 1667. He learnt the art of engraving from his uncle Gerard, and practised with great reputation for sixty seven years. His stroke was distinguished for delicacy; and among his leading works are engravings of the lesser battles of Alexander, as well as several admired portraits. He died at Paris, much esteemed both as an artist and a man of worth, in his ninetyeth year. BENOIT, likewise son to Germain, also attained considerable eminence, and the dictionaries mention several more members of this extraordinary family, who obtained more or less distinction in the arts of painting and engraving, to which they so peculiarly devoted themselves.—*Strutt's Dict. of Eng. Morcri.*

AVENTINE (JOHN) an historian, born at Abensperg in Bavaria, in 1466. He studied at Ingoldstadt and at Paris, and afterwards gave lectures himself at Vienna, Cracow, and Ingoldstadt. In 1512 he was appointed tutor to two Bavarian princes, with one of whom he visited foreign countries. Towards the end of the reign of the emperor Maximilian I, he began, under the patronage of the duke of Bavaria, to compose his great work—"Annales Boiorum," "The Annals of Bavaria," in seven books, which was not published till after his death. Aventine severely censures the Romish clergy, and was introduced into his history some curious facts, which his first editor Ziegler thought proper to suppress; but the work was published entire by Nicholas Cisner at Basil, in 1580. Aventine also was the author of a curious book on counting and conversing by the fingers, entitled "*Numerandi per digitos manusque*," &c. Ratisb. 1532. He died in 1534.—*Vossius de Hist. Lat. Bayle. Moreri.*

AVENZOAR, or EBN ZOHAR, an Arabian physician of the twelfth century, born at Seville in Spain, where his father practised medicine. He became extremely eminent in his profession, travelled much, and passed through many adventures, among which was a long imprisonment by the governor of Seville. He had the care of an hospital, and he composed a work entitled "*Al Theiser*," containing a compendium of medical practice, and including many facts and observations not found in preceding writers, which were probably the result of his own experience. He died at Morocco in 1169. The report of his having lived to the age of 135 is probably an error, arising from his having been confounded with his son, of the same name and profession, who lived at Morocco, and was the author of a treatise on the regimen of health.—*Friend's Hist. of Physic.* vol. ii. *Halleri Bibliot. Med. Pract.* t. i.

AVERDY (CLEMENT CHARLES de l') a French financier of the eighteenth century. After having been a counsellor of the parliament of Paris, he was made comptroller-general. His administration proving unfortunate, he retired from the management of public affairs, to employ his time in literary studies. He published "*Code Penal*;" "*Traite de la pleine souveraineté du Roi sur la Province de Bretagne*," 8vo; "*Memoire sur le Procès criminel de Robert d'Artois, Pair de France*;" and "*Experiments on the Disease called the Smut in Wheat*." He was guillotined at Paris in 1794, in consequence of an absurd charge of having caused a scarcity of grain.—*Dict. Hist.*

AVELLANEDA (ALPHONSUS FERNANDES de) a Spanish writer, a native of Tordesillas, principally known as the author of a continuation of the first part of *Don Quixote*. The anger which this liberty excited in Cervantes is pleasantly exhibited in more than one passage of his own subsequent volumes. The production of Avellaneda, without being contemptible, will bear no comparison with the great work of Cervantes. A correct translation of this

book appeared in 1807; a previous version, through the medium of the French of Le Sage, gives no competent notion of the original.—*Antonio. Bibl. Hispan.*

AVERROES, or AVEN ROSCH, a celebrated Arabian philosopher, was born about the middle of the twelfth century, of a respectable family at Corduba, the capital of the Saracenic dominions in Spain. He was early instructed in Mahometan law, to which, in the manner of the Arabian schools of the period, he united the study of the Aristotelian philosophy. He also studied medicine and the mathematics, and thus educated was, upon his father's demise, chosen chief magistrate of Corduba. The fame of his talents induced the caliph Jacob Al-Mansor, king of Mauritania, to appoint him chief priest and magistrate of Morocco, in order to settle a plan of administration of law throughout his dominions. This rapid advancement of Averroes, as usual, excited the jealousy and enmity of rivals; and a base plan was laid to accuse him of a heretical desertion of the true Mahometan faith. As he was very speculative in his religious opinions, this plot succeeded; he was as rapidly disgraced as he had been advanced, and ordered never to appear out of the precincts of the Jews. In this state of depression he was so insulted, that he fled to Fez, where he was rapidly discovered and imprisoned. The news of his flight being carried to the King, a council was called to determine upon his treatment. Some of the members would have condemned him to death; others, on account of his popularity with a large population of unbelievers, thought it would be more politic to rest satisfied with recantation and penance. The latter opinion prevailing, Averroes was brought out of prison, and placed on the upper step of the mosque, with his head bare; and every one passing in to prayer was allowed to spit upon him. After suffering this indignity, and pronouncing his recantation, he was dismissed, and returned to Corduba, where he resided for some years in poverty and disgrace. At length however, the people of Corduba being dissatisfied with the governor who had succeeded him, petitioned for the appointment of Averroes a second time. Almanzor demurred, and called a second council, who deciding in favour of the penitent, he again experienced one of those rapid transitions of fortune so common in Mahometan governments, and was restored by royal mandate to all his former honours. He died at Morocco, according to some accounts, A. D. 1195, and to others in 1206. Averroes was a man of the greatest temperance and self-command, many striking instances of his urbanity and singular forbearance being recorded: he was also extremely liberal, especially to learned men, and made no distinction between friends and enemies. Much has been asserted of his impiety, but, in Brucker's opinion, without adequate proof. Partaking of the enthusiasm of the times in regard to Aristotle, he seems to have maintained with that philosopher the eternity of the world, and the existence of one universal intellect;

which opinion, in the estimation of both Mahometan and Christian, was doubtless heretical, but can scarcely be called impious. He wrote a commentary on Aristotle, although he did not understand the Greek, and could only read the wretched Arabic translations of it from the Syriac and Latin. He also wrote "A Paraphrase of Plato's Republic," a treatise on medicine, and many other works, which were particularly valued by the Jews. An edition of his works was published in quarto, Lyons, 1537; and two in folio at Venice, 1552 and 1608.—*Bayle. Brucker. Saxii Onomasticon.*

AVESBURY (ROBERT of) an English historian of the fourteenth century, of whose personal history little is known, except that from the title of his works it appears that he was registrar to the court of the archbishop of Canterbury. His history is entitled "Mirabilia Gesta Magnifici Regis Angliæ Domini Edwardi Tertii," &c.; or a history of Edward III, from his birth to the year 1356; when the author was probably interrupted by death. This valuable piece of English history is a plain narrative of facts, authenticated by exact copies of public papers, and exceedingly accurate in regard to dates. It lay long buried in obscurity, but was at length published by Hearne, from a MS. in the possession of Sir Thomas Sebright, 1720, 8vo.—*Biog. Brit.*

AUGE (DANIEL AUGENTIUS) a native of the diocese of Sens in France, in the 16th century, who cultivated the belles lettres, and became regius professor of the Greek language at Paris. He died in 1595. His chief works are dialogues on poetical invention, oratory, and fictitious narrative, and translations from the Greek of Synesius and St Macarius. He was also the author of a discourse relative to the case of a man accused of being a *werewolf*, or of taking the shape of a wolf, and feeding on human flesh. Such a superstition is mentioned by Petronius, and it seems formerly to have been as prevalent in many parts of Europe as the belief of witchcraft.—*Moreri.*

AUGER (ATHANASIUS) a learned classical scholar, professor of rhetoric at Rouen, and vicar-general of Lescar, who died at Paris in 1792. He published a splendid edition of the works of Isocrates from the press of Didot, Paris, 3 vols. 4to, 1782, and the works of Lysias in 1783 in 2 vols. 4to, afterwards reprinted together in 5 vols. 8vo. He also published translations of the discourses of the Greek orators in general, of the orations of Cicero, and of harangues taken from the histories of Herodotus, Thucydides, and Xenophon. He was intimately acquainted with the Greek language and literature, and his translations are considered as very correct, but his style is deficient in ease and elegance.—*Saxii Onomasticon. Dict. Hist.*

AUGUSTIN (St) bishop of Hippo, and one of the most celebrated Fathers of the Christian church, was born A.D. 354, at Tagaste in Africa. His father, Patricius, was a citizen of mean rank; and his mother, Monica, was distinguished for her parental affec-

tion and piety. By the latter he was brought up very religiously; but, according to his own account of himself, his childhood and adolescence were marked with great carelessness, and at a very early age he indulged himself in licentious pleasures without restraint. He studied classical learning, first in his native place, and then at Madaura and Carthage. At the latter place he paid great attention to Cicero, and even studied the scriptures; but not finding in them the kind of eloquence which so much pleased him in the Pagan writers, he quickly threw them aside. About this time he united himself to the sect of Manichæans, and to the doctrine of the two principles, of which he remained a constant and zealous supporter until his twenty-ninth year. At length his mother, who was much afflicted by his licentious conduct and religious wanderings, prevailed upon him to return to Tagaste, where he opened a school of grammar and rhetoric, and became very popular. Wishing however for a wider field for his talents, in 379 he transferred his school to Carthage, and not only retained his own attachment to the Manichæan system, but laboured earnestly to propagate it. Notwithstanding his occupation and zeal, his personal conduct remained very free; and a son was born to him by a favourite mistress, which he chose to distinguish by the name of *Adeodatus*. At length, displeased with the department of his scholars at Carthage, he took shipping with his mistress, sailed for Italy, and settled for some time at Rome, whence he removed to Milan, where he was made professor of rhetoric. Here, owing to the zeal and eloquence of Ambrose, aided by a miraculous interference, at least as he himself asserts, he forsook his long cherished heresy and licentious conduct, and declared himself of the Catholic church. He also sent his mistress back to Carthage, and resolved to marry; but unhappily, in waiting for a young virgin not yet marriageable, he discredited his conversion by taking a second mistress. At length, having formed an intimate acquaintance with Ambrose, he was persuaded by that ardent prelate to study theology and embrace the ministry. Following this advice, he dismissed his new mistress, forsook his intended wife, and with his illegitimate son and his friend Alypius dedicated the remainder of his days to religion. The next year he returned to Africa, and at the recommendation of Valerius, bishop of Hippo, was chosen presbyter of that church. His reputation for zeal and sanctity increasing, in consequence of his institution of a monastery, he was next chosen coadjutor to the bishop, and on his death his successor. Of his private life, after he ascended the episcopal chair, little is recorded; but in his public character he opposed with great zeal, by his preachings and writings, the various sects which the Catholic church classed under the general term of heretics; and Manichæans, Donatists, Circumcellions, and Pelagians, by turns fell under his censure. His zeal against the last of these procured him the title of "The Doctor of Grace;" and the history of councils during the period of his

prelacy, exhibits him as a zealous champion of the Catholic faith on all occasions. In his last days he had the mortification to witness the invasion of his country by the Vandals, and died during the siege of Hippo, in his seventy-sixth year. The Vandals respected his library, his writings, and his body, the last of which was conveyed by the now exiled Catholic bishops to Sardinia, whence it was, 200 years afterwards, removed by Liutprand king of the Lombards, to Pavia. The personal character of Augustin may be tolerably well estimated by the foregoing particulars, the most singular of which are established from his own honest book of "Confessions," which vies with that of Rousseau in its character of unblushing frankness. As a minister and prelate, he evinced the common intolerance of the age, although in the first instance he spoke of heretics with mildness and charity. In changing his opinion, he asserted that he yielded to experience; and Voltaire, observing this inconsistency, treats it with his usual witty sarcasm. By Le Clerc, Augustin is charged with being the first who advanced two doctrines which take away goodness and justice both from God and man; the one representing the Deity as dooming human beings to eternal torments for sins which they cannot avoid; and the other, stirring up the civil magistrate to persecute those who differ from them in religion. Of the Christian writers called the Fathers, Augustin is one of the most voluminous; his works in the Benedictine edition of Antwerp, 1700-3, fill 12 folio volumes. The first of these contains the works which he wrote before he was a priest, and his retractations and confessions:—the former a critical review of his own writings, and the latter a curious and interesting picture of his life. The remainder of these volumes consist of a treatise "On the City of God;" commentaries on Scripture; epistles on a great variety of subjects, doctrinal, moral, and personal; sermons and homilies; treatises on various points of discipline; and elaborate arguments against heretics. With the exception of Aristotle, no writings contributed more than Augustin's to encourage the spirit of subtle disputation which distinguished the scholastic ages. They exhibit much facility of invention and strength of reasoning, with more argument than eloquence, and more wit than learning. Erasmus calls Augustin a writer of obscure subtlety, who requires in the reader acute penetration, close attention, and quick recollection, and by no means repays him for the application of all these requisites. His works are now altogether neglected; and we are only left to wonder that, not much more than a century ago, they could indirectly set the whole kingdom of France in an uproar, and secure for so long a time a large share of the attention of mankind.—*Augustin's Confess.* Bayle. Moreri. Dupin.

AUGUSTIN or AUSTIN (St) sometimes called the Apostle of the English, flourished at the close of the sixth century. Pope Gregory I, having formed the design of converting the Anglo-Saxons, selected Augustin, then a

monk of the order of St Andrew at Rome, to lead a mission, consisting of forty other monks of the same order, into England. He accordingly landed with his associates in the Isle of Thanet, in the year 597, and sent interpreters to Ethelbert king of Kent (who, although himself a Pagan, had a Christian wife in his queen Bertha, a descendant from Clovis) in order to declare the object of their mission. Ethelbert admitted them to a conference, gave them a candid hearing, and although he would not immediately give up the faith of his ancestors, he allowed them to settle at Dorovernum, since called Canterbury, and make as many converts among his subjects as they were able. At first their success was very bounded; but when, after a short interval, the King himself submitted to baptism, great numbers of the Kentish men followed his example; and Augustin is said to have superintended the baptism of ten thousand persons in one day, in the river Swale. The rapid success which attended his mission excited in him the desire of possessing, under the sanction of the Pope, the supreme authority over the English church as archbishop of Canterbury. He accordingly received from Rome the pall, a piece of white woollen cloth to be worn over the shoulders as a badge of archiepiscopal dignity, together with a solution to some curious queries in relation to points of discipline and conscience, and a caution against being elated with vanity on account of his power to work miracles. Having fixed his see at Canterbury, his attachment to the see of Rome induced him to make an attempt to bring the British bishops in Wales under the authority of the papacy. Several conferences accordingly took place with these prelates, and the monks of Bangor; which ended in an express rejection of the Pope's authority on the part of the British priesthood. This assertion of their independence exceedingly disappointed Augustin, who, in taking leave of the assembly, angrily exclaimed, "If ye will not accept of peace from your brethren, receive war from your enemies: if ye will not preach the way of life to the English, receive death from their hands." The event corresponded with the denunciation, for Ethelfrid king of Northumberland soon after marched with a large army to Caerleon, and put near 1,200 monks of Bangor to the sword. Bishop Godwin, on the authority of a French MS, accuses Augustin of the infamy of having stirred up and even assisted in this merciless expedition; but in a passage of Bede, which is supposed to be an interpolation, because omitted in the Saxon version of Alfred, it is said not to have taken place until a year after his death. Whether he actually saw or assisted in the war in Wales, cannot therefore be decided; but that he promoted the hostilities which proved so destructive to the monks, corresponds at once with his declaration and with probability. After nominating Laurentius to succeed him, Augustin died at Canterbury, according to some accounts in 604, and to others in 608 or 614. The number of miracles attributed to

this prelate by the legends is very great, and too stupidly ridiculous to merit further notice. It is more difficult to decently dispose of such as this holy person himself reported to the pope. He must have known whether he miraculously restored a blind man to sight or not; and he either performed that and many other wonderful things, or amused the Holy Father with gross inventions. It is to be presumed that the words "pious frauds," will best apply to these asserted miracles, and that the great end of converting a barbarous and ignorant people was supposed to justify a little trickery in the means. For the rest, it is clear that, whatever the other merits of this prelate, he was strongly actuated by ambition and the love of temporal power; and that he at least meditated revenge, simply for a conduct on the part of the British churches, which was spirited, national, and honourable. No writings of his remain, so that his character can be judged of only by his imperfectly recorded actions.—*Bede. Godwin Presul. Angl. Biog. Brit.*

AUGUSTUS (CAIUS JULIUS CÆSAR OCTAVIANUS AUGUSTUS) originally called Caius Octavius, was the son of a father of the same name, and of Accia, daughter of Julia, the sister of Julius Cæsar. He was born during the consulate of Cicero, B. C. 62, and losing his father in his infancy, was educated by his mother and her second husband, Lucius Philippus. His early maturity and discretion made him a great favourite with his great uncle Julius Cæsar, who declared his design of adopting him, should he have no children of his own. He was studying eloquence at Apollonia in Epirus, when the news reached him of his uncle's death, and of his own adoption. Contrary to the timid advice of his friends, he immediately set sail for Italy; and on landing at a small port near Brundisium, was immediately waited upon by a deputation from the soldiers of his uncle, who hailed him as his heir and avenger. His conduct was very able and decided for a youth just entering into his nineteenth year, and gave earnest of his future successful career. First solemnly declaring his adoption, and assuming the name of his uncle, with the addition of that of Octavianus, he placed himself at the head of the veterans, intercepted for his own use the tribute which was passing from the trans-marine provinces to the capital, and immediately took his route through Campania for Rome. On his arrival, he found Cæsar's avengers triumphant, and Antony, as consul, ruling with almost sovereign sway. His first step was to procure the legal ratification of his adoption; after which he waited on Antony, and proposing a mutual friendship, demanded of him the money left by Cæsar, in order that he might pay his legacies. Antony, jealous of his spirit and ambition, treated him with great haughtiness; and an open difference ensued, which at length extended to an enmity so confirmed, that Octavius was accused, not without some probable ground, of an attempt to assassinate his rival. Besides collecting a body of Cæsar's veterans from Campania, Octavius, who perceived the

Senatorian party to be very powerful, artfully affected to be governed entirely by the advice of Cicero (whom, notwithstanding his age and experience, he appears to have completely deluded), and when Antony was declared a public enemy, accepted a command against him. He accordingly accompanied the armies of the two consuls, Hirtius and Pansa, to the relief of Decimus Brutus, and by their death in battle, was most critically left master of the victorious army. Some jealousy and impolitic neglect of him on the part of the senators, while they accumulated honours on Decimus Brutus soon after, determined him to follow the reported dying advice of the consul Pansa, and reconcile himself to Antony, who, driven out of Italy, had artfully seduced the whole army of Lepidus in Gaul, and was preparing to return at the head of it. Alarmed at this intelligence, the senate decreed the management of the war to Octavius and Decimus Brutus; but the former had already made a treaty with Antony, and employed the legal command given him, to march an army to Rome and get himself declared consul. One of his first acts in that capacity was to procure the legal condemnation of all who had been concerned in the death of Cæsar; after which he caused the decrees against Antony and Lepidus to be revoked, and invited them into Italy. The result of the meeting with these leaders, and the bloody and atrocious proscription agreed upon between them, has been already detailed in the life of Antony; as also the issue of the war against Brutus and Cassius. In those transactions the character of Octavius appears to no great advantage, either as a leader or a man. The army which he commanded at the battle of Philippi, was twice defeated by Brutus; and, unlike Antony, he meanly revenged himself on the dead body of that virtuous Roman, by causing the head to be cut off and thrown before Cæsar's statue. So base and detestable indeed was his cruelty at this time, that it would be scarcely credible, but for the apologies of his friends, who attributed it to a state of mind participating in the sickness of the body; his health being at that time most precarious. He was equally cruel in a short civil contest which, after his return to Rome, was caused by the violence of Antony's wife Fulvia and brother Lucius. On the capitulation of the town of Perugia, he punished its fidelity to Lucius by giving it up to plunder, and coldly and mercilessly delivering up its three hundred senators to the executioner; which butchery was a pious offering at an altar erected to the manes of Julius. The famous partition of the Roman world, between Octavius, Antony, and Lepidus, followed, which agreement was cemented by the union of Octavia with Antony. Having stated the rise of Octavius, it is unnecessary to pursue the details of his public career, which is rather the province of history. On his return from a campaign to Gaul, an accident occurred in his private life which forcibly exhibited the approaching despotism to which Rome would soon be subjected. Although already married

to Scribonia, Octavius divorced that lady; and so little was his delicacy, and so imperious his tyranny, that having fallen in love with Livia, the wife of Claudius Tiberius Nero, he made her husband divorce her, and immediately married her himself, although then so far advanced in pregnancy, that only three months afterwards she was delivered of Tiberius Nero, subsequently emperor. The conduct of Octavius, in the war with Antony, was as measured and prudent as that of his rival was wild and infatuated; and although on its conclusion he sacrificed to his own security the eldest son of Antony, and Cæsarion, the supposed son of Cleopatra and Julius Cæsar, he used his victory in other respects with moderation. On his return from the East, he seems to have been perplexed in determining upon the mode of his future authority; and it is said, that on applying for advice to his friends Agrippa and Mæcenas, the former generously advised him to reinstate the republic, and the latter to retain the sovereignty under some form which would not shock the feelings of the people. The advice of Mæcenas, it need not be said, was followed by Octavius; and he accordingly proceeded with great art and address. After remodelling the senate, and repealing many of the severe laws of the triumvirate, in his seventh consulate and in the thirty-sixth year of his age, he went to the senate house, and in a studied speech proposed to abdicate his authority. He was interrupted by the unanimous entreaties of the assembly not to abandon the guidance of the commonwealth; with which request, after a decent affectation of reluctance, he graciously complied. It was on this occasion that, on the motion of Munatius Plancus, he received the name of Augustus, under which appellation he was gradually allowed to unite the power of *imperator* or *emperor*, which rendered him the uncontrolled head of the executive and soldiery; of *proconsul*, which gave him the supremacy in any province he might visit; of *tribune*, rendering his person sacred, and giving him a *veto* in all public proceedings; of *censor*, or superintendent of manners; of *supreme pontiff*, or the head of religion; and lastly, he was endowed with a dispensing power, from observing the laws whenever he thought proper. It was the policy of Augustus to accept the possession of all this authority for only ten years, well knowing, as it proved, that he would never be deprived of it. He also retained ancient names and forms, as much as possible, in order that affairs might appear to proceed in the usual train; nor during his sway were the senate, the people, and the great officers, without a portion of real authority; by which arrangement he wisely perceived his own power was rather strengthened than otherwise. It is unnecessary to enter into any detail of the events of the subsequent long reign of Augustus, which was distinguished by a course of prosperous and prudent government which has seldom been exceeded. The usual vicissitudes of war occasionally occurred; but the surprise of Varus and his legions by the Germans under Arminius, was the only

great public calamity that occurred during the whole course of it. In domestic government, as his authority became confirmed, his equity and moderation increased; and it gradually became difficult to recognize the bloody and merciless Octavius in the mild and clement Augustus. He filled Rome and all Italy with improvements of every kind, constructed harbours, raised edifices for use and commerce, and could boast that he received a capital of brick and left one of marble. From his encouragement of learning, one of the great ages of human literary excellence takes its name from him; but it must at the same time be recollected, that most of the illustrious writers in his days were formed in the school of the republic, and that he rather distinguished and selected than created them. Of their gratitude it is unnecessary to say that they have been profuse, and frequently with an excess of servility which does very little honour to the Roman muse, although the panegyric of Horace in particular is often very judiciously applied. In private life, Augustus retained to an advanced age too great a disposition for gallantry to merit the encomium of morality; but in other respects he had many excellent qualities, being simple and abstemious in his habits, affectionate to his family and friends, and indulgent without weakness to his dependents and domestics. In short, the great—probably the dangerous—phenomenon in his history, is the exhibition of the same man as a candidate for power and the head of a party, crafty, dissembling and unrelenting; and as an unrestricted sovereign, generous, humane, forgiving, and in most respects the model of a wise and equitable governor. As contrasted with the turbulence of the last years of the republic, the government of Augustus has had a tendency to establish the superiority of policy which it in this case superseded; but a brief glance at the fate of the Roman empire, in a few generations after him, will shew, that if the Roman republic possessed within itself the germ of its own destruction, imperial despotism implied a still more certain degradation. Augustus died in August, the month called after him, A. D. 14, in the 76th year of Rome, and the seventy-sixth of his age. Afflicted with a weakness of his stomach and bowels, he sought relief by a tour to Naples, Beneventum, and the beautiful coast of Campania; but on his return was obliged to stop at Nola, where he patiently waited the approach of death. This last scene was highly characteristic, and significant of the artificial and premeditated complexion of his whole life. After calling for a mirror, and ordering his attendants to adjust his hair and otherwise improve his appearance, he desired his friends to be summoned, and asked them “if he had tolerably acted in the pantomime of life?” When they signified their assent, “Then,” added he, using the form with which players left the stage, “farewell and clap your hands;” (*valet et plaudite*). They then retired, and he breathed his last in the arms of Livia. Augustus had but one daughter, by

Scarbonia, named Julia, who was married first to Marcellus, then to Agrippa, and finally to Tiberius, afterwards emperor. This princess, whose character for gallantry was notorious, had issue by Agrippa—Caius and Lucius, adopted by Augustus, but who both died before him; Julia of a character similar to her own, in whose subsequent disgrace the poet Ovid was implicated; and Agrippina, married to Germanicus, by whom she had Agrippina the younger and Caligula. The younger Agrippina, by her first husband, Domitius Enobarbus, was mother of Nero, in whose person ended the natural posterity of Augustus. By his adoption of the children of Livia, by her first husband, Tiberius Nero, he became father to Drusus and to Tiberius his successor. Drusus was the parent of Germanicus and Claudius; and, as already shewn, Germanicus was the father of Agrippina the younger, the mother of Nero; so that both the natural and the adopted family of Augustus ended in the last mentioned emperor. Augustus endured much uneasiness, as he advanced in life, from the irregularity of the female branches of his family, and the restless ambition of his grandsons and expectants; and the result shewed that it was not without reason. He bequeathed to his successors the important advice not to extend the limits of an empire already overgrown; which policy however Adrian was the first to attend to.—*Suetonius. Dion. Cassius. Tacitus.*

AUGURELLO (GIOVANNI AURELIO) a native of Rimini, who distinguished himself as a writer of Latin poetry. He was born about 1441, and was educated at Padua. After being disappointed of an establishment at Venice, he settled at Treviso, where he obtained a canonry, and was public professor of polite literature. He died there in 1524. Augurello is best known as the author of a poem entitled "Chrysopoia," which has brought on him the imputation of being a believer in the transmutation of metals, a doctrine which he expressly disclaims. Besides many other Latin poems, he wrote some in Italian, which remained unpublished till 1765.—*Tiraboschi. Gen. Biog.*

AVICENNA, or EBN-SINA, an Arabian philosopher and physician, was born at Assena, near Bochara, A.D. 980. He possessed a ready genius and a strong memory, and after going through a course of study with various masters, entered himself of the school of Bagdat, where he exhibited indefatigable industry and no inconsiderable portion of fanaticism. According to his own account, he read the metaphysics of Aristotle forty times without understanding them, yet completed his studies at the early age of eighteen, and began to practise as a physician. He soon acquired a degree of reputation which reached the ears of the various Eastern princes, all of whom were desirous of retaining him in their service; but he finally went into that of the sultan Nedjmeddevle, who appointed him his physician and grand vizier. His great love of pleasure soon however lost him his post and his master's favour; and the remainder of his life was spent in great adversity, being

charged with the crime of heresy in addition to other accusations. He died at Hamadan in abject circumstances, A.D. 1036, aged fifty-eight. Avicenna left many writings behind him; but notwithstanding his reputation for genius and learning, they are of very little value, being but imperfect and obscure representations of the doctrine of Aristotle. They consist of twenty books "On the Utility of the Sciences;" "The Heads of Logic;" and various pieces in metaphysics and morals. Of his medical works, the principal is called "Canon Medicinæ," which is thought very lightly of by Haller and Freind. The works of Avicenna were printed in the original Arabic at Rome in 1497, more than one Latin version of which has been translated, the latest being that of Vopucius Fortunatus' Louvain, 1651.—*Pococke. Bayle. Freind's Hist. Phys.*

AVIENUS (RUFUS FESTUS) a Latin poet of the fourth century. The works attributed to him are, Latin versions of the "Phenomena of Aratus," and "Periegesis of Dionysius;" a description, in Iambic verse, of the "Maritime Coasts;" of "Æsop's Fables," in elegiac verse; and the "Allegory of the Syrens," the "History of Livy, and the "Fables of Virgil," in Iambic verse. Some of these strange productions still remain, and show him to have been a tolerable versifier. The best edition of his works is that of Cannegetier, 1731. Very little is known of his history.—*Vossius de Poet. Græc.*

AVILA, see D'AVILA.

AVISON (CHARLES) an English musician, born probably at Newcastle, where he practised the whole of his life. In 1752 he published an "Essay on Musical Expression," in which he treats of musical composition as consisting of harmony, air, and expression. This work was vourably received, and reached a second edition in 1763, when it produced published remarks from Dr Hayes, professor of music at Oxford, in which it is treated very lightly; especially in regard to the music of Handel, whom Avison rated below his own master, Geminiani. He quickly retorted in a similar uncourtly style, which reply is appended to the third edition of the original essay. Avison died at Newcastle in 1770. He left five concertos for the violin and other compositions, which are esteemed light and elegant, but defective in originality from his exclusive attachment to the style of Geminiani.—*Biog. Brit. Sir J. Hawkin's Hist. of Mus.*

AULISIO (DOMINIC) a Neapolitan lawyer of celebrity, born 1639, died 1717. He published, in 1700, "A History of the Rise and Progress of Medicine," and was also the author of three 4to volumes of "Commentaries on Civil Law;" a treatise, "De Gymnasii Constructione, De Mausolei Architectura, De Harmonia Timaica et numeris Medicis," originally printed in 1694 in 4to; and of another entitled "Delle Scuole Sacre," 4to.—*Moreri.*

AULUS GELLIUS, see GELLIUS.

AUNGERVILLE (RICHARD) also called Richard de Bury from the place of his birth, St Edmundsbury in Suffolk, born 1281. He

was one of the most learned men of the 14th century, and a great patron of learning in others, for the encouragement of which he founded a library at Oxford, and furnished it with the choicest books then extant. Edward III, to whom he had been tutor, employed him in two several embassies to the court of Rome, and made him successively lord keeper of the Privy Seal, bishop of Durham in 1333, lord high chancellor in 1334, and lord high treasurer of England in 1336. He also appointed him one of the commissioners for arranging the treaty of peace between this country and France. His death took place in 1345. He wrote a treatise entitled "Philobiblon, seu de amore Librorum et Institutione Bibliotheca," containing regulations for the management of his library. This book was first printed at Spire in 1483, and afterwards republished by Dr James in 4to, 1599; but Durham college, which contained his collection, being dissolved with other religious houses, the books were afterwards dispersed. He lies buried in the cathedral of his diocese.—*Biog. Brit.*

AUNOY (MARIA CATHERINE, countess d') a French lady, wife to the count d'Aunoy, and celebrated as the author of "Fairy Tales," "Hippolito, Earl of Douglas," the "Prince of Carenay," and other romances of gallantry and fiction. She wrote with the negligent ease of a woman of quality, but not without spirit and vivacity. Her memoirs of what passed in Europe between 1672 and 1679, and of the Court of Spain, where she for some time resided with her mother, contain many curious particulars, which are however deteriorated by an ill-judged mixture of doubtful amorous adventure and romance. Her Spanish portraiture is very unfavourable, but singularly arch and lively. She died in 1705.—*Morevi. Dict. Hist.*

AURELIAN, emperor of Rome, distinguished for his military abilities and stern severity of character, was the son of a peasant of Illyricum. He gradually arose, under Valerian II, to the highest honours in his profession, and even to the consulate; which good fortune was further favoured by a wealthy marriage. Claudius II on his death-bed recommended Aurelian to the choice of the troops of Illyricum, who readily attended to his wishes. He delivered Italy from the barbarians, reduced Tetricus, who had been unwillingly made to assume the purple in Gaul, and, after a campaign of considerable exertion, conquered the famous Zenobia, queen of Palmyra, who formed a part of the procession, as a captive, in a splendid triumph at Rome. Owing to the ungenerous excuse of the Queen, that she had waged war by the advice of her ministers, her secretary, the celebrated Longinus, was put to death by the victor; but after having graced his triumphal entry, Zenobia herself was presented with a villa on the Tiber, and allowed to spend the remainder of her days as a Roman matron. Aurelian followed up his victories by the reformation of abuses, and the restoration throughout the empire of order and regularity, but tarnished his good intentions by the general severity of his measures, and light sacrifice of

the Senatorian order to his least suspicion. He had planned a great expedition against Persia, and was waiting at Thrace for an opportunity to cross the straits, when he lost his life, A.D. 275, by assassination, the result of a conspiracy, excited by a secretary whom he intended to call to account for peculation. Aurelian was a wise, able, and active prince, and very useful in the declining state of the empire; but the austerity of his character caused him to be very little regretted. It is said that he meditated a severe persecution of the Christians, when he was so suddenly cut off, after a distinguished and eventful reign of only five years.—*Crevier Gibbon.*

AURELIUS VICTOR, see VICTOR.

AURENG-ZEBE, great mogul, the third son of shah Jehan, was born in 1618. His natural disposition was serious and thoughtful, and, with the most profound hypocrisy, he covered his ardent ambition under the affected garb of religious austerity. By this deportment he much gained upon his father; but his elder brother Dara penetrated the mask, and used to say, "Of all my brothers, I fear none but this teller of beads." The dangerous sickness of shah Jehan, by setting all his sons in motion, quickly exposed the ultimate views of Aureng-zebe, who, gaining to his party his younger brother Morad, defeated Dara, who in his turn had overcome another brother called Syah. The use which he made of his victory was to depose his father, to behead Morad, poison Dara and his son, and then impose upon himself a rigorous penance, eating only barley-bread, herbs, and fruits, and drinking pure water. His treatment of his deposed father was however so apparently respectful and submissive, that the old monarch ostensibly forgave him, but of course was never restored to power. Aureng-zebe showed great abilities when in full possession of the sovereignty. He subdued Visapour, Golconda, and the Carnatic, on the south, overran the kingdom of Aßen on the north, reduced Bengal, and cleared the mouth of the Ganges from the Portuguese pirates. His wealth and power induced all the neighbouring nations to send embassies to him; and, with a view to commercial advantages, many of the European sovereigns did the same. He had formed a design to destroy all the native princes, and to force a conversion of the Hindoos; but harassed in his turn by the rebellion of his sons, he was obliged to put off the execution of this momentous endeavour. He died in 1707, in his eighty-ninth year; and notwithstanding his many atrocities, his religious zeal had infused such an opinion of his sanctity among his subjects, that many of them made a pilgrimage to his tomb! Like Augustus indeed, having obtained power, he was mild in the exercise of it, although it is very equivocal praise to say, that by his indulgence towards his omrahs and governors, his meaner subjects were oppressed with impunity. "God," he observed, in his usual sanctimonious manner, "would punish them, if they did evil." The real state of the case was, that he shared in the fruits of their oppression. The personal

appearance of a character so able, smooth, and factitious, cannot be unwelcome: it is thus described by the traveller Carrari, who saw him at the age of seventy-seven. "He was of a low stature, with a large nose, a white beard, and olive complexion. He was slender and stooping with age, and supported himself on a staff; yet he endorsed petitions without spectacles, and seemed pleased with doing business at a public audience."—*Mod. Univ. Hist.*

AURELIO (LEWIS) a monk of the seventeenth century, a native of Rome, where he died in 1637. He wrote an account of the Bohemian rebellion, and abridged the *Annalia* of Baronius, the *Ecclesiastical History* of Bzovius, and the *Universal History* of Tursellin.—*Moreri*.

AURILIA (VINCENTIO) a native of Palermo in Sicily, born 1623. He wrote the *Lives* of the Sicilian Viceroy, which appeared in 1697 in folio, and in 1704 a history of the most eminent men among his own countrymen. His death took place in 1710.—*Nouv. Dict. Hist.*

AURIGNI (GILLES DE) a French lawyer and poet, born at Beauvais in the latter part of the fifteenth century. He published in 1516 a quarto volume, intitled, "Aureus de utraque potestate libellus." &c. "Le cinquante-deuxieme arret d'Amour," 8vo, 1528; "La Genealogie des dieux poetiques," 1545; and a poem, entitled "Tuteur d'Amour." He was an advocate of the parliament, and a man of some genius.—*Moreri*.

AVRIGNI (HYACINTHE RICHARD) a French jesuit, a native of Caen in Normandy, born 1675. His works are "Memoires pour servir a l'Histoire universelle de l'Europe," and "Memoires chronologiques et dogmatiques pour servir a l'Histoire Ecclesiastique," each work being severally contained in four 12mo volumes. He died in 1719.—*Nouv. Dict. Hist.*

AUSONIUS (DECIVS or DECIMVS MAGNVS) a distinguished Roman poet of the fourth century. He was born at Bourdeaux, where his father, Julius Ausonius, was an eminent physician. He was educated with great care, and was chosen professor of grammar and rhetoric in his native city. So high was his reputation, that the emperor Valentinian made him preceptor to his son Gratian. In this capacity he gave great satisfaction; and he was afterwards raised by his pupil to the office of Pretorian prefect of Gaul and Italy, and finally to the consulate in 379. He was also much esteemed by the emperor Theodosius, and is by some writers claimed as a Christian, while others doubt the circumstance, in consequence of the extreme licentiousness of some of his productions. He was alive in 392, but the exact time of his death is uncertain. The poems of Ausonius consist of a variety of pieces on different topics, and, with a display of learning and ingenuity, contain several fine passages. The poem on the "Moselle," and that on "Illustrious Cities," are the most valuable, from the local information which they contain. The best edition of Ausonius is the "Variorum" of 1671. The Delphin edition, Paris, 1730, 4to, is imperfect, the

best decent passages being omitted in their proper places, but inserted at the end of the work. This practice has been adopted by some editors of Martial and of others of the ancients who were not very scrupulous as to the moral purity of their language. Lord Byron (see Don Juan, Canto I, Stanza 44) very fairly censures this awkward contrivance, as likely to produce an effect contrary to what was intended. The edition of Tollius, "cum notis variorum," Amst. 1671, 8vo, contains the entire text; as also does the more correct and convenient Bipontine edition, 1785, 8vo.—*Bayle. Vossius. Ed.*

AUTREAU (JACQUES D') a French dramatic writer of the last century, whose comedies have procured him considerable celebrity. He did not begin to write for the stage till he had attained his sixtieth year, having previously supported himself by his profession as a painter; but he never attained to any excellence in his art. He died in the Hospital of Incurables at Paris, in 1745. His works, which are still popular, were printed in four 12mo vols. in 1749.—*Dict. Hist.*

AUVERGNE (ANTONY D') a French musician of considerable eminence, director of the Opera, or Royal Academy of Music, and principal musician to Louis XVI. In 1753 he composed the music of the first comic opera ever performed in France. He afterwards produced many much-admired pieces for the theatre, as well as some of a more serious description, among the latter of which are his *Te Deum*, *De Profundis*, and *Miserere*. Towards the close of his life he was unfortunate, having suffered in his circumstances during the political commotions of the French revolution. He found an asylum with some relatives at Lyons, where he died in 1797, aged eighty-three. D'Auvergne left in manuscript the music of two tragic dramas, which have never been performed.—*Nouv. Dict. Hist. Biog. Univer.*

AUZOUT (ADRIAN) an eminent mathematician of the seventeenth century, at Rouen in Normandy. His countrymen claim for him the credit of having invented the micrometer, as well as that of being the first who adapted the telescope to the quadrant for astronomical purposes. His pretensions however in both these instances are disputed by an English astronomer of the name of Gascoigne, said to have been slain in the civil wars. Auzout died in 1691.—*Hutton's Math. Dict.*

AYALA (GABRIEL) a native of Antwerp, but of Spanish origin, who practised with great reputation at Brussels, as a physician, in the sixteenth century. He took his degrees at Louvaine about the year 1556, and united the study of poetry with that of medicine. His writings were collected in 1562, and published at Antwerp in one quarto volume; they consist of a Treatise on the Plague, a book of Elegies, "Popularia Epigrammata Medica," and "Carmen pro vera Medicina."—*Dict. Hist.*

AYESHA the daughter of Abubeker and favourite wife of Mahomet, whom he mar-

ried when she was only nine years of age. She produced Mahomet no offspring, but was much beloved by him until his death, which took place in her arms. She did not however pass through the nuptial state with unsuspected fidelity; and on a particular occasion appearances were so much against her, that even the prophet himself was staggered; but as absolute proof was wanting, he politically produced a timely revelation from heaven declaratory of her innocence. Ayesha was always much respected by the Moslems, who styled her the "Mother of the Faithful"; and her influence, which she on many occasions exercised very mischievously, was considerable. On the accession of Ali, she raised a revolt; and being carried on a litter, at the head of the army which marched against him, in the first battle that ensued, she was exposed to much personal danger. According to an Arabian writer, the hands of seventy men were cut off, who successively held the bridle of her camel. At length being taken prisoner, Ali, after some mutual reproaches had passed between them, caused her to be respectfully conveyed to Medina, only requiring her to live peaceably at home and no longer interfere in public affairs. She regained a portion of influence under his successor Moawiyah, but died soon after, in the 58th year of the Hegira, A. D. 677, aged sixty-seven.—*Mod. Univ. Hist.*

AYLMER (JOHN) bishop of London, was born at Aylmer Hall in Suffolk, the seat of his family, in the year 1521. He was educated at Cambridge under the patronage of Henry Grey, marquis of Dorset, and became tutor to his children, and more especially to lady Jane Grey. In 1553 he was appointed archdeacon of Stowe, and, being a zealous friend to the Reformation, was so active against Popery, that on the accession of Mary he deemed it necessary to quit the country and seek a temporary retreat at Zurich. Towards the conclusion of his exile, with a view to the favour of Elizabeth, he wrote an answer to Knox's book "Against the monstrous Regimen of Women." In this work he exhorts the bishops to be content with moderate revenues—"priestlike, not princelike"; and on being taxed with the passage, when by various preferments and a somewhat grasping disposition he had accumulated a large fortune, he very frankly replied, "When I was a child, I spoke as a child and thought as a child," &c. On the accession of Elizabeth, he was immediately placed in the road to eminence, and obtained one clerical distinction after another, until in 1576 he succeeded Dr Sandys as bishop of London. Bishop Aylmer was rather a man of business than a theologian, and being exceedingly tenacious in every thing which regarded his authority and temporalities, was involved in a variety of disputes in respect to his see, which he conducted with great spirit and perseverance. He was very rigid against both Papists and Puritans, but particularly against the latter; so that the executive was occasionally impelled to moderate his rigour. Two curious instances of the intrepidity and strong

temper of this active prelate are recorded; on of which mentions his sitting down to have a tooth drawn, to encourage queen Elizabeth to undergo a similar operation; while the other states that he sent for his son-in-law, with whom he had a difference, and gave him a sound cudgelling in his closet. Bishop Aylmer died at Fulham in 1594, aged seventy-three. A liberal passage in his book against Knox has been quoted, to prove the constitutional notions even then entertained in respect to the limited nature of the English monarchy; but there is too much reason to believe that, if subsequently questioned on the point, the bishop would again have found out that he had "thought as a child." This strong tempered and thriving prelate died very rich.—*Strype's Life. Biog. Brit.*

AYLOFFE (SIR JOSEPH) a baronet of a respectable family in Sussex, born at Framfield in that county, about the year 1703. From Westminster school, in which he received the rudiments of education, he was removed in his seventeenth year to St John's College, Oxford, his name being at the same time entered as a member of the Society of Lincoln's Inn. The study of antiquities soon became his favourite pursuit; and as to other requisites, natural and acquired, he added the most indefatigable research, he eventually became one of the most learned and sagacious antiquarians of his time. He acted as secretary to the commission appointed for building the bridge over the Thames at Westminster, and held a situation in the State Paper office, as one of the record keepers. He was the author of several curious papers to be found in the *Archæologia*, as well as of other interesting publications. Among the latter are his Catalogue of ancient Charters and royal Grants contained in the Record Office at the Tower, printed in 4to, in 1772; and an 8vo volume entitled, "The Universal Librarian." He also superintended the publication of new editions of the "Liber Niger Scacarii," 8vo, 2 vols; the "Collectanea" of Leland, in 9 vols. 8vo; the "Curious Discourses" of Thomas Hearne, 2 vols. 8vo; and Thorpe's "Registrum Roffense," in folio. He had at one time projected a translation of the French "Encyclopedie;" but not meeting with the encouragement he expected, the design was abandoned, only one number of the work being printed, which appeared in 1747. He died in 1781, having been for more than half a century a fellow of the Royal and Antiquarian Societies.—*Biog. Brit.*

AYMON (J'HN) an ecclesiastic, born in Piedmont in the latter part of the seventeenth century. He was at one time chaplain to the bishop of Maurienne, but abjured Popery, and retired into Holland, adopting the discipline and opinions of Calvin. His attachment to the reformed church did not however long continue; and the cardinal de Noailles settled a pension on him, upon his reading his recantation, and returning within the Romish pale. Being intimately acquainted with Clement, then librarian to the royal collection at Paris

(who had indeed been the means of introducing him to his new patron) Aynou availed himself of the opportunities afforded him by their intimacy, to peruse from the books under his friend's care several valuable volumes, as well printed as manuscript; one of the most curious of these, containing the original minutes of the synod held at Jerusalem in 1672, with the letters of Cyril Lucer annexed, he afterwards thought proper to publish in Holland. This work, which is in one 4to volume, appeared in 1718. He also translated the *Memoirs and Correspondence of the nuncio Viscouti*, in two 12mo volumes, and is the author of an *Account of the National Synods of the Reformed Churches of France*, in two vols. 4to, and of a "Picture of the Court of Rome," in one 12mo volume.—*Moreri*.

AYRAULT (PETER) a French lawyer, was born at Angers in 1536. He studied Latin and philosophy at Paris, and law at Toulouse, and became one of the most famous advocates of the parliament of Paris. In 1563, he published the "Declamations of Quintilian," with notes, and in 1567, "Decretorum rerumve apud diversos Populos, et omnes Antiquitate Judicatarum, libri duo," which work he much enlarged in subsequent editions. He was soon after made Lieutenant Criminel at Angers, where he was called "the Rock of the Accused." His son being seduced by the Jesuits, who were entrusted with his education, to enter their order, although he had been entrusted to them with an understanding that no such attempt should be made, Ayrault wrote a treatise on the power of fathers, entitled "De Patrio Jure," which the young man himself answered, although the Jesuits were ashamed to publish his reply. Both the Pope and the king of France interested themselves in favour of the father on this occasion; but the son was never recovered from the order. Ayrault died in 1601, after having been recouiled to his son, who died in 1644.—*Bayle. Moreri*.

AYRTON (EDMUND) mus. doct., born at Ripon, Yorkshire, in the year 1734; an excellent composer of cathedral music. At the age of thirty he became one of the gentlemen of the Chapel Royal, St James's, and subsequently a vicar choral of St Paul's and Westminster abbey. In 1784 he took his degree of doctor of music in the university of Cambridge, on which occasion he composed his celebrated grand anthem for a full orchestra, afterwards performed at St Paul's cathedral with a full band, on the day appointed for the general thanksgiving for peace in the year 1784. Dr Ayrton took a leading part in the commemoration of Handel in Westminster abbey, on which occasion he was one of the directors. His death took place in 1808, and his remains were deposited in the cloisters belonging to Westminster abbey.—*Biog. Dict. of Mus.*

AYSCUE (Sir GEORGE) an eminent English admiral, who entered the naval service under Charles I, and was honoured by that prince with the order of knighthood. He however subsequently adhered to the parlia-

ment; and when in 1648 the greater part of the fleet went over to the prince of Wales, he secured the ship which he himself commanded for the parliamentary service, and subsequently acted in conjunction with Blake. In 1651 he reduced Barbadoes by stratagem, which was followed by the surrender of all the Leeward Islands. When he returned to England, he commanded in the Downs, defeated the attempts of Van Tromp to enter the Thames, and soon after engaged that famous admiral off the isle of Wight, with no decisive advantage on either side. He had a share in the great naval engagement between Blake and Van Tromp, but, being disgusted on that occasion, resigned his commission and obtained a pension. He then went to Sweden, with the view of being appointed high admiral, but was prevented by the death of the king. He returned home on the Restoration, when he was made rear-admiral of the blue, and fought in the great battle under the earl of Sandwich, in which the Dutch admiral Opdam was blown up. He was also vice-admiral under the duke of Albemarle in the memorable engagement near Dunkirk. On this occasion Sir George Ayscue's ship struck upon the Galloper sand, and he was captured. The Dutch made a great parade with so able a captain; and he remained in confinement, it is believed, until the end of the war. He returned home, but the time of his death is uncertain.—*Biog. Brit.*

AYSCOUGH (SAMUEL) the son of a reduced tradesman of Nottingham, whom, subsequently to his losses, he assisted for a while in the cultivation of a small farm. He was born in 1745, and coming to London about the year 1770, first obtained employment from a paviour in the capacity of superintendent over his workmen. This situation he soon quitted for one in the shop of Mr Rivington, the bookseller in St Paul's church-yard. This he again left, and became one of the servants in the British Museum, where the education which he had received previous to the distresses of his family, proved eventually of such use to him, that in 1785 he obtained the place of assistant librarian on that establishment. The opportunities he now enjoyed were not lost, and his studies were continued with unwearied diligence. Having been ordained to the curacy of St Giles-in-the-Fields, he in 1790 obtained the Fairchild lectureship at Shoreditch, and held it till his death, which took place October 30, 1804. Besides compiling indexes to the works of Shakespeare, the Gentleman's Magazine, the British Critic, the Monthly Review," &c., he published "Remarks on the Letters of an American Farmer," and an account of the parish of Cudham (a living in Kent, given him a short time previous to his death by the lord chancellor Eldon) which appeared in the Gentleman's Magazine. He was also employed in arranging the archives in the record office of the Tower of London, and the manuscripts in the British Museum, of which latter he completed a catalogue in two quarto volumes.—*Chalmer's G. Biog. Dict.*

AZARA (JOSEPH NICHOLAS d') born of a

noble family at Babanales in Arragon, in the year 1731. He was an eminent politician and diplomatist, as well as an author, and the intimate friend of Andrew Raphael Mengs the painter, on whose works he wrote a treatise in two 4to vols. His other writings are—"Introduzione all' Istoria Naturale e alla Geografia fisica di Spagna," and a translation of Middleton's *Life of M. T. Cicero* into the Spanish language. He died in 1797 at Rome.—*Diet. Hist.*

AZARA (FELIX d') a distinguished Spanish traveller and naturalist of the last century. He was born in 1746, and educated partly at the military academy of Barcelona. Entering into the army, he served in an expedition against Algiers, in which he was wounded. In 1766 he was raised to the rank of a captain. The year following a treaty was concluded between Spain and Portugal, one object of which was to determine the boundaries of the Spanish and Portuguese territories in South America. Don Felix d'Azara was appointed commissioner on the part of Spain to fulfil this article of the treaty; and he was also made lieutenant-colonel of engineers. In 1781 he embarked at Lisbon for America, to execute his commission. The colonial limits were soon fixed; but the intrigues of interested persons on the spot prevented the conclusion of the disputes on the subject between the two governments, in consequence of which Azara was detained in America several years.

He determined to devote his time to the formation of correct maps of the country, which he accomplished with vast labour at his own expense, and in spite of the most persevering illiberality on the part of the Spanish authorities in the colonies. He also examined the natural history of Paraguay, read all the works on the subject he could procure, and collected materials for future publication. At length, after repeated solicitation, he obtained his recall home in 1801. His first care was to print his "Natural History of the Quadrupeds of Paraguay," which he dedicated to his brother Don Nicholas d'Azara, then ambassador in France. This work was immediately translated into French, by M. Moreau de St Mery, and published in two vols. 8vo. Azara went to Paris to visit his brother, who possessed considerable talents as a diplomatist, and who died during his embassy, in January 1803. Don Felix, while in France, formed an intimacy with several men of science, one of whom, M. Walkenaer, subsequently published a translation from the author's manuscripts of the travels of Azara in South America, from 1781 to 1801, with notes by the celebrated naturalist Cuvier, in 4 vols. 8vo, Paris, 1809. Prefixed to the first volume is a sketch of the life of the author, from which the foregoing facts are taken. After he left Paris, M. Walkenaer corresponded with him till September 1806. How long he survived that period is uncertain.—*Original. Biog. Univ.*

BAART (PETER) a Dutch poet of the eighteenth century. In his *Georgics* he has described the rural pleasures and occupations of his countrymen in an agreeable manner, and he was also the author of a poem entitled the "Triton of Friesland."—*Biog. Univ.*

BABER, or BABOUR (sultan) the founder of the Mogul dynasty in Hindostan. He was descended from the great Tatar prince Timour, usually called Tamerlane, and was sovereign of Cabul. He attempted the conquest of Samarcand, and while engaged in an expedition against it, was deprived of his hereditary dominions, and reduced to the utmost extremities, by an invasion of the Usbecks. After more than once recovering his fortunes, when they seemed to be almost desperate, he invaded Hindostan, and in 1525 overthrew and killed sultan Ibrahim, the last Hindoo emperor of the Patan or Afghan race. Another emperor was chosen to oppose Baber, who however overcame the combination against him, and firmly established himself on the throne. After an active and glorious reign, he died in 1530. Ferishta, the Persian historian of Hindostan, informs us that this prince wrote an elegant history of his own life. He is said to have been of a voluptuous disposition; and he is noted as the first Indian sovereign, who had

the road by which he travelled measured after him.—*Dou's History of Indostan.*

BABEUF (FRANCIS NOLL) one of the numerous individuals of more talent than principle, who distinguished themselves during the French revolution. He was born at St Quentin of poor parents, and passed his youth in menial service. Having been imprisoned in the citadel of Arras for forgery, he made his escape, and went to Paris, where in concealment he published a pamphlet against the Jacobins, entitled—"Du Système de Dépopulation, ou la Vie et les Crimes du Carrier," 8vo. Soon after, changing his plan, he started an incendiary journal, called "Le Tribun du Peuple, par Gracchus Babeuf." He then wrote alternately for and against the Jacobins, as best suited his purpose; and was repeatedly arrested for reviling the national representatives. After the fall of Robespierre, Babeuf was regarded as the head of that party, which was opposed to all moderate government. Returning to the capital after the organization of the constitution in 1795, he resumed his journal, and advocated in it the most pernicious principles, with such insane violence, as to bring on him the vengeance of the ruling powers. He was accused of a conspiracy against the directorial government, tried at Vendôme, with

some accomplices, convicted, and condemned to death, in 1797. He endeavoured to destroy himself, but was prevented, and fell by the hand of the public executioner. The debates on his trial were published in 6 vols. 8vo.—*Nouv. Dict. Hist. Biog. Univ.*

BABINGTON (ANTHONY) a Catholic gentleman of Derbyshire, who associate with others of his own persuasion to assassinate queen Elizabeth and deliver Mary queen of Scots. The plot being discovered by Walsingham, the conspirators were executed in 1586. Babington seems to have been principally induced to this rash conspiracy by a romantic hope that Mary in gratitude would accept of him as a husband.—*Rapin. Camden.*

BABRIAS or **BABRIUS**, a Greek poet, supposed to have lived a short time before the beginning of the Christian æra. He turned the fables of Æsop into verse, of which work some fragments have been published in "Fabulæ, Gr. Lat. cum Notis Neveleti," Francfort, 1660, 8vo. Mr Tyrwhitt printed in 1776, "Dissertatio de Babrio. Fabularum Æsopæarum Scriptore," containing all the information he could collect concerning this ancient writer.—*Fabricii Bibliot. Græc.*

BACCALAR Y SANNA (VINCENT) a Sardinian nobleman of Spanish origin, created marquis of San Filippo by Philip V of Spain, under whom and his predecessor Charles II he filled several high situations both civil and military. He was the author of a History of the Jewish Monarchy, in two 4to volumes, and of Memoirs of the Reign of Philip V, from 1699 to 1725, bringing up his history to the year preceding his own decease.—*Biog. Univ.*

BACCIO della PORTA, a Florentine painter of eminence, whose proper name is not known. He was called Della Porta, from his having a study near the city gate; and on his entering into the Dominican order he assumed the appellation of Frà Bartolommeo di S. Marco. He studied under Cosimo Roselli, but derived much of his skill from imitating the works of Leonardo da Vinci. He became the instructor of Raphael in colouring, who in return gave him lessons in perspective. He chiefly painted sacred subjects. His St Sebastian, a naked figure, was so admirably designed and so naturally and beautifully coloured, as to obtain the general commendations of artists and critics: the monks of the convent of St Mark at Florence, however, thought proper to remove this picture from the chapel to a more private place, and afterwards to sell and send it to France; because, as they alledged, it attracted too much attention from the female devotees. To this artist is ascribed the invention of the machine called a *Layman*, for hanging drapery on, while designing it. He died in 1517, aged 48.—*Pilkington.*

BACCHINI (BENEDICT) a learned Italian monk of the seventeenth century. He was a native of the duchy of Parma, and at the age of sixteen entered into the Benedictine monastery of Mount Cassino, where he studied so closely as to injure his health. He afterwards visited several parts of Italy as secretary to the

abbot of Ferrara. At length he settled at Parma, and established a periodical journal of literature, which he conducted for some years with learning and judgment; but his criticisms created enemies who procured his banishment from Parma. He retreated to Modena, and under the patronage of the duke of Modena (who made him his librarian) he resumed his journal. He was also historiographer to the duke, and collected materials for the history and genealogy of the family of Este. He subsequently became abbot of a Benedictine monastery, and he was also chosen professor of ecclesiastical history at Bologna, where he died in 1721, aged seventy. Bacchini was one of the most learned men of his time. His knowledge was various and extensive, and his acquaintance with ecclesiastical antiquities very profound. His literary journal extends to nine vols. 4to; besides which he published treatises "De Sistrorum Figuris ac Differentiis," Bononiæ, 1691, 4to; "De Ecclesiasticæ Hierarchiæ Originibus," Modenæ, 1703; and other learned works.—*Niceron Mem. Gen. Biog.*

BACCHYLIDES, a Greek lyric poet, who was a native of the island of Cos, and nephew of Simonides. His works consisted of odes, hymns, and epigrams, of which there are only some fragments remaining, published in the first volume of Brunck's "Analecta Veterum Poetarum Græcorum," and in some editions of Pindar. Bacchylides lived about 480 B. C. His poems were highly esteemed by some of the ancients; and it is no mean testimony to his merit, that he has been imitated by Horace, particularly in the fifteenth ode of his first book.—*Fossius de Poetis Græcis. Elton's Specimens of the Classic Poets.*

BACCI, or **BACCIO** (ANDREAS) a medical writer of the sixteenth century. He was a native of Ancona, became professor of medicine at Rome, and was first physician to pope Sixtus V. His works relate to poisons and antidotes, gems and precious stones, baths, and the natural history of wines. They were once much esteemed, but the progress of science has long since rendered them nearly obsolete. He died about 1600.—*Moreri.*

BACHELIER (JOHN JAMES) a French history and flower painter, of the eighteenth century. Though his claims to notice as an artist were very slight, he deserves to be commemorated on account of his schemes for the improvement of the arts. In 1763 he devoted a fortune of about 60,000 francs to the establishment of a gratuitous school of design, of which he became director. He was also the inventor of a kind of encaustic composition to preserve marble statues from being injured by the atmosphere. Being appointed director of the porcelain manufactory of Sevres, he introduced a more correct and tasteful mode of decoration than had previously prevailed. Bachelier died in 1805, aged eighty-one. He wrote "Le Conseil de Famille," a dramatic proverb in one act, 1774; and "Memoire sur l'Education de Filles," 1789, 8vo, which he presented to the National Assem

ly.—*Heinacken Dict. des Artistes. Biog. Univ.*

BACHSTROM (JOHN FREDERIC) a literary man, whose life was singularly varied and unsettled. He was born in Silesia about the end of the seventeenth century, and was the son of a peruke-maker. At the age of twenty he went to Halle, and got admitted into the university as a theological student. His sentiments as a pietist prevented his obtaining a settlement on his return to Silesia. In 1717 he was professor at the Gymnasium at Thorn, whence he was banished on account of a heterodox sermon. After other adventures he studied medicine, and going to England was admitted a Fellow of the Royal Society. In 1729 he was at Constantinople, where he set up a printing-press, circulated religious tracts among the Turks, and undertook a translation of the Bible into the Turkish language. This scheme was frustrated by the intrigues of the Mahometan copyists. Of the remainder of the life of this extraordinary man there are no authentic accounts. Among his works are, "De Plica Polonica," Copenh. 1723; "Nova æstus marini Theoria," &c. Leyd. 1734, 8vo; "Art de Nager, ou Invention à l'aide de laquelle on peut toujours se sauver du naufrage," Amst. 1741, 8vo; a tract entitled, "Democritus redivivus," has also been attributed to him.—*Biog. Univ.*

BACH (JOHN SEBASTIAN) a celebrated German composer for the organ and harpsichord, and a first rate musician, born at Eisenach, where his father was musician to the court, on the 21st March, 1685. Being left an orphan before he was ten years old, he obtained a situation in the choir of St Michael's school at Luneburg, where the instructions he had received from an elder brother were of much service to him. Hence he proceeded to Weimar, which he quitted in its turn for Darmstadt, where he procured the place of organist. In this situation it was that his incessant application to the study of his profession, and the familiarity he acquired with the works of the best masters, laid the foundation of his future fame. Handel's master, the celebrated Zacher, dying in 1717 at Halle, Bach was invited to succeed him; but, for what reason is not known, though he exhibited his qualifications in that city, he subsequently declined the office. Shortly afterwards he became chapel-master to prince Leopold of Anhalt-Cohen, and in 1723 director of music to St Thomas's school at Leipzig, where he remained till his death. His second son, Charles Philip Emanuel, being in the service of Frederick the Great, the pressing invitations of that monarch, conveyed through this channel, at length induced Bach to take a journey to Potsdam, where the King, on hearing of his arrival, quitted a concert abruptly to receive him, and in order to try his skill, gave him the subject of an extemporaneous fugue, which he handled so scientifically as to elicit the greatest admiration. This piece he afterwards published under the title of "Musicaleshes Opfer" (Musical Offering) with a dedication to the king. His indefatigable atten-

tion to his art had by this time contributed much to the injury of his eyes; and the use of improper medicines, together with an unsuccessful operation which he was induced to submit to, eventually deprived him entirely of sight. He lingered in this melancholy state about six months, when he expired July 30, 1750, in his sixty-sixth year. It is recorded, that ten days before his death his eye-sight partially returned; but a few hours afterwards an apopleptic fit, followed by an inflammatory fever, carried him off. His works, which are numerous, are all of a very superior description. He left behind him four sons and five daughters, all the former being excellent musicians in their day.—*Burney's Hist. Mus.*

BACHER (GEORGE FREDERIC) a German physician, of great reputation for his treatment of dropsical complaints, relative to which he published several works. He was a native of Thau in Alsace, and practised much at Paris, where he died in 1807. Besides his professional writings, he printed, in 1794, the first and fifth volumes of a course of public law, on a new plan. These two volumes were never published, and are exceedingly rare.—*Biog. Univ.*

BACHIUS (JOHN AUGUSTUS) an eminent civilian, the pupil of Gesner of Ernest, born at Hohendorf in Germany, 1721. He graduated as doctor of laws at Leipzig in 1750, of which science he subsequently became professor. He published a Dissertation on the Eleusinian Mysteries, in 4to; a History of the Jurisprudence of the Romans, 8vo; a treatise entitled "Divus Trajanus", 8vo; "Xenophontis Aconomicum", 8vo; "Bergeri Æconomia juris", 4to; "Opuscula ad Historiam et Jurisprudentiam spectantia", printed at Halle, in 8vo, 1767, by C. A. Klotz; and "Brissonius de formulis", in folio. He died in 1756, in the thirty-fifth year of his age.—*Ibid.*

BACKHOUSE (WILLIAM) a writer on astrology and alchemy in the seventeenth century. He was a native of Berkshire, and was educated at Oxford. After leaving the university, he lived on his estate, occupying himself in the absurd and ridiculous pursuits so deservedly satirized by his contemporary, Ben Jonson, in his "Alchemist." Backhouse's studies however were not altogether of a frivolous nature, if he was, as is asserted, the inventor of that useful instrument, the pedometer or waywiser. He died in 1662.—*Wood's Athen. Oxon.*

BACKHUYSEN, a celebrated painter of sea-pieces and storms, born at Embden in 1631. He had been intended for the mercantile profession at Amsterdam, but his time was more occupied in the company of painters than in the counting-house. His fondness for shipping led him frequently to copy the vessels in the port, which he executed so admirably with a pen, that collectors were eager to purchase them at liberal prices. This encouragement induced him to attempt similar objects in painting, and he was at once successful. He frequently hired fishermen to take him out to sea in stormy weather, in consequence of which

Le has represented that fearful element in its most tremendous agitation with striking fidelity. He also practised etching, and published a set of sea views executed in that manner. He died in 1709, aged seventy-eight.—*Bryan's Biog. and Crit. Hist. of Painters.*

BACON (ROBERT) an English divine of the thirteenth century, memorable for having preached a sermon at Oxford, in 1233, before Henry III, reproving that prince for his ill-judged partiality to foreigners, and recommending their dismissal from his service, which remonstrance had at least a temporary effect on the King. Bacon was patronized by Edmund Rich, archbishop of Canterbury; and after the decease of that prelate in 1240, he wrote his life. His other works are—“*Scripture Commentaries, Sermons, and Lectures.*” He died in 1248, at an advanced age.—*Pitts de Illustr. Angl. Scriptor. Biog. Brit.*

BACON (ROGER) a celebrated English monk of the Franciscan order, was born in the year 1214 at Ilchester in Somersetshire. He received his early education at the university of Oxford, where he was much countenanced by several eminent men, and among others Grosseteste, bishop of Lincoln, and Rich, archbishop of Canterbury. From Oxford Bacon proceeded to Paris, which was then much celebrated, where he received the degree of doctor of theology. Either while he was in France, or soon after his return to England, he assumed the monastic habit of St Francis, and took up his residence at Oxford, where he applied himself chiefly to useful researches into the properties of natural bodies, and was assisted with very liberal subscriptions to construct instruments, collect books, and make experiments. The new discoveries and extraordinary performances of Bacon, by exciting universal admiration, produced much envy and ill-will among the monks of his fraternity, who circulated a report that he practised magical arts and held converse with evil spirits. The Pope's legate then in England admired his genius and merit, and to this prelate, when afterwards raised to the pontifical dignity under the name of Clement IV, Bacon transmitted his principal writings, collected into a volume entitled “*Opus Magus.*” This learned work produced both favour and encouragement from Clement; but unhappily, on the accession of Nicholas III, the general of the Franciscans, not only prohibited the reading of his works, and sentenced him, then in his sixty-fourth year, to imprisonment, but to prevent appeal, obtained from Nicholas a confirmation of his sentence in the first instance. The pretence for this injustice is attributed by some writers to certain tracts on necromancy, astrology, and alchemy; but the real cause of his persecution was probably the dread of innovation on the parts of bigoted and interested men who, however blind to the benefits of science, in other respects possess an intuitive perception of its ultimate operation on interests, which are fostered by ignorance and superstition. After remaining in custody for ten years, upon the advancement of his persecutor,

the general of the Franciscans, Jerome de Ascoli, to the papal chair, under the name of Nicholas IV, Bacon, with a view to conciliation, addressed to him a treatise “*On the Means of avoiding the Infirmities of Old Age.*” No effect however was produced by this step; and it was not until the close of this pontificate, that the intercession of some English noblemen procured his liberty. He returned to Oxford, where he wrote his “*Compendium of Theology,*” and spent the remainder of his days, dying, according to some accounts, in 1294, and to others in 1292, at the advanced age of seventy-eight or eighty. Bacon received from his contemporaries the name of “*the wonderful doctor,*” and was certainly the most extraordinary man of the age. He was so well versed in Latin, Greek, and Hebrew, that his acquirements in this way would have secured him a high character, had he never otherwise distinguished himself. He was skilled in every branch of mathematical and physical science; and in mechanics Dr Freind is of opinion that no greater genius had arisen since the days of Archimides. He largely contributed to the improvement of optics, and from a passage in his “*Opus Magus,*” he may be considered, with every appearance of probability, as the inventor of the telescope: he also mentions therein the camera obscura and burning glass. He was at the same time intimately acquainted with geography, and gave an eminent proof of his skill in astronomy, by discovering and demonstrating the errors which then existed in the calendar, and, with an exactness approaching to truth, pointing out the proper method of correcting them. In chemistry, with an almost unavoidable portion of the superstitious and visionary spirit of the alchemic school, he made great discoveries, and went through many processes which led him to an intimate knowledge of the properties of natural bodies. Among other secrets, he speaks of a fire made by art, which was probably a species of phosphorous, and alludes distinctly to the composition of gunpowder, the secret of which he wrapped up in a Latin anagram. Nor is the medical science displayed in his treatise on old age contemptible, although injured by his partial confidence in judicial astrology. No calumny could be greater than that which described him addicted to necromancy and magic, as he wrote several pieces expressly to expose their fallacy. Even in ethics and moral philosophy, Bacon has laid down some excellent precepts for the conduct of human life; and he is on every account entitled to lasting remembrance as a great philosopher and a wonderful man. The “*Opus Magus*” of Bacon was published by Dr Jebb in 1773; his chemical tracts are in the “*Thesaurus Chemicus,*” Frankfort, 8vo, 1620; and his treatise “*On avoiding the Infirmities of Old Age*” was printed at Oxford in 1590, and an English version of it by Dr Richard Brown in 1633. Several tracts of Roger Bacon yet remain in MS, unpublished: a piece bearing the title of “*Liber Naturalium*”; a chronological work, entitled “*Com-*

ptus Rogeri Baconis," and the "Compendium of Theology," are to be found in the King's Library; and two other works, called by the author "Opus Minus" and "Opus Tertium," among the Cottonian MSS. Tradition long preserved at Oxford the remembrance of Friar Bacon's study, a small retirement to which he often withdrew when he was harassed by his enemies.—*Bale. Leland. Jebb's Preface to Opus Magnus.*

BACON (Sir NICHOLAS) an eminent English lawyer in the reign of queen Elizabeth. He was born at Chislehurst in Kent in 1510, and was educated at Cambridge, after which he travelled in France. On his return, he studied at Gray's Inn; and acquiring the favour of Henry VIII, he appointed him attorney of the court of Wards. On the accession of Elizabeth he was knighted, and in 1553 made keeper of the great seal and a member of the privy council. He behaved with great prudence in this important post, fulfilling the duties which devolved on him with wisdom and propriety, and maintaining the almost uninterrupted favour of the Queen for more than twenty years, till the time of his death, which took place after a short illness in February, 1579. Sir Nicholas Bacon left behind him in manuscript some discourses on law and politics, and a commentary on the twelve minor prophets, none of which have been printed. He was twice married, and by his second wife was the father of the great Francis Bacon.—*Biog. Brit.*

BACON (ANNE) one of the four learned daughters of Sir Anthony Cooke, who was preceptor to king Edward VI. She appears to have been well acquainted with classical literature, and left, as monuments of her abilities, a translation of bishop Jewel's Apology for the Church of England from the Latin, and of the sermons of Bernard Ochino from the Italian. She was married to Sir Nicholas Bacon, whom she long survived, dying about 1600, when she was upwards of seventy.—*Ballard's Mem. of Brit. Ladies.*

BACON (FRANCIS) baron of Verulam, viscount of St Albans, and, in the reign of James I, lord high chancellor of England. This most illustrious ornament of his age, and reformer of modern philosophy, was born in London on the 22d of January, 1561. He was the son of the above-mentioned, Sir Nicholas Bacon, and Ann, daughter of Sir Anthony Cooke, tutor to Edward VI. From his childhood he displayed a vigour of intellect above the common level, and when quite a boy, was much noticed for his sprightliness by queen Elizabeth, who pleasantly called him her young lord keeper. When qualified for academical studies, he was sent to the university of Cambridge, where he was entered of Trinity college under Dr Whitgift, afterwards archbishop of Canterbury. Such was the vigour of his intellect, that even before he had completed his sixteenth year, he was impressed with the futility of the Aristotelean philosophy and led into that train of thought which produced so much fruit in due season. At sixteen he was

sent by his father to France with Sir Amias Paulet, ambassador to that court, who intrusted him with a secret and important message to the queen, which he executed in such a manner as to receive the thanks of Elizabeth. He then returned to France and travelled through the provinces; and indubitable proofs of the industry with which he collected political information, and of the sagacity and penetration with which he pursued his inquiries and reflections, remain in a work written when he was only nineteen, entitled "On the State of Europe." The sudden death of Sir Nicholas Bacon, who left his son Francis the youngest of five brothers, obliged him to return abruptly from France, in order to engage in some lucrative profession. He chose the law, and applied his vigorous intellect so industriously, that at the age of twenty-eight he was appointed counsel extraordinary to the queen. Professional studies however could not fill up the capacious mind of Bacon, who in his twenty-sixth year formed the first sketch of the great philosophical work which has distinguished his name with such superior honour. The narrowness of his fortune affording him no other alternative than a pursuit of his speculations in retirement or a close attendance on the court, unfortunately for his happiness and reputation he chose the latter. Though allied to the lord treasurer Burleigh, and to his son Sir Robert Cecil, his friendship to the earl of Essex, proved an insuperable bar to his success, beyond a gift of the reversion of the place of registrar of the star-chamber, which office he did not enjoy until twenty years after. In 1594 that nobleman used all his interest to obtain for him the post of solicitor-general, but failed, Cecil representing Bacon as a man so devoted to speculation as to be wholly unfit for public business. The generous Essex, on this refusal, presented his friend with an estate in land, which he sold at an underprice for 1300*l.*, as he himself acknowledged. It is melancholy to relate that, notwithstanding this act of friendship, rather than relinquish his honorary appointment and court views, Bacon forsook the imprudent Essex in his adversity, acted against him as a crown lawyer, and even undertook the task of vindicating the conduct of the administration in an appeal to the public published under the title of "A Declaration of the Treason of Robert earl of Essex." He no doubt drew up this paper with great tenderness to the Earl; but so general was the disgust entertained at his conduct, that he addressed a long and elaborate apology to the earl of Devonshire, in which he endeavoured to mitigate the odium that he had incurred, but by no means wholly removed it. In parliament he acted for some time with more spirit and independence; but, oppressed with poverty and twice arrested, he gave way in the latter part of Elizabeth's reign, supporting her ministers in all things, and strenuously opposing the proceedings of the Commons against monopolies. On the accession of James I, fortune began to smile upon him; for, moved by the

intreaties of his many friends, and possibly still more by his literary reputation, the new sovereign quickly received him into favour, and in 1603 conferred on him the honour of knighthood. Having been nominated to the difficult service of making a solemn representation to the throne, of the injuries and oppression arising from the exactions of the royal purveyors, he executed the task with so much address as to please both the king and the Commons, and received from the former a patent of king's counsel, with a pension of 30*l.* per annum, and from the latter a vote of thanks. Cecil however was still his enemy; and he found a new and powerful opponent in Sir Edward Coke, attorney-general, who affected to slight his professional learning, while he envied his reputation as a philosopher. Bacon however assiduously persevered; and by his admirable work "On the Advancement of Learning," published in 1605, which may be deemed the opening part of his grand plan, so effectually recommended himself to James, that he was at length appointed solicitor-general. His private practice also became extensive, and he improved his fortune by his marriage with Alice Barnham, daughter to a wealthy alderman of London. In parliament, as well as in court, his great talents were now universally displayed; but, however occupied by public business and his profession, his philosophical speculations and pursuits were by no means neglected. About this time he circulated copies of an outline of his great intended work among the learned, in order to receive their animadversions; and in 1610 he published his treatise "On the Wisdom of the Ancients." In 1611 he became judge of the Marshalsea court and registrar of the star-chamber, and in 1613 attorney-general, in which office, it is to be lamented, that he supported much of the arbitrary power then claimed by the crown in relation to constructive treason, although on many other occasions he acted very meritoriously. His fortune was now good, and with moderation and economy might have rendered him wholly independent; but a careless and reckless expenditure rendered him still a needy man, and he sought, by an assiduous court to the new favourite Buckingham, and by the most servile pleading to the King himself, to obtain the office of lord keeper. His address to James on the subject is still extant, in which he deprecates the qualities of his opponents, and exalts his own with very little delicacy; nor is it much to his credit, that he forms his chief plea on his implicit obedience, and useful influence in the House of Commons. Unfortunately for himself, by the assistance of Buckingham, he succeeded; and on the resignation of lord Brackley in 1617, received the seals as lord keeper. In 1619 he was created lord high chancellor of England, and baron Verulam, and the year following viscount St Alban's. In his new post he soon began to endure the usual perplexity and vexation of high official station. He offended James by thinking ill of the projected marriage between the prince of Wales

and the infant of Spain, and endured much uneasiness at the prospect of an union between the brother of Buckingham and a daughter of his enemy, Sir Edward Coke. The displeasure of the King soon passed away; and he procured from James the farm of the alienation office, by which he was chiefly supported during his disgrace. In many instances he not only acted beneficially for the country, but even refused to put the seals to some of the improvident grants of Buckingham himself. About this time an abortive attempt was made against him by one Wrenham, a defeated suitor of chancery, by means of a petition to the King, which, although apparently unmerited, was much remembered on his subsequent exposure. In the midst of all these cares and duties, this extraordinary man was so far from neglecting his philosophical studies, that in 1620 he sent to the King his great work, "The Novum Organon," the second part of his grand "Instauration of the Sciences," the design of which was to advance a more perfect exercise of the rational faculties in the improvement of the understanding, and in the interpretation and study of nature. This work James received very graciously, and addressed a letter to the chancellor on the occasion, which does both of them much honour; nor was its general reception by the learned less gratifying. The political life of Bacon was now however drawing to a close. A committee of the Commons, in March 1620-1, appointed to inquire into abuses in courts of justice, reported that two charges of corruption had been brought against the lord chancellor. A further inquiry being ordered by the Commons, still stronger circumstances were produced, and the complaint was sent up to the House of Lords. In the first instance, the chancellor, by a letter presented by Buckingham, intimated a design to resist the accusation, but in a few days the Lords' own committee reported more than twenty similar instances of misconduct, on which in a second letter he relinquished his intended defence; and in a full and explicit confession, admitted the twenty-three articles of corruption with which he was charged, and threw himself on the mercy of his peers. A deputation of lords then waited on him, to inquire if the confession which they read was signed with his own hand. "It is my act, my hand, my heart," he replied; "I beseech your lordships to be merciful to a broken reed." The chancellor's delinquency was however deemed so heinous that a severe sentence was resolved upon; nor is there any reason to believe, that party feeling, personal animosity, or any thing but the nature of the case, had a share in producing it. He was sentenced to pay a fine of 40,000*l.*; to be imprisoned in the Tower during the king's pleasure; to be forever incapable of place or employment; and never again to sit in parliament or appear within the verge of the court. It is not clearly understood that the chancellor was bribed into the committing of absolute injustice; but the acceptance of money is certainly not the way

to ensure equitable and unbiassed decrees. The fate of this great man was attributable, in a great measure, to an ostentatious love of state, and an utter indisposition to superintend his own expenditure. Of his easiness with his domestics, and the rapacious use they made of his favour and neglect, he became sensible when too late. "Sit down, my masters, your rise has been my fall," he exclaimed to them sarcastically, on their rising to salute him, as he passed them one day in the midst of his trouble. He was soon released from the Tower; by degrees the rest of his sentence was mitigated, and he even regained some portion of favour with the King, who consulted him on the proper methods of reforming the courts of justice. Other marks of favour and indulgence were likewise shown him: he received a pension of 1,200*l.* per annum, in addition to the grant which he had obtained from the Alienation-office of 600*l.* a-year; and 700*l.* a-year was granted to him from his own estate. Thus he was still enabled to live at a considerable expense, and he gradually resumed his philosophical studies with his usual ardour. In the spring of 1622, he published his "History of Henry VII.," which has met with less favour than his other works, and soon after received a full pardon, removing all his disabilities; in consequence of which he was summoned to the second parliament in the succeeding reign of Charles I.; but his infirmities did not allow him to take his seat. He pursued his philosophical researches to the last; and in the spring of 1626 was proceeding, in a weakly state of health, on a short journey into the country, to try some experiments in natural philosophy, when he was taken so ill upon the way, that he was obliged to stop at the earl of Arundel's house at Highgate, where he expired, after a week's illness, in April 1626. He was privately buried in the chapel of St Michael's Church in Old Verulam, where a monument was erected to his memory by his faithful friend and servant in all his troubles, Sir Thomas Meautys. In order to judge of the elevated genius of Bacon, it is necessary to recollect, that although the fields of natural knowledge had been cultivated by Roger Bacon, Galileo, Copernicus, and others, he came into the world at a period when Aristotle had obtained supreme authority in the schools, and men lost in a labyrinth of definitions, distinctions, and disputations, wasted their time in speculations altogether barren and useless. There still therefore wanted a comprehensive mind, which could survey the whole region of science; examine the foundation of systems of philosophy that evidently palsied the natural progress of society; and suggest a more sure and advantageous mode of cultivating knowledge. Such a commanding genius was Bacon, and such the grand plan which he in a great measure executed in his "Instauration of the Sciences;" a scheme which has entitled him to the appellation of the "Father of experimental Philosophy." The eternally increasing pile of natural knowledge which philosophers, following his method of experi-

mental investigation, have been enabled to raise, is an imperishable monument to his memory; and it is a singular example of the confidence with which original genius repose upon futurity, that he confidently anticipated the respect and admiration of posterity, as appears by the following passage in his will: "My name and memory I leave to foreign nations, and to mine own countrymen, after some time be passed over." The great fame obtained by lord Bacon in this high philosophical department, obscures by its very brightness much of the credit which is due to him for his "Moral Essays," and other more popular and miscellaneous productions, which however have all merited and secured a due share of the world's attention. The moral defects which were interwoven with his intellectual superiority may be palliated, but certainly can never be excused. Servility, ingratitude, and corruption, are not to be lightly stigmatised even in a Bacon; and although certain sources of error may be less odious than others, society is equally injured by the errors themselves. This great man however has, upon the whole, proved so conspicuous a benefactor to his species, it is a sort of moral justice on the part of society to follow the example of James I, and to pardon him in consideration of "the profitable employment of his time and great services," provided the boundaries between virtue and vice be unequivocally preserved. Such in fact is the involuntary feeling of most reflective minds, on contemplation of his history, and human nature would scarcely be improved were the tendency otherwise. Pope quotes the example of Bacon in order to undervalue the possession of superior intellect, which did not prevent the brightest from being at the same time "the meanest of mankind." It would possibly be more to the purpose to illustrate, by so striking an example, the distinction between clearness of perception and the government of conduct, and to infer that habits and passions require to be regulated by discipline and self-control in the most gifted as well as in the most uninformed of mankind. The works of Bacon are collected in folio, in quarto, and in 8vo. The latest and best printed editions are in 5 vols. 4to, and 10 vols. 8vo. They have also been repeatedly reprinted on the continent in Latin.—The family of the lord-keeper, Sir N. Bacon, seems to have been distinguished for talent. Sir NATHANIEL BACON, one of his sons by his first wife, studied painting, travelled in Italy, and left some portraits and other works of merit. He died about 1615.—*Walpole's Anec. of Painting.* ANTHONY BACON, uterine brother of lord St Albans, was also patronized by the unfortunate earl of Essex. He is said to have been eminent for his political sagacity; and though the state of his health kept him in retirement, he was sometimes employed on affairs of state, as he received a pension from the crown in the reign of James I on account of some special services.—*Rouley and Mallet's Lives of Lord Bacon. Biog. Brit.*

BACON (PHANUEL) an Oxford divine, ca-

lebrated for his wit and humour. He was of Magdalen college, took his doctor's degree in 1735, and afterwards was rector of Balden, Oxfordshire, holding the vicarage of Bramber, Sussex, in commendam. The well-known ballad of "The Snipe," which may be found in the collection entitled the "Oxford Sausage," is of his composition, as well as "The Insignificant," "The Taxes," "The Oculist," "The Moral Quack," and "The Trial of the Time-keeper," dramatic effusions of less celebrity, and a poem called the "Artificial Kite." He died in 1783.—*Biog. Dram.*

BACON (JOHN) a sculptor of great eminence, born 1740 in the borough of Southwark. In 1754 he was apprenticed to a Mr Crispe, proprietor of a porcelain manufactory at Lambeth, where, observing the models furnished by various artists, he imbibed a strong predilection for the art in which he afterwards rose to so high a rank, and even before the expiration of his apprenticeship, conceived the idea of constructing statues in the artificial compost which has since been brought to such perfection in the Lambeth manufactory. It was not however till he had attained his twenty-third year that he commenced his operations upon marble, and soon after invented the machine, now in general use in the profession, for "getting out the points" of the model upon the stone. In 1769, having previously received several honorary distinctions from the Society for the Encouragement of Arts, he obtained the first gold medal given by the Royal Academy, of which he became an associate in 1770. A handsome compliment paid him by George III has been preserved. The artist was employed in executing a bust of that monarch for Christchurch, Oxford, when the King enquired if he had ever been out of the kingdom, and being answered in the negative, replied, "I am not sorry to hear it; you will do it the greater credit." Besides this bust, he executed another of the same monarch for the university of Gottingen. Among the most celebrated of the productions of his chisel, which are very numerous, are the monuments to lord Chatham in Westminster abbey and Guildhall; another to Mrs Draper in the cathedral at Bristol; the statues of Howard the philanthropist, and Johnson the lexicographer, in St Paul's cathedral; and that of Sir William Blackstone at All Souls' college, Oxford. He died August 7, 1799.—*Life by Cecil.*

BADALOCCHIO (Sisto) an eminent painter, was born at Parma in 1581, and educated under Annibale Caracci, whom he attended to Rome, and assisted in some of his celebrated works in that city. He died early, or it was thought that he would have proved a great ornament of the distinguished school in which he studied. His principal works were the two pictures which he painted in the Verospi Palace at Rome, representing Polyphemus seated on a rock with Galatea and her nymphs on the sea, and Polyphemus hurling a rock at Acis and Galatea.—*Bryan's Biog. and Crit. Dict. of Painters.*

BADCOCK (SAMUEL) an English divine,

was born at South Molton in Devon in the year 1747. He received his education at the Calvinistic dissenting academy of St Mary Ottery in the same county, and at the age of nineteen became pastor of a small dissenting congregation at Winborne in Dorsetshire. He was subsequently invited to become minister of a larger independent congregation at Barnstaple, which he quitted on some charge against his character, which however he appears to have satisfactorily refuted. It is conjectured, that some suspected leaning to the opinions of Dr Priestley increased the coolness between himself and flock, which ultimately led to his removal to South Molton, where he presided over a small congregation, and dedicated his views to miscellaneous literature. He wrote in the London Review, London Magazine, General Evening Post, St James Chronicle, and other journals; but the great scene of his literary labour was the Monthly Review, for which he wrote several distinguished criticisms, particularly one on Dr Priestley's "History of the Corruptions of Christianity," and another on Madan's "Thelyphthora." He also gave Dr White great assistance in his Bampton "Lectures." In 1787 he took a step which naturally brought upon him much obloquy from his dissenting connexions—that of joining the establishment. His intimacy with Dr Ross, bishop of Exeter, is supposed to have led to this resolution; and such was the respect paid to him as a man of talents and learning, that he was ordained deacon one week, and priest the next. He afterwards became assistant preacher at the Octagon chapel, Bath, but died in May 1788, while on a visit to Sir John Chichester, bart. Besides his very able articles in the Monthly Review and various essays and poems in the magazines and publications before-mentioned, he printed a pamphlet, entitled "A slight Sketch of the Controversy between Dr Priestley and his Opponents on Matter and Spirit." He also undertook a history of Devonshire, some materials of which fell into the possession of Sir Lawrence Palk; but he had made very little progress in the work.—*Gent. Mag.*

BADEN (JAMES) professor of eloquence in the university of Copenhagen, and one of the revivors of Danish literature in the eighteenth century. He was born in Zealand in 1735, and studied at Gottingen under the celebrated Heyne. On his return to Copenhagen in 1760 he commenced giving lectures on the belles lettres, in the Danish language. In 1767 he was nominated a member of the Academy of Belles Lettres; and in 1780 he obtained the honourable and lucrative place of professor in ordinary, which he held till his death in 1804. His principal works are—a Critical Journal, commenced in 1761 and terminated in 1779; the Journal of the University, from 1793 to 1799; translations of some of the works of Tacitus, Horace, Quintilian, Xenophon, &c.; and a German and Danish Dictionary.—*Biog. Univer.*

BADIA (DOMINGO) a Spanish traveller who, under singular circumstances, visited in

1803, and the four following years, the Mahometan countries bordering on the Mediterranean. During the whole of his tour he professed to be a Musselman; but this was an assumed character, which he had qualified himself to support by submitting to a distinguishing rite, practised by the votaries of the Arabian prophet. He travelled under the denomination of Ali Bey el-Abbassi, which style he also assumed in his "Travels," published in French, at Paris, by Didot, in 1814, 2 vols., 8vo; and about the same time in English, at London. It is now known that this person was employed as a political agent by the Prince of Peace, at the instigation of Buonaparte. His peculiar situation and religious profession gave him opportunities for making many observations which could not occur to other travellers; and his volumes are curious and interesting, though rather tinctured with an air of exaggeration, somewhat excusable in a person placed in such extraordinary circumstances. Burkhardt, another oriental traveller, who heard of Ali Bey at Aleppo, gives the following account of him. "He called himself Aly Bey, and professed to be born of Tunisian parents in Spain, and to have received his education in that country. Spanish appears to be his native language, besides which he spoke French, a little Italian, and the Mograbeyan dialect of Arabic, but badly. He came to Aleppo by the way of Cairo, Yaffa, and Damascus, with the strongest letters of recommendation from the Spanish government to all its agents, and an open credit upon them. He seemed to be a particular friend of the Prince of Peace, for whom he was collecting antiques; and from the manner in which it was known that he was afterwards received by the Spanish ambassador at his arrival at Constantinople, he must have been a man of distinction. The description of his figure and what is related of his travels, called to my recollection the Spaniard Badia, and his miniature in your library. He was a man of middling size, long thin head, black eyes, large nose, long black beard, and feet that indicated the former wearing of tight shoes. He professed to have travelled in Barbary, to have crossed the Lybian Desert, between Barbary and Egypt, and from Cairo to have gone to Mekka and back. He travelled with eastern magnificence, but here he was rather shy of showing himself out of doors: he never walked out but on Fridays, to the prayers of noon in the great mosque. One of the before-mentioned dervishes told me that there had been a great deal of talking about this Aly Bey, at Damascus and Hamar: they suspected him of being a Christian, but his great liberality and the pressing letters which he brought to all people of consequence, stopped all further inquiry. He was busily employed in arranging and putting in order his journal during the two months of his stay at Aleppo." This traveller died in his native country sometime after his return to Europe.

BADIUS (JODOCUS or JOSSE) surnamed **ACCENSIS**, from the place of his nativity

Asche, near Brussels, where he was born in 1462. Having received a liberal education in the Italian states, he became connected with Freschel, then an eminent printer at Paris, whom he succeeded in his business, having previously married his daughter. His death took place in 1536. One of his daughters, a lady famed for her learning and classical attainments, became the wife of the celebrated Robert Stephens; another married Michael Vascosan, also a printer. Conrad Badius, his son, settled at Geneva, where he embraced the doctrines of the reformed religion.—*Hist. Diet.*

BAFFIN (WILLIAM) an English navigator of the seventeenth century, famous for his discoveries in the Arctic regions. He visited West Greenland in 1612, again in 1615, and made a voyage to Spitzbergen in 1614. He subsequently went out as commander of a vessel, in which he is said to have sailed as far as 61½ degrees of north latitude; and in this expedition, which took place in 1623 and 1624, he is supposed to have ascertained the limits of the vast inlet of the sea since distinguished in our maps by the appellation of Baffin's Bay.—*Rees's Cyclopæd. Purchas's Pilgrimage.*

BAGE (ROBERT) an English writer of the last century, who was the author of several very ingenious novels. He was born at Derby in 1728, and brought up to the same occupation as his father, who was a paper-maker. Having a taste for literature, he by his voluntary application gained a knowledge of some branches of the mathematics, and of the French and Italian languages. Though regularly employed in business through the greater part of his life, his published works amount to a considerable number of volumes. The first production of his pen was a novel intitled "Mount Henneth", two vols. 1781. He afterwards published "Barham Downs"; "The Fair Syrian"; "James Wallace"; "Man as he is"; and "Hermesprong, or Man as he is not". The last two, which appeared, when the author was nearly seventy years of age, were decidedly superior to the preceding. He died at Tamworth in 1801. Three of the earlier novels of this writer have been republished in the ninth volume of *Ballantyne's Novelist's Library*, edited, with biographical prefaces, by Sir Walter Scott, who remarks that "The general object of Robert Bage's compositions is rather to exhibit character, than to compose a narrative; rather to extend and infuse his own political and philosophical opinions, in which a man of his character was no doubt sincere, than merely to amuse the reader with the wonders, or melt him with the sorrows of a fictitious tale. In this respect he resembled Voltaire and Diderot, who made their most formidable assaults on the system of religion and politics which they assailed, by embodying their objections in popular narratives." Bage was sceptical in his religious, and free in his political notions; and the spirit and originality of manner which animate his productions, render them generally pleasing to

the lovers of the lighter kinds of literature.—*Gent. Mag.*

BAGFORD (JOHN) an industrious antiquary, was originally a shoemaker in London, but afterwards a bookseller, printer, and collector of curiosities. He was employed by the first Harley earl of Oxford, and Dr Moore, bishop of Norwich, to enrich their libraries with scarce books and manuscripts; and he was presented by the latter with a small place in the Charter-house. In 1709 he published, in the Philosophical Transactions, "Proposals for a History of Printing," &c. for which he made numerous collections that were subsequently purchased for lord Oxford's library by Wanley, and accompanied the Harleian Miscellany to the British Museum. He died in 1716.—*Nichol's Anecdotes of Literature.*

BAGLIONE (GIOVANNI) a Roman painter of the seventeenth century, who distinguished himself by his works in fresco. He was employed at the age of fifteen in ornamenting the Vatican library; and he afterwards executed a vast number of paintings, principally of sacred subjects, on the walls and ceilings of the Roman churches. He was also an author, having published "Le Vite dei Pittori, Scultori, ed Architetti," Roma, 1642, 4to. Baglione died December 23, 1644; and to a posthumous edition of his "Lives" was added an account of the author. He produced another work describing the new churches of Rome—"Ritratti di alcuni celebri Pittori del Sec. xvii. disegni. dal Ottav. Lion. con le Vite de medesimi. Rom. 1731, 4to.

BAGOT (LEWIS) son of Sir Walter Bagot, bart. He was born in 1740, and educated at Westminster school, whence he proceeded to Christ-church, Oxford, of which cathedral he became a canon in 1771, and dean in 1777. In 1782 he was raised to the bench, becoming bishop successively of Bristol, Norwich (1783) and St Asaph (1790). In this latter diocese he rebuilt the episcopal palace, and, dying in 1802, was buried in the cathedral. He published his Warburtonian Lecture preached in Lincoln's Inn chapel; a Letter to Dr Bell on the Eucharist; and sundry devotional tracts, poems and sermons.—*Gent. Mag.*

BAGLIVI (GEORGE) an eminent physician and physiologist, born at Ragusa about 1663, and educated at Naples and Padua. He became professor of anatomy at Rome, where he died in 1707. He distinguished himself in the early part of the last century as the author of a new medical theory, which for a time attracted much attention. Baglivi rejected what has been termed the humoral pathology, or the doctrine which ascribes diseases exclusively to changes taking place in the blood and other fluids of animal bodies; instead of which he placed the cause of disease in the altered tone of the solids. He supposed the existence of an alternate motion of the heart and the *dura mater*, by which the whole animal machine was actuated; a theory founded on the discoveries of Pacchioni. His principal works are—"Praxis Medica," Romæ, 1696; and "De Fibra matrice et morbosa," 1700. There have

been several collective editions of his writings, one of which, by Pinel, was published in 1788, 2 vols. 8vo.—*Haller. Bibl. Med. Pract.*

BAHRDT (CHARLES FREDERIC) a German literary adventurer of singular character. He was born in Saxony in 1741, and was educated at Leipsic. Early in life he published several theological works, which attracted much notice, and displayed more talent than orthodoxy. In 1771 he became professor of divinity at Giessen in Hesse, which place he was obliged to quit on account of the freedom of his religious sentiments. He then attempted to establish seminaries for the education of youth, on the plan of Basedow. He was patronized by the count of Leiningen-Dachsburg, but his own imprudence frustrated his undertaking; and after several adventures, on being suspended from his office of ecclesiastical superintendent of the county of Leiningen, by the judgment of the Aulic council of Vienna, he finally became keeper of a cabaret or inn near Halle. He died in 1792. He was a man of considerable learning and abilities, but of a turbulent disposition and profligate manners. By his levity and imprudence he brought upon himself many persecutions, which drew towards him the attention of all Germany. Bahrdt was the author of several works on theology, which are much esteemed: the most celebrated of these is his translation of the New Testament, which he published under the singular title of "The last Revelations of God." By his method of interpretation, he endeavoured to give a natural explanation of the marvellous occurrences in the history of Jesus Christ. Among the numerous productions of this versatile writer is, the "History of his own Life," a strange performance, disclosing many circumstances regarding himself, which any man of common delicacy would rather have withheld from the public.—*Aikin's G. Biog.*

BAILEY (NATHAN) an English lexicographer and classical scholar, who kept a school at Stepney, where he died June 27, 1742. He published "Dictionarium Domesticum, or a Household Dictionary," 8vo; "The Antiquities of London and Westminster," 12mo; and several school books: but his principal work was an "Etymological English Dictionary," which first appeared in octavo, and was gradually enlarged to a folio volume. It has been often reprinted, but is chiefly deserving of notice as having been the basis of Dr Johnson's more celebrated compilation.—*Gent. Mag.*

BAILLET (ADRIAN) an eminent French critic and ecclesiastic of the 17th century. He was born of poor parents in 1649, at a village near Beauvais in Picardy, and educated at the college in that city. In 1676 he entered into holy orders, and accepted a cure; but he soon resigned it, to devote himself wholly to study. The president Lamoignon made him his librarian, an office well suited to his talents and disposition; and in that situation he continued till his death, which took place at Paris, Jan. 21, 1706. He was a most industrious scholar; and, being interrupted by no extraneous occupations, he acquired an accurate and intimate

acquaintance with a vast multitude of authors, and became a kind of living library. His published works are extremely numerous, and several of them were much esteemed by his contemporaries, particularly his *Lives of the Saints*, in which he freely criticised some of the legendary tales of preceding writers. But the literary reputation of Baillet must rest on his grand work, "*Jugement des Savans sur les principaux Ouvrages des Auteurs.*" The first volume or introduction contains rules for judging of authors and their works; the three next, published in 1685, treat of painters, critics, translators, authors of dictionaries, &c.; the five following of poets; and these would have been followed by others, continuing the work according to a plan published by the author, but his design was interrupted by the sarcastic criticisms of Menage in his *Anti-Baillet*, and other writers. M. de la Monnoye republished the *Jugemens des Savans* with the *Anti-Baillet* in 7 vols. 4to, Paris, 1722, and in 8 vols. 4to, Amsterdam, 1725, both which editions are much esteemed.—*Moreri. Nicéron Memoires. Aikin's G. Biog.*

BAILLIE (ROBERT) a Scotch divine of the 17th century, noted for his zeal against episcopacy. He was born at Glasgow in 1599, and educated in the university there. He took orders in the Scotch episcopal church, and was presented to the living of Kilwinning. But on the attempt of archbishop Laud to establish the use of the common prayer in Scotland, Baillie distinguished himself by his opposition to that measure, and joined the Presbyterian party, of which he became an active and zealous member. In 1610 he was sent to London by the Scotch Covenanters, to prefer charges against archbishop Laud; and in 1613 he was chosen a member of the Assembly of Divines at Westminster. Though an enemy to episcopacy, he seems to have been loyally disposed towards the house of Stuart; for in 1619, being sent by the general assembly of Scotland on an embassy to Charles II at the Hague, he, in a discourse to that prince, reprobated in the severest terms the execution of the late king. At the Restoration, Baillie was made principal of the university of Glasgow, and was offered a bishopric, which he refused. He died in 1652. He was the author of a work entitled "*Opus Historicum et Chronologicum,*" which is praised by Spottiswood. His "*Letters and Journals,*" 2 vols. 8vo, published in 1755, contain some curious details of contemporary history.—*Life prefixed to his Letters. Biog. Brit.*

BAILLIE (MATTHEW) an eminent physician and anatomist. He was the son of the Rev. James Baillie, professor of divinity at Glasgow, by the sister of Dr William Hunter. After some preparatory studies at Glasgow and Baliol College, Oxford, he became the pupil of his uncle Dr Hunter. Through his influence he was made physician to St George's hospital, and he succeeded him as lecturer on anatomy, in conjunction with Mr Cruickshank. Dr Hunter, having had an unfortunate misunderstanding with his brother John Hunter, left at his death a small family estate which he

had possessed to his nephew, who, highly to his honour, restored it to his surviving uncle. Dr Baillie continued a public lecturer till 1799, from which time till within a few years of his death he devoted himself to the more immediate duties of his profession. He was one of his Majesty's physicians in ordinary, and long stood in the first rank among his medical contemporaries. He died in 1823, in the sixty-third year of his age; leaving by his wife, daughter of Dr Denman, a son and a daughter. Dr Baillie published in 1793 a very valuable work intitled "*The Morbid Anatomy of the most important parts of the Human Body.*" 8vo; subsequently enlarged and improved. This was followed by "*A Series of Engravings tending to illustrate Morbid Anatomy.*" He also gave a description of the Gravid Uterus, and contributed many important papers to the *Philosophical Transactions* and the medical collections of his time. Dr Baillie formed a valuable museum of morbid anatomical specimens, which he presented to the College of Physicians, with a sum of money to be expended in keeping them in order.—*New Monthly Magazine.*

BAILLY (JOHN SYLVANUS) a learned French astronomer, one of those literary and scientific men who became the victims of the Revolution. He was born at Paris in 1736, and bred to the profession of painting, in which he made some progress, but forsook it for pursuits more congenial to his inclination. He first attached himself to poetry; but becoming acquainted with La Caille and other men of science, he was persuaded to devote himself to the study of astronomy, which was the means of his acquiring great reputation. The theory of the satellites of Jupiter formed a particular object of his researches; relative to which he communicated a number of memoirs to the Royal Academy of Sciences, and afterwards published a distinct work, in 1766. Such was his reputation that he was received as an adjunct of the academy in January 1763; and chosen associate in 1770. His great work, the "*History of ancient Astronomy*" made its appearance a few years after, the first volume being published in 1775. "*The History of modern Astronomy,*" from the foundation of the Alexandrian school to the present age, was printed in 1779; and in 1787 came out the "*History of Indian and Oriental Astronomy,*" forming a sequel to the *History of Ancient Astronomy*. All these publications are highly interesting, from the accurate details they contain relative to the origin and progress of astronomical science, and the lives, writings, and discoveries of astronomers. Some remarks having been made on this work by Voltaire, a correspondence took place between M. Bailly and him, which was made public under the title of "*Letters on the Origin of the Sciences and of the People of Asia.*" This was followed by "*Letters on the Atlantis of Plato, and the ancient History of Asia.*" These publications, amidst an imposing mass of learned authority, contain some fanciful notions concerning the original seat of civilization and

science, which the author places in the centre of Asia, in the region of Siberian Tartary, a country for many ages past inhabited by barbarians surpassing in ignorance and stupidity most of the other nations of the old world. In 1784 M. Bailly was nominated by the academy one of the commissioners directed to examine and make a report concerning animal magnetism, as practised by Deslon, a disciple of the famous Mesmer. The report drawn up on this occasion by M. Bailly was highly creditable to his talents and discrimination. In 1785 he was chosen a member of the academy of inscriptions and belles lettres; and at this period his literary reputation was nearly at its zenith. The contrast which this part of his life forms with his subsequent political career is melancholy but instructive. At the opening of the Revolution, M. Bailly was elected a deputy of the *tiers etat*, on the assembling of the States-General of France; and he was president of the first National Assembly, when the king's proclamation was issued ordering them to disperse. He resisted this mandate, and dictated to the members of the assembly an oath—"never to separate till they had obtained a free constitution." On the 14th of July, 1789, the very day the Bastille was taken, M. Bailly was appointed mayor of Paris. In this critical situation he seems to have acted consistently with his own notions, as the friend of liberty and the enemy of anarchy and oppression. Several measures however which he thought it right to adopt gave offence to the people, particularly his ordering the soldiery to fire on the mob in the Champ de Mars, on the 17th of July, 1791. At the close of that year the Constituent Assembly was dissolved; and M. Bailly at the same time resigned his office and retired to the rank of a private citizen. He had however acted too conspicuous a part to be allowed to remain in peaceful obscurity. The violent republicans, or rather anarchists, who considered his whole public life as a censure on their proceedings, were determined to sacrifice him to their vengeance. He was denounced, arrested, and committed to prison; and after the mockery of such a trial as was usual in the case of the prejudged victims of the demagogues who then governed in France, he was guillotined, November 11th, 1793, with circumstances of insult and barbarity disgraceful only to the misguided wretches who surrounded the scaffold. In private life the character of M. Bailly was amiable, and his integrity was irreproachable. In person he was tall, of a sedate but striking countenance, and his temper, though firm, was joined to much sensibility. His disinterestedness appeared frequently, and in a very peculiar manner towards his relations; and during his magistracy he expended a considerable part of his income in administering to the necessities of the poor. He left a widow, whom he married in 1787, when she was the relict of his intimate friend Raymond Gaye.—*Aikin's C. Biog.*

BAILZIE, or BAILLIE (WILLIAM) a physician of the fifteenth century, was a native of Scotland. After being educated in his native

country, he went to Italy, where he studied medicine with such reputation as to be made rector, and afterwards professor of medicine in the university of Bologna, about the year 1484. In his theory he adopted the Galenic system in preference to the Empiric, and wrote "Apologia pro Galeni doctrina contra Empiricos," Lyons, 1552, 8vo. Mackenzie thinks that he also wrote a book entitled, "De Quantitate Syllabarum Græcarum, et de Dialecticis," 1600, 8vo.—*Mackenzie's Scot. Writers. Tanner.*

BAINBRIDGE (JOHN) an eminent astronomer and mathematician, born at Ashby-de-la-Zouch in Leicestershire, in 1582. He studied at Cambridge, whence, having taken the degree of M.A., he returned to his native place, set up a grammar school, and at the same time practised physic, devoting his leisure to the science of mathematics. He at length removed to London, and was admitted a fellow of the College of Physicians. "A description of the Comet of 1618," which he published, was the means of introducing him to Sir Henry Savile, who had founded an astronomical lecture at Oxford, and who in 1619 appointed Dr Bainbridge to the professorship. He then entered as a master commoner at Merton College, where in 1631 he was nominated reader of Linacre's medical lecture. When above forty years of age he began the study of Arabic, that he might make himself acquainted with the discoveries of the Arabian astronomers. He died in 1643, while engaged in publishing corrected editions of the works of the ancient astronomers, an undertaking which was one of the duties enjoined on him as Savilian professor. His only published works, besides that already mentioned, are—"Procli Sphæra, Ptolemæi de Hypothesibus Planetarum Lib. sing." together with "Ptolemæi Canon Regnorum," 1620, 4to; and "A Treatise on the Dog Star," 1648. He left prepared for the press some astronomical dissertations, and a considerable quantity of other manuscripts, which are preserved in the library of Trinity College, Dublin.—*Wood's Athen. Oxon. Biog. Brit. Martin's Biog. Philosophica.*

BAIUS, or DE BAY (MICHAEL) professor of divinity at Louvain about the middle of the 16th century. He was one of those Roman Catholic divines who, without separating from the church of Rome, adopted some of the tenets of the Reformers. He was charged with teaching doctrines, concerning grace and free-will, contrary to the established faith, and similar to those broached by Luther on the authority of St Augustin. Baius was accused of heresy by the Franciscan friars and the doctors of the Sorbonne, and his opinions were condemned by pope Pius V, and subsequently, at the solicitation of the Jesuits, by Gregory XIII. He appears to have formally retracted his obnoxious tenets, and was allowed to retain his preferment. In 1563 he was commissioned to attend the council of Trent; and he afterwards was made chancellor of the university of Louvain. He died in 1589, aged seventy seven. His works, consisting of tracts on con-

'roversial divinity, were published entire at Cologne in 1696, 4to.—*Bayle. Moreri.*

BAKER (Sir GEORGE) an eminent physician of the last century. He was the son of a Devonshire clergyman, was born in 1722, and educated at Eton and Cambridge. Having taken the degree of M. D. in 1756, he commenced the practice of his profession at Stamford, whence he soon removed to London, and speedily attained considerable reputation. He was appointed physician in ordinary to the king, and physician to the queen; and he was also chosen fellow of the Royal and Antiquarian societies. In 1776 he was created a baronet, and in 1797 he was placed at the head of his profession, by being elected president of the College of Physicians. He died June fifteenth, 1809. Sir George Baker had the reputation of being an elegant classical scholar and critic in the dead languages, as well as a learned and skilful physician. His published works are neither numerous nor considerable. They consist principally of essays and dissertations on medical subjects, many of which were published in periodical works. "An Essay on the Cause of the Endemical Colic of Devonshire," which appeared about 1767, gave rise to a professional controversy relative to the origin of that malady, which he attributed to the use of cider impregnated with lead derived from the vessels used in making it. Of his Latin style Sir G. Baker has left a specimen highly creditable to his taste and talents, in the preface to a late edition of the pharmacopœia of the Medical College.—*Chalmer's Biog. Dict. Watt's Bibliot. Brit.*

BAKER (HENRY) a poet and naturalist of the 18th century. He is said, according to one authority, to have been brought up a bookseller, though another states that he was articled to an attorney. However, he engaged in neither occupation, but devoted himself to the instruction of persons born deaf and dumb, by which he acquired a handsome fortune. In 1725 and 1726 he published "Original Poems, serious and humorous," in two parts. He was also the author of "The Universe," a poem, and an "Invocation to Health." He afterwards employed himself much in experimental philosophy and making microscopical observations. In 1740 he was chosen a fellow of the Royal and Antiquarian societies, and in 1744 he obtained the Copleian gold medal, for his microscopical discoveries on crystallization. He contributed many papers to the Philosophical Transactions; and he was an active member of the Society for the Encouragement of Arts, to which he for some time acted gratuitously as secretary. He died in 1774. By his will he left 100*l.* to the Royal Society, for an annual lecture on chemistry or natural philosophy. Besides the works already noticed, he published "The Microscope made easy," and "Employment for the Microscope;" both illustrated by plates, and containing much curious information. Mr Baker married a daughter of Daniel Defoe, by whom he had two sons. The elder, David Erskine

Baker, who died in 1767, was the author of "The Companion to the Playhouse," 2 vols. 12mo; since enlarged by Isaac Reed and Stephen Jones. Henry Baker, the younger son, who was an attorney, had some talent for poetry, and in 1756 published "Essays Pastoral and Elegiac," 2 vols. 8vo.—*Biog. Brit.*

BAKER (Sir RICHARD) an English historian of the 17th century. He was born of a good family in Kent in 1568, and became a gentleman commoner at Oxford, whence he removed to one of the inns of court, and afterwards travelled on the Continent. Returning home, he was knighted in 1603 by James I, and in 1620 he served the office of High sheriff of Oxfordshire, having estates in that county. An unfortunate marriage with the daughter of Sir George Mainwaring, of Jightfield in Shropshire, occasioned his ruin; for, giving security for the debts contracted by that family, he became insolvent, and was obliged to take refuge in the Fleet prison, where, after continuing some years, he died in 1645. He lightened his tedious confinement by turning author. Some religious pieces which he published have been long since consigned to oblivion; but his "Chronicle of the Kings of England," first published in 1641, and afterwards continued by Edward Phillips, the nephew of Milton, and others, went through a great number of editions. Addison, in "The Spectator," represents it as the favourite manual of Sir Roger de Coverley; as it seems to have been, in fact, of country gentlemen in general at the beginning of the last century.—*Biog. Brit. Aikin's G. Biography. Wood's Athen. Oxon.*

BAKER (THOMAS) an English mathematician of the 17th century. He was a native of Somersetshire, and was educated at Oxford. In 1645, being a scholar of Wadham college, he served in the garrison of Oxford for king Charles I. Leaving the university, he obtained the vicarage of Bishop's Nymmet in Devonshire, and spent the remainder of his time in mathematical researches. In 1684 he published a work entitled "The Geometrical Key, or the Gate of Equations unlocked; or a new Discovery of the construction of all Equations, howsoever affected, not exceeding the fourth degree, viz. of Linears, Quadratics, Cubics, Biquadratics, and the finding of all their roots, as well false as true, without the use of Mesolabe, Trisection of Angles, Reduction, Depression, or any other previous Preparations of Equations, by a Circle, and any (and that one only) Parabole," 4to. This verbose title will give the reader an idea of the merit of Mr. Baker's discoveries, which recommended him to the notice of the Royal Society, by whom he was presented with an honorary medal. He died in 1690 at Bishop's Nymmet, where he was buried.—*Wood's Athen. Oxon. Biog. Brit.*

BAKER (THOMAS) a learned antiquary, born at Lanchester in Durham in 1656. He became a student of St. John's college, Cambridge, of which he was afterwards fellow.—Entering into orders, he obtained a living which he resigned in consequence of having

embraced the principles of the Nonjurors. On the accession of George I, his refusal to take the oaths required by government obliged him to give up his fellowship; but being much esteemed in the university, he was allowed to retain his chambers; and Prior the poet most generously made up his loss of income by giving him the emoluments of his own fellowship, his motives for keeping possession of which were not generally known. Baker died in 1740, leaving behind him vast manuscript collections relating to the history and antiquities of Cambridge university, and other subjects; part of which are in the Harleian library in the British Museum, and part in the public library at Canbridge. In 1699 Mr Baker published anonymously a volume entitled "Reflections upon Learning," which became exceedingly popular, and passed through many editions. The object of this piece was to show the uncertainty and insufficiency of all human learning, and evince to the necessity of revelation. Neither in its plan or execution is the work entitled to the unqualified praise which has sometimes been bestowed on it. The author printed nothing else but a preface to a sermon of bishop Fisher.—*Biog. Brit. Aikin's G. Biog.*

BAKEWELL (ROBERT) an English gentleman in the last century, who acquired some celebrity by his schemes for improving the breeds of sheep and oxen. He possessed an estate at Dishley Grange in Leicestershire, where his grazing and feeding schemes were put in execution; and he is said to have travelled over various parts of England, Ireland, and Holland, in search of information. In some respects he was very successful; for he found out a method of fattening animals to a prodigious degree for the table; and he sold his stock at a most enormous price. It may be questioned however whether his projects were productive of any real advantage to himself or to the public: for it has been stated that he failed in business more than once; and, with regard to the ultimate effect of his improvements, it has been sarcastically, but justly remarked, that they had enabled him to make meat too fat for any body to eat, and too dear for any body to purchase. He was however, like many other speculators, an intelligent and ingenious man; and he is said to have been distinguished for his humanity to the animals under his care. He died at Dishley, October 1st, 1795.—*Gent. Mag.*

BALBI (JOHN) a Dominican friar of the 15th century, author of a famous grammatical work entitled "Catholicon seu summa grammaticalis," finished as he himself states in 1286. It was first printed at Mentz, 1460, folio; which edition is extremely valuable, merely as a specimen of early typography.—*Marchand, Histoire de l'Imprimerie. Tiraboschi.*

BALBOA (VASCO NUNEZ DE) a Spanish officer in the 16th century, who distinguished himself by his Transatlantic discoveries. He was a native of Castile, and went early in life, as an adventurer, to the West Indies. He is said to have been the first European who as-

certained Cuba to be an island. After having been settled in Hispaniola, he sailed to the river Darien, and established a colony on the isthmus of Panama, where he built the first town on the continent of South America. Having cultivated a correspondence with the caciques or Indian chiefs of the country, Balboa in 1513 set off on an expedition across the isthmus, and discovered the Pacific Ocean. Returning back, he sent to Spain an account of his discoveries. His merits however were neglected, and Pedrarias Davila was sent out with a fleet and troops, as governor of Darien. Balboa was afterwards made lieutenant-governor, with independent authority. But disputes arising between him and Pedrarias, the latter accused him of disloyalty, and a design to revolt against the governor; on which charge he was tried and convicted, and in spite of the entreaties of the judges themselves and of the whole colony, he was publicly beheaded in 1517, at the age of 42, leaving the character of an active and enterprising adventurer, inferior to none of the Spanish leaders in America in courage or abilities.—*Robertson's Hist. of America.*

BALBUENA (BERNARDO DE) a native of Valdepeguas, near Toledo in Spain, who flourished in the 16th century. Having completed his studies at Salamanca, he assumed the cowl, and died in 1627, bishop of Porto Rico in the West Indies. He is principally known by his epic poem, the subject of which is the defeat and death of the Paladins at Roncesvalles, first printed in 4to, in 1624. He also published an account of "The Grandeur of Mexico," 8vo; and a work entitled "Siecle d'or dans les bois d'Eriphile," also in 8vo.—*Moreri.*

BALCANQUAL (WALTER) chaplain to James I, whom he accompanied to England, and graduated at Oxford. He afterwards, while master of the Savoy, represented the Scotch kirk at the synod of Dordt; his letters concerning which assembly may be found in Hales's "Golden Remains." On his return he obtained the deanry of Rochester, and afterwards that of Durham; but, being obnoxious to the Puritans during the troubles in the following reign, was driven from his cathedral and underwent much persecution. He composed the declaration issued by Charles I concerning the disturbances in the northern parts of his dominions, printed in folio in 1339; and died at Chirk castle, Denbighshire, just after the battle of Naseby in 1645.—*Wood's Athen. Oxon.*

BALD, an Anglo-Saxon, supposed to have written on medicine about the end of the ninth century. In Wanley's catalogue of Saxon MSS. is mentioned a medical treatise, containing numerous remedies against various diseases. It is divided into three parts; and from some lines between the second and third parts, Wanley infers that the name of the author was Bald. There is however some ambiguity in the expression, which, according to Mr S. Turner, implies rather possession than authorship.—*Turner's Hist. of the Anglo-Saxons.*

BALDERIC, a French historian of the 12th century. He was abbot of Bourgueil in 1114, and assisted at the council of Clermont, held upon account of the crusades, of which he wrote a history, from the commencement to the taking of Jerusalem by Godfrey of Bouillon in 1099. He wrote various other works in prose and verse, among the rest, the life of Robert Arbrissel, founder of the order of Fontevraud. A life of Balderic is extant, with very curious notes; and his poems appear in the fourth volume of Duchesne's collection. He died in 1136.—*Dupin. Moreri.*

BALDI or **BALDUS** (**BERNARDINO**) a learned Italian ecclesiastic of the 16th century, remarkable for his profound and various literature. On leaving the university of Padua, he was taken into the service of the duke of Guastalla as his mathematician, and ruled the church of Guastalla, as abbot, for many years with great reputation. Baldi was one of the few who united elegance with scientific pursuits; and he stood as high among the Italian poets as among the scholars and metaphysicians. His labours on mechanics and mathematics were very numerous; several of them are to be seen in the Vitruvius of Amsterdam, 1649, 4to; and a work which he left behind, entitled "*Cronica de Mathematici*," was printed in 1707. The blank verse of his poetry is much admired; and of his fables Crescembino gave a version in Italian verse, Rome, 1702, 12mo. He died in 1617.—*Moreri. Sarii Onomasticon.*

BALDI DE UBALDIS, a famous lawyer of the 14th century. He was the son of a physician at Perugia, where he studied law under Bartoli. He passed through most of the universities of Italy, gaining great celebrity; and at length he became the rival of Bartoli, whose opinions he openly contradicted. Jolu Galeazzo duke of Milan patronized him; and pope Urban VI, who held the pontifical chair at Rome, while Clement VII ruled at Avignon, rewarded Baldi liberally for pleading his cause against his rival. He died at Pavia in 1400, at the age of seventy-six. His works, consisting of numerous juridical treatises, have been published in 3 vols. folio.—*Bayle. Tiraboschi.*

BALDINI. There were two learned Italians of this name: the first, **JOHN ANTHONY**, was born of a noble family at Piacentia in 1634, and was employed on various diplomatic missions, especially on one to the congress at Utrecht. He was an eminent virtuoso and collector, and died in 1725. The second, **JOHN FRANCIS**, a native of Brescia, and a celebrated antiquary, was born in 1677. He was the author of several tracts on philosophical and other subjects. Among them are a treatise "*Sopra le forze moventi*," "*Dissertazione sopra un antica piastra di bronzo*," and "*Relazione dell' Aurora Boreale*," 1737. He also published "*Remarks on the Lives of the Popes*," by Anastasius Bibliothecarius; and edited Vailant's "*Numismata*." His death took place in 1765 at Tivoli.—*Moreri. Dict. Hist.*

BALDINI (**BACCIO**) a goldsmith of Flo-

rence, who, according to Vasari, was instructed in the art of engraving by Maso Finiguerra, who is said to have been the inventor. Baldini appears to have engraved nineteen plates for Dante's *Inferno*, from designs by Alessandro Boticelli, printed at Florence in 1431. His other works cannot be accurately ascertained. He died in 1515, aged seventy-nine.—*Strutt's Dict. of Engravers. Bryan's Dict. of Painters and Engravers.*

BALDINUCCI (**PHILIP**) a Florentine, noted for his acquaintance with the fine arts, and his researches concerning the history of their professors. He wrote the life of Bernini, at the request of Christina the ex-queen of Sweden, which work was published in 1682. He afterwards undertook a general history of the professors of the arts of design, from Cimabue to his own time, in six volumes, three of which were published during his life, and the remainder by his son. This valuable work has been repeatedly reprinted. Baldinucci also wrote a "*Vocabulary of Design*," and "*The Origin and Progress of the Art of Engraving on Copper*," 1686, 4to. He died in 1696.—*Tiraboschi. Nouv. Dict. Hist.*

BALDOCK (**RALPH DE**) a learned prelate, bishop of London and lord high chancellor of England in the reign of Edward I. The former of these dignities he acquired in 1301, the second three years afterwards. Leland speaks of having seen a history of British Affairs by this prelate: no such work however is now extant. He died in 1307. Another of this name, **ROBERT DE BALDOCK**, an ecclesiastic, shared the sufferings and captivity of his master, Edward II, who was much attached to him. He died in prison.—*Biog. Brit.*

BALDUNUS or **BAUDOUIN** (**FRANCIS**) a learned French critic and civilian of the sixteenth century. He studied at Louvain, and was patronized by the emperor Charles V and other princes. He became professor of law at Bourges and at Strasburg, and was afterwards in the service of Anthony de Bourbon, king of Navarre, who engaged him in an abortive attempt to reconcile the Catholic and Protestant churches. He died in 1573, aged about fifty-two. Besides several works on civil law, he published editions of "*Optatus de Schismate Donatistarum*," and of the *Octavius* of Minucius Felix.—*Moreri.*

BALDUNUS or **BAUDOUIN** (**BENEDICT**) a French ecclesiastic of the seventeenth century, who distinguished himself by a critical treatise entitled—"*Calceus antiquus et mysticus*," 1615, 8vo. He is said to have written this work, which relates to the kinds of shoes worn by the ancients, in consequence of some ridicule which he incurred as having been the son of a shoemaker, and himself a professor of the gentle craft. He translated the tragedies of Seneca into French, was principal of the college of Troyes, and afterwards master of a hospital at Amiens where he died in 1632.—*Moreri.*

BALDWIN, archbishop of Canterbury in the twelfth century, was a native of Exeter, who, embracing an ecclesiastical life, was made

archdeacon of Exeter. He afterwards became a Cistercian monk, in the monastery of Ford in Devonshire, of which in a few years he was made abbot. In 1180 he was consecrated bishop of Worcester, and in 1184 was promoted to the see of Canterbury. His attempt to found a college of secular priests at Hackington near Canterbury, involved him in a dispute with the monks of St Austin's abbey, and he was obliged to desist from his design; but he afterwards laid the foundation of a similar institution at Lambeth. In 1189 he crowned king Richard I, whom he followed in his subsequent expedition to the Holy Land; where Baldwin died in 1191, or according to some accounts in 1193. His works, chiefly theological tracts, were collected by father Tissier, and were published in the fifth volume of the *Bibliotheca Cisterciensis*.—*Biog. Brit. Aikin's G. Biog.*

BALDWIN I, emperor of Constantinople, a prince memorable not only on account of his talents, but as having been the founder of the short-lived dynasty of Latin sovereigns of the Eastern empire. He was born in 1172, and was hereditary count of Flanders and Hainault. Having joined in the fourth crusade, he distinguished himself by his courage and conduct in several actions which ensued; and when Constantinople in 1201 was taken by the French and Venetians, Baldwin was unanimously elected emperor of the East. His new subjects revolted against him, being excited by Joannices king of Bulgaria, whom he had offended by rejecting his proffered alliance. The insurgents seized Adrianople, in besieging which city Baldwin was taken prisoner by the king of Bulgaria, and probably soon after put to death with circumstances of great cruelty in 1205. The uncertainty of his fate gave rise to a remarkable deception. Twenty years after his disappearance, a hermit exhibited himself in Flanders, professing to be the long-lost prince, and was at first gladly received as such by his former subjects. He was however taken to the French court, where he was completely detected, and perished as an impostor.—*Moreri. Gibbon.*

BALDWIN (WILLIAM) an English writer about the time of the Reformation, chiefly known as a principal author of the "Mirror for Magistrates," a series of tragical stories of persons of rank and note, said to have been projected by Thomas Sackville first earl of Dorset, who wrote the poetical preface or introduction, and the legend of Henry Stafford duke of Buckingham, and left the work to be carried on by Baldwin and others. It was first published in 1559, and reprinted with a second part in 1563. Ritson says, the legends of Henry Percy earl of Northumberland, Richard earl of Cambridge, Thomas Montagu earl of Salisbury, king James I of Scotland, William Delapole duke of Suffolk, Jack Cade, Richard Platagenet duke of York, lord Clifford, John Tiptoft earl of Worcester, Richard Nevil earl of Warwick, king Henry VI, and George duke of Clarence, in the first part, and those of Sir Anthony Woodville and Collingbourne in the

second, appear to be the composition of Baldwin. He was at different times a schoolmaster, a printer, and a clergyman. He published verses on the death of Edward VI, and other poems. The time of his death is not known; but he seems to have lived some years after the accession of queen Elizabeth.—*Ritson's Biblio. Poetica. Chalmer's Biog. Dict*

BALE (JOHN) in Latin Balæus, an English ecclesiastic, and bishop of Ossory in Ireland, was born at Cove, near Dunwich, Suffolk, in 1495. His parents, having a large family, entered him at twelve years of age in the monastery of the Carmelites at Norwich, whence he was sent to Jesus college, Cambridge. Although educated a Roman Catholic, the Reformation having now found its way into England, he became a Protestant, according to his own account, at the instigation of Lord Wentworth, but possibly impelled by a still stronger incentive, as he immediately afterwards married. In early life he enjoyed the protection of lord Cromwell; but after that nobleman's execution, his own warmth of temper, and the intolerance of the Popish party, rendered it necessary for him to retire into the Netherlands. On the accession of Edward VI, he returned to England, and was in the first instance presented to the living of Bishop's Stoke, Southampton, and soon after nominated bishop of Ossory in Ireland. Here, on his preaching the reformed religion, his clergy either oppressed or forsook him; and so violent was the popular fury against him, that in one tumult five of his domestics were murdered in his presence. The death of Edward VI, and accession of Mary, necessarily added to his danger; and quitting his diocese, he lay some time concealed in Dublin. After enduring many hardships and much danger from the treachery and avarice of the captain and pilot of a Dutch ship of war, which captured the trading vessel in which he had sought to escape to Holland, he at length reached that country a prisoner. After enduring some confinement, by the sacrifice of a sum of money he was enabled to reach Switzerland, where he abode until the death of Mary. On his return to England, he made no attempt to recover his Irish diocese, but contented himself with the calm enjoyment of a prebendal stall at Canterbury, where he closed his stormy life in 1563, in the sixty-eight year of his age. Bale wrote several small pieces while he was a Romanist; and after he renounced Popery, his productions, both in Latin and English, were still more numerous. Most of his English writings were attacks upon the religion which he had abandoned, to which he was a bitter and in many respects, it is to be feared, an uncandid and disingenuous enemy. His "Brief Chronicle concerning Sir John Oldcastle," was republished in 1729; and he is also the author of many strange productions in English metre, among which are several plays on sacred subjects, a specimen of which may be seen in the Harleian Miscellany. To modern readers they appear extravagant burlesques; but, as

the author himself informs us, they were gravely and piously represented in his own days by young men at the market-cross of Kilkenny. The only work of bishop Bale which has given him distinction among authors, and is now at all attended to, is his "Scriptorum Illustrum Majoris Britanniae Catalogus;" or "An Account of the Lives of eminent Writers of Britain." This account, which, according to the title, commences with Japhet the son of Noah, reaches to the year 1557, at which time the author was an exile in Germany. It is compiled from various writers, but chiefly from the antiquary Leland. With considerable allowances for the strong bias of party zeal, this work may still be read with advantage, although not without errors in regard to dates, and the needless multiplication of the titles of books. That his invectives against Popery were too indiscriminately vehement, and his exposures of the vices and corruption of the Catholic clergy overcharged, is now very generally admitted, although not to the extent which the party attacked would insinuate. With every abatement however on the score of the warmth of a decided partizan and great personal sufferer, the principal work of Bale must ever be considered valuable as the foundation of English biography.—*Biog. Brit.*

BALE (ROBERT) an English divine of the fifteenth century. He was a native of Norfolk, and became prior of the Carmelites in the city of Norwich. He is the author of "Annales perbreves ordinis Carmelitarum;" of "Historia Heliae, Prophetæ;" and of "Officium Simonis Angli." He died in 1503.—*Pits. Wood's Athen. Oxon.*

BALES (PETER) a famous professor of the art of calligraphy or penmanship, in the sixteenth century. He resided some time at Gloucester-hall, Oxford, where he probably taught the art of writing, as he did afterwards in London. Holingshed in his chronicle mentions the wonderful skill of Bales in what may be termed micrography; and Evelyn more particularly states that he wrote the Lord's prayer, creed, decalogue, two short Latin prayers, his own name, motto, day of the month, year of our Lord, and of the reign of queen Elizabeth, to whom he presented it at Hampton Court, all within the circle of a silver penny, encased in a ring and border of gold, and covered with a crystal, so accurately done as to be plainly legible; to the great admiration of her majesty, the whole privy-council, and several ambassadors then at court. He was very dexterous in imitating the hand-writing of others, on which account he was employed by Sir Francis Walsingham, the Queen's secretary of state; but he seems to have cancelled the merit of his services to government by involving himself in the conspiracy of the earl of Essex, for which he suffered imprisonment. He died about 1610. From a book which he published in 1590, entitled the "Writing Schoolmaster, in three parts, the first teaching swift writing, the second true writing,

the third fair writing,"—it appears that he was acquainted with stenography, and made some improvements in it.—*Biog. Brit.*

BALGUY (JOHN) an English divine, born in 1686 at Sheffield in Yorkshire, where his father was master of a free grammar school. After his death he became a pupil of the Rev. Charles Daubuz, author of a commentary on the Revelations, and afterwards studied at Cambridge, where in 1726 he took the degree of M. A. He had previously entered into orders and obtained a small living in Lincolnshire. In 1718 he engaged in what was termed the Bangorian controversy, occasioned by a sermon preached by Hoadley, then bishop of Bangor, on the text, "My kingdom is not of this world." Balguy became the champion of liberal principles, and of the bishop, in whose defence he published three pamphlets, and who in 1727 rewarded his services with a prebend in Salisbury cathedral. In 1729 he was presented to the vicarage of Northallerton in Yorkshire, which was his principal preferment. He died in 1748. He was the author of tracts on the "Beauty and Excellence of Moral Virtue;" on "Divine Rectitude, or a brief Inquiry concerning the Moral Perfections of the Deity;" of an "Essay on Redemption;" and of "Sermons on several occasions."—*Biog. Brit.*

BALIOL or BALLIOL (JOHN de) founder of Baliol college, Oxford, was the son of Hugh de Baliol, a rich and leading baron in the reign of Henry III, to whose cause he strongly attached himself in his struggles with the barons. In 1263 he laid the foundation of Baliol college, which was completed by his widow. This chieftain received a great accession of wealth and influence by his marriage with Devorgille, one of the co-heiresses of Allan of Galloway, a great baron of Scotland, by Margaret, the eldest sister of John Scott earl of Chester, one of the descendants of David earl of Huntingdon. It was on the strength of this genealogy that his son John Baliol, under the influence of Edward I, became temporary king of Scotland.—*Biog. Brit.*

BALL (JOHN) an eminent Puritan divine, was born at Cassington in Oxfordshire, in 1585. Although educated at Oxford, he attached himself to the Puritan party, and having obtained ordination from an Irish bishop without subscription, settled upon a curacy in Staffordshire of 20*l.* a-year, upon which, aided by a small school, and the friendly countenance of the lord of the manor, he lived contentedly, and distinguished himself by his writings. His principal work was "A short Treatise on the principal Grounds of the Christian Religion," which passed through fourteen editions, and was translated into the Turkish language. Although disinclined to ceremonies, he wrote against those who deemed them a sufficient ground for separation. He died in 1640, with the character of a laborious preacher and an able writer.—*Biog. Brit.*

BALLARD (GEORGE) an English antiquary and biographer. He was a native of Camden in Gloucestershire, and was brought

up to the employment of a tailor or habita-maker. Having a taste for literature, he contrived to make himself acquainted with the Saxon language. This circumstance coming to the knowledge of lord Chedworth and some neighbouring gentlemen, they offered the modest student an annuity of 100*l.*, to enable him to prosecute his researches without interruption. He was so moderate in his wishes, that he accepted of only 60*l.* a-year, with which income he retired from Campden to Oxford, that he might avail himself of the literary treasures of the Bodleian library. He was appointed one of the eight clerks of Magdalen college, and afterwards chosen one of the university beadles. He died in 1755, leaving behind him a large collection of epistolary correspondence, and other valuable manuscripts. The only work which he published was the "Memoirs of British Ladies who have been celebrated for their writings or skill in the learned languages, arts, or sciences," 1752, 4to; republished, 1775, 8vo.—*Nichols's Liter. Anecd.*

BALLANTYNE (JOHN) a native of Kelso in Roxburghshire. At an early age he entered into business as a printer, and distinguished himself by the great improvement which the art obtained under his superintendance, evinced in the extensive publications which have of late years issued from the border press. He was at one time a proprietor of the Kelso Mail, a journal originally set on foot by his brother; and he subsequently ushered into the world the publications known as the Waverley novels. He died in 1821.—*Gent. Mag.*

BALLENDEN or BELLENDEN (Sir JOHN) a Scottish poet of eminence in the 16th century. He was descended from an ancient family, and when young had some employment at the court of James V, with whom he was a favourite. Having taken orders, and being made a doctor of the Sorbonne at Paris, he was appointed canon of Ross and archdeacon of Murray. He also obtained the place of clerk registrar, which he lost in consequence of the religious commotions in Scotland after the death of king James. Ballenden, who was a zealous Catholic, recovered his office in the reign of the unfortunate Mary, when he was also one of the lords of session. The progress of the Reformation, which he opposed, obliged him at length to quit his native country. He went to Rome, where he died in 1550. He has been esteemed one of the best among the early Scottish poets. He wrote a topography of Scotland, with a poetical proem; Epistles to king James V; Poems, part of which only have been published; and a translation, with additions and corrections, of the "History of Chronicles of Scotland," from the Latin of Hector Boëthius, Edinb. 1536.—*Mackenzie's Lives of Scottish Writers. Berkenhout's Biog. Lit.*

BALLEXSERD, a citizen of Geneva, who was born in 1726, and died in 1774. He is creditably known as the author of a very useful work, entitled "L'Education Physique des Enfants," 8vo, 1764. In this production,

which abounds with judicious reflections and physical information, the author takes up the child from his birth, and conducts it to the age of adolescence. He also wrote another treatise, scarcely less interesting, on the question—"What are the principal causes of the numerous deaths of children?"—*Nouv. Dict. Hist.*

BALLIN (CLAUDE) a skilful artist of chased work in gold and silver. He was born at Paris in 1615, and brought up to the occupation of a goldsmith under his father, who exercised that art. He studied drawing, and improved his taste as a designer by copying the pictures of Poussin. When only nineteen, he made four silver basins, decorated with figures representing the four ages of the world. These were purchased by cardinal Richelieu. He was subsequently employed in making plate services for Lewis XIV, of which it is said the workmanship added ten times to the value of the material. He was at length made director of the mint for casts and medals. Ballin was scarcely ever absent from Paris, where he died in 1678.—*Nouv. Dict. Hist.*

BALSAMON (THEODORE) a Greek ecclesiastic of the 12th century. He was nominated to the Patriarchate of Antioch, of which he never obtained possession, as that city was held by the Latin or Roman Catholic Christians. He was a man of considerable learning, and was the author of "Commentaries on the Apostolical Canons, the general and particular Councils, and the Canonical Letters of the Greek Fathers," published in bishop Beveridge's Synodicon in 1672, and other works relating to church history.—*Moreri. Fabricii Bib. Græc.*

BALSIIAM (HUGH DE) bishop of Ely and founder of St Peter's college or Peter-house in the university of Cambridge. He was born at Balsham, Cambridgeshire, early in the 13th century, and, being their sub-prior, was nominated by the monks of the Benedictine monastery of Ely to the see of Ely in 1247. Henry III refusing to confirm his election, he appealed to the Pope, who claimed a right of disposing of the vacant bishoprics of England by anticipation or provision. The King contested this right, and the point remained for ten years undecided. At last however the Pope and monks prevailed; and being settled in his see, Balsham distinguished himself by his public spirited plans to educate poor scholars. In accomplishment of this object he founded Peter-house, Cambridge, to which by his will he left many books, and 300 marks for erecting new buildings. He died in 1286.—*Biog. Brit.*

BALTHAZARINI or BALTAZAR DE BEAUJOYEUX, a famous Italian musician, and one of the most extraordinary performers on the violin ever known. He was employed at the court of Henry III of France. In 1581 he composed a ballet in honour of the marriage of the duke de Joyeuse, which was published at Paris in 1582, under the title of "Balet Comique de la Reyne." Baltazarini however only contrived the plan and devices of this piece, which is supposed by Dr Burney to

have been the origin of the French heroic ballets.—*Burney's Hist. of Mus.*

BALTUS (JOHN FRANCIS) a learned French Jesuit, born at Mentz in 1677. He wrote several books in illustration of the sentiments of the fathers, and in defence of the scriptural prophecies, but is chiefly known by his "Answer to Fontenelle's History of Oracles," Strassburgh, 8vo, 1707. Fontenelle, whose book was a popular and polished version of a portion of the Latin work of Anthony Van Dale on the same subject, maintained the opinion of the learned and ingenious Dutchman, that the Pagan oracles were merely the quackish contrivances of Heathen priests, and that their silence was the natural result of the destruction of their temples, and not of the coming of Christ. Baltus, in his answer, defended the opinion of the fathers, that these oracles were the work of demons. Fontenelle remained silent, not because he thought the argument of his opponent decisive, but—to use his own words—because "he chose rather to let the devil pass for a prophet, than occupy his time with such fruitless discussion." Le Clerc however continued the controversy, and Baltus rejoined; and both his answer and the continuation were translated into English by Dr Hickey in 1708 and 1709. Baltus possessed considerable learning and talents, which he wholly employed in defence of Roman Catholic orthodoxy.—*Moreri. Nouv. Dict. Hist.*

BALUZE (STEPHEN) a learned French clergyman, distinguished for his researches concerning ecclesiastical and literary history. He was born in 1630, and educated at Thoulouse. In 1652 he published a small tract entitled "Anti-Frizonius," which was a critique on the Gallia Purpurata of father Frizon. The archbishop of Thoulouse extended his patronage to Baluze, who, after the death of that prelate, became librarian to the celebrated Colbert, minister of state. The king made him professor of canon law in the royal college, appointing him also inspector of the college, with a pension. He was subsequently deprived of these offices, and sent into exile, for writing "Histoire genealogique de la Maison d'Auvergne," containing something offensive to the French court, in relation to the disputes with the cardinal de Bouillon. After residing at Rouen, Tours, and Orleans, he was recalled to Paris. He died July 23, 1713, leaving behind him the character of an erudite scholar and amiable man. Among his works not already mentioned are, a volume in continuation of father Labbe's great collection of Ecclesiastical Councils; the Capitularies of the French Kings, with Historical and Critical Notes; and the Lives of the Popes who were residents at Avignon.—*Ibid.*

BALZAC (JOHN LOUIS GUEZ DE) a celebrated French writer, was the son of a gentleman of Languedoc, and born at Angouleme in 1595. When young, he attached himself to the duke of Epemon and cardinal la Valette, the latter of whom employed him for two years at Rome, and on his return introduced him to court. Here he was much noticed for his wit

and eloquence, and obtained the good opinion of the bishop of Luçon, afterwards cardinal Richelieu, who granted him a pension of 2000 livres, with the brevets of counsellor of state and royal historiographer. He first distinguished himself by his letters, a collection of which appeared in 1621, and met with an extraordinarily good reception, the author, with genuine French vivacity, being exalted for eloquence beyond all other authors, ancient and modern. With much striking thought and fine sentiment, they are in the highest degree pompous and inflated, and depart altogether from the ease and familiarity of genuine epistolary composition. Such however was the reputation he acquired, that every gentleman in France, who wished to be deemed a man of wit and letters, wrote to him for the sole purpose of obtaining a reply, to exhibit as an epistle from the eloquent Balzac. At length, distinguished foreigners, and even crowned heads, paid him similar flattering compliments; a circumstance that naturally enough accounts for the artificial and studied style of his replies, which he was aware would be shown to all the world. When this enthusiasm was in some degree abated, he paid the usual penalty of literary eminence, in becoming the object of critical attack. A young feullant led the way in a piece entitled "The Uniformity of M. Balzac's Eloquence with that of the greatest Men in the past and present Times," in which he is placed below all of them. Balzac defended himself under the name of the abbe Ogier, which reply drew a still more acrimonious attack from Goulu, the chief of the feullants. He bore these strictures for some time with indifference, but at length withdrew to his pleasant estate of Balzac, where he employed himself in study, composition, and letter-writing to his numerous correspondents. Towards the close of his life he became devout, and built two chambers in the Capuchin convent of Angouleme, to which he occasionally retired for religious contemplation. He also gave 8000 crowns in his life time to the hospital of Angouleme, besides a considerable sum at his death, and ordered himself to be buried at the feet of the poor interred there. Balzac was a good classical scholar, and wrote Latin verses with elegance and facility. His conversation was altogether free from the affectation that prevailed in his writings, which however in the opinion of Voltaire first gave number and harmony to French prose. The principle that guided his composition—as well remarked by Boileau—was peculiarly unfit for letter writing, in which all should be free and spontaneous, whereas it was the practice of Balzac to form a collection of fine thoughts, and then premeditatedly introduced them wherever he could create an opportunity. Dr Warton considers him much superior to Voiture, to whom his name is directly opposed; and like most authors who are too highly exalted in the first instance, he has been latterly too much criticised. His principal works are—his letters printed at different times: "Le Prince;" "Le

Socrate Chretien ;" " L'Aristippe ;" " Entretiens," Latin verses in three books, which, with various other pieces are collected in three volumes folio, Paris, 1665. Balzac left an estate of 100 francs per annum for a gold medal, to be distributed every second year by the French Academy to the author of the best moral essay. He died in 1654, aged sixty.—*Nouv. Dict. Hist. Voltaire's Siecle de Louis xiv.*

BAMBOCCHIO. See LAER (Peter Van).

BAMPFYLDE (Sir CHARLES WARWICK) a baronet descended from one of the oldest and most distinguished families in Devonshire. He was the fifth baronet of his family, and had sat in seven parliaments for the city of Exeter. Sir Charles was well known upon the turf and moved in the first circles of fashion. He received his death from an assassin named Morland, whose wife had lived in his service. The act was perpetrated almost at his own door in Montague-square, in the vicinity of which the murderer waited his approach, and after a short conversation, discharged one pistol at his victim, and with a second blew out his own brains on the spot. Sir Charles lingered several days, but it being found impossible to extract the ball, which had entered his body on the left side, he expired April 19, 1823, in his seventy-first year.—*Gent. Mag.*

BANTI (SIGNORA BRIGIDA GEORGIS) a female singer of great note in her time. She is said to have been the daughter of an Italian gondolier, and even to have made her debut in the still humbler occupation of an itinerant ballad singer. While exercising her vocation in the streets of Georgi, the town whence she derived her birth and one of her appellations, she had the good fortune to attract the attention of a nobleman, by whose liberality she was enabled to cultivate the brilliant powers which she had received from nature. At Paris however she seems to have raised herself scarcely more than a single grade in her profession ; for when in 1788 M. de Visnes, the then manager of the Parisian opera, encountered her, she was amusing the company of a coffee-house on the Boulevards with the display of her talents. Struck by the melody of her tones, De Visnes offered her an engagement for the comic opera, where her debut was eminently successful, though limited to the singing a single air between the acts of the performance. Shortly afterwards she appeared in London at the Pantheon in Oxford Street : the managers of this then flourishing institution entertained however a much higher opinion of the quality of her voice than of her skill in its management, as appears from the fact of their deducting a considerable sum from her salary, in order to procure her the benefit of able tuition. Her want of industry, and the caprice which seems almost inherent in female singers of a certain pretension, are said to have completely exhausted the patience of her masters, among whom Sacchini quitted her in disgust. Abel was more enduring ; and to his instructions is unquestionably owing much of the favour she subsequently acquired. After a protracted absence, spent principally in exercising

her art at the different German Courts, in all of which she was enthusiastically received, Madame Banti returned to England in 1790, and gained new laurels as well by her execution of the principal airs in Gluck's 'Alceste,' as by her performance in Bianchi's opera of Inez de Castro, then produced for the first time. She continued on the English stage till 1802, when she retired to her native country, and died at Bologna in 1806, in the fifty-sixth year of her age.—*Biog. Dict. of Mus.*

BANCHI (SERAPHIN) a native of Florence, and a Dominican. He was sent by Ferdinand I, duke of Tuscany, into France ; and being at Lyons in 1593, Peter Barriere, a young fanatic of the age of twenty-seven years, communicated to him his intention of assassinating Henry IV. Banchi, unlike two priests and a Capuchin, who had received the same information, gave notice of the horrible project to a lord of the court, who, instantly repairing to the King at Melun, encountered Barriere preparing to effect his execrable intention. The King, by way of acknowledgment, nominated Banchi bishop of Angouleme, which he resigned for the monastic life in the monastery of St James at Paris. It forms a singular feature of the times, that he was obliged to defend himself from the imputation of having betrayed the confession of Barriere, on the ground, not of its atrocity, but that his disclosure was a consultation, not a confession. He wrote an account of the affair of Barriere, as also a work against the "rash" opinions of those who held that the Roman Catholic religion might be defended by regicide. He died about 1624.—*Nouv. Dict. Hist.*

BANCK (LAWRENCE) a Swedish lawyer, who was professor of civil law for fifteen years in the university of Franeker. In 1669 he wrote a work in Latin "On the Tyranny of the Pope over Christian Kings and Princes ;" and in 1656 "Rome triumphant, or the Inauguration of Innocent X." His principal publication however was his edition of his "Taxa Cancellariæ Romanæ," or book of the "Taxes of the Roman Chancery," Franeker 1652, 8vo ; which fixes the price of absolution for all sorts of enormities. This work, which he carefully collected from the most ancient and authentic copies, was soon placed in the list of prohibited books by the Inquisition, on the ground of incorrectness ; but enough remains in editions not controverted, to establish its general accuracy. It was translated into English under the title of "The Book of Rates now used in the Sin Custom-house of Rome, 4to, 1673." Banck died in 1662.—*Bayle. Saxii Onom.*

BANCROFT (RICHARD) archbishop of Canterbury in the reign of James I. He was a native of Farworth in Lancashire, where he was born of respectable parents in 1544. He studied at Christchurch, Cambridge, after which he became chaplain to Dr Cox, bishop of Ely, who gave him the rectory of Teversham in Cambridgeshire. In 1584 he obtained the living of St Andrew, Holborn, and was also appointed treasurer of St Paul's ca-

thedral. He subsequently obtained various other preferments, and was at once prebendary of St Paul's, of St Peter's Westminster, of Canterbury, and, according to one authority, of Durham. Such being the case, it will not surprise the reader to learn, that the Advocates' Library at Edinburgh contains an original letter from this prelate to King James in defence of pluralities. In 1589 he displayed his zeal for the church of England, by a famous sermon delivered at St Paul's Cross against the Puritans, in which he accused them, not only of an intention to seize the church revenues, but to dissolve the bonds of property, and introduce a community of goods. With consistent temper and argument, he at the same time maintained the divine right of bishops in terms; which, in the opinion of Sir Francis Knollys, one of Elizabeth's council, was inimical to the supremacy of the crown. It was supposed that he was put on this duty by archbishop Whitgift, to whom he was then chaplain. He also pursued the most rigorous measures against heresy and schism, as one of the commissioners for ecclesiastical causes, and stood forward on all occasions as a most vehement champion of church domination. In 1597 he was advanced to the see of London, and, owing to the increasing infirmities of the archbishop of Canterbury, the ecclesiastical business of the primacy was also entrusted chiefly to his active management. In the celebrated controversy between the bishops and the Presbyterian ministers, held at Hampton Court in 1603, Bancroft particularly distinguished himself, and would have terminated the dispute at once, by the interference of authority, if James would have been induced to listen to him. In the course of this debate, the subject of non-residence being started, the lord chancellor took occasion to argue against pluralities, and expressed a wish that some clergymen should have single coats, before others obtained doublets; adding, that in the distribution of the king's benefices he was careful in that particular. "I commend your honourable care; but a doublet is necessary in cold weather," replied the bishop of London. Upon the death of Whitgift, Bancroft succeeded him in the see of Canterbury, and as primate acted with a high hand against the Puritans. Clarendon thinks, that if he had lived, "he would have extinguished all that fire in England which had been kindled in Geneva, and would easily have kept out that infection which could not afterwards be so easily expelled." By this opinion lord Clarendon seems to indicate that the church of England had been irreparably injured by the appointment of archbishop Abbot, who patronized the Low Church. This presumption might be pardonable in Clarendon; but upon what principle the author of the "Book of the Church" professes to be at present of the same opinion, in the face of the progress of Calvinistic conformity and dissent since the days of that respectable writer, it is impossible to determine. Of archbishop Bancroft's jealousy of the rights

of the church, a memorable example is afforded in his contest with the judges; against whom he exhibited articles to the lords in council, complaining of their encroachments on the ecclesiastical courts in granting prohibitions. This complaint was overruled by the unanimous opinion of the judges; which, according to Coke, is the highest authority of the law. His administration of the affairs of the church displayed similar tenacity; he insisted upon the most rigid adherence to the rubric and canons; and several ministers who had formerly subscribed to the articles with an admitted latitude, were now required to signify their strict conformity in the most rigid and unevasive terms. Lastly, in order to increase the revenues of the church, he presented to Parliament, in 1610, a plan for better providing a maintenance for the clergy; the leading objects of which were to improve the tithes, to redeem lay impropriations, and to restore the practice of mortuaries by repealing the statute of mortmain. This extravagant proposal, which the Parliament wisely rejected, was the last public act of the archbishop, who in the same year died of the stone at his palace of Lambeth, aged sixty-seven. As an author, archbishop Bancroft is only known by the sermon before mentioned, and by two tracts against the Nonconformists, entitled "Dangerous Positions," and "Survey of the pretended Holy Discipline." With intolerant principles and a rough temper, he indisputably possessed a strong understanding and great talents for business, which enabled him to occupy his eminent station with considerable reputation. Whether the choice of a successor, in an equally able man of a directly opposite religious tendency, originated in personal favouritism, or in the policy of James I, does not clearly appear; but the circumstance is singular, and looks as if that monarch, who did not want a portion of political sagacity, foresaw that a succession of prelates of the disposition of Bancroft might precipitate that state of civil disorder which was certainly hastened in the following reign by the similar principles and counsels of Laud.—*Biog. Brit.*

BANDELLO (MATTHEW) bishop of Agen, and a celebrated Italian novelist, was born at Castenuovo in the Milanese, towards the close of the fifteenth century. He remained for some years under the patronage of his uncle, Vincent Bandello, general of the order of Dominicans, after whose death he passed a considerable part of his time at the court of Milan, where he instructed the celebrated Lucretia Gonzaga, in whose praise he wrote a poem. Having early entered in the order of the Dominicans, he was deeply involved in the ecclesiastical and political affairs of the times, and in the war carried on in the Milanese between the French and the Spaniards, suffered considerably, and only preserved his life by escaping in disguise. After various vicissitudes of fortune, he obtained the bishopric of Agen in France from Henry II, to hold until James Fregosa should attain his

twenty-seventh year; and after an almost nominal occupation for five years, he gave it up accordingly. The exact time of his death is unknown, but he was living in 1561. His collection [of novels or tales, by which he is chiefly known, was first printed in Lucca in 1554, in 3 vols. 4to; to which a fourth was afterwards added, printed at Lyons in 1573. This edition, to which that of London, 1740, is conformable, is scarce and dear. Bandello in his manner imitates Boccaccio, to whom however in point of composition he is much inferior. His tales, according to Mr Roscoe, bear the peculiar character which in general distinguished the literary productions of the ecclesiastics of that age from those of the laity, and are as remarkable for the ease of many of the incidents as for the vivacity and simplicity with which they are related. Shakespeare took his Romeo and Juliet from one of these volumes, which story is accordingly translated in "Shakespeare Illustrated." Bandello was also author of a Latin version of Boccaccio's story of "Tito et Gisippo," and of several other works.—*Tiraboschi. Nouv. Dict. Hist.*

BANDINELLI (**BACCIO**) a Florentine sculptor, painter, and architect, who was the contemporary and rival of Michael Angelo. His father was a goldsmith, and he instructed Baccio in drawing and working in metal; but a taste for sculpture displaying itself, he received instruction in that art. When he was but nine years old, he is said to have modelled a statue of snow, which was admired for the correctness of its proportions. He subsequently exhibited extraordinary talents, and obtained the patronage of popes and princes. As a sculptor he was particularly eminent, and produced several works of distinguished excellence, especially a copy of the Laocoon; but the ambitious, or rather envious temper of this artist, induced him to engage in other undertakings, in which he was less successful. Michael Angelo was the peculiar object of his spleen; but though his productions are manifestly inferior to those of that master-genius in the arts of design, he perhaps excelled as a sculptor all the rest of his contemporaries. He died in 1559, aged sixty-two.—*Vasari. D'Argenville, Vies des Sculpteurs.*

BANDINI (**ANGELO MARIA**) an Italian antiquary and bibliographer of the 18th century. He was a native of Florence, and received his education among the Jesuits. He entered into orders, and was recommended to the patronage of the emperor of Germany, Francis I, who gave him a prebend at Florence, where he was also made keeper of the Laurentian Library. He died in 1800, aged seventy-four. Bandini was the author of several works on archaeology and literary history, among which are—"Catalogus codicum MSS. Græc. Lat. et Ital. Bibliothecæ Laurentianæ," 3 vols. fol, 1765—1770; and "De Florentini Juntarum Typographia," 2 vols. 8vo.—*Biog. Univ.*

BANDURI (**ANSELM**) an archaeologist of the 18th century, a native of Dalmatia, and a Benedictine monk. He studied at Florence,

where, about 1700, he was employed by father Montfaucon to examine the manuscripts of the works of St Chrysostom. He afterwards went to Paris, and there published his principal work, "Imperium Orientale, sive Antiquitates Constantinopolitanae," 1711, 2 vols. folio. He also published in 1718, a treatise on the medals of the Roman emperors. In 1724 Banduri was appointed librarian to the duke of Orleans. He died at Paris in 1743.—*Moreri. Aikin's G. Biog.*

BANIER (**ANTOY**) a French abbé and writer of the 18th century, was a native of Clermont, in Auvergne, where he pursued his first studies. Repairing to Paris to finish his education, he soon attracted notice; and his talents supplied him with resources which he could not have obtained from his family. He was received into the house of M. du Metz, president of the chamber of accounts, who intrusted him with the care of his sons; and the exercises which he composed for these young gentlemen gave birth to his "Historical Explanation of the Fables of Antiquity;" which publication made him known as a writer of taste and erudition, and procured him admission into the Academy of Inscriptions and Belles Lettres. The object of this work is to trace up mythology to historical facts; and such a hold did inquiries of this nature obtain over the mind of Banier, that almost all his literary labours were more or less connected with them. Besides the foregoing work, he published a "Translation of the Metamorphoses of Ovid," 3 vols. 12mo, with historical remarks and explanations exhibiting great erudition. Of this production there is likewise an edition in Latin and French, 1732, folio, with the plates of Picart. He also gave a new edition of Marville's "Melanges d'Historie et de Litterature;" and had a share in a new and improved edition of Picart's "Religious Ceremonies" in 7 vols. folio, 1741. In his explanation of mythology by history, the abbe Banier, with great judgment, kept clear of tracing affinities with the scriptural accounts, by which he avoided a rock that had wrecked Bochart, Huet, and others. It may be questioned, however, whether his or any other single theory can disentangle the twisted web of ancient mythology. He died in Paris in 1741 in the sixty-ninth year of his age. An English translation of his "Mythology," &c. was published in London, 4 vols. 8vo, 1741.—*Moreri. Nouv. Dict. Hist.*

BANISTER (**JOHN**) a celebrated English physician of the 16th century, was educated at Oxford, where he graduated in 1573. He afterwards settled at Nottingham, and obtained great practice, especially in surgery. He wrote various professional treatises, the principal of which are—1, "A Treatise of Chirurgery;" 2, "Certain Experiments;" 3, "History of Man;" 4, "Compendious Chirurgery;" 5, "Antidotary Chirurgical;" all of which were collected and published in London, 4to, 1643. There was another physician named **RICHARD BANISTER**, that lived much about the same period, who wrote "A Treatise on one hun-

dred diseases of the Eyes and Eyelids," which was reprinted in 1662. He died in 1624.—*Biog. Brit.*

BANISTER (JOHN) the first violinist of any note, leader of king Charles's band of 24 violins. He set to music Davenant's opera of *Circe*, performed in 1676, and was the first who established benefit concerts in London. He died in 1679, leaving a son of the same name and profession, who was in king William's band, and the original leader of the orchestra at Drury-Lane, when operas were first produced at that theatre, and who died in 1726.—*Ibid.*

BANKS (JOHN) an English dramatic writer of the eighteenth century, was bred an attorney-at-law, which profession he quitted for the pursuit of the tragic department of the drama. He produced several pieces which were popular in their day, but of which none has been performed of late years, except "The Unhappy Favourite, or the Earl of Essex." His blank verse is exceedingly defective, but he succeeded where superior writers have failed, by a happy choice of subjects, abounding in incidents productive of stage effect. The time of his death is unknown, but his remains lie interred in the church of St James Westminster.—*Biog. Dram.*

BANKS (SIR JOSEPH) a distinguished English naturalist. He was the son of William Banks, Esq. of Revesby Abbey in Lincolnshire, where he was born in 1743. He received a classical education at Eton, and afterwards went to Oxford, where he continued till the death of his father, which happened in 1761. Having acquired a particular taste for natural history, he made a voyage to Newfoundland and Labrador in 1765, for the purpose of making researches relative to his favourite science. In 1763 he embarked, together with his friend Dr Solander, in the first voyage round the world made by lieutenant (afterwards captain) Cook. In the course of this expedition he narrowly escaped perishing from intense cold, in traversing the frozen rocks of the volcanic island of Terra del Fuego. On his return to England, he was complimented by the university of Oxford with the degree of doctor of laws. Another expedition to the Pacific Ocean being planned, under the command of captain Cook, it was intended that Mr Banks, Dr Solander, Dr Lind, and Mr Zoffani the painter, should engage in it, with the view to making discoveries and improvements in natural history and geography, and more especially to ascertain the existence or non-existence of a southern circum-polar continent. The expedition sailed in 1772; but in consequence of some opposition on the part of the commander to the arrangements made by Mr Banks for the accommodation of himself and his associates, none of those gentlemen engaged in the undertaking. After this disappointment, Mr Banks in 1772 undertook a voyage to the Western Isles of Scotland, and to Iceland, in the course of which he made great additions to our knowledge of the history of those northern regions. In 1778 he was

made a baronet and was elected president of the Royal Society, of which he had for some time been an active and distinguished member. Some unpleasant dissensions, which arose in this learned corporation not long after, were almost the only circumstances which occurred to interrupt the tranquillity of the president. These however subsided, and the remainder of his long life was passed in the society of his scientific associates, and the prosecution of researches connected with natural history. He died June 19th, 1820, at his seat at Spring Grove, Middlesex. His published writings are neither very numerous nor important. They consist of papers in the Philosophical Transactions, the *Archæologia*, the *Transactions of the Horticultural Society*, and other periodical works; and a small tract entitled, "A Short Account of the Causes of the Diseases in Corn called by Farmers the Blight, the Mildew, and the Rust," with plates, London, 1803, 4to. This first impression was only for private distribution; but an edition in 8vo was published in 1805. Sir Joseph Banks possessed a noble library of works on natural history, of which an admirable catalogue, in 5 vols. 8vo, was compiled by his librarian Mr Dryander.—*Journal of the Royal Institution. Gent. Mag.*

BANKS (THOMAS) an eminent English sculptor, was born in 1733, being the son of Mr William Banks, steward to the duke of Beaufort. Evincing a strong predilection for the arts, he was placed with Kent, the well-known architect of that period; but afterwards shewing a preference for sculpture, he studied it with great success in the Royal Academy, and was elected to be sent as one of its students to Italy. Here he executed several excellent pieces, particularly a basso relievo, representing Caracacus brought prisoner to Rome, in the possession of the duke of Buckingham; and a Cupid catching a butterfly, which was afterwards purchased by the empress Catharine. From Italy he repaired to Russia, where he staid for two years without meeting with any adequate encouragement; when he returned to his own country, where he soon acquired both fame and emolument. Among other works executed by him, was a colossal statue exhibiting Achilles mourning the loss of Briseis, now in the hall of the British Institution; and he is also the sculptor of the admired monument of Sir Eyre Coote in Westminster Abbey. Mr Banks was elected a member of the Royal Academy not long after his return from Russia, and finished a life of arduous exertion in February 1805.—*Gent. Mag.* vol. LXXXI.

BARANZANO (REDEMPTUS) a learned ecclesiastic of Piedmont, the friend and correspondent of lord Bacon, born about the year 1590. He wrote a folio work entitled "*Uranoscopia, seu Universa Doctrina de Cælo*;" another called "*Novæ Opiniones Physicæ*;" and "*Campus Philosophicus*," both these last in 8vo. He died in 1622 at Anneci, where he filled a professor's chair in mathematics and moral philosophy.—*Biog. Univ.*

BARATIER (JOHN PHILIP) a German student of the last century, who excited much interest by his precocious talents and extraordinary acquirement. He was born near Nuremberg in 1721, and was the son of a Calvinistic minister, who had emigrated from France on account of his religion. When only five years old, he is said to have been acquainted with the Greek, Latin, French, and German languages; and in three years after, to have known enough of Hebrew to be able to translate the Hebrew Bible into Latin or French. In 1731 he was admitted a student in the university of Altdorf; and the same year he published a paper on Hebrew literature in the *Bibliothèque Germanique*. In 1734 the margrave of Anspach gave him a pension of 50 florins a year, with permission to use the books in his library. He now published a translation from the Hebrew of the travels of Benjamin of Tudela, a Jew of the twelfth century, with historical and critical notes and dissertations, 2 vols. 8vo. Though ecclesiastical history and antiquities seem to have been his favourite studies, he did not confine his researches to those branches of knowledge; for he was acquainted with mathematics, and in January 1735 he laid before the Royal Academy of Sciences at Berlin, a plan for the discovery of the longitude at sea, which manifested so much ingenuity, that he was chosen a member of that academy. Subsequently he devoted fifteen months to the study of law, in which he attained such proficiency as to be able to support a thesis on public law with great credit. The intense application requisite for these various acquirements, proved extremely prejudicial to his health, and at length brought on a lingering disease, of which he died in 1740, when only nineteen years and eight months old. The more recent instances of our countryman Henry Kirke White, and of other youths of premature genius, render the case of Baratier less singular and less surprising to us at present than it was to his contemporaries. There is one circumstance however respecting the nature of his studies, which is sufficiently remarkable; and that is, that he was not, like the gifted youth just mentioned, peculiarly devoted to poetry, eloquence, or any branch of imaginative science, but his inclination rather led him to cultivate an acquaintance with the uninviting details of obsolete philology, dogmatic divinity, and ecclesiastical history. Hence it may be inferred, that he was indebted to nature more on the score of memory than of imagination: it must at the same time be conceded, that he possessed talents such as fall to the lot of few, and that he cultivated them with unremitting industry. An account of his life was written in French by M. Formey of Berlin, and in English by Dr Johnson.—*Now. Dict. Hist. Aikin's 3. Biog.*

BARBARO or BARBARUS. There was a noble Venetian family of this name, several members of which were highly distinguished by their learning and talents in the 15th and 16th centuries. FRANCIS BARBARO,

who was born 1398, and who died 1454, held various high appointments under the government. He is however principally known by a partial translation of Plutarch's works, and a treatise, "De Re Uxoriam." The latter was printed in 1515 at Paris. Some familiar epistles of his were also published as late as 1743. He left a nephew and a grandson, each known by the name of HERMOLOAUS. The former filled successively the bishoprics of Treviso and Verona, having enjoyed great reputation for learning from his earliest years. He is said to have translated part of Æsop into the Latin language, when only twelve years old, and died at Verona in 1470. The latter, born in 1454 at Venice, was a pupil of Theodore Gaza, and lectured on philosophy in the university of Padua. When only twenty years of age, he was selected to pronounce a funeral oration for the doge Marcello, having previously distinguished himself by his translation of Themistius's "Paraphrasis." In 1477 he obtained the degree of doctor of Civil Law, and being raised to the rank of a senator of Venice, was employed by the republic in several diplomatic missions, especially one in 1485 to the emperor Maximilian, who knighted him, and another to pope Innocent VIII. While at Rome, in violation of a specific law forbidding a Venetian minister to accept a benefice, he was persuaded by the pontiff to receive the dignity of patriarch of Aquileia, without receiving the consent of the senate; an imprudence which not only drew down a sentence of banishment upon his own head, but also brought ruin upon his family. He published a learned commentary and illustration of Pliny's Natural History, under the title of "Castigationes Plinianæ" in folio. In this work, he corrected his author in above 5000 passages. It went through two editions in 1491 and 1493, and was reprinted at Basil in 1534. He also translated Aristotle's *Dialectics*, and the works of Dioscorides. His death took place in 1493. DANIEL BARBARO, patriarch of Aquileia in the sixteenth century, translated the works of Vitruvius into the Italian language, printed in 4to, and wrote a treatise entitled, "Pratica della Perspectiva," folio, and another on Eloquence in 4to. He on one occasion was employed on an embassy from Venice to England, and died in 1570.—*Bayle. Moreri.*

BARBAROSSA (ARUCU) the son of a renegado of Lemnos, and a noted pirate. Having, by his success in piracy on the coast of Barbary, made himself master of twelve gallees stoutly manned with Turks, he rendered himself so formidable, that Selim Entemü, king of the country about Algiers, called in his assistance against the Spaniards. Being admitted into Algiers with his men, he caused Selim to be strangled in a bath, and himself to be proclaimed king. He acted with the greatest tyranny, which produced a revolt among the Arabs, who sought the aid of the king of Tunis. This confederacy was defeated, and Tunis itself taken, of which Barbarossa also declared himself the sovereign

He then marched to Tremecen, the prince of which he also defeated, and was admitted into their capital by the people, who first beheaded their fugitive king. The next heir of Tremecen then applied for aid to Gomares, governor of Oran for Charles V, who marched with a powerful army towards Tremecen. Barbarossa leaving the town with his Turks to meet this new enemy, the people shut the gates; on which he endeavoured to fly, but being overtaken, fought like a lion in the toils, and was cut to pieces with all his Turks, in the forty-fourth year of his age, A. D. 1518.—*Univ. Hist.*

BARBAROSSA (HAYRADIN) younger brother of the preceding. He was left by Aruch to secure Algiers, when he marched against Tunis, and on his death was proclaimed king in his place. Finding his authority insecure, he made application to the Ottoman sultan Selim, offering to recognise his superiority and become tributary, provided a force was sent to him, sufficient to maintain him in his usurpation. Selim agreed to his proposals, and ordering him a reinforcement of 2000 Janizaries, invested him with the dignity of viceroy or pacha over the kingdom of Algiers. Thus reinforced, Hayradin built a wall for the improvement of the harbour, strengthened it with fortifications, and may be deemed the founder of that mischievous seat of piracy, as it has ever since existed. Such was his reputation for naval and military talents, that Soliman II made him his capitan pacha. In this capacity he signalized himself by a long course of exploits against the Venetians and Genoese; and in 1543, when Francis I made a league with Soliman, Barbarossa left Constantinople, and with a powerful fleet, having the French ambassador on board, took Reggio, and sacked the coast of Italy. In conjunction with the French, he also besieged and took Nice, and refitting during the winter at Toulon, again ravaged the coasts and islands of Italy in the ensuing spring, and returned with many prisoners and much spoil to Constantinople. From this time he seems to have declined active service, and to have given himself up to a voluptuous life among his female captives, until the age of eighty, when he died, and left his son Hassan in possession both of his authority and riches. With the ferocity of a Turk and a corsair, he possessed some generous sentiments, and obtained a character for honour and fidelity in his engagements.—*Univ. Hist.*

BARBAULD (ANNA LETITIA) daughter of the Rev. John Aikin, born at Kibworth in Leicestershire, June 20, 1743, one of the most distinguished female writers of her age. She received from her father, who in the early part of her life presided over a dissenting academy at Warrington in Lancashire, an excellent literary and classical education, to which she was indebted for the full development of her great natural talents, and of a vein of poetry at once elegant and imaginative. Her earliest production was a small volume of miscellaneous poetry, printed in 1772, which in the year fol-

lowing was succeeded by a collection of pieces in prose, published in conjunction with her brother, Doctor John Aikin of Stoke Newington. In 1774 she accepted the hand of the Rev. Rochemont Barbauld, with whom she took up her residence at Palgrave in Suffolk, and there composed the works on which the durability of her reputation is most securely founded, viz. "Early Lessons and Hymns for Children," pieces which are justly considered as of standard merit, in conveying the first rudiments of instruction to the infant mind. In 1785, she accompanied her husband on a tour to the Continent, and on their return, resided for several years at Hampstead, but in 1802 again removed to Stoke Newington, in order the more constantly to enjoy her brother's society. In 1812 appeared the last of her separate publications, entitled "Eighteen Hundred and Eleven," a poem of considerable merit; previous to which she had amused herself by selecting and editing a collection of English novels with critical and biographical notices. A similar selection followed from the best British Essayists of the reign of Anne, and another from Richardson's manuscript correspondence, with a memoir and critical essay on his life and writings. Mrs Barbauld died at Stoke Newington, March 9, 1825, in her eighty-second year, leaving behind her many unpublished manuscripts both in prose and verse.—*Gent. Mag.*

BARBAZAN (ETIENNE) a French author and antiquary, born 1696. He reprinted several scarce books relating to the manners and customs of the feudal ages. Among these are—"L'Ordene de Chivalrie," 1759; "Le Castoiment, ou Instructions d'un pere a son fils;" and "Tales and Fables of the Twelfth and Thirteenth Centuries," in 3 vols, 1760; all in 12mo. Another edition of these works was printed at Paris in 4 vols. 8vo, in 1808. Barbazan died in 1770.—*Biog. Univ.*

BARBARINO (FRANCIS DA) an early Italian poet. He was born at Barbarino in Tuscany, in 1264, and studied jurisprudence at Padua and Bologna. He was employed as an ecclesiastical lawyer, and had the degree of doctor of laws conferred on him by pope Clement V. He is reckoned among the founders of Italian literature, on account of his poem entitled "Documenti d'Amore," which relates to moral philosophy. It was first printed at Rome in 1640. Barbarino died of the plague at Florence in 1348.—*Traboschi.*

BARBEU (JOHN LOUIS DE LA BRUYERE) a native of Paris, in which metropolis his father exercised the humble calling of a woodmonger, born 1710. He was well skilled in geography, in which science he published several useful works, especially a map of the globe, combining chronology and history with geography. He assisted in the composition of the two last volumes of the "Bibliothèque de France," La Croix's "Modern Geography," and Lenglet's "Chronological Tables," which last he edited. He also wrote an account of the life and supposed miracles of the deacon Paris, and translated into the French language Strah-

lenberg's Russia. He died suddenly in 1781, by an apoplectic stroke.—*Nouv. Dict. Hist.*

BARBEYRAC (CHARLES) a physician and philosopher of Montpellier, the friend of our great countryman Locke, born in 1629, at Cereste in Provence. He wrote two treatises on medical subjects, entitled "Traites de Médecine," 12mo, 1654; and "Questiones Medicæ duodecim," 1658, 4to. He died in 1699.—*Moreri. Biog. Univ.*

BARBEYRAC (JOHN) nephew of the preceding, was born at Beziers in 1674, but withdrew with his father to Lausanne in 1686. He was designed for the profession of theology, but his inclination led him to the study of jurisprudence, especially that branch of it which relates to the law of nature and nations. He first taught the belles lettres in the French college at Berlin, but in 1710 accepted the invitation of the Swiss magistracy to occupy the new professorship of law and history founded at Berne, whence in 1717 he removed to the chair of public and private law at Groningen. He displayed his industry and erudition in various labours of great value. He gave a French translation of the "Law of Nature and Nations," and of the treatise "On the Duties of Man," by Puffendorf; as also of "The Rights of War and Peace" by Grotius; to all which he added learned notes. He likewise translated the most able works of various other celebrated civilians, including Cumberland's Latin treatise "On Natural Laws," his notes appended to which are very highly estimated. Barbeyrac was also the author of several original works, of which the most noted is his "Treatise on the Morality of the Fathers," 4to, 1723, intended as a reply to the Benedictine Cellier's "Apology for the Fathers," written in consequence of Barbeyrac's free strictures on them in the preface to his translation of Puffendorf. Investigating in this treatise the eloquence, the logic, the casuistry, and the miserable puerilities, of many of the writers so termed, with the freedom of unfettered intellect, nothing more was necessary to ensure him in certain quarters the name of an infidel. Among his original works are also a "Treatise on Gaming," 2 vols. 8vo, and a "History of Ancient Treaties," folio. He likewise inserted literary and critical remarks in various journals, and published some academical discourses. This able writer, who also possessed an estimable private character, died in 1747.—*Moreri. Nouv. Dict. Hist.*

BARBIER (MARIANNE) a native of Orleans, celebrated for her dramatic productions. She cultivated taste and literature at Paris, and wrote *Arria and Pætus*, *Cornelia*, *Tomyris*, and *The Death of Cæsar*, tragedies; and *The Falcon*, a comedy. She was also the author of three operas, and a compilation termed "Les Saisons Littéraires." Racine and Quinault were her models; but her tragedy, in the delineation of male character in particular, wants energy and force. She died at an advanced age in Paris, in 1745.—*Nouv. Dict. Hist.*

BARBIERI, see GUERCINO

BARBOUR (JOHN) an ancient Scottish poet, of whose personal history but few particulars are recorded. He appears to have been born about 1316, and was brought up to the church, being styled, in the year 1357, archdeacon of Aberdeen. In that year he was appointed, by the bishop of his diocese, a commissioner to treat for the ransom of the captive king David II. About 1375 he was engaged in composing his celebrated poem of "The Bruce, or the History of Robert I king of Scotland," which work was first published in 1616, and of which the most valuable of many editions is that of 1790, 3 vols. 12mo, edited by Pinkerton, from a MS. in the Advocate's Library dated 1489. It is a work of considerable merit; and it is remarkable that Barbour, who was contemporary with Gower and Chaucer, is more intelligible to a modern reader than either of them. He died at an advanced age in 1396.—*Pinkerton's edition Mackenzie's Scotch Writers.*

BARCLAY (ALEXANDER) an English poet of the 16th century. Very little is known concerning him, except what we learn from his writings, which inform us, that he was a priest and chaplain of St Mary Ottery in Devonshire, and afterwards a Benedictine monk of Ely. He survived the Reformation, and obtained preferment in the church. His death took place in 1552, a short time after he had been presented to the living of Allhallows, Lombard-street. The principal work of this poet is a satire entitled "The Ship of Fools," a translation or imitation of a German composition. (See BRANDT, Sebastian). Barclay also wrote Eclogues, which, according to Warton the historian of English poetry, are the earliest compositions of the kind in our language. They are curious and interesting for the descriptions they afford of the character and manners of the age in which they were written.—*Biog. Brit. Berkenhout's Biog. Lit.*

BARCLAY (WILLIAM) a native of Scotland, who was patronized by queen Mary, and, after the dethronement of that princess, went to France, and engaged in the study of civil law at Bourges under the famous Cujacius. He afterwards became professor of that faculty in the university of Pont-à-Mousson, founded by the duke of Lorraine, who also made him counsellor of state and master of requests. Having embroiled himself with the Jesuits, they contrived to ruin him in the opinion of the duke his patron. He then went to England; and, returning to France in 1604, he was appointed professor of law at Angers, where he died soon after. He wrote commentaries on the Pandects, a treatise on Rega. Power, another on the Power of the Pope, and a commentary on the Life of Agricola by Tacitus.—*Mackenzie's Scottish Writers. Berkenhout's Biog. Lit.*

BARCLAY (JOHN) son of the preceding, was born at Pont-à-Mousson, and educated in the Jesuits' college at that place. The abilities which he displayed occasioned his being solicited to enter into the order of Jesus. But he rejected these overtures, in consequence of

which both he and his father experienced some persecution from the members of that institution. He accompanied his father to England, where he was much noticed by James I, to whom he dedicated one of his principal works, a politico-satirical romance, entitled "Euphormio." This piece, which is written in elegant Latin, and interspersed with poetry, seems to have been chiefly intended to expose the Jesuits, against whom the author adduces some very serious accusations. In 1615 he went to Rome, where he died in 1621, aged thirty-nine. John Barclay wrote a Narrative of the Gunpowder Treason; a defence of his father's book on the Power of the Pope, against Bellarmine; "Perænesis, or an exhortation to Sectarians;" "Icon Animarum;" and a singular romance in elegant Latin entitled "Argenis," which celebrated production first appeared at Paris in 1621. It is a political allegory, of a similar character to that of Euphormio, and alludes to the political state of Europe, and especially France, during the League. Like the Euphormio, it has been several times reprinted, and has also been translated into several of the modern languages, including English, (see REEVE, Clara). A singular story of romantic chivalry has been quoted from the Euphormio by Sir Walter Scott, in the notes to his Marmion.—*Life by Lord Hailes. Ed.*

BARCLAY (ROBERT) the celebrated apologist of the Quakers, was born in the year 1648, at Gordonstown in the shire of Moray, of an ancient and honourable family, being the son of colonel David Barclay of Mathers, by his wife Catharine Gordon, a descendant from the house of Huntley. The troubles of the country induced his father to send him when young to Paris, to be educated under the care of his uncle, who was principal of the Scots college in that capital. Under this influence he was easily induced to become a convert to the Roman Catholic religion, which when known to his father, he was sent for home; and colonel Barclay soon after becoming a Quaker, his son followed his example. Uniting all the advantages of a learned education to great natural abilities, he soon distinguished himself by his talents and zeal in the support of his new opinions. His first treatise in support of his adopted principles, was published at Aberdeen in the year 1670, under the title of "Truth cleared of Calumnies," &c. being an answer to an attack on the Quakers by a Scotch minister of the name of Mitchell. It is written with great vigour, and with his subsequent writings against the same opponent, tended materially to rectify public sentiment in regard to the Quakers, as also to procure them greater indulgence from government. To propagate the doctrines, as well as to maintain the credit he had gained for his sect, he published in 1675 a regular treatise in order to explain and defend the system of the Quakers, which production was also very favourably received. These and similar labours necessarily brought him into close controversial encounter with the leading mem-

bers of the university of Aberdeen, and others; but notwithstanding so much engrossment, his mind was at the same time busy with his great work, entitled "An Apology for the true Christian Divinity, as the same is preached and held forth by the people in scorn called Quakers." The address to Charles II, prefixed to this able production, is in the highest degree characteristic. His argument in it for toleration, as addressed to that fearless prince, is peculiarly emphatic: "Thou hast tasted of prosperity and adversity; thou knowest what it is to be banished from thy native country, to be over-ruled as well as to rule, and to sit upon the throne; and being oppressed, thou hast reason to know how hateful the oppressor is to God and man." He sent two copies of his apology, which he wrote in the Latin language, to each of the public ministers then assembled, at the famous congress of Nimeguen, where it was received with the courtesy due to the now established fame of the author. It was soon reprinted at Amsterdam, and quickly translated into the German, Dutch, French, and Spanish languages, and by the author himself into English. It met of course with many answers; but although several of them were from able and learned pens, they attracted very little comparative notice. His fame was now widely diffused; and in his travels with the famous William Penn through the greater part of England, Holland, and Germany, to advance Quaker opinions, he was received every where with the highest marks of respect. The strength of his understanding rendered this extraordinary man equally adequate to what is considered most important in the business of the world, as appears from an excellent letter addressed by him on public affairs to the assembled ministers of the various powers of Europe at Nimeguen. The last of his productions in defence of the theory of the Quakers, was a long Latin letter addressed in 1676 to Adam de Paets, "On the Possibility of an Inward and Immediate Revelation." It was not published in England until 1686; from which time Mr Barclay, who had endured his share of persecution, and been more than once imprisoned, spent the remaining part of his life, in the bosom of a large family, in quiet and peace. He died after a short illness at his own house in Uri, A. D. 1690, in the forty-second year of his age. With few exceptions, both partisans and opponents unite in the profession of great respect for the character and talents of Robert Barclay. In reference to the mainspring of the Quaker theory, "inward and immediate revelation," he has been most successfully controverted; and now that time has in some degree softened the glare produced by great reputation, it is thought that in many instances he has exhibited more of the dexterity of the advocate in concealing and modifying defects, than in explicitly proving them to be otherwise. Whatever sentence however be finally passed upon the opinions and talents of this singular and amiable man, he will ever remain a conspicuous instance of the effect to be pro-

duced by a strong understanding, when excited into activity and energy by conscientious enthusiasm. Besides the works already mentioned or alluded to, he wrote a treatise "On Universal Love," and various replies to the most able opponents of his Apology. He left seven children, all of whom were living fifty years after the death of their father. The last of them, Mr David Barclay, a mercer in Cheapside, successively entertained the three monarchs, George I, II, and III, when they visited the city on Lord Mayor's Day.—*Biog. Brit.*

BARCHOCHEBAS or **BARCOCHAB**, a Jewish impostor, who involved his nation in a dreadful calamity under the emperor Adrian. This prince having settled a colony near Jerusalem, established Paganism in that city, which was deemed by the Jews an insupportable abomination. Taking advantage of their indignation, Barchochebas, in proclaiming himself Messiah, by the aid of the famous rabbi Akibah, in order to accommodate himself to the anger and prejudices of the people, spoke of nothing but wars, battles, and triumphs; the first lesson of his gospel being the necessity of a general rise against the Romans. He accordingly fortified himself, with his deluded followers, in various places; and chusing the city of Bitter for his seat of empire, committed dreadful ravages and great barbarities, particularly directing his rage against the Christians, whom he massacred in great numbers. Adrian ordered Rufus, the governor of Judea, to quell these disturbances; but that officer, although he committed great cruelties, not being able to succeed immediately, Julius Severus, the greatest general of the time, took the conduct of the war against the Jews. This commander adopted the policy of attacking and cutting them off separately, until at length the whole war was reduced to the siege of Bitter, where Barchochebas fell. It is supposed that fifty thousand Jews perished in consequence of the arts of this impostor.—*Moreri. Mosheim. Brucker.*

BARCOS (**MARTIN DE**) a learned Jansenist of the 17th century, confidential secretary and afterwards successor to the abbot of St Cyran, in conjunction with whom he produced a work bearing the title of "Petrus Aurelius." His other writings are—"A Censure on the Predestinatus of Sirmond," in 8vo; "A Treatise on the Authority of the Apostles St Peter and St Paul; and another on "La Grandeur de l'Eglise Romaine;" "A Reply to certain objections raised against La Grandeur," all in 4to: a work in two 12mo vols. "On Faith, Hope, and Charity;" and an "Exposition of the Faith of the Romish Church, as regards the Doctrines of Grace and Predestination," 8vo. Barcos enjoyed his preferment thirty-four years, and died in 1678.—*Biog. Univ.*

BARDE (**JOHN DE LA**) better known as the Marquis de Marolles sur Seine, an historian and diplomatist in the reign of Louis le Grand, by whom he was deputed ambassador to the Swiss. He was born in 1602, and died 1693. A history of France, from the death of

Louis XIII to the year 1652, was published by him in 1671, written in the Latin language.—*Ibid.*

BARDON (**MICHAEL FRANCIS D'ANDRE**) professor of the fine arts at Aix in Provence, and the author of some valuable publications, among which are—"L'Histoire Universelle, traitée relativement aux Arts de Peindre et de Sculpter," 3 vols. 12mo; "Elements de l'Art de Dessigner;" and "Costumes des Anciens Peuples," 4 vols. 4to. He died in 1783.—*Heineken Dict. des Artistes. Nouv. Dict. Hist.*

BARETTI (**JOSEPH**) an Italian writer, was the son of an architect of Turin, where he was born in the year 1716. He received a good education and some paternal property, which, according to his own confession, he soon gamed away. Of his early life very little is known; but in 1743 he was employed in teaching Italian to some English gentlemen at Venice; whence, at the recommendation, as it is said, of lord Charlemont, he repaired to England. Here he rapidly became distinguished as a teacher of Italian; and such was his own happy facility in the acquirement of languages, that in 1753 he published in English "A Defence of the Poetry of Italy against the Censures of M. Voltaire." About this time he was introduced to Dr Johnson, then engaged in the compilation of his dictionary, of which Baretti, who by his works on Italian literature had then acquired considerable reputation, availed himself to compile an Italian and English Dictionary, much more complete than any which had before appeared. In 1760 he re-visited his native country, and published at Venice a journal under the title of "Frustra Literaria," which met with great success, but, owing to the severity of its criticisms, subjected the author to unpleasant if not dangerous consequences. After an absence of six years, he therefore returned through Spain and Portugal to England, and in 1768 published "An Account of the Manners and Customs of Italy," principally intended as a reply to some querulous strictures on that country in the "Letters from Italy" by surgeon Sharp, which this work effectually put down, with no small portion both of humour and argument. Dr Johnson, whose friendship to him was always warm and cordial, soon after introduced him to the Thrale family, a connexion useful to him both as a teacher and a guest. Not long after his return from Italy, an incident occurred to him of the most distressing nature. Accosted in the Haymarket by a woman of the town, he repulsed her with a degree of roughness which produced an attack from some of her male confederates, and in the scuffle, he struck one of the assailants with a French pocket desert knife. On this the man pursued and collared him; when Baretti, still more alarmed, stabbed him repeatedly with the knife, of which wounds he died on the following day. He was immediately taken into custody, and was tried for murder at the Old Bailey, but acquitted on a verdict of self-defence. On this occasion

Johnson, Burke, Goldsmith, Garrick, Reynolds, and Beauclerk gave testimony to his good character; and although he did not escape censure for his too ready resort to a knife, his acquittal was generally approved. In 1770 he published his "Journey from London to Genoa, through England, Portugal, Spain, and France," a work replete with information and entertainment. He also continued to publish introductory works, for the use of students in the Italian and other modern languages, and superintended a complete edition of the works of Machiavel. Being domesticated in the Thrale family, in 1775 he accompanied them and Dr Johnson in a trip to Paris, but in a fit of unreasonable disgust, quitted them the next year; and it is to be regretted that the latter part of his life was harassed with pecuniary difficulties, which were very little alleviated by his honorary post of foreign secretary to the Royal Academy, and an ill-paid pension of 80*l.* per annum under the North administration. In 1786 he published a work with the singular title of "Tolendron: speeches to John Bowles about his edition of Don Quixote, together with some account of Spanish literature." This was his last production; his constitution being broken by uneasiness of mind and frequent attacks of the gout, he died in May 1789. Baretta, although rough and cynical in his appearance, was notwithstanding a pleasant companion; and of his powers in conversation Dr Johnson thought very highly. He was deemed a latitudinarian in respect to religion; but his integrity was unimpeached, his morals pure, and his manners correct. He had also a high sense of the value of independence, and often refused pecuniary assistance when he most needed it. His principal works have been mentioned in the course of this account; to them may be added various elementary books introductory to a knowledge of the Italian language and literature, and other miscellaneous publications, which, although hastily composed, and much undervalued by himself, exhibited talents and acquirements of no common order. He gave several of Dr Johnson's letters to the European Magazine, and intended to publish several more; but, like many other men of letters, his writings fell into the hands of ignorant executors, who barbarously committed them to the flames.—*Gent. and European Mag. Boswell's Life of Johnson.*

BARKER. There were two of this name. The elder, SAMUEL, was a scholar and a gentleman, possessed of considerable property in the vicinity of Lyndon, Rutlandshire. He wrote several learned tracts, which were collected and published in one quarto volume the year after his decease, which took place in 1760. They consist of "Poesis vetus Hebraica restituta;" "Accedunt quedam de Carmine Anacreontis;" "de Accentibus Græcis;" "de Scripturâ veteri Ionica; de literis Consonantibus et Vocalibus; et de pronunciatione Linguae Hebraicæ." He was son-in-law to the learned but eccentric William Whiston; and besides the writings above-named, he left behind him in manuscript a Hebrew Grammar, which he

had long been engaged in drawing up, but in a very unfinished state. His son, THOMAS BARKER, who succeeded him in the estate, was a fellow of the Royal Society, and among the philosophical Transactions are to be found several ingenious papers from his pen on meteorological, astronomical, and other subjects. He also wrote an account of the parish of Lyndon, for Wright's History of Rutlandshire; an Essay on the Demoniacs described in Scripture; a treatise on Comets; another on the Sacrament of Baptism; and a work entitled "The Messiah, being the Prophecies concerning him methodized with their accomplishment;" all in 8vo. He died in 1809, having subsisted from infancy to the age of eighty-eight on a vegetable diet. There was also a Rev. WILLIAM HIGGS BARKER, of the same family, vicar of Carmarthen, and master of the grammar-school there, who published a grammar and lexicon of the Hebrew tongue.—*Nichol's Life of Bowyer.*

BARKER (ROBERT) an artist of great ingenuity, and patentee of the exhibition called a panorama, in which bird's-eye views are painted in distemper round the wall of a circular building, so as to produce a striking resemblance to reality. The first picture of the kind was a view of Edinburgh, exhibited by Mr Barker in that city in 1788. He then adopted the name of "Panorama" to attract, and commenced similar exhibitions in London, being ultimately enabled to build a commodious house for that purpose in Leicester-square. Mr Barker died in April 1806, leaving two sons, one of whom has continued the same species of exhibition.—*Lyson's Env. of London, supp. vol.*

BARKHAM or **BARHAM** (JOHN) an English divine of the 17th century. He was educated at Oxford; and after taking the degree of B. D. in 1603, he became chaplain to the archbishop of Canterbury. He subsequently was made dean of Bocking and D.D., and died in 1642. He was a collector of coins and medals, and is said to have written the lives of King John and Henry III in Speed's History of England. His literary fame however is founded on his being supposed to have been the author of "The Display of Heraldry," published as the work of John Gwillim. See Gwillim.—*Biog. Brit.*

BARKSDALE (CLEMENT) a native of Winchcombe, Gloucestershire, born about the year 1609. He graduated at Oxford, and succeeded to the head-mastership of Hereford grammar-school, in which situation he continued till the surrender of that city to the Parliament troops in the civil wars, when he retired to Hawling in his native county. On the return of Charles II, he obtained the benefice of Naunton. His works are a "Life of Hugo Grotius," in 12mo; "Memoirs of Worthy Persons," 12mo, printed in 1661; "The Cotswold Muse," 8vo; and "Monumenta Literaria, sive obitus et elogia doctorum virorum," 4to. He died in 1687.—*Wood's Athen. Oxon.*

BARLAAM, a native of Calabria, who went when young to Greece, for the purpose of studying the language of that country. He

became a monk of the order of St Basil; and obtaining the favour of the emperor Andronicus the younger and his minister John Cantacuzenus, he was in 1339 commissioned to treat with pope Benedict XII, concerning a reconciliation of the Greek and Latin churches. At Avignon, where the Pope then kept his court, Barlaam became acquainted with the celebrated Petrarch, whom he instructed in Greek; and to him may be attributed the revival of a taste for Grecian literature in the west of Europe. He failed in the object of his negotiation; and returning to Constantinople, he renewed a dispute in which he had engaged with the monks of Mount Athos, relative to the miraculous light of Mount Thabor. This ended in his being censured by an ecclesiastical council, which induced him to return to Italy, and join the Latin church. He was made bishop of Gerace in Calabria, where he died about 1348. As an author he has been accused of inconsistency, in having at different periods written against and in favour of the pope's supremacy. His other works are— a treatise on Morals; another on Arithmetic; and some Letters and Orations.—*Mosheim. Gibbon. Tiraboschi.*

BARLOW (JOEL) an American poet, politician, and miscellaneous writer, was born in the state of Connecticut in 1756. He was educated in the college of Newhaven, and became in the first instance a Presbyterian minister, but soon abandoned that profession and became sceptical. Before this change of opinion, he translated the Psalms into English metre; which version is still used in New England. At the breaking out of the French Revolution, Barlow was in London, and went as one of the deputies from the Constitutional society, to address the National Convention. He subsequently returned to America, and after different changes of situation, was in 1811 appointed minister plenipotentiary from the United States to the court of Napoleon. He followed the latter in his expedition against Russia as far as Wilna, where he fell a martyr to fatigue, and was buried at an obscure village in Poland. The principal work of Barlow was his "Vision of Columbus," a poem, which he afterwards enlarged and published under the title of "The Columbiad." It is not without merit, although disfigured by some American idioms and peculiarities of language. He also wrote—2. "Advice to Privileged Orders." 3. "The Conspiracy of Kings." 4. "Letter to the National Convention." 5. "Royal Pecollections." 6. "A Letter to the People of Piedmont.—*Supp. to Ency. Brit.*

BARLOW (THOMAS) a learned English prelate, who was educated at Queen's college, Oxford, of which he became fellow. In 1635 he was appointed reader of metaphysics to the university, and his lectures were published. His principles seem to have been very fluctuating, as he held offices in the university before and after the restoration of Charles II, during whose reign he was made bishop of Lincoln; and though he shewed his zeal

against popery before James II succeeded to the throne, he afterwards composed an elaborate defence of the power of dispensing with the penal laws claimed by that prince; and he ultimately deserted his interests, and took the oath of allegiance to William and Mary. This time-serving divine died in 1691, in the 85th year of his age. Though so versatile in his conduct, bishop Barlow was a man of ability; and he deserves approbation as the constant advocate of toleration during a period distinguished for the prevalence of a spirit of bigotry and persecution. His writings on casuistical theology were formerly much esteemed; but the only one of his works which retains any interest at present is an account of the Catholic conspiracy called the "Gunpowder Treason."—*Biog. Brit*

BARLOWE (WILLIAM) a distinguished philosopher in the early part of the seventeenth century. He was the son of William Barlowe, successively bishop of St Asaph, St David's, Bath and Wells, and Chichester. The subject of this article entered into holy orders, and obtained preferment in the church; but his claims to notice arise from his researches concerning the properties of the magnet, relative to which he is said to have been the earliest English writer. Barlowe was chaplain to prince Henry, son of James I, and in 1614 was made archdeacon of Salisbury. He died in 1625.—*Biog. Brit. Hutton's Math. Dict.*

BARNARD (SIR JOHN) an eminent citizen and magistrate of London, was born at Reading in Berksbire, of parents belonging to the Society of Friends. At the age of fifteen, his father, who was in the wine trade, introduced him into his business, and soon entrusted him with the principal management of his concerns. He quitted the Society of Friends in his nineteenth year, and declared himself a member of the Established Church, but although highly respected by his connexions, was unknown as a public character until appointed by the body of wine-merchants to state to the house of Lords their objections to a bill affecting their trade, which had already passed the Commons. The abilities which he displayed on this occasion attracted so much attention, that in 1721 he was nominated, without solicitation, a candidate for the representation of the city of London, and after a warm contest duly returned. During a period of forty years, his parliamentary career was in the highest degree independent and respectable; and his personal weight in the opposition to Sir Robert Walpole; was very considerable. In particular, the defeat of the famous scheme of that minister to extend the excise was materially produced by his intellectual vigour and assiduity. He did not however fear to incur temporary odium, by supporting unpopular measures, when he deemed them beneficial; as appeared from his attempt to reduce the four to three per cents, for which he was violently assailed, even by the multitude to whom the reduction could be no other than serviceable. In 1732 he was knighted by

George II, and in 1737 raised to the chief magistracy; which office he served with unwonted vigilance, justice, and humanity. In 1745 his name appeared at the head of the bankers, merchants, and tradesmen, who signed an agreement to take bank-notes in payment as cash, to prevent danger to public credit during the final attempt of the House of Stuart. In 1749 he became father of the city, when, much against his will, the merchants of London erected a statue of him in the Royal Exchange. He died at Clapham in 1764, leaving behind him one son and two daughters. Sir John Barnard was in all respects the model of an able, patriotic, and virtuous citizen; modest in deportment and appearance; firm and undaunted in the discharge of duties; clear, concise, and unaffected in his eloquence; and possessed of a portion of wisdom and knowledge which secured the esteem of the most leading of his contemporaries. He was frequently visited by Pulteney; and Lord Chatham, when Mr Pitt, sometimes styled him the great Commoner. It is also said that George II pressed him to accept the post of Chancellor of the Exchequer.—*Biog. Brit.*

BARNES (JOHN) an English Roman Catholic, who lived in the commencement of the seventeenth century. He studied at Oxford, and subsequently in Spain, where his orthodoxy was much distrusted by his superiors. A spirit of thinking for himself, totally congenial with the principles and practice of the Roman Catholic Church, subjected him to great danger; and while still young he entered among the English Benedictines near Douay, to escape the snares of the Inquisition, but from the same causes was soon obliged to quit them. He then took shelter at Paris, where he obtained the protection of some persons of distinction, and in 1625 published a work against mental reservation, entitled "*Dissertatio contra equivocaciones*;" which highly displeased the Catholic priesthood, and made considerable noise. His next work, called "*Catholico-Romanus Pacificus*," gave still more offence; and the Pope wrote to Cardinal Richelieu to have him arrested and sent to Rome. This act of tyranny accordingly took place; and he was confined in the dungeons of the Inquisition, where he died after thirty years confinement, during part of which time his sufferings brought on insanity. His "*Catholico-Romanus Pacificus*" was printed at Oxford, 1680, 8vo.—*Moreri. Wood's Athen. Oxon.*

BARNES (JOSHUA) a divine and classical scholar of eminence, who was a native of London, and received the first part of his education at Christ's Hospital, where he distinguished himself as a proficient in the Greek language. In 1671 he was admitted a servitor of Emanuel College, Cambridge, of which he was afterwards a fellow. He soon became known as the author of various works, chiefly relating to history and philosophy. His memory was extremely good, and he was hence enabled to acquire such an intimate knowledge of Greek, as to be capable of speaking

or writing it with great facility. The celebrated Dr Bentley, with whom he was no favourite, sarcastically observed "that Barnes knew as much Greek as an Athenian cobbler." In 1695 he was chosen professor of Greek in the university of Cambridge. There are few events of his life to be noticed, except the appearance of his various publications. The most important of these is—"The History of King Edward III," 1688, folio, a work in which the faults rather than the beauties of the ancient historians are imitated. In 1694 he published an edition of the Greek tragedies of Euripides; in 1705 the poems of Anacreon; and in 1710 Homer's Iliad and Odyssey. These editions of Greek classics exhibit much more industry than taste or judgment, and have been superseded by the labours of more recent critics. In 1700 he married a widow lady named Mason, possessed of considerable property at Hemingford in Huntingdonshire, where he afterwards resided. He died in 1712, and was interred in Hemingford church, in which a monument was erected for him by his widow, with a singular inscription, partly in Latin and partly in Greek anacronics. The private character of Barnes was respectable, but marked by some peculiarities of behaviour, bordering on the ridiculous: thus he had so high an opinion of the merit of alms-giving, that he has been known to give away his only coat to a beggar at his door.—*Biog. Brit.*

BARNEVELDT (JOHN OLDEN) an able and patriotic statesman of Holland, was born in 1547. He was early employed by the States-general in various negotiations with France, England, and the neighbouring powers; and the States of Holland made him their Grand Pensionary. Firmly attached to the liberty of his country, the great power of the house of Orange, headed by the aspiring and warlike prince Maurice, gave him uneasiness; and as the authority of the latter greatly depended upon the continuation of the war against Spain, Barneveldt used his utmost endeavours to conclude it. He finally succeeded in obtaining the memorable truce of twelve years, in the first article of which the independency of the United Provinces was finally acknowledged. Soon after this event, the religious disputes commenced between the Arminians and Calvinists, in which he took part with the former, and sought to obtain for them the liberty of conscience, which was all they claimed. Prince Maurice, finding the other party strongest in zeal and number, put himself at their head; and by means of the famous synod of Dordrecht, finally contrived to effect the destruction of his patriotic and illustrious opponent. The Arminians, on being cited to appear before an assembly resolved to condemn them, refused to appear; on which, the plot being ripe for the destruction of the Anti-Orange party, Barneveldt, Grotius, and others were arrested. Barneveldt however was the great destined victim; and a mock tribunal being formed by his enemies, he was tried for harbouring designs against public liberty, and

capitally convicted. Great interest was made with the vindictive and iniquitous Maurice to save him; but he coldly refused, unless the family and himself would acknowledge his being guilty, which they steadfastly refused to do; and this virtuous man, whose deportment in all respects became his great character, after addressing himself to the people and declaring his innocence, calmly resigned himself to the axe of the executioner on May 13, 1619, at the age of seventy-two. The popular hatred to him soon subsided; and his death has left a stain on the character of prince Maurice, which all his great qualities and services have never been able to efface. Barneveldt left two sons in considerable employments, who formed a conspiracy against the life of his enemy, which was detected. William, the most culpable, escaped, but Reiuier was taken and executed. His mother, after his condemnation, threw herself at the feet of Maurice to request his mercy; on which that prince expressed his surprise; that she would condescend to such a step for a son, after refusing it for a husband. Her answer has immortalized her memory, and still more stained that of the inexorable person to whom it was made—"I did not ask pardon for my husband, because he was innocent: I ask it for my son, because he is guilty."—*Univ. Hist. Moreri.*

BAROCCIO (FREDERIGO) an eminent painter, born at Urbino in 1598. He was the son of a sculptor of eminence, and placed under the instruction of Battista Venetiano, until of the age of twenty. After passing five years at Rome, he returned to Urbino, where he obtained great celebrity by a picture of St Margaret, and was invited by pope Pius IV to assist in the decoration of the Belvidere palace, which he accordingly enriched with several fine pictures, and a ceiling in fresco representing the annunciation. He again visited Rome during the pontificate of Gregory XIII, when he painted two pictures, the Visitation of the Virgin to Elizabeth, and the Presentation in the Temple, which are esteemed his master pieces. Baroccio adopted the style of Corregio; but although graceful in his figures, and harmonious in his colouring, he cannot vie with that great master. He was afflicted with very delicate health, yet reached his eighty-fourth year, when he died in 1612. Baroccio engraved four of his own pieces in a spirited manner, and more than thirty others have been published by different engravers.—*Bryan's Dict. of Painters.*

BARON (MICHAEL) a celebrated French actor. He was the son of a shopkeeper of Issoudun, who went himself on the stage, and was born at Paris in 1662. He entered young into a company of comedians, and rapidly became the hero of that of the celebrated Moliere. He succeeded equally in tragedy and comedy, but obtained his chief celebrity in the former. Possessing all the requisites of voice, person, genius, and judgment, he felt himself above rules, and usually abandoned himself to a natural expression of the passions as they arose. Preachers frequently came to the

grated box, in order to study his action; "and thence (says Voltaire) went to declaim against the theatre." He was censored by the great, and lived with them, as is frequently the case with numbers of his profession, on a footing of conversational familiarity. As he was sufficiently sensible of his own merit, it is probable that the repulses which he occasionally encountered in this precarious kind of intercourse, induced him unexpectedly to quit the stage, with a pension from the King in 1691. To the still greater surprise of the public, he returned to a theatrical life in 1720, after an interval of twenty-nine years, and at the age of sixty-eight was as much applauded as ever. He continued to act until 1729, when his infirmities obliged him to retire, and in two months afterwards he quitted the stage of life also. Baron composed several comic pieces himself for the stage, as also some very middling poems. His works are collected in 3 vols. 12mo, Paris, 1736.—*Voltaire's Siecle de Louis XIV. Nouv. Dict. Hist.*

BARON (RICHARD) a political writer, a native of Yorkshire, who was educated at Glasgow, and in 1753 became minister of a congregation of Dissenters in London. This situation he relinquished after some years, and was employed by Mr Thomas Hollis in collecting and publishing the political tracts of Milton, James Harrington, and others of a similar tendency. "The Pillars of Priestcraft and Orthodoxy shaken," 2 vols, 12mo, partly written by Gordon, the translator of Tacitus, was also published by Baron, who died in 1768.—*Chalmers's G. Biog. Dict.*

BARONIUS (CESAR) a learned cardinal, distinguished as an ecclesiastical historian. He was born at Sora in the kingdom of Naples in 1538, and educated first at Veroli, and then at Naples. Going to Rome, he in 1560 entered into the congregation of the Oratory, then newly founded by St Philip Neri. He was made a priest; and on the resignation of the founder of his order in 1583, he was chosen superior-general. Pope Clement VIII appointed him his confessor, made him apostolical prothonotary, and in 1596 gave him a cardinal's hat. On the death of that pontiff, he might have been his successor, but for the opposition of the Spanish party in the conclave, whom he had offended by his writings. He died in 1607, leaving an estimable private character, and the reputation of extensive erudition. The principal work of Baronius, which engaged his attention during the greater part of his life, is his "Ecclesiastical Annals," of which he published 12 volumes in folio, the first in 1588, and the last in 1607, containing the history of the Christian church to the year 1198. The chief object of Baronius in this great undertaking was to furnish an antidote to the Protestant compilation on the same subject, by the Centuriators of Magdeburg. Writing thus avowedly as a partizan of the Catholic church, it is by no means surprising that he has fallen into many errors, for which he has been censured by Protestant writers. His mistakes have likewise engaged

the attention of critics of his own communion, among whom are Pagi, Norris, and Tillemont, whose corrections are appended to the later editions of the *Annals*. Henry de Sponde, bishop of Pamiers, who died in 1643, wrote an abridgment, and also a continuation of the *Annals* of Baronius, which is much esteemed; and similar works have been executed by other writers.—*Moreri. Tiraboschi. Mosheim.*

BAROZZI, see VIGNOLA.

BARRALL (PETER) a French writer, who was the author of several useful publications. He was a native of Grenoble, and embraced the ecclesiastical profession, but devoted himself to the cultivation of literature. He died at Paris in 1772. His principal works are "Dictionnaire Historique, Litteraire et Critique," 6 vols, 8vo; "Dictionnaire des Antiquités Romaines," 2 vols, 8vo; et "Dictionnaire historique, géographique, et morale, de la Bible," 2 vols, 8vo.—*Dict. Hist.*

BARRE (JOSEPH) a learned and industrious writer, born in 1692. He entered into the church, became canon of St Genevieve, and afterwards chancellor of the university of Paris. He died in 1764. His chief works are, "Vindiciæ librorum deutero-canoniorum veteris Testamenti," 1730, 12mo; "A General History of Germany," 1748, 11 vols, 4to, reckoned the best work in French on the subject; "The Life of Marshal Fabert," 1752, 2 vols, 12mo; and "History of the Laws and Tribunals of Justice," 1755, 4to. *Nouv. Dict. Hist.*

BARRE (LUKE de) a Norman poet of the twelfth century, celebrated as the author of political satires, which proved the cause of his destruction. In 1124 an insurrection took place in Normandy against the usurped authority of Henry I, king of England. Barré joined the enemies of that prince, assisting them both with his sword and his pen. Being taken prisoner in battle, he was condemned to lose his eyes; and when a great foreign potentate interceded in his favour, his irritated enemy made the following reply: "No, sir, no! for this man being forsooth a wit, a bard, and a minstrel, hath composed many indecent songs against me, and moreover hath sung them openly, to the great entertainment of my enemies; now since it hath pleased God to deliver him into my hands, he shall be punished, in order to deter others from the like impertinence." The sentence consequently took place; and the imprudent satirist died of the wounds he received in struggling with the executioners.—*Orderic. Vital. Hist. Eccles.*

BARRE (ISAAC) an English gentleman, who distinguished himself as a politician during the American war. In the earlier part of his life he was in the army, in which he attained the rank of colonel. Becoming connected with the first marquis of Lansdown, he obtained a seat in the House of Commons, and was an active member of the Opposition, and a frequent speaker, during the ministry of Lord North. He was afflicted with blindness for several years previous to his death, which

took place July 1st, 1802, at the age of seventy-five. Some have supposed that colonel Barré wrote the celebrated Letters of JUNIUS, in conjunction with his friend the marquis of Lansdown and counsellor Dunning, afterwards Lord Ashburton; but this is a bare conjecture, unsupported by any probable arguments.—*Gent. Mag. New Ann. Reg.*

BARRETT (GEORGE) an eminent painter of landscapes, was born in Dublin in 1728. He was early introduced by Mr Burke to the patronage of the earl of Powerscourt; and he passed a great part of his youth in sketching the fine scenery round Powerscourt-park. In 1762 he came to England, and greatly contributed to the establishment of the Royal Academy, of which he was one of the earliest members. He was a faithful delineator of the genuine English landscape, the dewy verdure of which he perfectly represented. His works are to be found in several of the collections of the nobility, but principally in those of the dukes of Portland and Buccleugh. He died at Paddington in 1784, aged fifty-four.—*Bryan's Dict. of Painting.*

BARRETT (JOHN, D.D.) vice-provost of Trinity college, Dublin. His fame as an antiquary is established by the publication of an edition of Saint Matthew's gospel, transcribed from an ancient manuscript discovered by him in the college library, the writing of which had been partially erased, and a second written across the remains of the first. This is the only copy in the ancient Greek character which contains the two first chapters of this gospel; and, as the second writing has been deemed 800 years old, may be considered of great antiquity. This work, containing a fac-simile of the fragments, was published at the expense of the university. Many amusing stories are told of the penurious habits of this learned divine, who is reported to have refused sending for medical advice till nearly the last day of his life, on the ground of the expense, and at length to have consented only on its being suggested to him, that as his situation was worth thirteen guineas a day, if a physician could but prolong his life twenty-four hours, he would yet be a gainer of a dozen. He died Nov. 15, 1821, leaving behind him upwards of 80,000*l.* the whole of which he bequeathed to charitable uses.—*Gent. Mag.*

BARRETT (WILLIAM) a surgeon of Bristol, who attracted notice in consequence of his connexion with Chatterton, in the early part of the literary career of that extraordinary youth, whose professions relating to the originality and authenticity of the Rowley poems obtained his confidence and support. Barrett, at the period of his first acquaintance with Chatterton about 1763, was engaged in collecting materials for a history of Bristol; and in this work, published in a quarto volume in 1783, are given fac-similes of the few fragments produced as the genuine manuscripts of Rowley. Mr Barrett died in 1789.—*Ibid.*

BARRINGTON (JOHN SHUTE, viscount) a nobleman distinguished for theological learning, was the youngest son of Benjamin Shute,

merchant. He was born in 1678, and received part of his education at the university of Utrecht. On his return to London, he studied law in the Inner Temple, and in 1701 distinguished himself as a writer in favour of the civil rights of the Protestant dissenters, to which body he belonged. Being employed by lord Somers to engage the Presbyterians of Scotland to favour the projected union between the two kingdoms, he was in 1708 rewarded for his services by the place of commissioner of the customs, from which he was removed by the Tory ministry of Anne. This deprivation however was of little consequence, his fortune having been secured by the bequest of two considerable estates from different persons, one of which was left him by Francis Barrington of Tofts, Esq. whose name he assumed by act of parliament. On the accession of George I, he was chosen member of parliament for Berwick-upon-Tweed, and in 1720 was raised to the peerage by the title of viscount Barrington of Ardglass. Unfortunately for himself, he became connected with one of the bubbles of that time, called the Harburgh Lottery; and when the delusion became apparent, he was in consequence expelled the house of Commons; a censure which he scarcely merited, as the misconduct seems to have rested principally with the ministry of the electorate of Hanover. His opposition to Sir Robert Walpole is thought to have produced this severity; although, according to a passage in the correspondence of lord Orford, that minister by no means exposed his personal misconduct in the transaction so much as he might have done. In 1725 lord Barrington published his principal work, entitled "Miscellanea Sacra," 2 vols. 8vo, since reprinted by his son, afterwards bishop of Durham, in 3 vols. 8vo, 1770. This work traces the methods taken by the apostles to propagate Christianity, of which it has been deemed a judicious defence. In the same year he published "An Essay on the several Dispensations of God to Mankind," 8vo, and was also the author of various other tracts relative to toleration in matters of religion. He died in 1734, leaving several children, of whom five sons had the uncommon fortune of each rising to high stations respectively in the state, the church, the law, the army, and the navy; the youngest of them is the present bishop of Durlham, still surviving (1825) aged upwards of ninety. Lord Barrington was the friend and disciple of Locke, whose sentiments on civil and religious liberty he strictly adopted. Although bred a Dissenter, and a leader of that body, he was also a frequenter and communicant of the church of England.—*Biog. Brit.*

BARRINGTON (DAINES) fourth son of the first viscount Barrington, distinguished as a lawyer, antiquary, and naturalist. He was born in 1727, and, after preparatory studies at Oxford and the Inner Temple, was called to the bar. He held several offices previous to his being appointed a Welch judge in 1757; and he was subsequently second justice of Chester till 1785, when he resigned that post,

and thenceforward lived in retirement, chiefly at his chambers in the Inner Temple, where he died in March 1800. The works of this writer are numerous, consisting of papers in the Transactions of the Royal and Antiquarian societies, of both which learned bodies he was a fellow; "Observations on the Statutes, chiefly the more Ancient," &c. 1766, 4to; an edition of Orosius, with the Anglo-Saxon version of king Alfred, and an English translation and notes, 1773; "Tracts on the Probability of reaching the North Pole," 1775, 4to, occasioned by the arctic expedition of captain Phipps, afterwards lord Mulgrave.—*Gent. Mag. Nichol's Lit. Anec. of the 18th century.*

BARROS (JOHN DE) a Portuguese historian, born at Viseo in 1496, and educated at the court of king Emanuel. He was patronized by the infant John, who, succeeding his father in 1521, appointed Barros governor of St George de Mina on the coast of Guinea, and afterwards made him treasurer of the Indies. He subsequently gave him the lordship of Paraiba in the Brazils, on condition of his peopling the country with Portuguese settlers, which he attempted to do, but the fleet which he fitted out for that purpose was destroyed. He died in 1570. Barros is known as the author of a "History of Asia and the Indies," in four decads, three of which were published during his life, and the fourth after his decease. This work has been continued by other writers: the most complete edition is that of Lisbon, 1736, 3 vols. folio.—*Teissier, Eloges des Hommes Savans*, b. iii. *Moreri.*

BARROW (ISAAC) an eminent mathematician and divine, was the son of Mr Thomas Barrow, a respectable citizen and linen-draper of London, in which city he was born in 1630. His childhood gave no presage of his future celebrity; for at the Charter-house, where he was educated, he was chiefly remarkable for fighting and neglect of study. Being removed to a school at Felsted in Essex, he began to shew some earnest of his future great reputation. He was subsequently entered a pensioner of Trinity college, Cambridge, of which he was chosen a scholar in 1647. The ejection of his uncle, the bishop of St Asaph, from his fellowship of Peterhouse, in consequence of his adherence to the royal party, and the great losses sustained by his father in the same cause, left him in a very unprovided condition. His good disposition and great attainments however soon won upon his superiors, that although he refused to subscribe to the covenant, he was very highly regarded. In 1649 he was elected fellow of his college, and finding that opinions in church and state opposite to his own now prevailed, proceeded some length in the study of anatomy, botany, and chemistry, with a view to the medical profession. He however changed his mind, and to the study of divinity joined that of mathematics and astronomy, unbending his mind by the cultivation of poetry, to which he was always much attached. In 1652 he graduated M.A. at Oxford, and being disappointed in his endeavour to obtain the Greek professor

ship at Cambridge, engaged in a scheme of foreign travel. He set out in 1655; and during his absence his first work, an edition of Euclid's Elements, was published at Cambridge. He visited France and Italy, where he embarked for Smyrna; and the ship in which he sailed being attacked by an Algerine corsair, he stood manfully to the guns until the enemy was beaten off. From Smyrna he proceeded to Constantinople, returned in 1659 by way of Germany and Holland, and was soon after episcopally ordained by bishop Brownrigg. In 1660 he was elected Greek professor at the university of Cambridge, without a competitor. At the recommendation of Dr Wilkins, afterwards bishop of Chester, he was in 1662 chosen geometry professor of Gresham college, and in 1663 the Royal Society elected him a member of that body, in the first choice after their incorporation. The same year he was appointed the first Lucasian professor of mathematics at Cambridge, on which occasion he delivered an excellent prefatory lecture, on the utility of mathematical science. In 1669, on a conscientious principle of duty, he determined to give up mathematics, and adhere exclusively to divinity: accordingly, after publishing his celebrated "*Lectiones Opticæ*," he resigned his chair to a successor worthy of him, the great Newton. In 1670 he was created D.D. by mandate, and in 1672 the king nominated him to the mastership of Trinity college, observing, that he had bestowed it on the best scholar in England. He had before this refused a living, given him with a view to secure his services as a tutor to the son of the gentleman who had it to bestow, because he deemed such a contract simoniacal; and he now, with similar conscientiousness, had a clause in his patent of master, allowing him to marry, erased, because incompatible with the intentions of the founder. In 1675 he was chosen vice-chancellor of the university of Cambridge; but the credit and utility expected from his labours were frustrated by an untimely death, from a violent fever in May, 1677, in the forty-seventh year of his age. The works of Dr Barrow are of the highest class, both as a mathematician and a divine. Of the former, the following are the principal: 1. *Euclidis Elementa*," Cantab. 1655, 8vo; 2. "*Euclidis Data*," Cantab. 1657, 8vo; 3. "*Lectiones Opticæ*," Lond. 1669, 4to; 4. "*Lectiones Geometricæ*," Lond. 1670, 4to; 5. *Archimedis Opera*, Apollonii Conicorum, lib. iv.; Theodosii Sphericorum, lib. iii.; nova methodo illustrata et succincte Demonstrata," Lond. 1675, 4to; 6. "*Lectio in qua theoremata Archimedis de sphaera et cylindro per methodum indivisibilium investigata*," &c. Lond. 1678, 12mo; 7. "*Mathematicæ Lectiones*," Lond. 1683, which latter two works were not published till after his death; 8. All his English works, which are exclusively theological: they were left in M.S., and published by Dr Tillotson, in 3 vols. folio, Lond. 1683; 9. "*Isaaci Barrow Opuscula*," Lond. 1687, folio. As a mathematician, espe-

cially in the higher geometry, Barrow had been deemed inferior only to Newton: as divine he was singularly distinguished for depth and copiousness of thought, and he se exhausted the subjects on which he treated in his sermons, that Charles II used to call him an *unfair* preacher, for leaving nothing to be said after him. Le Clerc speaks of his sermons as exact dissertations, rather than addresses to the people; and although unusually long, they so abound in matter, that his language sometimes labours in the expression of it, whence his style is occasionally involved and parenthetical. Passages of sublime and simple eloquence however not unfrequently abound; and although his divinity is less read now than formerly, it is not unfrequently resorted to as a mine of excellent thoughts and arguments. A fine specimen of his characteristic copiousness is quoted by Addison from his sermon on "*Vain and idle Talking*," in which the various forms and guises of wit are enumerated with a felicity of expression which it would be difficult to parallel. Dr Barrow was indeed celebrated for his own wit, and still more for his personal courage, which was always remarkable. In external appearance he exhibited more of the scholar than the man of the world; being short in his person, meagre in his countenance, and unnecessarily slovenly in his habits. These however were but small defects in a man otherwise so highly gifted, and so modest, conscientious, and amiable. Charitable even in bounded circumstances, altogether disinterested in prosperity, and serene and contented in all fortunes, he was at once the divine and philosopher, leaving little property other than his books, and the reputation of being one of the greatest ornaments to his country.—*Biog. Brit. Aikin's G. Biog.*

BARRUEL (AUGUSTIN) a French ecclesiastic and man of letters, of some eminence during the French Revolution. He commenced his literary career in 1774 with an ode on the accession of Louis XVI, and soon after associated himself with Freron in the composition of the "*Année Littéraire*." In 1788 he became editor of "*Le Journal Ecclesiastique*," which he carried on till July 1792. As the principles he advocated were opposed to the Revolution and the alterations made in the ecclesiastical establishment, he rendered himself obnoxious to the ruling powers; and, after a temporary concealment in Paris, he made his escape to England. Here in 1794 he published his "*History of the French Clergy during the Revolution*;" and in 1796 appeared the first two volumes of the work by which he is best known, "*Memoirs for a History of Jacobinism, Impiety, and Anarchy*," the remaining part of which followed some years after. It is an exaggerated and highly coloured production, excusable possibly on account of the author's education, profession, and party, but upon which little reliance can be placed for facts not otherwise substantiated. He returned to France in 1802, and died there, Oct. 5, 1820, at the age of seventy-nine.—*Monthly Mag.*

BARRY (**GIRALD**) usually styled Giraldus Cambrensis, was born at Pembroke in South Wales, about 1146, being descended from a family allied to the princes of the country. After an early education at home, he was sent to France for improvement, and on his return Lome obtained various ecclesiastical preferments. At thirty years of age he was chosen bishop of St David's, in succession to his uncle; but, satisfied that king Henry II would not confirm the election of a native Welshman, he declined the preferment. He then returned to Paris, in order to study civil and canon law, and returning in 1180, was entrusted with the administration of the see of St David's for three or four years, on the tumultuary expulsion of the bishop. In 1184, Henry II appointed him his chaplain, and attended much to his advice on Welsh affairs. The next year he accompanied prince John to Ireland, and was offered the united sees of Ferns and Leighlin; but disapproving of the measures of John, he again declined the preferment, and chiefly occupied himself in collecting materials for his "Topography of Ireland." Returning to Wales in 1187, he assiduously employed himself in writing that work, and when it was finished, went to Oxford, and publicly recited it for three days running, during which he sumptuously feasted the members of the university, the citizens, soldiers, inhabitants, and poor. In 1188 he accompanied the primate Baldwin in a tour through Wales, to preach up the crusade; the best result of which journey was his "Itinerary of Wales." During the expedition of Richard I, he was of much assistance to William Loughchamp, bishop of Ely, in the management of Wales, but upon some disgust he retired from court, and spent six years at Lincoln in study and in writing. He was afterwards much engaged in an endeavour to become bishop of St David's, always the chief object of his ambition; but he was defeated after much anxiety and vexation. In 1215 he might have been nominated to that see, but refused it on the proffered terms, and soon after retired into a monastery, where he died about 1220. His printed works are, 1. "Topographia Hiberniæ," 1602; 2. "Historia Vaticinalis de expugnatione Hiberniæ," 1602, which two works are in Hollinshed and Camden; 3. "Itinerarum Cambriæ," 1585, 8vo, of which a translation was published by Sir R. Colt Hoare, 2 vols, 4to, 1806; 4. "De Laudibus Cambrorum," 8vo, 1585; 5. "Gemma Ecclesiastica," 1519, 8vo; 6. "Liber secundus de descriptione Walliæ," published by Wharton in his "Auglia Sacra." Besides these works, there are many of his MSS. in the various public libraries, one of which, in exposure of the views of the monks, whom he detested, is very remarkable. Giraldus Cambrensis deserves credit for his literary industry, and the variety of his writings; but although some of his descriptions are not void of a degree of eloquence, his general style is puerile, affected, and full of quibbles and conceits. His judgment was also exceedingly

weak, his credulity being extreme, and his accounts stuffed with all sorts of prophecies and fables of Merlin and similar impostors. Many errors and falsehoods have been detected in his two works on Ireland; and it is to be lamented that so much industry and perseverance was not accompanied with a more powerful understanding.—*Biog. Brit.*

BARRY (**JAMES T.**) This eccentric and celebrated artist was born at Cork in 1741 being the son of a shipmaster who traded from that port to England. It was the intention of his father that he should succeed him in his calling; but his decided inclination for drawing induced his parents to allow him to follow the bent of his inclinations, and he was educated at the academy of Mr West of Dublin. Where, at the age of twenty-two, he gained the prize for the best historical work, by his picture of St Patrick landing in Ireland. By the kindness of Mr Burke, he was enabled to visit Italy, where he studied four years, and was made a member of the Clementini academy of Bologna. He returned to England in 1770: the next year he exhibited at the Royal Academy his Adam and Eve, and in 1772 his Venus Anadyomene, a picture which has been the most admired of all his works. In 1775 he published "An Inquiry into the real and imaginary obstructions to the increase of the Arts in England," in answer to abbe Winckelman, who deemed the English incapable of any great progress in art, from their "natural deficiency in genius, and the unfavourable temperature of their climate." He soon after made his celebrated proposal to the Society for the Encouragement of Arts, to paint gratuitously a series of pictures allegorically illustrative of the culture and progress of human knowledge. This work he accomplished in three years, without assistance, and while enduring no small anxiety from the narrowness of his circumstances, which however were produced in a great degree by his singular waywardness and eccentricity. In 1777 he was made a Royal Academician, and in 1780 professor of painting, which situation he lost in 1799, in consequence of his extreme anxiety to induce the Academy to appropriate the receipt of the exhibitions to the formation of a gallery of old masters for the use of the pupils. This public spirited plan suited neither the interests or views of an influential body of the Academicians; nor was the intemperate manner of Mr Barry of a nature to remove their objections. The division ended by his expulsion from the professor's chair, and ultimately from the Academy itself; which proceedings were laid before king George III, and approved of by him. Soon after, the ear of Buchan set on foot a subscription for him which amounted to about 1,000*l.* With this sum it was intended to purchase an annuity when the object of the bounty was seized with a pleuritic fever, which carried him off on the 22d Feb. 1806, aged sixty-five. He was a painter of unquestionable talents and of original genius, but was never able either to accomplish what he projected, or to pra-

tice what he professed; added to which, his enthusiasm was marked by peculiarities which sometimes assumed the appearance of unsoundness of mind. Towards the close of life he was doubtless occasionally deranged. His works are collected in 2 vols. 4to, 1809, of which his lectures are deemed the most honourable to his abilities.—*Life prefixed to his Works. Bryan's Dict. of Painters.*

BARRY (SPRANGER) an English actor of distinguished eminence, the contemporary and rival of Garrick. His peculiar merits as a hero of the buskin were derived in a great measure from the natural endowments of a fine person, melodious voice, and most pleasing address. When Garrick was in the height of his fame, Barry appeared on the stage of Covent Garden. The tragedy of *Romeo and Juliet* was acted at that theatre and at Drury Lane, for a vast number of nights successively; Barry performed the principal character at Covent Garden, and Garrick at Drury Lane. The public at first crowded to see the rival actors; but were so satiated by the repetition of the piece, that both houses were at length almost deserted. The following epigram was made on this occasion:

"What Play to-night," says angry Ned,

As from his bed he rouses,—

"Romeo, again!" and scratch'd his head—
"A plague on both your houses."

Barry, who was a native of Dublin, afterwards became proprietor of a theatre in that city; in which situation he lost a great deal of property. Returning to London, he died in January 1777, aged fifty-eight. See *CRAWFORD*.—*Davis's Life of Garrick.*

BARSANTI (FRANCESCO) a native of Lucca, born in 1690. Having early attained to a considerable proficiency in music, he accompanied his countryman Geminiani to London in 1714. While on this side the channel, he visited Scotland, and gave great effect to much of its national music by adapting bases to popular airs. Several of his earlier compositions evince considerable knowledge of his art.—*Biog. Dict. of Mus.*

BARTAS (WILLIAM de SALUSTE, sieur du) a famous French poet of the sixteenth century. He was a soldier by profession, and, according to De Thou, an amiable man, of distinguished honour and probity, who wrote merely for his own amusement those works which obtained for him a very high degree of temporary celebrity. The principal production of Du Bartas is entitled, "*Divine Weeks and Works.*" It is a kind of general survey of nature, and abounds in far-fetched thoughts, absurd metaphors, and bombastic phraseology: the poem is however occasionally illuminated by sparks of genius, which only serve to render more visible the bad taste which predominates in the composition. Joshua Sylvester in the reign of James I published an English translation of this poem, in a style and manner well adapted to afford a notion of the prominent features of the original. The work of Du Bartas appeared in most European languages, and within the space of six years

passed through more than thirty editions, affording a striking instance of the transitory triumph of false taste. Du Bartas was in the service of Henry IV, who employed him in several embassies. He died in 1591.—*Nouv. Dict. Hist.*

BARTH (JOHN) a celebrated sea-captain in the service of France, was born at Dunkirk in 1651, being the son of a fisherman, and himself brought up to the same humble calling. He was entirely uneducated, and rough in his manners and appearance, but signalized himself by so many daring and singular acts, in privateering against the Dutch and English, that he made himself the terror of the narrow seas. He was at length taken into the French navy, and by degrees raised higher in command, until in 1692 he was made commodore of a squadron of seven frigates and a fire-ship. With this force he passed through an English and Dutch fleet which was blocking the harbour of Dunkirk; took and destroyed a great number of merchantmen; and making a descent near Newcastle, burnt 200 houses, and returned triumphantly to port with prizes to a great amount. Various other distinguished services followed; but his greatest action was in 1691, when, being sent with six ships of war to escort home a fleet of corn vessels, he found them captured by a Dutch squadron of eight ships of war, which he attacked without hesitation, took the admiral's ship and two more, and recovered all the prizes. For this action he was ennobled, but always remained a rough and uncultivated man. When taken to court by the chevalier Forbin, the head of the marine, whom the courtiers on this occasion called a bear-leader, John is said to have worn breeches of cloth of gold, most uncomfortably lined with cloth of silver. "John Barth," said the King, "I have made you a commodore." "You have done right, sire," replied John. This answer exciting the mirth of those around, Louis, whose presence of mind in the way of dignity and good manners seldom forsook him, calmly observed, that the reply of Barth was that of a man who felt his own value, and intended to give new proofs of it. His talent was for prompt and daring enterprises, rather than for extensive and complicated command; and he was employed accordingly. He died in 1702, aged fifty-one.—*Ibid.*

BARTHE (NICHOLAS THOMAS) a French dramatist, born at Marseilles in 1733. He was educated under the fathers of the Oratory, and on leaving college, obtained a prize from the academy of Marseilles, of which he subsequently was chosen a member. He was intended for the legal profession; but giving way to his inclination, he went to Paris, and commenced a writer for the theatre. In 1764 he produced an afterpiece called "*L'Amateur*," which was well received, as likewise was another drama, entitled "*Fausse Infidélité*." He wrote two other pieces, which were less successful, and afterwards translated Ovid's "*Art of Love*," and published poetical epistles, and other works in verse. He died in 1785.—*Ibid.*

BARTHELEMI (JOHN JAMES, abbe) a distinguished literary character, was born in 1716 at Cassis, a sea-port in Provence, of a family settled at Aubagne in that neighbourhood, and much respected. At twelve years of age he was sent to school at Marseilles, from which he was transferred to the seminary of the Jesuits, where he ultimately received the tonsure. Not being satisfied with the course of application in this establishment, he formed to himself an additional plan of private study, comprehending the Greek, Chaldean, and Hebrew languages, which he pursued with a degree of ardour that brought on a dangerous illness. While thus engaged, he became acquainted with a young Maronite then resident at Marseilles, by whose assistance he learned the Arabic language; and such was his proficiency, that he enabled himself to commit to memory and deliver several Arabic sermons to a body of Arabian and Armenian catholics at Marseilles. Having finished his studies, he retired to his family at Aubagne, but passed a great part of his time with M. Cary, who possessed a choice cabinet of medals, and in whose society he seems to have imbibed that predilection for the study of ancient history and literature, by which he was afterwards so much distinguished. In 1744 he went to Paris with a letter of recommendation to M. Boze, keeper of the royal medals, with whom he was soon formally associated in the care and arrangement of the cabinet. In 1747 he was elected associate of the Academy of Inscriptions, and on the death of M. de Boze succeeded him as keeper of the king's medals. In the succeeding year M. de Stainville, afterwards duke de Choiseul, being appointed ambassador to Rome, invited the abbe to accompany him. His engagement would not allow him to attend the ambassador in his journey, but he joined him at Rome in the autumn, and after being presented to pope Benedict XIV, made the tour of Naples. Here he viewed the subterraneous treasures of Herculaneum and Pompeii, and distinguished himself on his return to Rome by a new and ably supported explanation of the famous Mosaic at Palestrina, which he was of opinion related not to Sylla, but to the emperor Adrian. When M. de Stainville, then duke of Choiseul, became minister in 1758, one of his first cares was to provide for the abbe, whose moderation was more than gratified by several successive pensions and the place of secretary-general of the Swiss. When in 1771 Choiseul was banished to his seat at Chanteloup, to make way for Aiguillon, Barthelemi followed him; and on the duke's dismissal, resolved to resign his place of secretary. Advised by the duke to go to court and give it up in person, on his unalterable resolution to retreat with his patron, he was allowed to retain a pension of 10,000 livres on the appointment. At this time his income was 35,000 livres per annum, which he expended in kindness to men of literature, in the advantageous settlement of his nephews, and in the increase of his library. After thus spending nearly twenty years of his life, he

found himself, by the suppression of places and pensions, suddenly reduced to strict necessities, at a time when old age had brought with it the usual accession of infirmities. Possessed of that calm constitutional temperament, which is far beyond riches, he bore this change without complaint, and even with gaiety. In 1788 appeared his celebrated work, "The Travels of the Younger Anacharsis," which had occupied him for a period of thirty years. It was received with universal applause, and procured him an entrance into the French Academy by acclamation. In 1790 he was offered the vacant post of king's librarian, which he declined, deeming himself inadequate to the requisite duties; but he still continued to employ himself in the cabinet of medals, which under his superintendance had increased in number from 20,000 to 40,000. In 1792 the failure of his strength became manifest, and it was at this moment that himself, his nephews, and several other persons, were denounced as aristocrats by one of the miserable wretches of that gloomy period, called Duby, a clerk belonging to the library, whom the abbe had never even seen. Being arrested at the house of Madame de Choiseul in September 1793, he was conducted to the prison of Les Magdelonettes, and submitted to this indignity with his usual serenity, and a cell being prepared for him, retired quietly to repose. Madame de Choiseul and her friends so rapidly interested themselves to get the order reversed, that he was released the same evening by the Committee, who, ashamed of the transaction, asserted that the arrest had taken place without their knowledge. Soon after, by way of reparation, he was offered the place of librarian in chief, but successfully pleaded his age and infirmities. He lived on however until April 30, 1795, on which day he was reading Horace, until the book fell from his cold hands, and, apparently yielding to sleep, he expired unobserved in the commencement of his eightieth year. The person of Barthelemi was large and well proportioned; and his features, according to an excellent bust of him by Houdon, admirably expressed the antique simplicity and candour of his character. In many respects he resembled the best of the philosophical characters of that Greece which he so much admired. The works of the abbe Barthelemi published separately are—1. "Les Amours de Carite et de Polydore," 1760 and 1796; 2. "Lettre sur quelques monumens Pheniciens," 1766, 4to; 3. "Entretiens sur l'Etat de la Musique Grecque, au quatrieme Siecle," 1777, 8vo; 4. "Voyage du Jeune Anacharsis," 3 vols. 4to—7 vols. 8vo, 1788; 5. A portion of a vast medallic history, under the title of "Paleographie Numismatique," 3 vols. folio; 6. "Discours prononcé à l'Academie Française," 1789, 4to; "7. Voyage en Italie;" 8. "Dissertation sur une Inscription Grecque," 1792, 8vo; 9. "Œuvres diverses," published by St Croix, 1795, 2 vols. 8vo. To these are to be added many papers on subjects of classical antiquity, in the Memoirs of the Academy.—*Life by the Duke de Nivernois.*

BARTHELEMON (FRANCIS HIPPOLITE) a celebrated musical composer and violin-player, born at Bordeaux in 1741, author of "Le Fleuve Scamandre," "Pelopida," and other operas. Coming to London in 1765, this last-named production of his was so well received that Garrick engaged him immediately to set several dramatic pieces for his theatre. Among others, the "Peep behind the Curtain," which had a run of a hundred and eight nights in one season, and general Burgoyne's "Maid of the Oaks," brought out in 1774, are indebted to him for their music. An anecdote is told of the commencement of this engagement, singularly illustrative of the rapidity with which he was in the habit of composing. At their first interview, Garrick, having questioned him as to his ability in setting English words, took a pen and wrote down the words of a song to be introduced in the "Country Girl." Barthelmon in the meanwhile, looking over his shoulder, wrote down the notes as fast as the other composed his verses. "There, Sir, is my song," at length cried the manager. "And there, Sir, is the music to it," returned the composer. An invitation to dinner was the consequence of this unexpected display of talent, at which Dr Johnson was present, and commenced an acquaintance of long duration with the musician. The illiberality of the manager however soon disgusted him with the stage, for which he wrote no more. He was afterwards engaged as leader at the Operahouse for several seasons, where his execution and taste were much admired, especially in his adagio movements, and as a performer of Corelli's solos. His wife (Miss Young) was also possessed of much musical talent. She composed an anthem and a set of hymns for the Magdalen and Asylum chapels. M Barthelmon died in London in 1803, at an advanced age.—*Biog. Dict. of Mus.*

BARTHOLINE. There were several members of this family, whose medical celebrity commenced with CASPAR BARTHOLINE, who filled the medical chair at Copenhagen eleven years; when, in consequence of a vow made during a severe illness, he dedicated himself exclusively to divinity, and was appointed professor of theology in the same university. He had been much distinguished as an anatomist, and wrote "Institutiones Anatomicae," and other works. He died in 1629. THOMAS BARTHOLINE, son of the preceding, was born at Copenhagen in 1616, and took his doctor's degree in medicine at Basil in 1645. Returning to Copenhagen, he was first made professor of mathematics, but in 1648 obtained the anatomical chair, which he filled with much reputation. The first knowledge of the lymphatics ascribed by most English writers to Joliffe; but as he wrote nothing on the subject, anatomists generally divide the honour between Rudbeck and Thomas Bartholine, the former of whom first saw and demonstrated the vessels, while Bartholine first clearly understood their course, and named and described them. His earliest work on this subject, entitled "Vasa Lymphatica nuper in animantibus inventa et

hepatis exsequia," appeared in 1653, and involved him in much controversy. He pursued his anatomical studies very assiduously, and published a variety of works on the science, of which the principal is, "Historiæ Anatomice" in six centuries, printed from 1654 to 1661. Thomas Bartholine was among the first who received and defended the Harveian doctrine of the circulation of the blood. The fruits of his correspondence, entitled "Epistolarum Medicinalium," abound with curious and interesting matter. He died in 1680, leaving four sons and three daughters. All the sons were brought up to literature, and obtained professorships. CASPAR, the eldest, was his successor in the anatomical chair; THOMAS, another son, wrote several pieces on Danish history and antiquities; and MARGARET, one of the daughters, acquired great reputation in the Danish language by her poetry. There were also other members of this family who more or less distinguished themselves by their talents and writings.—*Moreri. Haller, Bib. Anat.*

BARTHOLOMEUS, an ancient English author, who wrote a treatise on music as early as the year 1366. Sir J. Hawkins, in his History of Music, owns his obligations to the writer for his memoirs of the state of the art during the dark ages. His work is principally valuable for the description he gives of the musical instruments in use in his time.—*Sir J. Hawkins' Hist. of Mus.*

BARTLEMAN (J.) the most celebrated bass singer of his day, educated under Dr Cooke, and brought up in the choirs of the Chapel Royal and Westminster abbey. His first appearance as a professional singer was at the concerts at Freemasons' Hall, where the singular compass and sweetness of his fine baritone voice raised him at once to the top of his profession. He was immediately engaged at the Ancient Concerts, and eventually became one of the proprietors and conductors at the Hanover-square rooms. He died in 1820, and was buried in the cloisters of Westminster abbey, most of his professional associates of eminence attending the funeral. There is a handsome tablet erected to his memory near the spot of his interment.—*Biog. Dict. of Mus.*

BARTOLO, a lawyer of the 14th century, so famous among his contemporaries as to have been distinguished by the pompous titles of Light and Star of Jurisconsults, Master of Truth, Lamp of Right, Guide of the Blind, &c. He was born in the territory of Ancona, and, after studying at Perugia and Bologna, was made professor of law at Pisa. He afterwards occupied the same post in the university of Perugia, where he probably passed the remainder of his life. In 1355 he was honoured with the titles of imperial counsellor and domestic commensal by the emperor Charles IV. He died in 1359, aged forty-six. His works, consisting of 10 vols. folio, contain much learned research, relating principally to legal topics.—*Moreri. Aikin's G. Biog.*

BARTOLI (PETER SANCTUS) a celebrated Roman engraver of the 18th century. He executed the plates for the following works

relating to ancient art: "Colonna Trajana," folio; "Le Picture antiche nel Sepolcro de' Nasoni nella Via Flaminia," 1680, folio; "Romanæ Magnitudinis Monumenta," folio; "Antiquissimi Virgiliani Codicis Fragmenta," folio; "Antichi Sepolcri Romani ed Etruschi," folio; "Museum Odescalcum," 2 vols. folio; a collection of Ancient Paintings, &c. Bartoli died at Rome in 1727.—*Heinecken, Dict. des Artistes.*

BARTOLI (DANIEL) a Bolognese, or as some say born at Ferrara, author of an elaborate history of the Society of Jesuits, of which order he was a member. This work, which was written in very pure Italian in six folio volumes, was afterwards translated by Giannini into the Latin language. In 1680 he published a very ingenious and scientific treatise on harmonics, entitled "Del suono de Tremore Armonici e dell Udito," which formed the basis of several later dissertations on acoustics. He died at Rome in 1685, in his seventy-seventh year.—*Burney's Hist. of Mus.*

BARTOLOZZI (FRANCIS) an eminent engraver, was born in 1728 at Florence, where his father was a silversmith. He was intended for the same business, but in his employment of the graver displayed so much taste and execution, that he was placed at the Florentine academy, under Gaetano Biagio and Ignazio Hugford. Here he had for a fellow pupil Giovanni Cipriani, with whom he formed a friendship which lasted through life. After a successful application to painting for three years, he was articled to Joseph Wagner of Venice, who employed him too much in the execution of works from inferior masters, although he at the same time continued to complete several pieces of his own drawing. When this engagement was expired, he married a Venetian lady of a good family, and accepted the invitation of cardinal Bottari to repair to Rome, where he engraved his fine plates from the life of St Nilus, and the heads of painters for a new edition of Vasari. Not meeting with the encouragement that he expected, he returned to Venice, where Mr. Dalton, librarian to George III, employed him to engrave some of the drawings of Guercino and, pleased with the execution of them, offered him 300*l.* per annum to accompany him to England, and work on his account. Under this engagement he completed his beautiful collection of Guercinos. Advised to terminate it, by his countryman Giardini, he then worked on his own account and for the booksellers, particularly Mr. Boydell. He was highly distinguished for the elegance of his designs for the benefit tickets of the higher performers of the Opera-house; and hearing that the celebrated Strange said he could execute nothing else, in a fit of emulation he produced his Clytie, and Virgin and Child, from A. Carracci and Carlo Dolci. About this time the red dotted or chalk manner became prevalent; and Bartolozzi contrived to execute it so beautifully as to assist in seducing the public taste from the superior and legitimate style of the line. When the Royal Academy was instituted, he was elected one of the mem-

bers as a painter, and might have made a fortune by his labours; but, with much spontaneous liberality and generosity to others, he appears to have been careless in respect to pecuniary acquirement, and in consequence was induced in 1802 to accept an invitation from the Prince Regent of Portugal, to superintend a school of engravers at Lisbon, with a pension of 100*l.* per annum, a handsome house, and the produce of the engravings. It is said a pension of 400*l.* was offered to him to remain in England; but that he would accept it only on condition that government would explain the matter to the Prince Regent of Portugal. This interference being deemed improper, he proceeded with his intention, and bade England farewell in his seventy-fifth year. He was received at Lisbon with great distinction, and executed several fine engravings there in a wonderful manner, considering his great age. He died in that capital in his eighty-eighth year, leaving a wife and a son, to whom, and a favourite pupil, he left his small property in equal divisions. Few artists have reached so distinguished a rank in the profession as Bartolozzi, and that in every species of engraving. His etchings in imitation of the drawings of the great masters, admirably represent the character and spirit of the originals; and his Marlborough gems, musical tickets, and prints for Boydell's Shakspeare, exhibit exquisite proofs of taste and execution. He was so generous as to finish a plate left incomplete by Ryland, at the request of that unhappy man while under sentence of death for forgery, and exhibited many other traits of a humane and benevolent character. Among the pupils of Bartolozzi were Sherwin, Tompkins, Cheeseman, John and Francis Vandramini, and many more. His son, now also deceased, was a musician in London.—*Gent. Mag. Orig. Com.*

BARTON (ELIZABETH) commonly called the "Holy Maid of Kent," was first known in the character of a servant girl at Aldington in Kent, in 1525. Some hysterical fits of an uncommon kind induced ignorant people to think she was inspired. Masters, the parson of the place, with a view to prop up the declining cause of Rome, resolved to set her up for a prophetess; and under his tuition she acted her part so well, that even Sir Thomas More, bishop Fisher, and Warham, archbishop of Canterbury, were so weak as to be led to imagine something extraordinary in the case. Warham appointed a commission, which being composed of monks and ecclesiastics, concurred in support of the imposture. She had now become a nun; and for some time her instructors were satisfied that she should urge in her trances the use and importance of the Romish doctrines. At length however they ventured to set her upon direct censures of the King's divorce from Catharine of Arragon and marriage with Ann Boleyn. Henry VIII was not of a temper to endure gambols of this kind, and in consequence ordered the apprehension of Barton and her accomplices, who all, upon examination by the star-chamber, confessed the imposture, which they publicly confirmed

before the people at Paul's Cross. The machinations of a party to induce them to retract, sealed their fate; a bill was passed in Parliament attainting them of high treason; and Elizabeth Barton and five of her accomplices were hanged at Tyburn in April, 1534. The nun, a simple ignorant woman, acknowledged the justice of her sentence, although some Catholic writers have been strongly inclined to make her and her companions martyrs of the church of Rome.—*Biog. Brit.*

BARTON (**BENJAMIN SMITH**) professor of the theory and practice of medicine in the university of Pennsylvania. He was born in 1766, and was the son of an episcopal clergyman, his mother being the sister of David Rittenhouse, the famous American mathematician. He studied at the college of Pennsylvania; and while a pupil there, he accompanied his uncle Rittenhouse and the other commissioners appointed by government to settle the boundary line west of Pennsylvania. He afterwards went to study physic at Edinburgh, and then passed a few months in London, where in 1787 he published a small tract, entitled "Observations on some parts of Natural History; to which is prefixed an Account of some considerable vestiges of an ancient date, which have been discovered in different parts of North America." He next went to the university of Gottingen, where he took the degree of M. D. After three years absence, he returned to Philadelphia, and commenced practice as a physician. He was soon after chosen member of the American Philosophical Society in that city, of which he became one of the vice-presidents. In 1789 he was appointed the first professor of natural history and botany in the college of Philadelphia. On the death of Dr Rush, he succeeded him as medical professor. He was not long after seized with dropsy in the chest; in hopes of relieving which he took a voyage to France and England, but in vain, for he died of that disease December 19, 1815. He was the author of several papers relating to natural history, published in the "Transactions of the American Philosophical Society," which are valuable for the information they afford.—*Monthly Mag.*

BASEDOW (**JOHN BERNARD**) a native of Hamburg, whose novel plans of education attracted as much attention in Germany in the latter part of the last century, as that of Joseph Lancaster did more recently in England. This projector, who was the son of a peruke-maker, studied theology at Leipsic, after which he returned to Hamburg about 1746. He became tutor to the son of a gentleman at Berghorst in Holstein; and subsequently was chosen professor of moral philosophy and the belles lettres at Soroe in Denmark. Here he was patronized by count Bernstorff; but incurring the charge of heterodoxy, on account of the opinions delivered in his lectures, he was removed from Soroe to the gymnasium of Altona. His writings, while in this situation, increased the prejudice which had been excited against him to such a

degree, that the people began to talk of stoning him, and for a long time he was afraid to appear in public. These circumstances probably, in some measure, induced him to turn his attention from religious controversy to a subject of more practical importance. In 1767 he drew up a plan for an improved mode of education; after which he issued proposals for publishing an "Elementary Book of Knowledge," for which he solicited subscriptions. The public curiosity was excited, and he obtained contributions to the amount of 15,000 rix dollars, of which sum 1,000 were advanced by the empress of Russia. In 1770 he published the first volume of his "Methodical Book," for the use of fathers and mothers of families; and, soon after, the first part of his "Elementary Book," with 50 copper-plates. This was translated into Latin and French; as also was his grand treatise, in four volumes, with 100 plates, which appeared in 1774 with the title of "Elementary Work," to distinguish it from the former. Towards the close of the same year, he opened a seminary for carrying his scheme into execution, at Dessau. He gave it the appellation of *Philanthropium*, and being supported by the patronage of the prince of Anhalt Dessau, he conducted it for some time with tolerable success. Like other speculators he seems to have been more capable of forming plans than executing them. Disputes with his associates and other causes induced him to withdraw entirely from the *Philanthropium* in 1778; and it was afterwards conducted by others. Basedow at length removed to Magleburg, where he employed himself in educating children; and in that city he died in 1790, in the sixty-seventh year of his age. He published a great many works, besides those already mentioned. A French writer observes, that Basedow effected a revolution in the education and instruction of youth, for which he established a new and ingenious philosophical system. Many excellent teachers were formed in the school which he founded; and his method has had a marked influence on the progress of letters in Germany.—*Aikin's G. Biog.*

BASHUYSEN (**HENRY JAMES VAN**) a learned divine and critic in the Oriental languages. He was a native of Hanau, where his father was a clergyman of the Dutch church. After having completed his studies, he was appointed professor of the Oriental languages and ecclesiastical history in the gymnasium of Hanau. He afterwards occupied a similar situation at Zerbst, where he died in 1758, aged seventy-nine. About the year 1709 he set up a printing-office in his own house, at which he printed many valuable works on Hebrew literature, consisting of his own productions, and new editions of rabbinical authors.—*Aikin's G. Biog.*

BASIL (St) an eminent father of the church, was born A. D. 326, at Cæsarea in Cappadocia. His father had him instructed in the principles of polite literature, and he seems in the first instance to have been a pro-

fessor of rhetoric and a pleader. Induced to visit the monasteries in the deserts of Egypt, the austerities of these misguided solitaries so impressed his imagination, that he himself sought a similar retreat in the province of Pontus. He was ordained priest by Eusebius, the bishop of his native city, upon whose death he succeeded to the same dignity. In this station he assumed the part of Athanasius, in defence of the doctrine of the Trinity, which much irritated the Arian emperor Valens, who, however, did nothing more than threaten and request. The remainder of the life of this eminent prelate was taken up in endeavours to reconcile the three *hypostases*, in which, of course, he did not succeed. In point of literary and intellectual qualifications, Basil excels most of the fathers, his style being pure, elegant, and dignified; and, independently of his extensive erudition, he argues with more force and closeness, and interprets scripture more naturally than other writers of his class. The best modern edition of his works is that of the Benedictines, Garnier and Morand, Paris, 3 vols. folio, 1721 to 1730.—*Dupin. Gibbon. Nouv. Dict. Hist.*

BASIRE (ISAAC) a learned divine, was born in the island of Jersey in 1607. For some time he was master of the free school in Guernsey, and then became chaplain to Merton, bishop of Durham, who gave him a rectory and a vicarage in the diocese. In 1640 he was made doctor in divinity at Cambridge, chaplain to Charles I, and in 1643 prebendary of Durham. On the breaking out of the civil war, he lost all his preferments; on which he made a journey to the Morea where he preached with great success among the Greek Christians; after which he travelled to the Holy Land. At Constantinople he officiated to the French Protestants, and was entertained for some years by George Ragotzi, who made him professor of divinity at Weissenburg. He was recalled by Charles II in 1661, who appointed him his chaplain in ordinary. He died in 1676. He wrote a history of the English and Scottish Presbytery, and several sermons.—*Wood's Athen. Oxon.*

BASIRE (JAMES) an ingenious English engraver, born in London in 1730. He studied his art first under his father, and afterwards under Richard Dalton, with whom he travelled to Rome for improvement. In 1760 he obtained the appointment of engraver to the Antiquarian Society; and his principal works are plates of architectural and archæological subjects, which he executed for the publications of that learned body. He was also engraver to the Royal Society. His death took place in 1802. The works of Basire are, in many respects, worthy of praise, but in point of minute accuracy and delicate finishing, they will bear no comparison with the productions of the principal architectural engravers of the present day.—*Nichols's Lit. Anec. of the 18th Century.*

BASKERVILLE (JOHN) an English artist deserving of notice for his improvements in printing and type-founding. He was born at

Wolverley in Worcestershire in 1706, and inheriting a small estate, was brought up to no profession. He, however, acquired a particular skill in penmanship and carving letters on stone; and at the age of twenty he settled at Birmingham as a writing-master. He subsequently engaged in the manufacture of Japanese works; and in 1750 commenced his experiments on the branch of art which acquired for him so much celebrity. His first great performance as a printer was an edition of Virgil, in royal 4to, 1756; which was followed by many of the Latin classics, and some English ones, in 4to and smaller sizes. The beauty of his typographical production was superior to any thing which had previously appeared from an English press; and when it is considered that the paper and ink, as well as the types and workmanship, were the fruits of one man's skill and ingenuity, it must be admitted that he possessed great merit. He died in 1775; and his types and matrices were afterwards sold to a literary society at Paris for 3,700*l.*—*Biog. Brit*

BASNAGE DE FRANQUENET (JAMES) the son of Henry Basnage, an eminent French lawyer of a Calvinist family, who died at Rouen in Normandy in 1695. The subject of this article, of whom Voltaire, in his age of Lewis XIV, says, "that he was more fitted to be the minister of a state than of a parish," was born in 1655. He studied at Saumur, and afterwards at Geneva and at Sedan, and then became minister among the Protestants at Rouen. The revocation of the Edict of Nantes induced him to leave France in 1685, and settle in Holland, where Le chiefly devoted his great talents, during the remainder of his life, to literary researches and the duties of his profession. He was for some time minister of a congregation at Rotterdam; and in 1709, through the interest of the pensioner Heinsius, who was much attached to him, he was made one of the pastors of the Walloon church at the Hague. At the congress of Utrecht he was employed to conduct a secret negotiation with marshal d'Uxelles, the French plenipotentiary, which affair he executed with much ability; and he was afterwards entrusted with several other important commissions. Such was his reputation for political sagacity, that Dubois, being sent to the Hague in 1716, to negotiate a defensive alliance between France, England, and the States General, was directed by his employer, the Regent duke of Orleans, to follow in all things the advice of Basnage. The negotiation was concluded; and the refugee minister, as the reward of his services, obtained the restoration of his estate, which he had forfeited on leaving France. He died at the Hague, after a long illness, in 1725. The works of this author, almost all written in French, are very numerous, and relate chiefly to history and theology. Among the most important are—"The History of the Reformed Churches," 1725, 2 vols. 4to; "The History of the Jews, from Jesus Christ to the present time; being a Continuation of the History of Josephus,"

15 vols. 12mo; "Annals of the United Provinces, since the Peace of Munster," 2 vols. folio, 1719 and 1726.—*Nouv. Dict. Hist. New Mem. of Literature*, vol. iv.

BASNAGE DE BEAUVAL (HENRY) younger brother of the foregoing, born in 1639, was a member of the legal profession, and became a counsellor of the parliament of Rouen. His attachment to the Protestant faith induced him to quit his native country, and retire to Holland, where, in 1684, he published a tract "On Religious Toleration." Basnage is principally distinguished as the writer of the critical journal, entitled "L'Histoire des Ouvrages des Savans," 25 vols. 12mo, 1687-1709, intended as a sequel to Bayle's "Nouvelles de la Republique des Lettres." He died at the Hague in 1710.—*Nouv. Dict. Hist.*

BASSEVILLE (HUGH DE) a French writer towards the close of the last century, more distinguished on account of his fate than his abilities. In the beginning of the Revolution he became editor of a journal called "Le Mercure," and afterwards of "Journal d'Etat et du Citoyen." Being sent envoy from the republic to Rouen in 1792, he behaved with such violence and imprudence, as to excite a popular commotion which cost him his life. He died in January 1793, owing to the injuries received from being pelted with stones. He wrote Historical and Political Memoirs of the French Revolution, and other works.—*Il.*

BASSANTIN (JAMES) a Scottish astronomer and mathematician of the sixteenth century. He was the son of the laird of Bassantin, and was educated in the university of Glasgow, after which he travelled on the Continent. He taught mathematics at Paris, where he probably adopted those notions concerning the pseudo-science of astrology, which were among the fashionable follies of the age. In 1562 he returned to his native country; and in his way through England he hazarded some predictions relative to his unfortunate sovereign, Mary queen of Scots, which have attracted more attention than they deserved. Bassantin, who is said to have been a zealous Protestant, and a partizan of the Regent earl of Murray, died in Scotland in 1568. His principal work is a treatise on astronomy, written in French, of which there is a Latin translation by John Tornæsius, published at Geneva, folio, 1599.—*Biog. Brit.*

BASSOMPIERRE (FRANCIS DE) marshal of France, descended from a distinguished family in Lorraine, was born 1579. He rapidly rose in the military service, and attained the rank of marshal in 1622. He was also employed in a diplomatic capacity to Spain, England, and Switzerland, in all which employments he evinced courage and conduct, but is thought to have owed his elevation still more to his handsome person, wit, politeness, and generosity. Cardinal Richelieu, who smarted under his bon-mots, which were peculiarly caustic and satirical, and who otherwise feared his influence, caused him to be imprisoned in the Bastille in 1631, where he was detained until the death of that imperious minister; a period

of no less than twelve years. During this retirement he passed most of his time in reading and writing, and composed the works by which he is now chiefly remembered. These consist of—"Memoirs, containing the History of his Life, and of the most remarkable Occurrences in the court of France, from 1598 to 1631," 3 vols. 12mo; "An Account of his Embassies," 2 vols. 12mo; and "Remarks on the History of Louis XIII, by Duplex," 12mo. They all abound in curious particulars and biting strokes of satire; and his memoirs exhibit him as a most successful man of gallantry, who, according to his own account, had no less than six thousand love letters from ladies of the court and city, to commit to the flames on the morning of his arrest. On his liberation from the Bastille he was restored to the colonelcy of the Swiss guards, which had been taken from him, and was fixed upon as governor to the young king Louis XIV. but declined the post in consequence of his age and infirmities. He died of an apoplexy in 1646.—*Moreri. Dict. Hist.*

BASTIDE (JOHN FRANCIS DE LA) an industrious French miscellaneous writer, was born at Marseilles in 1724. After studying in his native place, he came to Paris, and engaged in a great variety of literary enterprizes, among which was the "Bibliothèque Universelle des Romains," Paris, 1775-1789, 112 vols. 12mo, and the "Choix des Anciens Mercurès," 1757-1764, 108 vols. 12mo. He also attempted a work in the manner of the Spectator, which he entitled "Le Nouveau Spectateur," 2 vols. 8vo. His remaining productions, which are too numerous for detail, are all of a miscellaneous and sprightly cast, and in consequence please, although few of them rise above mediocrity. The time of his death is unknown.—*Dict. Hist.*

BASTWICK (DR JOHN) an English physician of the seventeenth century, who has obtained more celebrity from his sufferings than his writings. He was born at Writtle, in Essex, in 1593, and studied at Cambridge, but was doctor of physic at Padua. He published, in London, sometime about 1635, a work entitled "Flagellatum Pontifices et Episcoporum latium," for which he was called before the High Commission Court, fined 1000*l.*, and sentenced to be excommunicated, to be debarred the practice of physic, to have his book burnt, to pay costs of suit, and to be imprisoned two years in the Gatehouse. This merciless procedure, so far from breaking his spirit, increased his enthusiasm; and while in the Gatehouse he wrote "Apologeticus ad presules Anglicanos," and a book called the New Litany, in which he taxed the bishops with Popery, and exclaimed against the severity of his sentence. For this last publication he was again tried, and sentenced to pay a fine of 5000*l.*, to stand in the pillory in Palace-yard, lose his ears, and to be imprisoned during life. Similar sentences were passed in the same year upon Prynne and Burton, which they all endured with great equanimity; and the patience, or rather alacrity, with which they suffered, in-

creased the odium excited by rigours so ill applied to men of their profession and character. Bastwick was removed to Launceston castle, Cornwall, and thence to Saint Mary's Castle in the Isle of Scilly, where he was not even permitted to see his relations. On the ascendancy of the Parliament in 1640, the sentences of all these persons were reversed and declared illegal; and the judges who passed them were ordered to make a reparation to the amount of 5000*l.*; which sum was accordingly levied out of the estates of Laud and other members of the High Commission Court and Star Chamber. On their entry into London, multitudes carrying green boughs met them some miles from the city, and they were received with the loudest acclamations of joy. Bastwick was alive in 1648, and wrote two pamphlets against the Independents, and a defence of himself against Lilburn. When he died is uncertain.—*Biog. Brit.*

BATE (GEORGE) an English physician and historian of the seventeenth century, was born at Maid's Morton, Bucks, in 1608. He was educated at Oxford, where he took his doctor's degree in 1637; and such was his reputation that, during the king's residence at Oxford, he acted as his principal physician. On the decline of the king's party, he came to London; and although he chose to pass for a concealed royalist with the one party, he so ingratiated himself with the other, that he was sent by Parliament in 1651 to Scotland, to attend on general Cromwell, then dangerously ill of an intermittent fever. During the protectorate, he was also Oliver's principal physician; and Anthony Wood says, that at the Restoration it was reported by his friends, that he had hastened the death of Oliver, in order to ingratiate himself with the rising party. His own account of the last illness of Cromwell contradicts this scandal, the propagation of which was a greater satire on the cavaliers than on the physician. Such however was his medical reputation and complying disposition, that he was continued first physician to Charles II, and made a member of the Royal Society. He died in 1669. The professional writings of Dr Bate are confined to a treatise on the rickets, and his share in the "Pharmacopeia Bateana," translated into English under the title of "Bate's Dispensatory." It first appeared in 1688, and has not long ceased to be popular. In political and historical writing he is principally known as the author of a Latin work, entitled "Elenchus Motuum nuperorum in Anglia, simul ac Juris Regii a Parliamentarii brevis narratio," (an account of the late commotion in England, with a brief relation of the royal and parliamentary prerogatives.) It is deemed one of the most impartial narratives of the unhappy transactions of the times, and is written ably and elegantly, but in a style not altogether clear of affectation. The author had the assistance of papers communicated to him by lord Clarendon; and under such circumstances the accusation against him, of leaning towards the Puritans, is in favour of his impartiality. To Dr Bate is

also ascribed "The Royal Apology, or the Declaration of the Commons in Parliament February 11, 1647," printed in 1648.—There was another GEORGE BATE, who wrote the "Lives of the Regicides."—*Ibid.*

BATE (JOHN) prior of the monastery of Carmelites at York in the fifteenth century. He was born in Northumberland, educated at York, and finished his studies at Oxford. He answered the hopes entertained of him, and became an eminent philosopher and divine, and profoundly skilled in the Greek language. He died in 1429, in the beginning of the reign of Henry VI. He wrote a compendium of logic, and treatises on the Construction of the Parts of Speech, Aristotle's Predicaments, and Porphyry's Universalis; as also various theological treatises, among which is a preface to the Bible.—*Leland. Pits. Tunner. Biog. Brit.*

BATE (JULIUS) a clergyman of the church of England, who distinguished himself in the last century by advocating the peculiar notions of Hutchinson, the author of Moses's Principia; who conceived the knowledge of all arts and sciences to have been derived from the Bible. He published several works in defence of the Hutchinsonian system, and some others on biblical literature. He died in 1771 at Arundel in Sussex.—*Nichol's Lit. Anec. of the 18th Cent.*

BATHURST (RALPH) an eminent scholar and Latin poet of the seventeenth century, was descended from an ancient family at Hawthorpe in Northamptonshire, where he was born in 1620. He received his education at the free-school of Coventry, whence he was sent to Trinity college, Oxford, and was elected scholar of the house in 1637, and fellow in 1640. He was ordained priest in 1644, and read some theological lectures in 1649, which are said to discover a wide acquaintance with writers on divinity. The ensuing confusion of the times induced him, like Dr Willis and others, to apply to the study of medicine; and his success and interest were sufficient to procure him the appointment of physician to the sick and wounded of the navy. By an external compliance with the times he also retained his fellowship; and it appears from some verses by him in the Musæ Anglicanæ, that he complimented Cromwell on the peace with the United Provinces. He still however retained his clerical functions, and frequently assisted Dr Skinner, the deprived bishop of Oxford, in the dangerous office of examining candidates for orders. At the Restoration, he reassumed the clerical character, and relinquishing the practice of physic, was made king's chaplain in 1663, and in the next year president of his college. He also attended to the philosophic pursuits carried on at Oxford under the patronage of the hon. Robert Boyle, and was a member of that society of learned and scientific men, who afterwards formed the Royal Society. In 1670, by the interest of the Devonshire family, he became dean of Wells, the height of his clerical dignity, as he refused the bishopric of Bristol, which was offered him in 1691. In 1673 he was ap-

pointed vice-chancellor of Oxford, and died in 1704, in the eighty-fourth year of his age. The literary attainments of Dr Bathurst were extensive; but he chiefly shines as a classical scholar, and especially in Latin poetry and composition. According to Dr Warton, his Latin orations are wonderful specimens of wit, humour, and antithesis, if not of purity of taste; and several of his poetical pieces in the *Musæ Anglicanæ* are not only deemed excellent as classical productions, but possess a vein of thought superior in dignity and liberality to most in that collection. Some vigorous iambics, in praise of Hobbes' Treatise on Human Nature, are singularly free for an academical theologian, and have produced some suspicion of his heterodoxy in the votaries of the schools. His verses to Cromwell and to Charles II were dexterously applied to the circumstances of each; and, like Robert Barclay, in his address to the latter, he dwelt much on the schooling of adversity, which in no case possibly ever proved less beneficial. Ovid was the favourite poet of this able scholar, whose works, under the title of "Literary Remains," are annexed to the account of his life by Dr Warton.—*Life by Warton. Biog. Brit.*

BATHURST (ALLEN, Earl) was the son of Sir Benjamin Bathurst, of St Pauler's Perry, Northamptonshire, and was born in London in 1684. He was educated at Oxford, and represented the borough of Cirencester in two parliaments during the reign of Anne, whose Tory administration he strongly supported, and in return was raised to the peerage in 1711. He was a warm opponent to Sir Robert Walpole, and in 1757 was appointed treasurer to prince George, then become prince of Wales, on whose accession to the throne he obtained a pension of 2,000*l.* per annum. He was advanced to the earldom in 1772. Lord Bathurst is distinguished as the intimate friend of Bolingbroke, Addison, Pope, Swift, Gay, and all the celebrated wits of the age, and was himself a man of bright parts and convivial disposition. After his son became chancellor, he went to visit his father, who invited a large party to meet him to dinner. The whole company sat up late, except the chancellor, on whose retirement at twelve o'clock, the aged earl facetiously exclaimed, "Now the *old gentleman* is gone, we can manage to take another bottle." He died in 1775 at the advanced age of ninety-one.—*Biog. Brit.*

BATHURST (HENRY, Earl) son of the above, was born in 1714. Having studied the law, by the influence and patronage of his father, he rapidly ran through all the honours of the profession, being early made solicitor-general, and then attorney-general to the prince of Wales. In 1754 he was raised to the chief justiceship of the Common Pleas, and in 1771 advanced to the wooolsack, with the title of baron Apsley. He resigned the seals in 1778, and died in 1794. He wrote a pamphlet in 6*to*, entitled, "The Case of Miss Swordfeger," and a work on the "Theory of Evidence," 8*vo.*—*Gent. Mag.*

BATORI or **BATHORI (STEPHEN)** a Transylvanian prince who, on the death of the rayvode John Sigismund in 1571, was chosen to succeed him. In 1576 he was raised to the throne of Poland, on the abdication of Henry of Valois, who succeeded his brother, Charles IX of France. He is reckoned among the best of the Polish monarchs. His subjects were indebted to him for many salutary laws, and for the establishment of a permanent military force for the defence of the country. He introduced order and civilization among the Cossacks, and successfully endeavoured to reconcile them to the Polish government. He died in 1586. This prince is reported to have said, that God reserved three things to himself—the power of creating, the knowledge of things future, and the dominion over the consciences of men.—*Mod. Univ. Hist.*

BATOU or **BATU KHAN**, the grandson of Jenghiz Khan, who succeeded his grandfather in the northern part of his vast empire, and followed his example in extending it by conquest. He ravaged the countries of Poland, Hungary, Moravia, and Dalmatia; and in 1240 he took possession of the whole of Russia, except the province of Novgorod, which preserved its independence. He protected Mangu Khan, placed him on the throne of the Moguls in Persia, and assisted him in the conquest of China. Like his predecessor Jenghiz, he was in religion a Monotheist. He died after a long reign in 1276.—*Nouv. Diet. Hist.*

BATRACHUS of Lacomia, an architect, who flourished 40 B. C. In conjunction with Sauros, another Lacomian architect, he erected several temples at Rome. The churches of St Eusebius and St Lorenzo, without the walls at Rome, contain some antique columns, on whose pedestals are sculptured figures of a lizard and a frog, intended as hieroglyphic memorials of the names of the artists, *Σάραχος* signifying a lizard, and *Βάτραχος* a frog.—*Plinii Hist. Nat.*

BATSCH (AUGUSTUS JOHN GEORGE CHARLES) an eminent German naturalist, born at Jena in 1761. He was professor of philosophy in the university of that city, where he died in 1801. His principal work is entitled "Elenchus Fungorum," 3 parts, 8*vo.* 1783—1786, 4*to*. It is illustrated with coloured plates, and may be considered as the best treatise extant on fungous vegetables. He also wrote other works on botany in Latin, and several in the German language.—*Nouv. Diet. Hist.*

BATTELY (JOHN) an English antiquary and divine, who was a native of St Edmund's-bury in Suffolk, and was educated at Cambridge. He was chaplain to archbishop Sancroft, who gave him a living in Kent, a prebend in Canterbury cathedral, and made him archdeacon of the diocese. He died in 1703. After his death appeared his treatise on the Roman Antiquities of Richborough, of which a second edition was published in 1745, together with another tract on the antiquities of St Edmund's-bury. An abridged translation of the first piece was published in 1774 by the

Rev J. Duncombe, with a prefatory account of the author. NICHOLAS BATTELY, brother of the archdeacon, published an edition of Somner's Antiquities of Canterbury, with a sequel or second part; and wrote an account of Eastbridge hospital, Canterbury, printed in Strype's life of Archbishop Whitgift.—*Biog. Brit.*

BATTEUX (CHARLES) an ingenious French writer, who was a native of the diocese of Rheims, in the church of which he held an honorary canonry. A strong taste for literature induced him to take up his residence at Paris, where he obtained the professorship of philosophy in the Royal College. He was chosen a member of the Academy of Inscription and Belles Lettres in 1759, and of the French Academy in 1761. He died in 1780. His works are "Cours de Belles Lettres," 1760, 5 vols, 12mo; Translations of Horace, Epictetus, and other ancient writers: "An Elementary Course of Instruction for the Military School," 45 vols, 12mo; &c.—*Nouv. Dict. Hist.*

BATTISHILL (JONATHAN) a musical composer of the last century, celebrated for the peculiar strength of idea, the force and justness of expression, and the masterly disposition of the parts, displayed in his compositions. He was educated by Mr Savage, in the choir of St Paul's cathedral. In 1764 he produced, in conjunction with Michael Arne, the opera of Alcmena, which was however, from the flatness of the dialogue, withdrawn after a performance of five nights. In the "Rites of Hecate," which succeeded it, he was more successful. Besides his pieces of church music, which are numerous and deservedly admired, he is the author of many excellent catches and glees, for one of which, "Underneath this myrtle shade," he obtained the gold medal given by the Nobleman's Catch Club in 1776. The popular song "Kate of Aberdeen," is perhaps his most favourite composition. He died at Islington in 1801, and is buried in St Paul's cathedral, near the grave of Dr Boyce.—*Biog. Dict. of Mus.*

BATTONI (POMPEO) the most eminent Italian painter of the eighteenth century, was born at Lucca in 1708. He was the son of a goldsmith, an employment which in Italy has always been deemed a branch of the fine arts, and was intended for the same profession. Having executed with great taste a golden cup to be presented to pope Benedict XIII, it was so much admired, that a subscription was entered into for supporting him at the Roman school of painting. Possessing both genius and industry, he soon distinguished himself; and, with the exception of Mengs, became the most distinguished artist of the day. He was more admired for his colouring and facility than for strength of conception, but generally executed his own designs in a very masterly manner. It was however as a portrait painter, that he acquired his greatest share of fame, few princes or nobles visiting Rome without sitting to him. This eminent artist, who was more distin-

guished by natural talents than by learning or acquirements, died in 1787.—*Pilkington Bryan's Dict. of Painters.*

BAUDELÔT de DAIRVAL (CHARLES CÉSAR) a native of Paris, bred to the profession of an advocate, which he practised for some time with success. But he chiefly distinguished himself as an antiquary, and collector of books and medals; and in 1686 he published a work intitled, "De l'utilité de Voyages," 2 vols, 12mo, which treats chiefly on inscriptions, medals, statues, and other monuments of antiquity. This treatise established his reputation, and procured him admission into the Academy of Ricovrati of Padua; and in 1705 he was made a member of the French Academy of Inscriptions and Belles Lettres. He died in 1722.—*Moreri. Nouv. Dict. Hist.*

BAUDIER (MICHAEL) historiographer of France under Louis XIII. He has left behind him several historical works which display considerable industry, and abound with particulars not to be found elsewhere, although exhibiting little method or taste. The principal of these are, "Histoire générale de la Religion des Turcs," 1636, 8vo; "Histoire du Cardinal D'Amboise," 1651, 8vo; "Histoire du Maréchal de Toiras," 1666, 2 vols, 12mo; and the "Lives of the Abbe Suger and of Cardinal Ximenes. A History of Margaret of Anjou is also attributed to him.—*Moreri.*

BAUDIUS (DOMINIC) a learned civilian and philologist, born at Lille in Flanders in 1561. His parents, being Protestants, fled to Aix-la-Chapelle, from the persecution of the duke of Alva. He studied at Leyden, Geneva, Ghent, and other places; and in 1585 was made doctor of laws. He then visited England in the suite of the Dutch ambassador, and became acquainted with Sir Philip Sidney. On his return he was placed on the list of counsellors at the Ilague; but he quitted the bar soon after, and went to France, where he resided ten years. He obtained the patronage of Harlai, president of the parliament of Paris, whose son, coming to England in 1602, as ambassador from Henry IV, brought Baudius with him. He settled at Leyden in the same year, and gave lectures on history and jurisprudence. In 1611 the States appointed him historiographer, together with Meursius. He died in 1613. Baudius wrote in Latin. His poems, first printed in 1587, display much ingenuity and elegance of style. His letters are still more esteemed, and afford some curious information. He wrote an historical work, "De Induciis Belli Belgici," also harangues, and other pieces. The private character of Baudius was very indifferent; and his poems are plentifully interlarded with classical invective against his opponents.—*Bayle. Aikin's Gen. Biog.*

BAUDOT DE JUILLI (NICHOLAS) a French historian of the eighteenth century, who was a native of Vendome. He wrote the History of Catharine of France, queen of England; the Secret History of the Constable of Bourbon; an Account of the Invasion of Spain by

the Moors; the History of the Conquest of England, by William duke of Normandy; the History of Philip Augustus; and that of Charles VII of France. These and other works which he published are distinguished for their lively style and manner, rather than for judgment or depth of research. Baudot died in 1759, aged eighty-one.—*Nouv. Dict. Hist.*

BAUDOIN (BENEDICT) see BALDUINUS.

BAUDOIN (FRANCIS) see BALDUINUS.

BAUDRAND (MICHAEL ANTHONY) a French geographer of some note in the 17th century. He was a native of Paris, and was educated at Clermont under the learned Jesuit Philip Briet. He resided some time in Italy, and afterwards came to England in the suite of Mary of Modena, when that princess was married to James duke of York. Returning to his native country, he became prior of Rouvres, and died in 1700, aged sixty-seven. His principal work is a large geographical dictionary, and he also published a description of the rivers of France.—*Moreri*.

BAUHIN. There were three eminent physicians of this name, who flourished in the sixteenth century. JOHN, the father, was a native of Amiens in France, born 1511. He was considered one of the most skilful men of his age, and obtained the appointment of body physician to Catharine of Navarre. He visited England in 1522, and on his return to his native country, narrowly escaped (through the interest of queen Margaret) being burnt at the stake for heresy. He subsequently retired to Basil, and for a while was employed there by Froben the printer, to correct his press. Previously however to his death, which took place in 1582, he had resumed the practice of his profession, in which he had arrived at the rank of dean of the faculty. He left two sons: the eldest, named JOHN after himself, was born after his father's retreat to Basil, in 1541, and graduated in 1562. He became principal physician to the duke of Wirtemberg, and was the friend and pupil of Gesner, who taught him botany. His works in this science, as well as on medical subjects, are principally "De plantis a Divis et sanctis nomen habentibus," 8vo; "De plantis absynthii nomen habentibus," 8vo, "Historia plantarum prodromus," 4to; "Historia plantarum universalis," in three folio volumes; "Historia novi et admirabilis fontis, Balneique Bollensis," 4to; "Memorable Historia luporum aliquot rabidorum," 8vo; "De Aquis medicatis nova methodus," in four books, one volume 4to; and a work on insects, entitled somewhat whimsically "Vivitur ingenio cetera mortis erunt." He died in 1613 at Montbelliard, his younger brother, GASPARD, surviving him about eleven years. This latter, like his brother, was born at Basil, in 1560; and having studied at Padua, graduated at Wirtemberg, in which university he lectured in botany and anatomy. In 1588 he added the professorship of those sciences to that of Greek, which he had obtained six years before, and became a physician to the court. He attained to the highest honours in

the university, being chosen eight times dean of the faculty, and four times rector of the university. He is the author of two botanical treatises, which evince great industry and skill in arrangement. They are entitled "Phytopinax," and "Pinax Theatri Botanici," both printed in 4to at Basil.—*Moreri*. *Haller Bib. Botan.*

BAULDRI (PAUL D'IBERTILLE) a native of Rouen in Normandy, born 1639. He was an eminent scholar, and well skilled not only in the Greek and Latin, but also in the Hebrew, Arabic, and other Oriental languages, having studied the former under the celebrated Tanaquil Faber at Saumur, and the latter under Cappel. In the further pursuit of learning he visited Oxford, and on his return to France married a daughter of Henry Basnage in 1682. Being of the Reformed Religion, the repeal of the edict of Nantes drove him to Utrecht, where he became professor of ecclesiastical history. He wrote "Critical Remarks on the book of Job," and edited the "De mortibus persecutorum" of Lactantius, and Furetiere's "Nouvelle Allegorique," 12mo. His death took place in 1706.—*Ibid.*

BAULOT (JAMES) whose name is also sometimes spelled BEAULIEU, generally known in his life time by the appellation of "Friar James," although he never belonged to any religious order, but merely assumed the monastic habit as a convenient passport in travelling. He was born in 1651, his parents being peasants in Franche Compté. Having accidentally acquired the principles of lithotomy from a surgeon, he became a proficient in performing that nice and dangerous operation. After making a progress through most of the provinces, a remarkable cure of a boy at Paris gained him great reputation. Cheselden has since improved upon his process, which was to extract the stone by the lateral operation, leaving the wound to heal without further assistance, though subsequently he altered his practice in the latter respect. He died in 1720.—*Dict. Hist.*

BAUME (JAMES FRANCIS DE LA) a French ecclesiastic, born in 1705 at Carpentras, author of an absurd poem in six volumes 12mo, entitled "The Christiade, or Paradise regained," and also of another in two volumes 12mo, called "Saturnales Francoises." The publication of the former drew on him the censure of the parliament of Paris, who ordered his book to be burned, and himself to pay a considerable fine. He died in 1757 at Paris.—*Ibid.*

BAUME (ANTONY) a French chemist of some eminence towards the close of the last century, who distinguished himself by his opposition to the new chemical theory promulgated by Lavoisier, and his colleagues. He practised as an apothecary at Paris, and was well acquainted with the technical details of his profession. In 1775 he was chosen a member of the Royal Academy of Sciences; and on the establishment of the National Institute, he became one of its members. His principal works were—a Treatise on Theoretical

and Experimental Chemistry, and a Manual of Pharmacy. He also wrote a Memoir on Argillaceous Earths; a Dissertation on Æther, &c. He died in 1805.—*Now. Dict. Hist.*

BAUMGARTEN (ALEXANDER THEOPHILUS) an eminent writer on metaphysics and moral philosophy. He was born at Berlin in 1714, and studied in the university of Halle, where, after taking the degree of M.A., he was appointed extraordinary professor of philosophy. In 1740 he accepted of a similar situation at Frankfort on the Oder. He was the first who gave a scientific form to the theory of the fine arts, in a work of which he published the first part in 1750, under the title of "Aesthetica," a term which the Germans have adopted to designate the science of which he treats. The second part appeared in 1758. His other ethical and philosophical works are much esteemed. He died in 1762.—*Aikin's G. Biog.*

BAUMGARTEN (SIGISMUND JAMES) brother of the preceding, was born in the duchy of Magdeburgh in 1706. He was educated at Halle, where in 1734 he was appointed professor of theology. He was one of the most celebrated Protestant divines of his age, and the author of several valuable works on theology and history. He published the first sixteen volumes of the great Universal History commenced at Halle in 1744, which now extends to more than 60 volumes in quarto, having been continued by Gebhardi and others. He died in 1757.—*Aikin's G. Biog.*

BAUR (FREDERIC WILLIAM VON) a distinguished officer of engineers in the last century, a native of Hessian Hanau. After having served with credit in the English artillery, he quitted it for the Prussian service in 1757, and obtained the rank of general, with a patent of nobility, from Frederic II. He was subsequently employed in superintending the salt works of Novogorod, in constructing a harbour at the mouth of the canal at Petersburg, and in supplying with water the city of Moscow; which works he undertook at the express command of the empress Catharine II. He was the author of a work entitled "Memoires Historiques et Geographiques sur la Valachie," 8vo, and published a military map of Moldavia in 7 sheets. His death took place in 1783.—*Biog. Univer.*

BAUR (JOHN WILLIAM) a painter of Strasburg, in which city he was born in the year 1610. His paintings are principally on architectural subjects, in which he has contrived to introduce processions of figures, battles, &c. with considerable effect. He also produced several beautiful water-colour drawings on vellum, and etched many of his own works on copper, especially a series of designs from Ovid's Metamorphoses. He was taught by Brendel, and died at Vienna in the thirtieth year of his age.—*Bryan's Dict. of Painters.*

BÄWDWEEN (WILLIAM) a laborious antiquary and divine, who held the vicarage of Hooton Pagnell, in Yorkshire, where he died in 1816. He was particularly conversant with English history and antiquities, and undertook

the translation of the Domesday Book, which he proposed to publish in 10 quarto volumes. Death however prevented him from completing his design; and only two volumes appeared, containing the northern and some of the midland counties.—*Gent. Mag.*

BAXTER (ANDREW) an ingenious philosopher and metaphysician. He was a native of Aberdeen, and was educated at King's College in that city; after which he was employed as a private tutor. About 1730 he published "An Enquiry into the Nature of the Human Soul; wherein the Immateriality of the Soul is evinced from the Principles of Reason and Philosophy." This work was applauded by Warburton, and obtained for the author a high reputation; though his arguments, which are founded on the *vis inertiae* of matter, have since been controverted by Hume and Colin Maclaurin. In 1741 he went abroad with one of his pupils, and remained for some years at Utrecht, where he contracted an acquaintance with some of the Dutch literati. He returned to Scotland in 1747, and resided at Whittingham in East Lothian, where he died in 1750, aged sixty-three. He was the author of a Latin treatise entitled "Matho sive Cosmotheoria Puerilis Dialogus," which he afterwards translated into English, and published in 2 vols. 12mo.—*Biog. Brit.*

BAXTER (RICHARD) the most eminent of the English nonconforming divines of the seventeenth century. He was the son of a small freeholder in the county of Salop, and was born in the village of Rowton in 1615. The example and instruction of his father, who, although of the established church, was branded with Puritanism, gave him a serious turn very early in life. After receiving his education under some disadvantages in his own county, he was sent to London, to pursue his fortune under the patronage of sir Henry Herbert, master of the revels; but the gaiety of this new and uncongenial scene soon disgusted him, and he returned into the country with a view to study divinity. He was soon after made master of the free-school at Dudley; and in 1638 received ordination in the church of England, having at that time no scruples on the score of subscription. It was not long after, however, that the imposition of the oath of universal approbation of the doctrine and discipline of the church of England, usually termed the "et cetera oath," detached him and many others from the establishment to which they might otherwise have passively submitted. In 1640 he received an invitation from the people of Kidderminster, to reside with them as a preacher; and that neighbourhood was the scene of his exertions for many years. When the civil war broke out, he sided with Parliament, and after the battle of Naseby, accepted the appointment of chaplain to colonel Whalley's regiment, and was present during much active service. He is said to have been the whole of this time a friend to the establishment, according to his own notions, and to have repressed sectaries as much as he was able. In 1647 he retired, in

consequence of ill-health, from his military chaplainship, and when he recovered, opposed the measures of those in power, and preached urgently against the Covenant. He even endeavoured to persuade the soldiery not to encounter the Scottish troops who came into the kingdom with Charles II, and hesitated not to express an open dislike to the usurpation of Cromwell, whom he told, in a conference very characteristic of both parties, that the people of England deemed the ancient monarchy a blessing. The fact is, that Baxter, with many more zealous religious partizans, held civil liberty to be of secondary consequence to true religion, and appears, from the tenor of a sermon which he preached before Cromwell, to have deemed the toleration of separatists and sectaries the grand evil of his government. After the Restoration he was made one of the king's chaplains, and a commissioner of the Savoy Conference, to draw up the reformed liturgy. He was even offered the bishopric of Hereford, but refused it, and was then denied the liberty which he sought of returning to his flock at Kidderminster. The active persecution of the Nonconformists soon followed: and upon the passing of the act against conventicles, he retired, first to Acton, then to Totteridge, and preached more or less openly, as the act was more or less rigidly enforced. At length, after the accession of James II in 1685, he was arrested by a warrant from lord-chief-justice Jefferies, for some passages in his "Commentary on the New Testament," supposed hostile to Episcopacy, and was tried for sedition. The brutal insolence and tyranny of the atrocious ruffian Jefferies on this trial have signalized it as one of the most disgraceful proceedings on legal record; and after a scene of intemperate coarseness which almost beggars description, the threats of the robed bully, who would neither hear the accused nor his counsel, produced a verdict of guilty on the most frivolous grounds imaginable. He was accordingly sentenced to two years' imprisonment and a heavy penalty; which, after a short confinement, the king remitted, probably with some degree of compunction for the manner of its infliction. Henceforward Mr Baxter lived in a retired manner, not interfering in the affairs of party, nor joining in the wretched delusion of the addresses to James for his religious indulgences. During all his conscientious perseverance in his ministerial duties, he had been afflicted with great delicacy of health; and increasing disease at length confined him to his chamber. He died in 1691, at the age of seventy-six, and consequently witnessed the Revolution. It was the good fortune of this celebrated divine to marry a wife who cheerfully submitted to and shared all his sufferings on the score of conscience, both in and out of prison; and it is only for those who know the persecution, direct and indirect, of an opposing or treacherous woman, to be aware of the noble assistance to character which such conjugal aid affords. The character of Baxter is now tolerably well understood: it was formed by his age; his fail-

ing was subtle and controversial theology; his excellence, that practical conscientiousness and piety, which allied him to all good men of every creed. In divinity, he sought to establish a resting place between strict Calvinism and high church Arminianism, and failed, as most doctrines made up of a compromise of debateable grounds do fail. The essence of the Baxterian principles seems to be the admittance of election, and the rejection of reprobation—Christ died for some especially, and for all generally; that is to say, all possess the means of salvation. A body called Baxterians, long acknowledged these distinctions; and the nonconformist clergy, after the Revolution, were divided between this grade, the pure Calvinists, and the high church passive-obedient Arminians. Richard Baxter was a most voluminous writer, above 145 treatises of his being enumerated, of which four were folios, seventy-three quartos, and forty-nine octavos. Two of them, the "Saints' Everlasting Rest," and the "Call to the Unconverted," have been extraordinarily popular. Dr Barrow thought most highly of his practical works, and he enjoyed the friendship of some of the most eminent men of the age. According to Burnet, he was an excellent man spoiled by the early metaphysical distinctions of the schoolmen. Oblivion generally swallows up the writings of men thus disposed; and it has certainly cast a shade over those of Richard Baxter.—*Biog. Brit.*

BAXTER (WILLIAM) a philologist and antiquary, nephew and heir of Richard Baxter, was the son of parents in a mean condition of life, who resided at Llanlughany in the Welsh part of Shropshire, where he was born in 1650. So entirely was he uneducated that, when sent to Harrow school in his eighteenth year, he could not speak a word in any language except Welsh. He however effectually overcame these disadvantages, and at the age of twenty-nine published a Latin grammar under the title of "De Analogia seu arte Latine linguæ commentariolus," &c. 12mo. He followed the congenial profession of a schoolmaster at Tottenham in Middlesex, whence he was elected master of the mercers' school in London, and from time to time made himself known by learned publications. In 1695 he published a new edition of Anacreon with notes, reprinted in 1710. An edition of Horace in 1701, reprinted with improvements in 1725, has obtained more lasting reputation. This edition Dr Harwood calls the best ever published; the learned Gessner has made it the ground of his own excellent edition; and Bentley praises it. More recent critics however have demurred to the justice of this panegyric, especially in reference to his ribaldry and abuse of Bentley. In 1719 he published his dictionary of British Antiquities, entitled "Glossarium Antiquitatum Britannicarum," in which he was tempted, by his knowledge of the ancient British language, to determine geography by etymology. In this work he has been able to correct Camden in many places, but not without numerous errors of his own. He pursued the same method in

a "Glossary of Roman Antiquities," which he carried no further than the letter A. Some letters of his on the subject of antiquity appear in the *Archæologia*: he also left behind several notes on Juvenal and Persius, and was the translator of some of Plutarch's lives. He died in 1723, aged seventy-three.—*Biog. Brit.*

BAYARD (PÉTER DU TERRAIL DE) a celebrated French captain, was born of a noble family in Dauphiny in the year 1476. At a very early age he became page to the duke of Savoy, and subsequently followed Charles VIII into Italy, where he highly distinguished himself, and was named by the king "the chevalier sans peur et sans reproche." He was not less active in the service of Louis XII, and contributed much to the conquest of Milan. He was sent the next year to the kingdom of Naples; where, in a battle in 1501, like Cocles he singly defended a bridge against 200 warriors. So high a character did he obtain for bravery, honour, disinterestedness, courtesy, and the various qualities which form the most finished conception of the chivalric and knightly character, that, like sir Philip Sydney sometime after in England, he was held in esteem by all Europe, and Francis I chose to be knighted by his sword. After achieving great glory in various battles and sieges, he was mortally wounded by a musket shot in the retreat from Rebec in 1524. His manner of dying was peculiarly characteristic. On falling he kissed the cross of his sword, and as no chaplain was to be found, confessed himself to his squire, and requested to be placed with his back to a tree, with his face towards the enemy. The constable of Bourbon, then fighting against his country, on coming up in pursuit, expressed regret at seeing him in this situation. "It is not I who am to be pitied," replied Bayard, "but you, who are bearing arms against your king, your country, and your oath." He expired shortly after, at the age of about fifty. The duke of Savoy buried Bayard with the honours allotted to sovereign princes; and although his notions of honour were doubtless in some particulars fantastic, he merited great esteem for the simplicity and frankness of his heroism, and the excellence of his general disposition.—*Nouv. Dict. Hist.*

BAYLE (PETER) an eminent critic and philosopher, and possibly the father of free discussion in modern times, was born in 1647 at Carla in the county of Foix, where his father was a Protestant minister. He was educated by his father until his seventeenth year, when he was sent to the academy of Puylaurens, where he studied so deeply and read so extensively as to injure his health. In his twenty-second year he was removed to the university of Toulouse, and attended the philosophical lectures of the Jesuits' college. Here, like Gibbon, falling a victim to the arts of disputation and the forms of logic, he became a convert to the Roman Catholic religion. The bishop of Rieux supplied the support which his offended family withdrew from him, and all means were taken to confirm him in his new persuasion; but on a discussion of the

subject with a well-informed friend, who found means to see him, he was soon convinced that he had been too hasty; and abjuring his new belief, immediately set out for Geneva. Here he resumed his studies, and rejected the Peripatetic, for the Cartesian philosophy. From Geneva he removed to the Pays de Vaud, where he became tutor to the two sons of count Dhona, and thence visited Rouen, where he remained until in 1675 he settled in Paris, as a tutor in the family of Messrs de Behringen. Although he had anxiously wished to reside in Paris, he rapidly became disgusted with that capital, and the very same year offered himself as a candidate for the professorship of philosophy in the Protestant university of Sedan. In this attempt he was much encouraged by Jurieu, professor of divinity there, who afterwards became his bitterest enemy. In a public disputation his superiority was so apparent, that he triumphed over all his opponents; and his assiduity and amiable conduct in private life gained him great reputation. While at Sedan, he employed his leisure in compositions of a critical nature, in which exercise he acquired that accuracy and depth of reasoning by which he was afterwards so much distinguished. He however committed nothing to the press until 1681, when, in the assumed character of a Roman Catholic, he wrote his celebrated letter to a doctor of the Sorbonne, afterwards entitled "Pensées diverses sur la Comete," &c. in which there is much critical investigation into supposed miracles and omens, and a comparison of the mischiefs of atheism compared with those arising out of fanaticism and idolatry. In the same year the university of Sedan being suppressed by the arbitrary intolerance of Louis XIV, Bayle became professor of philosophy and history at Rotterdam; and at his recommendation, Jurieu was also engaged as a professor of divinity. His next work was a criticism on Mainbourg's "History of Calvinism;" which was also confuted by Jurieu, but with such inferior power, that thenceforward the rancorous ill-will was engendered, which was afterwards so vehemently displayed, and which scandal, without any adequate foundation, attributed to an improper attention from Bayle to his wife. An attempt was about this time made by a female friend to engage him in a matrimonial connexion; but the habits and pursuits of a student had gradually gained such a mastery over him, that he declined wedlock, both then and ever after. The freedom of the press in Holland induced him to republish various pieces interdicted in France, and in particular "A Collection of some curious pieces relative to the Philosophy of M. Des Cartes," with a preface, giving the history of them, and shewing the evils of an inquisitorial power over books of science. Pursuits of this kind very naturally led the way to his celebrated monthly journal entitled "Nouvelles de la Republique des Lettres;" and few journals of the kind have met with greater applause. Deeply impressed with the iniquity of the repeal of the edict of Nantes, and the atrocities of the dragooning then in practice against the

French Protestants, he was induced in 1686 to write an anonymous little piece entitled "Ce que c'est la France toute Catholique, sous le Regne de Louis le Grand;" which strictures on the persecutions of that bigotted and intolerant monarch were followed in the same year by a pretended translation from the English, entitled "Commentaire Philosophique." This work is a clear and elaborate defence of general toleration, and possesses the merit of being founded on those enlarged notions on the subject which were then very rare, but which now nearly form a portion of the common sense of all enlightened communities. A considerable weight of argument was founded upon the difficulty of distinguishing truth from error; a sceptical principle no doubt, but one on which alone the complete freedom of human opinion can ever be securely established. Bigotry of no kind can digest this ground for toleration, and accordingly it was as offensive to Jurieu in Holland, as to the Jesuits in France. In 1686, having published in his journal a letter attributed to Christina, the deditated queen of Sweden, containing her disapprobation of the persecution of the Protestants in France, he called it "a remainder of Protestantism." This expression, as implying a doubt of the sincerity of her conversion to the church of Rome, Christina resented, but possessed sufficient good sense to accept the apology of Bayle, whom she at the same time highly complimented. Possibly this incident, added to ill health, induced him to give up his journal in 1697. Soon after, the evil genius of Jurieu led him to apply the prophecies in the Revelations to the affairs of the French Protestants. To counteract the effect of this silly publication on the character of the reformed religion, Bayle is thought to have once more assumed the character of a Catholic, and to have written "Avis Important aux Réfugiés sur leur prochaine retour en France." It was replete with literary raillery on the visionary hopes of the refugees, and if really written by Bayle, shewed that he was after all so much a Frenchman as to be influenced in favour of the interest and assumptions of the French monarchy. It was attacked by Jurieu with great acrimony; and like most disputants of his class, he called for the expulsion of Bayle, whom he charged with the authorship, from his professorship. The magistracy behaved with decent impartiality in the dispute, which after a while subsided. The title of Bayle to this production, notwithstanding his non-acknowledgment, is strengthened by the fact, that king William soon after suspected him to be concerned in an intrigue to produce a separate peace between France and the United Provinces, and in that conviction caused him to be dismissed from his professorship. This was in October 1693, from which time he lived as a private man, and refused several advantageous offers of new engagements. His celebrated "Critical Dictionary" had been vaguely announced ever since 1690; and in 1692 he published "Projet et Fragment d'une Dictionnaire Critique," 8vo; which not being much ap-

proved, he remodelled his plan, and in 1695 the first volume of his great work, the "Critical Dictionary," appeared. So great was the expectation formed of this book, that the duke of Shrewsbury offered 200*l.* for a dedication; but Bayle, who was above trafficking in panegyric, refused the offer. It sold so rapidly that it was necessary to reprint it, to accompany the larger impression of the second volume. A work so well known it is hardly necessary to describe. The articles chosen were, in a great measure, avowedly supplementary to or in correction of Moréri; but the real object of the author was to make his dictionary a repository of all the curious information as to fact, and of all the critical and philosophical knowledge which he had spent his life in acquiring. To a slender vein of text he adds a vast body of notes, discursive in the highest degree, not unfrequently prolix and gossiping, but so mixed up with solid, learned, and ingenious matter, that to every succeeding generation of students it ever has proved, and most likely ever will prove, indescribably attractive. His implacable antagonist Jurieu immediately attacked it, and endeavoured to procure its condemnation by the ecclesiastical assemblies. The consistory of the Walloon church of Rotterdam accordingly did moderately censure his occasional indulgence in prurient matters, his free strictures on the character of David, his articles relative to the Manichæans, his great tendency to scepticism, and the praises bestowed by him on the morals of certain Atheists. Bayle promised amendment in some of these points in a second edition; and thus the matter ended. His reputation was however in the highest degree extended by this volume, as well as the number of his opponents. In 1703, by way of relaxation from his severe labours, he wrote a volume called, "Reponse aux Questions d'un Provincial," and in 1704 a continuation of his Thoughts on Comets, which brought on a controversy with Le Clerc. His adversaries indeed regularly increased with his fame; and not content with making him an enemy of religion, they charged him with being a foe to the state; and, owing to a false accusation of holding secret conferences with the marquis d'Allegre, a French prisoner, he was nearly ordered from the United Provinces. On this occasion he was invited by his friend, Lord Shaftesbury, to visit England; but he already began to feel the effects of a decayed constitution; and having been affected for six months with an hereditary pulmonary disorder, convinced of its mortal nature, he would not trouble himself with remedies. No man ever viewed the approach of death with greater equanimity; he pursued his studies as long as he was able, and finding that speaking gave him pain, declined all visits, and died almost alone, on the morning of the 28th December, 1706, on which day when his landlady entered his chamber, he asked her faintly if his fire was lighted, and immediately expired. The moral character of this eminent man was unblemished; he was calm, temperate, disinterested, kind, and charitable. As a writer he is usually placed

at the head of the modern school of sceptics. A habit of considering abstruse questions in every point of view, led him to doubt where the mass of mankind think it criminal not to be certain. Bayle himself might have pleaded, that he doubted only of things really doubtful, and that, in the genuine spirit of philosophy, he has combated little beyond hurtful prejudice and unwarrantable dogmatism. That he occasionally took too much ingenious pleasure in creating and marshalling doubts, may possibly with truth be conceded; but the assiduous labour and impartiality with which he refutes the calumny of party writing on every side, were in the highest degree beneficial and laudable. It is for biography at least to acknowledge, that without a due portion of this constitutional coolness, very few opinions and characters would be correctly represented. For a disposition to coarse allusion, there is doubtless less excuse; but he is more satirical and humorous than inflammatory; and in fact it is usually in the exposure of some ridiculous pretension or practice, that he thus indulges. In his style he is animated and lively, but not always correct; and certainly prolixity is a frequent failing. The best editions of his dictionary were those of 1720 and 1740; but recently an accurate and comprehensive edition, in 20 volumes octavo, is deemed the most perfect. The English translation by Des Maizeaux is a very good one. It is remarkable, that although Bayle was obliged to live out of France, the parliament of Toulouse, in declaring his will valid in France, expressly said, that such a man could not be regarded as a foreigner; thus claiming the genius, while rejecting the philosopher. A particular account of all the works of Bayle may be seen in the sixth volume of Niceron.—*Life prefixed to Des Maizeaux's Translation of Crit. Dict.*

BAYLEY (ANSELM) a divine, and Hebrew critic of eminence, who was educated at Oxford, where he took the degree of LL.D. in 1764. He obtained a canoury in St. Paul's, and was sub-dean of the Chapel Royal. He published a Hebrew grammar, and a Treatise on the Alliance between Music and Poetry; but his principal work was "The Old Testament, English and Hebrew, with critical and grammatical Remarks on the Hebrew, and Corrections of the English," 4 vols. 8vo. He died in 1794.—*Gent. Mag.*

BAYLY (LEWIS) an English prelate, was a native of Carmarthen, and studied at Oxford. He was appointed chaplain to Henry prince of Wales, son of James I, to whom he dedicated a religious work entitled "The Practice of Piety," which passed through a vast number of editions in the former part of the seventeenth century, and has preserved his name from oblivion. He was afterwards made bishop of Bangor; and he died in 1632.—*Biog. Brit.* THOMAS BAYLY, the youngest son of the bishop, was educated for the church at Cambridge; and during the civil war he resided at Ragland Castle, as chaplain to the marquis of Worcester. After the surrender of that fortress, he travelled on the Continent;

and on his return in 1649, he published a work entitled, "Certamen Religiosum; or a Conference between King Charles I, and Henry, late marquis of Worcester, concerning Religion, in Ragland Castle, anno 1646." It has been supposed by some, that he wrote this treatise to justify his conduct in embracing the Roman Catholic faith. The same year he published "The Royal Charter granted unto Kings," for which he was committed to Newgate. While in confinement, he wrote a book with the odd title of "Herba parietis, or the Wall-flower, as it grows out of the stone-chamber belonging to the Metropolitan Prison." He made his escape soon after, and went to Douay, where he published a justification of his conversion. He died in 1659.—*Dodd's Church Hist. of England.*

BAYLY (THOMAS) a divine and critic of the seventeenth century, who was a native of Rutlandshire, and was educated at Cambridge, which he left to become secretary to the learned Dr Augustin Lindsell, who was successively bishop of Peterborough and of Hereford. This prelate entertained a design to publish the works of the Greek Fathers, which he had prepared for the press, and which were transcribed by Bayly, and nearly finished, when bishop Lindsell died. His manuscripts, agreeably to his desire, were presented to archbishop Laud, who enjoined Bayly to proceed with the publication, and bestowed on him for his support the living of Braxted in Kent, worth 200*l.* a-year. The works of Theophylact only were published, with a dedication to the archbishop; whose misfortunes, and the political commotions which ensued, put a stop to the undertaking. After being deprived of his benefice, and meeting with other sufferings, in consequence of his party connexions, this learned divine obtained the patronage of Dr Jeremy Taylor, who took him with him to Ireland, where he remained till the Restoration. Returning to this country, he was first made dean of Down, and in 1664 bishop of Kilalla, by Charles II, as a reward for his loyalty. The time of his death is not mentioned. Dr George Hickes in 1709, published, in a volume of tracts, a sermon preached before Charles I at Oxford by Dr Bayly, with a memoir, from which the preceding account is taken.

BAYLY (WILLIAM) an ingenious mathematician and astronomer, was the son of a farmer at Bishop's Cannings, in Wiltshire. In early life he was employed as a schoolmaster; and his acquirements coming to the knowledge of Dr Maskelyne, the late astronomer royal, he engaged him as his astronomical assistant. In 1769 he was sent by the Royal Society to the North Cape, to observe the transit of Venus, his account of which was published in the philosophical transactions. In 1772 he went out as astronomer with Captain Cook in his second voyage; and he again accompanied him in the expedition which terminated the life of that celebrated circumnavigator. For his services on these occasions, in having determined the longitudes

and latitudes of the several places discovered by captain Cook, by surveys and astronomical observations, he was in 1785 appointed master of the Royal Academy at Portsmouth. This situation he held, with great credit to himself, till 1807, when he retired with a handsome pension. He died in 1810.—*Gent. Mag.*

BAYER. There were two of this name. **JOHN**, a celebrated astronomer of Germany, flourished in the early part of the seventeenth century. He was the author of a work on his favourite science, first printed under the title of "Uranometria," in 1603, which was reprinted in 1627, re-modelled and improved by himself. In this second edition he changed the names which he had previously assigned to the stars (denoting their magnitude and consequence by the letters of the Greek alphabet) for appellations taken from Scripture history, calling his work "Cælum Stellatum Christianum;" the book however has been since reprinted with the old names. His grandson, **THEOPHILUS SIGFRED BAYER**, was born in 1694 at Königsberg, where he was afterwards appointed librarian, having acquired a great proficiency in the Chinese and other Eastern languages. Here he remained from 1717 till 1726, when he repaired to Petersburg, on an invitation from the government, and took charge of the cabinet of coins, medals, &c. in that capital, with the title of professor of Greek and Roman Antiquities. He published a treatise on Chinese literature, entitled "Museum Sinicum," 2 vols. 8vo; "Historia Osrhoena et Edessena ex numinis illustrata," 4to; and "Historia regni Graecorum Bactriani," 4to. Several academical dissertations from his pen were also collected after his death, which took place in 1738. They were printed in one 8vo volume at Halle in 1768.—*Nouv. Dict. Hist.*

BAYNES (JOHN) a native of Middleham, Yorkshire, where he was born in 1758. Having gone through Richmond grammar school, he entered himself at Trinity Hall, Cambridge, where he graduated; and having obtained a lay fellowship, and become a member of the Society of Gray's Inn, went in due course to the bar. Several anonymous pieces, published in the magazines of the day, both in prose and verse, but principally of a political nature, have been attributed to him, as well as the Archæological Letter on the subject of the poems printed by Chatterton under the name of Rowley, which was addressed to dean Milles. He died in 1787.—*Europ. Mag.*

BEALE (ROBERT) an eminent civilian of the sixteenth century, a native of Woodbridge, Suffolk. The persecution to which many persons were subjected for their religious opinions on the accession of Mary to the throne of England, drove him to the Continent, where he remained till the commencement of the reign of her successor, whom he afterwards served on various diplomatic missions, especially at the court of France and in the Netherlands. He officiated as confidential secretary to sir Francis Walsingham, a relation of whom he married, and was the person entrusted with the warrant

for the execution of Mary of Scotland. He wrote a work on the "Scriptores Rerum Hispanicarum," printed in 1579, 2 vols. folio; and sat as a commissioner at the treaty of Boulogne. His death took place in 1601.—*Biog. Brit.*

BEALE (MARY) a poetess and painter, whose maiden name was Cradock, born in the county of Suffolk, 1632. Portrait painting was the branch of the art in which she particularly excelled, having devoted much time to the study of the works of Vandyke and sir Peter Lely, whose style she imitated. In the sister art her principal composition was a metrical version of most of the Psalms. Her death took place in 1697.

BEARCROFT (PHILIP) an English divine of great classical attainments, educated at the Charter-house, of which foundation he afterwards became head-master and published an account, with memoirs of the founder, Thomas Sutton. In 1712 he was admitted of Magdalen-hall, Oxford, and having taken the degree of A.M., was elected a fellow of Merton, soon after which he obtained the preachingship at the Charter-house. In 1743 he was presented to the vicarage of Stourmouth, Kent, and in 1753 to the head-mastership, having previously taken the degree of doctor in divinity. He died in 1761.—*Biog. Brit.*

BEARD (JOHN) a tenor singer of great celebrity about the middle of the last century. He was educated at the Chapel Royal under Bernard Gates, and first appeared in public as a singer in one of Handel's operas, performed at Covent Garden in 1736. The following year he made his *début* at Drury Lane, in the part of sir John Lovemore, and became a great favourite. Soon afterwards he married lady Henrietta Herbert, widow of lord Edward Herbert, and daughter of the earl of Waldegrave, which circumstance for a time interrupted his career. He subsequently returned to Covent Garden; and his wife dying in 1753, after an union of fourteen years duration, he again married Miss Rich, daughter of the proprietor of that theatre, and succeeded his father-in-law in the management. In 1759 his performance of Macheath filled the theatre nightly for fifty-two evenings, Miss Brent playing Polly. He quitted the stage in 1768, sold his share in the theatre, and retiring from public life, died in 1791, in the seventy-fifth year of his age. He was much esteemed in private life.—*Biog. Dict. of Music.*

BEATON, BETON, or BETHUNE (DAVID) cardinal and primate of Scotland, descended from a French family long settled in Scotland, was the son of John Beaton of Balfour, and the nephew of archbishop and chancellor Beaton. He was born in 1494, and educated at the universities of St Andrew's and Paris. He entered into holy orders, which did not prevent him from being employed in secular capacities under the duke of Albany, regent during the minority of James V, who appointed him resident at the court of France. Through the interest of his uncle, he obtained the rich abbey of Arbroath, and on his return to Scotland, was placed about

the person of the young king, who in 1523 promoted him to the office of privy seal. He was a great instrument of keeping up a good understanding with France; and Francis I found him so useful in his designs, that he conferred on him all the privileges of a native of France, together with the rich bishopric of Mirepoix. He negotiated king James's second marriage with Mary, daughter to the duke of Guise, and was made cardinal by pope Paul III. Not long after the death of his uncle, he succeeded him as archbishop of St Andrews, and immediately commenced a severe inquisition into heretical doctrines, for which purpose he appears to have been so much exalted. He caused prosecutions to be commenced against men of all ranks, and, it is said, had prepared a black list of 360 of the chief nobility in the kingdom, when the overthrow of James at Solway Moss checked these measures. When the king soon after died, the cardinal, who was the only person of authority with him at the time of his decease, is accused of having forged his will, in which, in conjunction with three other nobles, he appointed himself regent during the minority of Mary. This scheme was however defeated; and the earl of Arran being declared sole regent, Beaton was for some time imprisoned; but such was his ability and influence, that he was soon liberated and made high chancellor. Soon after he obtained a legatine commission from the court of Rome, by virtue of which he proceeded with great vigour to extirpate heresy. For this offence several eminent and esteemed Protestants were executed, and among the rest, Mr George Wishart was burnt with circumstances of great pomp and cruelty, the cardinal, according to some accounts, being himself a spectator. This execution excited great odium, especially as a report gained ground that the sufferer had denounced the cardinal at the stake, and predicted his violent death. Hume and some other authors believe this story, and attribute the fulfilment of the prophecy to the fact; but upon the whole, the weight of evidence is against it, at least in the circumstantial manner described. In less than three months afterwards, however, the cardinal met with a violent death, although religion seems only to have partly caused the deed, which was effected principally by the contrivance of two offended members of the house of Lesley. These, associating a few more in their design, early one morning surprised the castle of St Andrews, in which the cardinal lodged, and forcing their way into his chamber, put him to death with their swords. One of the conspirators, James Melville, expressly imputed his revenge to the persecution of Wishart. This event took place in May 1546, and proved a decisive blow to the ancient religion of Scotland. Beaton was a man of strong talents for business, but haughty, cruel, overbearing, and intolerant in the extreme. He appears to have had little learning, and many natural children, the fruit of open concubinage.—*Biog. Brit. Robertson's Hist. of Scotland.*

BEATSON (ROBERT) an ingenious man

who embraced the military profession, but afterwards turned his attention to literature, and was the author of some useful publications. He was born in Scotland in 1742, and early in life entered into the corps of Royal Engineers, in which he appears to have attained no higher rank than that of a lieutenant. His principal work was his "Naval and Military Memoirs of Great Britain," 3 vols. 8vo, 1790. He also published "A Political Index to the Histories of Great Britain and Ireland," containing catalogues of the nobility, state officers, &c. since the conquest; and a work of a similar kind relating to the houses of Parliament. He died in 1818.—*Ann. Biog.*

BEATTIE (JAMES, LL.D.) a pleasing poet and miscellaneous writer, was born at Lawrencekirk in the county of Kincairdine, in 1735. He lost his father when he was only seven years of age, but was placed early at the only school his birth-place afforded, whence he was removed to Marischal College, Aberdeen. Here he obtained the first of those bursaries or exhibitions, which are left for the support of those whose parents are unable to support the entire expense of an academical education. He studied Greek at Marischal College under the principal, Thomas Blackwell, and made a general proficiency in every branch of education except the mathematics. In 1753 he obtained the degree of AM. and having technically finished his education, accepted the office of school-master and parish-clerk to the parish of Fordoun, and then looked forward to the church of Scotland as his principal prospect, for which purpose he still attended during winter the divinity lecture at Marischal College. In June 1753 these views were somewhat changed, by the attainment of the situation of one of the masters of the grammar-school of Aberdeen. In 1761 he published a volume of poems, which were received favourably, but which he subsequently thought very little of, and endeavoured to buy up. They nevertheless procured him some powerful friends, whose patronage obtained him the appointment of professor of moral philosophy and logic at Marischal College. In 1765 he published a poem of the "The Judgment of Paris," 4to, which proved a failure, although it was afterwards added to a new edition of his poems in 1766. The work which procured him the greatest fame was his "Essay on Truth," which first appeared in 1770. It was so popular, that in four years five large editions were sold; and it was translated into several foreign languages. Among other marks of respect, the university of Oxford conferred on the author the degree of LL.D.; and George III honoured him, on his visit to London, with a private conference and a pension. He was also solicited to enter the church of England by flattering proposals from the archbishop of York and the bishop of London; which proposals he declined, lest his opponents should attribute the change to self-interest. The popularity of this celebrated essay, which was written in opposition to the prevalent scepticism of Hume and others, was principally

owing to its easiness of style, and to a mode of treating the subject, calculated for the meridian of slight scholarship and medium intellect. This is often a great source of immediate celebrity; but thus produced, it is usually as transitory as spontaneous, which has proved the case in the present instance. A few months after the appearance of the "Essay on Truth," Dr Beattie published the first book of "The Minstrel," 4to, and in 1774 the second; which pleasing poem is indisputably the work by which he will be the longest remembered. To a splendid edition of his "Essay on Truth," published by subscription in 1777, he added some miscellaneous dissertations on "Poetry and Music," "Laughter and Ludicrous Composition," &c. In 1783 he published "Dissertations, Moral and Critical," 4to; and in 1786 appeared his "Evidences of the Christian Religion," 2 vols. 12mo. In 1790 he published the first volume of his "Elements of Moral Science," the second of which followed in 1793; and to the latter was appended a dissertation against the Slave Trade. His last publication was "An Account of the Life, Character, and Writings of his eldest son, James Henry Beattie," an amiable and promising young man, who died at the age of twenty-two in 1790. This great affliction was followed in 1796 by the equally premature death of his youngest and only surviving son in his nineteenth year; which losses, added to the melancholy loss of reason by his wife, wholly subdued his constitution; and after two paralytic strokes, he died at Aberdeen in August 1803. Dr Beattie was a religious and an amiable man, but constitutionally more calculated for a poet than a philosopher, and for a pleader than a controversialist. He was however a respectable, if not a strong writer, and might have been thought more of at present, had he been thought less of heretofore.—*Libé by Sir William Forbes.*

BEATUS RHENANUS. a learned man of the sixteenth century, whose father, Anthony Bilde, adopted the name of Rhenanus from Rheinach, the place of his birth. Beatus was born at Schletstadt in Alsace, in 1485. He studied at Paris, Strasburgh, and Basil, at which last place he was for some time corrector of the press to Frobenius: but at the age of thirty-five he returned to his native place. He was distinguished for his acquaintance with the Greek language, ecclesiastical history, and the antiquities of Germany. Beatus first published the "History of Velleius Paterculus:" he also wrote annotations on Tacitus, Livy, Tertullian, and other ancient authors: and an historical work, entitled "Rerum Germanicarum," libri iii. 1531, reprinted at Ulm in 1693, with notes by James Otto. He died at Strasburgh in 1547. Though he always continued a member of the Catholic church, he had a great regard for Luther; yet he was an enemy to schism, and seems, like his contemporary Erasmus, to have had too much sense and knowledge to be blind to the errors of Popery, and too little courage to become a reformer.—*Aikin's G. Biog.*

BEAU (CHARLES LE) a French historical writer, born in the Bourbonnois in 1701, and died at Paris in 1778. He was professor in the Royal College at Paris, secretary to the duke of Orleans, and perpetual secretary and pensionary of the Academy of Inscriptions and Belles Lettres. He was the author of a valuable "History of the Lower Empire," 20 vols. 12mo; of which there is a continuation by M. Ameilhon. He also wrote several detached memoirs and dissertations on historical subjects.—*Nour. Dict. Hist.*—**JOHN LEWIS LE BEAT.** the younger brother of the preceding, published editions of Homer and of the orations of Cicero, as well as some other literary productions.—*Ibid.*

BEAU (JEAN BAPTISTE LE) a French Jesuit, rector of the college of Rhodéz, a native of the Comtat Venaissin, where he was born about the year 1602. He was a man of much reading and great antiquarian research. One of his works, entitled "Diatriba duae, prima de partibus Templi Aegularis, altera de mense et die Pharsalicae victoriae," went through two editions, both in 8vo, the latter of which issued from the Wirtemberg press in 1705. His other productions are—"Breviculum expeditionis Hispaniensis Ludovici XIII," in 4to; "Otia vera Ludovici XIV, sive Polyanus Gallicus de veterum et recentium Gallorum stratagematibus," 8vo. He also wrote the life of Francis d'Estaing, bishop of Rhodéz, in 4to; "Speculum veri Antistitis," as exemplified "in vita Alphonsi Torribii Archiepiscopi Linnensis," 4to; and "Historia de vita Bartholomaei de martyribus," 4to. He died at the Jesuits' College in Montpellier, 1670.—*Saxii Onom. Nour. Dict. Hist.*

BEAUCAIRE DE PEGULON (FRANCIS) a learned French prelate, bishop of Metz in the sixteenth century, born of a noble family in the Bourbonnois in 1514. The first duke of Guise selected him for his literary attainments to be tutor to his son Charles, cardinal of Lorraine, whom he accompanied to Rome, and afterwards to the council of Trent, where he distinguished himself as well by his eloquence as by drawing up the terms of a disputed decree with such happy ambiguity as to satisfy all parties. In 1568 he resigned his see, and retiring to his patrimony of La Chrete in the Bourbonnois, amused himself by writing the history of his times in the Latin language, without however any intention of publishing it. Philip Dietz finding it in his library after his death, printed it in 1625 at Lyons, in one volume folio. It is entitled "Rerum Gallicarum Commentaria, ab anno 1461 ad annum 1562." He also wrote a treatise on the future state of infants dying unborn. He died in 1591.—*Moreri. Saxii Onom.*

BEAUCHAMP (RICHARD) an English prelate of the 15th century, who signalized himself by his skill in architecture. He was the son of sir Walter Beauchamp, and brother of William lord Beauchamp of St Amand. Having embraced the ecclesiastical profession, he was made dean of Windsor, and afterwards bishop of Hereford, whence in 1450 he was

translated to Salisbury, which see he held till his death in 1481. Gough calls him the Wickham of his age, an appellation which he justly merited. When the old collegiate chapel at Windsor was taken down in the reign of Edward IV, the superintendance of the new building was committed to bishop Beauchamp; and the design of the principal part of the present beautiful edifice is generally attributed to this prelate, whose unremitting zeal as master and surveyor of the works at Windsor procured him the chancellorship of the order of the Garter. He left other specimens of his taste in architecture, particularly the elaborate sepulchral chapel in Salisbury cathedral, which bears his name, and the great hall of the episcopal palace. The former is a fine example of the richly ornamented style of gothic architecture, which prevailed in the latter part of the 15th century.—*Cassan's Memoirs of the Bishops of Salisbury*, 1824.

BEAUCHAMP (JOSEPH) a Bernardine monk, nephew of Miroudat bishop of Babylon, who appointed him his vicar-general in the Levant. Here he availed himself of the opportunities afforded him to prosecute his favourite study of astronomy. In 1795 he obtained from the French republican government the appointment of consul at Muscat in Arabia, which he afterwards quitted for Constantinople, and employed himself in making a survey of the Black Sea. In 1799 he was detected by the English in the execution of a secret mission confided to him by Napoleon; when, being delivered up to the Turkish government, he remained in prison till 1801. On obtaining his liberty he repaired to Nice, where he died in the same year.—*Nouv. Dict. Hist.*

BEAUCHAMP (PIERRE FRANCOIS GORDARD DE) a native of Paris, who wrote in the early part of the 18th century. He published a metrical version of the "Letters of Abeldard and Heloise," a work on the French theatres in 4to, and translated a couple of Greek romances, the "Ismene and Ismenias" of Eustathius, and the "Rhodantes and Docicles" of Theodore Prodromus. He died in 1761.—*ib.*

BEAUCLERK (TOPHAM) a gentleman celebrated for his conversational talents and his connexions with literary men. He was the son of lord Sidney Beauclerk, and grandson of the first duke of St Alban's. He was born in December 1739, and married, on the 12th of March 1768, lady Diana Spencer, daughter of the duke of Marlborough, whose previous marriage with Frederic viscount Bolingbroke had two days before been dissolved by act of parliament. Mr Beauclerk died at his house in Great Russell-street, Bloomsbury, March 11, 1780, leaving by his wife a son and two daughters. A valuable library, which he had gradually formed, was sold by auction by Samuel Paterson in April 1781. Mr Dibdin, who notices this collection in his *Bibliomania*, says of the owner, that he was "one who had frequently gladdened Johnson in his gloomy moments, and who is allowed, by that splenetic sage and great teacher of morality, to have

united the elegant manners of a gentleman with the mental accomplishments of a scholar." Perhaps a higher encomium could scarcely have been bestowed than what is implied in Johnson's declaration, "That Beauclerk's talents were those which he had felt himself more disposed to envy than those of any whom he had known," referring particularly to his spontaneous wit and wonderful facility of expression.—Lady Diana Beauclerk long survived her husband, and died in August 1808, at the age of seventy-four. She was a very ingenious woman, and was highly distinguished for her taste and skill in the arts of design.—*Boswell's Life of Johnson*. *Brydges's edition of Collins's Peerage*.

BEAVER (JOHN) a learned monk of Westminster, of the order of St Benedict, author of a history of England from the days of Brutus to the 14th century, in which he lived. He also left behind him a work, "De Rebus cœnobii Westmonasteriensis." The date of his death is not known.—*Pits*.

BEAUFORT (HENRY) bishop of Winchester, and cardinal, was a legitimated son of John of Gaunt by his third wife Catherine Swinford. He studied at Oxford and Aix-la-Chapelle, and obtained early promotion both in the church and state. He was made bishop of Lincoln in 1397, chancellor of the university of Oxford in 1399, lord chancellor in 1404, and the next year bishop of Winchester. During the reigns of his half-brother Henry IV, and his nephew Henry V, he does not appear to have interfered much in politics, though the latter sent him on an embassy to France, after which in 1417 he went to Palestine. On the death of Henry V in 1422, Beaufort was appointed one of the guardians to his son, and entrusted with the care of his education. In 1424 he for the third time held the office of lord chancellor. The minority of the young king afforded ample scope for the ambition of this rich and powerful prelate, whose perpetual disputes with his nephew the duke of Gloucester, protector of England, repeatedly disturbed the peace of the kingdom, and ultimately proved fatal to the protector. Pope Martin V made Beaufort a cardinal, and gave him a legatine commission, which however he was prevented from using by the influence of the duke of Gloucester. He then raised a body of troops for a crusade against the Hussites in Bohemia. Returning from that expedition, he in 1430 accompanied Henry VI to Paris, and performed the ceremony of his coronation in the church of Notre Dame. He continued to take a very active part in the affairs of government till his death, which happened in 1447. The popular character of his antagonist Gloucester, long known by the appellation of the "Good Duke Humphrey," has cast an odium on cardinal Beaufort, which probably he did not altogether deserve. The horrors of his death-bed scene have been strikingly portrayed by the pen of Shakespeare and the pencil of sir Joshua Reynolds; but they must both be considered as having adopted a poetical licence in their delineations, which are founded rather on tradi-

tional rumour than on historical record. The greatest crime with which he has been obliquely charged is the murder of the duke of Gloucester, whom he survived only one month, and in whose catastrophe, if he had any concern, he must have shared the guilt with the queen and her favourites, who, in consequence of the king's mental imbecility, then ruled in his name. Beaufort died immensely rich, leaving by his mistress Alice, daughter of the earl of Arundel, a natural daughter, who was married to sir Edward Stradling. He founded the hospital of St Cross at Winchester, and bequeathed much of his property to charitable uses.—*Biog. Brit.*

BEAUFORT (MARGARET) countess of Richmond and Derby, distinguished as the patroness and cultivator of learning in the period preceding the Reformation. She was the sole daughter and heiress of John Beaufort duke of Somerset, grandson of John of Gaunt. She was born in 1441, and at the age of sixteen married to Edmund earl of Richmond, by whom she was the mother of Henry VII. She had two other husbands, Henry Stafford, son of the duke of Buckingham, and Thomas lord Stanley, created earl of Derby, by neither of whom she had any children. She spent the latter part of her life in seclusion, and, dying in 1509, was interred in Henry VII's chapel at Westminster. The literary attainments of the countess Margaret exceeded those of most of her female contemporaries. She understood French sufficiently to translate a book from that language into English, and she had some acquaintance with Latin. But she principally deserves to be commemorated as the liberal patroness of literature and learned men. She founded divinity lectureships at both the English universities, and at Cambridge the colleges of Christ and St John, the former in 1505 and the latter in 1508. Her character was strongly tinged with the ascetic enthusiasm of the age; and the warmth of her religious zeal may be estimated from her declaration, that provided she could induce the princes of Christendom to form a league and march against the infidels, she would willingly attend them as their laundress.—*Ballard's Mem. of British Ladies.*

BEAUHARNOIS (ALEXANDER DE) a French nobleman who perished during the Revolution, and who deserves commemoration on account of the subsequent connexion of his family with Buonaparte, who married his widow. He was a native of Martinique, and went early in life to Paris, where his handsome person and agreeable manners gained him admission into the first society. He was elected deputy of Blois in the Constituent Assembly, in which he distinguished himself by joining the popular party, and by the amenity and elegance of his public speeches. He proposed equality of punishments for all classes of citizens, and their eligibility to all offices. Subsequently to the flight of Louis XVI from Paris, Beauharnois was appointed adjutant-general to Luckner, general-in-chief of the army of the Moselle, in which post he gave many

proofs of his courage and resolution as well as of his humanity to the vanquished. He was offered the place of minister of war, which he refused. Five days only previous to the fall of Robespierre, he was condemned by the revolutionary tribunal, and perished on the scaffold at the age of thirty-four. July 23, 1793.—*Nouv. Dict. Hist.*

BEAUHARNOIS (EUGENE DE) only son of the preceding. His history is intimately connected with that of his father-in-law Napoleon, by whom he was made viceroy of Italy; which kingdom he is said to have governed with great judgment and moderation, and to have acted in such a manner as to conciliate the respect and esteem of the inhabitants in general. In the Russian campaign he commanded the Italian troops belonging to the grand army of the French emperor, whose downfall in 1814 terminated his viceregal sway. He was a great favourite with Napoleon, whom he always served with fidelity. In January 1806 he married the princess Augusta Amelia, eldest daughter of the king of Bavaria, to whose court at Munich he retired on the restoration of Louis XVIII, and died there in 1824. He does not appear to have possessed great talents; but his disposition was amiable, and his honour and integrity unsuspected.—*Ann. Reg.*

BEAULIEU, see PONTALT.

BEAUMARCHAIS (PETER AUGUSTIN CARON DE) a French dramatic writer of celebrity, was born at Paris in 1732. His father was a watchmaker, and he himself, when a young man, signalized himself by his improvements in that art. Being passionately fond of music, he also invented some alterations in the harp, which gave him an introduction to the princesses, daughters of Louis XV, and laid the foundation of his fortune. He lost two wives successively, and then gained three considerable law-suits, the papers in relation to which were published by him and excited great attention. He was afterwards employed in various political transactions by the ministers Maurepas and Vergennes, and distinguished himself in the establishment of the Caisse d'Escompte, and other schemes. After the death of Voltaire, he purchased the whole of his MSS, which he printed magnificently at Kell. On the breaking out of the American war, he realized a large fortune by supplying the Americans with arms and ammunition. Although on the side of the Revolution from principle, he was never a favourite with the parties whom it brought into action, and was even imprisoned for some presumed breach of contract in the supply of arms. On his release he took refuge in England, but returned to Paris in 1794, and engaged in a salt speculation by which he lost the greater part of his property. He died of an apoplectic fit in 1799, aged sixty-nine. Beaumarchais was a singular instance of versatility of talent, being at once an artist, politician, projector, merchant, man of business, and dramatist. He was passionately attached to celebrity, and sought the attention of the public by every

means in his power. He was fully gratified in his wishes during his dramatic career, especially on the production of his celebrated "Marriage of Figaro," which excited one of those extraordinary sensations for which the world of fashion in Paris has always been so remarkable. The English modifications and versions of this clever but not very moral comedy, convey but a slight notion of the mischievous subtlety and deep spirit of intrigue in the original, which every one abused and every one went to see. His other works are, the law reports before-mentioned; "Eugenie," "Les deux Amis," "Le Barbier de Seville," and "La Mere Coupable," comedies; "Tarare," an opera; "Memoire en Reponse au Manifeste du Roi d'Angleterre;" and "Memoires a Lecoindre de Versailles." All these are to be found in a collection of his works published in 1807, Paris, 7 vols. 8vo.—*Biog. Moderne.*

BEAUMELLE (LAURENT ANGLIVIEL DE) a modern French writer of some note. He was born at Vallaraugues in the diocese of Allais in 1727, and very early obtained sufficient reputation to be invited to Denmark, in order to undertake the professorship of French belles lettres. The climate not agreeing with him, he quitted Denmark with a pension and the title of counsellor, and on his way called at Berlin, with the view of forming an intimacy with Voltaire. The result was sufficiently ludicrous; for each being petulant and irritable, a quarrel ensued, which lasted, in the way of literary skirmish, for the remainder of their lives. On his arrival at Paris, the freedom he had taken in his work entitled "Mes Pensées," produced him the old French literary honour of a temporary seclusion in the Bastille; whence he had scarcely been liberated, when his "Memoirs of Madame Maintenon" sent him back again. Again released, he wisely retired into the country, to pursue his literary schemes in quiet, and married the daughter of an eminent lawyer of Toulouse. In 1772 some female interest at court produced him the post of king's librarian, which however he did not long enjoy, being cut off by a pulmonary disorder in November 1773. The principal works of La Beaumelle are, 1. "Defence of the Spirit of Laws;" 2. "Mes Pensées, ou le Qu'en dira-t-on?" a spirited but not very profound production, in which much wit and vivacity is displayed with a freedom very capable of giving offence: it was a stroke in this piece, comparing the king of Prussia's patronage of Voltaire to the taste of the petty German princes in keeping buffoons, which produced the quarrel that lasted for life; 3. "Memoirs of Madame Maintenon," 6 vols, 12mo, a work not devoid of force and vivacity, but in no great reputation for its accuracy in regard to facts; 4. "Letters to M. Voltaire," 1761, 12mo, which, as they were keen and satirical, induced Voltaire to acknowledge that "the rascal had a great deal of wit;" while on the other hand, La Beaumelle was in reality a great admirer of Voltaire, and frankly admitted, that he was at war because he was

sure that his opponent would never conclude a sincere peace, and moreover because his attack on him sold his books; 5. "Thoughts of Seneca," Latin and French; 6. "Commentary on the Henriade," 1775, 2 vols, 8vo, which is an able critique, but too severe and minute. He also left a MS. translation of Tacitus, of whose manner he was a frequent imitator, and another of the odes of Horace, with some miscellaneous pieces. La Beaumelle was a frank and open character, but captious and satirical. His conversation was said to be much less spirited than his writings.—*Nouv. Dict. Hist. Aikin's G. Biog.*

BEAUMONT (sir JOHN bart.) an English poet, was the son of Francis Beaumont, one of the judges of the Common Pleas, in the reign of Elizabeth, and elder brother of Francis, the celebrated colleague of Fletcher. He was born in 1582, at the family seat of Grace-Dieu in Leicestershire, and after studying at Oxford, became a member of one of the inns of court, but soon returned to Leicestershire, and married. In 1626 he was created a baronet by Charles I, but only survived two years, dying in the winter of 1628 at the age of forty-six. He left seven sons and four daughters, of whom sir John, his son and successor, edited his father's poems, and was himself a minor poet, and a man of great bodily strength, who died fighting on king Charles's side at the siege of Gloucester. The poetical works of sir John Beaumont form part of the collection of English poets; and of these, "Bosworth Field" is the most considerable. As a specimen of the heroic style of that day, it is exceeded by very few of his contemporaries; and he describes the death of Richard with great spirit. His minor poems, if exhibitive of no great invention, are very pleasing; and his verses on the pure form of English poetry, prove him to have been possessed of great taste. His translations from Horace, Virgil, Juvenal, and Persius, are also very forcible and correct.—*Biog. Brit. Nichol's Hist. of Leicestershire.*

BEAUMONT (FRANCIS) third son of Francis the judge, and brother to the preceding, was born at Grace-Dieu in Leicestershire, 1581, and was educated at Oxford, not Cambridge, as stated by some writers who have taken a cousin and namesake for himself. He studied for some time in the Inner Temple; and his "Mask of the Inner Temple and Gray's Inn" was acted and printed in 1612, when only in his twenty-sixth year. His application to the law must however have been nearly nominal, for his celebrated dramatic connexion with Fletcher, who was ten years older, began before he was twenty, and he died in his thirtieth year, in March 1616. With respect to the specific share he had in the plays which have been published as the joint production of Beaumont and Fletcher, all that is known upon the subject may be gained from the preliminary matter of the edition published in 1778. Tradition, principally on the conjecture of Langbaine, has assigned judgment for the distinguishing characteristic

of Beaumont, who it is said was chiefly employed in correcting the luxuriant redundancy of Fletcher. Other accounts say, that he confined himself to writing the more serious and lofty parts in their joint plays, and in contriving the plots and development of the fable. Be this as it may, Fletcher, to his great credit, always appears to have acquiesced in the high opinion entertained of Beaumont, and notwithstanding his own seniority, uniformly allowed the name of his colleague to stand first. The character of their dramas will be adverted to in the life of Fletcher; it is therefore only necessary to remark further, that his "Masque in the Inner Temple," and original poems, give Beaumont an undoubted claim to a place in the list of English poets, independently of his claims as a dramatist. His amatory poems are sprightly and original, his sentiments refined, and his versification peculiarly harmonious. His greatest defect was an indulgence in metaphysical conceits—the literary malady of the age. Beaumont married the daughter and co-heiress of Henry Isley, of Sundridge in Kent, by whom he had two daughters. One of these, called Frances, was living so late as 1700 on a pension of 100*l.* per annum from the duke of Ormond. She had once in her possession several MS. poems, by her father, which were lost in her passage from Ireland. Beaumont lies interred in Westminster abbey, but without tomb or inscription.—*Biog. Brit. Chalmers's G. Dict.*

BEAUMONT (JOSEPH) a learned ecclesiastic, a native of Hadleigh in Suffolk, born in 1615. He was a fellow of Peterhouse, Cambridge, which situation he lost from his adherence to the cause of Charles the First, but recovered it again at the Restoration, when he became one of the chaplains in ordinary to the king. Returning to the University, he obtained first the headship of Jesus College, and afterwards that of Peterhouse, with the divinity professorship. He was a poet as well as a divine, and published in 1648 a poem on the subject of "Psyche," which in 1702 reached a second edition. His other works are—a volume of poems in the English and Latin languages, and remarks on St Paul's Epistle to the Colossians, printed in 4to, 1749.—*Jacob's Lives of the Poets.*

BEAUMONT (ELIE DE) was a native of Carentan in Normandy, born 1732, and admitted an advocate at the French bar in 1762. The weakness of his voice appears at first to have militated greatly against his success as a pleader; but his beauty and eloquence with which he drew up his memorials, especially the celebrated one in favour of the unfortunate Calas family, gained him great popularity and a lasting reputation. Though possessed of an easy flow of wit, and great liveliness of imagination, he was nevertheless subject to severe fits of occasional dejection. The kindness of his heart is demonstrated by his institution of the festival known by the name of the *Fête des bonnes gens*, at Canon in Normandy, of which village he was the seigneur. He died in 1785 at Paris. His lady, who died before him,

wrote an epistolary novel under the title of "The Marquis de Roselle."—*Nouv. Dict. Hist.*

BEAUMONT (Mad. le Prince de) a lady who distinguished herself by some useful works for the instruction of youth of her own sex, and also wrote some amusing novels. She was a native of Rouen in Normandy, and kept a boarding-school for young ladies at London, and afterwards at Annecy in Savoy, where she died in 1780. Among her principal publications are—"Magazin des Enfants;" "Magazin des Adolescents;" "Magazin des Jeunes Dames;" "Nouveau Magazin Anglois;" "Lettres de Madame du Montier;" and "The New Clarissa." This last work proves the authoress to have been better acquainted with the language than with the manners of this country.—*Mrs. Tichell's Memoirs of French Ladies. Nouv. Dict. Hist.*

BEAUMONT, see PEREFIXE.

BEAUSOBRE (ISAAC) a minister of the Calvinistic church, descended from an ancient family in Provence, but born at Niort in Switzerland in 1659. He received the rudiments of his education on the estate of an officer of distinction of the name of Villette, a friend of his father, and completed it at Saumur. Declining the profession of the law, in which, from a distant connexion with Madame de Maintenon, he had great prospects of success, he entered the church; but on the repeal of the edict of Nantes, having the hardihood to break the king's seal affixed to the doors of his place of worship, he was condemned to the *amende honorable*, in order to escape which he fled into Holland. Here the interest of the princess of Orange placed him in the situation of chaplain to her daughter, the princess of Anhalt Dessau, to whose capital he in consequence retired, and remained there till 1694, when he removed to Berlin, and became minister to a congregation of French refugees in that city, as well as chaplain to the king of Prussia. His chief works are a "History of the Reformation," printed after his death in four volumes, 8vo. In this work he carries his enquiries down to the confession of Augsburg. A French version of the New Testament was afterwards executed by him, in concert with L'Enfant, in which the epistles of St Paul fell to the share of Beausobre. Several dissertations, "On the History of the Adamites of Bohemia," "On the Statue of Paneades," "The Virgin Queen of Poland," &c. were written by him for the *Bibliothèque Germanique*, and are reprinted in L'Enfant's *History of the Hussites*. His last production was his "Histoire Critique du Manichéisme," 2 vols. 4to, 1734, the most curious and valuable of all. The French colleges and churches of the Calvinistic communion were placed under his superintendence till the year 1736, which was that of his decease. He left two sons, LEOPOLD, a colonel in the Austrian service; and CHARLES LEWIS, born in 1690 during his residence at Dessau, who became minister to a French congregation at Berlin, where he died in 1753, having published a "Commentary on the New Testa-

ment," "An Apology for the Protestants," and other tracts.—*Nouv. Dict. Hist.*

BEAUSOBRE (LEWIS) a native of Berlin, where he filled the post of counsellor to the king, born 1730. He was the author of a "Philosophical Disquisition on the Nature of Fire," "Les Songes d'Épicure," "Le Pyrrhonisme du Sage," and other tracts; and died in the year 1784.—*Ibid.*

BEAUVAIS. There were two of this name, the first, **WILLIAM**, born 1698, was an antiquarian of some celebrity, and a member of the literary societies of Orleans, Cortona, &c.; he published a work on the medals of the Roman Empire, in 3 vols, 12mo, 1767, and died in 1773. The second, **CHARLES NICHOLAS**, was a native of Orleans, where he was born in the year 1745. He practised physic at Montpellier, and is the author of some essays on the history and antiquities of his native city, a topographical description of Mount Olivet, and other tracts. His death took place in 1794.—*Ibid.*

BEAUVAIS (VINCENT DE) a friar of the Dominican order, who was a native of the diocese of Beauvais in France. He was honoured in a particular manner with the esteem of his sovereign Lewis IX, who supplied him with the means of prosecuting the great literary work which has preserved his name from oblivion. It is a kind of Encyclopædia, divided into four parts: the first, entitled "Speculum Doctrinale," treats of the sciences in general, from grammar to theology; the second, "Speculum Historiale," contains a summary of general history from the beginning of the world to the year 1254, of which there is a continuation by an anonymous author to 1494; the third part, or "Speculum Naturale," relates to physics, or natural philosophy; the fourth, "Speculum Morale," is a treatise on vice and virtue. This last part was not written by Vincent, who, dying in 1264, was prevented from completing the work according to his original design.—*Moreri.*

BEAUVILLIERS (FRANCIS DE) duke de St Aignan, born in 1607. He entered into the army and distinguished himself in several engagements; on which account Lewis XIV raised him to a dukedom. He was often employed in the direction of festivals at court, in which he displayed a great deal of taste. Many of his occasional verses are to be found in the works of Madame Deshoulières, of Scarron, &c. He died in 1687. His eldest son, **PAUL** duke de Beauvilliers, first gentleman of the bed-chamber, minister of state, and chief of the royal council of finance, was governor to the duke of Burgundy, father of Lewis XV. He died in 1714, at the age of sixty-six. He was highly distinguished for his cultivated talents and probity of character; as well as for his success in the education of the duke of Burgundy, which he shared with the learned and virtuous archbishop of Cambrai. **PAUL HIPPOLYTUS DE BEAUVILLIERS**, duke de St Aignan, was the third son of the preceding. He had the rank of lieutenant-general in the army, the collar of the royal orders, and was a member of the French

Academy. He was the author of "Amusemens Littéraires," and a memoir in the Transactions of the Academy of Inscriptions, on the cession made by Andrew Paleologus, of the empire of Constantinople and Trebizond, to Charles VIII of France.—*Nouv. Dict. Hist.*

BEAUZEE (NICHOLAS) a member of the French Academy and professor of grammar in the Military School, was born at Verdun in 1717. Of his life few particulars are known, except that he was selected by the Encyclopædists to furnish them with the article on grammar. About the same time he published his "Grammaire générale en Exposition raisonnée des Elemens nécessaire du Langue, pour servir de fondement à l'étude de toutes les Langues," Paris, 1767, 2 vols. The work falls short of its title, but is valuable in reference to the French language. He also published the abbe Girard's "Synonymes," with great additions and translations of Sallust and Quintus Curtius, which became very popular. He is also said to be the author of an abridged exposition of the historical proofs of the Christian religion.—*Dict. Hist.*

BECAN (MARTIN) a Jesuit of Hilvarenbic in Brabant, born 1561. He entered into the polemical contest carried on between Bellarmine and James the First of England, with less discretion than zeal; the latter indeed was so predominant, that, even the Catholics, whose party he espoused, disclaimed the extravagance of his tenets; and the parliament of Paris ordered his writings to be publicly burnt, the Pope himself condemning them. He died in 1621.—*Moreri.*

BECCADELLI (ANTONIO) generally known by the name of Antonio il Panormitano, from Palermo, his native city, was born in 1374. He was an able but licentious writer, descended from an ancient Bolognese family. In the early part of his life he made the law his profession, entering the service of the duke of Milan, who much admired his talents and gave him a handsome salary. The emperor Sigismund was another of his patrons, and crowned him with the poetic laurei in person, in 1432, at Pavia, in which university he was then professor of elocution and the belles lettres. In 1435 he accompanied Alphonso king of Naples to his court, and became a great favourite with that prince, whom he attended in his expeditions, receiving from his bounty admission into the order of nobility and an estate correspondent with his new dignity. In 1451 he persuaded his patron to send him in a diplomatic character to Venice, for the purpose of procuring the arm-bones of the historian Livy, an author for whom he felt and professed so high a veneration, as actually to sell a valuable farm, in order with the produce to purchase a splendid manuscript of his works, written by the Florentine Poggio. We learn that he succeeded in attaining the object of his embassy. He married in his old age a young woman who brought him a large family, and died at Naples in 1471. His works, written in the Latin tongue, both in prose and verse, are distinguished for the

purity and elegance of their diction. The principal of them was a collection "Of the sayings and doings of Alphonso king of Arragon," for which he obtained from that monarch a thousand crowns in gold. This work has gone through several editions. He also published five books of his Letters and Oration, which were printed at Venice in 1453. But the work which has contributed most strongly to give a disgraceful notoriety to his name, is a collection of short poems in two books, entitled "Hermaphroditus," so infamous for their obscenity, as to draw down upon his head the severest and most deserved censure, not only from his open opponent Lorenzo Valla, but even from his friend Poggio, himself a serious offender in the same way. Many of these pieces appear never to have been printed, but the whole collection is yet extant in more than one of the Italian libraries.—*Moreri*.

BECCADELLI (LUDOVICO) born 1502, the descendant of a noble Bolognese family, who, having taken his degrees at Padua, became attached to the suite of cardinal Pole. He assisted at the council of Trent; and having executed a diplomatic mission from the Pope to the Venetian republic with great adroitness and success, the pontiff rewarded his exertions with the archbishopric of Ragusa. Cosmo the First of Tuscany afterwards induced him to resign his see, and to undertake the superintendance of the studies of his son, promising him the archbishopric of Pisa for his reward. This piece of preferment however he never obtained, but died provost of Prato in 1572. He wrote the lives of cardinals Pole and Bembo in Latin, and that of Petrarch, in Italian. The latter is considered a more correct biographical sketch of the poet of whom it treats than any which preceded it, and is much esteemed.—*Ibid*.

BECCAFUMI, see **MICHAELINO**.

BECCARIA (BONESANO CESAR, Marquis) an eminent Italian political writer. He was born at Milan in 1735, and showed from infancy an attachment to the study of social philosophy. Count Firmian, the Austrian governor of Lombardy, distinguished himself not only as a liberal patron of sciences and letters, but as the friend of every reform which could be grounded on solid principles. Under the auspices of this nobleman, and in conjunction with other literary men, Beccaria projected a periodical work, which was to contain essays on various subjects of philosophy, morals, and politics, of a nature to enlighten the public mind. It accordingly appeared in 1764, under the title of "The Coffee House," and, when collected, formed 2 vols. 4to. In the same year Beccaria published his celebrated treatise on crimes and punishments, "Dei Delitti e delle Pene," 12mo, which became celebrated throughout Europe. Six Italian editions were immediately bought; and it is computed that it has run through more than fifty editions and translations. It had the merit of breaking ground on this important subject; and although a few of its positions and principles may be

disputed or objected to, it proved the immediate parent of much salutary reform in the criminal codes of the Continent. This fame was not unattended with danger, as it was clear that the principles which the author invariably supported were hostile to arbitrary power. Count Firmian however protected him; and in 1768 the Austrian government founded a professorship of political economy for him. His lectures on that science were published in 1784, under the title of "Elements of Public Economy." In 1770 he published "Disquisitions on the Nature of Style," in which, like Helvetius, he endeavoured to inculcate the paradoxical notion, that nature had implanted in every individual an equal degree of genius, and that education was all in all. The marquis Beccaria was a great lover of men of letters, a beneficent patron to those who were entering the career of literature, and a warm and steady friend. He has been charged with venality in the exercise of a magisterial office, and compared with Bacon on that account; but how far political enmity may have had to do with the report, it is not at present easy to ascertain. He died in November 1794.—*Nour. Dict. Hist.*

BECCARIA (JOHN BAPTIST) an eminent natural philosopher of the eighteenth century, was born at Mondovi in Piedmont in 1781. He entered into the religious society of the Pious Schools, and became professor of mathematics and philosophy, first at Palermo and then at Rome. He was afterwards called to the professorship of experimental philosophy at Turin, and made tutor to the sons of the king of Sardinia. Though eminent in various branches of science, it was principally in electricity that he distinguished himself as a discoverer. He adopted the Franklinian theory of positive and negative electricity, but with some modifications of his own. His chief works are—"Dell' Eletticismo artificiale et naturale," Turin, 1753, 4to, and "Lettere dell' Eletticismo," 1758, folio. He also wrote an "Essay on the Cause of Storms and Tempests," and another "On the Meridian of Turin." Father Beccaria, who was estimable for his works as well as knowledge, died at an advanced age at Turin, in 1781.—*Nour. Dict. Hist.*

BECCHER or **BECHER** (JOHN JOACHIM) an eminent chemist and natural philosopher of the seventeenth century. He was born at Spires in 1645; and adopting the medical profession, became physician to the elector of Mentz, and afterwards to the elector of Bavaria. He gained considerable celebrity at Vienna and Haarlem, for improvements in arts and manufactures; but the jealousy of rivals, and the neglect of those who profited by his inventions, induced him to retire to England, where he died in 1685. His works are numerous, and relate to several subjects. Among those on chemistry may be mentioned—"Ædipus Chemicus," "Metallurgia, de generatione, refinatione, et perfectione Metallorum;" "Physica Subterranea," with various appendices; "Parnassus Medicinalis Illustratus;"

"Laboratorium Portatile;" and "The Chemical Rose Garden." He was the first writer on theoretical chemistry whose speculations are deserving of attention. His works abound in shrewd and witty remarks, and in deep and curious reasoning; in frivolous subtlety, and in weighty and sensible observations. His hypotheses respecting the origin of the varieties of matter from the mutual agencies and combinations of a few elementary principles, though unnecessarily blended with scriptural history, are characterized by considerable brilliancy of thought and originality of invention. *Brande's Diss. on the Progress of Chemistry. Suppl. to Encycl. Brit.*

BECK (FRANCIS) an eminent musician, born at Bourdeaux. Four operas by this composer, each consisting of six symphonies, were published at Paris in 1776. His "Stabat Mater," performed in 1783, is also much admired. He died in 1809.—*Biog. Dict. of Music.*

BECKER (DANIEL) a native of Königsberg, who studied medicine and became first physician to the elector of Brandenburg. He died in 1670, in the forty-third year of his age. He was the author of several medical tracts, among which is one entitled, "De Cultrivoro Prussiaco," Lugd. Bat. 1638, 8vo. It contains an account of a Prussian shoemaker who swallowed a knife which was afterwards extracted from his side.—*Moreri.*

BECKET (THOMAS) the most celebrated Roman Catholic prelate in the English annals, was born in London 1119. He was the son of Gilbert, a London merchant, and something like romance has given to him a mother in the person of a Saracen lady, to whose father he was a prisoner in Jerusalem during the crusades. After studying at Oxford and Paris, he was sent, by the favour of Theobald archbishop of Canterbury, to study civil law at Bononia in Italy, and on his return was made archdeacon of Canterbury and provost of Beverley. His claim to the good opinion of Theobald was founded on his talents for negotiation in a matter of the highest importance to England—the soliciting from the pope the prohibitory letters against the crowning of Eustace, the son of Stephen, by which that design was defeated. This service not only raised Becket in the esteem of the archbishop, but in that of king Henry II; and hence the foundation of his high fortune. In 1158 he was appointed high-chancellor and preceptor to prince Henry, and at this time was a complete courtier, conformable in every respect to the humour of the king. He was in fact his prime companion, observed the same hour of eating and going to bed, held splendid levees, and courted popular applause. In 1159 he made a campaign with the king in Toulouse, having in his own pay 700 knights and 1200 horsemen; and it is said he advised Henry to seize the person of Louis king of France, shut up in Toulouse without an army. This counsel however, so indicative of the future martyr, being too bold for the lay councillors of one of the boldest monarchs of the age, was

declined. In the next year he visited Paris, to treat of an alliance between the eldest daughter of the king of France and prince Henry, and returned with the young princess to England. He had not enjoyed the chancellorship more than four years, when his patron Theobald died, and king Henry was so far mistaken as to raise his favourite to the primacy, on the presumption, that he would aid him in those political views, in respect to church power, which all the sovereigns of the Norman line embraced, and which in fact caused a continuous struggle until its termination by Henry VIII. It has been asserted, that Becket told the king what he was to expect from him; but, independent of the appointment itself, there is evidence to prove his eagerness to obtain the dignity, and the disgust entertained by Henry at the first symptoms of the real temper of the man whom he had been so anxious to promote. Becket was consecrated archbishop in 1162, and immediately affected an austerity of character which formed a very natural prelude to the part which he in future meant to play. Pope Alexander III held a general council at Tours in 1163, at which Becket attended and made a formal complaint of the infringements by the laity on the rights and immunities of the church. On his return to England, he began to act in the spirit of this representation, and to prosecute several of the nobility and others holding church possessions, whom he also proceeded to excommunicate. Henry, consistently with the conduct of an able and politic monarch, was anxious to recal certain privileges of the clergy, which withdrew them from the jurisdiction of the civil courts; and it was not without a violent struggle and the mediation of the Pope, that Becket finally acquiesced. The king soon after summoned a convocation or parliament at Clarendon, to the celebrated constitution of which, although the archbishop swore that he would never set his fiat, he at length subscribed, and alleging something like force for his excuse, by way of penance suspended himself from his archiepiscopal functions until the Pope's absolution could arrive. Finding himself the direct object of the King's displeasure, he soon after attempted to escape to France; but being intercepted, Henry in a parliament at Northampton charged him with a violation of his allegiance; and all his goods were confiscated. Not only so, but a suit was commenced against him for money lent him during his chancellorship, and for the proceeds of the benefices which he had held vacant while in that capacity. In this desperate situation, he with great difficulty and danger made his escape to Flanders, and proceeding to the Pope at Sens, humbly resigned his archbishopric, which was as politically restored. He then took up his abode at the abbey of Pontigny in Normandy, whence he issued expostulatory letters to the king and bishops of England, in which he excommunicated all violators of the prerogatives of the church, and included in the censure the principal officers of the crown. Henry was so exasperated, that he banished all his relations, and obliged the

Cistercians to send him away from the abbey of Pontigny; from which he removed, on the recommendation of the king of France, to the abbey of Columbe, and spent four years there in exile. After much negotiation, in which the haughtiness of the archbishop sometimes disgusted, and the pride of Henry as frequently intervened, a sort of reconciliation took place in 1170, on the whole to the advantage of Becket, who, being restored to his see with all its former privileges, behaved on the occasion with excessive haughtiness. After a triumphant entry into Canterbury, the young king Henry, crowned during the life-time of his father, transmitted him an order to restore the suspended and excommunicated prelates, which he refused to do, on the pretence that the Pope alone could grant the favour, although the latter had lodged the instruments of censure in his hands. The prelates immediately appealed to Henry in Normandy, who, in a state of extreme exasperation, exclaimed—"What an unhappy prince am I, who have not about me one man of spirit enough to rid me of a single insolent prelate, the perpetual trouble of my life!" These rash and too significant words induced four attendant barons, Reginald Fitz-Urse, William de Tracy, Hugh de Morville, and Richard Breto, to resolve to wipe out the king's reproach. Having laid their plans, they forthwith proceeded to Canterbury; and having formally demanded of the archbishop to restore the suspended prelates, they returned in the evening of the same day (December 29, 1170,) and placing soldiers in the court-yard, rushed with their swords drawn into the cathedral, where the archbishop was at vespers, and advancing towards him, threatened him with death, if he still disobeyed the orders of Henry. Becket, without the least token of fear, replied, that he was ready to die for the rights of the church, and magnanimously added, "I charge you, in the name of the Almighty, not to hurt any other person here, for none of them have any concern in the late transactions." The confederates then strove to drag him out of the church; but not being able to do so, on account of his resolute deportment, they killed him on the spot with repeated wounds; all which he endured without a groan. The conduct of Henry, and the consequences of this assassination, form a part of English history wherein the discerning student will perceive the subtle policy of the court of Rome, which only felt and acted upon it, in the advancement of its general object, with a due regard to the power and strength of character of Henry. Even the perpetrators of the deed, on taking a voyage to Rome, were admitted to penance, and allowed to expiate their enormity in the holy land. Thus perished Thomas Becket, in his fifty-second year, undoubtedly a martyr to the cause which he espoused; a fact that forms a very equivocal claim to praise in the general scale of social estimation. In regard to the vigour of his intellect, and the extent of his talents, there can be no difference of opinion; and it is equally to be

conceded, looking to the long course of suspension and mortification which he endured, that he was sustained by a principle of what he himself deemed duty. A theory has also been started, which assumes, that the power of the priesthood was beneficial in this stage of the European progress, and that the force of a single despotism was thereby avoided. Grounds of defence, which are formed for principles and actions which those who adopt them have never pleaded for themselves, are always to be suspected. Henry might be as personally ambitious as Becket, and as warm an enthusiast for the paramount authority of the crown, as the archbishop for the *imperium in imperio* of the church; but the one contended for a general principle of all government; the other for a most dangerous exception to it. For the rest, Becket deserves the secondary praise of consistency and courage, but exhibited nothing of that high degree of moral perception, which exemplifies wisdom in the abstract. He was canonized two years after his death, and miracles abounded at his tomb. In the reign of Henry III his body was taken up and placed in a magnificent shrine erected by archbishop Stephen Langton; and of the popularity of the pilgrimages to his tomb, the Canterbury Tales of Chaucer will prove an everlasting testimony.—*Biog. Brit.*

BECKINGTON (THOMAS) an English prelate, was born in the parish of Beckington in Somersetshire, towards the close of the fourteenth century. He was educated at Winchester, and obtained various preferments, until in 1429 he became dean of the court of Arches, and was one of three appointed to draw up a code of law in conformity with which the Wickliffites were to be proceeded against. Having been tutor to Henry VI, he wrote a formal treatise against the salique law, and strenuously asserted the right of the kings of England to the throne of France.—For this and other services, he was made secretary of state, keeper of the privy seal, and bishop of Bath and Wells. He was a munificent benefactor to the University of Oxford and to his see, and died at Wells in 1465. His book against the salique law, with some others of his pieces, and a large collection of letters, is in the Lambeth library.—*Biog. Brit.*

BECKMANN (JOHN ANTHONY) a native of Hoya in the electorate of Hanover, who in 1767 became professor of physic in the university of Gottingen, where he died in 1811. He was an ingenious and learned man, and is chiefly known in this country as the author of a history of discoveries and inventions, which has been translated into English, and published in 4 vols. 8vo. This is a work of vast research, affording much curious information. He also wrote a history of the earliest voyages made in modern times, and many papers in the Transactions of the Royal Society of Gottingen; besides publishing some editions of ancient authors.—*Supp. to Encyclo. Brit.*

BECON (THOMAS) a Puritan writer of the

centeenth century. He was the author of a book once very popular, entitled "The Sick Man's Salve," published about 1561. This is not, as might be imagined from its title, a medical treatise, but a book of devotion. It is frequently alluded to by Ben Jonson and contemporary dramatists. He also wrote "Reliques of Rome;" "David's Harpe, full of most delectable Harmony, newly stringed and set in tune," which Ritson supposes to be a metrical work; as also "Christmasse Carols, very new and godly;" and a long poem entitled "An Invective against Whoredome and all other Abominations of Uncleanesse." He was one of the Protestant refugees who went to Germany on the accession of queen Mary; and on his return home in the reign of Elizabeth, he was made prebendary of Canterbury. He died in 1570, leaving many works besides those just mentioned.—*Strype's Life of Cranmer. Ritson's Bibliographia Poetica.*

BEDA or BEDE. An eminent ecclesiastie of the eighth century, usually entitled the *venerable Bede*, was born in the year 672 or 673, in the neighbourhood of Wearmouth in the bishopric of Durham. From the age of seven until nineteen, he successfully pursued his studies in the monastery of St Peter at Wearmouth, under the care of the abbots Benedict and Ceolfred, and of the learned John of Beverly, who successively became bishop of Hexham and of York. Being then ordained deacon, he was associated in the office of educating the youth who resorted to the monastery for instruction, and pursued his own studies with unremitting ardour. In his thirtieth year he was ordained priest; and his fame for zeal and erudition reaching the ears of pope Sergius, he was invited to Rome, but in consequence of the death of that pontiff, never went there. It is not even certain that he ever left Northumberland; which of course reduces the incidents of his life to his literary pursuits and domestic occupations, as he accepted no benefice, and never seems to have interfered in civil transactions. History records no other period of his life, except the time of publishing his church history in 731. His last literary labour was a translation of the gospel of St John into Saxon, which he with difficulty completed on the very day and hour of his death. The writings of Bede were numerous and important, looking to the time in which they were written, and the exclusive subject of the writer, which extended to ecclesiastical affairs, religion, and education only. His "English Ecclesiastical History" is the greatest and most popular of his works, and has acquired additional celebrity by the translation of king Alfred. The collections which he made for it, were the labour of many years. Besides his own personal investigations, he kept up a correspondence with the monasteries throughout the Heptarchy, to obtain archives and records for his purpose; and thus nearly all the knowledge possessed of the early state of Christianity in this country, is due to

Bede. A history of the church being the avowed object of his work, it contains little in reference to secular matters, and therefore merits not the censure of Milton on that account. It is more liable to objection for the admission of so much miracle and legend, which however is only a part of the common superstitious credulity of the day. There have been several editions of the original Latin, which is easy, although not elegant, the latest and best of which is that of Dr. Smith, Cambridge, 1722. There is a translation into English by Thomas Stapylton, DD, Antwerp, 1505, besides the Saxon version of Alfred. Bede was also the author of many other works, a catalogue of which he subjoined to his history. Several of these were printed early; but the first general collection of his works was that of Paris, 1554, 3 vols, folio. Some of his treatises have been published by Mr Wharton, from MSS in the library at Lambeth palace, London, 4to, 1693. While the number and variety of the writings of Bede show the extent of his erudition, his probity, moderation, and modesty, ensured him general respect; and his disinterestedness is proved by the fact that he was never any thing but an unbeficed priest. A letter of advice which he wrote late in life to Egbert archbishop of York, proves at once the purity of his morals, the liberality of his sentiments, and the excellence of his discernment; his wish being to curtail the number of monasteries, and to increase the efficacy and respectability of the secular clergy. Notwithstanding the veneration with which he was regarded, not a single miracle is recorded of him; and as monks were the great miracle mongers, and such his views of monastic reform, this is not surprising. The manner of the death of this virtuous ecclesiastie was striking and characteristic. He was dictating a translation of the gospel of St John to an amanuensis. The young man who wrote for him said, "There is now, master, but one sentence wanting;" upon which he bade him write quickly, and when the scribe said, "It is now done," the dying sage ejaculated, "It is now done," and a few minutes afterwards expired in the act of prayer on the floor of his cell, in the sixty-third year of his age, in the month of May A.D. 735.—*Biog. Brit.*

BEDDOES (THOMAS, MD.) a physician of some celebrity, was born at Shiffnal, Salop, in the year 1760. He received his early education at Bridgnorth, and finished it at Oxford and Edinburgh. In 1786 he took his doctor's degree, and was appointed professor of chemistry at Oxford; an appointment which his political opinions, on the breaking out of the French Revolution, did not permit him to retain. In 1793 he removed to Bristol, where he began a career of medical and physiological researches, experiments, and lectures, which lasted for his life, and which, with more philosophical temperament, might have established for him a lasting reputation. He was capable of great things, but aimed at too many at once; and was too ardent and pre-

cipitant in all. Various publications came from his pen in rapid succession, until in 1808 he was seized with a liver complaint, which proved fatal in the December of the same year. A list of his various treatises, medical, chemical, scientific, economical, and political, would be too extensive for our limits; but they may be seen at length in his life by Dr Stock, from which this brief account is taken.

BEDELL (WILLIAM) a divine of the seventeenth century, eminent for his piety and learning. He was descended from a respectable family in Essex, and was born at Black Notley in that county in 1570, and educated at Emanuel College, Cambridge, of which he was chosen a fellow in 1593. From the university he removed to St Edmund's-bury, where he resided some years, distinguishing himself by a close attention to clerical duties. About 1604 he went to Venice with sir Henry Wotton, who had been appointed ambassador to the republic. The Venetians were at this period upon the point of separation from the papal see, in consequence of their disputes with Paul V; in which struggle against ecclesiastical despotism, the celebrated Paul Sarpi, usually called Father Paul, bore a prominent part. With this great man Bedell formed an intimate friendship, and on his return to England was entrusted with the manuscript of that father's histories of the council of Trent, and of the inquisition, and of the interdict issued by the Pope against Venice; which works he employed himself in translating. He retired for that purpose to his former station at St Edmund's-bury. In 1615 he was presented to the living of Horingsheath, in the diocese of Norwich. Here he remained twelve years in such a state of seclusion, that Diodati, an eminent Genevese divine who had known him at Venice, visiting England at that time, in vain enquired for him, and at last met with him merely by accident. This circumstance was the means of his being introduced to Morton, bishop of Durham; and his worth and talents becoming more generally known, in 1627 he was chosen provost of Trinity College, Dublin; an office which he was unwilling to accept till urged by the king's positive command. After presiding over that university about two years, he was advanced to the united bishoprics of Kilmore and Ardagh. In this station his conduct was most exemplary. He set himself to reform abuses among his clergy, one of the most important of which related to pluralities: previous to the abolition of which, he resigned the see of Ardagh, thus affording a pattern for the conduct of others. He was extremely active in his endeavours to convert the Roman Catholics, but conducted himself with so much mildness and prudence, as to gain the esteem of persons of all ranks among them. When the rebellion broke out in Ireland in 1641, bishop Bedell for a time was unmolested by the Catholic insurgents; and while his Protestant neighbours in general were driven from their homes, the sanctity of his mansion was respected; and it might probably have continued to be so, if he had not given

offence by granting a general asylum to the distressed of his own party. On his refusal to dismiss these refugees, he was, together with his family, seized and conveyed to a ruinous castle in the midst of a lake. The hardships he here suffered proved fatal; for being removed to the house of Mr. Sheridan, a Protestant minister, he was seized with a fit of illness, of which he died, February 7, 1641-2, in the seventy-first year of his age. He was interred in the church-yard of Kilmore; and the Irish insurgents who attended the solemnity, as a token of respect, fired a volley over his grave, some of them exclaiming, "Requiescat in pace ultimus Anglorum!"—"May the last of the English rest in peace!" Bishop Bedell wrote against Popery; but his principal literary work was a translation of the Old Testament into the Irish language, in which he was assisted by a Protestant convert named King, who had the reputation of being an elegant writer of the Erse, both in prose and poetry. This work was published many years after the death of the bishop, at the expense of the hon. Robert Boyle.—*Biog. Brit.*

BEDFORD (JOHN, duke of) one of the younger sons of king Henry IV, famous both as a statesman and a warrior. Shakespeare, who calls him prince John of Lancaster, introduces him in his plays of Henry IV as distinguishing himself by his youthful courage in the battle of Shrewsbury in 1403, and forming a sort of moral contrast to his more dissipated brother the prince of Wales. During the reign of Henry V, he participated in the fame acquired by the conquest of France; but it was after the death of that king, who by will appointed him regent of France, that his talents became fully developed. He displayed his military skill in the battle of Verneuil in 1424; after which the difficulties, which from various causes he experienced in endeavouring to maintain possession of the conquered provinces in France, afford the strongest proof of his abilities in surmounting them. The greatest blemish in his character is his cruel and unjustifiable execution of the maid of Orleans in 1431. He survived this event about four years, and dying in 1435 at Rouen, was buried in the cathedral of that city. Bedford likewise deserves notice for his patronage of the arts. One curious monument of his taste is still existing: it is the Bedford Missal, a small thick folio volume highly illuminated, of which the following account is given by Mr Dibdin in his *Bibliomania*, p. 253: "This missal, executed under the eye and for the immediate use of the famous John duke of Bedford [regent of France] and Jane [the daughter of the duke of Burgundy] his wife, was at the beginning of the 18th century in the magnificent library of Harley earl of Oxford. It afterwards came into the collection of his daughter, the well-known duchess of Portland, at whose sale in 1786 it was purchased by Mr Edwards for 215 guineas; and 500 guineas have been a few years ago offered for this identical volume. Among the pictures in it there is an interesting one of the whole length portraits of the duke and duchess; the

Bedford of the former of which has been enlarged and engraved by Vertue, for his portraits to illustrate the history of England. The missal frequently displays the arms of these noble personages, and also affords a pleasing testimony of the affectionate gallantry of the pair, the motto of the former being 'A vous entier,' that of the latter, 'J'en suis contente.' There is a formal attestation in the volume of its having been given by the duke to his nephew Henry VI as a most suitable present." This splendid missal contains 59 large and more than 1000 small miniature paintings, among which, besides the portraits above-mentioned, is one of Henry V. At the sale of Mr Edwards' library it was bought by the marquis of Blandford, now duke of Marlborough, for 687*l.* 15*s.* Gough the celebrated antiquary published a work in octavo, describing the Bedford Missal.—*Hume's Hist. of Eng.*

BEDFORD (FRANCIS RUSSEL, duke of) see RUSSEL (Francis.)

BEDFORD (ARTHUR) a learned clergyman of the church of England, who was a native of Gloucestershire, and was educated at Oxford, where he took the degree of MA. in 1691. After holding for several years some church preferment in Somersetshire, he was in 1724 chosen chaplain to Aske's hospital at Hoxton, where he died September 15, 1745. As an author he distinguished himself by a treatise on the "Evil and Danger of Stage Plays," in which he has produced "seven thousand instances of blasphemous and impious expressions taken out of plays of the present century, [the 18th] and especially of the last five years, in defiance of all methods hitherto used for their reformation:" to which he has added "above fourteen hundred texts of scripture, which are mentioned either as ridicul'd and exposed by the stage, or as opposite to their present practices." Mr Bedford, like his contemporary Jeremy Collier, argues against the propriety of dramatic productions, from the abuses which had crept into them, on which score there certainly existed strong grounds for his animadversions. He published other works on the same subject, as well as several single sermons and tracts. He was also the author of a treatise entitled "Scripture Chronology demonstrated by Astronomical Calculations," 1741, folio, which was praised by Dr Waterland.—*Chalmers's Biog. Dict.*

BEDFORD (HILKIAH) an English non-juring clergyman, who in 1714 was sentenced to fine and imprisonment for publishing a book entitled "The Hereditary Right of the Crown of England asserted," said to have been really written by the Rev. George Harbin. Mr Bedford translated from the Latin "The Life of Dr John Barwick," and from the French "An Answer to Fontenelle's History of Oracles." He died in 1724.—THOMAS BEDFORD, his son, was educated at Cambridge, and became the minister of a congregation of non-jurors at Compton in Derbyshire, where he died in 1773. He published "Simeonis Monachi Dunelmensis libellus de exordiis atque procurso Dunel-

mensis Ecclesiae," 1732, 8vo, and an "Historical Catechism."—*Ibid.*

BEDFORD (ARTHUR) an English composer who lived in the early part of the last century. He published in 1712 an essay on the "Method of Singing the Psalms of David in the Temple before the Babylonish Captivity," and a small treatise entitled "The Abuse of Music."—*Biog. Dict. of Mus.*

BEGER (LAWRENCE) a German author, the son of a tanner of Heidelberg, in which town he was born in 1653. He applied himself to the study of theology, law, classical literature, and antiquity, with such success as to obtain in 1677 the appointment of librarian, &c. to the Elector Palatine. In order to gratify his patron, who loved another lady while his wife was living, Beger composed a defence of polygamy, under the title of "Considerations on Marriage, by Daphnæus Arcuarus," to which he subsequently wrote a refutation himself, to please the elector's son, although the latter work was never printed. His other writings are—"Thesaurus ex thesauro Palatino selectus," folio, 1685; "Thesaurus reg. elect. Brandenburgicus," 3 vols. folio; "Meleagrides et Actolia," and "Cranae Insula Laconica," both 4to, 1696; "Regum et imperatorum Romanorum numismata," 1700, folio; "De nummis Cretensium serpentiferis," 1702, folio; "Lucernæ veterum sepulchrales," 1702; "Numismata Pontif. Roman. aliorumque rariora," 1703, folio; and "Bellum et excidium Trojanum illustratum," 4to. He died at Berlin in 1705.—*Moreri.*

BEGUILLET (EDMUND) a French author, educated for the bar, at which he practised before the parliament of Dijon. He wrote several treatises on "The General Principles of Agriculture," on the "Cultivation of Vines," &c.; another, "Sur les Avantages de la Moture economique et du Commerce des Farines en Détail;" "Sur l'Ergot, ou Blé cornu," 4to; "De la connoissance générale des Grains," in 3 vols. 8vo; "Traité général des Substances et des Grains," 6 vols. 8vo; and "Manuel de meunier et du charpentier des Moulines," 8vo. He died in 1736.—*Nouv. Dict. Hist.*

BEHAM (BARTHOLOMEW and JOHN SEBALD) brothers, natives of Nuremberg. The elder (who is sometimes also called Hans) was a painter as well as an engraver of considerable merit, following a good deal the style of Albert Durer and Aldegraver. The younger settled at Rome, where he learnt the art of engraving under Marc Antonio, and became very eminent. They flourished in the 16th century.—*Bryan's Dict. of Painters and Engr.*

BEHEM (MARTIN) an eminent geographer, mathematician, and navigator, of the fifteenth century, was born of a noble family at Nuremberg. Impressed, as it is said, with the idea of a western continent, he applied in 1459 to Isabella, daughter of John I king of Portugal, regent of the duchy of Burgundy and Flanders, who supplied him with a vessel, with which he discovered the island of Fayal, one of the Azores, or at least established a colony of Flemings there, for the discovery is

claimed for Gonsalvo Velho, a Portuguese. After residing at Fayal for twenty years, in 1484 (eight years before the expedition of Columbus) according to letters said to be written by himself, and still preserved in the archives of Nuremberg, he induced John II of Portugal, to intrust him with the command of an expedition to the south west. In this voyage he is said to have discovered Brazil, and even to have sailed to the Straits of Magellan, which he mathematically delineated on a map for the king of Portugal. These letters bear date 1486; and the event did not entirely escape contemporary writers, it being particularly related in the Latin Chronicle of Hartman Schedl. Peter Mateus too, who wrote on the canon law two years before the expedition of Columbus, also mentions Behem and his discoveries. They are likewise referred to by Cellarius and Riccioli, the first of whom adverts to the service which his discoveries and charts effected for Magellan, while the latter asserts that Columbus obtained direct information from Martin Behem himself in Madeira. It is also proved that he was knighted by the king of Portugal, and otherwise honoured as a person of great merit; although these rewards some writers attribute to his discovery of Congo, whence he brought gold and other valuable matters. He died at Lisbon in July 1506, leaving no works behind him except the chart before mentioned, and a terrestrial globe, still in the library of Nuremberg, formed from the writings of Ptolemy, Pliny, Strabo, Marco Polo the Venetian, John Mandeville the Englishman, and his own discoveries. Dr Robertson treats the story of his discovery of America as a legend; and without well knowing how to dispose of the positive testimony, it is certainly strange that he should leave the world without more formally claiming it. It is still more extraordinary, that the court of Portugal should not protest against the exclusive claim of Spain. For the pretensions of Behem however the memoir of M. Otto, in the second volume of the American Philosophical Transactions, is very able, and may be profitably consulted by all who interest themselves in this curious question.—*Suppl. to Encyclop. Brit.*

BEHN (APHARA) a lady of some celebrity as a writer of plays and novels, was descended from a good family in Canterbury by the name of Johnson; and was born in the reign of Charles I. Her father, through the interest of his relation, lord Willoughby, being appointed lieutenant-general of Surinam, embarked with his family for the West Indies, taking with him Aphara, who was then very young. The father died at sea; but his family safely arrived at Surinam and remained there some years, during which time Aphara became acquainted with the American prince Oroonoko, whom she made the subject of a novel subsequently dramatised by Southern. On her return to England, she married Mr Behn, a merchant of London of Dutch extraction; but was probably a widow, when selected by Charles II as a proper person to acquire intelligence on

the Continent during the Dutch war. She accordingly took up her residence at Autwerp, where she engaged in gallantries for the good of her country; and it is said that by the means of one of her admirers she obtained and transmitted advice of the intention of the Dutch to sail up the Thames. This intelligence, although true, being discredited, she gave up politics and returned to England, and devoted herself to intrigue and writing for support; and as she had a good person and much conversational talent, she became fashionable among the men of wit and pleasure of the time. She published three volumes of poems of Rochester, Etherege, Crisp, and others, with some poetry of her own; and wrote seventeen plays, the heartless licentiousness of which was disgraceful both to her sex, and to the age which tolerated the performance of them. She was also the author of a couple of volumes of novels, and of the celebrated love letters between a nobleman and his sister-in-law (lord Gray and lady Henrietta Berkeley.) Pope, in his character of women, alludes to Mrs Behn under her poetical name of Astrea:

“The stage how loosely does Astrea tread,
Who fairly puts her characters to bed.”

She died in 1689, between forty and fifty years of age, and was buried in the cloisters of Westminster abbey.—*Biog. Brit. Cibber's Lives.*

BEK (DAVID) a portrait painter of eminence, born in the year 1621. Delft and Arnheim contend for the honour of having given him birth. He was a pupil of Vandyck, whose style he imitated, and was celebrated for the rapidity with which he executed his pictures. Charles I of England, whose sons and nephews were his pupils, used to say that he supposed he could paint while riding post. He worked for most of the European sovereigns of his age, and is said to have had in his possession, at the time of his death, nine gold chains with corresponding medals, all presented him by different crowned heads who had sat to him. A popular story is told of him, that being taken ill once, while travelling in Germany, a swoon into which he fell continued so long that his attendants fancied him dead, and in that persuasion laid him out on some straw in a room of the inn. Two of them, sitting up to watch the supposed corpse, poured in a frolic part of the contents of a flask of brandy down his throat, exclaiming, that he had been a good master and loved a glass while living, and out of gratitude they would not suffer him to be without one now he was dead. The violent stimulus restored suspended animation, and saved Bek from being interred alive. He was afterwards successively in the service of the kings of Denmark and France, and of Christina queen of Sweden, whose court he quitted in 1656 on a visit to his relations at the Hague, but died in the same year soon after his arrival there.—*Pilkington.*

BEKKER (BALTHASAR) a famous Dutch divine, who was a native of the village of Warthuisen in the province of Groningen, where his father was minister. He studied at the universities of Groningen and Franeker

and became minister of a village near the latter. In 1666 he removed to Franeker, and in that place he began to distinguish himself by the freedom with which he canvassed opinions sanctioned by antiquity and generally believed, relative to the agency of evil spirits. The sentiments he promulgated were very obnoxious to the orthodox; and he was, in consequence of the opposition he experienced, obliged to relinquish his office at Franeker, and at length to settle at Amsterdam. There he published a full exposition of his system in a work entitled "The World Bewitched," 1691. He denies the possibility of demoniacal possessions or sorcery, and virtually questions the existence of the devil and evil spirits. He made some converts, and he met with a host of opponents. The pulpit as well as the press was made the vehicle of animadversion on his heterodox system, and the aid of persecution was called in to reclaim or punish so dangerous a heretic. He was deposed from his pastoral office; but in consideration of the excellence of his moral character, the magistrates of Amsterdam continued his salary. On the occasion of his deposition a satirical medal was struck, representing the devil, dressed like a clergyman, riding on an ass, and displaying a banner in token of triumph. Bekker, nothing daunted by opposition, published answers to his adversaries, which are said to be written in a strain of moderation of which they had by no means set him the example. He died in 1698, aged sixty-four. His book, which contains much curious and interesting information, was translated into French with the title of "Le Monde enchanté," and published in 1694, 4 vols. 12mo: there is also an English translation. He likewise wrote "Researches concerning Comets," and other works on theological and philosophical subjects.—*Moreri. Aikin's G. Biog.*

BEL (JOHN JAMES) a native of Bourdeaux, in which city he was born in 1693. He was a counsellor of the parliament, and director of the academy, which at his death he endowed with a library, a house, and other valuable donations. He was the author of a "Dictionnaire Neologique," a work afterwards considerably augmented by Des Fontaines, and levelled against the affected phraseology of modern writers. He also published in 1724 an ironical apology for M. Houdart de la Motte, in 4 letters, 8vo, being in fact a satire on his tragedies; "Observations on Voltaire's Marianne;" a "Dissertation on the Abbe Dubos's opinion concerning Taste," &c. besides several professional tracts. Visiting Paris in 1738, to augment his information on certain points connected with several scientific and literary works which he had in embryo, excess of study brought on an illness which carried him off in his forty-sixth year.—*Nouv. Dict. Hist.*

BEL (MATHIAS) more generally known by his Latin termination Belius, an ecclesiastic, born at Otsova in Hungary, 1684. Having commenced his education at Neusohl and Presburg, he completed it at Halle, in which

university he studied medicine for two years, but afterwards abandoned it for theology, becoming tutor in the family of A. H. Frank, the divinity professor. In 1714 he became rector of the school at Presburg, and pastor of a congregation in that city. He collected a quantity of valuable materials for the history of his native country, many of which he published under the titles of "Apparatus ad Historiam Hungariæ," "Notitia Hungariæ novæ," &c. The emperor Charles VI was so much delighted with the latter work, that he ennobled him (a favour Bel would gladly have declined, and kept as secret as possible) besides making him imperial historiographer. His other works are, "Prodromus Hungariæ novæ et antiquæ," folio, 1723; "De peregrinatione Lingue Hungariæ in Europam;" "De vetere Literatura Hunno-Scythicâ," 4to; and "Præfationes in Scriptores Hungaricarum rerum veteres," 3 vols. folio. Pope Clement the XIIth, the empress of Russia, and the king of Prussia, also distinguished him by many proofs of their esteem and munificence till the day of his death, which took place August 29, 1749. Besides his original writings, he translated the Bible and several theological tracts into the Bohemian language with great spirit and fidelity.—*Nouv. Dict. Hist.*

BEL (CHARLES ANDREW) son of Mathias, born July 13, 1717, at Presburg, studied at Jena, Altdorf, and Strasburg. In 1741, having accompanied a nobleman to Leipsic, he obtained there the professorships of poetry and moral philosophy, and became librarian to the university, with the rank of counsellor of state. He published a treatise "De vera Origine et Epocha Hunnorum, Ararum, Hungarorum in Pannonia," printed in 4to, 1757, translated Watterville's History of Switzerland, edited the "Decades rerum Hungaricarum" of Bonfonius, and succeeded Menek as editor of the "Acta Eruditorum" and Literary Gazette of Leipsic, which he conducted from 1754 to 1781. He died suddenly, April 1782, it is said by his own hand.—*Ibid.*

BELIDOR (BERNARD FOREST DE) an eminent mathematician and engineer, a native of Catalonia, born 1697. He obtained the situation of royal professor at the artillery school of La Fere, and that of provincial commissary of artillery, at an early age. While thus engaged, having ascertained by experiment that a considerable diminution of the powder used in charging cannon might take place without injuring the projectile force, he sent a memorial upon the subject direct to cardinal Fleury, which rousing the jealousy of the grand master of artillery, the official channel of communication with the minister, his influence was exerted with success to deprive him of both his places. The patronage however of the prince of Conti, whom he accompanied to Italy, restored him at length to favour; and under the ministry of Belleisle he obtained the inspectorship of artillery, with the cross of St Louis, and apartments at the arsenal of Paris. He published "La Science de l'Ingenieur," 4to; "Dictionnaire portatif de l'Ingenieur," 8vo;

"La Science des Ingenieurs dans la conquite des travaux les Fortifications," 4to; "Sommaire d'un cours d'Architecture militaire, civil, et hydraulique," 12mo; "Architecture hydraulique," 4 vols. 4to; "Traité des Fortifications," 2 vols. 4to; "Le Bombardiere Française," 4to; and "Nouveau cours de Mathématique," 4to. He died in 1761.—*Nouv. Dict. Hist.*

BELISARIUS, one of the commanders of the emperor Justinian, and the greatest general of declining Rome. In 529 he marched against Cabades king of Persia, which war he concluded successfully. He next conducted a naval expedition into Africa, and taking Carthage, marched against Gelimor, king of the Vandals, whom he led prisoner to Constantinople. He was next dispatched by Justinian against the Goths in Italy, and arriving with his fleet on the coast of Sicily, captured Catania, Syracuse, Palermo, and various other towns. He then proceeded to Naples, and having taken it, marched to Rome, the keys of which he sent to the emperor. Theodosius, king of the Goths, having been assassinated, Vitiges his successor returned to Ravenna, where he assembled an immense force, and hastened to besiege Rome, before which he lay a whole year, until the Emperor sent a force for its relief, and the Gothic king, after a vain attempt on Rimini, was obliged to shut himself up in Ravenna. After much fighting and some negociation, Belisarius took Ravenna, and Vitiges too, whom he carried captive to Constantinople, but was not received with the cordiality which his services merited. He was soon however obliged to quit that capital, to march against Chosroes king of Persia, whom he chased back into his own dominions. A more dangerous foe called for his services in Italy, in the person of Totila, who had been elected king of the Goths. Ill supplied with troops and resources, he was unable to contend with the latter in the field; nor, badly seconded as he was by his officers, could he prevent him taking Rome. He was finally called from this disastrous service, in which his secret enemies found means to impede all his plans and exertions, and returned with diminished glory to Constantinople, where he still maintained a high station near the throne of Justinian. About ten years afterwards, on a sudden irruption of the Bulgarians across the frozen Danube, he was called once more into activity. Hastily assembling a tumultuary band of soldiery, he placed himself at the head of it, and saved the capital by putting the barbarians to flight. The remainder of his days was doomed to misfortune and disgrace. Suspensions being infused into the aged and jealous Emperor, of a design against his crown and life on the part of Belisarius, he was on very incompetent testimony condemned; and although his life was spared, his estates were confiscated, and he was guarded as a prisoner in his own house. At length his innocence was recognized, and his liberty and fortune restored; but he survived this acknowledgment only eight months, his

death taking place in 565. The story of his deprivation of sight, and begging in the streets of Constantinople, is a fiction of later times, altogether unsupported. It was the misfortune of Belisarius to be united to a woman whose personal conduct much disgraced him; but who made some amends for her profligacy by her political penetration, courage, and active abilities.—*Univ. Hist. Gibbon.*

BELL (JOHN) an eminent surgeon and ingenious scholar, engaged in practice for many years at Edinburgh, where he delivered anatomical lectures, and published several professional works of importance. Among these are—"Discourses on the Nature and Cure of Wounds," 8vo; "The Anatomy of the Human Body," 3 vols. 8vo; "Principles of Surgery," 3 vols. 4to. A few years ago he travelled to Italy, and dying at Rome in 1821, left for the press a work published in 1825 with the title of "Observations on Italy," 4to. This gentleman possessed learning, talents, and a cultivated taste; and in his posthumous publication he has shown, that he was well qualified to describe and to appreciate the general character and peculiar beauties and curiosities of a country which was inhabited by one of the greatest nations of antiquity.—*Original. Com.*

BELL (HENRY NUGENT) a student of the Inner Temple, of great heraldic and genealogical research. His exertions were principally the means of the recovery of the dormant Huntingdon Peerage, on which subject he published a work. In another attempt of the same nature he was not so successful, and died October 18, 1822, the very day that a verdict was given against him for a sum of money advanced to him by Mr Cooke, an engraver, towards the investigation of a claim to an estate.—*Ibid.*

BELLAI or BELLAY (WILLIAM DU) lord of Langei, an eminent French statesman in the reign of Francis I. He exerted himself to procure the decisions of the French universities in favour of the divorce of Henry VIII from Catharine of Arragon, in order to attach that prince to the interest of his master, by whom he was also employed in negociations with the German Protestants. He was made governor of Turin in 1537, and soon after viceroy of Piedmont. He died in 1543, leaving some memoirs of his own times, parts of which only have been published.—*Moreri. Bayle.*

BELLAI (JOHN DU) younger brother of the preceding, was born in 1492, and received a literary education, to fit him for the ecclesiastical profession. He obtained the favour of Francis I, to whose notice he is said to have been first recommended by accident. At the marriage of the Dauphin with Catharine of Medicis, when an interview was about to take place between Francis I and pope Clement VII at Marseilles, it was discovered the night before, that a Latin oration, which had been prepared for the occasion by the president of the parliament, related to topics likely to offend the Pope. To relieve the embarrassment produced by this awkward mistake, Du Bellai

offered to deliver an extemporaneous discourse, which procured him a great deal of credit. He was successively made bishop of Bayonne, Mans, Limoges, and Paris, and archbishop of Bourdeaux. He was employed by Francis I, in a negotiation, the object of which was to prevent a rupture between Henry VIII and the pope Paul III, in which, however, he did not succeed. In 1535 he was made a cardinal, as a reward for his services. When Provence was invaded by Charles V, Du Bellai was entrusted by his master with the defence of Paris; on which occasion he adopted all the precautionary measures of an able general. He continued in favour at court till the death of Francis I; after which, being deprived of power by the intrigues of his enemy the cardinal de Lorraine, he resigned his ecclesiastical preferment in France, and retired to Rome. He was made bishop of Ostia and dean of the college of cardinals; and it is said there was an intention of raising him to the pontificate, when he died, at the age of sixty-eight, in 1560. He was not more distinguished as a statesman than as a scholar. In conjunction with Budæus, he prevailed on the king to found the Royal College at Paris in 1529. The famous Rabelais was patronized by him, and was at one time his physician. He wrote in Latin and in French, both prose and verse. Of his compositions in the former language, the celebrated chancellor de l'Hopital says, somewhat hyperbolically, that he equalled Cicero in his prose and Virgil in his poetry.—*Moreri. Teissier, Eloges des Hommes Savans.*

BELLAI (MARTIN DU) brother of the cardinal, was employed by the same prince both in a civil and military capacity. He possessed considerable talents, and was the author of Historical Memoirs from 1513 to 1543, published with those of his brother. He died in 1559.—*Moreri.*

BELLAI (JOACHIM DU) a French poet, related to the foregoing. He was a native of Anjou, and became an ecclesiastic, but acquired fame by his poetical productions, which procured him the title of the *French Catullus*. He has copied the faults as well as the beauties of the Roman poet; displaying the same sweetness and facility of style, and occasionally a very reprehensible degree of licentiousness. He obtained the archdeaconry of the church of Notre Dame at Paris, and expected to be made archbishop of Bourdeaux, when he died of an apoplexy, on the 1st of January, 1560. He wrote Latin as well as French poems. The former were published in 1569; of the latter there are several editions.—*Teissier, Eloges des Hommes Savans.*

BELLAMY (THOMAS) author of various literary productions. He was born at Kingston-upon-Thames in 1745, and bred a hosier; but after being twenty years concerned in trade, he relinquished it for literature. "Sadaski," a novel; "Lessons from Life;" and "The Friends," a musical interlude, are among his works. He was also the original projector of the "Monthly Mirror." His death took place in 1800.—*Genl. Mag.*

BELLARMIN (ROBERT, cardinal) a celebrated controversialist of the Roman church, was born at Monte Pulciano in Tuscany in 1542. At the age of eighteen he entered into the college of Jesuits, where he soon distinguished himself; and his reputation caused him to be sent into the Low Countries to oppose the progress of the Reformers. He was ordained priest in 1569, by Jansenius, bishop of Ghent, and placed in the theological chair of the university of Louvain. After a residence of seven years, he returned to Italy, and was sent by Sextus V to France, as companion to the legate. He was nominated cardinal, as one unequalled in learning, by Clement VIII, and in 1602 created archbishop of Capua. At the elections of Leo XI and Paul V, he was thought of for the pontificate, and might have been chosen, had he not been a Jesuit. Paul V recalled him to Rome, on which he resigned his archbishopric without retaining any pension on it, as he might have done. In 1621 he left his apartments in the Vatican, and returned to a house of his order, where he died the same year, at the age of seventy-one. So impressed were the people with the idea of his sanctity, that it was necessary to place guards to keep off the crowd which pressed round to touch his body or procure some relics of his garment. Bellarmin had the double merit with the court of Rome, of supporting her temporal power and spiritual supremacy to the utmost, and of strenuously opposing the Reformers. In the latter, his controversial powers were such as to call forth all the similar ability on the Protestant side; and for a number of years no eminent divine among the Reformers failed to make his arguments a particular subject of refutation. The great work which he composed for this warfare, is entitled "A Body of Controversy," written in Latin, the style of which is perspicuous and precise, without any pretension to purity or elegance. He displays a vast share of scriptural learning, and is deeply versed in the doctrine and practice of the church in all ages, as becomes one who determines every point by authority instead of reason. To his credit, he exhibits none of the lax morality of his order, and in respect to the doctrines of predestination and efficacious grace, is more a follower of St Augustin than a Jesuit. His maxims on the right of pontiffs to depose princes, caused his work on the temporal power of the popes to be condemned at Paris. On the other hand, it did not satisfy the court of Rome, because it asserted not a direct but an indirect power in the popes in temporal matters; which reservation so offended Sextus V, that he placed it among the list of prohibited books. These differences among the Catholics necessarily gave strength to the Protestant side, and produced a work from Mayer in exposition of them. In the rancour of controversy some malignant calumnies were uttered against the morals of Bellarmin; but it is evident that he inclined to superstition in faith, and scrupulosity in practice, at his death bequeathing one-half of his soul to the Virgin and the other to Jesus Christ. His society

thought so highly of his sanctity, that proofs were collected to entitle him to canonization; but the fear of giving offence to the sovereigns, whose rights he opposed, has always prevented a compliance with the ardent wishes of the Jesuits. The best edition of his controversial works is that of Prague, 1721, 4 vols. fol.—*D.zin. Moreti. Bayle. Nour. Dict. Hist.*

BELLEAU (REMI) one of the "Pleadians of France," seven poets so called in the sixteenth century. He was born at Nogent le Rotrou in 1521, and became a tutor in the family of Renatus of Lorraine. He was celebrated for his pastorals, and translations from the Greek of Anacreon, and also for a poem on precious stones, which was very popular. He died in 1577. His works were collected and published at Rouen, about thirty years after his decease, in 2 vols. 12mo.—*Nour. Dict. Hist.*

BELLEFOREST (FRANCIS DE) a French historian of the sixteenth century, whose works, though mere compilations, are occasionally read and cited, on account of the singular facts they contain. He was a native of Guienne, and studied law at Toulouse; after which he went to Paris, and obtained some reputation in the reigns of Charles IX and Henry III. He died in 1583, aged fifty-three. His works are more than fifty in number, among the best of which are—"The History of the nine Kings of France of the name of Charles," folio; and "The Annals of the General History of France," 1600, 2 vols. folio.—*Ibid.*

BELLENDEN or BELLENDENUS (WILLIAM) a Scottish writer of the seventeenth century, distinguished for the elegance of his Latin style. He was educated at Paris, where he was professor of the belles lettres in 1602; and though he was made master of requests by James I, he still continued to reside in the French metropolis. In 1608 he published a work entitled "Cicero Princeps," containing a selection, from the works of Cicero, of passages relating to the duties of a prince and the rules of government. It was dedicated to Henry prince of Wales, and included a prefatory discourse "De processu et scriptoribus rei politicæ." This was followed in 1612 by "Cicero Consul, Senator, Senatusque Romanus." He planned a third work, "De Statu Orbis Prisci," which he began printing in 1615; but he afterwards published the three pieces united, with the title of "Bellendenus de Statu." He then engaged in a more extensive work, "De Tribus Luminibus Romanorum," in which Seneca and Pliny were to be added to Cicero; but this he did not live to complete. The treatise of Bellendenus, "De Statu," which had become very scarce, was republished in 1787 by an anonymous editor (since known to be Dr Samuel Parr) with a very extraordinary Latin preface, relating to the politics and public men of that period.—*Aikin's G. Biog.*

BELLENDEN (SIR JOHN). See **BALLENDEN.**

BELLEVRE (POMPONE DE) a French

statesman, born at Lyons in 1529. He was the son of the first president of the parliament of Dauphine, and was educated at the university of Padua. He held various offices in the state under Charles IX and Henry III who employed him in foreign embassies of importance. Henry IV also made use of his services, particularly at the peace of Vervins, and as a reward for his zeal and dexterity on that occasion, made him chancellor in 1599. He held the seals till 1604, and died in 1607, leaving the character of having been one of the most distinguished persons in an age and country fertile in eminent men. He published an account of the famous theological conference, held at Fontainebleau, between Du Peron and Du Lessis Moriai, at which he was present. **POMPONE DE BELLEVRE**, grandson of the preceding, was first president of the parliament of Paris, and was employed in several negotiations in the reigns of Lewis XIII and XIV. He founded the general hospital at Paris, and died at the age of fifty, in 1657.—*Sully's Memoirs. Perrault's Lives of Eminent Frenchmen.*

BELLIN (JAMES NICHOLAS) an ingenious geographer and engineer, who was born at Paris in 1703, and died in 1772. He was a fellow of the Royal Society of London, and the author of a treatise on the geography of the British Isles, and of several collections of maps and charts.—*Nour. Dict. Hist.*

BELLINI (LORENZO) a Florentine physician of great skill and learning, born 1643. Having studied at Pisa under Marchetti, Redi, and Borelli, he obtained the professorships of philosophy and anatomy in that university, through the favour of the grand duke Cosmo III, to whom he became principal physician, though he afterwards lost his confidence. He was a great supporter of the medico-mathematical sect, and composed several treatises on professional subjects. Among the principal are a dissertation "De structura et usu renum;" another "On the Organs of Taste," 12mo; "De urinis et pulsibus, &c." 4to; "Opuscula aliquot de urinis, de motu cordis," &c. dedicated to Dr Pitcairn, 4to; and a small work entitled, "Gratiarum Actio," &c. Bellini died in 1703.—*Moreti. Nour. Dict. Hist.*

BELLINO (GENTILE) the son of a Venetian artist, born in 1490. His father educated him as a painter, and he afterwards attained to great proficiency in the art, which he exercised in his native city. The fame of his talents having reached Constantinople, Mahomet II, then at peace with the republic, requested the Venetian senate to send him to his court, where he received him with especial favour. It is said however, that having, in a representation of the death of John the Baptist, given, in the sultan's judgment, too great prominence to a part of the neck of the principal figure after decollation, that prince, for the purpose of more clearly pointing out the error, decapitated a slave in his presence. The painter was completely convinced, but made all possible haste to get out of the sultan's dominions. On his destination, he received many

valuable presents, and a letter to the senate, which on his return procured him the order of St. Mark. The great council-chamber at Venice is adorned with his productions. He died in 1501. His brother GIOVANNI was also an excellent painter. He died in 1512.—*Pilkington. Bruau's Dict. of Painters.*

BELLOCC (PIERRE) a French satirist, remarkable for the keenness of his wit and the singularity of his visage, born 1737. He was valet-de-chambre to Louis-le-Grand. The petit-maitres and novel writers of the day were the objects of his satire, in two productions, called "Les Petit-Maitres" and "Les Nouvellistes." He also wrote a poem on the Hotel des Invalides. Bellocq was the intimate friend of Racine, Moliere, &c. and died October 4, 1704.—*Nouv. Dict. Hist.*

BELLOI (PIETER LAURENCE BUYRETTE DE) a native of Auvergne, who was bred to the bar, but was smitten with so violent a passion for the drama, that he left France to go to Russia as a comedian. He continued there some time, and wrote various fugitive pieces. Returning to Paris in 1758, he brought on the stage his tragedy of "Titus," an imitation of the *Clemenza di Tito* of Metastasio. He afterwards produced several other tragedies with various success, chiefly relating to subjects of national history. The most popular of his pieces was the "Siege of Calais." He died in 1775, partly of chagrin at the failure of his tragedy of "Peter the Cruel." His dramatic works, with the life of the author, were published in 6 vols. 8vo, 1779, by the abbé Gaillard.—*Ibid.*

BELLORI (JOHN PETER) a Roman writer of the seventeenth century, eminent as a classical antiquary. He was destined by his father for a public office, but prompted by inclination he devoted himself entirely to the study of antiquities. Christina, ex-queen of Sweden, then residing at Rome, appointed him keeper of her library and museum; and pope Clement X made him antiquary of Rome. He died in 1696, aged above eighty. A valuable archaeological cabinet, which he left, was annexed to that of the king of Prussia at Berlin. His most important works relate to the architectural antiquities of Rome: the titles of some of them have been given in the account of P. S. Bartoli, who furnished the illustrative engravings. He also wrote on medals, on the biography of artists, and several tracts published in the Greek Antiquities of Gronovius.—*Moreri. Tiraboschi.*

BELOE (WILLIAM) an English divine and critic, who was a native of Norwich, and was educated at the university of Cambridge. About 1773 he engaged as assistant to Dr Samuel Parr, then head master of the grammar-school at Norwich. He also entered into holy orders, and obtained the vicarage of Earlsnam. Removing to London, he was made master of Emanuel college, Westminster. Soon after, he engaged with Mr archdeacon Nares, one of the librarians of the British Museum, in establishing and editing the *British Critic*. His connexion with this review terminated

with the 42d volume. Lord Roslyn, the chancellor, bestowed on him the living of All-hallows, London Wall, with which he held a prebend in St. Paul's cathedral. He was also appointed a librarian of the British Museum; which induced him to commence the publication of what may be considered as his most important work, "Anecdotes of Literature and Scarce Books," extended to 6 vols. 8vo. While engaged in this undertaking, he unfortunately lost his situation at the Museum, in consequence of some prints having been purloined, which he had entrusted to a dishonest person. He died at Kensington in 1817, aged 60. He had been employed in superintending the printing of memoirs of his own life; and he is said to have read the last proof a few days before his decease. It was afterwards published, with additions, under the title of "The Sexagenarian," 2 vols. 8vo. His other works are translations of Herodotus, Aulus Gellius, &c.—*Monthly Mag. Ann. Biog.*

BELSUNCE (HENRI FRANCOIS XAVIER DE) bishop of Marseilles during the fatal plague which ravaged that city in 1720 and 1721, on which dreadful occasion his fortitude, charity, and benevolent exertions, procured him the love and admiration not only of the miserable inhabitants of his diocese, but of the whole of Europe, while the appellation of "the Good Bishop" has in consequence descended to posterity as an imperishable adjunct to his name. He was a Jesuit, descended of a noble family in Guienne, and had been raised to his see only one year previous to the breaking out of its calamity. On the cessation of the pestilence, he was honoured by the pope with the *pallium*, a mark of distinction never granted to any prelate below the rank of archbishop; and Louis XV offered to his acceptance the rich bishoprick of Laon, which confers on its possessor a ducal coronet. This favour however the "Good Bishop" respectfully declined, declaring that his present flock was endeared to him alike by habit and calamity, and that he would never quit them. He founded a college in Marseilles, and was the author of several works, among which are a life of Mademoiselle de Foix Candale; a history of the bishops of Marseilles; and several pastoral instructions and other devotional tracts. He died in 1755, mourned by the whole city.—*Nouv. Dict. Hist.*

BELZONI (JOHN BAPTIST) a modern traveller, celebrated for his investigations and discoveries relative to the remote antiquities of Egypt. He was of a Roman family, and was born at Padua. His original destination was to a monastic life; but the disturbed state of his native country, in consequence of the French invasion of Italy in 1800, induced him to seek an asylum elsewhere. In 1803 he came to England, where he married, and continued to reside during nine years. Being a person of exalted stature (considerably more than six feet high,) robust and well-proportioned, he at one time exhibited, at Astley's Amphitheatre, feats of strength and activity; but he subsequently devoted himself to

a much more honourable as well as useful occupation. About 1812 he went to the Continent, accompanied by his wife; and after visiting Portugal, Spain, and Malta, in 1815, he travelled to Egypt. He continued there till 1819, employing the interval in exploring, with extraordinary activity and success, the dilapidated monuments of antiquity so thickly scattered over that country. Among his most remarkable discoveries are—an entrance into one of the pyramids of Ghizeh; the tombs of the Egyptian kings at Beban-el-Malook, in the vicinity of the ancient city of Thebes; and the temple of Ipsambul, near the second cataract of the Nile. On returning to Europe, and visiting Italy, Belzoni presented to the inhabitants of his native city, two *lion-headed statues* of granite, which the Paduans placed in a conspicuous situation in the Palazza della Justizia; and to show the interest they took in the fame of their fellow-citizen, they caused a medal to be struck, bearing on one side a representation of the statues in question, and on the other an inscription recording Belzoni's principal researches and discoveries. The traveller, who had been much indebted to Mr Salt, the British consul in Egypt, for pecuniary and other assistance in the prosecutions of his undertakings, hastened to England to lay their results before the public. In 1820 he published a "Narrative of the Operations and recent Discoveries within the Pyramids, Temples, Tombs, and Excavations, in Egypt and Nubia; and of a Journey to the Coast of the Red Sea, in search of the ancient Berenice; and another to the Oasis of Jupiter Ammon," 4to; together with 44 illustrative plates in folio. In 1821 Belzoni exhibited, at the Egyptian Hall in Piccadilly, a model of the tomb which he had explored near Thebes; facsimiles of the paintings on the walls of one or two of the sepulchral apartments; with other curiosities which he had collected in Egypt. This exhibition attracted much public attention, and probably proved very profitable; but being removed the following season to Paris, it did not there meet with equal success. Belzoni afterwards undertook an expedition of discovery to the central parts of Africa. He reached the mouth of the Benin river on the coast of Guinea, in the autumn of 1823; and after waiting some time for a gentleman to accompany him to Benin, whose interest with the king of that place he believed would be advantageous to him, he on the night of the 24th of November set off with that gentleman for Gato. He reached Benin, where he was seized with a disease which speedily terminated in death. He was interred at Gato, and the following monumental inscription, recording the circumstances of his melancholy catastrophe, was placed over his grave:

"Here lie the remains of

G. BELZONI,

Who was attacked with dysentery at Benin,
(On his way to Houssa and Timbuctoo,)
On the 26th of November, and died at this
place,
December 3d, 1823.

The gentleman who placed this inscription over the grave of this intrepid and enterprising traveller, hopes that every European visiting this spot will cause the ground to be cleared, and the fence round the grave to be repaired, if necessary."—*Original Com.*

BEMBO (PETER, cardinal) an eminent restorer of literature, son of a noble Venetian, was born at Venice in 1470. He studied Latin and polite literature under Urticio, and in 1492 obtained permission to repair to Messina, to study the Greek language under Lascaris. In 1495 he removed to Padua, where he studied philosophy and finished his education. His father, proud of his talents, being himself a public man, now wished to employ him in the service of his country, but after a short trial he showed an utter disinclination to public business. In 1498, his father being appointed vice domino of Ferrara, Bembo accompanied him thither, where he contracted an intimacy with several eminent men of learning, and was much esteemed by duke Alphonso, and his wife, Lucretia Borgia. Being now in his twenty-eighth year, he began to write, and published his "Azolani," a poem on the subject of love, morally and philosophically regarded, which work became extremely popular. In 1506 he visited the court of Urbino, then distinguished for its patronage of learned men, and continued there six years, pursuing his studies, and in great favour with the prince. In 1512 he went to Rome, where he was well received by Julius II, whose successor, Leo X, immediately on his election, appointed him his secretary with a handsome salary. The manners of the Papal court at this time were very free; and Bembo, being no ecclesiastic, openly kept a concubine, by whom he had three children. He was in great favour with Leo, who employed him in several important commissions until his death, on which he fixed his abode at Padua, where he passed many years in a tranquil manner, surrounded by men of letters, his house forming a kind of literary academy. In 1529 the task of writing the history of Venice was imposed on him; and in 1539 pope Paul III, who wished to be surrounded by men of learning, named him a cardinal; a dignity which it is said that he reluctantly accepted. It was of course necessary in the first instance that he should be ordained priest; and being in his seventieth year, he assumed a mode of life congenial with his new functions. He was nominated to the bishopric of Gubbio, but continued to reside at Rome, much honoured by the Pope, until his death in 1547, at the age of seventy-seven. Cardinal Bembo is almost equally celebrated in the Latin language and his vernacular tongue. He was one of the principal of those who contributed to elevate Italian poetry; but, fastidious in the highest degree, his writings are deficient in nature and ease. His Latin poems are esteemed for the elegance and delicacy of their style, but exhibit little genius, and some which he wrote early are extremely licentious. He seems chiefly to have rested his reputation on his Latin works in prose, which are laboured

with extraordinary care; but his servile adherence to the style of Cicero has betrayed him into ambiguity and absurdity, when treating of modern and especially religious subjects. He can hardly be called a priest; yet it is singular that he should advise a friend not to read the epistles of St Paul, lest he should injure his style. The principal works of Bembo are—"Epistolæ Nomine Leonis X.," Venice, 1536; "Epist. familiarum," Venice, 1552; "Rime de M. Pietro Bembo," Rome and Venice, 1548; "Historia Rerum Venetarum," Venice, 1551. All his works in both languages were published at Venice in 4 vols. folio, 1729.—*Tiraboschi. Moreri. Bayle.*

BENAVIDIO (MARCO MANTUA) an eminent juriconsult, professor of law in the university of Padua in the reign of the emperor Charles V, by whom he was held in great estimation, and advanced to the rank of knighthood, a dignity also conferred upon him by pope Pius IV. He was the son of a physician, and born in the year 1490. He published ten books "Observationum legalium," 8vo; twelve of "Polymathicæ," a dialogue; "De Concilio," 4to; and two "Biographical Memoirs of celebrated Lawyers," both in 8vo. His death took place in 1582.—*Nouv. Dict. Hist.*

BENBOW (JOHN) an English naval character of distinguished merit, descended of a respectable family in Shropshire. He was born in Shrewsbury about the year 1650, and having been brought up to the sea in the merchant service, fought a small vessel which he commanded so desperately against a pirate from Sallee, in one of his trips to the Mediterranean about the year 1686, as to beat her off, though infinitely his superior both in men and metal, killing thirteen of her crew on his own deck. This gallant action attracted the notice of Charles II of Spain, who invited him to his court, and recommended him so strongly to the favour of James II, that he was promoted at once by that monarch to the command of a ship of war. After the Revolution, William III employed his services in protecting the English trade in the channel, which he did with great effect, bombarding several of the French sea-ports, and keeping the whole coast in a state of constant alarm. His valour and activity on these occasions secured him the confidence of the nation, and he was soon promoted to the rank of vice-admiral, and charged with the blockade of Dunkirk. From some negligence however on the part of the Dutch allies, the squadron in that port under the command of Barth managed to slip out of port, nor could Benbow, though he sailed instantly in pursuit, ever overtake it. In 1698 he went as rear-admiral with a small squadron to the West Indies, and in 1701 again sailed to that part of the world with a small fleet, having voluntarily accepted a command previously declined, by several of his seniors, from the supposed superiority of the enemy's force in that quarter. In the August of the following year he fell in with the French fleet under Du Casse, and for five days maintained a running

fight with them, when he at length succeeded in bringing the enemy's sternmost ship to close quarters. In the heat of the action a chain-shot carried away one of admiral Benbow's legs, and he was taken below; but the moment the necessary dressing had been applied to the wound, he caused himself to be brought again on deck and continued the action. At this critical instant, being most disgracefully abandoned by several of the captains under his command, who signed a paper expressing their opinion that "nothing more was to be done," the whole fleet, which he considered almost in his power, effected its escape. For this infamous dereliction of duty, Benbow, on his return to Jamaica, brought the delinquents to a court-martial, by which two of them were convicted of cowardice and disobedience of orders, and condemned to be shot; which sentence, on their arrival in England, was carried into execution at Plymouth. Admiral Benbow, who suffered equally in mind and body from the unexpected result of this disgraceful business, gradually sunk under his feelings, and expired at Jamaica, Nov. 4, 1702. His son, named after himself JOHN, had like his father entered at an early age into the merchant service, and was shipwrecked, while yet a young man, and first-mate of the Degrave East Indiaman, on the coast of Madagascar, from which he with great difficulty escaped. Of this misfortune Benbow wrote an account, with a description of the southern part of Madagascar; but the manuscript, which was in the form of a journal, was unluckily consumed by an accidental fire at his brother's in 1714. Of the exact time of his birth and death no documents are in existence; but it is said that a considerable portion of unclaimed property, belonging to the Benbow family, is yet remaining in the Bank of England for want of an heir, the family being extinct.—*Biog. Brit. Campbell's Brit. Admirals.*

BENCIRENNI (JOSEPH) an Italian critic and writer on the fine arts. He was a native of Tuscany, who, after filling some other important public situations, was appointed director of the gallery of Florence. He died in 1808, aged eighty. His works are—"An Historical Essay on the Florentine Gallery;" a "Life of the Poet Dante," in some repute; and several biographical eulogies on illustrious Tuscans.—*Nouv. Dict. Hist.*

BENDA (FRANCIS and GEORGE) brothers, both musicians in the service of Frederick II of Prussia. Francis, the eldest, born in 1709 in Bohemia, was educated at the chapel-royal in Dresden, but is said to have derived greater profit from the instructions of an itinerant Jew violin-player. By making this man his model, he arrived at great excellence in his profession, and became the founder of a German school of violinists. He died at Potsdam in 1786. George, born in 1722, was many years in the service of the duke of Saxe-Gotha, to whom he was chapel-master, as well as to the king of Prussia. In 1760 he visited Italy, after which journey he composed his most admired pieces, two works which he styles "Duo-

dramas; the one founded on the story of Medea; the other, and by far the most celebrated, called "Ariadne in Naxos." He died in 1795.—*Biog. Dict. of Mus.*

BENDLOWES (Edward) a gentleman of easy fortune born about the year 1613, who, after having studied at St John's college, Cambridge, and made the tour of Europe, suffered himself to become the prey of needy pretenders to literature, who overwhelmed him with empty flatteries and dedications, in return for the more substantial advantages derived from his purse. By these means his patrimony dwindled from a good thousand a-year to nothing; and he died at length at Oxford in absolute indigence, at the age of seventy-three. He was an author as well as a patron, and printed many poetical pieces, all of which are now deservedly forgotten, if we except perhaps one entitled "Theophila, or Love's Sacrifice," published in folio in 1652, with a portrait of the author. He was well acquainted with Davenant, Fisher, Payne, and other contemporary writers.—*Wood's Athen. Oxon.*

BENEDETTO, see **CASTIGLIONE**.

BENEDICT (St) founder of the monastic order of Benedictines, was born in the territory of Norcia in Italy, A. D. 480. He retired, when a young man, to a desert, where he passed three years in a cavern, known only to his friend St Romanus. Being at length discovered by some neighbouring monks, they chose him for their abbot; but disliking their conduct, he again retired to a solitude, where the fame of his sanctity drew so many persons around him, that in a short time he peopled twelve monasteries with his followers. He thence removed to Mount Cassino, where he took possession of a temple of Apollo, and converted the surrounding inhabitants to Christianity. Here he laid the foundation of the since famous monastery of Mount Cassino, where he established his rule. The object of Benedict was to form an establishment, more solid and useful than the other orders, the members of it being enjoined to divide their time between prayer, reading, the education of youth, and other beneficial labours. It flourished exceedingly, and became the most considerable order in the West, having towards the middle of the ninth century nearly absorbed all the others. Possessed of immense riches, great political consequence followed the Benedictine order, which was for a long time a great support of the popes. In process of time several reforms were made in it, and various societies branched out of it, especially that of St Maur in France, which commenced in 1621, and which, according to Gibbon, has produced more learned writers than any other establishment in Europe. St Benedict died in 543, or, according to some writers, in 547.—*Mishem. Care. Dupin.*

BENEDICT, abbot of Peterborough in the twelfth century, was educated at Oxford, and became a monk of Christ-church, Canterbury, of which monastery he was made prior. Although attached to Becket, whose life he wrote, he was elected abbot of Peterborough

by the influence of Henry II. He assisted at the coronation of Richard I in 1189, and was keeper of the great seal in 1191, but died on Michaelmas-day in 1193. He composed a history of Henry II and Richard I, from 1170 to 1192; which work, among antiquaries, obtained the reputation of being one of the best accounts of the time. An edition of this production was published by Hearne, Oxford, 1735, 2 vols. 8vo.—*Biog. Brit. Leland. Bale.*

BENEDICT XI (pope) was the son of a shepherd of Treviso in the territory of Venice. His original name was Nicholas Bocasini, and for some time he followed the occupation of a schoolmaster. He afterwards became a Dominican, of which order he became general in 1298, and was created a cardinal by Boniface VIII. On the death of the latter, he succeeded to the pontificate, but survived only a year, when he died, with the suspicion of being poisoned. Benedict was an able and liberal pontiff, whose actions, during his short possession of the holy chair, were wise and conciliating. He wrote comments on the gospel of St Matthew, besides several sermons, and letters to the king of France and other princes, on the reformation of ecclesiastical abuses in their various kingdoms.—*Moreri. Boicer.*

BENEDICT XII (pope) was a native of Savenden in the county of Foix. His real name was James Fournier, and he was the son of a miller. He entered young into the Cistercian order of monks, and gradually rose into distinction until he became bishop of Pamiers, afterwards of Mirepoix, and in 1327 cardinal. On the death of John XXII in 1334, owing to one of those compromises so common on a balance of strong interests in the Papal elections, he was unexpectedly chosen to succeed him. He had the character of being little skilled in the refinement of politics, but deeply versed in divinity and law, and of exemplary probity. Although a Frenchman, he wished to restore the apostolic see to Italy, but was prevented by the disordered state of Rome. As a politician, he acted with great fairness between England and France, and particularly distinguished himself in his selection of cardinals. Like his predecessor of the same name, he avoided aggrandizing the members of his own family, observing, that although James Fournier had relations, pope Benedict had none. He published a constitution in which he much modified the doctrine of purgatory, and occupied himself diligently in the reform of the monastic orders; by which he gained the ill-will of the monks, who, contrary to all other testimony, have accused him of licentiousness and immorality. His volumes on the state of the soul before the last judgment, and other works, are still in MS---which is prudent, as the opposition of one infallible authority to another is perplexing. Benedict died after a short illness at Avignon, in April 1342. The most remarkable of the printed works of this pope are his "Decretum de Animabus Separatis," and his constitution for the reform of the religious orders. He also left sermons, commen-

aries on the Psalms, letters, and poems.—*Platina. Moreri. Bower.*

BENEDICT XIII, by name Vincenzo Maria Orsini, was the eldest son of the duke of Gravina, a nobleman of Naples. He entered early among the Dominicans, and in 1672 was raised by family influence to the dignity of cardinal. It was with difficulty that he could be made to accept of the pontificate, and immediately meditated a reform of all the pleasures and pomp of his court. With a view to these changes, he held a provincial synod in the Lateran in 1725, but was defeated by the Jesuits in revenge for his approbation of the Dominican doctrine of grace and predestination in preference to their own. He also expressed a wish for the diffusion of Scriptural knowledge, and encouraged the multiplication of copies of the Bible in modern languages. Another great object with him was to unite the four religious communities in Christendom, for which purpose he proposed, that four councils should be held in different places, consisting of representatives of the Romish, Greek, Lutheran, and Calvinist churches. It need not be said, that this scheme failed; but the purity of intention of the pontiff was undeniable. Benedict lived with the utmost frugality, like a hermit in his cell, and has been called more a monk than a pope; which probably meant, that he was more attached to what he conceived to be the spiritual welfare of the church than to its political influence. His greatest fault was his implicit confidence in cardinal Coscia, to whom he left the entire management of his government, and who much abused it. He died in February 1731, in the sixth year of his pontificate. His works, consisting of sermons, poems, and other writings, together with his bulls, were published in 1728, in three volumes folio, under the title of "Opere di Benedetto XIII."—*Bower. Mosheim.*

BENEDICT XIV (pope) originally named Prospero, was a member of the noble family of Lambertini at Bologna, where he was born in 1675. He passed through various offices in his youth, being consistorial advocate for twenty years; and by freely mingling with mankind, he cherished a constitutional vivacity which never forsook him. In 1724 he was created titular bishop of Theodosia, and in 1728 received the cardinal's hat. In 1731 Clement XII nominated him archbishop of Bologna; and on the death of that pontiff in 1740, after a conclave of six months, he was elected pope. He is said to have hastened their deliberations by telling them it was idle to spend so much time in discussion. "If you want a saint, choose Gotti; a politician, Aldrovandi; a pleasant companion, take me." Benedict XIV was this, and much more, being a man of deep learning, of elegant taste, of liberal and enlarged sentiments, and of great goodness of heart. He diminished the number of festivals, abolished many idle ceremonies, and displayed so confirmed an aversion to superstitious practices and pious frauds, that he obtained the name of the Protestant pope.

BIOG. DICTION.—No. XV.

He was also a generous patron of literature: he founded academies at Rome, bestowed benefactions on that of Bologna, and corresponded with and rewarded learned men both at home and abroad. His principal fault was an insuperable aversion to business; his greatest delight being to retire to a small building in the gardens of Monte Cavallo, with a few intimate friends and select strangers, and jest and converse at his ease. He was indeed both the subject and the utterer of numerous pungent bon-mots. He governed the church with great mildness, and was very desirous of conciliating the doctrinal differences which divided it. In 1750 he celebrated a jubilee with great splendour, and after a pontificate of the unusual length of eighteen years, died in 1758, aged eighty-three. His works were published at Rome, in 12 vols. 4to, by Azevedo. The first eight of these are on the beatification and canonization of saints, in which the subject is exhausted; the ninth and tenth are on the mass and the festivals instituted in honour of Christ and the Virgin; the eleventh, entitled "Ecclesiastical Institutions," contains his instructions, mandates, and letters, while bishop and archbishop, which do him great credit; and the twelfth is "On Diocesan Synods." They are all in Latin.—*Bower. Mosheim. Nouv. Dict. Hist.*

BENEVOLI (ORAZIO) one of the greatest musical composers of the seventeenth century, pupil of Navini, and *maestro di capella* at St Peter's. He is celebrated for his skill in writing fugue and counterpoint for four and six choirs, each of four parts; of which description is his celebrated mass composed for the cessation of the plague at Rome. More than two hundred singers, on the occasion of its performance, occupied St Peter's church, the sixth choir being placed on the summit of the cupola.—*Biog. Dict. of Mus.*

BENEZET (АНТОНУ) an American philanthropist of Philadelphia, of a singularly devout and charitable turn of mind. He was in the first instance apprenticed to a merchant; but finding that commerce excited too worldly a spirit, he articed himself to a cooper, and finally became a schoolmaster for the greater part of his life. He was the author of "A Caution to Great Britain and her Colonies, in a short Representation of the calamitous State of the enslaved Negroes in the British Dominions," 1767, 8vo. He also wrote "Some Historical Account of Guinea, with an Enquiry into the Rise and Progress of the Slave Trade," 1772, with other works of a kindred character. His extreme simplicity and benevolence made him the idol of the poor, and of the negroes, hundreds of whom attended his funeral, as well as religious persons of all denominations. He died at Philadelphia in 1734.—*Chalmers' Biog. Dict.*

BENGLIUS or BENGEL (JOHN ALBERT) a Gernau Lutheran divine of the orthodox school. He was a native of Wirtemberg, and was consistorial counsellor to the duke of Wirtemberg, Protestant abbot of Al-

pirspach, and professor of divinity at Tubingen. He was disposed to mysticism, and broached some fanciful explanations of the Apocalypse, particularly relating to the Millennium, which he supposed would begin in the year 1836. Several of his publications relate to this topic; but his principal work is a critical edition of the New Testament in Greek, with a corrected text. It exhibits proofs of talent and learning; but has been superseded by the more recent researches of Wetstein and Griesbach.—*Chalmers' Biog. Diet.*

BENJAMIN (of Tudela) a Jew of the twelfth century, born at Tudela in Navarre, distinguished as one of the earliest travellers in the middle ages who visited the central regions of Asia. He is supposed to have explored the countries to the north of the Euxine and Caspian seas, as far as Chinese Tartary; and he also collected information concerning the rites and customs of the Oriental Jews. The narrative of his travels is curious, but romantic; and some doubts have been entertained of its authenticity. It was first published at Constantinople in 1513, with a Latin translation by Arias Montanus; and there are English and French versions. See *BARATIER. Aikin's G. Biog.*

BENIGNUS (St) an Irish divine of the fifth century, who is supposed to have been a disciple of St Patrick, and to have been his successor in the see of Armagh. He died in 468. A work on the "Life and Miracles of St Patrick;" an Irish poem on the conversion of his countrymen; and the "Munster Book of Reigns," are ascribed to him.—*Biog. Brit.*

BENIVIENI (JEROME) an Italian poet of the age of Lorenzo de Medicis. His principal works are canzonets on divine love, which he treats according to the principles of the Platonic writers, so as to give his poetry an air of allegorical mysticism, which somewhat detracts from its acknowledged beauties. He died in 1542.—*Tiraboschi. Nouv. Diet. Hist.*

BENNET BISCOP, or **BENEDICTUS EPISCOPIUS**, an Anglo Saxon monk of the 7th century. He was of a noble Northumbrian family. Devoting himself early to a religious life, he in 653 made a journey to Rome, to obtain an exact acquaintance with monastic discipline; and on his return he founded the monastery of Wearmouth. In the erection and endowment of this institution he spared neither cost nor pains. He made repeated journeys to Rome to obtain manuscripts, pictures, relics, and church ornaments of various kinds; and he procured artists from abroad to build and decorate the church and other monastic edifices. He is considered as one of the greatest improvers of ecclesiastical architecture among the Anglo Saxons; and it is probable that he introduced the manufacture of glass into this country. He founded a second monastery on the banks of the Tyne, called Jarrow; and dying in 690, he was buried at Wearmouth. "Benedict Biscop," says Mr Dibdin, "made not fewer than five journeys to Rome to purchase books and other neces-

sary things for his monastery, for one of which books our immortal Alfred gave afterwards as much land as eight ploughs could labour."—*Bibliomania*, p. 219. The learned bibliographer, in a note on this passage, remarks on the apparent anachronism which would connect Bennet Biscop with a prince who lived and died 200 years after him. But the mistake rests with Mr Dibdin: it was not the West Saxon monarch deservedly styled Alfred the Great, but Alfred or Aldfrid, a king of Northumbria, who, as Bede the historian informs us, agreed to give an estate for a manuscript volume; and Biscop dying during the progress of the negotiation, it was completed, and the exchange made, by his successor, the abbot Ceolfrid.—*Henry's Hist. of Engl.*

BENNETT (HENRY) earl of Arlington, one of the confidential ministers of Charles II. He was born of a good family at Arlington in Middlesex in 1618, and was educated at Christ Church college, Oxford. During the civil war he served in the royal army; and following Charles II into exile, he received the honour of knighthood from him at Bruges in 1658, and afterwards resided as his minister or agent at Madrid. In 1662 he returned home, and was appointed secretary of state; and in 1664 he was created baron Arlington, and became a leading member of the cabinet, having been one of the favourite counsellors of Charles II, who were designated by historians as the *Cabal*, a term fancifully formed from the initials of the names or titles of the five individuals composing it, viz. lord Clifford of Chudleigh, Anthony Ashley Cooper earl of Shaftesbury, Villiers duke of Buckingham, lord Arlington, and Maitland duke of Lauderdale. The subject of this article was in 1672 made viscount Thetford and earl of Arlington, and decorated with the order of the Garter. He retired from office in 1674, after having narrowly escaped an impeachment by the house of Commons. He died in 1685, having, as it is asserted, reconciled himself to the church of Rome on his death-bed. His public letters when secretary of state were published in 1701.—*Biog. Brit.*

BENNETT (THOMAS) an English divine, who distinguished himself as a controversial writer in the former part of the 18th century. He was a native of Salisbury, and studied at Cambridge, where he obtained a fellowship. In 1700 Dr Compton, bishop of London, gave him the rectory of St James's, Colchester, and he subsequently obtained the vicarage of St Giles's, Cripplegate, on which he removed to London, where he died in 1728. He was well acquainted with Oriental, Greek, and Roman literature, as well as with divinity. His writings are numerous, relating chiefly to the controversies between the Church of England and the Dissenters, especially on the propriety of using established forms of prayer in public worship.—*Biog. Brit.*

BENNETT (AGNES MARIA) a lady distinguished for her talents as a novelist. Possessed of a well-informed and highly cultivated mind, she delineated character with peculiar

success; and excelled no less in description, sentiment, humour, and pathos. Her first work was "Anna, or Memoirs of a Welch Heiress," 4 vols. an impression of which was sold on the day of publication. She afterwards wrote "Juvenile Indiscretions," 5 vols.; "Agnes de Courci," 4 vols.; "Ellen countess of Castle Howell," 4 vols.; "The Beggar Girl and her Benefactors," 5 vols. The last production of her pen was "Vicissitudes abroad, or the Ghost of my Father," 6 vols., two thousand copies of which are said to have been disposed of the day it made its appearance. Most of her novels have been repeatedly printed, and they have been translated into French and German. She died at Brighton in 1805.—*Athenaeum*, vol. iii.

—BENOIT (FATHER) otherwise ASBARACH, a learned Jesuit, a native of Gusta in Phœnicia, born 1663. He was sent when nine years old to Rome, for education in the Maronite college, where he made great progress in his studies, and on his return to the East, having entered the priesthood, was employed by the patriarch of Antioch in correcting his works. Again visiting Rome, on affairs connected with his church, he accepted the invitation of Cosmo III to Florence, where he was employed in arranging the Oriental types founded by Ferdinand de Medicis, and superintending the publication of several Eastern manuscripts. At the age of forty-four he became a member of the Jesuits' college, and was appointed by Clement XI a corrector of the editions of the Greek fathers. He also translated a portion of the Greek Menology, and commenced an edition of the works of Ephrem Syrus, but only lived to complete two volumes, the remainder being after his death furnished by Assemanni. He died in 1742, in the eightieth year of his age.—*Nouv. Dict. Hist.*

BENOIT (ELIE) a French minister of the reformed church, of great learning and ability. On the revocation of the edict of Nantes, he fled to Holland, where he became pastor to a congregation at Delft, and remained there till his death in 1723, at the age of eighty-eight. He left behind him several works, among which are—"Miscellaneous Remarks on Toland's two Dissertations," and "An Apology for the Retreat of the Pastors from the Persecution in France;" but his principal production is his "Histoire de l'edit de Nantes" in five quarto volumes, 1693. His manuscript memoirs give a curious portrait of Madame Benoit, who, he says, "plagued in every possible way her wretched mate for the space of seven-and-forty years."—*Ibid.*

BENSERADE (ISAAC) a celebrated French writer and poet of the seventeenth century, was born in 1612 at Lyons-la-Forêt in Upper Normandy. He lost his father when very young; but his mother claiming relationship to cardinal Richelieu, that prelate had him educated, and would have provided for him in the church, had he not preferred the court, where he soon became famous for his wit and poetry. The department in which he more peculiarly succeeded, was the gallant and sati-

rical verses composed for the court ballets, before operas came into vogue; in which he ingeniously adapted the personages of antiquity to known characters. His success in these lighter pieces, led him to the strange attempt of turning all Ovid's Metamorphoses into rondeaus; a work which, though favoured by the king, and magnificently decorated with engravings, was laughed at from the moment of its appearance. Towards the end of his life, the better taste of the age of Louis XIV threw him into neglect; and, as usual, disgusted with the world which he no longer pleased, he withdrew to Gentili, and gradually exchanged gallantry for devotion. Olivet observes, that it was the custom in his youth to visit the remains of the ornaments with which Benserade had decorated his house and garden, which, even to the barks of the trees, abounded with poetical inscriptions. Voltaire deems these the last of his productions, and regrets that they were not collected. Benserade was an adept in the art of ingratiating, and by his flattering of Mazarin, the queen dowager, and others, obtained pensions and gifts which enabled him to keep a carriage and live otherwise with éclat. He died in 1691, at the age of seventy-eight. His whole works, including a selection from his Ovid, were printed at Paris, 1697, 2 vols. 12mo.—*Nouv. Dict. Hist.*

BENSON (GEORGE, DD.) an Arian minister born at Great Salkeld, Cumberland, Sept. 1, 1699. He received the rudiments of education under Dr Dixon at Whitehaven, and completed his studies at Glasgow. Being intended by his friends for the ministry, the interest of Dr Calamy procured him an invitation to take charge of a congregation at Abingdon, Berks, where he remained seven years, but quitted it in 1729 for a similar situation in Southwark. Eleven years after, he succeeded Dr Harris in the chapel in Crutched Friars, having Dr Lardner as his colleague and assistant; and here he continued till his death in April 1762, in his sixty-third year. Though a dissenter from the Church of England, he enjoyed the friendship of Hoadley, Herring, Butler, Conybeare, and many other names who ranked high in the establishment. He published in his life-time various religious and controversial tracts, among which are—"An Illustration of some of the Epistles of St Paul," 4to; "A History of the planting of Christianity," 4to, 3 vols.; "Tracts on Persecution and on the reasonableness of Prayer;" and a "Life of Christ." Dr Amory published an edition of his posthumous works in one vol. 4to, 1764.—*Biog. Brit.*

BENTHAM (JAMES) an ingenious writer on ecclesiastical archæology. He was born at Ely, where his father was a clergyman, lineally descended from Thomas Bentham, bishop of Lichfield and Coventry in the reign of queen Elizabeth. He was educated at Trinity college, Cambridge, where he took the degree of M. A. in 1738. Previous to this he had entered into holy orders, and obtained the living of Stapleford in Cambridgeshire. After having successively held some other livings in that

county and in Norfolk, he in 1779 was promoted to a prebendal stall in Ely Cathedral, of which he had been before a minor canon. In 1783 he was presented to the valuable rectory of Bow-brick-hill. The literary reputation of Bentham is founded on his "History and Antiquities of Ely Cathedral," for the publication of which he issued proposals in 1761, and which appeared in 1771 in one vol. 4to. It has been observed, that the knowledge of ancient architecture displayed in this work, far exceeded all that had been before written on that subject. The cathedral of Ely, where Bentham was beneficed, furnished him with examples of almost every variety of style, from the Saxon era to the Reformation. The characteristic ornaments of each were carefully studied by him; and his numerous quotations from ancient authors prove his diligence in historical research. In this work was first brought forward the presumed origin of the pointed arch, the chief feature of the Gothic style, on which the whole style seemed to have been formed. This kind of arch Bentham supposed might have been derived from the intersection of two semi-circular arches, such as are seen on the walls of some buildings erected soon after the Norman conquest. Dr Milner, the historian of Winchester, has since adopted this hypothesis, and supported it with a degree of learned ingenuity which has given it much celebrity. Whatever may be its merit, Bentham seems to have the fairest claim to it: yet attempts have been made, not only to deprive him of the credit to be derived from this source, but even to invalidate his title to the authorship of all that part of his work which relates to the ecclesiastical architecture. Dr Milner, in the article *Gothic Architecture* in "Rees's Cyclopædia," stated that "the poet Gray drew up the architectural part of the History of Ely cathedral." This statement is successfully rebutted in the memoirs of Bentham, prefixed to the new edition of the "History" published in 1812; where it is shewn, that the architectural essay in question, far from having been written by Gray, was actually drawn up before Bentham was acquainted with the poet and that it was the occasion of their subsequent literary intercourse. A more extraordinary attack on the reputation of the Ely historian has been made by Cole, the Cambridge antiquary, who, in some manuscript marginal notes on Bentham's work, coarsely asserts it to have been written by his brother Edward Bentham, divinity professor at Oxford; for which statement there seems to be not the slightest foundation. Bentham published some tracts relating to the draining and inclosure of the fens of Ely; and he is said to have made collections for a general history of ancient architecture in this kingdom. He died November 17, 1794, aged eighty-six, having been twice married, and leaving by his first wife one son, a clergyman.—*Memoirs prefixed to the Hist. of Ely, second edition, 1812. Notes on Mem. in Suppl. to Hist. 1817.*

BENTHAM (EDWARD) elder brother of the

preceding, was educated at Oxford, and embraced the clerical profession. He held successively various preferments in Hereford cathedral. In 1749 he took the degree of DD.; and he was subsequently appointed regius professor of divinity at Oxford. He published several sermons, and elementary treatises on moral philosophy, logic, and theology; besides some other works. He died in 1776, aged sixty-nine. *Biog. Brit. Nichols's Literary Anecd.*

BENTINCK (WILLIAM) the first earl of Portland, was born in Holland of a noble family, and accompanied the prince of Orange in England. He secured the affection of William by a singular act of devotion. On the prince falling ill of the small-pox, it was thought necessary by the physicians, that he should receive the natural warmth of a young person lying in the same bed with him. Bentinck, who had been his page, and was always near his person, offered himself for this purpose, and caught the distemper dangerously, but secured the favour of the prince for ever. In 1677 he was sent over to England, to negotiate the marriage of William with Mary, the daughter of the duke of York, and during the progress of the Revolution was eminently serviceable by his zeal and activity. On the settlement of William, he was rewarded with the title of earl of Portland, and obtained several high offices, civil and military, as well as grants of land. He was cold and sedate in manners, like his master, but an upright and able statesman, to which he added the not always accompanying merit of private good conduct. He died in 1709. His son HENRY, the second earl, was created duke of Portland in 1716.—*Biog. Brit.*

BENTINCK (WILLIAM HENRY CAVENDISH) third duke of Portland, was born in 1738, and educated at Christchurch, Oxford. After sitting for some time in the house of Commons as member for Weobly, he was called to the upper house by the death of his father in 1762, from which time he voted with the marquiss of Rockingham, in whose administration he was lord chamberlain. During the American war he acted with the Opposition, and in 1782 was appointed lord lieutenant of Ireland, where he remained only three months, in consequence of the breaking up of the administration by the death of the marquiss of Rockingham. The memorable and ill-advised Coalition succeeded, which fell before the rising fortunes of Mr Pitt; and from that time the duke acted with the Whig Opposition until 1792, when he was elected chancellor of Oxford, and soon after joining with Mr Burke in his alarm at the French revolution, agreed with this orator and other seceders on the score of French politics, to support administration. He was accordingly, in 1794, made secretary of state for the home department, which he held until the resignation of Mr Pitt in 1801, and was then appointed president of the council, which he held until 1805. On the resignation of Lord Grenville in 1807, he was appointed first lord of the treasury, which office he resigned soon

after, and was succeeded by Mr Perceval. He died of the stone in October 1808, leaving behind him the character of a man of probity and respectability, who however was neither eminent as a speaker, nor possessed of brilliant parts.—*Gent. Mag. Ann. Regis.*

BENTIVOGLIO (HERCULES) one of the best Italian poets of the sixteenth century, was born at Bologna in 1506, of one of the most illustrious families of that city and of all Italy. His father, Hannibal II, being forced by Julius II to leave the country, of which his ancestors had been masters for nearly a century, repaired to Milan and took his infant son with him. A few years afterwards, he removed to Ferrara, and placed himself and family under the protection of the house of Este, to which he was related. Here his son made a rapid progress in his studies, and was eventually employed by the duke of Ferrara in state affairs of importance, until his death in 1573. His works, which are published under the title of "Opere poetiche del sig. Ercole Bentivoglio," Paris, 1719, 12mo, consist of two comedies of great merit; five epistles in the manner of Berni; and stanzas, sonnets, eclogues, and satires, which are deemed inferior only to those of Ariosto. *Biog. Univ.*

BENTIVOGLIO (GUY or GUIDO) of the same family as the preceding, celebrated as a cardinal in the Roman church, and in literature as a historian, was born at Ferrara in 1579. He studied at Padua with great reputation, and afterwards fixing his residence at Rome, acquired general esteem by his prudence and integrity. He was nuncio in Flanders from 1607 to 1616, and afterwards in France to 1621. His character stood so high, that on the death of Urban VIII in 1644, he was generally thought to be the most likely person to succeed him; but on entering the conclave, in the hottest and most unhealthy season of the year, he was seized with a fever, of which he died, aged sixty-five. Having lived in too magnificent a style, he was much embarrassed at the time of his death; a circumstance attributed to his canvass for the papacy. Cardinal Bentivoglio was an able politician; and his historical memoirs are the works of a man of that description. The most valuable of these are—his "History of the Civil Wars in Flanders," written in Italian, and first published at Cologne, 1630, a translation of which, by Henry earl of Monmouth, appeared in 1654, London, folio; "An Account of Flanders" during his legation, also translated by the earl of Monmouth, folio, 1652; his own Memoirs; and a collection of letters, which are reckoned among the best specimens of epistolary writing in the Italian language, an edition of which was published at Cambridge in 1727. All these, except the memoirs, have been published together at Paris, 1645-1648, folio, and at Venice 1668, 4to.—*Tiraboschi, Biog. Univ.*

BENTIVOGLIO (HYPPOLITUS) of Arragon, another member of the same family, was born at Ferrara about the middle of the sixteenth century. He bore the titles of marquis of Magliano, and count of Antignato and

after studying first in Italy and afterwards at Paris, embraced a military life, and served in Flanders in 1588. To the pursuit of arms he joined that of literature, and was especially attached to the drama, of which he produced "L'Annibale in Capoa," "La Figlia di Tracia," "L'Achille in Sciro," "Tiradate," tragedies; and "Impegni per disgracia," a comedy. His lyric poems are in various collections.—*Biog. Univ.*

BENTIVOGLIO (CORNELIUS) a cardinal and poet, one of the sons of the preceding, was born at Ferrara in 1668. Having early distinguished himself by his learning and proficiency in the belles lettres, he was promoted by Clement XI to be his domestic prelate, and in 1712 was sent nuncio to France, where he obtained high favour with Louis XIV for his zeal in favour of the bull Unigenitus. He was made cardinal in 1719, on his recall from Paris, and died at Rome in 1732. Amidst a busy life, in respect both to political and ecclesiastical duties, he found leisure to cultivate polite literature. He delivered a discourse in the Academy of Design, on the utility of the fine arts, which was printed at Rome in 1707, but is more celebrated for an elegant translation of the Thebaid of Statius, and for his sonnets. His brother Louis and sister Cornelia also cultivated poetry: the latter, who died in 1811, is highly spoken of by Crescimbeni.—*Moreri, Biog. Univ.*

BENTLEY (RICHARD) a celebrated divine and classical scholar, distinguished as a polemical writer in the latter part of the seventeenth century. He was born at the village of Oulton, near Wakefield in Yorkshire, in 1662. His ancestors had possessed a valuable estate in the parish of Halifax; but the family was reduced in circumstances, owing to the misfortunes of his grandfather, who suffered in the cause of Charles I. His father is said to have been a blacksmith. To his mother, who was a woman of strong natural abilities, he was indebted for the first rudiments of his education. He was afterwards sent to a grammar-school at Wakefield, whence he was removed, at the age of fourteen, to St John's college, Cambridge. In 1682 he left the university, and became usher of a school at Spalding; and this situation he relinquished, in the following year, for that of tutor to the son of Dr Stillingfleet, dean of St Paul's. He accompanied his pupil to Oxford, where he availed himself of the literary treasures of the Bodleian library in the prosecution of his own studies. In 1684 he took the degree of M A, at Cambridge, and in 1689 he obtained the same honour at the sister university. His first published work was a Latin epistle to Dr John Mill, in an edition of the Chronicle of John Malela, which appeared in 1691. It contained observations on the writings of that Greek historian, and displayed so much profound learning and critical acumen, as excited the sanguine anticipations of classical scholars from the future labours of the author. Dr Stillingfleet, having been raised to the bishopric of Worcester, made Bentley his chaplain,

and in 1692 collated him to a prebend in his cathedral. The recommendation of his patron and of bishop Lloyd procured him the honour of being chosen the first preacher of the lecture instituted by the celebrated Robert Boyle for the defence of Christianity. The discourses against Atheism, which he delivered on this occasion, were published in 1694: they have since been often reprinted, and translated into several foreign languages. In 1693 he was appointed keeper of the royal library at St James's; a circumstance which incidentally led to his famous controversy with the hon. Charles Boyle, afterwards earl of Orrery, relative to the genuineness of the Greek Epistles of Phalaris, an edition of which was published by the latter, then a student at Christ-church, Oxford. In this dispute Bentley was triumphantly victorious, though opposed by the greatest wits and critics of the age, including Pope, Swift, Garth, Atterbury, Aldrich, Dodwell, and Conyers Middleton, who advocated the opinion of Boyle with a degree of warmth and illiberality which appears very extraordinary. But the motives of Bentley's assailants were various. Swift, in his *Battle of the Books*, took up the cudgels against him in defence of his friend sir William Temple; Dr Garth attacked him probably from mere wantonness, in the well-known couplet in his *Dispensary*—

"So diamonds owe a lustre to their foil,

And to a Bentley 'tis we owe a Boyle."

Some were actuated by personal considerations, among whom was Conyers Middleton, whose persevering hostility to Bentley during a long series of years seems to have originated from the latter having applied to the former, when a young student in the university, the contemptuous epithet of *fiddling* Conyers, because he played on the violin. It does not appear who was the author of a punning caricature which was produced on this occasion, representing Bentley about to be thrust into the *brazen bull* of Phalaris, and exclaiming, "I had rather be *roasted* than *Boyled*." In 1699 Bentley, who had three years before been created D.D., published his "Dissertation on the Epistles of Phalaris," in which he satisfactorily proved that they were not the compositions of the tyrant of Agrigentum, who lived more than five centuries before the Christian era, but were written by some sophist, under the borrowed name of Phalaris, in the declining age of Greek literature. Soon after this publication, Dr Bentley was presented by the crown to the mastership of Trinity college, Cambridge, worth nearly 1,000*l.* a-year. On obtaining this preferment, he is said to have applied to himself, somewhat profanely, a passage in the Psalms—"By the help of my God I have leaped over a wall;" alluding to the relative situations of the colleges of St John and Trinity, which are divided only by a wall. He now resigned the prebend of Worcester, and in 1701 was collated to the archdeaconry of Ely. His conduct, as head of the college, gave rise to accusations against him from the vice-master and some of the fellows, who, among various offences, charged him with

embezzling the college money. He published a defence, entitled "The present State of Trinity college in Cambridge, in a Letter from Dr Bentley to the Right Rev. John lord bishop of Ely," 1710. The contest was much protracted, and occasioned a law-suit which was decided in the Doctor's favour about *twenty years after*. In 1711 he published an edition of Horace at Cambridge in 4to, which was reprinted at Amsterdam; and in 1713 appeared his remarks on Collins' Discourse on Free-thinking, under the form of "A Letter to F. H. [Francis Hare] D.D. by Phileleutherus Lipsienus." He was appointed regius professor of divinity in 1716; and in the same year he issued proposals for a new edition of the Greek Testament, an undertaking for which he was admirably qualified, but which he was prevented from executing, in consequence of the animadversions of his determined adversary Middleton. In 1717 George I, visiting the university, nominated by mandate, as is usual on such occasions, several persons for doctor's degree in divinity. It was the duty of Bentley, as professor, to perform the ceremony called *creation*; previous to which, he made a demand of four guineas from each candidate beyond the usual fees, absolutely refusing to create any doctor without payment. Some submitted; but others, among whom was Middleton, withstood the demand, and commenced a prosecution against the professor before the vice-chancellor; who, deciding in favour of the complainants, first suspended Bentley, and subsequently degraded him from the honours, rights, and offices, he held in the university. These proceedings were, after considerable litigation, annulled by the court of King's Bench; and the doctor in 1728 was restored to all his former honours and emoluments. In 1762 he published an edition of Terence and Phædrus; and his notes on the comedies of the former involved him in a dispute with bishop Hare on the metres of Terence, which provoked the sarcastic observation of sir Isaac Newton, that "two dignified clergymen, instead of minding their duty, had fallen out about a play-book." The last work of Dr Bentley was an edition of Milton's *Paradise Lost*, with conjectural emendations, which appeared in 1732. This added nothing to his reputation, and may in one word be characterized a failure. He died at the master's lodge at Trinity, July 14, 1742, and was interred in the college chapel. As a scholar and a critic this great man had few equals. Such was the extent of his learning and the accuracy of his judgment, that the best informed of his opponents respected his talents, while they were loading him with classical abuse, which he did not fail to return with interest. Now that the prejudices, excited apparently by his personal conduct, have subsided, his pre-eminence in that species of literature which he cultivated is universally acknowledged; and though some may be disposed to question the utility of his speculations, no one can deny that he displayed talents of the highest order in bringing them to maturity,

In his personal character Dr Bentley has been charged with displaying a rapacious and mercenary spirit; yet he can hardly be accused of avarice, for it is stated on good authority, that he lived in a very hospitable manner, maintaining the dignity and magnificence of the ancient abbots in housekeeping at his lodge, which he caused to be handsomely repaired and decorated; and in several respects he was a benefactor to the college. By his wife (the daughter of sir John Bernard of Brampton in Huntingdonshire,) who died in 1740, he had one son and two daughters: one of the latter was the mother of Richard Cumberland, the celebrated dramatist.—*Biog. Brit. Cumberland's Memoirs of his own Life. Classical Journal.*

BENTLEY (RICHARD) only son of the preceding was educated at Trinity college, under his father, on whose death he married and went to France. He was a man of various accomplishments and elegant manners, but of little conduct; and being frequently much involved by his imprudence, he was reduced to situations uncongenial with his feelings, and unfavourable to the due cultivation of his talents. He enjoyed a portion of the sickly and capricious patronage of Horace Walpole, and designed many of the embellishments for Strawberry Hill. By the interest of Walpole or Bubb Doddington, or of both, he also obtained a small place under the administration of lord Bute, and a pension of 500*l.* a year. The consistent fruit of these connexions was the production of "Patriotism," a satirical poem against Wilkes. He likewise wrote "A Poetical Epistle to Lord Melcombe;" and three dramas, "Philodamus," "The Prophet," and "The Wishes." He died in 1782.—*Cumberland's Life. Biog. Dram.*

BENYOWSKY (MAURICE AUGUSTUS, count de) a magnate of the kingdoms of Hungary and Poland, and one of the chiefs of the confederacy formed in the latter kingdom in 1767. He was born in Hungary in 1741, and received a military education; but having acted altogether violently and lawlessly in the recovery of some family property, he was deprived of all his estates by the chancery of Vienna, and fled into Poland. Here he joined the war of the confederates, and was taken prisoner by the Russians, ransomed, and again captured and sent exile to Kamtschatka, where the governor entrusted to his care the education of his son and three daughters. The youngest of these having fallen in love with him, her fond parents consented to the match; but the sole object of Benyowsky, who was secretly forming a confederacy among the exiles with a view to escape, was simply to take advantage of his talents of ingratiation to effect that purpose. He finally succeeded, but not without killing the governor; on which event, by contriving to get their wives and children into his power, he imposed terms on the military, and was enabled to seize a vessel and sail from Kamtschatka, accompanied by ninety-six persons. Of these nine were women, including Aphranasia Nilow the go-

vernor's daughter, of whom nothing more is heard, in the very romantic and suspicious narrative of the count, than that she died the following September at Macao. At the latter port the count and his companions arrived, after crossing the northern Pacific ocean, and touching at Japan and Formosa. At Macao he formed an engagement with the French East India company, and proceeded with most of his companions to the Isle of France, whence he finally sailed for Europe in 1772, and, touching at Madagascar, arrived in France in the July of that year. He was well received by the French ministry, who listened to his plan for a settlement on the island of Madagascar. He accordingly embarked once more for the isle of France, whence he sent a detachment to Madagascar; but being inadequately supported, great confusion ensued, which induced the French ministry to send out commissioners to enquire into the state of the settlement. Here Benyowsky again degenerated into the mere adventurer, quitted the French service, and inducing the natives to believe that he was a descendant of one of their native kings formerly carried away to Europe, was actually elected their chief. Thus constituted a sovereign, he sailed to Europe in a brig which he had freighted for the Cape of Good Hope, in order to submit proposals for acquiring the aid and protection of Great Britain, or any other power which might deem certain trading advantages an equivalent. He however failed in all these endeavours, but induced certain private merchants to supply him with a vessel and merchandise to the value of 4000*l.* After touching at the Cape of Good Hope and at Sofala, he anchored at the bay of Atanagara in Madagascar, in July 1785, where he unloaded his cargo, on which those on board sailed away with the vessel and deserted him. Notwithstanding this disaster, he departed for his settlement of Angoneti, leaving his party to follow, and soon had a body of natives under his command, with whom he attacked the French factory at Foulpoint. In consequence of these proceedings, the government of the Isle of France sent a ship with sixty regulars on board, who landed in May 1786. The count had constructed a small redoubt, which he attempted to defend with two cannon, as many Europeans, and thirty natives. The latter fled on the first fire; and Benyowsky, receiving a musquet-ball in the breast, fell behind the parapet, whence he was dragged by the hair, and in a few minutes afterwards expired. Thus fell this brave and eccentric adventurer, for whose motives and principles there has been little authority except his own narrative, which in many particulars is highly improbable. It is evident however that a wider theatre was only wanting to make him a conspicuous subject for history. As it is, he merely supplies an example of one of those daring and fearless characters, who pass like meteors through life, and leave neither traces nor consequences behind them.—*Preface to his Memoirs.*

BENZELIUS (ERIC) a Swedish divine,

born at Benzely in West Gotland, whence he derived his name. After being educated at Upsal, he was chosen tutor to the sons of the count de la Gardie, chancellor of Sweden. He travelled with his pupils in several parts of Europe, forming an acquaintance with learned men, and examining the public libraries. Returning home in 1663, he was appointed professor of history and morality, and afterwards professor of divinity, in the university of Upsal. In 1677 he was raised to the bishopric of Strengnes, and in 1700 he was made archbishop of Upsal: he was also vice-chancellor of the university. He died in 1709, having been twice married, and leaving a numerous family. His works relate to theology and ecclesiastical history, and he published a translation of the Bible into the Swedish language.—*Moreri. Biog. Universelle.*

BENZELIUS (ERIC) son of the foregoing, born at Upsal in 1675, was of the same profession as his father, and after enjoying other preferments in the church, was raised to the metropolitan see of Upsal. He died in 1743. He wrote on the antiquities of Sweden, and was also editor of the ancient Gothic version of the Gospels, published with a Latin translation by Edward Lye, Oxford, 1750, 4to. It is somewhat remarkable that two younger brothers of this prelate were successively archbishops of Upsal. One of them, HENRY BENZELIUS, who died in 1758, travelled into the East and left a journal of his tour, said to be preserved in manuscript at Upsal. Some of his observations were published in a miscellany entitled "Syntagma Dissertationum in Academia Lundensi habitarum." Leipsic, 1745, 4to.—*Biog. Universelle.*

BEORNO, or BIORN, of Scarsaa, an Islandic author of the 17th century. He wrote a work entitled "De novitiis Groenlandorum Indiciis," containing some curious facts, which appear to indicate the existence of a Norwegian colony in East Greenland, the coast of which has been inaccessible to navigators ever since the beginning of the 15th century. He also wrote "Annales sive Collectanea Gronlandiæ, ab A.C. 1400 usque ad sua tempora deducta," often quoted by Torfeus, who had in his possession a manuscript copy of the work, which does not appear to have been published.—*Sibbern. Bibliot. Hist. Dano-Norveg.*

BEOWULF, the name of a Danish seaking, whose adventures form the subject of a curious epic poem, preserved in manuscript in the Cottonian library in the British museum, and published at Copenhagen in 1815 by Grimr. J. Thorkelin. The poem consists of forty-three sections or cantos, comprising the life of Beowulf, who, after a reign of fifty years, terminated his existence on a funeral pyre. The anonymous author professes to have been repeatedly recompensed by his hero, and must therefore have been his contemporary. In the first section a bard is introduced singing before Beowulf the history of the creation and the death of Abel, whence it has been inferred that the Danes were Christians at the time

this poem was written. Other circumstances tend to fix the date of its composition to the 9th century. The author seems to have been a priest. The language is Dano-Saxon, differing but little from the Islandic, and the style resembles that of the Edda. An analysis of this poem, with copious extracts, may be found in Turner's History of the Anglo-Saxons.—*Monthly Mag.* vol. xliii.

BERARDI (ANGELO) a musician and writer on counterpoint of the 17th century. His works were published at Bologna: "Documenti Armonica" in 1687, "Miscellanea Musicale" in 1689, "Arcani Musicale" in 1690, and "Il Perche Musicale" in 1693. They were esteemed of great authority at the time, and are quoted by Cheron.—*Biog. Dict. of Mus.*

BERCHORIUS (PETER) a Benedictine of the fourteenth century, who died at Paris, prior of the monastery of St Eloy, in 1362. He wrote several works which are lost: those which remain are in three volumes folio, under the title of "Reductorium, Repertorium et Dictionarium Morale utriusque Testamenti," Strasburgh, 1474. The Reductorium contains all the stories and incidents in the Bible reduced into allegories; the Repertorium is a dictionary of kings, persons, and places; and the Dictionarium seems principally designed for students in theology. Warton is of opinion that this work proves Berchorius to have been the author of the "Gesta Romanorum." He also translated Livy by order of king John of France, of which version copies are to be found in the royal library at Paris. It was printed in 1514 in 3 vols. folio.—*Biog. Univ. Warton's Hist.*

BERENGARIUS, or BERENGER, archdeacon of Angers, a famous writer on controversial theology in the 11th century. He revived the opinions of Scotus Eriгена concerning the eucharist, asserting that it was only a commemorative rite, and denying the doctrine of transubstantiation. His heresy, as it was termed, was repeatedly condemned in provincial councils; and he was three times summoned to Rome, and induced to sign recantations of the tenets he had promulgated. He died in 1088, in the bosom of the Catholic church. Francis de Roye, a learned French lawyer of the 16th century, wrote a treatise to prove that the repentance of this great heretodox divine was sincere and lasting; a position which has been the subject of much idle controversy between Protestants and Catholics. Berengarius wrote much, but few of his works are extant. One treatise however, "De Corpore et Sanguine Jesu Christi," was published in Germany by Lessing so lately as 1770.—*Moreri. Mosheim's Ecclesiastical Hist.* There was another French divine of this name, BERENGARIUS of Poitiers, who was a disciple of Peter Abelard. On the condemnation of his master's opinions in 1140, he wrote an "Apology," for him, which, with some other tracts composed by Berengarius, has been published in the collection of the works of Abelard by Francis Amboise.—*Bayle.*

BERENGARIUS (JACOBUS) called Carpus

Berenger di Carpi from the place of his birth, an eminent physician and anatomist of the 16th century. He was the son of a surgeon, and was patronized by Alberto Pio, lord of Carpi, who employed him when young in the dissection of brute animals. In 1502 he was made professor of anatomy at Bologna, in which situation he distinguished himself by his anatomical researches and discoveries. Like others of his profession, he has been charged with dissecting human living subjects, and it is said he was obliged on that account to flee from Bologna. But this appears to be a vulgar calumny; and he was more probably compelled to remove by the Inquisition, in consequence of the supposed licentious tendency of his anatomical demonstrations, and the laxity of his moral principles. He afterwards practised his profession at Rome, and about 1527 retired to Ferrara, where he died. Berengarius gained great fame and riches by his skill in the treatment of a certain disease, in the curing of which he had recourse to the external use of mercury, though he was not, as some have asserted, the inventor of that practice. He wrote "Commentaries on the Anatomy of Mundinus;" another anatomical work; and a treatise on "Fractures of the Skull."—*Haller. Bibl. Anat. Hutchinson's Biog. Med.*

BERENGER (JOHN PETER) a native of Geneva, who distinguished himself as a man of letters. Having been engaged in some political machinations against the state, he was banished in 1770, and retired to Lausanne, where he afterwards resided. He died in 1807. His principal works are—"Les Amans Republicains, ou Lettres de Nicias à Cynire;" "Histoire de Genève," 6 vols. 8vo; "J. J. Rousseau justifié envers sa patrie;" an abridgment of Busching's Geography, 12 vols. 8vo; and a collection of Voyages round the World, 9 vols. 8vo.—*Biog. Univ.*

BERENICIUS, an eccentric personage, supposed to have been an expelled Jesuit, who excited some attention in Holland about the year 1670. For a maintenance, he united the occupations of a chimney-sweeper and itinerant knife-grinder; while such were his natural abilities and literary acquirements, that, besides being able to repeat from memory most of the works of Aristophanes, Homer, Pliny, Virgil, Cicero, and other Greek and Roman authors, he could also, without any apparent effort, translate at will the journals and gazettes, &c. into extemporaneous verse in either the Greek or Latin language. He was well versed in most of the modern European tongues, and displayed a great familiarity with many subjects of science, but was nevertheless of a most debauched and licentious disposition, to which he eventually owed his untimely death, perishing miserably in a bog into which he had fallen while in a state of intoxication. He is said to have been the author of "Georgar-choniomacha."—*Moreri.*

BERGALLI (LOUISA) the daughter of a shoemaker at Venice, in which city she was born in 1703. By means of intense application, she raised herself to no mean rank in the

republic of letters, reading and writing the learned languages with the greatest facility. She published a tragedy on the subject of Agis king of Sparta, written in Italian; two others, entitled "La Teba" and "Elettra;" "La Brandamante" and "L'Elenia," musical dramas; and "Le Avventure del Poeta," a comedy. Her other writings are—"Componimenti Poetica delle piu illustri matrici d'ogni seculo," and a translation of the comedies of Terence into Italian verse, printed in 8vo. She was also a good painter, having studied under Rosalba Carriera. In 1738 she married count Gaspard Gozzi, by whom she had a family. The time of her death is not known.—*Biog. Univ.*

BERGEN (CHARLES AUGUSTUS DE) a German anatomist and botanist, was born in 1704 at Frankfort on the Oder, where his father was professor of anatomy and botany. After studying under Boerhaave and Albinus at Leyden, he proceeded for further improvement to Paris, Strassburgh, and most of the celebrated universities in Germany. In 1738 he succeeded to both the professorships of his father, and in 1744 became professor of therapeutics and pathology at the same university, which chair he maintained with high credit until his death in 1760. His academical dissertations on anatomy were published by Haller, who praises them highly. His works not included in that collection are—1. "Icon nova ventriculorum cerebri;" 2. "Programma de Pia-mater;" 3. "Programma de nervis quibusdam cranii ad novem paria hactenus non relatis;" 4. "Methodus cranii ossa dissuendi, et machinae hunc in finem constructae delineatio;" 5. "Pontas observationum anatomico-physiologicarum;" 6. "Elementa physiologiae;" 7. "Anatomes experimentatis;" 8. "Programma" on the comparative merit of the Linnæan and Tournefortian systems;" 9. "Dissertatio de Aloide;" 10. "Catalogus stirpium quas hortus Academia Viadrinae (Frankfort) complectitur;" 11. "Flora Francofurtana;" 12. "Classes Conchyliorum;" besides several dissertations in medical journals.—*Ibid.*

BERGERAC (SAVINIEN CYRANO DE) was born at Bergerac in Perigord in 1626. He was indifferently educated by a country priest, and afterwards came to Paris, and gave himself up to dissipation. He then entered the guards as a cadet, and became famous as a duellist, regularly quarrelling with every one who noticed his nose, which was very remarkably formed. His courage on these occasions procured him the name of the intrepid, which he retained to the end of life. Being twice badly wounded, he gave up the army, in which he had little chance of preferment, and applied himself to letters, which he had never altogether neglected. He composed many works, in which he showed that mixture of genius and extravagance which it is so difficult either to admire or condemn. The only works published during his life were some letters written in his youth, a tragedy on the subject of the elder Agrippina, and a comedy called "The Pedant." His other works con-

BER

sisting of a "Comic History of the States and Empires in the Moon;" a "Comic History of the States and Empires of the Sun;" with some letters, dialogues, and fragments, were not published until after his death. He died in 1655, aged only thirty-five, owing to a blow upon his head received some months before from the falling of a piece of wood. Bergerac was deficient in education, but possessed a peculiar turn of wit and humour, not very dissimilar to that of Swift, but less correct and misanthropical, and more light and extravagant. He has introduced into his romances the system of Des Cartes, apparently with a view to laugh at it, as well as at other wild notions, suppositions, and theories, of the astronomers of his age. Swift is thought to have been indebted to him in his Gulliver, as also Fontenelle in his Plurality of Worlds, and Voltaire in his Micromegas. The best edition of his works is that of Paris, 1741, 3 vols. 12mo.—*Ibid.*

BERGHEM (NICHOLAS) a celebrated painter, was born at Haarlem in 1624, being the son of a painter of little merit. The pictures which he painted in early life resemble the sea-pieces of Weenix, but are touched with more delicacy. He afterwards embraced the more fertile province of landscape, in which he is superior to any painter of his country, except Both. The style of Berghem is deemed excellent, being extremely happy in the choice and arrangement of his composition. The distribution of his masses, and his conduct of light and shadow, are also masterly, while the delicacy of his aerial perspective, the light floating of his skies, and the transparency of his water, have never been surpassed. He has also left behind him many exquisite drawings and etchings. He married the daughter of his master, Jan Wils, a woman of a most avaricious disposition, who grasped all his earnings, and reduced him to the necessity of borrowing from his pupils to purchase engravings, his only source of expense. He died in 1683, aged fifty-nine.—*Bryan's Hist. of Paint. and Eng.*

BERGIER (NICHOLAS) an eminent writer on archæology in the seventeenth century. He was a native of Rheims, and embracing the legal profession, was made syndic of that city. Afterwards removing to Paris, he obtained the patronage of the president de Bellievre, who procured him a pension, with the office of royal historiographer. He died in 1623. Bergier was the author of several works, the most important of which is his "Histoire des grands Chemins de l'Empire Romain," first published in 1622, and reprinted with notes at Brussels in 1729 and 1736: a translation into Latin by Henninius, is inserted in the 10th vol. of the Roman Antiquities of Grævius. It has also been translated into Italian, and a part of it into English. A history of Rheims, by Bergier, was published by his son in 1635, 4to.—*Bayle. Biog. Univ.*

BERGIER (NICHOLAS SYLVESTER) a French ecclesiastic, who became professor of divinity and principal of the college of Besançon, and was afterwards canon of Notre Dame

BER

at Paris, and confessor to Louis XVI. He died in 1790. As a public writer he distinguished himself by several popular treatises against the philosophy of Voltaire and his followers. He was also the author of a Theological Dictionary, 3 vols. 4to; and "Elemens primitifs des Langues," 12mo.—*Biog. Univ.*

BERGLER (STEPHEN) a learned but eccentric scholar, who was a native of Hermanstadt in Transylvania. After acquiring an acquaintance with classical literature, he visited Germany and Holland, and was employed as a corrector of the press at Leipsic, and then at Amsterdam, where he superintended the printing of the *Ouomasticon* of Julius Pollux, with the notes of the learned Hemsterhuis; and he also edited the works of Homer, 1707, 2 vols. 18mo. He then went to Hamburg, and assisted John Albert Fabricius, who was occupied in his great work, the "Bibliotheca Græca." Bergler went next to Leipsic, where he published the *Cassandra* of Lycophron, and some classical dissertations in the "Acta Eruditorum." He also translated, from the Greek into Latin, a treatise written by Maurocordato, prince of Wallachia, which was published under the title of "Liber de Officiis," London, 1724, 12mo. In Wallachia, whither he subsequently removed, he discovered a manuscript containing the first part of the "Evangelical Demonstration of Eusebius," which he transmitted to Fabricius, by whom it was published. His future adventures are but imperfectly known, as he led a wandering life, which was terminated at Constantinople in 1746. He is stated to have become a Mahometan, a circumstance which is rendered probable by the general levity of his principles and character.—*Ibid.*

BERGIUS. There were three authors of this name; the first, JOHN HENRY LOUIS, was a native of Laaspa in Germany, born 1718. His principal work is "A Magazine of Police and Administration," contained in fourteen quarto volumes; he also collected the various laws of Germany respecting the regulation of the police into four volumes, and published a catalogue of works written on the subject of political economy. He died in 1781. The other two were brothers, natives of Sweden, and members of the academy of Stockholm, in which the elder, PETER JONAS, was professor of natural history. He published a catalogue of the plants found at the Cape of Good Hope; a history of Stockholm; a work on fruit-trees; and a treatise in 2 vols. 8vo, entitled "Materia Medica æ regno vegetabili." He died in 1791, surviving by about seven years his brother BENEDICT, born 1725, who was, like himself, a proficient in natural history, but left behind him little more than a few essays published in the Transactions of the academy of Stockholm, and a manuscript treatise, since printed, on the subject of "Nicity in Diet."—*Biog. Univ.*

BERGMANN (TORBERN) professor of chemistry at Upsal, member of the Academy of Sciences of that city, of the Royal Societies of London, Berlin, Stockholm, Göttingen, and

Turin, and foreign associate of the Medical Society and Academy of Sciences at Paris, was one of the most eminent chemists and natural philosophers of the eighteenth century. He was born in West Gothland in 1735, and educated at Upsal, where he attracted the notice of the celebrated Linnæus by some discoveries in Entomology. In 1761 he was nominated professor of mathematics and natural philosophy at Upsal; and the same year he distinguished himself by his observations on the transit of Venus over the sun. But his fame depends on his having extended the boundaries of chemical science. On the resignation of Wallerius, professor of chemistry and mineralogy, in 1767, Bergmann became a candidate for the office, and was, notwithstanding the formidable opposition of a numerous party, chosen to fill the vacant chair, chiefly through the active patronage of the prince royal, afterwards Gustavus III, who was the chancellor of the university. One of the first measures of the new professor was to form a cabinet or museum near his own laboratory, in which were regularly arranged the various substances of the mineral kingdom, with their products; the minerals peculiar to Sweden; and models of the instruments and machines employed in converting those substances into articles of utility. He also instituted a great variety of experiments, tending to develop the nature and composition of bodies principally belonging to the vegetable and mineral kingdoms; and his labours were rewarded with several interesting discoveries relating to metals, earths, gems, mineral waters, &c. His most important researches however, were those concerning electric attraction or chemical affinity, that property of matter which gives rise to the various combinations and decompositions continually taking place in the processes of nature and art. The laws or general principles of this species of action, on our acquaintance with which the whole science of chemistry depends, have since been more fully investigated and ascertained; but to Bergmann is to be ascribed the merit of having taken a most extensive view of the subject, and, after pointing out the mode in which researches should be conducted, of having shown how to note down their results in a very ingenious manner, so as to form a system of chemical science. The life of Bergmann was but little varied by incident. After his appointment to the chemical professorship, he scarcely ever left Upsal, excepting a few excursions to the mines for the purpose of making scientific experiments, and occasional visits to a watering-place for the benefit of his health. He had the honour to be chosen rector of the university; and some time after the king of Prussia invited him to Berlin, wishing to attach him to the Royal Academy in that city; which agreeable offer he declined, out of gratitude to his own sovereign, who he knew wished to retain him in Sweden. He died July 8, 1784, at the baths of Medwi, whither he had gone to use the mineral waters. The most valuable works of Bergmann are a memoir on the manufacture of alum;

a sketch of mineralogy, entitled "*Sciagraphia Regni Mineralis*," which has been translated into French and English; a number of detached essays, collected and published under the title of "*Opuscula chemica et physica*," 6 vols. 8vo; and a treatise on elective attraction.—*Aikin's G. Biog. Hutchinson's Biog. Med.*

BERING (VITUS) an eminent navigator, well known for his shipwreck and death on an island still distinguished by his name. He served in the Russian navy, and was entrusted by Peter the Great with an expedition to ascertain how far the coast of America extended towards the east; but he made no discoveries of moment, either in this voyage, or in the two which he subsequently commanded for the same government in 1730 and 1741. In the last of these attempts he was shipwrecked in the straits and on the island which retain his name, where he died in great distress in December 1741. Though Bering's expedition terminated so unfortunately, the finding of this island led to the discovery of others abounding with valuable furs, and finally to that of the Aleutian isles.—*Coxe's Russian Discoveries.*

BERINGER (JOHN BARTHOLOMEW ADAM) a German naturalist, professor in the university of Wurtsburg, in Franconia, who was the subject of a curious mystification or hoax, played off at his expense, and which exposed him to a good deal of ridicule. He published in 1726 a folio volume, with engravings, entitled, "*Lithographiæ Wirceburgensis ducentis Lapidum Figuratorum a potiori Insectiformium prodigiis imaginibus exornate, Specimen primum: resp. G. L. Hueber*," Wirceb. This work contained representations of *insect-shaped stones*, described as natural petrifications, while they were in fact spurious imitations. Beringer was a collector of curious fossils, and spared no exertions to obtain them. Some Jesuits, whom he had offended, procured carvings or models in stone of insects, frogs, toads, lizards, butterflies, small birds, &c. which they buried in the neighbourhood of Wurtsburg. The credulous philosopher was too keen an investigator of the soil to let these imaginary treasures escape him. Having brought them to light, he had them engraved, wrote learned descriptions of them, and proceeded to publication. Then, and not till then, his mischievous adversaries promulgated the whole history of the manufacture and interment of the supposed *lusus nature*, on which the professor had been induced to waste his erudition, his time and his money.—*Gronovii Biblioth. Regni Animalis et Lapidei*, 1760.

BERKELEY (GEORGE BERKELEY, earl of) a descendant from Robert Fitzharding of the royal house of Denmark, who, for his attachment to Charles I, and zeal for the Restoration, was created viscount Dursley and earl of Berkeley in 1679. According to lord Orford, he was the author of a work of a religious cast, entitled "*Historical Applications and Meditations upon various Subjects*," and also published a speech to the *Levant Company* in

1680. The manners of this nobleman were so generally affable and suspiciously obsequious, that Wycherley is said to have aimed at him in the character of lord Plausible in the "Plain Dealer." He died in 1698.---
Walpole's Royal and Noble Authors.

BERKELEY (Dr GEORGE) an eminent prelate and philosopher, was the son of William Berkeley of Thomas Town in the county of Kilkenny, an English gentleman who, having suffered for his attachment to Charles I, repaired to Ireland, and obtained the collectorship of Belfast. He was born at Kiterin, near Thomas Town, on the 12th of March, 1684, and received his education at Kilkenny school, whence he removed to Trinity college, Dublin, where he became a fellow in 1707. In the same year he published his first work, written before he was twenty years of age, entitled "Arithmetica absque Algebra aut Euclida demonstrata." This piece showed his mathematical knowledge, and tendency to that subtle line of investigation by which he afterwards became so distinguished. His next work was on the "Theory of Vision," published in 1709, which production was the first formal attempt to distinguish the operation of the senses from the conclusions deduced from our sensations. He more especially proved, that the apparently intuitive connexion between sight and touch is the result of habit; a truth soon after completely verified in the famous case of the young man restored to sight by Cheselden. In 1710 appeared "The Principles of Human Knowledge," and in 1713 "Dialogues between Hylas and Philonous;" the object of both which works is to prove, that the commonly received notion of the existence of matter is false, and that sensible objects are merely mental impressions produced by the Supreme Being according to certain rules termed laws of nature. This doctrine the author of his life in the "Biographia Britannica" attributes to his fondness for romances; an opinion which might justly create a suspicion that he who gave it had read nothing else himself. The hypothesis of Berkeley, for it is no more, is founded upon the immutable truth, that the mind discovers nothing but powers or qualities; and his acute endeavour to trace their origin is only romantic in the sense that every attempt to discover the great secret of existence is romantic, and must ever remain so, deprived as we are of data on which to rest the investigation. Berkeley declared, that he wrote against sceptics and infidels, and his veracity is unimpeachable; but Hume places these works before the labours of Bayle, and of all philosophers ancient and modern, as lessons of scepticism;—so differently may conclusions be drawn. Dr Reid, and what is termed the common sense school of Scottish metaphysicians, have most forcibly opposed the ideal theory of Berkeley; which at present is as much out of repute as a system can be, the falsehood of which is as unaffirmable as the truth, and in allusion to which an eminent philosopher once observed, that the fact of its never crossing the mind of

a man, in the present state of knowledge, is sufficient to prove, that he can never be a metaphysician. In 1712 Mr Berkeley published three sermons in favour of passive obedience and non-resistance; which afterwards caused him to be reprobated as a Jacobite to the house of Hanover, with whom the doctrine at that time was necessarily in great discredit. The reputation of Mr Berkeley was now established; and acuteness of parts and beauty of imagination were so conspicuous in his writings, that his company was courted by all parties; not only Pope, Swift, and Arbuthnot, but Addison and Steele, concurred in recommending him. He ably assisted the latter in the Guardian; and Swift, besides recommending him to many valuable acquaintances, procured him the place of chaplain and secretary to the celebrated earl of Peterborough, in his embassy to Sicily. His hopes of further preferment expiring with the reign of Anne, he soon after embraced the offer of accompanying Mr Ashe, son to the bishop of Clogher, on a tour through Europe, in which he was detained nearly four years. At Paris, on his way home, he visited Malebranche, and had an ardent discussion with that philosopher on the principles of his ideal theory; and at Lyons he wrote his tract entitled "De Motu," which he printed in London in 1721. On his return, he was introduced by Pope to lord Burlington, who recommended him to the duke of Grafton, who becoming lord lieutenant of Ireland, made him one of his chaplains; and at this time he took the degrees of bachelor and doctor of divinity. On his first visit to London, Dr Swift had introduced him to the celebrated and unfortunate Vanessa, Mrs Esther Vanhomrigh. This lady, on her discovery of the marriage of Swift with Mrs Johnson, altered her intention of making him her heir; and to the great surprise of Dr Berkeley, on her death her fortune of 8,000*l.* was found equally divided between him and a Mr Marshall, a gentleman of the law, both being also named executors. In the discharge of this latter duty, Dr Berkeley destroyed such part of the epistolary correspondence between the testator and Swift, as fell into his hands, notwithstanding her express wish that it should be published. A too great warmth of expression on the part of the lady was his plea on this occasion; but what defence the other executor could make for the suppression of an entire copy received from Vanessa on her death-bed, with a formal injunction to publish it, it is not so easy to determine. In point of honour and justice, the defeat of a testator's intention in one thing is as unwarrantable as in another; and an eccentric disposition of property might be as rationally corrected, on a similar principle, as an imprudent publication. In 1724 Dr Berkeley was made dean of Derry, and resigned his fellowship. Since his arrival in Ireland, he had occupied himself with a scheme for the conversion of the North American savages by the instrumentality of a missionary college to be erected in the Bermudas. He accordingly obtained coadjutors, and made a

proposal to government, which obtained a charter from George I; and the sum of 10,000*l.* was promised in due time by the minister sir Robert Walpole. In the mean time, in August 1728, Dr Berkeley married Anne, the eldest daughter of Mr Forster, speaker of the Irish house of Commons; but this union was so far from checking his enthusiasm, that he sailed for Rhode Island in the middle of the ensuing month, accompanied by his lady, a Miss Handcock, two gentlemen of property, of the name of James and Dalton, a valuable library of books, and a large sum of his own property. The conduct of Walpole on this occasion was very unpardonable; for after remaining two years in America, the necessary aid was withheld, and Dr Berkeley returned to Europe, after spending a large part of his fortune, and seven years of the prime of his life, in maturing a scheme which, if visionary, as afterwards alleged, should have been opposed in the first instance. The honourable integrity of the originator was very conspicuous on this occasion; for scrupulously returning all the subscriptions which he had received in aid of his pious intention, he took the whole of the loss on himself. In 1732 he published "The Minute Philosopher," a series of dialogues, the object of which was on his own principles, to refute the various systems of atheism, fanaticism, and scepticism. On the appearance of this work, it was carried by Dr Sherlock to queen Caroline, by whose patronage the author was in 1733 promoted to the bishopric of Cloyne; which accession of wealth and consequence produced no abatement of his studies. A reported conversation of Dr Garth on his death-bed, attributing his infidelity to the opinions of Dr Halley, induced bishop Berkeley to address a discourse, called "The Analyst," to an "Infidel Mathematician." In this work he labours to show, that the objects, principles, and inferences, of modern analysis are not more distinctly conceived than points of faith; a position which he still farther illustrated from certain difficulties in the doctrine of fluxions. This attack gave rise to a smart controversy on the subject of fluxions, which at all events was serviceable in giving rise to Maclaurin's masterly treatise, in which the doctrine was delivered with more precision than before, and by introducing a more strict logical process in the superior departments of the mathematics. During the rebellion in 1745, bishop Berkeley addressed a letter to the Roman Catholics in his diocese, and another in 1749, which, from its candour, moderation, and good sense, produced him the thanks of the Catholic gentry. On the accession of lord Chesterfield to the lieutenancy of Ireland, he was offered the bishopric of Clogher, of twice the value of that of Cloyne, which translation he declined, with a modest assurance, that he was attached to his diocese, and that his revenue was quite equal to his wishes. In 1750 he published an able work entitled "Maxims concerning Patriotism." In 1744, having cured himself of a nervous cholick by the use of tar water,

he wrote a Look on that medicine, which he called "Siris." To this work in 1752 he furnished a sequel, entitled "Further Thoughts on Tar Water," which was his last performance. In July 1752, he removed, in a bad state of health, with his family to Oxford, in order to superintend the education of one of his sons, and lived highly respected there until his death. While sitting in the midst of his family, listening to a sermon by Dr Sherlock, he was seized with what was supposed to be a palsy of the heart, and immediately expired. The event, which took place in January 1753, in his seventy-ninth year, was so sudden, that his body was cold and his joints stiff when his death was discovered by his daughter, who came to present him with a cup of tea. Bishop Berkeley was a robust and handsome man, until his studies impaired his health; his countenance was expressive and benevolent; and the enthusiasm of his public character was equally apparent in his private life and conversation. His morals and conduct were always unimpeachable, and he was in all respects an honourable and amiable man. The testimonies in this respect are abundant: "To Berkeley every virtue under Heaven," is one of the lines of Pope; and Atterbury, alluding to his singular display of knowledge, understanding, innocence, and humility, spoke of him as fulfilling his conception of an angelic being. The degree of estimation which he merits as a philosopher will be differently regarded, according to the various opinions of those who judge of him; but the ingenuity of his reasoning, and the acuteness of his intellect, can be disputed by none. Such was the activity of his disposition, that he was not only versed in the general positions of science, but in the maxims of trade, the pursuits of agriculture, and the arts of common life. That he possessed the germ of poetical ability, is also evident from his letters, and the beautiful stanzas written by him on looking towards the Bermudas. Besides the writings already enumerated, he wrote some smaller pieces, which are to be found in a collection printed at Dublin, 1752, under the title of "Miscellanies." The Utopian romance of "Gaudenzio di Lucca," has been erroneously attributed to bishop Berkeley.—*Biog. Brit. Aikin's G. Dict.*

BERKELEY (GEORGE, D.D.) second son of the above, was born in London in 1733, and educated by his father, by whom he was placed at Christ-church, Oxford. On taking orders, the respect entertained for the bishop ensured him various preferments; and he died possessed of the rectory of St Clements' Danes, a prebendary stall in Canterbury, and the chancellorship of Brecon. He is author of a few printed political sermons, one of which, preached on 30th of January, has run through six editions. He died in 1795. He married Eliza, daughter of the Rev. Henry Finsham, a literary female of exceeding eccentricity, who wrote very curious papers for the Gentleman's Magazine, and published in 1789 a magnificent edition of

the poems of her deceased son, George Monk Berkeley. She died in 1800. *George Monk Berkeley*, the son in question, published himself, in 1789, a volume entitled "Literary Relics."—*Gent. Mag.*

BERKELEY (SIR WILLIAM) the son of sir Maurice Berkeley, and brother of lord Berkeley of Stratton, was born in London, and educated at Oxford. In 1646 he invited a body of royalists to accompany him to Virginia, in order to take that refuge from the partizans of the new government, which had been sought by emigrants of contrary principles from the persecutions of the old one. In this plan he partly succeeded, but was deprived of the government by the ruling powers at home. He was however restored on the return of Charles II. He died at Twickenham in 1677. He wrote two plays, "The Last Lady," a tragi-comedy, and "Cornelia," not printed. He is also the author of a "Description of Virginia," in folio.—*Wood's Athen. Oxon.*

BERKENHOUT (JOHN) an ingenious physician, who was the son of a Dutch merchant settled at Leeds in Yorkshire. He was designed for the same profession, but going to the Continent to study foreign languages, he entered into the military service of the king of Prussia, in which he attained the rank of captain. On the commencement of war between England and France in 1756, he came home, and had a commission in the British army. Peace taking place in 1760, he went to Edinburgh and studied physic, and afterwards to Leyden, where he took the degree MD. He practised for some time at Isleworth in Middlesex; and in 1778 he went to North America, with the commissioners sent by government to treat with the colonies. On his return home, he had a pension bestowed on him. He died in 1791, aged about sixty. His principal literary works are—"Clavis Anglica Linguae Botanicae;" "Outlines of the Natural History of Great Britain and Ireland," 3 vols. 12mo, republished in 2 vols. 8vo; "Symptomatology;" "First Lines of the Theory and Practice of Chemistry;" a continuation of Campbell's Lives of Admirals; and "Biographia Literaria," 4to, of which only the first volume was published, containing an historical survey of British literature to the reign of Elizabeth.—*Hutchinson's Biog. Med.*

BERNARD (St) abbot of Clairvaux, one of the most distinguished characters of his age, was born of a noble family of Burgundy in 1091. At the age of twenty-three he entered the abbey of Cîteaux, and in two years obtained so much distinction, as to be sent with a colony of monks to found the abbey of Clairvaux, in the diocese of Langres, of which he was created the first abbot, and never would accept of a higher preferment. His zeal and eloquence soon peopled the solitude; and under his rule Clairvaux became a seminary for men of the first merit in the church, a pope, six cardinals, and thirty prelates proceeding from it in the life-time of the founder. So famous did its ruler become, that Bernard in his retreat possessed more authority in the

Christian world, than if seated on the throne of St Peter. He was consulted as an oracle on all religious occasions; and his example rendered the new order of Cistercians so popular, that he lived to see the foundation of 160 convents, the members of which acknowledged him as their second head. His controversy with Abelard has been mentioned in the life of that celebrated doctor (see **ABELARD**) and the superior learning of the latter was constrained to yield to the ascendancy of a man wielding a popular influence so overwhelming, who on this occasion, and probably on others, by no means hesitated to use the arts of making an antagonist odious, which so frequently accompany the defence of established systems. Some of his exertions indeed were more meritorious; for instance, he opposed the fanatical monk Raoul, who preached the extermination of the Jews. His success in theological warfare however rendered him less famous, than his wonderful influence in promoting the second disastrous crusade against the Saracens. Louis VII of France, the emperor Conrad, and a crowd of nobles and princes throughout Christendom, urged by his eloquence, took the cross; and all sorts of miracles are recorded as attendant on his mission from Constance and Cologne, to preach up this absurdity. The Christian hosts thus raised, however, melted away without the accomplishment of any thing worthy of record, and Bernard, who had confidently predicted success, was destined to endure the reproaches of the poor remnant who found their way back to Europe. He prudently attributed the blame to the sins of the crusaders, which had been sufficiently notorious; but he did not long survive this mortification, dying at Clairvaux in 1153, in the sixty-third year of his age. He was a great man of that secondary order who possess greater energies in the way of excitement, than of control and management, and evidently more of an enthusiast than a politician. Ascendancy so extensive and uncontrolled could not however have been acquired without extraordinary powers of persuasion; nor is it a common nature that can always speak and act like one born to command. He was a copious writer: his style possesses energy, vivacity, and elevation; and although he lived in a scholastic age, his genius enabled him to escape both from its dryness and its method. Hence he has been regarded as the latest of the fathers. The best edition of his work is that of Mabilion, Venice, 6 vols. folio.—*Bayle. Nouv. Dict. Hist. Mosheim.*

BERNARD of Menthon, a celebrated monk, born of an illustrious family at Annecy in Savoy in the year 923. He obtained great distinction in his day for his learning and religion, but is more particularly known to posterity by the foundation of the two hospitia or monasteries of the Great and Little St Bernard on the summit of the Alps, as resting-places for the French and German pilgrims on their way to Rome. These establishments, which were entrusted to regular canons of the

order of St Augustine, have now lasted nine hundred years, to the preservation of some thousand lives. The principal monastery, that of Great St Bernard, is 2500 toises above the sea. Bernard de Menthon, who became archdeacon of Aoste, died in 1008.—*Biog. Univ.*

BERNARD (EDWARD) an eminent mathematician and Oriental scholar of the seventeenth century. He was a native of Northamptonshire, and was educated at Merchant-Tailors' school, and St John's college, Oxford. Here he studied with assiduity and success the Eastern languages, as well of those of Greece and Rome, and had for his mathematical instructor the celebrated Dr Wallis. After taking his degrees, he went in 1668 to Leyden, to examine the Oriental manuscripts in the library of that university, and particularly an Arabic version of the work of Apollonius Pergæus on conic sections, part of which is wanting in the Greek original. He transcribed the manuscript with a view to publication, but he was prevented from executing his purpose. In 1669 he became deputy to the Savilian professor of astronomy; and in 1673, on the resignation of sir Christopher Wren, he succeeded him. He immediately engaged in preparing to fulfil one of the objects for which the professorship was instituted, the publication of the existing works of the ancient mathematicians (see **JOHN BAINBRIDGE**) but he only printed a few sheets of Euclid as a specimen. In 1676 he went to France, as tutor to the two sons of Charles II by the duchess of Cleveland. About a year afterwards he returned to Oxford, where he continued till 1683, when he went to Leyden, to attend the sale of the library of Nicholas Heinsius. The next year he took the degree of DD.; and being subsequently presented to the valuable rectory of Brightwell in Berkshire, he resigned his professorship to Dr David Gregory. He went again to Holland in 1696, to be present at the sale of the manuscripts of Golius, the famous Orientalist. Soon after his return home, he was attacked with a consumptive disease, of which he died in January 1697, at the age of fifty-nine. Dr Bernard published some astronomical papers in the Philosophical Transactions; "A Treatise on ancient Weights and Measures;" "Orbis eruditi Literatura a character Samaritico deducta," a large sheet of engraving, exhibiting a variety of alphabets and abbreviations, "Etymologicum Britannicum;" "Chronologia Samaritanæ Synopsis," in the *Acta Eruditorum, Lips.*; besides learned contributions to the works of other authors. He left some tracts in manuscript, which, with his literary collections, were purchased for the Bodleian library.—*Biog. Brit.*

BERNARD (JAMES) a native of Nions in Dauphny, where his father was a Protestant clergyman. He was educated at Geneva, and adopted the same profession, which he exercised in his native province, till the religious persecutions which took place in France under Louis XIV obliged him to emigrate to Geneva, whence he removed to Lausanne, and after-

wards to Holland. He was engaged as a pensionary minister at Ganda, but obtained leave to reside at the Hague, where he published several political and historical works. In 1699 he undertook the continuation of "Nouvelles de la République des Lettres," begun by Bayle, which he conducted till 1710, and resuming it in 1716, continued it until his death, which took place in 1718, at the age of sixty. He died at Leyden, where he had for several years been pastor of the Walloon church, and professor of philosophy and mathematics at the university. His literary productions and compilations are very numerous. He wrote in Le Clerc's "Bibliothèque Universelle;" drew up a supplement to Moreri's Historical Dictionary, and was the author of some theological works, one of which, that "De l'Excellence de la Religion Chrétienne," was published in English, 1793, 8vo, with an account of the author.—*Nouv. Dict. Hist.*

BERNARD (JOHN STEPHEN) a German physician and eminent classical scholar of the eighteenth century. He was a native of Berlin, studied in Holland, and settled at Arnheim in Guelderland, where he died in 1793. He published editions of several ancient Greek writers on medicine, of the pastoral romance of Longus, and of a grammatical treatise of Thomas Magister.—*Biog. Univ.*

BERNARD (PETER JOSEPH) a French poet, who distinguished himself in the last century for his airy and elegant though voluptuous compositions. He was the son of a sculptor at Grenoble, and was educated in the Jesuits' college at Lyons. After acting as clerk to a notary at Paris, he made a campaign in Italy, and fought at the battles of Parma and Guastalla in 1734. His talent attracted the notice of the French general marshal de Coigny, who made him his secretary, and procured him the post of secretary-general to the dragoons. He died in 1775, having for some years previously been reduced to a state of mental weakness by a total loss of memory. This poet, who seems to have been the *Anacreon Moore* of France, obtained from his countrymen the appellation of *le gentil Bernard*, from the grace and sprightliness displayed in his songs and lighter pieces. He was not so successful in his principal work, "L'Art d'Aimer," in three cantos. He likewise wrote an opera entitled "Castor et Pollux;" a ballet called "Les Surprises de l'Amour;" and "Phrosine et Melidore," a poetical tale.—*Aikin's G. Biog.*

BERNARD (sir THOMAS) an ingenious scholar and philanthropist, was the son of sir Francis Bernard, formerly governor of New Jersey, and afterwards of Massachusetts Bay. He was educated at Harvard college in New England, after which he studied the law at Lincoln's Inn. In 1730 he was called to the bar, but he practised only as a conveyancer. Being appointed treasurer to the Foundling hospital in 1795, he greatly improved the estates belonging to that charity by his prudent management. He was the principal projector and supporter of the society for bet-

tering the condition of the poor, and he engaged with ardour in the promotion of various other philanthropic undertakings. He also displayed a taste for literature and the arts, and interested himself in the establishment of the Royal Institution, and the British Gallery in Pall Mall. In 1809, on the death of his elder brother, he succeeded to the title of baronet; soon afterwards he was made doctor of civil law at Oxford; and he was also chancellor of the see of Durham. His publications are numerous, and relate chiefly to the instruction and support of the poor; except a work entitled "Spurina, or the Comforts of Old Age," 8vo, which is a dialogue in imitation of the ancients, and docs credit to the taste and learning of the author. He died at Leamington Spa in Warwickshire in 1818, aged sixty-seven.—FRANCES ELIZABETH, the sister of sir Thomas Bernard, married to the Rev. Richard King, rector of Worthing in Shropshire, distinguished herself by her literary productions. She wrote "A Tour in France," 1803; "The beneficial Effects of the Christian Temper on Domestic Happiness," 1809; "Female Scripture Characters," 1811, which has gone through several editions; and a tale entitled "The Rector's Memorandum Book." She also furnished many papers in the "Reports of the Society for bettering the Condition of the Poor," published by her brother. Mrs King, who survived her husband, died at Gateshead, Durham, in 1821, aged sixty-two.—*Annual Biog. Monthly Museum.*

BERNARDI (JONAS) born at Castel Bolognese in Romagna in 1495. He was an excellent engraver on precious stones, and also executed some beautiful medals. Two of his works on chrysal are particularly admired, the one representing the "Fall of Phaeton," and the other "Tityus with the Vulture," from designs by Michael Angelo. He was highly esteemed, and ranked among his patrons Alphonso duke of Ferrara and cardinal de Medicis, by whose means he was enabled to pass the evening of life with great enjoyment in an elegant retirement. He died in 1555.—*Biog. Univ.*

BERNARDI (JONAS) usually called major Bernardi, was born at Evesham in Worcestershire, being the son of Francis Bernardi, who had been consul for the republic of Genoa, but who, giving up that office, settled with a handsome property at Evesham. John, the subject of this article, being of a restless temper, ran away from home, and enlisted as a common soldier in the service of the prince of Orange, afterwards William III. In this situation having displayed considerable talents, he gradually gained a captain's commission; but on the recall of the regiments in the Dutch service by James II, he would not sign the association proposed by the prince, and consequently lost his favour. Having no other alternative, he followed the abdicated James into Ireland, by whom he was employed on a mission in Scotland; which being rendered nugatory by the ruin of that infatuated king, he once more returned to Holland. Venturing

however to appear in London in 1695, he was committed to Newgate on suspicion of being the abettor of the plot to assassinate king William; and as sufficient evidence could not be brought of the fact, he was continued in prison by the express decree of six successive parliaments, under four sovereigns, for a period of forty years; a case without precedent. This extraordinary captive married during his confinement, and had ten children born to him while in Newgate. Bernardi was a little brisk and active man, of extraordinary vivacity and fortitude. It is probable that his guilt could have been proved, but not without some unpleasant exposures; nothing less it is thought would have induced so many sovereigns and parliaments to detain so unimportant a person in captivity. He died in September 1736; and what became of his numerous family is unknown.—*Biog. Brit.*

BERNARDINE, commonly called St BERNARDINE of Sienna, a native of Massa in Tuscany, born in 1383. Having studied at Sienna, he entered into the society of Hospitalers of La Scala in that city, and having been admitted in 1405 into the order of St Francis, soon became popular, as well for his preaching as for the benevolence and intrepidity which he exhibited during the prevalence of the plague. Notwithstanding his virtues, and the austerity of his life and manners, he was not without enemies, who brought his orthodoxy into question before pope Martin V: that pontiff however, after hearing his defence, dismissed the accusation as unfounded. He refused more than one bishopric, but accepted the office of vicar-general of his order in Italy; in which capacity he is said to have reformed or founded near 300 religious houses. The power of working miracles is commonly attributed to him, as well before as after his death, which event took place at Aquila in 1444; so that pope Nicholas, six years after his decease, made no difficulty of conferring on him the honors of a canonization. His works, consisting of a commentary on the Revelations, and other devotional treatises, have gone through two editions; the first printed in 4to at Venice in 1591, the second at Paris in two folio volumes in 1636.—*Moreri.*

BERNEGGER (MATTHIAS) a divine and philologist of the seventeenth century. He was a native of Austria, and was chosen professor of history and rector of the college of Strassburg. He died in 1640, aged sixty-one. He published editions of Tacitus and of the Letters of Pliny the Younger, which have afforded assistance to later critics; and he was the author of a work entitled "Hypobolimæa D. Mariæ Deiparæ Camera, seu Idiolium Lautetanum." His correspondence with Grotius, Kepler, and others, has also been published. *Niceron Memoirs.*

BERNERS or BARNES (JULIANA) an English lady of the fifteenth century, of whom little more is known than that she was prioress of the nunnery of Sopewell near St Alban's, and has her name prefixed, as the writer or compiler to one of the earliest and most cu

rious productions of the English press. The title of the second edition, printed in the abbey of St Alban's in 1486, is "The Boke of Hawkyng and Huntynge, with other Pleasures dyverse, and also Cootarmuries." The first edition 1481; does not treat of *coat-armour* or heraldry. This work, under the title of "The Book of St Alban's," became a popular manual of sporting science, and was several times reprinted in the sixteenth century. As a typographical curiosity, a limited impression of it was published in 1811 by Mr Haslewood.—*Ballard's Mem. of Brit. Ladies. Dublin's Bibliomania.*

BERNIARD, a German musician, the inventor of pedals for the organ. His discovery was first completed and adapted to the instrument at Venice in 1470.—*Biog. Dict. of Mus.*

BERNI or BERNIA (FRANCIS) one of the most celebrated Italian poets of the sixteenth century. He was born towards the conclusion of the fifteenth at Lamporecchio in Tuscany, of a noble but impoverished family. In his nineteenth year he went to Rome and assumed the ecclesiastical habit and could obtain no better employment than that of secretary to the bishop of Verona. Possessed of no very strict morals, Berni enlivened his dull office by sharing the society of some of the most witty but dissipated young men of Rome, and in this company made verses so superior to those of his companions as to give the name the style of poetry called after him. One of his most important labours was the new modelling of Boyardo's "Orlando Innamorato," which he raised into some general estimation: the Venice quarto edition of this poem, 1545, is in great request. His "Rimé burlesche," and other works, are to be found in various Italian collections. He lost his life by an unfortunate intimacy at Florence with Alexander de Medicis, duke of Florence, and cardinal Hippolito de Medicis; each of whom it is said was anxious to poison the other. One of them is reported to have wished to empoison Berni in this detestable transaction, was having refused, fell a victim himself. The cardinal died in 1535, as all historians agree, of poison; and Berni followed him in 1536. Some writers think, that as he lived so long afterwards, Alexander had nothing to do with his death, and there certainly appears no proof of guilt except his very execrable character. *Biog. Univ. Roscoe's Leo X.*

BERNI (FRANCIS, count) an Italian dramatist of the seventeenth century. He was the author of eleven plays, published collectively at Ferrara, 1666, 8vo. He likewise wrote detached essays, which appeared in 2 vols. 4to, under the title of "Academia." This nobleman, who is said to have had seven wives, by whom he left a numerous family, died in 1673, at the age of sixty-two.—*Biog. Univ.*

BERNIER (FRANCIS) a native of Angers, who studied medicine at Montpellier, after which he travelled to Syria and Egypt. Thence he went to India about 1653, and resided

there twelve years as physician to the Mogul emperor Aurengzebe. He returned to France in 1670, visited England in 1685, and died at Paris in 1688. St Evremont says of Bernier, that he never knew a more agreeable philosopher, and that his figure, his behaviour, and conversation, rendered him worthy of that honourable appellation. His principal works are—"Travels," 4 vols., containing much interesting information; "A History of the last Revolution in the States of the Great Mogul," 2 vols. 12mo; "An Abridgment of the Philosophy of Gassendi," 8 vols.—*Nouv. Dict. Hist.*

BERNIER (NICOLAS) born at Mantes sur Seine in 1664, afterwards organist to the king of France and the Regent duke of Orleans. He was a pupil of Caldara, and considered to have excelled all the musicians of his time in his knowledge of counterpoint. Five books of cantatas and songs of his are in high esteem, the words being written to them by Fuselier and Rousseau. "Les Nuits de Sceaux," another of his compositions, is also still highly popular. His death took place in 1734 in his seventieth year.—*Biog. Dict. of Mus.*

BERNINI or BERNINO (JOHN LAURENCE) an Italian artist of the seventeenth century, who was not only the first sculptor of his age, but was also famous as a painter and an architect. He was born at Naples, December 7, 1598, and was the son of Peter Bernini, a Florentine, who practised sculpture and painting. Having removed with his family to Rome, this artist instructed his son in his profession, and set him to copy the works of art in the Vatican. Young Bernini soon displayed his extraordinary talents. At a very early age he executed a marble head, which procured him the favour of pope Paul V and Cardinal Maffeo Barberini. The applause he received stimulated his exertions; and before he was twenty he produced several fine works, among which a group representing Daphne fleeing from Apollo has been particularly admired. In the pontificate of Gregory XV Bernini obtained a pension, and was made a knight of the order of Christ, whence he is commonly styled the cavalier Bernini. His patron, cardinal Barberini, becoming pope Urban VIII in 1623, employed him in various undertakings connected with the completion and embellishment of St Peter's; among which were the magnificent decorations of the confessional, the mausoleum of the pope, and the erection of a campanile over the portico, which last was, to the great mortification of the architect, obliged to be taken down in the ensuing pontificate of Innocent X, in consequence of the instability of the portico itself. The reputation of Bernini extended to foreign countries. Charles I engaged him to make a bust, for which Vandyke furnished a portrait of the king; and the work when executed was greatly admired. Louis XIII invited this artist to Paris, which however he did not visit till 1664, in the reign of his successor, when he was sent for to finish the building of the Louvre. He made a bust of Louis XIV, and

commenced his architectural undertaking, but returned to Rome before he had made much progress in it. He afterwards employed himself on a colossal equestrian statue of the French monarch, cut out of one block of marble, on which he spent fifteen years. Bernini continued his professional pursuits till near the time of his death, which was occasioned by apoplexy, November 23, 1680. His remains were interred in the church of St Maria Maggiore, and his funeral was attended by the principal Roman nobility.—*Baldinucci, Aikin's G. Biog.*

BERNIS (FRANCIS JOACHIM DE PIERRE, cardinal de) a French ecclesiastic, who distinguished himself as a statesman and a poet in the last century. Born of a noble family, but in indigent circumstances, he obtained promotion through the patronage of Madame de Pompadour, mistress of Louis XV. After having held diplomatic situations, he was appointed minister of foreign affairs, and obtained a cardinal's hat. The political embarrassments of the French government in 1763 occasioned his retirement from office. In 1764 he was restored to favour, made archbishop of Albi, and sent ambassador to Rome. He continued there with the additional title of protector of the French church, till the Revolution deprived him of his appointments, when he obtained a pension from the king of Spain. He died at Rome in 1794, at the age of seventy-eight. He was a member of the French academy, and was the author of "Les Quatre Saisons;" "Les Quatre Parties du Jour;" "La Religion Vengée," a posthumous work, &c. The poems published in his life-time are more distinguished for ease and vivacity than for delicacy or propriety of sentiment.—*Biog. Universelle.*

BERNOULLI (JAMES) an eminent mathematician and natural philosopher of the 17th century. He was a native of Basil, and was educated in the university of that city for the clerical profession; but conceiving a particular predilection for the study of geometry, he acquired a knowledge of that science without a master. In 1676 he went to Geneva, and from thence travelled to Germany, France, Holland, Flanders, and England, forming every where an intimacy with learned men, and making himself acquainted with their philosophical discoveries. Returning to Basil, he gave lectures on natural philosophy: and about 1684 he distinguished himself by a mathematical discovery, of which some hints had been published by Leibnitz in the *Acta Eruditorum* at Leipsic. In 1687 he succeeded Peter Mejerlin as professor of mathematics at Basil, whither his reputation attracted a great number of students. He was afterwards chosen a foreign associate of the royal academies of Paris and of Berlin, to the Transactions of both which scientific bodies he contributed several valuable memoirs. He died August 16, 1705, aged fifty. In imitation of Archimedes, he ordered a mathematical diagram to be inscribed on his tomb. It was a logarithmic spiral line (the properties of which he first demonstrated)

with the words "Eadem mutata resurgo." His works relating to mathematical and physical subjects, were collected and published in 2 vols. 4to, at Geneva, 1744. Besides these, he wrote a treatise "De Arte Conjectandi," printed at Basil in 1713.—*Martin's Biog. Philos. Aikin's G. Biog.*

BERNOULLI (JOHN) brother of the foregoing, and no less famous as a mathematician. He received a commercial education, but, prompted by inclination, devoted himself to the study of philosophy, in which he took a doctor's degree at Basil in 1685. He shared with his brother in the great mathematical discovery relating to the differential calculus, in which Leibnitz had been engaged. In 1695 he was chosen professor of mathematics at Groningen, where he distinguished himself by his lectures and scientific researches. On the death of his brother, he succeeded him at Basil, where he continued till his death, which took place January 1, 1748, in the eighty-first year of his age. He discovered what was called the mercurial phosphorus, now known to be an electrical phenomenon depending on the friction of mercury in a glass tube. He wrote on the management of ships, on the elliptical figure of the planets and the motion of their aphelia, and maintained controversies on mathematical subjects with Jurin, Brook Taylor, Keil, Pemberton, Herman, and Riccati. His works were published in 4 vols. 4to, at Geneva, 1742, exclusive of his correspondence with Leibnitz, which forms two volumes more.—*Aikin's G. Biog.* His eldest son, NICHOLAS BERNOULLI, was professor of mathematics at Petersburg, where he died in 1726. He wrote a considerable number of memoirs, published in the Transactions of the Academy of Petersburg.—*Ibid.*

BERNOULLI (DANIEL) professor of physic and natural philosophy in the university of Basil, and member of most of the learned societies in Europe, was the son of the preceding. He was born at Groningen in 1700, and was, like his father, intended for trade, but was permitted at his own request to study medicine. At the age of twenty-four he visited Italy, where he refused the presidency of an academy about to be established at Genoa. He then went to Petersburg, and continued there till 1733, when he returned to Basil, and became medical professor. In 1724 he published his "Exercitationes quædam Mathematicæ," and in 1738 his "Hydrodynamica." Nine times he obtained the premium given by the Academy of Sciences at Paris, and once, viz. in 1734, divided it with his father, who, instead of being pleased with the honour obtained by his son, never forgave what he termed his undutiful competition. It seems the son's greatest offence was his having adopted the Newtonian philosophy, while the father was a determined Cartesian. In 1749 he divided a prize with Euler and Maclaurin for a paper on the tides. In 1748 he succeeded his father in the Parisian Academy of sciences. He died March 17, 1722. By his will he left an endowment for an in-

stitution at Basil, for the benefit of poor students. His manners were as mild and unassuming as his knowledge was varied and extensive. On a journey he met with a man of learning, whose curiosity being excited by the conversation of his fellow-traveller, he enquired his name. "I am Daniel Bernouilli," said he with great simplicity; and "I am Isaac Newton," replied the other, thinking his new acquaintance was joking with him. Another time Koenig, a celebrated mathematician, dining with Bernouilli, was speaking to him of a difficult problem which it had cost him a great deal of labour to solve. Bernouilli continued to do the honours of the table as usual, and before they parted presented Koenig with a more elegant solution of his problem than that which had cost him so much trouble.—*Hutton's Mathemat. Dict. Aikin's G. Biog.*

BERNOUILLI (NICHOLAS) the nephew of John Bernouilli, the subject of a preceding article, was a Basilian professor, and the author of some learned disputations. He died in 1759. **JOHN BERNOUILLI**, the brother of Nicholas, held a professorship in the same university, and wrote several prize memoirs. He died in 1790, leaving a son, **JOHN BERNOUILLI**, born at Basil in 1744. He became director of the class of mathematics in the academy of Berlin, and belonged to many learned societies. He died in 1807. He was the publisher of "Additions to the Travels of Volkmann in Italy;" a "Tour in Brandenburg, Pomrania, Prussia, Courland, Russia, and Poland," 6 vols. 8vo; and "Collection of Voyages," 15 vols. 8vo; and other useful compilations and translations.—*Biog. Univ.*

BERNSTORF (JOHN HARTWIG ERNEST, count) an eminent statesman, was born at Hanover, May 13, 1712, where his father, baron von Bernstorff, was chamberlain to the elector. Possessing some influential relations in Denmark, he was invited thither, and after having been employed in various embassies, was placed by Frederick V at the head of foreign affairs. As a statesman in this department, his conduct of count Bernstorff was eminently wise and beneficial to Denmark. During the seven years' war he maintained a strict neutrality, which proved exceedingly serviceable to her commerce and internal prosperity; and in 1767 he concluded a provisional treaty with Russia, by which Denmark acquired the Duchy of Holstein. His reputation was much advanced by these instances of policy, which however fell far short of his merit in domestic government. He first set the example, on the great estates which he had acquired near Copenhagen, of manumitting the peasantry. He not only put an end to their being transferred with the soil, but, by granting them long leases, transformed them into a respectable tenantry. He also placed the education of youth in Holstein on a far better footing, and founded useful institutions for a due supply of teachers. His measures for the advancement of commerce and manufactures were likewise in the highest degree liberal and judicious; and he was at the same time a most

enlightened and beneficent protector of men of science and letters. Bernstorff was among the first who discovered the beauties of the Messiah of Klopstock, who by his assistance was enabled to finish that celebrated poem with the necessary ease and leisure. Roger, Reverdil, Oeder, Cranner, Schlegel, Basedow, and others, also enjoyed his countenance and assistance, to the production of several works very honourable to Denmark. It was also chiefly owing to Bernstorff that a society of learned men were in the year 1761 sent to travel in Arabia and in the East, one of the results of which is the valuable publication of Niebuhr. On the death of Frederick V, he was continued minister for the first two or three years of the reign of the weak monarch who succeeded, but was at length, by one of the court reverses so common in absolute monarchies, obliged to resign all his employments in favour of the adventurer Struensee, and to retire on a pension. He then repaired to Hamburg, where he remained until the catastrophe of Struensee, when he was recalled, but died of an apoplexy while preparing to return, February 19, 1772. Bernstorff was an able and patriotic minister of that upright school of politics, the disciples of which are just, open, and honourable; and being at the same time a most cultivated, benevolent, and amiable man, both his public and his private character have ever been held in great estimation. His nephew, count **ANDREW PETER BERNSTORFF**, who eventually succeeded him as minister for Denmark, in all respects endeavoured to follow his example, especially in his anxiety to maintain that neutrality in the continental quarrels, which can alone preserve the existence of a state in the situation of Denmark. His state papers, on the principle which regulated the neutrality of Denmark in 1780, and his "Declaration to the Courts of Vienna and Berlin, in 1792," have been much admired, especially the latter, which was declared in the English house of Lords to be a document that should be kept as a model in every state of Europe. Count A. Bernstorff fell a prey to the gout on the 21st of July, 1797, greatly lamented by the Danes, with whom his administration had been highly and deservedly popular.—*Biog. Univ. Aikin's G. Dict.*

BEROALDUS or **BEROALDO (PHILIP)** the elder, a learned critic of the 15th century. He was a native of Bologna, where he was educated, and became professor of the belles lettres. He afterwards gave lectures at Parma and other places, and then returned and settled at Bologna, where he died in 1505, aged fifty-two. His principal work was a commentary on the philosophical romance of Apuleius, called the Golden Ass. He also wrote notes on many other Latin authors, besides orations, letters, poems, &c.—*Moreri. Tiraboschi.*

BEROALDUS (PHILIP) nephew of the preceding, was appointed librarian to the Vatican by Leo X in 1516, and died in 1518, aged about forty. He was the author of notes on the first five books of the Annals of Tacitus; and he also wrote Latin poems.—*Ibid.*

BEROALDUS (**MATTHEW**) of the same family with the former, but born in France. He was tutor to Hector Fregosa, afterwards bishop of Agen. Being converted to Calvinism, he narrowly escaped suffering death as a heretic; on which he went to Geneva, and there died in 1576. He was the author of a scripture chronicle, and other works.—*Ibid.*

BEROALDUS (**FRANCIS**) usually called Beroalde de Verville, was the son of the last-mentioned, and was born at Paris in 1558. On the death of his father, he was reconciled to the church of Rome, and becoming an ecclesiastic, he obtained the canonry of St Gatiien at Tours. He was a man of learning and ability, and the author of several miscellaneous works, formerly much in request, but now almost forgotten, with the exception of one entitled "Moyen de Parvenir. œuvre contenant la raison de tout ce qui a esté, est, et sera," which is a collection of anecdotes and observations strung together without apparent order or plan, and is much more remarkable for its indecency than its wit, though by no means destitute of the latter quality. There are several editions of this work, which is usually printed in two small volumes.—*Ibid.*

BEROLDINGEN (**FRANCIS DE**) a learned ecclesiastic, canon of Osnaburgh and Hildesheim, a native of St Gall, and born in 1740. He applied himself most assiduously to the study of mineralogy, and passed several years in foreign travel for the purpose of facilitating his progress in this his favourite branch of science. He is the author of several works connected with this pursuit, among which are a treatise "On ancient and modern Volcanoes," 8vo, another on the mines of quicksilver in the Palatinate: an account of the spring at Dribourg; "Observations on Mineralogy," 2 vols, 8vo; and a new theory of the Basaltes. He died in 1798.—*Biog. Univ.*

BEROSUS, a Babylonian historian rendered much more famous by the mention of others, than from any thing which is known of his own performances. He was priest of the temple of Belus; in the time of Alexander and having learned the Greek language from the Macedonians, he removed to Greece, and opened a school of astronomy and astrology in the island of Cos, where his productions acquired him great fame with the Athenians. The ancients mention three books of his, relative to the history of the Chaldeans, of which Josephus and Eusebius have preserved fragments. Annius of Viterbo published a work under the name of Berosus, which was soon discovered to be a forgery. It is said that Berosus had a daughter who uttered predictions like himself, and became the Cuman sibyl.—*Fossius. Moreri. Univ. Hist.*

BERQUEN or **BERGUEN** (**LEWIS DE**) a Fleming, who invented the art of cutting and polishing diamonds, in 1456. It became commonly known and practised in the following century. The method of engraving on diamonds was the subsequent discovery of Clement Biraque, a Milanese sculptor of precious stones in the sixteenth century; and the first

work of this kind executed by him is said to have been a portrait of Don Carlos, the son of Philip II of Spain. Mr Croly, in his essay prefixed to Dagley's "Select Gems," has fallen into an error, in stating that the art of engraving diamonds was known at a very early period among the Jews. He was doubtless misled by relying on the common English or some other translation of Exodus, chap. xxxix, verse 11, where the diamond is improperly mentioned among engraved stones.—*Nouv. Dict. Hist. Edit.*

BERQUIN (**ARNAULD DE**) well known as a most amusing and instructive writer of the last century. He was born at Bourdeaux in 1749, and is the author of several pastoral romances distinguished for their pathos and elegance; but the work on which his literary fame principally rests, is his "Ami des Enfants," first printed in six 12mo volumes, which has not only gone through a variety of editions in the original language, but has been translated into most European tongues, and is deservedly popular as combining instruction with amusement. He died at Paris, December 21, 1791, leaving behind him in manuscript several comedies and other pieces of minor importance, some of which have since been printed.—*Nouv. Dict. Hist.*

BERFAUT (**JOHN**) an early French poet of some note, who was of the ecclesiastical profession. His talents procured him an introduction to the court of Catharine de Medicis, who made him her aimonier. He was afterwards private secretary to Henry III, and was in favour with Henry IV, whom he is supposed to have influenced in his conversion to the Catholic faith. In 1594 he was made abbot of Aulnai, and in 1606 bishop of Seez. He died in 1611 at the age of fifty-nine. His poetical works were published collectively at Paris, 1620, 8vo. His versification is easy and elegant; but his compositions abound in point and antithesis, as is the case with many of his contemporaries.—*Nouv. Dict. Hist.*

BERTHAUD (**PIERRE**) dean of Chartres a poet and historian of some celebrity about the middle of the seventeenth century. He was a native of Sens, born in 1600. Besides his Latin poems, which were much admired, he was the author of two works, entitled "Florus Franciscus" and "Florus Gallicus." His death took place in 1681.—*Moreri.*

BERTHIER (**WILLIAM FRANCIS**) a French Jesuit of some literary note, was born at Issoudun in 1704, and entered among the Jesuits in 1722. He was professor of humanity at Blois, of philosophy at Rouen, and of divinity at Paris, and continued father Brumoy's "History of the Gallican Church." In 1745 he was employed in the Journal de Trevoux, which he conducted with considerable ability for many years. In this journal he early exasperated Voltaire, and of course was the subject of much wit and raillery in return, as well as of some serious recrimination. On the dissolution of the Jesuits, he quitted his literary occupation for retirement, but in 1762 was made keeper of the royal library, and ea-

trasted with a share in the education of Louis XVI and Monsieur, until the dismissal of all the ex-jesuits from court, when he retired to Ossenburgh, and afterwards to Bruges, where he died of a fever in December 1782. He wrote "Commentaries on the Psalms and on Isaiah," 15 volumes, 12mo; "Œuvres Spirituelles," 5 vols. 12mo; and a "Refutation of the Social Contract of Rousseau," 12mo.—*Biog. Univ.*

BERTHIER (ALEXANDER) prince of Neufchatel, a French officer who acted a prominent part in the wars which succeeded the Revolution. When general Duphot was killed in a popular tumult at Rome, Berthier was despatched thither by the French Directory, and entering that city on the 10th of February 1798, he put an end to the papal government, proclaimed the Roman Republic on the 15th of the same month, and sent pope Pius VI a prisoner to France where he died. In 1800 Berthier commanded in Italy, when he gained a victory over the Austrian general Ott, at Montebello. He afterwards served in the expedition against St Domingo; and he was one of those who contributed to the establishment of a military government in France. He was rewarded with the rank of marshal; in 1806 he was made duke of Neufchatel, and in 1809 prince of Wagram and Neufchatel. He occupied some important posts under Napoleon, and was with him in the contests which preceded his first abdication of imperial power in 1814, a short time previous to which Berthier lost his life by falling, or being thrown from a window into the street. VICTOR LEOPOLD, brother of the preceding, rose to the rank of general of division in the French service, and distinguished himself at the battle of Austerlitz and the taking of Lubeck. He died at Paris in 1807.—*Biog. Univ.*

BERTHOLLET (CLAUDE LEWIS) a celebrated French chemist, who was a native of Talloire in Savoy. He studied medicine at Turin, where he took a doctor's degree; after which he commenced practice at Paris, and obtained the appointment of physician to the Duke of Orleans. Devoting himself to the study of chemistry, he shared with Lavoisier, Fourcroy, and other philosophers, in the great modern improvements made in that science. Among the most important of his earlier researches are those relative to the composition of ammonia, the combinations of azote and the nature of chlorine, or oxygenated muriatic acid. In 1780 he was admitted a member of the Academy of Sciences, to whose memoirs he supplied a number of valuable contributions. In 1792 he was nominated a member of the committee on coinage, and in 1794 of the committee on agriculture and the arts. About the same time he was made professor of chemistry in the Polytechnic school; and on the establishment of the National Institute, his name was inscribed first on the list of learned members. In 1796 he was sent by the directory into Italy, to select such objects of art and science as were to be transferred to Paris. When Buonaparte in 1796 set off on

his Egyptian expedition, he took with him among other men of science, Berthollet, who, on his return with the general to Europe, in the following year, was rewarded for the zeal he had shown in providing, by the resources of his genius, for the exigencies of the French army: he was appointed a member of the conservative senate under the consular government, and had other honours conferred on him. After the restoration of Louis XVIII in 1811, Berthollet was nominated a member of the chamber of Peers, with the title of count; and as he did not take his seat in the chamber created by Buonaparte on his return from Elba, he retained his right and dignity on the second restoration of the king. Not long after his return from Egypt, he fixed his residence at the village of Arcueil near Paris, where he associated a body of scientific students, who aided him in his experimental investigations. He died after a short illness in 1822, aged seventy-four. The separately published works of Berthollet are—"Observations sur l'Air," 1776; "Precis d'un Théorie sur la Nature de l'Acier, sur ses préparations," &c. 1789; "Elémens de l'Art de la Teinture," first published in 1 vol. 8vo, and enlarged to 2 vols. 1804; "Description du Blanchiment des Toiles," 1795; "Recherches sur les Lois d'Affinité," 1801; "Essai de Statique Chimique," 1803, 2 vols. 8vo. Most of these treatises have been translated into English.—*Lit. Chron. No. 185.*

BERTHOLON (N. de St Lazare) an eminent author of the last century, born at Lyons. He received the rudiments of education at St Lazare, which place he quitted for Montpellier, and became professor of medicine and philosophy there. The offer of the historical chair in the central school of his native city afterwards brought him back to Lyons, where he continued till his death in 1799. His works on arrostation, electricity, and other scientific subjects evince much learning and ability; among them are a treatise "On the Electricity of the Human Body in a Healthy and in a Diseased State; one entitled "De l'Electricité des Vegetaux," in 8vo; and another, "De l'Electricité des Meteores." Besides these, he published an essay on the method of ascertaining the period at which wine in a state of fermentation has acquired its greatest strength; another on the means most conducive to the prosperity of the manufacturing interest at Lyons; "Théorie des Incendies," 4to; "Preuves de l'efficacité des Paratonneres," 4to; "Des avantages que la Physique et les Arts peuvent retirer des Érostats," 8vo; "De l'eau la plus propre à la Vegetation," in 4to, &c. &c. He was the discoverer of several useful and ingenious inventions; and to him the French are indebted for the introduction of lightning conductors, on Franklin's principle, into their country. His death took place in 1799.—*Biog. Univ.*

BERTHOUD (FERDINAND) a native of Planchemont in Neufchatel, born 1727, celebrated as one of the best constructors of clocks and watches of his time. He travelled from

Paris to London, purposely to gain a sight of Harrison's famous chronometer, made for the board of Admiralty, but failed in his object, through the caution of his rival. He published several treatises on the art of measuring time, the titles of which are—"Histoire de la Mesure du Temps par les Horologes," 2 vols. "Traité des Horologes Marines;" "De la Mesure du Temps;" "La Mesure du Temps appliquée à la Navigation;" "Les Longitudes par la Mesure du Temps;" "Essai sur l'Horologerie," 2 vols.; "L'Art de conduire et de regler les Pendules et les Montres;" and "Eclaircissemens sur l'Invention des nouvelles machines proposées pour la détermination des Longitudes en mer par la Mesure du Temps," all in quarto. The principles on which he constructed his marine time-pieces have been very generally approved. Berthoud died at Paris in 1807.—*Nouv. Dict. Hist.*

BERTI (ALEXANDER POMPIY) was a native of Lucca, where he was born in 1686. He was a member of the Arcadian Society, and published a poem on prince Eugene's successes against the Turks; the lives of several of the most distinguished Members of the Society to which he belonged; a catalogue *raisonné* of the Capponi library, and a work entitled "La Caduta de' decenvirii della Romana Republica." His death took place at Rome in 1752.—*Biog. Univ.*

BERTI (JOHN LAURINCE) born at Serravalle, May 28, 1696, and died in 1766 at Pisa. He was an Augustine monk, and assistant general of the order. His principal work, "De disciplinis theologis," in eight quarto volumes, subjected him to a charge of Jansenism before Benedict XIV, which drew from his pen a most prolix defence, in 2 vols. 4to. He also wrote seven 4to volumes of ecclesiastical history in Latin (in which he broaches the most extravagant ideas of papal authority) and some Italian poems.—*Nouv. Dict. Hist.*

BERTIE (WILLOUGHBY, earl of Abingdon) a nobleman much distinguished for the warmth and eccentricity of his opposition to administration, was born in 1740, and educated at Geneva. In 1777 he published a pamphlet which excited much attention, entitled "Thoughts on the Letter of Edmund Burke, Esq. to the sheriffs of Bristol, on the affairs of America," 8vo: it passed through six editions. He is also the reputed author of a "Letter to Lady Loughborough, in consequence of her presentation of the colours to the Bloomsbury and Inns of Court Volunteers;" which epistle, from its eccentricity, ran through eight or nine editions. Lord Abingdon having sent one of his speeches delivered in the house of Lords to the press, he was prosecuted, for publishing a libel, by an attorney of the King's Bench, whom he had attacked in it, and sentenced to an imprisonment of three months in the King's Bench prison. He died in 1791.—*Gent. Mag.*

BERTIN (EXUPERIUS JOSEPH) a French anatomist of the eighteenth century. He was a native of Brittany, and after studying at Rheims and at Paris, he became physician to

the hospodar of Wallachia. About 1744 he returned to France, and settling at Paris, was chosen a member of the Academy of Sciences, to whose memoirs he contributed several anatomical papers. After suffering for some time from a singular complaint, which occasioned a temporary suspension of his intellectual faculties, he completely recovered, and pursued his professional studies with the utmost assiduity. In 1754 he published his principal work, a treatise on Osteology, 4 vols. 12mo. He continued his labours, and in 1775 presented to the Academy of Sciences a work on the arteries. He subsequently retired to his native province, where he died in 1781, aged sixty-nine.—*Hutchinson's Biographia Medica.*

BERTIUS (PETER) a native of Beveren, a village in Flanders, born 1565. He was educated in England, and having made the tour of Europe, returned to his native country, where he obtained the appointment of professor of philosophy at Leyden, and also that of public librarian. After continuing in these situations more than twenty-six years he was compelled to resign them on espousing the tenets of Arianism, which he afterwards abandoned at Paris in 1620, for those of the Roman Catholic church. He was then nominated cosmographer to the king and supernumerary professor of mathematics. His knowledge of geography was considerable, as is evinced by his principal work, "Theatrum geographicæ veteris," a rare and valuable treatise, in which he has collected and compared the writings of nearly all the ancient geographers. This work was printed at Amsterdam in 2 folio volumes, in 1618. He also published an introduction to universal geography, and a learned commentary on the affairs of Germany, 12mo, 1635, containing a good description of the country, with a map of the empire under Charlemagne. His other works are—"Illustrium virorum Epistolæ Selectæ, &c. 1617;" "Notitia Episcopatum Galliæ," Paris, 1625, in folio; "De Aggeribus et pontibus," Paris, 1629, 8vo; and "Variæ orbis universæ et ejus partium tabulæ." Bertius died in 1620.—*Moreri. Nouv. Dict. Hist.*

BERTON (PIERRE MONTAN) a celebrated French musician, *chef d'orchestre* at the grand opera at Paris during the famous contest between the Gluckists and Piccinists, which feud he exerted himself not a little to suppress, and at length succeeded by reconciling the rival composers. His talents exhibited a remarkable instance of precocity; at four years old he was taught music, and at six could read any common vocal composition at sight. Eventually he received the appointment of chamber musician to the king. Gluck had so great a confidence in his musical taste and ability, that he entrusted to him his own celebrated opera of Iphigenie en Aulide, the denouement of which he revised and corrected, and which is still performed with Bertou's alterations. He died at Paris in 1780.—*Biog. Dict. of Mus.*

BERTONI (FERDINAND) chapel master of

De Mendicanti at Venice, born in 1727. His opera of "Orfeo," brought out in 1776, gained him great credit. He also composed upwards of thirty others, the words to which were furnished him by the abbaté Metastasio, Zeno, and other celebrated Italian poets. The once famous Tenducci was a pupil of his. *Ibid.*

BERTOUX (WILLIAM) a French author, born 1723. On the suppression of the Jesuits, to which order he belonged, he became a canon of Senlis. He published "Anecdotes Françaises," in one vol. 8vo; "Anecdotes Espagnoles et Portugaises," in 2 vols. 8vo, and a "Histoire Poétique tirée des poètes Français," 12mo. The time of his death is uncertain.—*Nouv. Dict. Hist.*

BERTRAM (CORNELIUS BONAVENTURE) an able Oriental scholar, a native of Tours in Poitou, born 1531, of a respectable family, nearly connected with the ancient one of La Tremouille. He became professor of Hebrew at Geneva, Lausanne, and Frankendal, and used his acquaintance with that language in 1588, to correct and render more literal Calvin's version of the Bible. He was also the author of a treatise on the Jewish republic, Geneva, 1580, and Leyden, 1611; "Lubrations Frankendalenses," 1585; and a parallel between the Hebrew and Syriac Languages; besides which, he superintended the publication of a new edition of Pagnin's Thesaurus. He died at Lausanne in 1594.—*Moreri*.—Another learned writer of this name, **PHILIP ERNEST**, was a native of Zerbst, born 1726. He was brought up to the law, of which he became professor at Halle, and published a history of Anhal, in 8vo; a continuation of that of Spain by Herrera, 4to; and a treatise on "The History of Learning," 4to. His decease took place in 1777.—*Biog. Univ.* There was also a monk belonging to the abbey of Corbie, of this name; but more generally known by that of **RATRANUS**, who in the ninth century wrote against Hinckmar, archbishop of Rheims, on the subject of predestination; his treatise, comprised in two books, is to be found in the "Vindiciæ Predestinationis." He also wrote a work against the doctrine of transubstantiation (two editions of which have since been published, the one in 12mo. 1686, in Latin and French; the other in English, printed at Dublin, 1753, and another on the miraculous conception.—*Ibid.*

BERTRAND (ELIAS) an ecclesiastic of Orbe in Switzerland, born 1712. He was a member of various literary societies, and became president of the board of agriculture and trade in Poland. His works are—a dissertation on the interior structure of the globe; another on the earthquakes felt in Switzerland; an enquiry into the ancient and modern languages of that country; a dictionary of fossils in two 8vo vols.; a moral and philosophical essay on pleasure, 12mo; another on mountains, with a letter annexed on the subject of the river Nile, and a book in two 12mo vols. entitled "The Philanthropist." The date of his death is uncertain.—

There were also two French physicians of that name in the last century. **JEAN BAPTISTE** the elder, was a native of Martigues, born 1670, died September 10, 1752. He published an interesting account of the great plague at Marseilles; letters on the muscular motion; and a dissertation in 4to on the beneficial effects of sea air. **NICHOLAS**, the younger, wrote a treatise on physiology, and died at Paris in 1780.—*Biog. Univ.*

BERTRANDI (JOHN AMBROSE MARIA) an eminent surgeon of Turin, born 1723. At the age of twenty-two he published a very able work on the diseases of the eye, which he followed up two years afterwards by another on the complaints of the liver, being at that time an associate of the surgical college. In order to prosecute further his anatomical studies, he visited both Paris and London (the latter in 1754); and on his return received the appointments of chemical professor and first surgeon to the king of Sardinia, who founded a new surgical professorship, and an anatomical theatre expressly for his demonstrations. His professional works, the principal of which is a treatise on surgical operations, are contained in 13 octavo vols. His death took place in 1765.—*Ibid.*

BESLER (BASIL) an apothecary of Nuremberg, born 1561. He published several botanical treatises of great merit, particularly his "Hortus Eystellensis," folio, 1618, and his "Icones florum et herbarum," 4to, 1616. He died in 1629, leaving a son, **MICHAEL RUPERT**, who distinguished himself by his "Gazophylacium rerum naturalium," printed at Nuremberg in folio, 1642. He also wrote a quarto volume of anatomico-medical observations, and two other treatises, entitled "Mantissa ad viretum stirpium Eystellense Beslerianum," and "Admiranda fabriciæ humanæ mulieris partium delineatio," both in folio. He died in 1664.—*Nouv. Dict. Hist.*

BERULLE (PIERRE) a French cardinal, founder of the congregation of the Oratory of Jesus. He was born in Champagne in 1675, and educated among the Jesuits and at the university of Paris. He was made abbot to Henry IV, who sent him to Spain to fetch a colony of Carmelites, which he established at Paris. In 1611 he founded the congregation which has conferred on him so much honour. On the death of the king, he was chief of the council to the queen-mother, Mary de Medicis. He afterwards came to England as confessor to Henrietta Maria, queen of Charles I. In 1627 pope Urban VIII, without his knowledge, gave him a cardinal's hat. He died suddenly in 1629. His works, consisting of devotional and controversial tracts on theology, have been published repeatedly.—*Aikin's G. Biog.*

BERWICK (JAMES FITZJAMES, duke of) the natural son of James duke of York, afterwards James II, by Arabella Churchill, sister of the duke of Marlborough. He was born in France in 1670, and embracing a military life, served under the duke of Lorraine at the siege of Buda in 1686, when he was wounded,

He also distinguished himself in Ireland, in the contest between his father and William III. Continuing in the service of France, he rose to the rank of marshal; and he commanded in Spain during the war of the succession, particularly at the battle of Almanza in 1707, when he defeated the army of Charles II, and established his competitor Philip on the Spanish throne. He put an end to this war in 1714, by the taking of Barcelona. The duke of Berwick was again employed, on the occurrence of hostilities between France and Germany in 1733, in consequence of the attempt to replace the abdicated monarch Stanislaus Leczinsky on the throne of Poland. At the siege of Philipsburgh he was killed by a cannon shot, June 12, 1731. The memoirs of the duke of Berwick, written by himself, and containing many military details, were published at London in 1779.—*Nouv. Dict. Hist.*

BESOLDE (CHRISTOPHER) a counsellor of Vienna, born at Tübingen, 1577. He published a Synopsis of the Art of Politics, another of the Transactions from the Creation of the World to the reign of the emperor Ferdinand, both in 8vo; "A History of the Ottoman Empire;" "A Brief Account of the Kings of Jerusalem;" "Documents illustrative of the History of the Religious Houses in Wirtemberg," 4to; a quarto volume of "Philological Dissertations;" "Documents connected with the Collegiate Church of Stuttgart, and with the Church of Backhenang; and two treatises, entitled "Virginum sacrarum monumenta," and "Prodromus Vindictarum Ecclesiarum Wirtemb.," 4to. Besolde made a public abjuration of Protestantism, and died in 1638.—*Moreri*.

BESSARION (JOHN) a Greek priest, one of the most eminent restorers of learning in the fifteenth century. He was born at Trebizond in 1395, and educated, first at Constantinople, and afterwards in the Morea, under George Gemistus Pletho. Having entered into the order of St Basil, his talents and learning raised him to be bishop of Nicæa, in which capacity he appeared as one of the delegates from the Greek church to the council held by pope Eugenius IV, first at Ferrara and afterwards at Florence, with the view of effecting an union between the Greek and Latin churches. Bessarion, being either gained over by the arguments of his opponents, or actuated by other motives, employed his interest with the other Greek deputies to procure their consent to the union on terms very disadvantageous to their communion, including an express acknowledgement of the pope as supreme head of the Catholic church. On their return to Constantinople, popular opinion ran so high against them, as to induce them (headed by Mark, bishop of Ephesus, the only one of their number who had refused his assent to the treaty) to protest against the whole of the proceedings, with a declaration that they had been carried on by means of fraud and artifice. Under these circumstances Bessarion thought it advisable to continue at Rome,

where he was in 1429 rewarded, by being raised to the purple, with the title of patriarch of Constantinople. In addition to these dignities, he obtained the bishopric of Sabina, and afterwards that of Frescati, from pope Nicholas V, whose legate he was at Bologna, from 1450 to 1455, during which period he distinguished himself by the encouragement which he gave to literature and learned men. On the death of Nicholas, he was near obtaining the pope-dom; his rejection being, as some say, accomplished with difficulty through the interference of cardinal Alain, who objected the fact of his being of the Greek church. Others aver, that the deputation of cardinals actually knocked at his door, to acquaint him with his elevation, but were repulsed by the ill-judged adherence of an attendant priest to the letter of his commands; to whom Bessarion is reported afterwards to have said, "Perot, thy mistake hath cost thee a hat, and me the tiara." Popes Calixtus III and Pius II afterwards employed him in preaching up a crusade against the Turks, to Alphonso of Naples and the emperor Frederic. In 1468 he presented his very valuable library (the collection of which is said to have cost him upwards of thirty thousand crowns) to the Venetian senate; and this liberal donation was the principal foundation of their national library of St Mark. On the accession of Sixtus IV to the papal chair, Bessarion was despatched as legate into France, for the purpose of effecting a reconciliation between Louis XI and the duke of Burgundy; but happening unfortunately to pay his first visit to the latter, the pride of the French monarch took fire, and vented itself in a personal affront to the legate, whose beard he is said to have seized and pulled most unceremoniously, dismissing him with the rudest expressions, and without entering upon the subject of his mission. This affront, we are told, broke the cardinal's heart. He set out on his return, but fell seriously ill at Turin, and died at Ravenna in his seventy-seventh year, A.D. 1472. As an author he is most celebrated for his defence of Plato against the attacks of the "Calumniator," as he styles him, George of Trebizond. This work has gone through three editions, being first printed without a date at Rome in 1470, afterwards in folio at Venice in 1505 and 1516. He also translated Xenophon's "Memorabilia," Aristotle's metaphysical works, and those falsely attributed to Theophrastus. Several of his orations, letters, &c. were printed both before and after his death.—*Tiraboschi. Moreri. Nouv. Dict. Hist.*

BETHENCOURT (JOHN DE) a Norman baron, who obtained a grant of the Canary Islands from Henry III of Castile; in consequence of which he conquered and took possession of those islands in 1405, and held them as a fief of the crown of Castile. The Canaries had been erected into a kingdom in 1344 by pope Clement VI, and bestowed on Lewis de la Cerda, a Castilian nobleman; but he never effected a settlement, and they were only visited by freebooters till the conquest of Bethencourt, who transmitted the feudal re-

thority to his descendants.—*Robertson's Hist. of America.*

BETHLEM GABOR, a Transylvanian; who distinguished himself by his political intrigues and conquests in the early part of the seventeenth century. He acquired the favour of Gabriel Batori, prince of Transylvania, whom he afterwards expelled from his dominions by the assistance of the Turks, and caused himself to be proclaimed prince or wayvode in 1613. He then formed an alliance with the elector palatine, son-in-law of James I, who was endeavouring to obtain the kingdom of Bohemia. In 1619 Bethlem invaded Upper Hungary, which he conquered; and Lower Hungary having also submitted to him, he took Presburg and was acknowledged prince of Hungary. He professed the Protestant faith, which secured him the co-operation of the Hungarian Protestants, who had been severely persecuted, but under his dominion obtained liberty of conscience. He was soon after declared king, notwithstanding the opposition of the Catholic nobility. The emperor of Germany sent against him count Bucquoy, who recovered Presburg and several other places, but was at length killed in battle. A treaty was then concluded between Bethlem, and the Emperor by which the former renounced his regal title, and was made a prince of the empire, with the possession of various territories in Silesia and Hungary. He however did not keep the treaty, but in 1624 made another attempt to obtain the dominion of Hungary. He was at first successful; but being defeated by the imperial general, he agreed to a second treaty, which recognized his authority over Transylvania during his life, and granted him several lordships in Silesia; he on his part renouncing his pretensions to Hungary, and all connexion with the enemies of the house of Austria. He died in 1629, having it is said left legacies both to the emperor and the grand seignor.—*Aikin's G. Biog.*

BETTERTON (THOMAS) a highly celebrated actor, the Roscius of his day, was the son of a cook in the household of Charles I, and born in 1635. He received the benefit of a liberal education, and was afterwards apprenticed to a bookseller who published for sir William Davenant, through an acquaintance with whom he appears to have been brought on the stage in 1656 or 1657. After the restoration he was attached to the duke's company, and went over to Paris, at the command of Charles II, in order to take a view of the French stage, and adopt such improvement in that of England as the inspection might suggest. It does not appear that Betterton established a decided superiority over his contemporary performers until the coalition of the king's and duke's companies, when, according to the account of him in Cibber's Apology, his genius began to distance all competition. His line was the more lofty characters of tragedy; Othello, Hamlet, Brutus, and Hotspur embracing a range from calm dignity to the most fiery impetuosity, are reckoned among his most celebrated. In consequence of the ad-

vantages taken of the actors by the patentees of a single theatre, Betterton and several of the superior players procured, by the patronage of the earl of Dorset, a patent for the erection of a new theatre in Lincoln's Inn Fields, which prospered for two or three seasons, and then so declined that a re-union of the companies again became advisable. By this time however the infirmities of Betterton obliged him to retire, unhappily in very narrow circumstances, owing to having lost his moderate property in a commercial undertaking in which he embarked by the advice of an intimate friend. It ought not to be omitted, in honour to the heart of this great performer, that when the daughter of that friend became an orphan, he maintained her as his own. In 1709 a benefit was given to him, in which he himself performed Melanthus in the Maid's tragedy, and was aided by Mrs Bracegirdle and Mrs Barry, both of whom had retired from the stage. In 1710 he performed again at a benefit allowed him in the same manner; but having taken means to repel the gout from his feet for that purpose, the expedient proved fatal. He died during the same month, and was buried in Westminster abbey, Steele writing a Tatler to honour his memory and record the event. Betterton possessed one of those characters in private life which occasionally do so much to sustain the profession to which he belonged: off the stage as well as on, his conduct was manly, decorous, and elevated; and he was rewarded with general esteem. He wrote and adjusted several pieces for the theatre, which exhibited a great knowledge of stage effect, usually the principal merit of the dramatic works of actors. *Biog. Dram. Cibber's Apology.*

BETTINELLI (XAVIER) a Jesuit of Mantua, born in 1718. His order being suppressed he afterwards lectured on oratory at Modena. His principal work, "Lettere dieci di Virgilio agli Arcadi," gained him great credit. His other writings are—"Dell' Entusiasmo belle arti;" "Dialoghi d'Amore;" "Ragionamenti filosofici;" "Delle Lettere e delle arti Mantovane," &c.; "Risorgimento negli studi, nelle arti e ne' costumi dopo il mille;" "Lettere a Lesbia Cidonia sopra gli epigrammi;" an essay on eloquence, letters on the fine arts, poems, tragedies, &c. He died in 1808.—*Biog. Univ.*

BETULEIUS (SIXTUS), a Suabian, born at Memmingen in the beginning of the sixteenth century, afterwards provost of the college of Augsburg. He published commentaries on some of the works of Cicero and Lactantius, a Greek concordance of the New Testament, a treatise on the Sibylline Oracles, and three sacred dramas on the subjects of Judith, Susannah, and Joseph. He died in 1554 in his fifty-fourth year.—*Moreri.*

BEVER (Dr THOMAS) an English civilian of some note, chancellor of Bangor and Lincoln, and a judge of the cinque ports, born at Mortimer, Berks, in 1725. He graduated at Oxford, and became fellow of All Souls college. He wrote "On the Study of Jurispru-

dence and Civil Law," printed in 4to, 1766; and "On the legal Polity of the Romans," 4to, 1781. His death took place in 1791.—*Cooke's Cat. of Civilians.*

BEVERIDGE (WILLIAM) one of the most learned prelates of the English church, a native of Barrow in Leicestershire, born in 1638, and educated at St John's college, Cambridge. Here he applied himself with such intense application to the study of Eastern literature, as to publish in his twentieth year a Latin treatise "On the Excellency and Use of Oriental Languages," in which he reviews the Hebrew, Chaldee, Syriac, Arabic, and Samaritan tongues. About the same time also he produced a Syriac grammar. Being ordained in 1661, he obtained the vicarage of Ealing in Middlesex, on the collation of Sheldon bishop of London; but in 1672, being presented to the rectory of St Peter's, Cornhill, by the corporation of London, he resigned that piece of preferment, and removed to the metropolis. In 1681 he was raised to the archdeaconry of Colchester, with the prebendal stall in St Paul's cathedral annexed to that dignity. Three years after, he obtained a stall at Canterbury. On the deprivation of Dr Kenn in 1691, the see of Bath and Wells was offered to his acceptance, which however he declined from conscientious motives; nor was it till 1704 that he took his seat on the bench as bishop of St. Asaph. This new dignity however was enjoyed by him little more than three years, his death taking place at Westminster in 1708, in his seventy-first year. He was a voluminous writer on theological and philological subjects. Besides the works already alluded to, "De Linguarum Orientalium præstantiâ et usu," printed 8vo, 1658, he published "Institutionum Chronologicarum Libriduo," in 4to, 1669; "Συρόδικον sive Pandectæ Canonum SS Apostolorum," &c. Oxon, 1672, 2 vols. folio; "Codex Canonum Ecclesiæ primitivæ vindicatus," &c. 4to, 1679; and a treatise on the catechism of the Church of England, 4to, 1704, which has run through several editions. His executors after his decease printed many of his posthumous works, the principal of which are—"Thesaurus Theologicus," 4 vols. 8vo; "Private Thoughts on Religion;" "The Necessity of frequent Communion;" "An Exposition of the Thirty-Nine Articles," folio; "A Defence of the Old Version of the Psalms;" and above 150 sermons, contained in twelve octavo and two folio volumes, besides other tracts. In his divinity he leaned strongly towards the Calvinistic side of the question: hence eulogy and animadversion have been dealt out upon his tenets in a pretty equal proportion; but to the integrity, piety, and simplicity of his character, all parties have united in bearing testimony. He left the principal part of his property to charitable uses, and is buried in St Paul's cathedral.—*Biog. Brit*

BEVERLAND (ADRIAN) a classical scholar, memorable for his learning and the licentious character of his writings. He was born in 1653 at Middleburgh in Zealand, and stu-

died law, in which faculty he took the degree of doctor and became a counsellor. In 1678 he published a work with the following curious title: "Peccatum originale philologicè elucubratum, a Themidis Alumno, *Elutheropoli, in Horto Hesperidum, Typis Adami et Eve Terræ Filii.*" The Dutch magistrates ordered this book to be publicly burnt, and committed the author to prison, whence he was not liberated without much trouble and expense. He revenged himself by a severe satire on the magistrates and professors of Leyden, entitled "Vox clamantis in Deserto." In 1680 he published his treatise "De Stolatæ Virginitatis Jure;" and wrote a still more offensive tract, "De Prostibulis Veterum," which his friends with difficulty prevented him from publishing. Isaac Vossius however is said to have made use of it in his notes on Catullus. Beverland afterwards was somewhat reformed by the admonitions of Dr Edward Bernard, and, as a testimony of his penitence, wrote "De Fornicatione cavenda Admonitio, sive Adhortatio ad Pudicitiam et Castitatem." He was living in 1712, but in a state of mental derangement, to which there seems to have been a tendency in the former part of his life, and which may in some measure account for, though it cannot excuse, the perversion of his talents.—*Chauvigné Dict. Hist. Peignet, Dict. des Livres condamnés au Feu.*

BEVERLY (JOHN of) a learned ecclesiastic of the seventh and eighth centuries, a native of Harpham in Northumberland. Having assumed the cowl, he became abbot of St Hilda, whence Alfred king of Northumberland raised him in 685 to the see of Hexham, and two years afterwards to that of York. He was one of the most learned men of his time, having been pupil to Theodore archbishop of Canterbury, and tutor to the venerable Bede. In 701 he founded a college at Beverly for secular priests, and having enjoyed the archiepiscopal dignity thirty-four years, resigned his mitre and became once more a simple monk. He died May 7, 721; but having the credit of performing several miracles, after his decease, Alfric archbishop of York had his bones taken up and enshrined, about three centuries after his death. He was the author of several devotional treatises still extant. There was also another monk of this name, professor of theology at Oxford in the fourteenth century.—*Biog. Brit.*

BEVIN (ELWAY) a celebrated musician and composer, of the age of Elizabeth, a pupil of Tallis, through whose recommendation he was appointed a supernumerary gentleman of the Chapel Royal; but in 1637 he lost the situation, it being discovered that he adhered in secret to the Roman Catholic religion. Several anthems and services of his yet remain; but his great work is a treatise "On the Composition of Canons," published in 1631, and dedicated to bishop Goodman.—*Biog. Dict. of Mus.*

BEVIS (JOHN, F.R.S.) a physician born at Old Sarum, Wilts, in 1695, and educated at Christchurch, Oxon, where he graduated. In 1733, having taken up his residence at Stoke

Newington, in the neighbourhood of London, he built an observatory, and commenced an astronomical book on the model of Bayer's, to be entitled "Uranographia Britannica." but the failure of his engraver caused the miscarriage of the work. Besides his papers printed among the Philosophical Transactions of the Royal Society, he published a treatise on the mineral spring at Bagnigge Wells, the "Satellite Sliding Rule," and "Halley's Astronomical Tables," and left behind him a manuscript translation of Lalande's Astronomy. He died in 1771.—*Philoso. Mag.* 1806.

BEULANUS or BEULANIUS (SAMUEL) an ecclesiastic and historian, who made additions to the "Historia Britonum" of Nennius. He probably lived in the ninth century. Some suppose there were two British annalists of this name, a father and son, the former of whom is said to have flourished AD. 600.—*Gunn's Edit. of Nennius's Hist.*

BEUTHER (MICHAEL) a pupil of Martin Luther, a native of Carlostadt in Germany, born in 1522. Being disgusted with the law, to which he was bred, he became a physician, but directed his attention more to antiquarian researches than to the profession which he had adopted. He published commentaries on the works of Sallust, Livy, and Tacitus; a treatise on the "Fasti Hebraeorum, Atheniensium et Romanorum;" "Animadversiones Historicae et Chronographicae;" and "Opus Factorum Antiquitatis Romanae." His death took place in 1587.—*Moreri.*

BEWICK (JOHN) an English artist who, in conjunction with his brother Thomas Bewick, found out an improved mode of engraving on wood, which they carried to such a degree of perfection as almost to equal the delicacy of copper-plates. Engravings of this kind are done in relief, in consequence of which they can be worked together with letter-press. These ingenious brothers were settled at Newcastle-on-Tyne, where they printed in 1790 a "History of Quadrupeds" in an octavo volume, which first made known their abilities, and still maintains its credit as a curious and valuable work. They produced many other specimens of art and were engaged together in making engravings for a "History of British Birds" (published in 1797, 8vo,) when John Bewick died of a consumptive disease, December 5th, 1795. The author of the "Pursuits of Literature" has bestowed a merited eulogium on the subject of this article; who however rather revived than invented the art of wood-engraving, which was practised by Albert Durer in the sixteenth century, in a style of almost unequalled excellence, though it afterwards fell into a state of neglect and degradation. Since its revival by the Bewicks, it has been successfully cultivated by Branston, Harvey, Thompson, and other artists now living.—*Elmes's Dict. of the Fine Arts.*

BEWLY (WILLIAM) an ingenious chemist and natural philosopher, who contributed by his researches to the improvement of chemical science in the last century. He practised as a

surgeon at Great Massingham in Norfolk; and died September 5th, 1783, aged fifty-eight, in London, at the house of his friend Dr Burney, the historian of music. It does not appear that he published any distinct work; but some valuable papers by him were printed among the philosophical and chemical essays of Dr Priestly; and he was for some time a writer in the Monthly Review, of articles on chemistry and natural philosophy.—*Lond. Med. Journ.* vol. iv. *Boswell's Life of Johnson.*

BEYER. There were two German authors of this name. GEORGE, born in 1665 at Leipsic, was educated for the bar, and gave lectures on his profession at Wirtemberg, about the close of the seventeenth century. His principal work, "Notitiæ auctorum Juridicorum, &c." has been frequently reprinted. He was also the author of a treatise entitled "Declinatio Juris divini, naturalis, et positivi," 4to. He died in 1714.—AUGUSTUS, the second, an ecclesiastic, whose name is sometimes spelt Beier, was born in 1701. He wrote a letter on the library at Dresden; historical and critical remarks on scarce books; and a treatise entitled the "Arcana sacra," of the Dresden library. He also published "Bernardi Monete epistola hactenus inedita ad Mich. Maittaire," 8vo. He died in 1741.—*Biog. Univ.*

BEZE, or BEZA (THEONORE) a divine of great eminence, and one of the pillars of the church of Geneva, was born at Vezelai, a small town of Nivernois in France, of parents nobly descended. He passed his first years at Paris with his uncle Nicholas, a counsellor of parliament, who sent him to Orleans for education, where he was placed under Wolmar, a very eminent Greek scholar, who introduced the principles of the Reformation into France. With him Beza studied seven years, and then entered upon a course of law; but was much more attached to classical literature, and distinguished himself by a turn for Latin poetry, in which he wrote several pieces, the licentiousness of which subsequently much stained his reputation. Notwithstanding, on his return to Paris, he was presented to the priory of Longjumeau, and another benefice; and thus enjoying an ample revenue, he joined somewhat too freely in the amusements and dissipation of youth. The impression which he had received from his Protestant tutor, however, never forsook him; and his perplexity was increased by a marriage of conscience with a young woman, which he could not complete without divesting himself of his benefices. At length a severe illness assisted the suggestions of attachment and conscience, and in 1548 he fled to Geneva with his female companion. In the following year he accepted the Greek professorship at Lausanne, which he held with great reputation for nine or ten years; he also read lectures in French on the New Testament, and published several books. At the persuasion of Calvin, he undertook to finish the French version of the Psalms, which Marot had

begun as also a defence of the absurd doctrine of the duty of a magistrate to punish heresy. This treatise, which is entitled "De Hæreticis a Magistratu puniendis," was composed by way of reply to a book written by Castalia in merited reproach of the atrocious execution of Servetus. The principles of the Reformation being at that time legal heresies, it was in no way wonderful that the romanists should turn the arguments of Beza against himself. Besides these labours, he wrote several controversial pieces with more levity and satire than his maturer judgment approved; and having obtained considerable reputation, took a journey to Germany in 1558, as one of the deputies sent by the Protestants to engage the German princes in favour of the persons imprisoned at Paris, and of the persecuted inhabitants of the valleys. In 1559 he removed to Geneva, became the colleague of Calvin in the church and university, and at the particular request of the king of Navarre, was deputed to assist at a Protestant conference at Passy in 1561. After this conference was terminated, he remained in France, and attended the prince of Conde, as minister, at the battle of Dreux. At the peace in 1563 he returned to Geneva, and sent out several controversial books, composed with no inconsiderable portion of acrimony. In 1571 he acted as moderator in the national synod of Rochelle, and was employed in almost all occurrences in which the interests of his party were concerned. In 1588 he lost his wife, and in allusion to the similar conduct of David, married another, whom he called his fair Shunamite. His increasing infirmities at length caused him to withdraw from public instruction; but his genius was unextinguished almost to the time of his death, which took place in October, 1605, in the eighty-sixth year of his age. Beza was a man of great natural abilities and literary acquirements; whose activity in the cause of the Reformation has necessarily exposed him to excessive calumny on the part of Catholic writers. That he was a virulent disputant, there is no doubt; nor is it quite untrue, that the style and tone of his controversy did something towards the promotion of civil discord in France. On the other hand, the attempt to stain him with the blame of inciting the assassination of the elder duke of Guise by Poltrot, was believed by none of his contemporaries. His early Latin poems were too popular, but as the productions of a then unsettled youth, can scarcely be quoted against the man. These were first printed in 1548, and a selection from them, with others of a graver class, was printed by the Stephenses at Paris in 1597, 4to, with the title of "Theod. Bezæ Poemata varia." His theological works are very numerous, but are little attended to at present, with the exception of the New Testament translated into Latin with notes, folio, which is still much consulted and esteemed. Beza gave a Greek MS. of the third or fourth century, of the gospels and acts of the apostles, to the university of Cambridge, where a fac-simile of it was published in

1793, in 2 vols. folio.—*Bayle. Morer. M sheim.*

BIANCHI (ANTONIO) a Venetian gondôier of the last century, who raised himself from obscurity by his poetic genius. His "Il Davide Re d'Israele," published in folio in 1751, has been much admired. He also wrote a poem, entitled "Il Tempio ovvero il Salomone," 4to, 1753; a treatise on Italian comedy; and an oratorio, called "Elia sur Carmelo."—*Biog. Univ.*

BIANCHI (JOHN) more generally known by the name of James Plancus, a native of Rimini, born 1693. He practised medicine with great success, and published several works, as well professional as on conchology, botany, &c. both in Italian and Latin. Among them are—"Lettere intorno all cataratta," 4to; "Osservazioni intorno una sezione anatomica," 4to; "De Monstris," 4to; "Storia Medica d'un apostema nel lobo destro del cerebello," 8vo; "Dircorso sopra il vitto Pitagorico," 8vo; a treatise "On the Baths of Pisa;" another respecting a giant; a third on scarce shells; and an account of a girl named Caterina Vizani, &c.; "Epistola anatomica ad Jos. Puteum Bononiensem," 4to; "Dissertazione de vesicatori," 8vo; and "Fabii Columnæ Phytobasanos." He was considered very skilful in his profession, and died in 1775.—*Ibid.*

BIANCHI (JOHN ANTONIO) an Italian monk, provincial of the order of the Minorites, and an inquisitor at Rome, born 1686. He was the author of several tragic dramas on religious and moral subjects; a work on the best method of correcting and reforming the modern theatre; and a treatise in opposition to Pietro Giannone, entitled "Della potestè e polizia della Chiesa, &c." 5 vols. 4to; all which he printed under the assumed name of Farnabio Gioachino Annunzi. He died in 1748 at Rome.—*Ibid.*

BIANCHINI (FRANCIS) a philosopher and mathematician of Verona, celebrated as the founder of the Aletholli Society in that city, born December 13, 1662. Cardinal Ottoboni, afterwards pope Alexander VIII, held him in great esteem, and distinguished him by his patronage. Though enjoying a high degree of reputation for sanctity among his contemporaries, he is better known to posterity as an author and an antiquarian. In 1697 he published the first part of an universal history, under the title of "Istoria Universale provata con monumenti et figurata con simboli de gli Antichi." This work, which he never finished, commences with the creation, and extends to the destruction of the Assyrian empire. In 1701-2 he was appointed, by pope Clement XI, secretary to the assembly of learned men charged with the reformation of the calendar; in which capacity he published in the year following two scientific tracts, "De Calendario et Cyclo Caesaris, &c." He also exhibited his talents as an astronomer, by tracing the meridian at Rome in the church of the Char-treux, an account of which he printed, entitled "De nummo et Gnomone Clementino."

afterwards produced a plan, the result of eight years' labour, for tracing a meridian line through Italy, but died before he was able to commence his operations for carrying the scheme into effect. His other works are—"Memoirs on the Comets of 1684 and of 1702, and of the Eclipse of the Sun in 1724;" an "Account of the Alethofili Society;" another of the discovery of a subterranean sepulchre in 1726, on the Appian way, entitled "Camera e' Inscrizioni Sepolcrati di Liberti, &c.," 1727; "Hesperii et Phosphori nova Phenomena," 1728; "Astronomicæ et Geographicæ observationes," folio; "Del palazzo de Cesari;" and "Opuscula varia," 4to, 2 vols. He also superintended an edition in three folio vols. of the lives of the popes by the librarian Anastasius. The Roman senate ennobled him, and that of Verona placed his bust in their cathedral after his death, which took place in March 1729, of dropsy. Fontenelle wrote an eulogium on his memory.—*Biog. Univ.*

BIANCHI (FRANCIS) a musical composer of eminence, a native of Cremona. He was the author of several highly popular operas, one of which had a narrow escape at Vienna in 1785. This was the "Disertor Franchese," in which, Pacchierotti having to appear in the character of a French soldier, the fastidiousness of the audience was so offended by the sight of the costume of common life then for the first time introduced upon their stage, that the piece was condemned at once. Luckily for the composer, some royal personage, then passing through the city, expressed a desire to hear the piece; out of deference to him, the performance was permitted, when the rapture it excited equalled the previous disapprobation, and proved the foundation of its author's future fame. Bianchi some years afterwards, coming to England, wrote "Castore e Polluce," for Signora Storace, and "Inez di Castro," for Mrs Billington, which were both much admired. His "Semiramide" also had a great run, being selected by Banti for her début in England.—*Biog. Dict. of Mus.*

BIANCHINI (JOSEPH) a native of Verona, nephew to Francis Bianchini, born 1704. He was a celebrated rhetorician as well as an author. He published a curious account of the death of the countess Cornelia Zangari, who underwent a species of self-combustion from the immoderate use of ardent spirits: this work has been translated into English. His other works are—"Evangeliarum quadruplex Latinæ versionis antiquæ," folio; "Demonstratis historiæ ecclesiasticæ quadripartitæ monumentis ad fidem temporum et gestorum," folio, 2 vols.; a vindication of the Latin Vulgate; and a treatise on the topography of ancient Rome. The period of his decease is uncertain.—*Biog. Univ.*

BIANCHINI (JOSEPH MARIA) a native of Tuscany, born 1685 at Prato. Having graduated in the university of Pisa, he assumed the tonsure, and became celebrated as a theological lecturer and a polemic. He translated the Canticles into Italian verse with copious

annotations, and is the author of two other works, the one a treatise on the satirical poetry of the Italians, in 4to, the other entitled "De gran' duchi di Toscana della real casa de Medici," folio. He died in 1749.—*Ibid.*

BIAS, called one of the wise men of Greece, was born at Priene, a small town of Caria, B. C. 570. Although born to considerable riches, he lived without splendour, but expended his fortune in noble and generous actions. On one occasion some pirates brought several young women to sell as slaves at Priene, whom he ransomed and maintained, until he could restore them to their friends. Some striking maxims of wisdom are ascribed to him, which are enumerated by Brucker. It is said, that hearing some profligate persons in a storm invoke the gods, he exclaimed, "Hold your peace, lest they should discover that you are here." The action which terminated his life was very affecting. Having attended the senate, being then very old, to defend the interest of an old friend, when he had finished, being much fatigued, he reclined his head on the bosom of the son of one of his daughters. The orator who pleaded for his opponent then replied; and having concluded the judges pronounced in favour of the friend of Bias, who expired the same instant in the arms of his grandson.—*Stanley. Brucker.*

BIBLIANDER (THEODORE) a learned scholar and Protestant divine of the sixteenth century, who, according to a fashion then prevalent among the Continental literati, new modelled after the Greek his proper name, which was *Buchmann*, i. e. Book-man. He was a native of Switzerland, and became divinity professor at Zurich in 1532. The heterodoxy or liberality of his opinions concerning predestination, occasioned him to be superseded by Josiah Simler in 1560; but he held the title of *professor emeritus* till his death, which was caused by the plague in 1564. His writings are extremely numerous. In a tract, "De Ratione communi omnium Linguarum," he asserts that God had endowed him with the ability of judging of all languages in use throughout the world. He published a corrected edition of the Koran in Arabic and Latin, and other Mahometan works, with a refutation of the doctrines of Mahomet; and he was also concerned in the Latin Bible printed at Zurich in 1543.—*Moreri. Teissier, Eloges des Hommes Savans.*

BICHAT (MARIE FRANCIS XAVIER) a French physician, pupil to the celebrated Petit of Lyons, and afterwards of Desault of Paris, born in 1771 at Thoirette. The interest of his friend Desault procured him the medical professorship at the Hotel Dieu; in which situation he remained till his death in 1802. He published several medical treatises, among which are—one on the membranes, 8vo; another, entitled "Physiological Researches respecting Life and Death," 8vo, 1799; and a third on "Anatomy in General, as applied to Physiology and Medicine," in four 8vo volumes. He also wrote an eulogium on Desault, printed in the fourth volume of the Sur-

gical Journal, and various memoirs in the collection of the Medical Society.—*Nouv. Dict. Hist.*

BIDDERMAN (**JOHN GOTTLIEB**) a native of Naumberg in Germany, born 1705, in which place he became rector of the public college, resigning for that purpose the appointment of librarian at Wirtemberg, where he had graduated. The more lucrative situation of rector of the public school at Friedburg being offered him in 1747, he accepted it, and discharged its duties until his death. He was an excellent classic, and is the author of several learned treatises, among which are—"De Latinitate Maccaronicâ;" "Acta Scholastica," in 8 vols.; and "Selecta Scholastica," in two; "De arte Obliviscendi;" "De insolentia titulorum librariorum;" "De religione eruditorum," &c. He died in 1772.—*Biog. Univ.*

BIDDLE (**JOHN**) a celebrated Socinian writer, was born in 1615 at Wotton-uuder-Edge in Gloucestershire. He received the elements of education at the grammar-school of his native place, whence he was removed to Magdalen college, Oxford, in his nineteenth year. Here he became an eminent writer, and having graduated as A. M. in 1641, was chosen master of Gloucester free-school. While in this capacity, he devotedly attached himself to the study of the Scriptures, and being led to doubt of the doctrine of the Trinity, drew up twelve arguments on the subject; in consequence of which he was committed to jail by the parliamentary committee then sitting at Gloucester, but was liberated on security being given for his appearance when called for. About six months afterwards, he was summoned before the Parliament at Westminster, and examined before a committee, to whom he readily acknowledged his opinion against the divinity of the Holy Ghost. On this declaration, he was immediately committed into the custody of one of the officers of the house, and his "Twelve Arguments" were ordered to be burnt by the common hangman. He however persisted in his opinions, and in 1648 published two tracts, containing his "Confessions of Faith concerning the Holy Trinity," and "The Testimonies of Irenæus, Justin Martyr," and several other early writers on the same subject. These publications induced the assembly of divines to solicit Parliament to decree the punishment of death against those who should impugn the established opinions respecting the Trinity and other doctrinal points, as well as to enact severe penalties for minor deviations. The Parliament indulged these ministers in their intolerant request; which immediately exposed Biddle, who would neither consent nor recant, to the loss of life; but difference of opinion in the Parliament itself; and the penalties to which this sweeping measure rendered many in the army liable, prevented its execution. The ascendancy of the Independants after the death of Charles having produced a kind of general toleration, Biddle received the benefit of this change, and retired into Staffordshire, where he was kindly entertained by a magistrate of the

county, who left him a legacy. He was however some time after again remanded to prison by the zeal of president Bradshaw, and remained for some years in confinement, subjected to the greatest privations, until somewhat relieved by being allowed to correct the printing of a Greek septuagint, then publishing in London. A general act of oblivion in 1657 restored him to liberty, when he immediately disseminated his opinions, both by preaching and by the publication of his "Two-fold Scripture Catechism." A complaint being made to Cromwell's Parliament against this book, he was committed to the Gatehouse, where he remained for six months, until released by due course of law. In the next year however a dispute with an Anabaptist again involved him in trouble, and he was remanded under the severe ordinance before-mentioned, to take his trial for his life. Cromwell, who disapproved of this intolerance, then took him out of this peril and banished him to St Mary's castle, Scilly, where he assigned him an annual subsistence of a hundred crowns. Here he remained three years, until the Protector, at the intercession of his friends, once more liberated him in 1658. He then became pastor of an Independent congregation, and continued to support his opinions, until fear of the Presbyterian Parliament of Richard Cromwell induced him to retire into the country. On the dissolution of that parliament he preached as before until the Restoration, which obliged him to confine his exertions to private preaching. He was however, in June 1662, apprehended at one of those assemblies, and upon process of common law, fined 100*l.*, and ordered to be in prison until it was paid. He fell a martyr to this sentence by catching one of the distempers so common at that time to gaols, and died in September 1662, in the forty-seventh year of his age, a martyr to religious intolerance. The private character of this courageous sectarian, like that of most of those who suffer from p inciple, was moral, benevolent, and exemplary; and his learning and logical acuteness, rendered him very fit to gain proselytes. He did not agree in all points with Socinus but was apparently unsolicitous to establish a perfect agreement. Toulmin styles him the father of the modern Unitarians.—*Biog. Brit. Toulmin's Mem. of Socinus.*

BIDLAKE (**DR JOHN**) a clergyman of the church of England, author of various poetical as well as devotional writings. He was born in 1755 at Plymouth, and brought up at the grammar-school there, of which, having completed his education at Christchurch, Oxford, he was afterwards the high-master. Three years before his death, an epileptic fit seized him in the pulpit, while delivering the Bampton lecture at St Mary's, which terminated in the total loss of sight. In addition to the lecture above mentioned, he published an "Introduction to Geography," 12mo: "The Sea," "The Country Parson;" "The Summer Eve," "The Year," and "Youth," poems, separately printed in octavo, besides a quarto vo-

lume of miscellaneous poetry; "Virginia," a tragedy; "Eugenio," a tale in one volume 12mo; and two volumes of sermons. He died in 1814.—*Gent. Mag.*

BIDLOO (**GODFREY**) a physician of Amsterdam, born in 1649, eminent for his skill in anatomy, of which science he became professor at the Hague in 1683, and afterwards at Leyden in 1694. On the abdication of James II of England, Bidloo attended the prince of Orange to this country, in quality of body physician, and continued so during the whole of the reign of that monarch, who expired in his arms. On this event, Bidloo returned to his professorship at Leyden in 1702, and died there eleven years afterwards. His fame rests principally upon his splendid work on the "Anatomy of the Human Body," first printed at Amsterdam in 1685, with 105 admirable plates from the designs of Lairese, the fidelity of which however is not rated so highly as the beauty of their execution. The publication of this work involved him in a controversy with Ruysch and William Cowper, the latter of whom he charged with having bought up several of his plates in Holland, and re-issuing them with some trifling alteration as his own; a charge which, although answered, was by no means refuted. His other works are "A Relation of the last Illness and Death of William III.;" "De Animalculis Hepatis," &c. Leyden, 1694; "De Venenis," Leyden, 1704; "Exercitatus: anatomico-chirurg: Decad II.," Leyden, 1708; with a few other dissertations and orations. A volume of his poems, written in Low Dutch, was collected after his death, and published in 1719. He left behind him one son, Nicholas, afterwards inspector of hospitals and physician to the czar Peter the Great, and a brother Lambert, author of a work "De re herbaria."—*Biog. Univ. Bible Anatomy.*

BIEL. There were two learned German ecclesiastics of this name, both celebrated theologians. The first, **GABRIEL**, a native of Spire, flourished in the fifteenth century, and became in 1477 professor of divinity at Tubingen. He was the author of several theological works, among which are lectures on the mass, and a dissertation on the sentences of Occam. He died at a great age in 1495. **JOHN CHRISTIAN**, the second, was born in 1667 at Brunswick, and was a pastor of the Reformed Church. He published a valuable lexicon of the septuagint version of the Old Testament, entitled "Novus Thesaurus Philologicus," &c. He died in 1745.—*Biog. Univ.*

BIELFIELD (**JAMES FREDERIC**, Baron de) a German author of no great note, a native of Hamburg, born 1717. The king of Prussia employed him as a secretary of legation, and afterwards placed his brother, prince Ferdinand, under his tuition. In 1747 he obtained the post of curator of the universities, and in 1748 was ennobled, and raised to the rank of a privy counsellor. He published "Familiar Letters, or Elements of Universal Education," in 3 vols. 8vo; "Political Insti-

tutions," 3 vols. 8vo, of both which there are English translations; "Dramatic Amusements;" and "Progress of the Germans in the Belles Lettres," 8vo. He died in 1770.—*Nov. Dict. Hist.*

BIERLINGIUS (**CASPAR THEOPHILUS**) a German philosopher, who distinguished himself by the liberality of his opinions in the latter part of the seventeenth century. He was a Lutheran divine, and professor in the university of Rinteln on the Weser; and is said to have been the first among the reformed clergy who embraced the doctrine of Christian Thomasius relative to the nullity of magic, ghostly visitations, and the whole scheme of popular demonology. There is extant, in the *Miscellanea Curiosa*, 1671, a paper of this writer, entitled "Observatio de Serpente Vaccan emulgente." He died in the beginning of the nineteenth century.—*Heumannii Conspectus Reipublica Literaria.*

BIERON or **BIHERON** (**MADemoiselle**) a very ingenious Parisian lady, who distinguished herself by talents of a peculiar kind. She was born in 1719, and died in 1795. She studied with success music, painting, history, and geography; but is chiefly deserving of notice for her knowledge of anatomy, and the curious works she executed to illustrate that science. These are models in wax of various parts of the animal structure, which, together with her paintings on velum of subjects belonging to natural history, are preserved in the museum of Natural History at Paris. Vicq d'Azyr in 1777 presented to the Academy of Sciences a memoir on the anatomical preparations of Mad. Bieron; and the empress of Russia bought several for her cabinet, now in the museum of Natural History at Petersburg.—*Dict. de Femmes Celecs. Elmes's Dict. of the Fine Arts.*

BIGLAND (**RALPH**) an English herald and topographer, who was a native of Kendal in Westmoreland. He was appointed Garter king at arms in 1780, and died in 1784, at the age of seventy-three. He employed himself in making collections for a history of the county of Gloucester, in which he possessed some landed property. His son Richard Bigland published from his manuscripts, in one volume folio, the first part of "The Antiquities of Gloucestershire," 1792.—*Moule's Bibliotheca Heraldica.*

BIGNE or **VIGNE** (**GRACE DE LA**) a French ecclesiastic and poet of the fourteenth century, born at Bayeux about the year 1328. He was taken prisoner by the Black Prince in 1356 at the battle of Poitiers, while in the suite of king John of France (to whom he was chaplain) and accompanied his master to England. His principal poem, "Le Roman des Oiseaux," was composed for the instruction of the dauphin, and printed in 1520 with Gaston de Foix's work on the chace. His death, the exact time of which is uncertain, took place about the year 1374.—*Biog. Univ.*

BIGNE (**MARQUERIN DE LA**) a descendant of the same family as Grace de la Bigne, was eminent for his proficiency in the belles let-

tzek. He, like his ancestor, was a native of Bayeux, born in 1516, and became a doctor of the Sorbonne, with the deanery of Mans. His "Bibliotheca Patrum," printed first in eight folio volumes, 1575, was afterwards republished in 16 volumes folio, with additions, and is a valuable compilation. His aversion to litigation was so great, as to induce him to surrender his church preferment, rather than wait the issue of a suit; on this occasion he removed from Bayeux to Paris, where he passed the remainder of his life in literary pursuits, and died there about the close of the sixteenth century. Several of his sermons and public addresses have been printed.—*Nouv. Dict. Hist.*

BIGNON (JEROME) a learned French writer, was born at Paris in 1589, and was privately educated by his father, an erudite advocate of the parliament of Paris, in the languages, philosophy, mathematics, law, and divinity. Such was the result of this parental care, that Jerome published a description of the Holy Land, and three years afterwards two other works which gained him great reputation in France; the first being a treatise "On Rome and its Antiquities," 1604, 8vo; and the second a treatise "On the Election of the Popes," 1605, 8vo. Henry IV appointed him page of honour to the dauphin, afterwards Louis XIII. He also wrote a treatise on the superiority of the kings of France, in order to confute a Spanish book claiming a similar precedence for those of Spain, which work he dedicated to Henry. In 1613 he published an edition of the "Formule de Marculphus," with learned notes, which added greatly to his reputation. In 1614 he travelled into Italy, where he met with much attention from pope Paul V, and the celebrated father Paul. On his return he devoted himself to the bar, and was nominated advocate-general in the grand council; which office he discharged with so much reputation, that the king appointed him counsellor of state and advocate-general on the parliament, and in 1612 librarian to the king. He was subsequently employed on many critical state occasions, especially during the regency of Anne of Austria. He died much esteemed in 1656, of an asthma, aged sixty-six.—*Moreri. Perrault's Hommes Illus. Biog. Univ.*

BIGNON (JOHN PAUL) grandson of the preceding, an abbe, and also librarian to the king of France, was a writer of considerable fertility of invention and fancy. He was concerned in the Medallic history of Louis XIV, and in the *Journal des Savans*. He also wrote "Vie de François Levesque," 1684, 12mo, and "Les Aventures d'Abdalla fils d'Hanif," a work in imitation of the Arabian Nights, in which he displays much vivacity of imagination. He died in 1743.—*Biog. Univ.*

BILFINGER (GEORGE BERNARD) a German author, born at Canstadt in 1693. A singular *lusus nature* was observable in him and in his family, most of the members of which had twelve fingers and as many toes. The reputation for learning which he had acquired

obtained for him the professorship of philosophy at St Petersburg, and afterwards that of divinity at Tubingen. His most valuable work is his "Dilucidationes Philosophicæ de Deo, Animâ Humanâ, Mundo," &c. printed in 4to. He also wrote treatises on the "Origin of Evil," "On the Harmony existing between the mental and corporeal Powers of Man;" and a learned dissertation entitled "Specimeu doctrinæ veterum Sinarum." He died in 1750. *Biog. Univ.*

BILGUER (JOHN ULRIC) a Swiss physician of great eminence, especially celebrated for his skill in surgery, was born at Coire in 1720, graduated at Halle in 1761, died 1796. He attended the Prussian army in several campaigns, and obtained a patent of nobility (which he never made use of) for his services. His principal work is a treatise in which he maintains the inutility of amputation in cases of gun-shot wounds; a theory which has been strongly controverted by Pott and others, and adopted and defended by Kirkland. He also wrote on the management of army-hospitals, and on hypochondriasis.—*Biog. Univ.*

BILLINGTON (ELIZABETH) the most celebrated English female singer of her day: she was of German origin, but born in England in 1770, her father, Mr Weichsell, being a native of Saxony. At an early age she studied the piano-forte under Schröeter, and attained to an extraordinary proficiency. At fourteen she made her first appearance as a singer at Oxford, and two years afterwards married Mr Billington, a performer on the double-bass, whom she accompanied to Dublin, where she made her *début* there in the opera of "Orpheus and Euridice." From Ireland she returned to London, where she appeared at Covent-Garden for the first time as Rosetta, in Arne's "Love in a Village," with such unprecedented success as to secure her an immediate engagement at what was then considered the enormous salary of 1000*l.*, and a benefit, for the remainder of the season; the managers afterwards voluntarily giving her the profits of a second night. While in town, she continued to take lessons of Mortellari, a celebrated Italian master then in London, and on the closing of the theatre, repaired to Paris, in order to profit by the instructions of Sacchini. In 1785 she returned to England, and appeared at the concerts of ancient music with Madame Mara, whose brilliant performance she, to say the least, fully equalled. From this period till 1793, no music meeting, opera, or concert of reputation, was considered complete without her. In the last named year she visited Italy, and performed, accompanied by her brother C. Weichsell, at the theatre of St Carlos at Naples; Francis Bianchi composing expressly for her his celebrated opera "Inez de Castro." Her engagement here met with an abrupt and melancholy interruption. Her husband dying suddenly of apoplexy, just as she was preparing to set out for the theatre. In 1796 she appeared at Venice, and afterwards at Rome, being every where received with the loudest expressions of applause. In

1799 she entered the nymeneal pale a second time, with Mr Felipont whom she accompanied to Milan. In 1801 her wonderful powers being then in their full meridian, she returned to the London stage, appearing alternately at either house, and astonishing the whole musical world by her Mandane; a performance that has never since been equalled in English opera. Engagements now multiplied upon her, and continued incessantly till her final retirement from public life, which took place in 1809. The last exhibition of her powers was for the benefit of a charity at Whitehall chapel, the queen, the prince regent, and most of the branches of the royal family, being present. In 1817 she quitted England for ever, and died after a short illness at her villa of St Artien, an estate she had purchased in the Venetian territories.—*Biog. Dict. of Music.*

BILSON (THOMAS) an English prelate under Elizabeth and James I, of great learning and ability, born 1536. He was educated at the grammar-school of Winchester (of which city he was a native) and afterwards became successively master of that seminary and warden of the college, with a prebendal stall in the cathedral. Having distinguished himself in 1593 as a champion of episcopacy, by his work entitled "The Perpetual Government of Christ's Church," his polemical exertions were three years afterwards rewarded by his elevation to the see of Worcester, whence he was translated the next year to the more valuable one of Winchester. He entered warmly into all the polemical questions of that period, and spoke at great length in the controversial assembly held at Hampton Court. He also acted as a delegate in 1613, on the famous divorce cause between the earl of Essex and his countess, and, in conjunction with Miles Smith bishop of Gloucester, revised the new translation of the Scriptures. Among his controversial works are—treatises "On Christian Subjection and Unchristian Rebellion," 1585; "The Survey of Christ's Sufferings for Man's Redemption," 1604; besides several sermons, one of which was preached by him at the coronation of James I. He died June 13, 1616, and lies buried in Westminster abbey.—*Biog. Brit.*

BINGHAM (JOSEPH) a native of Wakefield in Yorkshire, born September 1683, and educated at the grammar-school there, whence he removed to University College, Oxford, and obtained a fellowship in that foundation; but was compelled to resign it in consequence of the imputed heterodoxy of his opinions respecting the Trinity, as evinced in a sermon delivered by him at St Mary's, October 28, 1695. On this occasion he retired to the living of Headbourne-Worthy, Hants, to which he had been presented five years before by his friend Dr Radcliffe; and, undismayed by the censures of the university, boldly printed the obnoxious sermon, with a defence of the tenets it maintained. Here he passed his involuntary leisure in compiling a work of great learning and research, called "Origines Eccle-

siastica." The first volume of this laborious work appeared in 1703, and the whole was eventually completed in 10 vols. 8vo; an edition being also printed in 2 vols. folio. It was shortly after translated into Latin, and acquired a great circulation on the Continent, being still esteemed a standard book in all matters connected with ecclesiastical polity. In 1712 Trelawney, bishop of Winchester, collated him to the living of Havant near Portsmouth; an addition to his income which his large family rendered particularly acceptable. The failure however, in 1720, of the South Sea scheme, in which he had embarked the whole of his savings, once more reduced his circumstances to comparative indigence; and his death taking place within three years after, he was little able to retrieve his affairs. Of his children six survived him; the eldest of whom collected and published his father's works in 2 vols. folio, 1725. Among them are a "Scholastic History of Lay Baptism," originally printed in 8vo, 1712, and a "Discourse on the Mercy of God to Penitent Sinners."—*Biog. Brit.*

BION, a Greek philosopher, a native of Borysthenes, a Grecian colony in Scythia, flourished in the reign of Antigonus Gonatus, king of Macedon, B. C. 276. He is said when young to have been slave to an orator, who gave him his freedom, and left him a legacy which enabled him to study philosophy at Athens. He was first a disciple of Crates, then of Theodorus the atheist, and lastly of Theophrastes; but he seems to have adhered most to the opinions of Theodorus. He was skilled in music and poetry, and possessed considerable talent at repartee, but seems to have acquired very little title to the character of a philosopher, his life having been profligate and licentious, and his death superstitious. He died at Chalcis; and some fragments of his moral writings have been preserved by Stevens.—*Stanley. Brucker.*

BION, a Greek bucolic poet, and native of Smyrna, the period of whose existence is uncertain. Some make him contemporary with Theocritus, while others suppose that he flourished a century later, about 187 B. C. Moschus the poet, who was his disciple, in a beautiful elegy on his death, mentions that he was taken off by poison. This is almost all that is known concerning him. His "Idyllia" are characterized by elegance, simplicity, and purity of style, and abound with correct and pleasing imagery. There are many editions of his poems, together with those of Moschus, the best of which is that of Heskin, Oxford, 1748, 8vo.—*Bayle. Elton's Specimens of the Classic Poets.*

BIONDO (FLAVIO). See BLONDUS.

BIRAGO (FRANCIS) an Italian author of great authority in what the Italians call "Scienza Cavalleresca," which embraces all questions relative to nobility, the profession of arms, and the laws of honor. He was born in 1562, of a noble Milanese family, and wrote as late as the year 1637. By Crescenzi, a contemporary, and author of a treatise "On

the Nobility of Italy," we are informed that he was deemed an oracle throughout that country in all matters relative to chivalrous dispute. He also wrote several works on the subject, which are enumerated by Ginguene; the principal part of these are collected in one volume 4to, entitled "Opere Cavalleresche distinte in quattro libri, cioè in discorsi; Consigh libro I e II; e discisioni;" Bologna, 1686.—*Biog. Univ.*

BIRAGUE (CLEMENT) an engraver of the sixteenth century, who, although a native of Milan, exercised his art chiefly in Spain. He is celebrated as the first who discovered a method of engraving on the diamond; the first work of which kind executed by him was a portrait of Don Carlos, the unfortunate son of Philip II.—*Ibid.*

BIRAGUE (FLAMINEO DE) a French poet, although an Italian by birth, was a gentleman of the household of the king of France. He modelled himself after Ronsard; and his "Premieres Œuvres Poétiques," consisting of sonnets and minor pieces, were printed at Paris in 1581. He also wrote a satire entitled "L'Enfer de la mère Cardine," Paris, 1583 and 1597, both editions of which are very rare. In 1793 the elder Didot printed an elegant edition of only 100 copies, eight of which were on vellum.—*Ibid.*

BIRCH (THOMAS) an industrious historian and biographer of the eighteenth century. He was born in London in 1705; and his father, who was a Quaker, practised the occupation of a coffee-mill maker, to which the son also was destined. His early taste for reading induced him to prefer a literary life, which he was permitted to choose on condition of supporting himself by his own exertions. He accordingly, after some previous tuition, became usher in three different schools, and then went to Ireland with dean Smedley. In 1728 he married a clergyman's daughter, who died in the following year. Having left the Quakers, he took orders in the church in 1730, and obtained in 1732 a living in Essex, through the patronage of the attorney-general, afterwards lord Hardwicke. In 1734 he engaged in writing the "General Historical and Critical Dictionary," founded on that of Bayle, and completed in 10 vols. folio in 1741. His coadjutors in this useful work were the Rev. John Peter Bernard, John Lockman, and George Sale. In 1735 Birch was chosen at member of the Royal and Antiquarian societies. He subsequently obtained various preferments in the church, the last of which were the united rectory of St Margaret Pattens and St Gabriel, Fenchurch, in London, and the rectory of Debden in Essex. In 1752 he was elected one of the secretaries of the Royal Society, and in 1753 obtained the diploma of DD. by the favour of archbishop Herring. He was likewise appointed a trustee of the British Museum. Ill health obliged him to resign the office of secretary to the Royal Society; and soon after, on the 9th of January, 1765, he was killed by a fall from his horse in the road between London and Hampstead. Dr Birch

had formed very extensive manuscript collections, which, together with his library of printed books, he bequeathed to the British Museum. His principal works are the biographical sketches accompanying the "Heads of Illustrious Persons of Great Britain," engraved by Houbraken and Vertue; "An Inquiry into the share which Charles I had in the Transactions of the earl of Glamorgan," 8vo; "Memoirs of the Reign of queen Elizabeth, from 1581 till her death," 2 vols. 4to; "The Life of Henry prince of Wales, eldest son of king James I," 8vo; "The Life of Dr John Ward, professor of Rhetoric at Gresham college," 8vo; "The Life of archbishop Tillotson," 8vo. Besides which, he was the editor of "Thurloe's State Papers;" Cudworth's "Intellectual System of the Universe;" "Spenser's Fairy Queen;" the prose works of Milton; and various collections of letters, &c. Dr Birch was one of the pioneers of literature. He collected fully and faithfully, but without much discrimination, materials relating to the various subjects of his research, which are calculated to afford important assistance to writers possessed of more taste and judgment. Dr Johnson was repeatedly obliged to Birch for literary information: he bestowed on him a Greek epigram, and for many years corresponded with him; notwithstanding which, he is said to have considered him as a dull writer, and to have satirically observed—"Tom Birch is as brisk as a bee in conversation, but no sooner does he take a pen in his hand, than it becomes a torpedo to him, and benumbs all his faculties." The literature of this country is however certainly much indebted to the activity and diligence of Dr Birch. *Biog. Brit. Boswell's Life of Johnson.*

BIRKBECK (MORRIS). See Appendix.

BIRD (EDWARD) R. A. a painter of considerable eminence, who died at Bristol, after a protracted illness, November 2, 1819. He excelled in painting comic subjects, and was distinguished for an accurate attention to nature, and speed and facility of execution. In his earlier efforts he was patronized by the marquis of Stafford, who placed in his celebrated gallery, among the works of the old masters, the first picture of any consequence painted by Bird. His "Chevy Chase" procured him the appointment of historical painter to the princess Charlotte of Wales; his "Psalm Singers" in a country church was painted for his majesty; and others of his productions are in the collections of various amateurs.—*Gent. Mag.*

BIRD (FRANCIS) an English sculptor of the seventeenth century. He was born in London in 1667, and studied at Brussels, and afterwards under Le Gros at Rome. His principal performance was the monument of Dr Busby in Westminster abbey. He also executed the representation of the conversion of St Paul, in the pediment of that cathedral, the bas-reliefs under the portico, the statue of queen Anne, and the four figures round the pedestal in front of the same edifice. He died in 1731.—*Walpole's Anecdotes of Paintings, &c.*

BIRD (**JOHN**) an ingenious and eminent mathematical instrument maker in the last century. Among many undertakings which he executed, was the construction of a mural quadrant, on the west side of the pier in the royal observatory at Greenwich, for taking observations towards the north. This instrument was made in consequence of an application to government by Dr Bradley, astronomer royal, in 1748, stating the defects of the old quadrant, which had been executed under the direction of George Graham. In a pamphlet published by Bird in 1768, entitled "The Method of constructing Mural Quadrants," &c., he has given a description of his own instrument, and states the precautions he adopted to render it superior to that of Graham, to whose great skill in mechanics he candidly bears testimony. He also published a piece entitled "The Method of dividing Astronomical Instruments." Bird, whose professional reputation was not confined to his native country, died March 24, 1776, at his residence in the Strand London.—*Original*.

BIRD (**WILLIAM**) an eminent musician of the old school, a pupil of Tallis, chosen organist of Lincoln in 1563. In 1569 he succeeded Parsons in the Chapel Royal, and composed a great quantity of sacred music, chiefly set to Latin words, though published so late as the reign of James I. To much of this English words were adapted afterwards by dean Aldrich, who was a great admirer of his style, and collected his works. A service and several of his anthems are contained in the second and third volumes of Boyce's printed score, while many more are to be found in Dr Tudway's manuscript collection in the British Museum. The celebrated canon, "Non nobis Domine," is also generally attributed to him. He died at a very advanced age in 1623 *Biog. Dict. of Music*.

BIREN (**ERNEST JOHN**) duke of Courland, one of the extraordinary political adventurers occasionally created by the whims of despotism. He was descended from a humble family in Courland, his father being simply huntsman to the duke. Ernest received part of his education at the university of Königsburgh in Prussia, and in 1714 visited Petersburgh, in order to solicit the situation of a court page, which he was refused for want of nobility. He then returned to Courland, where he ingratiated himself with chancellor Bestucheff, who introduced him to Anne, duchess dowager and regent of Courland. The duchess, fascinated by his handsome person and address, rapidly made him her chief favourite, and put into his hands the government of the country; one of the first results of which promotion was the disgrace of his benefactor Bestucheff. On the accession of Anne to the throne of Russia, it was stipulated that Biren should not accompany her; but she soon broke her word, and during her whole reign he ruled Russia with sovereign sway, and almost peopled the deserts of Siberia with exiles, 20,000 of whom were despatched there during his ten years' administration. He even treated his

mistress with the most haughty violence; but on the other hand it is admitted, that both in external and internal policy, Russia flourished under his influence, and that he was not fearful of employing men of first rate talent. In 1737, on the death of Ferdinand duke of Courland, Anne compelled the nobles, who would not admit him into their body, to choose him for their sovereign; on which he immediately crushed every vestige of freedom in the states. He also prevailed on the infatuated empress, on her death bed, to nominate her nephew Ivan her successor, and himself the regent during his minority, and endeavoured to secure his authority with his usual decision. At length however a party was formed against him, headed by prince Munich, who succeeded in seizing his person in 1740, and conducting him to Siberia in his turn, where he remained during the whole reign of Elizabeth, with five roubles a day for his maintenance. On the accession of Peter III, all the exiles were recalled, and Biren, Munich his enemy (who had also been subsequently banished) and many victims of Biren's tyranny, all met at the new emperor's court. Great offers were then made to him, to induce him to resign his duchy, which he always stedfastly refused. He was at length in 1763 restored to all his honours by Catharine II, and closed his eventful life at Mittau in 1772, in his eighty-third year.—*Coxe's Travels into Russia*.

BIRKENHEAD (**SIR JOHN**) a political writer of the seventeenth century, was the son of a saddler at Northwich in Cheshire, where he was born about the year 1615. Having received some tincture of learning at the grammar-school, he came to Oxford, and was entered a servitor of Oriel college in 1662. Hence he was recommended to archbishop Laud as an amanuensis, who created him AM. by diploma in 1639, and by his influence caused him to be chosen a fellow of All Souls college. His preferment leading him to reside at Oxford, when Charles made that city his head-quarters, he set up a journal entitled the "Mercurius Aulicus," in support of the royal cause. Being expelled from Oxford by the parliamentary visitors, he retired to London, where, by his pasquinades and other tart performances in favour of the Cavaliers, he brought on himself various imprisonments. At the Restoration he was soon taken into favour, chosen member of parliament, and promoted to various offices, becoming finally master of requests. His abilities were almost exclusively confined to drollery and burlesque, with the exception of a few poetical attempts, set to music by Lawes. He died in 1679.—*Biog. Brit.*

BIRKHEAD (**HENRY**) a modern Latin poet, was born in London in 1617, and finished his education at Oxford. By the patronage of archbishop Laud, he was elected fellow of All Souls in 1638, and kept his fellowship until the Restoration, when he became registrar of the diocese of Norwich. His works are—"Poemata in Elegiaca, Iambica, Polymetra," &c. 1656. 8vo; "Otium Literarium," 1656,

8vo. He was also the author of several Latin elegies on the sufferers in the cause of Charles I. He died some time about the close of the seventeenth century.—*Biog. Brit. Wood's Athen. Oxon.*

BIRON (ARMAND DE GONTAULT, baron de) a celebrated French warrior of the sixteenth century. He was born about 1524, and was in his youth page to the famous Margaret queen of Navarre. After passing through the gradations of military service, he was made grand master of the artillery in France in 1569. In consequence of this situation he escaped, though a Protestant, falling a victim in the massacre of St Bartholomew. Henry III in 1577 raised him to the rank of marshal, and afterwards appointed him lieutenant-general of Guienne. After the assassination of that prince, he attached himself to the cause of Henry IV, whom he served with courage and fidelity at the battles of Arques and Ivry. On the latter occasion he commanded the reserve, and contributed to the victory by his skilful manœuvres, though his troops did not come in contact with the enemy. When the engagement was over, he said to the king, who had exposed his person with great temerity—"You Sire, have acted the part of Biron to-day, and he has acted yours." He reduced part of Normandy to subjection, and supported the courage of Henry by his advice and exhortations, when his fortunes were at the lowest. He was killed by a cannon-ball at the siege of Ipernai in 1592. Biron had a taste for literature, and left commentaries on the affairs in which he had been engaged. They were never published, and are said to have been lost.—*Sully's Mem. —Moreri.*—CHARLES DE GONTAULT, duke de Biron, the eldest son of the preceding, served Henry IV in many battles and sieges, where he acted with the utmost bravery. On the field of Fontaine-François, in 1594, the king himself rescued him from the midst of the enemy. He was for some time a great favourite with his master, who made him admiral of France in 1592, and afterwards marshal and governor of Burgundy, and raised him to a dukedom. He was employed in embassies to England and other countries; but notwithstanding the manner in which he was honoured and trusted by his sovereign, he suffered himself to be seduced into a conspiracy against him by the Spaniards; which being discovered he was tried, condemned, and executed in the court of the Bastille, July 31, 1602, at the age of forty. His behaviour at his exit exhibited a striking contrast with his general conduct, as he seemed to have lost all courage, and gave way to womanish tears and lamentations.—*Ibid.*

BISCOE (RICHARD) an English clergyman, originally educated and ordained as a dissentor, but admitted a minister of the established church in 1726. He was a pupil of Dr Benison of Shrewsbury, under whom he studied in the grammar-school of that town. In 1727 he obtained the rectory of St Mary Outwich in the city of London, with a prebendal stall in St Paul's, and shortly afterwards

was appointed a king's chaplain. His *Boys* lecture, preached between 1736 and 1738, and printed four years afterwards in two octavo volumes under the title of "The History of the Acts of the Apostles confirmed by other Authors," has been much admired. He died in 1748.—*Chalmers's G. Dict.*

BISSET (ROBERT) a native of Scotland, educated at Edinburgh for the clerical profession. He took the degree of LL.D., and became a schoolmaster at Chelsea; but not succeeding in that occupation, he employed himself in writing for the press. His chief productions are—a history of the reign of George III, 6 vols. 8vo; the life of Edmund Burke, 2 vols. 8vo; and an edition of the Spectator, with lives of the authors, 6 vols. He died in 1805, aged forty-six.—*Gent. Mag.*

BITAUBE (PAUL JEREMIAH) a French writer, who distinguished himself by his compositions in what has been termed *poetic prose*, or that ornamented style of which the *Telemachus* of Fenelon, and the *Psyche* and *Cupid of La Fontaine*, are excellent specimens, and which Florian and other modern authors have successfully adopted. Bitaupe was born at Berlin of French refugee parents, and was educated as a Protestant divine, though he did not exercise that function. In 1762 he obtained a pension from the king of Prussia, and was chosen a member of the Royal Academy of Berlin. After the French Revolution, he was made an associate of the National Institute. He died at an advanced age in 1808. His principal work is "Joseph," a tale, which has been often published, and of which there is an English translation. He was also the author of several other pieces of the same kind, and of a prose version of the *Iliad* and *Odyssey* of Homer, besides some miscellaneous tracts.—*Biog. Univ.*

BIZOT (PETER) a French historian, canon of St Saviour d'Herisson in the diocese of Bourges. He was the author of a curious and useful work entitled "Histoire Medallique de la Republique d'Hollande," Amsterdam, 1682, 3 vols. 8vo, of which an enlarged edition was published in 1732. He died in 1696.—*Moreri.*

BLACK (JOSEPH) a celebrated chemist and natural philosopher, who contributed greatly to the improvement of chemical science in the last century. He was born in 1728 at Bourdeaux in France, but of British parents. At an early age he was brought to this country, and was educated at Glasgow, where he became a medical student when Dr Cullen was professor in the university. Black became his favourite pupil, assisted him in his experiments as lecturer on chemistry, and imbibed the rudiments of that knowledge for which he was afterwards distinguished. In 1750 he entered as a student the university of Edinburgh, and in 1754 took the degree of MD. His inaugural dissertation, which was entitled "*De humore acido a cibus orto, et magnesia alba.*" exhibits the outline of his discoveries relative to the nature of fixed air or carbonic acid, and the causes of the causticity of alkaline

substances. He proceeded to develop these doctrines in a paper entitled "Experiments on Magnesia Alba, Quicklime, and some other alkaline substances," which he read before the Literary Society of Edinburgh, and published in the second volume of "Essays Physical and Literary," 1756. About the same time he succeeded Dr Cullen as professor of medicine and lecturer on chemistry at Glasgow. Here he continued his investigations, and in 1757 brought forward the curious and important doctrine of latent heat, on which depend the causes of fluidity and evaporation, and which has most admirably illustrated the effects of low and high temperature in producing the freezing and boiling of various substances, the expansion of bodies by heat (whereon rests the construction of thermometers) and other interesting phenomena of chemistry. The fame conferred on Dr Black by the publicity of these discoveries occasioned his being invited to take the chemical professorship at Edinburgh, on the removal of Dr Cullen to another department. This event, which took place in 1765, raised him to the first rank in his peculiar line of study in the principal school of medical science in Europe. He steadily sustained the fame he had acquired; but with a singular degree of philosophical indifference he neglected to publish many of the additional discoveries which were the fruit of his continual researches, any otherwise than by mentioning them in his lectures: copies of them were taken by several of his students, by which means they were promulgated to the world. His only publications, after his removal to Edinburgh, were—a paper "On the effect of boiling upon Water, in disposing it to freeze more readily," which appeared in the 65th volume of the Philosophical Transactions for 1774; and "An Analysis of the Waters of some Hot Springs in Iceland," published in the 3d volume of the Transactions of the Royal Society of Edinburgh in 1791. The latter relates to the interesting fact of the solution of siliceous earth, or flint in hot water, and its deposition on cooling. When Dr Black commenced his scientific career, the theory of Stahl, which accounted for chemical phenomena by the general agency of phlogiston, was universally admitted, and to that system he had been accustomed to refer in his theoretical reasonings and explanations of facts and appearances. Hence, when Lavoisier and his countrymen published a new hypothesis, on principles diametrically opposite to the system of Stahl, and therefore termed the *antiphlogistic theory*, Dr Black was for some time one of its most strenuous opponents; but he ultimately became convinced of its superior accuracy, and did ample justice to the ingenious philosophers by whom it was elaborated. The death of this great man was sudden, and attended with peculiar circumstances. He was alone in his study taking his usual slight evening's repast of bread and milk and water, when his decease occurred; and so calmly did the mortal change take place, that a servant, on entering the

room, found him quite dead, with the cup of milk and water resting on his knee, held so steadily, that not a drop of the liquid had been spilt. He had always a delicate constitution, and his health had declined for some years before this event, which happened Dec. 6, 1799. Dr Black was a bachelor. He belonged to the royal societies of London and Edinburgh; and at the solicitation of Lavoisier he received the distinguished honour of being appointed one of the eight foreign members of the Academy of Sciences at Paris. In 1803 his "Lectures on Chemistry" were published from his manuscript, in 2 vols. 4to, by professor Robison, with a memoir of the author.—*Thomson's Annals of Philosophy. Aikin's G. Biog.*

BLACKBURNE (FRANCIS) a divine of the church of England, eminent for his theological writings, was born at Richmond in Yorkshire, in 1705. At the age of seventeen he was admitted pensioner of Catharine hall, Cambridge, where he took the degree of bachelor, and was elected conduct or chaplain-fellow, on which title he was ordained deacon in 1728. It was not until 1739 that he took priest's orders, on his induction to the rectory of his native town Richmond, by the presentation of sir Conyers D'Arcy and John York, esq. He was for some time chaplain to Dr Hutton, archbishop of York, by whom he was collated in 1750 to the archdeaconry of Cleveland, and in the same year to the prebend of Bilton. In 1750 he engaged in that course of defence of Christian liberty, for which he became afterwards so famous, by writing "An Apology for the Author of a Book, entitled 'Free and Candid Disquisitions relating to the Church of England, &c.;" of which work he was accused of being the author, although disapproved of by him as being too cautious and delicate to raise the spirit of reform which it meant to excite. He subsequently printed several single sermons and charges, and in 1756 entered into the controversy concerning the "Intermediate State," on which subject he published a work entitled "No Proof in the Scriptures of an Intermediate State of Happiness or Misery, between Death and the Resurrection." He wrote several other pieces on the same topic, concluding in 1765 with "A Short Historical View of the Controversy concerning the Intermediate State;" of which work an edition, with large additions, was published in 1772. In 1768 he began to publish his sentiments on subscriptions to articles of faith required by the church, in "Remarks on the Rev Dr Powell's Sermon in Defence of Subscription;" which work was preliminary to the piece which gained him so much celebrity, entitled "The Confessional; or a Full and Free Inquiry into the Right, Utility, Edification, and Success of Establishing Systematical Confessions of Faith and Doctrine in Protestant Churches," 8vo, 1766. This performance consists of eight chapters, the three first of which contain a view of the rise and progress of confessions of faith, the right to establish them, and their

utility, and expediency when established; the fourth and fifth chapters examine bishop Burnet's mode of justifying subscription, and expose the fluctuating casuistry of those who pursue a different method; the sixth and seventh appreciate the sentiments and reasoning of the writers who plead for a latitude, and whence the practice of subscribing in different senses has been derived; and the last sums up the whole consideration. The "Confessional" excited great attention; a second edition was rapidly called for; and numbers of pamphlets for and against it appeared during several succeeding years. A supposition being entertained that the writer would not remain under the establishment, some leading members of the dissenting congregation in the Old Jewry, London, on the death of Dr Chandler in 1766, invited archdeacon Blackburne to succeed him. This proposal he however declined, thinking his consistency sufficiently maintained by declining all further preferment which might require a renewal of subscription. In this resolution he persevered, refusing a living of considerable value on that account, although the revenue of all his other preferments did not exceed 200*l.* per annum; an account which vindicates him from any sordid motives for remaining in the church. In fact his theological opinions did not lead him so near to Unitarianism as his relatives Lindsey and Disney; and on the secession of the latter he drew up a paper entitled "Why are you not a Socinian?" which was not published in his life time from motives of delicacy, but is now added to his works. In 1768 he published "Considerations on the present State of the Controversy between the Protestants and Papists of Great Britain and Ireland," in which he denies the title of the latter to toleration on Protestant principles, on the plausible but untenable ground, that persecutors on system ought not to receive toleration from others. In order to restrain abuses which had crept into the spiritual court at Richmond, he accepted in 1767 the office of commissioner to the commissary of that archdeaconry, and acted with great skill and judgment in that capacity. When considerably advanced in years, he adopted the idea of writing the life of Martin Luther, but was diverted from the design by the death of the philanthropic Mr T. Hollis, a memoir of whom was undertaken by archdeacon Blackburne. The increasing infirmities of age prevented him from afterwards resuming his former intention, but he executed his professional duties to the last, dying at his parsonage-house at Richmond, August 7, 1787. His style of writing was strong and animated, and he is more entertaining as a controversialist than most who engage in that line of composition. His publications are numerous, and all are either theological or controversial, with the exception of occasional short pieces in the public journals, in favour of political liberty. He also largely contributed to a collection of letters and essays on this subject, published in 3 vols. 8vo. 1774.—*Biog. Brit. Aikin's G. Biog. Diet.*

BLACKBURNE, MD. FR.S. (THOMAS) son of the preceding, was educated at Cambridge, which university he quitted without taking a degree, because he did not choose to subscribe to the thirty-nine articles. He then went to Edinburgh, where he graduated in physic; and about 1777 he settled as a medical practitioner at Durham. He died in 1782, at the age of thirty-three. His only publications were an inaugural dissertation—"De Medici institutis," Edinburgh, 1775; some contributions to a medical journal; and a communication to Dr S. F. Simmons, which appeared in his work on the *Tænia*.—*London Med. Journ.* vol. iii.

BLACKLOCK (THOMAS) a poet, remarkable for his literary attainments under the misfortune of a deprivation of sight, was born at Annan in the county of Dumfries, in 1721. His parents, who were natives of Cumberland, although humble, were industrious and well-informed. At the age of six months he lost his sight by the small-pox; and as he grew up, his father, with exemplary industry and affection, endeavoured to lessen his calamity by reading to him such books as instructed or entertained him, when he always appeared to be particularly pleased with the works of Spenser, Milton, Prior, Pope, and Addison. Such was the kindness his peculiar situation and gentle temper excited, that he was seldom without some companion, who aided in his singular course of education, until he had even acquired some knowledge of the Latin tongue. At the age of twelve he began to versify, and his performances at length became the subject of discourse in his neighbourhood. At the age of twenty he lost his father, on which he was invited by Dr Stephenson, a physician in Edinburgh, to visit that metropolis, in order to pursue his studies at the university. He soon became a proficient in Latin, as also in French, which he chiefly acquired by conversation with a French lady, the wife of provost Alexander. He also, in the course of nearly ten years' study at the university, made a considerable progress in the sciences. In 1754 he published a second edition of his poems, which gained him the patronage of Mr Spence, who published an account of his life, character, and productions, which brought him into general notice; and a quarto edition of his poems being soon afterwards published by subscription, a considerable sum was thereby raised for his benefit. He now devoted himself to the study of theology, and having passed through the usual course, was licensed in 1759 by the presbytery of Dumfries. In 1762 he married the daughter of Mr Johnson, surgeon of Dumfries; a connexion which proved to him a source of comfort and felicity for the remainder of his life. He was soon after appointed minister of Kirkcudbright, on the presentation of the earl of Selkirk; but being opposed by his parishioners, after two years' contention, he resigned his living, upon a moderate annuity, and retired to Edinburgh, where he adopted the plan of receiving a few students of the university as boarders, and of

assisting them in their studies when desirable. In 1766 he was created DD; and having now taken a respectable station among the literati of Scotland, he maintained it by various publications until his death in July, 1791, at the age of seventy. His private character, according to the testimony of Hume and others, was singularly amiable. Letters and conversation were his solace, to which he joined the practice of music. His poetry is easy, polished, and harmonious; and he composed with considerable rapidity. The number of his images from visual objects will surprise those who are not aware of the uniform strain of imitation in common-place poetry. Besides his poems, Dr Blacklock wrote "A Discourse on the Improvement of Time," 1760; "Consolations deduced from Natural and Revealed Religion," 8vo; "Two Discourses on the Spirit and Evidences of Christianity, from the French;" "Remarks on the Natural Extent of Liberty," &c. He is also author of a valuable little article in the *Encyclopedia Britannica*, "On the Education of the Blind."—*Anderson's Life, prefixed to his Poems.*

BLACKMORE (sir Richard) a physician and poet of notoriety, if not of eminence, was the son of an attorney in the county of Wilts. He received his early education in the country, and in 1668 was removed to Edmund hall, Oxford. At that university he remained thirteen years, and for some time afterwards appears to have followed the profession of a schoolmaster. At length he turned his attention to physic, graduated at Padua, and after visiting several parts of the Continent, returned to London, and was admitted a fellow of the college of physicians. In 1697 he had risen to so much eminence in his profession, as to be appointed physician to king William, who knighted him. The preceding year he had made himself known as a poet, by the publication of his heroic poem of "Prince Arthur;" which was soon followed by "King Arthur," and in 1700 he published a paraphrase on the book of Job, in folio; as also a poem, entitled a "Satire on Wit," being an attempt to retort on the wits by whom he had been very successfully assailed. By the strictness of his Whiggish principles, he had incurred the resentment of the Tory junto composed of Swift, Pope, Arbuthnot, and others; while a something stiff and solemn in the complexion of his religion and morality, added to the real absurdity of starting epic after epic in quick succession, ensured the raillery of all those to whom his gravity, perseverance, and mediocrity, afforded so much irresistible subject for ridicule. When once it becomes the fashion to laugh at a writer, a stronger genius than sir Richard Blackmore must give way; and so much was it the case in regard to this worthy man and middling poet, that he became the common butt of his day, and that almost for two generations, for Pope took up the quarrel which Dryden began. In 1713 he began a periodical paper called the "Lay Monk," which extended only to forty numbers; and in 1716 published 2 vols. of essays on various

subjects, and in 1718 a collection of poems. The work however which produced him the greatest reputation was "The Creation," a poem in seven books, which went through several editions, and was greatly applauded by Addison in a paper of the *Spectator*, as well as by Dr Johnson in his lives of the English poets. The general opinion now is, that although this poem possesses great comparative merit, both the writers in question have been somewhat biassed, by their regard for the vein of piety it exhibits, into a higher estimation of it than they might otherwise have formed. In treating of the wonders of the creation, some happy thoughts could scarcely be avoided, and the adaptation of means to ends could not but now and then forcibly strike the most common observer; but, generally speaking, the poem of Creation is very tamely elaborate. In 1721 sir Richard published "A New Version of the Psalms of David," which, although recommended by authority, has never been adopted. Towards the close of life his practice as a physician declined, but whether owing to the attacks upon his poetical reputation or not, does not appear. He died at an advanced age in 1729, leaving behind him the character of a pious, well-meaning, and respectable man, of bounded genius and little taste. That he deserved all the satire which he encountered may be denied; but at the same time it must be admitted, that he possessed qualities which have elicited raillery in all ages, and that the solemnity of his persevering mediocrity was unavoidably a source of much excitement. Besides the epics already mentioned, he wrote "Eliza," in ten books; "The Redeemer," in six books; "King Alfred," in twelve books, &c. He also composed a "History of the Conspiracy against King William III," and several medical and theological treatises, especially against the Arians, all of which have quietly reached oblivion. As a physician he was a strenuous opposer of the new system of inoculation for the small-pox.—*Biog. Brit. Johnson's Lives of the Poets.*

BLACKSTONE (sir WILLIAM, knight and LL.D.) a celebrated English lawyer, and the most popular writer on the laws and constitution of his country, was born in London in 1723. He was the third son of Mr Charles Blackstone, a silk-mercator, but being left an orphan, was brought up by his maternal uncle, Mr Thomas Bigg, surgeon; from whose kindness he received an education which the narrow circumstances of his father could scarcely have supplied. He was educated on the foundation of the Charter-house, whence in 1738 he was removed to Pembroke-college, Oxford. He was much distinguished both at school and at the university, and at an early age compiled a work for his own use, entitled the "Elements of Architecture," which has been much praised. Having chosen the profession of the law, he was in due time entered at the Middle Temple, and on this occasion published the admired verses, called "The Lawyer's Farewell to his Muse," which appeared in Dodsley's *Miscellany*. In

1743 he was elected fellow of All Souls' college, Oxon, and in 1746 was called to the bar and commenced the practice of law. Being deficient in elocation, and not possessed of the popular talents of an advocate, his progress was slow, and he principally showed his activity as bursar or steward of his college of All Souls', and in taking the necessary measures for the construction of the Codrington library. In 1749 he was appointed recorder of Wallingford, Berks, and took the degree of LL.D.; he also about the same time published his "Essay on Consanguinity," written against the claims of the kindred of the founder of the college of All Souls'. Having now attended the courts of law at Westminster for seven years, without success, he determined to quit the practice of his profession, and retire to his fellowship at Oxford. The system of education in the English universities supplying no provision for teaching the laws and constitution of the country, Dr Blackstone undertook to remedy this defect, by a course of lectures on that important subject; and the manner in which he executed the task, has conferred a lasting distinction on Oxford. His first course was delivered in 1753, and was repeated for a series of years with increasing effect and reputation. These lectures doubtless suggested to Mr Viner the idea of founding, by his will, a liberal establishment in the university of Oxford for the study of the common law; and Dr Blackstone was with great propriety chosen the first Vinerian professor. His engagements at Oxford did not prevent his occasional practice as a provincial barrister, and in 1754, being engaged as counsel in a contested election for the county of Oxford, he was led into considerations on the elective franchise, which produced his work entitled, "Considerations on Copyholds." In this treatise he denied the right of copyholders to vote as freeholders; which led to a declaratory act of Parliament, in establishment of that narrow doctrine. In 1759 he published a new edition of the "Great Charter and Charter of the Forest," with an historical preface; and during the same year the reputation which he had obtained by his lectures induced him to resume his attendance at Westminster-hall, when business and the honours of his profession soon crowded in upon him. In 1761 he was elected MP. for Hindon, made king's counsel, and solicitor-general to the queen. About this time he also married, and thereby losing his fellowship, was appointed principal of New Inn hall; which office, with the Vinerian professorship, he resigned the next year. In 1765 he also published the first volume of his "Commentaries on the Laws of England;" a work of greater merit than any which had yet appeared on the subject. In this celebrated production the author does not confine himself to the humble duty of an expositor, but aspires to the higher character of a philosophical writer on jurisprudence; and having been preceded by no authors in the same line, his manner of accomplishing his task is entitled to great praise. It must not

however be regarded as a philosophical investigation into the grounds and merits of the English laws and constitution, so much as an elegant exposition and defence of an existing system. Whatever he found instituted, it was his purpose to support and eulogise; and consequently we are rather made acquainted with the "legal reasons" of what is established than instructed in the general principles of national legislation. This mode of treating the subject may have a species of educational utility, in conveying a due notion of the grounds on which government and usage have proceeded, but of course will do little to advance the mind of a nation, although often a great deal to nurture prejudices and impede amelioration. Notwithstanding some passages against standing armies, and in exposition of the progress of the influence of the crown, Blackstone is uniformly the advocate of prerogative, and very confined in his notions of toleration. On the latter ground he was involved, on the publication of his Commentaries, in a controversy with Priestley; and some years afterwards his political principles were assailed with much acuteness in a publication entitled a "Fragment on Government," now known to be the work of Mr Jeremy Bentham. In the debates which took place on the Middlesex election, in relation to the re-eligibility of an expelled member, he was led to language in parliament, against the tenor of which Mr James Grenville, with great adroitness, quoted his own book, and he was also warmly attacked for the same inconsistency by Junius. The real merit and talents of Blackstone, backed by political tendencies which are generally favourable to advancement, now made him an object of ministerial favour, and he was offered the post of solicitor-general in 1770, and declining it, was made one of the justices of Common Pleas, which station he held until his death in February 1780, in his fifty-seventh year. The private character of sir William Blackstone was exceedingly mild, benevolent, and amiable; and he was a most active and intelligent man of business, in which indeed he all his life delighted. He left in MS. two volumes of reports, which have been published since his death, and are deemed inadequate to his reputation.—*Life prefixed to Reports. Atkin's G. Diet.*

BLACKWELL (THOMAS) the son of a Scottish clergyman of Aberdeen, who was educated in the university there, and in 1723 was chosen Greek professor. He published, without his name, in 1735, an "Enquiry into the Life and Writings of Homer," 8vo, which is a curious and entertaining performance, and procured for the author much literary reputation. In 1748 appeared his "Letters concerning Mythology," 8vo; soon after which he was appointed principal of the Marischal college. His chief work was the "Memoirs of the Court of Augustus," the first volume of which was published in 1753, the second in 1755, and the third in 1764, after the death of the author, which took place at Edinburgh in 1757, at the age of fifty-five.—*Biog. Brit.*

BLAEU (WILLIAM) called also Janssen, a learned geographer and printer, born in 1571 at Amsterdam. He was the friend and pupil of Tycho Brahe, and obtained great reputation by the fidelity and beauty of his great work, the "Theatrum Mundi," an atlas printed originally in three folio volumes, and after his death republished in 1663 by his sons John and Cornelius in 14 vols. folio. The latter edition is now become very rare and valuable, many of the copies having been destroyed by fire. The other productions of Blaeu are "Theatrum Urbium et Munimentorum," and a treatise on the use of the globes. He died in 1638. His son JOHN, above-mentioned, was also a proficient in the same study, and published able surveys illustrated with maps of Belgium, 2 vols. folio; Savoy and Piedmont, 2 vols. folio; and of Italy, in 4 vols. folio. He also edited a work entitled "Erythræi Pinacotheca."—*Moreri*.

BLAGRAVE (JOHN) the younger son of an ancient family, which had been for several generations settled at Bulmarsh Court, near Sunning, Berks. He was born about the middle of the sixteenth century, and having commenced his education at Reading grammar-school, removed to St John's college, Oxford, but quitted the university without taking a degree. Retiring to Southcote Lodge, a small estate which devolved to him, situate within the parish of St Mary's, Reading, he gave himself up to literary pursuits, and attained considerable proficiency in mathematics. His disposition was remarkably kind and benevolent during life; and at his death, which took place August 9th 1611, besides handsome bequests to the children of his three brothers, he left various charitable donations to the town of Reading, where he lies buried under an elegant monument erected to his memory in the church of St Lawrence. The most remarkable of those legacies is one of ten pounds to be raffled for every Good Friday, by three "virtuous maids" (one from each parish in the town) who have lived five successive years in the service of the same family. The two unsuccessful candidates, with the addition of a new one, were to throw again the following year, but, if still unlucky, to lose their chance after the third time. He published in 1585 a treatise, in folio, entitled "The Mathematical Jewel, shewing the making and use of an Instrument so called, for the purposes of Astronomy, Geography, and Cosmography," &c.; another on geometrical mensuration in 1590, called "A Familiar Staff," &c. 4to; "Astrolabium Uranicum Generale, for the Use of Navigators," London, 1596, 4to; and "The Art of Dialling," in two parts, 4to, London, 1609. There was also a JOSEPH BLAGRAVE, a descendant of the same family, born at Reading about the year 1609. He died at the age of seventy, leaving behind him an "Introduction to Astrology," of which art he was a noted professor. This work was published in 1682, about three years after his decease. He also wrote the "Astrological Practice of Physic," printed in 8vo, a book on surgery, and a

supplement to Culpepper's Herbal.—*Bicf. Brit.*

BLAIR (HUGH) an eminent divine of the Scottish church, was born at Edinburgh, April 7, 1718. His father was a respectable merchant, and a descendant of Robert Blair, the celebrated chaplain to Charles I. He was educated at the High school, whence he was sent to the university of Edinburgh, where he took his degree of A.M. in 1739, and in 1741 was licensed to preach, his first living being the parish of Collessie in Fife. In 1743 he was recalled to Edinburgh, and became minister of the Canongate church, where he continued eleven years, and was then removed to lady Yesters, one of the city churches. In 1758 he was raised to the High-church of Edinburgh, where he remained for the rest of his life, being the most important ecclesiastical charge in Scotland. Hitherto, with the exception of two sermons, and a few articles in the Edinburgh Review of that period, he had written little; but in 1759, in which year he was created D.D., he projected a course of lectures on composition, which he accordingly delivered at the university with so much reputation, that in 1762 the king founded a professorship of rhetoric and belles-lettres, and appointed Dr Blair professor, with a salary of 70*l.* per annum. About this time he distinguished himself as a zealous advocate for the authenticity of the poems of Ossian, to which he prefixed a dissertation, which produced him much reputation at the period. In 1777 appeared the first volume of his "Sermons," which Mr Strahan, the king's printer, declined to purchase, until induced to change his mind by the high opinion entertained of it by Dr Johnson. Its sale was so rapid and extensive, that the publishers doubled the stipulated remuneration to Dr Blair, and bought the succeeding volumes at very high prices, and he was also favoured on the same account with a pension of 200*l.* per annum, at the express instance of queen Charlotte. In 1783 he resigned his professorship, and published his "Lectures on Composition," which form a popular and able digest of the rules of eloquence, as applicable to the oratory of the pulpit, the bar, and of popular assemblies. His last publication was a discourse delivered before the Society of the Sons of the Clergy of Scotland in 1796. He died at Edinburgh, after a short illness, in December 1800, in the eighty-third year of his age. The reputation of Dr Blair has been deservedly high; but now that the fashion of so much admiration of his productions has somewhat abated, it is thought that the celebrity of his discourses is more attributable to polish of style, than to weight of matter; and that they are rather short, elegant, moral treatises, than sermons. Both these and his lectures will however always possess a great portion of utility, and most likely of popularity. Dr Blair married his cousin, Miss Bannatine in 1748, by whom he had two children, who died before their parents.—*Life by Finlayson.*

BLAIR (JOHN, LL.D. F.R.S. &c.) an

eminent chronologist and geographer, a native of Scotland, which country he quitted for London about the middle of the last century. Though he had received a good classical education at Edinburgh, he thought himself fortunate in obtaining the situation of usher in a school in Hedge-lane, London, to which he was recommended by his countryman and fellow-traveller, Alexander Henderson, who had himself filled the same situation. In 1754 the publication of a work in folio, entitled "The Chronology and History of the World from the Creation to A. D. 1753," gained him great reputation. In the composition of this book, which changed the colour of his destiny, he is said to have been materially assisted by his relation Dr Hugh Blair. In it he illustrates his subject by fifty-six tables, four of which are introductory, containing the centuries which precede the first Olympiad. He dedicated his work to the lord chancellor Hardwicke, and in 1757 was appointed chaplain to the princess dowager of Wales, and mathematical tutor to the duke of York, whom he accompanied in 1763 on a tour to the Continent, having been presented two years previously to the rectory of Burton Coggles, Lincolnshire, and to the vicarage of Hinckley, Leicestershire, both which pieces of preferment he held with a prebendal stall in Westminster abbey. On his return to England, he published in 1768 a new edition of his "Chronological Tables," with fourteen maps of ancient and modern geography annexed, and in 1771 obtained the living of St John's, Westminster, which five years after he exchanged for that of St Bride, Fleet-street. He died June 24, 1782, of an attack of influenza, his disease being as was imagined considerably hastened by grief for the loss of his brother, capt. Robert Blair, who fell in Rodney's action of the 12th of April in the same year. After his death were published his "Course of Lectures on the Canon of the Old Testament," and a duodecimo volume entitled the "History of Geography."—*Nichols's Hist. of Hinckley.*

BLAIR (PATRICK) an ingenious physiologist and botanist of the eighteenth century. He was a native of Scotland, and adopting the medical profession, settled as a surgeon at Dundee. The accidental death of an elephant, exhibited as a show at that place, gave him an opportunity of distinguishing himself by the dissection of so rare an animal. He sent his observations to the Royal Society in 1706 and they were published in the Philosophical Transactions, and afterwards in a separate volume. His political principles as a non-juror subjected him to suspicion during the rebellion in 1715, and he was committed to prison, but soon released. He then went to London, and in 1718 published "Miscellaneous Observations in Physic, Anatomy, Surgery, and Botanic," 8vo. But his most important work was "Botanic Essays," 1720, 8vo, which was an enlargement of a discourse on the sexes of plants, read before the Royal Society, of which he was a fello This is

one of the earliest and best works on the subject. Dr Blair (for he had obtained a diploma) afterwards practised as a physician at Boston in Lincolnshire. In 1723 he began to publish a dictionary of medical botany, which was never completed, the author being probably prevented by death from continuing it beyond the seventh part, which appeared in 1728; but the exact time of his decease is not known. He wrote an account of the asbestos or amianthus found in Scotland, and other papers printed in the Philosophical Transactions.—*Aikin's G. Biog.*

BLAIR (ROBERT) a Scottish poet, born at Edinburgh in 1699. His father, the rev. David Blair, gave him a classical education in the university of the city in which he was born; and on his attaining the age requisite for the assumption of holy orders, he was appointed to the cure of Athelstanford in East Lothian. He was a good botanist as well as a poet, in which latter capacity he is principally known by his "Grave," first printed at London 1743; which, though unequal as a poem, has yet sufficient merit to ensure its immortality. He married the daughter of Mr Law, professor of morality at Edinburgh, by whom he had several children; the eldest, Robert, became president of the court of Session at Edinburgh, and died in 1811. Mr Blair died February 4, 1746.—*Biog. Brit.*

BLAKE (ROBERT) a celebrated British admiral, was the eldest son of a merchant in the Spanish trade, settled at Bridgewater, where he was born in 1599. After attending the grammar-school of his native place, he was sent to Wadham college, Oxford, where he took the degree of B.A. in 1617. On his return to Bridgewater, he lived for some time in a private manner on the fortune left him by his father, and was led by the gravity of his own disposition and by family connexion, to embrace the principles of the Puritans, which interest elected him member for Bridgewater in the Parliament of 1640. This being soon dissolved, he lost his election for the next, and immediately sought to advance the cause in a military capacity, in the war which then broke out between the King and Parliament. He soon distinguished himself by his activity, among other services defending Taunton, which he had previously surprised, against Goring, with a very superior force, and by reducing Dunster Castle, one of the last actions of the civil war. In 1649, in the manner of those times, when military men often served on shipboard, he was sent to command the fleet, in conjunction with the colonels Deane and Pophaam, and thus commenced the naval career which has given him so distinguished a place in British history. He immediately sailed to Kinsale in quest of prince Rupert, whom he attempted to block up in that port. The Prince, contriving to get his fleet out, escaped to Lisbon, where Blake followed him; and being refused permission to attack him in the Tagus, by the king of Portugal, he took several rich prizes from the Portuguese (against whom the Parliament declared war) and fol-

lowed Rupert to Malaga, where, without asking permission of Spain, he attacked him, and nearly destroyed the whole of his fleet. On his return to England, he was made warden of the Cinque Ports, and soon after reduced the islands of Scilly and Guernsey. In 1659, on the prospect of a Dutch war, he was made sole admiral, and on the 19th May was attacked in the Downs by Van Tromp, with a fleet of forty-five sail, the force of Blake amounting only to twenty-three, which however he fought so bravely, that Van Tromp was obliged to retreat. He then continued his cruise, took a number of Dutch merchantmen, and after several partial actions, drove the enemy into their harbour, and returned to the Downs. On the 29th May he was again attacked by Van Tromp, whose fleet was now increased to eighty sail. Blake, who could not bear the thought of a retreat, engaged this vast force, with a very inferior number and an unfavourable wind; but after every possible exertion, was obliged to retreat into the Thames, on which Van Tromp was so much elated, that he sailed through the Channel with a broom at his mast head, to signify that he had swept the sea of British ships. In the February following, Blake, having with great diligence repaired his fleet, put to sea with sixty sail, and soon after met the Dutch admiral, who had seventy sail, and 300 merchantmen under convoy. During three days a furious running fight up the Channel was maintained with obstinate valour on both sides; the result of which was the loss of eleven men of war and thirty merchant-ships by the Dutch, while that of the English was only one man of war. It was in April this year that Cromwell assumed the sovereignty, on which occasion Blake and his brother admirals issued a declaration, that notwithstanding this change they resolved to persist in faithfully performing their duty to the nation. "It is not for us (said Blake to his officers) to mind state affairs, but to keep the foreigners from fooling us." He well practised his own lesson; for on the 3d June he again engaged Van Tromp with dubious success; but renewing the action the next day, he forced the Dutch to retire with a considerable loss in ships and men into their own harbours. On his return he was received by Cromwell with great respect, and returned member in the new Parliament for Bridgewater. Aware of his affection for a republican government, the Protector was not displeased at having occasion to send him with a strong fleet to enforce a due respect to the English flag in the Mediterranean, where he accomplished his mission by inspiring all the powers with awe and respect. He sailed first to Algiers, which submitted, and then demolished the castles of Goletta and Porto Ferino at Tunis, because the Dey refused to deliver up the English captives. A squadron of his ships also blocked up Cadiz, and intercepted a Spanish plate fleet. Being now very sickly he resolved to do one more service to his country before his death, and sailed with twenty-four ships to Santa Cruz in Tenerife;

and notwithstanding the strength of the place, burnt the ships of another Spanish plate fleet which had taken shelter there, and by a fortunate change of wind came out without loss. It is worthy of remark, that Blake's own brother having failed in some part of duty during this service, he immediately removed him from his command, although he still behaved to him with fraternal affection; so completely did his love of country absorb every private feeling. Finding his disorder making rapid progress, he then sailed for England, and amidst his frequent enquiries for the sight of the English coast, expired while the fleet was entering Plymouth-sound, August 27, 1657. His body was honoured with a magnificent public funeral, and interred in Henry VII's chapel, whence it was pitifully removed at the Restoration, and buried in St Margaret's church-yard. The foregoing detail sufficiently evinces the bravery and talents of this able commander, who first deviated from the old practice of keeping ships and men as much out of danger as possible, and gave the example of that kind of naval skill and courage, which consists in bold and spirited achievement. So disinterested was this great man, that after all his rich captures and high posts, he scarcely left behind him 500*l.* of acquired property, freely sharing all with his friends and seamen, into whom he infused that intrepidity and spirit of enterprise, by which the British navy has been ever since so highly distinguished.—*Biog. Brit. Life by Dr Johnson.*

BLANDRATA (GEORGE) a native of the marquisate of Saluzzo in Italy, born in the early part of the sixteenth century. He practised physic in Transylvania and Poland, but returning to Italy, rendered himself obnoxious to the Inquisition, by his opinions respecting the Trinity, having declared himself a convert to the doctrines of Arius. He was in consequence compelled to fly from Pavia to Geneva, where he became for a time an adherent to the church established there by Calvin; but giving cause to that stern reformer to suspect the orthodoxy of his faith, he narrowly escaped the atrocious treatment of Servetus. He returned to Poland in 1558, and eventually became physician to Stephen Battori, king of Poland, who protected him in that capacity. In 1758 he assisted in bringing Socinus into Transylvania. His religious opinions however appear to have been very unsettled, as he shortly after attached himself to the Jesuits, who were in great favour with his royal patron. His end was premature and tragical, being occasioned by his nephew, whom, after having made a will in his favour, he had threatened to disinherit. In order to prevent this, the latter, a worthless profligate, strangled him in his bed, and succeeded in appropriating his effects. This catastrophe took place in 1593. In 1568 he printed a controversial treatise entitled "Brevis enarratio disputationis Albanæ de Deo trino," &c. in one volume 4to.—*Biog. Univ.*

BLANKOF (JOHN TEUNISZ) a Dutch marine painter of considerable eminence. He

was born at Alkmaar in 1628, where he became a scholar of Everdingen, and on leaving that master passed some time at Rome. His best pictures represent storms on the coasts of the Mediterranean, in which he combined the truth and nature of the Flemish school, with the grand scenery of Italy.—*Bryan's Dict. of Paint. and Engr.*

BLASIUS (GERARD) a Flemish physician, who distinguished himself in the seventeenth century by his researches on anatomy and physiology. He studied at Copenhagen and Leyden, and took the degree of MD. at the latter university in 1646. He subsequently settled at Amsterdam, where he was professor of medicine and physician to the general hospital. His death took place in 1682. Besides editions of the works of several anatomical writers, enriched with valuable commentaries, Blasius published "Observata Anatomica in homine, simia, equo, vitula, testudine, echino, glire, serpente, ardea," &c. 1674, 8vo; "Zootomie, seu anatomie variorum animalium, pars prima," 1676, 12mo; and also several medical treatises. He has the merit of having been the earliest writer of importance on comparative anatomy. *Biog. Univ*

BLAYNEY (BENJAMIN, D.D.) a learned theologian and biblical critic, educated at Oxford, at which university he filled the Hebrew professor's chair. He was originally of Worcester college, but quitted it on obtaining a fellowship at Hertford college. He resigned the latter appointment in 1787 for a canonry of Christchurch, with the professorship annexed. The only benefice he enjoyed was the rectory of Polshot, Wilts, which he held till his death in 1801. His theological writings are numerous. Besides a variety of manuscript works, deposited after his death in the library of Lambeth palace, he published in his life time a "Dissertation on the Seventy Weeks of Daniel," in 4to; new translations of the books of Zechariah and Jeremiah with the lamentations, and several sermons. But he is principally known as the editor of the Oxford Bible, printed in 1769, and celebrated for the accuracy of its marginal references.—*Gent. Mag.* 1810.

BLEFKEN or BLEFKENIUS (DITTMAR) a voyager and historian of the sixteenth century. He is supposed to have been a native of Lower Saxony. In 1563 he went to Iceland where he collected materials for a curious description of that island. He afterwards made a voyage to Africa, and travelled through several countries. After many adventures he died probably in the service of the elector of Cologne. His account of Iceland was first published at Leyden, 1607, 8vo. It attracted a great deal of notice, and was severely criticised by Armgim Jonas.—*Biog. Univ.*

BLEGNY (NICHOLAS DE) a French surgeon, medical writer, and projector of the seventeenth century. He established at Paris an "Academy of New Discoveries," where he delivered lectures on medical and other subjects, among which, it is said, was the art of wig-making. He obtained the situation of surgeon

to the king and the duke of Orleans; and in 1679 he commenced a journal entitled "Nouvelles Découvertes dans toutes les parties de la Médecine," which contained extracts from medical publications with remarks of his own; but he attacked his contemporaries with so much scurrility, that the work was suppressed by a decree of council in 1682. He afterwards began a periodical publication called "Mercure Savant," which was soon dropped. He also published a treatise on the use of tea and coffee, and other works. At length he was imprisoned in the castle of Angers, during eight years. He died at Avignon in 1722.—*Moreri. Camusat Histoire Critique des Journaux. Biog. Univ*

BLETIERIE (JOHN PHILIP RENE de la) an historical writer of the eighteenth century, who was a native of Rennes in Brittany. He entered into the congregation of the oratory, in which he became a distinguished professor; but quitted that society in consequence of some regulation respecting perukes. He then went to Paris, where he obtained the professorship of rhetoric at the Royal College, and was chosen a member of the academy of belles-lettres. His principal works are "The Life of the emperor Julian," 1735, 12mo; "The History of the emperor Julian, and a translation of some of the works of Julian," 1748, 2 vols. 12mo; and translations of parts of the works of Tacitus. Gibbon often quotes the two former productions, and bestows on them much praise. The abbe La Bletierie became a convert to quietism, and wrote in defence of it. He died in 1772, aged seventy-four.—*Nouv. Dict. Hist*

BLETON or BLETTON (——) a practitioner of the pretended art of rhabdomaney, or the faculty of discovering subterraneous treasures, springs, &c. by means of a wooden rod. Jacques Aimar Vernai, a peasant of Dauphiny in France, made himself famous by his pretensions to this art, towards the close of the seventeenth century. He attracted so much attention that he was invited to Paris, where making his experiments before well-informed persons, it appeared that he was an impostor. About one hundred years later Bleton practised similar deceptions in the same country, and met with many partisans, even among men of science in Italy, France, and Germany. Dr Ritter, a member of the academy of Munich, advocated the virtues of the hydromantic baguette, which he endeavoured to explain by means of galvanism. Those who wish to know what can be advanced in favour of rhabdomaney, may consult a treatise entitled "Memoire Physique et Médicinal montrant des Rapports evidens entre les Phenomenes de la Baguette Divinatoire et ceux de Magnetisme et Electricité," Par M. T—— [Thouvenel,] Paris, 1781, 12mo.—*Biog. Univ.*

BLOCH or BLOCK. There were several persons of this name distinguished in various pursuits. JOHN ERASMUS BLOCH, a gardener of Copenhagen in the early part of the seventeenth century, published a botanical work

in 1647, entitled "Horticultura Danica," in 4to. BENJAMIN, JACOB, and DANIEL, of a family in Pomerania, were eminent about the same period as painters of architectural and historical pieces and portraits, in which latter branch Daniel particularly excelled. He died in his eighty-first year in 1661. There was also a female artist of the same name, JOANNA KOERTEN BLOCK, nearly contemporary with them. She was a native of Amsterdam, born in 1650, and was celebrated for her beautiful models in wax, her engravings on chrysal and glass, &c. and her copies of paintings in paper, executed only with the scissors. For three pieces of this latter description she is said to have refused 1,000 florins from the elector palatine, and to have received a sum four times as large from the empress of Germany for a trophy similarly cut out, adorned with the imperial arms. A portrait of the emperor, fashioned by the scissors, is still preserved at Vienna. Her death took place in 1715. GEORGE CASTANEUS BLOCH, a native of Denmark, born in 1717, was bishop of Ripen in that country. He published in 1767 a learned work intended to illustrate the botanical history of the Old Testament, and is said to have studied that science expressly for the purpose. His book, which was printed in 8vo, is called "Tentamen Phœnicologices Sacre," &c. He died in 1773. MARIE ELIFZER, born 1723 of mean parentage, was an eminent naturalist at Anspach. Being brought up to the surgical profession, he made himself completely master of the science of anatomy, and taught himself Latin sufficient to qualify him for the degree of doctor of medicine, which he obtained at Frankfort on the Oder. His principal work is a natural history of fishes, published first in 6 vols. folio, 1785, with coloured plates, afterwards reprinted in 1799, in 12 vols. 4to. His other works are a treatise on intestinal worms, some papers on the habits, &c. of fishes, published in the Berlin memoirs, and a short dissertation in 8vo, on the qualities of the Pymont waters. He died August 6th, 1799, at Berlin.—*Biog. Univ. Descamps.*

BLOEMAERT (ARRAÏAM) a Dutch painter and engraver, born at Geraum in 1564. He painted history and landscapes, and was an excellent colourist, but defective in drawing. As an engraver he has claims to considerable attention, his most esteemed prints being those executed in chiar-oscuro, the outlines of which, contrary to the usual process, are not cut on the blocks of wood, but etched on copper. He had four sons, all of whom were painters and engravers.—*Bryan's Dict. of Paint. and Engr.*

BLOEMAERT (CORNELIUS) younger son to the preceding, a very eminent engraver, was born at Utrecht in 1603. He was instructed by his father in the first principles of design, but devoted himself entirely to the art of engraving. In 1630 he visited Paris, where he distinguished himself by some excellent performances, and then went to Rome, where he lived the greater part of his life. This able artist signalized himself by a talent unknown

before him, of effecting an insensible gradation from his lights to his shadows, and by introducing a delicate variety of tints in different distances of his subjects. His works, which are universally admired, although numerous, have now become scarce. *Bryan's Dict. of Paint. and Engr.*

BLOÏS (HENRY DE) see HENRY (de Blois.)

BLOÏS (PETER DE) see PETER (de Blois.)

BLOMEFIELD (FRANCIS) an English topographical writer of the eighteenth century. He was the author of "Collectanea Cantabrigiensiæ, or Collections relating to Cambridge University, Town, and County," Norwich 1750, 4to; and of "An Essay towards a Topographical History of the County of Norfolk; continued by the Rev. Charles Parkin," Fersfield, 1739-1775, 5 vols. folio; reprinted in 11 vols. 8vo, in 1805-1810. Blomefield, who was rector of Fersfield in Norfolk, died in 1755 or 1756.—*Original.*

BLOND or BLON (JAMES) a painter and engraver, born at Frankfort in 1670, who studied in Italy, and came to England, where he set on foot a project for printing Mezzotinto plates in colour, so as to imitate the pictures from which they were taken. He executed some plates in this way, but the plan failed, as it did subsequently in France. He soon afterwards projected a plan for copying the cartoons of Raphael in tapestry, and made some fine drawings for the subject, but this plan also failed. He is said to have died at an hospital in Paris in 1741, aged seventy-one. His works possess considerable merit, and he was also author of a book, entitled "Il Colorito, or the Harmony of Colouring in Painting reduced to infallible practice."—*Bryan's Dict. of Paint. and Engr.*

BLONDEL, a minstrel in the reign of Richard Cœur de Lion, of whom he was the personal friend. On the captivity of his royal master and his secret confinement in an Austrian fortress, Blondel is said to have discovered the king by singing beneath the walls of Lowenstein castle, a song the joint composition of himself and Richard, who heard and responded to the strain; a tradition which has formed a prominent incident in more than one dramatic piece upon the subject of this monarch's adventures. Gretry in particular has a beautiful opera founded on this story.—*Biog. Dict. of Mus.*

BLONDEL (DAVID) a French clergyman of the reformed church, born in 1691 at Chalons in Champagne. In 1614, being then minister to the congregation at Houdan in the vicinity of Paris, he published a reply to the invectives of the bishop of Lucon (afterwards cardinal Richelieu) against the tenets of the communion to which he belonged. This work gained him so much credit with his own party as to procure him, on more than twenty occasions, the appointment of secretary to the synods held in the Isle of France and elsewhere, and eventually in 1645 an honorary professorship, with a pension from that of Charenton. On the death of the celebrated Gerard Vossius, the curators of the "Scholæ

Illustris' at Amsterdam, elected him in 1650 to the chair of professor of history, vacated by that great scholar, to whom he proved no unworthy successor. The appointment however conducted more to his honour than his happiness, which was not only broken in upon by private squabbles, and a charge brought against him by his opponents of Arminianism, but suffered a still more serious interruption through his total loss of sight. Nevertheless, while labouring under this, so grievous a calamity to a literary man, he dictated a treatise against Chofflet, "On the Genealogy of the Kings of France," in 2 vols. folio, it is said at the instigation of Seguier the chancellor. His other works are—"Explications on the Eucharist;" "Pseudo-Isidorus et Turrianius vapulantes;" a treatise, "De Episcopis et Presbyteris;" another on the "Primacy of the Church;" a third against the pretended Sibylline oracles; and a fourth exposing the falsehood of the vulgar opinions respecting Pope Joan, a work at which many of his own religious persuasion took offence, as depriving them of a fertile topic of satire against the Romish church. There is also a piece of his "De formulâ Regnanti Christo," a memoir in favour of the duc de la Timouille's claim to the Neapolitan succession, and several works on civil history. He died in 1655 at Amsterdam.—*Moreri. Nouv. Dict. Hist.*

BLONDEL (FRANCIS) an eminent mathematician, a native of Ribemont in Picardy, born in 1617. Having travelled in the capacity of governor to the young count de Brienne, through Italy and the north of Europe in 1652 and the three following years, he printed his tour in the Latin language. In 1659 Louis XIV sent him as his envoy to Constantinople and Egypt, and on his return appointed him a counsellor of state and mathematical tutor to the dauphin, with a professor's chair in the College Royal. In 1665 he distinguished himself as an engineer by constructing a bridge over the Charente at Saintes, and four years afterwards was made superintendant of the public work in Paris, which city he adorned with the gate of St Denis and other magnificent edifices. He was afterwards placed at the head of the Academy of Architecture, established in 1761; and his lecture delivered in that capacity was printed in folio in 1698, and is still considered a standard work. His other writings are treatises "On Fortification," (for which he was created *maréchal de camp*), "On throwing Bombs;" "On Savot's Architecture;" "A Solution of the four Principal Problems in Architecture," folio; "A History of the Roman Calendar," 4to; "A Course of Mathematics," in 4to; and a "Comparison between Horace and Pindar." His death took place in 1686. His nephew, JOHN FRANCIS BLONDEL, was born in 1705 at Rouen, and became a celebrated professor of architecture at Paris. He is principally known by his "Course of Lectures on Civil Architecture," 9 vols. 8vo, and by his "Architecture Française," 4 vols. folio; "On the Decoration of Edifices," 2

vols. 4to, and a "Discourse on Architecture," in 12mo. He also wrote the architectural articles in the Encyclopedie, and died in 1774 at his school in the Louvre.—*Nouv. Dict. Hist.*

BLONDUS (FLAVIUS) or Flavio Biondi, an Italian antiquary and historian of the fifteenth century. He was secretary to pope Eugenius IV, and three succeeding pontiffs, and was employed in several embassies, especially to Venice. He died at Rome in 1465. Blondus was one of the earliest writers on Roman antiquities. His principal works are—"Roma illustrata;" "De Roma triumphanti;" and "Italia illustrata."—*Tiraboschi. Nouv. Dict. Hist.*

BLOOMFIELD (ROBERT) an English poet, who raised himself from the lower ranks of life to considerable eminence, by the spontaneous exertion of his talents. He was born in 1766, at Honington, near Bury, St Edmund's in Suffolk, where his father was a tailor; and his mother, who became a widow during his infancy, supported her family by keeping a village school. After being taught to read by his mother, he was at the age of eleven taken into the employ of his uncle, a farmer, and was for a year or two engaged in the lighter labours of husbandry; but appearing to be unfit for his task, from the delicacy of his constitution, his elder brother, who was a shoemaker in London, took him to the metropolis, and taught him his occupation. He continued, with the exception of a few months, which he passed in the exercise of his former employment in Suffolk, to work in London as a journeyman shoemaker for several years, and during that period married a person in his own station of life. He had always been extremely fond of reading books of amusement, and especially poetry, for which he acquired a strong taste, and at an early age he began to exercise his talents in making verses, some of which he sent to the editor of a newspaper, who thought them worthy of a place in his journal. Their insertion stimulated the genius of the youthful poet, who continued to write, and at length produced a poem of considerable extent, entitled "The Farmer's Boy," describing the occupations of the husbandman through the four seasons of the year. This piece was shown in manuscript to booksellers and others, from whom it attracted little attention, till it fell into the hands of Capel Lofft of Troston, near Bury, who on perusal was so much struck with its beauties, that he immediately corrected and prepared it for the press, and shortly after published it with notes, and a prefatory account of the author, from which the preceding facts are principally derived. Both the poem and the poet speedily became the objects of general curiosity and applause; and the work obtained for the latter such encouragement as might, under some circumstances, have led to fortune as well as fame. His book passed through many editions in a short time, and Messrs Vernor and Hood, by whom it was published, acted with liberality to the author. He was patronised by the duke of Grafton, who bestowed on him a small

annuity, and also appointed him under-sealer in the seal-office. This situation he was forced to resign on account of ill health. He then worked at his trade as a shoemaker, and employed himself in constructing Æolian harps, which he sold among his friends. He published two or three volumes of poetry, which must have added to his emoluments; but engaging in the book-trade, he became a bankrupt; and to add to his difficulties, in the latter part of his life he was afflicted with violent head-aches, and became nearly blind, so that he could not attend to any mechanical employment. At length he left the metropolis and went to Shefford in Bedfordshire, for the benefit of his health. He however gradually became more debilitated, and was reduced to such a state of nervous irritability, that apprehensions were entertained of his becoming insane. The fears of his friends were terminated by his death, which took place August 19th 1823. Besides his first and principal work, Bloomfield was the author of a volume entitled "Wild Flowers," containing a collection of poetical tales, which was well received by the public, and was not unworthy of his reputation. His latest production was "Hazelwood-Hall: a Village Drama," which appeared shortly before his decease. This piece consists of prose dialogue interspersed with songs, the merit of which is not sufficient to atone for the dullness of the story. The literary character of Bloomfield may be considered as depending solely on his first work, which derives its principal value from the strict adherence to truth and nature observable throughout the piece. The writer in fact has drawn his own portrait in the Farmer's Boy, and described the scenes and events which he actually witnessed: hence there is a degree of spirit and originality in the poem which stamps it with the impress of genius, and will render it always pleasing. The versification is uncommonly smooth and correct, and altogether very extraordinary, considering the circumstances under which the author wrote. *Orig. Com. Ann. Biog.*

BLOUNT (SIR HENRY) a gentleman of Hertfordshire, son of sir Thomas Pope Blount of Tittenhanger in that county, born December 15, 1602. He received his education at Album-hall and Trinity-college, Oxford, and afterwards became a member of the Society of Gray's-inn. In 1634 he set out on his travels through Turkey in Europe, Syria, and Egypt, and of which journey he published an entertaining memoir on his return in 1636, under the title of "A Voyage to the Levant, with Observations concerning the modern Condition of the Turks." The work went through several editions. In 1638 the death of his father put him in possession of the family estate of Blount's-hall, Staffordshire; the year following he was knighted, and on the breaking out of the civil wars, being then one of the band of gentlemen pensioners, attached himself to the royal cause, and fought under the banner of Charles at the battle of Edge-Hill. On the ruin of the king's party however, he con-

trived so far to ingratiate himself with those in power, as to procure not only a pardon but employment. In 1651 he was appointed a commissioner for the reformation of the criminal code, and in 1654 sat as a commissioner on the trial of the Portuguese ambassador's brother for murder, and voted for his execution. His brother dying the same year, he succeeded to the family estate in Hertfordshire, and in 1661 became high sheriff of that county on the return of Charles II, who received him into favour. Six comedies, printed in 8vo, under the name of John Lilly, and entitled "Court Comedies," have been ascribed to him. His other works are—"An Epistle in Praise of Tobacco and Coffee," 8vo, and the "Exchange Walk," a satire, 8vo. His opinions, as expressed in these works, are of considerable latitude, and accounted sceptical. His death took place October 9, 1682.—*Biog. Brit*

BLOUNT (SIR THOMAS POPE) eldest son of sir Henry Blount before-mentioned, born September 12, 1649, at Holloway near London. While yet a young man, his literary attainment had brought him into considerable notice, so that through the favour of Charles II, he was raised to the baronetage in 1679, during the life-time of his father. He was member for St Alban's in the thirtieth and thirty-first parliaments of Charles II, and sat as member for Herts in three successive parliaments after the Revolution. His works are—"Censura celebriorum auctorum," 1690, London, reprinted in 4to at Geneva in 1694 and 1710; "De Re Poeticâ, or Remarks on Poetry," 1694; a compilation, entitled "Natural History," 12mo, 1693; and "Essays on several Subjects," 8vo, 1697. He died in his forty-eighth year, June 30, 1697, at the family seat of Tittenhanger.—*Ibid.*

BLOUNT (CHARLES) youngest son of sir Henry Blount, and considered the most able man of the family in point of intellect. He was avowedly a favourer of deism, of which his father was only suspected. He was born April 27, 1654, at Upper Holloway, and at the age of eighteen married a daughter of sir T. Tyrrel, of Shotover, near Oxford. In 1675 he published a defence of Dryden's play, "The Conquest of Grenada," and three years after his "Anima Mundi," or "An Historical Narrative of the Opinions of the Ancients concerning Man's Soul after this Life, &c." The sceptical opinions broached in this work brought it under the cognizance of Compton, bishop of London, by whose order it was suppressed, and the book afterwards publicly burnt. In the same year a single sheet, entitled "Hobbes' Last Words and Dying Legacy," a satirical exposure of the "Leviathan" of that author (with whose principles however he agreed in the main) appeared from his pen, which was followed by a strongly written pamphlet against the popish succession, under the signature of Junius Brutus. In 1680 he published the most celebrated of his writings, "The Life of Apollonius Tyaneus," in folio, extracted from the two first books of Philostratus.

tus, with his own notes. This too was considered so dangerous a work, that its suppression was at once determined on, and but few copies got into circulation. In the course of the same year he published a severe attack upon the heathen priestcraft, in his "Great is Diana of the Ephesians;" which publication caused him at once to be considered as the chief of the deistical writers of the age. "Religio Laici," said by Leland to be little more than a recapitulation of the opinions of lord Herbert of Cherbury, was his next literary effort, but owing to the prejudice already excited against him, it was published anonymously. In 1681 appeared his "Janus Scientiarum," 8vo; a work intended for the initiation of youth into science. He concurred heartily in the Revolution of 1688, and published, soon after it had taken place, a "Vindication of Learning and the Liberty of the Press," considered one of his best performances; soon after which, in 1693, he wrote an extraordinary treatise, called "King William and Queen Mary Conquerors," justifying the title of those sovereigns to the crown on the grounds of conquest. This absurd performance proved so obnoxious to the Commons, that by a vote of that house it was burnt by the hands of the common hangman. The death of Mr Blount was extraordinary: on the decease of his wife, to whom he had been much attached, he paid his addresses to her sister, a lady of great beauty and accomplishments, who accepted them with a proviso, that the sanction of the church could be obtained for their espousals, when, notwithstanding the case was drawn up with great perspicuity and ingenuity of argument by Blount himself, the decision of the divines to whom it was submitted was against him. The lady abided by it, and Blount shot himself through the head in consequence, August, 1693. His writings have been collected and printed by Gildon.—*Biog. Brit.*

BLOUNT (THOMAS) a native of Bordesley, Worcestershire, born about the year 1618. He was a barrister of the Middle Temple, but his religious opinions (being of a Roman Catholic family) prevented his practising. He published "Glossographia," a dictionary of English words derived from the Greek, Hebrew, &c. in 8vo; "A Law Dictionary," in fol. "Fragmenta Antiquitatis," a record of certain feudal tenures, customs of manors, &c. 8vo, since republished by Beckwith; "The Art of Making Devises," 4to; "Boscobel, or a History of the King's Escape after the Battle of Worcester," 8vo; "The Academy of Eloquence," 12mo; "The Lamps of the Law and the Lights of the Gospel," 8vo; "A Catholic Almanack," and two treatises exposing the errors of Baker's Chronicle and Philips' World of Worlds," folio. He died December 26, 1679.—*Biog. Brit.*

BLOW (JOHN) an English musician of considerable fame, was born in 1648, at North Collingham, Notts, and became one of the first set of children of the Chapel Royal, after the Restoration. In 1673 he was appointed

one of the gentlemen of the chapel, and in the next year its master. In 1685 he was nominated one of the private musicians to James I, and in 1687 almoner and master of the choristers at St Paul's. The degree of doctor of music was bestowed on him *speciali gratia* by archbishop Sancroft; and on the death of Purcell he became organist of Westminster-abbey. He died in 1708. It is upon his compositions in church music that the reputation of Blow is chiefly founded; and of these Dr Burney observes, that several of his choral productions are in a bold and grand style, but that he frequently fails in attempts at new harmony and modulation. Dr Boyce printed three services and ten anthems of his composition, and the collections of Dr Tudway and Dr Aldrick contain many more. His secular compositions were collected into a folio volume in 1700, under the title of "Amplion Anglicus." Dr Blow was a man of grave deportment and pure morals, but somewhat too conscious of his own talents. Several of the most distinguished musicians of the time were his pupils, and among the rest the celebrated Purcell.—*Burney's Hist. of Music*, vol. iii.

BLUCHER (GIEBHARD LEBRECHT VON) one of the most distinguished generals of modern days. He was a native of Rostock, born 1742. At the age of fourteen he entered the Swedish army, but being taken prisoner exchanged the service for that of Prussia, in which he continued during the whole of the seven years' war; at the conclusion of peace he quitted the army, but rejoined it soon after, and fought under William II during several campaigns. In September 1794 he was raised to the rank of major-general, and was present at the battle of Leystadt. During the progress of the French arms in 1802 he seized on Erfurt and Mülhausen, and distinguished himself by a masterly retreat through Lubec, after the battle of Jena. Towards the close of the campaign he was compelled to surrender prisoner of war, but was soon afterwards released in exchange for the duke of Belluno. In 1813 he again took a prominent part in the hostilities which were then carrying on, and was created a knight of the Russian order of St George, for his gallantry at Lutzen. He also distinguished himself greatly at the battles of Kattvach (where he defeated marshal Macdonald) and Leipsig; and from his activity in pursuit of the French army, then in full retreat, acquired the appellation among the troops of "Marshal Forwards." On the entry of the allied forces into Paris, he was with difficulty restrained from sacking the city, in revenge for the conduct of the French at Berlin, and accompanied the allied sovereigns to London, where he became the object of no small popularity and public curiosity. In 1814 he narrowly escaped with life, having a horse shot under him during one of the engagements which immediately preceded the battle of Waterloo, and a whole squadron of cavalry charging over him. On the defeat of the French troops on the field above-mentioned, to which he mainly contributed as commander-

in-chief of the Prussian forces, he was created prince of Wallstadt, and honoured with several orders of knighthood. Falling ill at Kriblowitz in 1819, the king of Prussia visited him repeatedly during his last sickness, which carried him off on the 12th of September in that year, at the age of seventy-seven.—*Gent. Mag.*

BLUM (JOACHIM CHRISTIAN) a German poet of considerable eminence in the last century. He was a native of Brandenburg, and was educated at Berlin and Frankfort on the Oder, studying first divinity, and afterwards jurisprudence; but he abandoned both to devote his talents to poetical composition. His lyric poems, published at Berlin in 1765, have been often reprinted. He also wrote idyls, epigrams, an historical drama entitled "The Deliverance of Rathenau," a dictionary of German proverbs, &c. He died in 1790, aged fifty.—*Biog. Univ.*

BLUMAUER (LEWIS) a satirical poet, who was a native of Steyer in Austria. He entered into the order of Jesuits in 1772, and after their suppression he was appointed literary censor at Vienna and librarian. He died in 1793, at the age of forty-four. His poems were first published in 1782, and repeatedly reprinted. He succeeded best in broad satire and burlesque poetry. His principal production was the *Æneid* travestied, written against the temporal authority of the pope.—*Biog. Univ.*

BLUTEAU (DON RAPHAEL) a Theatine preacher, born in 1638 in London, of French parents. So great was his facility in acquiring languages, that having visited Portugal, he was in six months able not only to converse fluently, but to preach with elegance in the vernacular idiom of the country. After this he settled for some time in Paris, and was appointed chaplain to Henrietta Maria, queen to Charles I of England, but eventually returned to Lisbon, where he became an inquisitor and a member of the Royal Academy of History. He published a dictionary in Portuguese and Latin, in 8 fol. vols. printed at Coimbra between the years 1712-1721, and afterwards added a supplement in 2 vols. more, Lisbon, 1727-1728. He lived to the advanced age of ninety-six; his death taking place at Lisbon in 1734.—*Ibid.*

BOABDIL, or ABOUABOULA, the last Moorish king of Grenada. He was the son of Muley Hacem, against whom he revolted in 1481, and took the title of king; but he was soon after attacked by Ferdinand, king of Castile and Arragon, who defeated and took him prisoner. He was restored to his liberty and realm, on condition of acknowledging himself a vassal of the conqueror. Intestine wars arising in Grenada, the Castilian monarch again attempted to become master of the Moorish kingdom, and Boabdil, after vainly attempting to defend himself, submitted to the Spaniards. He was allowed to retire to Alpujares, a small domain assigned for his residence. On leaving Grenada with his family, he turned round to take a last view of the

city from a hill at some distance. The recollection of what he had lost overwhelmed him with sorrow, and he could not help shedding tears. "My son," said his mother Aïxa, "you have cause to weep like a woman, for that throne which you could not defend like a man and a king." The unhappy prince afterwards lost his life in battle in Africa, fighting for the king of Fez. The conquest of Grenada took place in 1491, after the Moors had held the country 782 years.—*Univ. Hist.*

BOCCACINO (BOCCACCIO) an eminent painter, was born at Cremona in 1640. His works bear a strong resemblance to those of Perugino, although upon the whole inferior. He died in 1518. CAMILLO, son of the preceding, was born at Cremona in 1811, and brought up under his father. He is considered the greatest genius of the Cremona school, and in 1537 painted the niches in the cupola of St Sigmund so much in the style of Corregio, as to excite great surprise and admiration. This promising artist died in 1546, aged thirty-five.—*Bryan's Dict. of Paint. and Eng.*

BOCCACCIO (JOHN) one of the fathers of Italian romance, was descended from a family in humble life at Certaldo in the territory of Florence. He was placed by his father with a merchant, with whom he travelled for several years, but showed so little disposition for commerce, and so decided a turn for letters, that his father put him to the study of the common law, in which he uselessly consumed six years more, and was finally left at liberty to please himself. He then sought instruction in science and polite literature, and commenced an acquaintance with the Greek language. A friendship which he formed with the celebrated Petrarch, was of great service to him; and such was the esteem which his various acquisitions inspired, that Florence honoured him with the rights of citizenship, and employed him in public business. In 1353 he was sent on a mission to pope Innocent VI at Avignon, and afterwards resided at the Court of Naples, where he became enamoured of his Fiammetta, whose name he has made the title of one of his works. Until 1359, Boccaccio seems to have lived with considerable licence, and to have employed his pen in poetical works and other compositions of a free kind; but a conference with Petrarch at Milan, enforced by the prediction of some recluse or holy man about this time, induced him to assume the clerical habit, and with it a new line of conduct. He again visited Naples in 1362, and thence went to Venice, and spent three months with Petrarch. He was subsequently sent again ambassador to the pope at Avignon, and in 1367 in the same character to Rome. In 1373 he was appointed to the new institution of a public lectureship on the "Commedia" of Dante at Florence, and died in December 1375, at his retirement at Certaldo, having survived his friend Petrarch about a year. Boccaccio was a voluminous writer both in Italian and Latin, and in prose as well as in verse. Among his Latin works are—1. "De Genealogia Deorum;" 2. "De Montium, Syl

varum, Fluviorum, &c. nominibus," 3. *De claris Muliebris*;" 4. "De casibus Virorum et Fœminarum illustrium," which work was translated into English by Iydgate; 5. "Eclogæ." The Italian poems are—6. "La Teseide;" 7. "Il Filastro;" 8. "Amoroso Visiose;" 9. "Nimfale Fiesolano;" 10. "Rime." His productions in Italian prose are—11. *L'Amorosa Fiametta*;" 12. "Il Filocopo;" 13. "Nimfale d'Ameto;" 14. "L'Urbano;" 15. "Origine vita et costumi di Dante;" 16. "Il Corbaccio," a satire; 17. "Comento sopra la Commedia di Dante;" 18. "Il Decameroue," a collection of a hundred stories or novels, feigned to have been related in ten days by a company of ladies and gentlemen, who had retired to a country villa, to avoid the plague of Florence in 1348. On this work his modern celebrity is chiefly founded; and it is very curious for the striking picture it presents of manners, and for the freedom of its satire against the frauds and licentiousness of priests and monks; even the mysteries of the Catholic religion scarcely escape. Much of the narrative will appear flat and trite in the present day; not to mention the looseness of the description and incident. Several of the stories are however told with nature and humour, and the language is eminently elegant and pure for the period. This work has passed through innumerable editions, a copy of the first of which, that of Valdafer in 1471, was knocked down at the duke of Roxburgh's sale to the duke of Marlborough for 226*l.* The "Teseide" of Boccaccio is the original of the admirable Knight's Tale of Chaucer, so magnificently modernised by Dryden; and the great father of English poetry was otherwise much indebted to our Italian. Boccaccio served the cause of letters by procuring copies of many ancient works, and gives himself the credit of being the first who brought Homer and several Greek authors from Greece to Tuscany. He bequeathed his valuable library to a convent in Florence, where it was long preserved. *Tiraboschi. Biog. Univ.*

BOCCAGE (MARY ANNE LE PAGE DU) a French poetess of the eighteenth century. She was born at Rouen in Normandy, and educated at Paris. She studied the English language, and distinguished herself by translating into French Pope's Temple of Fame. She also produced a poem, entitled "Le Paradis perdu," in imitation of Milton, and another founded on Gesner's death of Abel. In 1749 was exhibited with success her tragedy "Les Amazones." The year following she travelled in England, Holland, and Italy, and published an account of her tour in a series of Letters. Her principal work was—"La Columbiade," an epic poem relating to the discovery of America, which was published in 1756. She married a rich financier, who left her a widow with an ample fortune. This lady was at one period much connected with Madame du Chatelet and Voltaire, the latter of whom wrote in her praise, and smiled at her in private. She died in 1802, at a very ad-

vanced age.—*Mrs Thicknesse's Memoirs of French Ladies. Nour. Diet. Hist.*

BOCCALINI (TRAJAN) an Italian satirist and politician of the seventeenth century. He was the son of an architect of Carpi, but was born at Loretto. Taking up his residence at Rome, he secured by his talents the patronage of some of the cardinals; and having exposed himself to danger by the severity of his satires, personal and political, he obtained appointments to various governments in the pope's dominions, and among them to that of Benevento; his administration of which did not give satisfaction, as several complaints were preferred against him. In 1612 he retired to Venice, either on this account or to escape the vengeance of the Spaniards, whose invasions of the freedom of Italy he had exposed in his writings. He died the year following, owing, as it is reported, to having been barbarously beaten with sand-bags by four ruffians, who entered his chamber in the morning before he had risen. Other accounts assign a fever or cholæ as the cause of his death. The work by which he is chiefly distinguished is his "Ragguagli di Parnasso," or news from Parnassus. It contains an account of an imaginary court of Apollo, in which the god is represented as sitting to hear informations, complaints, &c. against various persons, whose actions and writings are freely and not always impartially censured. A second part, entitled "La Segretaria d'Apollo," is a continuation of the same design under another form. Boccacini also wrote commentaries on Tacitus and other works.—*Moreri. Tiraboschi.*

BOCCHI (ACHILLIS) a Bolognese of a noble family, who devoted himself to the cultivation of literature in the sixteenth century. The emperor Charles V made him count Palatine, and bestowed on him other honours. He became professor of classical learning at Bologna, where he founded an academy, denominated "Bocchiale e Ermatena," and he set up a printing office in his own house. The senate of Bologna gave him the office of historiographer of that city; in writing the history of which he appears to have been engaged. Among his published works are—"Apologia in Plantum," and Latin poems, some of which are in Gruter's "Delicæ Poetarum Latinorum."—*Biog. Univ.*

BOCCONE (PAUL) an ingenious writer on natural history. He was a native of Palermo, and travelled when young in various parts of Europe. After having been botanist to the duke of Tuscany, he at length, in 1682, entered a Cistercian monastery at Florence, on which occasion he took the name of Sylvius. He continued to pursue with ardour his scientific researches, the most curious of which relate to corals and other marine zoophytes. He died in a monastery of his order at Palermo in 1704. His works, which are numerous, contain descriptions of newly-discovered plants; the knowledge of which he probably often derived from his correspondents, as Jussieu taxes him with plagiarism. His observations on natural history were published in

French at Amsterdam in 1674, and also in Dutch in 1744.—*Biog. Univ. Gronovii Bibl. Regia Animalis et Lapidei. Halleri Bibl. Botan.*

BOCH or BOCHIUS (JOHN) a Flemish writer of the sixteenth century, distinguished for his compositions in Latin verse. He went to Rome with cardinal Radzivil, and studied divinity under Bellarmine. Travelling afterwards into Poland, Livonia, and Russia, he narrowly escaped losing his feet by the severity of the frost on his way to Moscow. On his return to the Netherlands he was made secretary to the town-house of Antwerp. He died in 1609, aged fifty-four. The poems of Bock, consisting of heroics, elegies, epigrams, &c. were printed at Cologne in 1615. He has been styled the Belgic Virgil. He likewise wrote orations and other works in Latin prose. His son, who died young, was the author of some poetical pieces, published with those of the father.—*Bayle. Moreri.*

BOCHART (SAMUEL) a learned divine and general scholar, who was a native of Rouen in Normandy. His father was a Protestant minister, and his mother was the sister of Peter du Moulin. He studied under Thomas Dempster at Paris, and afterwards at Sedan and Saumur. He then came to England, and continued his studies at Oxford, whence going to Leyden he applied himself particularly to Oriental learning, under Erpenius and Ludolf, and there completed his education. Returning to his native country, he became minister at Caen, where he distinguished himself in a theological disputation with Father Veron. He had as a pupil the earl of Roscommon, afterwards eminent as a poet. In 1652 he was invited by queen Christina to Sweden, whither he went in company with his learned countryman Huet. The talents of Bochart did not obtain at the Swedish court so much respect as he deserved. Christina sometimes amused herself with attempts to disconcert him. On one occasion she is said to have insisted on his performing, before a number of persons, a solo on the violin, with which instrument he was utterly unacquainted. She had however previously been told by some mischievous courtier, that Bochart was a skilful musician. He returned home the year following, when he was admitted a member of the Academy of Caen. He died of apoplexy, while engaged in the Academy in a public discussion with his friend Huet, May 16, 1667, at the age of sixty-eight. The circumstances of his death gave rise to the following epitaph:

“ Scilicet hæc cuique est datâ sors æquissima, talis

Ut sit Mors, qualis vita peracta fuit.

Musarum in gremio teneris qui vixit ab annis
Musarum in gremio debuit ille mori.”

To him it was appointed, by an equal lot, that his death should resemble his life. He, who from his tender years had lived in the bosom of the Muses, ought also in the bosom of the Muses to die.”

The works of Bochart relate principally to Biblical literature. His “Phaleg et Canaan;

seu Geographia Sacra,” 1646, displays a great deal of learned research, relative to the earliest portions of ancient history. He also wrote an account of the various kinds of animals mentioned in Scripture, published in London in 1663, under the title of “Hierozicon,” and several times reprinted; an edition by Rosenmuller in 3 vols. 4to, Leipsic 1793-1799, is much enlarged and improved.—*Bayle. Moreri.*

BOCK or LE BOUCQ (JEROME) a celebrated German botanist, who lived in the sixteenth century, and was one of the principal restorers of that science on the revival of letters. He is more commonly known under the name of Fragus, which is a Greek translation of his proper appellation. He was born at Heidesbach in 1498, and after acquiring a knowledge of the ancient languages, became a schoolmaster at Deux-Ponts, and subsequently a physician. Having embraced the doctrines of Luther, he adopted the clerical profession among the reformers, and resided at Hornbach, where he died in 1554. He was the first modern botanist who attempted to acquire a knowledge of plants by collecting and comparing them with the descriptions of the ancients. The first work which he published was entitled “New-Krœuter-Buch,” i. e. a new herbal of plants growing in Germany, 1539, folio. He afterwards produced a work translated into Latin by Kyber, under the following title—“Hieronymi Tragi, de Stirpium, maxime earum quæ in Germania nostra nascuntur, &c. libri tres,” Strasburg, 1532, 4to, with 568 figures. Bock was the first who attempted a natural method of botanical arrangement; and though his scheme is necessarily very imperfect, it shows the extent of his views and the originality of his genius. Plumier has consecrated to his memory a genus of plants of the Euphorbium family, to which he has given the name of “Tragia.”—*Biog. Univ.*

BOCKHORST (JOHN VAN) an eminent painter, born at Munster in Germany, in 1610. His family, which was very respectable, subsequently settled at Antwerp, where he became a pupil of Jacob Jordaens. He took Vandyck for his model, and some of his pictures are so much in the style of that admired painter, that they may easily be mistaken for his works. Like Vandyck he also excelled as a portrait painter, and is only inferior to him in that department.—*Biog. Dict. of Paint. and Eng.*

BODE (CHRISTOPHER AUGUSTUS) a learned German critic of the last century. He studied at Halle and Leipsic, and became eminent for his acquaintance with the Oriental languages, having such a taste for that kind of literature, that he gained a knowledge of the Turkish, Armenian, and Coptic tongues without the assistance of a master. He was professor of the Oriental languages, and afterwards of philosophy at Helmstadt, where he died in 1796, aged seventy-four. His principal publications are an edition of the New Testament in Ethiopic; of St Matthews's gospel in Arabic; and of all the evangelists in Persian. He

also wrote criticisms on the Greek Testament of Bengal.—*Biog. Univ.*

BODE (JOHN JOACHIM CHRISTOPHER) a native of Berlin, who was originally a musician in a Hanoverian regiment, afterwards a bookseller at Hamburg, and at length privy-counsellor to the landgrave of Hesse Darmstadt. He died at Weimar in 1793. His classical translations of the works of Montaigne, Fielding, Sterne, and Goldsmith, obtained him much reputation among the German literati. He also wrote against the Freemasons.—*Nour. Dict. Hist.*

BODIN (JOHN) a French lawyer, who distinguished himself by his writings in the sixteenth century. He was a native of Angers, and was educated at Toulouse, where he delivered lectures on law. He then removed to Paris and practised as an advocate, but with so little success, that he afterwards devoted his time chiefly to letters and politics. His first work was an elegant translation in Latin verse, of the "Cynægicon" of Oppian. In 1566 he published "Methodus ad facilem Historiarum cognitionem," containing directions for studying history. This was followed in 1568 by a dissertation on money; after which appeared his great work "Livres de la République," folio, 1576. The historian Thuaus bears testimony to the various and profound learning exhibited in this production; and Gabriel Naude, in his "Bibliographia Politica," is almost romantic in his praises of this book and its author. It obtained for him a high reputation throughout Europe, and has been repeatedly printed, and translated into Latin and English. In 1578 he published a tabular view of legal science, entitled "Juris universi distributio." He also wrote a treatise called "Demonomanie des Sorciers," 1579, 4to, of which there is an English translation. It was intended as an answer to a work of Wierus against witchcraft. Bodin, who supported the popular creed on this subject, was justly rewarded by incurring the suspicion of being himself a magician. He was at one time in favour at the court of Henry III, but his patriotic conduct in an assembly of the states general at Blois, to which he belonged, having given offence, he accepted an offer from the duke of Alençon, the king's brother, to accompany him to the Netherlands, of which he was governor, and he afterwards visited England with that prince, who came hither as a suitor to queen Elizabeth. After the death of the duke in 1585, Bodin returned to Laon, where he had previously resided, and there exercised with great integrity the office of chief magistrate. He died of the plague in 1606, at the age of sixty-six.—*Bayle. Moreri.*

BODLEY (SIR THOMAS) the founder of the Bodleian library at Oxford. He was born at Exeter in 1544, and educated partly at Geneva, whither his parents, who were Protestants, had retired in the reign of queen Mary. On the accession of Elizabeth they returned home, and he completed his studies at Magdalen college, Oxford. He afterwards became a fellow of Merton college, read lectures on

the Greek language and philosophy; and in 1569 he was chosen one of the proctors, and subsequently public orator. He went to the Continent in 1576, and spent four years in travelling. In 1583 he had the office of gentleman-usher to the queen, and two years afterwards he married a widow lady of Bristol, who brought him a handsome fortune. He was then employed in various embassies to Denmark, Germany, France, and Holland. In 1597 he came home, and declining all further concern with affairs of state, he dedicated the remainder of his life to the re-establishment and augmentation of the public library at Oxford, which has attached a permanent celebrity to his name. Richard de Bury bishop of Durham, and afterwards Thomas Cobham bishop of Worcester, in the fourteenth century are said to have set up libraries for general use at Oxford; but Humphrey duke of Gloucester, in the following century, founded a library over the divinity-school stored with all the learning of the age. This institution having fallen into decay, and its literary treasures being dispersed, Bodley formed the noble design to repair and refurnish it. This he accomplished, procuring books and manuscripts himself both at home and abroad, at a great expense, and by his influence and persuasions inducing his friends and acquaintance to assist in his undertaking. Sir Robert Cotton, Sir Henry Savile, and Thomas Allen, the mathematician, were among the principal contributors on this occasion. The library was so much augmented, that Sir Thomas Bodley, who was knighted at the accession of James I, was induced to erect an additional structure for the reception of the increasing quantity of valuable books and manuscripts. The first stone of this new foundation was laid July 19th 1610; but it was not completed till after the death of the founder, which happened January 18th, 1612. He died in London, and was interred in the chapel of Merton college in the university, where a monument was erected to his memory. He bequeathed nearly the whole of his property to the support and augmentation of the library, which has been so much enriched by subsequent benefactions, that it is at present one of the most magnificent institutions of the kind in Europe. Thomas Hearne published at London in 1703, a volume entitled "Reliquiæ Bodleianæ," containing the life of Sir T. Bodley, written by himself in 1609, the first draft of his statutes for his library, and a collection of his letters.—*Biog. Brit. Painter's Antiquities of Oxford University.*

BODMER (JOHN JACOB) a German poet of eminence in the last century. He was born at Griefenberg near Zurich, in 1698, and was educated at Zurich for the ministry; but this did not suit his inclination, and on his return from college in 1717 he was sent to Bergamo in Italy, in a mercantile situation. His strong passion for literature preventing him from attending to the duties expected from him, he was dismissed, and removing to Zurich he gave a course of lectures on history, and afterwards

obtained a college tutorship in that department. He now devoted himself entirely to letters, and produced a great many valuable works. In conjunction with his friend Breiting, he published a paper in imitation of the Spectator, and contributed much to the improvement of the literary taste of his countrymen. He was nearly fifty before he had published any thing, when he seemed all at once to be seized with a kind of *metromania*. He translated Milton's *Paradise Lost*, and also wrote an imitation of it: he likewise translated into German hexameters the *Iliad*, the *Odyssey*, the Rape of Helen, the Rape of Europa, and the Argonautics of Apollonius Rhodius; but the best known of his works is an epic poem, entitled *Noah*, in a similar style to Gesner's death of Abel, and which like that has been translated into English. He died in 1783, leaving unfinished another epic poem on the discovery of America by Columbus; and a history of the German language, likewise not completed.—*Biog Univ. Monthly Mag.* vol. xlviii.

BODONI (JOHN BAPTIST) an Italian printer settled at Parma, who distinguished himself by the beauty and accuracy of the publications which issued from his press, including some fine editions of the Greek classics. Shortly after his death in 1818, appeared a most magnificent work in 2 vols. 4to, entitled "*Manuale Tipografico*," containing specimens of the vast collection of types which had belonged to this celebrated typographer, together with his portrait.—*Biog. Univ.*

BOECE or BOETHIUS (HECTOR) a famous Scottish historian, a native of Dundee, who studied at Aberdeen and afterwards at Paris. On the foundation of the King's college by Elphinston Bishop of Aberdeen in that city, Boece was invited from Paris to become principal of the new establishment. On the death of the bishop in 1514, Boece wrote his life, together with those of the preceding bishops of Aberdeen, in Latin, Paris, 1522, 4to. He then undertook the history of Scotland, together with a topographical description of the country. This work, which is full of legendary tales, but composed in elegant Latin, was first published in 1526. The author is supposed to have made subsequent additions, bringing the narrative down to near the time of his death, which is said to have happened about 1550.—*Mackenzie's Lives of Scottish Writers. Biog. Brit.*

BOECLER (JOHN HENRY) a German philologist, who was born at Cronheim in Franconia, in 1610. He became professor of rhetoric at Strasburgh, whence he was invited by Christina to Sweden, and appointed to a professorship in the university of Upsal, and to the office of royal historiographer. Ill health induced him to return to Germany, and he was made professor of history at Strasburgh. He was nominated counsellor by the elector of Mentz, and by the emperor Ferdinand III, and he had a pension from Louis XIV. He died in 1692. His works consist of annotations on several of the Greek and Latin clas-

sics, and treatises on law, history, and Etimology.—*Moreri. Nouv. Diet. Hist.*

BOEHMEN or BEHMEN (JACOB) a German mystic or fanatic of the seventeenth century, whose nonsensical writings procured him a vast number of admirers, and a considerable degree of celebrity. He was a native of Upper Lusatia, and was by trade a shoemaker. He seems to have devoted all the time he could spare to reading the works of Paracelsus, and others of a similar description. After having, as he professed, been seized with religious trances, in which he was favoured with supernatural revelations, he published in 1612 a treatise, entitled "*Aurora, or the Rising of the Sun*." This work attracted the censure of a clergyman at Gortitz, and the efforts he made to get the book suppressed, only excited the curiosity of the public, and raised prejudices in favour of Boehmen, who afterwards produced a multitude of similar publications. He died in 1624. The Rev. William Law author of "*A Serious Call to a Devout and Holy Life*," was so zealous an admirer of this incomprehensible fanatic, that he published an English edition of his works in 2 vols, 4to.—*Aikin's G. Biog.*

BOERHAAVE (HERMAN) one of the most celebrated physicians of modern times. He was the son of James Boerhaave, minister of Voorhout, near Leyden, where he was born in 1668. He was designed for his father's profession, and his preliminary studies were all directed to the attainment of such knowledge as might qualify him for it. When about twelve years old, he was afflicted with an obstinate ulcer in the thigh, and finding no relief from the treatment of surgical practitioners, he is said to have undertaken the cure of it himself, and accomplished it by fomentations of salt and wine. This incident is supposed to have given him an inclination for the study of medicine. However, he continued for some years longer to apply himself to divinity. In his fourteenth year he was placed in the public school at Leyden, in which he distinguished himself by his talents and industry. About this time his father died, leaving him but slenderly provided for; this did not however check his ardour for study. He became a student at the university, where he acquired a knowledge of Oriental literature, divinity, natural philosophy, and mathematics. Having gone through an academical course of learning in 1690, he took his first degree in philosophy. His patrimony having been spent in his education, he now began to read mathematical lectures to the younger students, as a means of supporting himself. This was the occasion of his introduction to John Vandenburg, burgomaster of Leyden, who obtained for him some literary employment, and who also persuaded him to give way to his inclination, in joining to his other pursuits the study of the medical sciences. He took this advice, and after having by his own industry made himself acquainted with the writings of the most eminent physicians, from Hippocrates to Sydenham, and also obtained a knowledge of

anatomy, chemistry, and botany, he went to the university of Harderwick in Guelderland, and there took the degree of MD. in 1693. It was his intention to have united the medical and clerical professions; but on his return to Leyden, he found a malicious report had been circulated that he had adopted the doctrines of Spinoza, which proved an obstacle to his entering into the ministry. Constrained to depend on physic for his support, he began to practice at first with limited success; but his reputation gradually extending, he ultimately attained the very highest rank in his profession. In 1701, on the death of professor Drelincourt, he gave lectures at the university on the principles of physic; and at the solicitation of the students, he also lectured on chemistry. His merit becoming known, he received an invitation in 1703 to accept the professorship of medicine at Groningen, which he declined, and the governors of the university of Leyden immediately increased his salary, and promised him the first medical chair which should become vacant. On the death of Dr Hotten he consequently succeeded him as professor of physic and botany, and raised the credit of the university to the utmost degree as a school of medical knowledge. Students from all parts of Europe flocked thither, particularly from England and Germany; and his doctrines obtained such a general ascendancy, that scarcely any other theories than his were heard of for more than half a century. In 1714 he was advanced to the dignity of rector of the university, having just before succeeded Bidloo as professor of the practice of physic. In 1718 he added to his other offices that of professor of chemistry, performing with the greatest assiduity and success the various duties which devolved on him, as well as those arising from his very extensive practice as a physician. He was not only consulted by patients from neighbouring countries, but his fame brought him applications from the European settlements in the East Indies. It is even related that a Chinese mandarin, wishing for his advice, wrote a letter, addressed "To the illustrious Boerhaave, Physician in Europe," which was safely delivered. He was chosen a member of the Academy of Sciences at Paris, and a fellow of the Royal Society of London, to both which learned bodies he communicated his chemical discoveries. In 1722 he was seized with a severe attack of rheumatic gout, which was of long continuance, and seems to have much impaired his constitution. The weakness of his health induced him in 1729 to resign the professorships of botany and chemistry; and from that time he led a less active life, unbending his mind at a country-house near Leyden, where he had a botanical garden, which he amused himself in cultivating. About the middle of the year 1737 he perceived the approaches of a disease of the chest, which was probably dropsical, under which he laboured for nearly a year and a half, when it proved fatal September 23, 1738. He was interred in the church of St Peter at Leyden,

where a monument was erected, with the following simply elegant inscription:—"SALUTIFERO BOERHAAVII GENIO SACRUM." He married September 17, 1710, Mary Drolenveaux, the daughter of a Burgomaster of Leyden, by whom he had four children, one only of whom, a daughter, survived him. The character of Boerhaave, as a man of science, depends chiefly on his industry in collecting, and his ingenuity in arranging the ideas of others. His medical system was founded, though not exclusively, on the mathematical principles of Bellini and Pitcairne. He too often reasons on the nature of living bodies from data derived from the properties of inanimate substances, and he lays too much stress on supposed changes in the state of the animal fluids. But his theory was so consistent throughout, and so superior to those of preceding writers, that it was more generally received than any since the time of Galen. His principal treatises on medicine are—"Institutiones Medicæ," 8vo, and "Aphorismi de cognoscendis et curandis Morbis;" of both which there have been numerous editions and translations, and on the latter of which there is an ample commentary by baron Von Swieten, well known to medical students. In chemistry, as in medicine, Boerhaave only methodized and improved the previously discovered elements of the science; but he has the merit of having banished from his pages the mystical jargon of the alchemists, and he treated his subject with perspicuity and elegance. His great work, "Elementa Chemicæ," 2 vols. 4to, has been repeatedly printed, translated, and abridged; and before the fall of the phlogistic theory, it was considered as a standard book. Botany was a favourite pursuit of Boerhaave. His principal works relating to it are methodical catalogues of the plants in the university garden of Leyden.—*Life by Dr. Johnson. Hutchinson's Biog. Med. Aikin's G. Biog.*

BOERNER (CHRISTIAN FREDERIC) professor of theology at Leipzig. He was born at Dresden in 1683, studied at Leipzig and Wittenberg, and after travelling in England and Holland, returned to Leipzig, where he died in 1753. His erudition was prodigious, and his abilities were principally devoted to the explanation of the sacred writings, and the study of ecclesiastical history. He wrote a vast number of treatises and disputations, the most important of which are—"De exulibus Græcis hincdemque litterarum in Italia instauratoribus," 1750, 8vo; "De Ortu atque Progressu Philosophiæ Moralis," 1707; "De Socrate, singulari boni ethici exemplo;" "De Actis Lutheri;" "Institutiones Theologiæ symbolicæ," 1751, 4to; "Disputationes Sacræ," 1752. He also published an improved edition of the "Bibliotheca Sacra," of Father Le Long. CHRISTIAN FREDERIC BOERNER, his son, was a physician at Wolfenbuttel, and the author of "Traite pratique de l'Onanisme," Leipzig, 1775, 8vo.—FREDERIC BOERNER, another son, also a physician, died in 1761. He wrote "Relationes de libris

Medicophysicis antiquis, raris, &c." Wittenberg, 1756, 8vo, and other learned works; and he was the principal compiler of "Notices sur la Vie et les écrits des Médecins et des Naturalistes vivants les plus Distingués," 3 vols. 8vo, 1748-1764.

BOETHIUS (**ANICIUS MANLIUS TORQUATUS SEVERINUS**) the last distinguished philosopher of ancient Rome. He was descended from the noble and wealthy Anician family, and was born about AD. 470. He is supposed to have been educated at Athens, and was certainly intimately acquainted with the principles of the Grecian philosophers, especially Aristotle and Plato. He was of the Christian religion, and is said to have first applied scholastic philosophy to the service of Christian theology; and he defended the orthodox doctrine of the Trinity in his treatise, "De Unitate et Uno," against the opinions of Eutychius, Arius, and Nestorius. He obtained great honours in the state, having been decorated with the consular title in 510; and he was also created patrician, and held the post of master of the offices. He married the daughter of the patrician Symmachus, and two of his sons were consuls together in 522. Thus far prosperous in the circumstances of his life, his future fate and death were particularly disastrous. Theodoric, king of the Ostrogoths, who then governed Italy, listened to accusations against Boethius, who was charged with a treasonable correspondence with Justin, emperor of the East. The philosopher was imprisoned in the tower of Pavia, and the senate passed on him the sentence of confiscation and the punishment of death, which he suffered in prison, it is not precisely known in what manner, AD. 526. While under confinement, Boethius composed his celebrated work, entitled "De Consolatione Philosophiæ." It is written in the form of a dialogue between the author and the genius of philosophy, in various sections, each consisting of prose and verse. The topics of consolation are uniformly drawn from heathen philosophy, and the sentiments are noble and elevated. Few works have undergone so many editions, and it has been translated into all cultivated languages. There are two versions by British sovereigns; one in Anglo-Saxon by Alfred the Great, and an English translation by queen Elizabeth.—*Tiraboschi. Aikin's G. Biog.*

BOETTCHER (**JOHN FREDERIC**) the inventor of the Dresden porcelain. He was a native of Voigtland, and being placed with an apothecary at Berlin, he employed himself in studying alchemy. He was obliged to flee from that city in consequence of a report that he had discovered the philosopher's stone. He went to Saxony, and Frederic Augustus, the elector and king of Poland, sent him to Dresden, to inquire whether it were true that he could make gold. Boettcher answered that he could not; but the king perhaps supposing him to be possessed of some valuable secret, shut him up in the castle of Konigsberg, and commanded him to search for the *grand secret*. In the course of his operations

Boettcher was so fortunate as to discover the method of making that beautiful kind of porcelain, called Saxon or Dresden china. He is said to have made the discovery in 1702 or 1703; and in 1710 a large manufactory was established at Meissen, it having been previously made at Dresden. Boettcher, who was ennobled by the king, continued to occupy himself in the improvement of his invention till his death, which happened March 14, 1719.—*Biog. Univ.*

BOGAN (**ZACHARY**) an English divine, a native of Devoushire, born at Little Hempstone in that county in 1625. He received his education at Oxford, having entered at Alban Hall, which society he quitted for a fellowship at Corpus Christi. He left behind him a learned treatise on the phrasology of Homer compared with that of the Old Testament, entitled "Homerus Εβραϊζων," with another annexed, "Hesiodus Ομηριζων," printed together in 8vo, 1658. His other writings are—"A Help to Prayer," 12mo; "A View of the Threats and Punishments denounced in Scripture," 8vo; a supplement to the "Archæologiæ Atticæ," of F. Rous, 4to, and "Meditations on the Mirth of a Christian Life." He died young, from the effects of too much application and a sedentary life in 1659. *Biog. Brit.*

BOHN (**JOHN**) a German physician, who distinguished himself by some ingenious writings on medical science. He was a native of Leipzig, and after studying at Jena, and travelling in England, France, and Switzerland, he took the degree of MD. in the university of his native city, and in 1668 became professor of anatomy there. He was subsequently appointed public physician, and obtained the professorship of therapeutics. He died in 1719, aged seventy-eight. Bohn was well acquainted with anatomy and chemistry, and deserves notice for his researches on the chemical composition of bones; and as a medical practitioner for recommending the use of calomel in the small-pox, in a tract published so early as 1679. His principal works are—"Circulus Anatomico-physiologicus, sive œconomia Corporis Animalis," 1680, 4to; "De Alcali et Acidi insufficientia ad Principia Corporum, &c." 1681; "De Officiis Medici duplici, Clinico at Forensi," 1704, 4to.—*Moreri. Haller's Bibl. Anatom. et Medico-Pract.*

BOHUN (**EDMUND**) a native of Ringsfield, Suffolk, who flourished as a writer of some note about the time of the Revolution. He was a member of Queen's college, Cambridge, but quitted the university abruptly without taking a degree, on the breaking out of the plague there in 1666, and entered at the Temple. In 1675 he took out his *dedimus* as a magistrate for the county of Suffolk, but having rendered himself obnoxious to James II by his principles, that monarch removed him from the commission of the peace. On the accession of William and Mary however, his name was replaced upon the roll. His works consist of "A Defence of King Charles II's Declaration," 4to; another of sir R. Filmer against

Algernon Sydney, and a preface to the former author's "Patriarcha," in 8vo; two Collections, one "Geographical," in 8vo, the other "Historical, Geographical, and Political," in folio; "The Justice of Peace's Calling," 8vo; a "History of the Desertion," &c. 8vo, 1689; "A Life of Bishop Jewel," and a "Character of Queen Elizabeth," both in 8vo. He also wrote a treatise on the doctrine of passive obedience in 4to, and translated Puffendorf's "Germania," "Sleidan's History of the Reformation," and Wheare's "Mode of Reading History." He survived till the reign of queen Anne.—*Biog. Brit.*

BOIARDO (MATILDO MARIA) count of Scandiano, an Italian poet, was born at Fratta near Ferrara, in 1430. He was educated at the university in that city, and was made governor of Reggio in the Milanese by duke Hercules I, where he died in 1496. He was author of some bucolic poetry in the Latin language, and of some Italian sonnets, printed at Reggio 1494. He likewise translated Herodotus and Apuleius into Italian, and composed a comedy called "Timon," from one of the dialogues of Lucian. The work however by which he is now chiefly remembered is the "Orlando Innamorato," the first of the singular poems which, to the form of the ancient epic, add the extravagance of chivalric romance. The style of Boiardo is rude, and his versification constrained, but he exhibits much variety and fervour of invention, and great liveliness of imagery. It has been modernized by Berni, whose work has nearly superseded the original; the best edition of which is that of Venice in 1554. It need scarcely be added, that the "Orlando Furioso" of Ariosto is properly a continuation of the poem of Boiardo. *Tiraboschi. Moveri.*

BOILEAU (GILLES) the elder brother of Boileau Despreaux, born 1631. He was a man of considerable talent and a lively wit, and though, perhaps from a jealousy of his success, at first on bad terms with his brother, whose enemies, Chapelain and Cotin, were his bosom friends, yet a reconciliation at length took place. He translated the "Epicetus" of Arrian, printed at Paris in 1655; "Diogenes Laertius," in two 12mo vols. 1663; and wrote two pamphlets against Costar and Menage. He died in 1669, and a collection of his posthumous works appeared the year following.—*Biog. Univ.*

BOILEAU (JAQUIS) a brother of the same family, eminent for his learning and abilities. He was born in 1635, took his degree of divinity at the university of Paris in 1662, and was made a doctor of the Sorbonne. In 1667 he became, through the patronage of Gendrin, archbishop of Sens, dean and grand vicar in that cathedral, and in 1694 obtained a canonry in the Sainte Chapelle at Paris, from the king. He was the author of various publications, some on singular subjects, but all written in Latin, lest, as he said, "the bishops should condemn them." De Lolme has published an English translation of his "Historia Flagellantium," written against the Whigs, and

which attracted much notice. He also wrote a work trenching much upon the rights of episcopacy, entitled, "De antiqua jure Presbyterorum in Regimine Ecclesiastico," and a long list of controversial treatises, now consigned to oblivion. He hated the Jesuits as much as his brother Nicholas, and a saying of his has been preserved, that "they extended the creed and abridged the decalogue." He died August 1, 1716.—*Ibid.*

BOILEAU (NICHOLAS) sieur Despreaux. This eminent French poet was the youngest son of Gilles Boileau, register of the parliament of Paris. He was born at Crone near Paris, in 1636, and is said to have undergone an operation for the stone at eight years of age, although some accounts place the necessity of surgical aid to an unlucky accident. In his youth he was deemed a dull and uninteresting child; but while thus regarded, he was acquiring a taste for polite literature, that totally unfitted him for the laborious profession of the law, for which his father designed him. Being placed with a relation, an eminent member of the long robe, his aversion and indifference soon disgusted his teacher, and being sent home as a confirmed dunce, he was set down to study scholastic divinity. This pursuit he followed to no purpose for some years, and was then allowed to dedicate himself wholly to letters. Although so little esteemed at home, Boileau had by this time displayed considerable marks of vivacity among his intimates, and at the age of thirty this supposed heavy and harmless character published a volume of satires, in which he attacked a host of inferior writers with considerable wit and some ill-nature. It was necessarily assailed in return by the writers attacked, and some of these being estimable persons, although indifferent authors, the duke de Montausier and other rigid moralists, expressed some dislike to so obvious a spirit of detraction. Boileau could however deal in panegyric as well as satire, and disarmed the duke by flattery, while he acquired the highest of all protection by lavishing all manner of incense on the vain-glorious Louis XIV. He accordingly proceeded in his career, and answered his opponents, more especially in his ninth satire, "A Son Esprit," which is deemed his masterpiece, being admirable for the keenness of its irony and the polished refinement of its ridicule. Another of them, in the imitation of Juvenal, against women, necessarily excited considerable animadversion in France; and much of its spirit was naturally and ludicrously attributed to his early accident. His satire was followed by his "Art of Poetry," which is possibly the best poem of the kind in any language. To this able production succeeded his epistles, after the model of those of Horace, which are highly esteemed for uniting morality and criticism with sentiment and character. In 1674 he published his mock-heroic poem of the "Lutrin," founded on a trifling dispute between the treasurer and chanter of the holy chapel; it abounds with poignant irony and various and ingenious raillery. He had now

obtained a brilliant reputation, and secured the good graces of Louis, who gave him a pension and the exclusive privilege of printing his own works, and appointed him, in conjunction with Racine, royal historiographer, for which office, had it not been a sinecure, neither had the least aptitude. His ode on the taking of Naumur was possibly a result of this appointment being more historical than poetical; but lyrical poetry was not adapted to the correct and measured exactitude of Boileau. Called frequently to court, he appeared there with manly freedom, and often indeed ventured upon observations which were sufficiently bold when addressed to a monarch of the character of Louis. When the king asked his opinion of a few verses which he had composed, "Nothing, sire, is impossible to your majesty," he replied; "you wished to make bad verses, and you have succeeded." Neither did he fear taking part with the ejected members of Port Royal, for being told in the anti-chamber that the king was making search for the celebrated Arnauld, to confine him in the Bastile, "His majesty is too fortunate," exclaimed Boileau; "he will not find him." In 1684 he was received into the French Academy, and also became a member of the Academy of Inscriptions, in which he claimed a place by his not very exact translation of Longinus. Although very little acquainted with science, properly so called, he rendered it a considerable service, by his "Arret in favour of the University, against an unknown person called Reason," which he procured to be presented in form to the president Lamoignon, and thereby induced him to quash some bigotted attempts to establish intolerance in matters of philosophy. In literature however Boileau zealously espoused the opinion of the superiority of the ancients to the moderns, and although not with the pedantic extravagance of the Dacier, he treated Perrault on the occasion with much severity, and also laid the foundation of a lasting enmity with Fontenelle. After the death of Racine he went little to court, beginning to feel the weight of the expected tribute of adulation, for which the latter part of the reign of Louis afforded very few materials. He also ceased to pay visits, admitting only a few friends, and giving way to a misanthropical tendency of temper, which had always in some measure attended him, although his conversation was mild, and indeed heavy in comparison with his writings. He was religious without bigotry, and abhorred fanaticism and hypocrisy; he was also one of the few poets who lived in easy circumstances, and practised a prudent economy. This conduct sometimes subjected him to the unmerited imputation of avarice, although his purse was always open to indigent men of letters, and he was otherwise exceedingly charitable. He died in 1711 of a dropsy, at the age of seventy-five, and bequeathed nearly the whole of his property to charitable uses. Boileau has been emphatically termed the poet of good sense; taste and judgment scarcely ever desert him. Voltaire observes that he is not a sublime poet,

but that he has done well what he intended to do; and that although he seldom rises, he never falls, and is always clear, easy, and happy. According to D'Alembert his greatest defect is a want of that natural sensibility to objects of the heart and imagination, which renders poetry touching and impressive. There was some similarity between Boileau and Pope, but while the former excels in delicacy and correctness, the latter is decidedly superior in force and fancy. The best editions of the works of Boileau are—that of Geneva, 2 vols. 4to, 1706; that of the Hague, 1713, 2 vols. fol.; that of Durand, 5 vols. 8vo, 1747; and that of Paris, 1809, 3 vols. 8vo.—*Nouv. Dict. Hist. Aikin's G. Biog. Dict.*

BOISSARD (JOHN JAMES) an eminent archæological writer of the sixteenth century. He was a native of Besançon in France, and travelled when young, for the purpose of collecting antiquities, through several parts of Italy, Greece, and the Ionian islands. Returning to France he became tutor to the sons of the baron de Clervaut, with whom he made a second tour in France, Germany, and Italy. In 1597 he published the first volume of his great work "De Romanæ Urbis Topographia et Antiquitate," with engravings by Theodore de Bry. It was completed in 4 vols. the last of which appeared in 1600. He was likewise the author of "Theatrum Vitæ Humanæ," containing lives and portraits of illustrious persons; a treatise "De Divinatione et Magicis Prestigiis," folio, and other works. Boissard died at Mentz in 1602.—*Bayle. Moreri.*

BOISSY (CHARLES D'EPHIZ DE) born at Paris about 1730, became a counsellor, in which profession he was very successful. He is known as the author of "Lettres sur les Spectacles," 1759, 8vo; which became extremely popular and passed through many editions. The second volume is a catalogue of books written for or against theatrical exhibitions, which was published separately. Depez de Boissy, who was a member of several French and Italian academies, died at Paris in 1787.—*Biog. Univ.*

BOISSY (LEWIS LANS DE) a French comic writer, who was a native of Vic in Auvergne. Going to Paris he composed satires, which produced him a little money and a great many enemies. He relinquished this disgraceful occupation for that of writing for the theatre. In thirty years he produced forty comedies, several of which were very successful, yet at one time he was silently enduring such abject poverty, that an accidental intrusion into his wretched abode alone preserved himself and family from starvation. His affecting case being made known to Madame Pompadour, she procured him a pension and the editorship of the *Mercur de France*. He died in 1756 aged sixty-three.—*Biog. Univ.*

BOIT (——) an eminent painter in enamel, whose works have very seldom been surpassed. His father was a Frenchman, but he was a native of Stockholm, and was bred a jeweller, which profession he changed for that of a painter. He came to England and taught

drawing; and having engaged one of his scholars, a gentleman's daughter, to marry him, her father found means to have him committed to prison. While in confinement he studied the art of enamelling, and on his liberation came to London, and practised it with great success. He executed many beautiful portraits, and began a large historical piece, representing queen Anne and many personages of her court. This remained unfinished in consequence of the queen's death; and Boit, who had become involved in debt, fled to France, where he embraced the Catholic religion, and obtained the patronage of the regent duke of Orleans. He died suddenly at Paris in 1726. — *Walpole's Anecdotes of Painting.*

BOIVIN de VILLENEUVE (JOHN) a native of Normandy, who distinguished himself by his writings on classical literature. In 1714 he obtained the office of keeper of the royal library at Paris, in 1721 he was admitted into the French Academy, and in 1724 was made a pensionary of the academy of Inscriptions and Belles-Lettres. He died in 1726, aged sixty-four. Among his works are "An Apology for Homer, and the Shield of Achilles," 12mo; French translations of the *Batrachomyomachia* of Homer, of the *Œdipus* of Sophocles, and of the *Birds* of Aristophanes: Greek poems: and a Latin translation of the Byzantine history of Nicephorus Gregoras, with notes. Boivin also published some valuable dissertations on historical and philological subjects, in the memoirs of the academy of Inscriptions. — *Nouv. Dict. Hist.*

BOLD (SAMUEL) an English controversial writer of the last century, a native of Chester. Though educated under Mr. Cook, a clergyman of that city ejected for nonconformity, he received an episcopal ordination, and was for more than half a century rector of Steeple-cum-Tyneham, Dorsetshire. His principal works are a defence of Locke against Edwards, under the title of "A Discourse on the true Knowledge of Christ Jesus," 1697, 8vo: and an octavo volume in refutation of the objections raised against the former author's "Essay on the Human Understanding," which begat an intimacy between them. His other writings are "Christ's Impunity to Sinners," &c. 8vo, 1687; "A Plea for Moderation towards Dissenters," 8vo; "Man's great Duty," 8vo, 1693; and a "Help towards Devotion," 12mo, printed in 1736, the year preceding that of his decease. — *Biog. Brit.*

BOLEN or BOLEYNE (ANNE) second wife of Henry VIII, was born in 1507, being daughter of Sir Thomas Bolen, afterwards earl of Wiltshire and Ormonde. When only seven years of age she attended the princess Mary to France, on her marriage with Louis XII, and was so highly esteemed in that court, that when Mary returned a queen dowager to England, Anne Bolen remained there under the protection of Claude, wife to Francis I. On her return to England in 1527, she was appointed maid of honour to Catharine of Arragon, and about that period a sort of engagement took place between her and Lord Percy, son to the

earl of Northumberland, which Wolsey contrived to annul. In 1528 the king began to notice her, but it was not until 1532 that he created her marchioness of Pembroke, as a step to the marriage which took place in the January of the next year. On the 1st of June she was crowned queen with great pomp and solemnity, and in the September following, was delivered of Elizabeth, subsequently the celebrated queen of that name. In 1536, soon after the death of Catharine, she was delivered of a dead sou, a circumstance which operated against her in the capricious and fastidious mind of Henry. His change of inclination being perceived, the Romanists, who had attributed the secession of the king to his passion for Anne, did all they could to encourage it, and were unhappily in some degree seconded by a portion of levity and indiscretion on the part of the queen, in the highest degree dangerous in the consort of a tyrant like Henry. The wife of her brother, Lord Rochford, a woman of no virtue herself, either felt or affected to be jealous of the intimacy between her husband and his sister, and possessed the king with her own apprehensions. Her enemies also pretended that she was improperly familiar with Henry Norris, groom of the stole; William Brereton and Sir Francis Weston, who were of the king's privy-chamber; and Mark Smeaton, a musician. It was likewise asserted that she had dropped her handkerchief at a tournament at Greenwich, for some presumed favourite to wipe his face. Be this last circumstance as it may, the king on his return from Greenwich ordered her to be confined to her chamber, and her brother and the other persons spoken of to be committed to the Tower, where she herself followed the next day. On her examination, she evinced great disorder of mind, but although assailed with the pretended confessions of Smeton and Norris, she owned to nothing but a few indiscretions of the most trifling nature, which however were quite sufficient to totally alienate Henry. On the 12th May, Norris, Brereton, Weston, and Smeaton, were found guilty and executed, the latter alone deposing to some circumstances alluded to by Cronwell, as injurious to the queen, but probably no formal confession of guilt as related by Burnet; while Norris, although offered his life if he would confess, nobly refused to purchase it by a false accusation. On the 15th of the same month, Anne and the unfortunate lord Rochford were also found guilty, and on the 19th the unhappy queen was executed. Henry in the meantime caused his marriage to be annulled, as pretence of the pre-contract of Anne with Percy. A sentence of divorce was accordingly pronounced by the archbishop, which was afterwards ratified by Convocation and Parliament. Anne died with equanimity, and was prevailed upon, out of regard to her daughter, to say nothing of the injustice of her treatment on the scaffold, but only to desire that "all would judge for the best." This unfortunate lady, who was not destitute of education herself, had distinguished herself as a patroness of men of learn-

ing and genius. Although led by her French education to more freedom of manners and less reserve than suited her station, no persons now credit the charges against her; and it is justly observed by Hume, that the king himself made her a most effectual apology, by marrying Jane Seymour the day after the execution. The letter written by Anne in the Tower to her implacable husband, is much admired for its natural pathos and elegance.—*Birch's Lives for Houbraken's Heads. Huane. Rapin.*

BOLINGBROKE (see ST) JOHN

BOLLANDUS (JOHN) a learned Jesuit, who was a native of Tillemont in the Netherlands. His name is known in literary history on account of his share in the compilation called "Aeta Sanctorum," which contains memorials of all the Saints of the Catholic church arranged according to the order in which they occur in the calendar. Father Herbert Roseveid projected this work, which he calculated might be comprised in 16 folio volumes. Bollandus published in 1643 the lives of the saints of the month of January, in 2 vols., and in 1658 those of February in three more. He had commenced the next month, when he died in 1665. The design was prosecuted by Godfrey Henschenius, Daniel Papebroek, and other Flemish Jesuits; and the vast mass of history and legend has been extended to 53 vols.—*Moreri. Nour. Dict. Hist.*

BOLSWERT or BOLSUERD (SCHELIUS) a distinguished engraver, born at Bolswert in Friesland, in the year 1586. He settled at Antwerp, where he became one of the most celebrated engravers of his country, and especially distinguished himself by his performances after some of the finest pictures of Rubens and Vandyck. It was not unusual for Rubens to retouch his proofs in the progress of the plates with chalk or with the pencil, which contributed not a little to their characteristic expression, and proofs of this description are to be found in the cabinets of the curious.—*Bryan's Dict. of Paint. and Eng.*

BOLTON (EDMUND) an historical and antiquarian writer of the seventeenth century, who was a retainer of the first duke of Buckingham, and was of the Catholic persuasion. His works are numerous, and many of them exist only in manuscript. Among those which have been published, are "Elements of Annals," Lond. 1610, 4to; "Nero Caesar, or Monarchie depraved," 1624, folio, dedicated to his patron, Buckingham; and "Hypercritica, or a Rule of Judgment for Writing or Reading our Histories," 1722, 8vo. He wrote a life of Henry II, intended for insertion in Speed's Chronicle, but rejected because he was thought to have treated too favourably the character of Becket. He also possessed poetical abilities of a very respectable description, and is favourably spoken of as a poet by Warton. In "England's Helicon," a poem of his under the title of "A Palinode," is a beautiful production. The time of this author's death is not known.—*Biog. Brit. Aikin's G. Biog. Warton's Hist. of Eng. Poetry.*

BOMARE (JAMES CHRISTOPHER VAL-

MONT DE) a French naturalist, whose works obtained him considerable reputation, but have been superseded by those of later writers. He was a native of Rouen, and was educated for the legal profession, which he relinquished to devote himself to the study of natural history, on which he lectured at Paris. In his "Nouvelle Exposition du Regne Minerale," 1764, he proposed a new arrangement of mineral substances. His dictionary of natural history was a useful publication relative to the state of science half a century ago. He died in 1806, at an advanced age.—*Nour. Dict. Hist.*

BOMBERG (DANIEL) a celebrated printer of the sixteenth century, was born at Antwerp, but settled in Venice, where he printed the first Hebrew Bible in 2 vols. folio, 1518. At the suggestion of Felix Pratinois, an Italian, from whom he learned Hebrew, he also printed a Rabbinical Bible, dedicated to Leo X. This edition not being approved of by the Jews, the rabbi Jacob Haum prepared another, which Bomberg published in 1525. He twice reprinted this, and each edition is supposed to have cost him an hundred thousand crowns. In 1720 he commenced an edition of the Talmud, which he completed in a few years. He was extremely liberal in his art, so much so, as even to have injured his fortune; in the course of his life, it is said by Scaliger, that he expended three millions of crowns in printing alone. He died at Venice in 1549.—*Moreri. Vossius.*

BONA (JOHN) a Piedmontese noble, born at Mondovi in 1609. Having studied divinity at Rome, he assumed the tonsure, and became abbot of a Cistercian monastery in his native city, prior of Asti, and general of the order of Bernardine monks; to which latter dignity he was appointed in 1651. In 1669 he was raised to the purple by pope Clement XI, an honour he had previously declined from his predecessor Alexander VII, though on terms of intimate friendship with that pontiff. On the death of Clement, cardinal Bona was spoken of as his successor in the papal chair, but lost the election. He published several devotional treatises, principally of an ascetical character; but those by which he is most known to posterity, are his two books on liturgies, first printed in folio, 1671, afterwards in 4 vols. folio, at Turin in 1747, by father Salis; and a history of psalms from the earliest ages of the Christian church, which has also gone through several editions. Among his other writings, is a controversy which he entered into with the learned Mabillon, whether the consecrated wafer should be leavened or unleavened. His death took place in 1674 at Rome.—*Biog. Univ.*

BONANNI (PHILIP) a Jesuit, who was inspector of the museum founded by Athanasius Kircher in the college of the order of Rome. He was the author of many learned works, the chief of which are—"Museum Kircherianum," folio, with plates, Amsterdam, 1678, republished at Rome 1790; the history of the Vatican; a catalogue of the military orders; and a treatise on the ma-

dals of the popes. The first work is extremely curious, and contains microscopical observations on animals, which were also published separately. Bonami died in 1725, aged eighty-seven.—*Nouv. Dict. Hist. Gronovii Bibl. Regni Animalis et Lapid.*

BONAPARTE, see BUONAPARTE.

BONARELLI (GUY UBALDO) was born at Urbino in 1563, of one of the noblest families of Ancona. His principal literary production is a pastoral poem, called "Filli di Sciro," which was printed at Ferrara in 1607, and afterwards at Glasgow in 1763. Some objections being made to the heroine of this piece being too much a coquette, he attempted to excuse her in a tract, entitled "Discorsi in difesa del doppio amore della sua Celia," which was rather ingenious than conclusive. He was also employed on several important embassies, the success of which proves them to have been well carried on. He died in 1608.—*Moreri. Tiraboschi.*

BONASONI (GIULIO) a painter and celebrated engraver, was born at Bologna about the year 1498, and was a pupil of Lorenzo Sabatini. The church of St Stefano at Bologna contains a fine picture by him of the souls in purgatory. In engraving, in which he was more distinguished, he had the benefit of the instructions of Marc Antonio Karmondi; and although he did not arrive at the perfection of his excellent master, his works are executed with great elegance. He engraved from the pictures of Michael Angelo, Raffaele, Julio Romano, Parmegiana, &c. and occasionally from his own designs. The time of his death is uncertain.—*Life by George Cumberland.*

BONAVENTURE (JOHN FIDUZZA) surnamed the "Seraphic Doctor," born at Gagnara in Tuscany, in 1221. In 1243 he entered into the order of Franciscans, of which he afterwards became the general. Having studied with great credit at Paris under De Hales, he obtained the degree of doctor in theology in 1255. Ten years after, the archbishoprick of York was offered to his acceptance by Clement IV, which he declined. On the death of that pontiff, so high was his character with the conclave, that a difficulty arising as to the appointment of a successor, Bonaventure was unanimously called on to decide. He declared in favour of Theobald Visconti, then in Syria with Edward I of England, and that prelate was accordingly elected by the name of Gregory X in 1271. His gratitude two years afterwards raised Bonaventure to the purple, as cardinal bishop of Albano; in which capacity he accompanied the pope in 1274 to the council held at Lyons, for the purpose of reconciling the differences between the eastern and western churches. Here he signalized himself by his talents and moderation, but died the same year before the session was brought to a conclusion, and was buried in the church of the Cordeliers in that city. Two hundred years after his decease, pope Sixtus IV canonized him, and at the expiration of another century, Sixtus V declared him a doctor of the church. Of his works, which

were collected and printed at Rome in 1583, in eight folio volumes, the principal is a "Commentary on the Master of the Sentences," in which his skill as a controversialist is very favourably displayed.—*Nouv. Dict. Hist.*

BONAVENTURI, an Augustine monk, born at Padua in 1332. He was made general of his order in 1377, and obtained a cardinal's hat from Urban VI in 1384; but entering with great warmth into a dispute concerning certain ecclesiastical rights with Carrario of Padua, that personage had him waylaid by assassins, who shot him with an arrow while passing over the bridge of St Angelo at Rome in 1386. He was the intimate friend of Petrarch, whose funeral oration he pronounced, and was himself distinguished for his love of literature. Among his works, which are entirely on devotional subjects, are commentaries on the epistles of St John and St James.—*Ibid.*

BON de St HILAIRE (FRANCIS XAVIER) a naturalist of the last century, born at Montpellier in France, who distinguished himself by ingenious experiments on manufacturing silk from the webs of spiders. He produced before the Parisian Academy of Sciences, a pair of stockings made of this article, and he wrote "Dissertation sur l'utilité de la Soye des Araignées," 1710, which was translated into Italian and English; and "Memoires sur les Marrons d'Inde." He died in 1761.—*Biog. Univ.*

BOND (JOHN) an English physician, who distinguished himself as a classical scholar and critic, in the beginning of the seventeenth century. He was born in Somersetsbire in 1550, and educated at Winchester school, and afterwards at Oxford, where he took the degree of M.A. in 1579. Being appointed master of a free grammar-school at Taunton, he taught there for many years with great reputation; but at length resigned that office, and engaged in the practice of physic. He died in 1612. Bond is known as the author of concise but useful commentaries on the works of Horace and the satires of Persius.—*Berkenhout's Biog. Lit.*

BONEFACIO (called VANTIANO) a Venetian painter, whom Ridolfi supposes to have been a pupil of Palma, but Boschini numbers him among the disciples of Titian, whom he greatly admired and imitated. His compositions are numerous and ingenious, and in the suavity of his colouring he nearly reaches the perfection of Titian. The public offices in Venice abound in his pictures, and the ducal palace, amongst others, contains an expulsion of the publicans from the temple, which alone would have rendered his name immortal, had not his own times already ranked him with Titian and Palma. He died in 1553, aged sixty-two.—*Ridolfi Pilkington.*

BONET, or BONETUS (THEOPHILUS) a medical writer of eminence in the seventeenth century. He was a native of Geneva, and after studying at several other universities, he took the degree of M.D. and settled in the place of his nativity. He occupied for some time the

office of physician to the duke of Longueville, and at length, after forty years' practice, he withdrew from more active employment to devote himself to literary studies connected with his profession. Among the works which he published, his "*Sepulchretum Anatomicum*" alone requires notice. It is a treatise on morbid anatomy, containing a collection of cases of diseases which proved fatal, with details of the appearances on dissection. It was first published in 1679, and republished with additions by J. J. Mangetus in 1700, 3 vols. folio. Bonet died in 1689, aged sixty-nine.—*Senebier Histoire Littéraire de Geneve*. *Hutchinson's Biog. Med.*

BONFADIOS, or **BONFADIO** (JAMES) a man of letters in the sixteenth century, memorable as affording an example of splendid abilities combined with profligacy of conduct degrading to human nature. He was born in the Brescian territory, near the lake of Guarda, and studied at Padua, whence going to Rome, he became secretary to cardinal Merino, and afterwards to cardinal Ghinucci. He then settled for some time at Padua, till in 1545 he received an invitation to give lectures on philosophy and rhetoric at Genoa. His reputation caused him to be appointed historiographer of the republic; and he composed five books of the annals of Genoa, from 1528 to 1550, when his literary labours were interrupted by his being accused of an unnatural crime, for which he was tried, convicted, and executed. He was sentenced to be burnt alive, but he was beheaded in prison, and his body publicly committed to the flames in July, 1560. In his annals, Bonfadius adopted the Latin language, which he wrote with great elegance; and he was equally successful in his Italian compositions, which consist of orations, letters, and poems.—*Bayle*. *Tiraboschi*. *Teissier Eloges des Hommes Savans*.

BONFINIUS (ANTHONY) an historian of the fifteenth century, whose works are still held in esteem. He was a native of Ascoli in Italy, and for some years was professor of the *belles lettres* at Recanati. In 1434 he was invited to the court of Matthias Corvinus, king of Hungary, and was much favoured by that prince and his successor Ladislaus. He was employed by the former to write the history of Hungary, which he performed in elegant Latin, comprising it in four decades and a half, extending to the year 1495. Of this work there is an edition published so late as 1771 at Leipzig, in folio. He was also the author of an account of the taking of Belgrade by Mahomet II, besides poems and other works. He died in 1710, aged seventy-five.—*Moreri*. *Tiraboschi*.

BONGARS (JACQUES) a calvinistic statesman and scholar in the reign of Henry the Great, born at Orleans in 1554. Having commenced a course of study at Strasburg, he continued it with great reputation under the celebrated Cujacius, with whom he made great proficiency in civil law. On the accession of Henry to the throne of France, that monarch employed him for upwards of thirty

years in various diplomatic missions to the German courts. While at Rome in 1585, he wrote a manly answer to the bull issued by Sixtus V against his master. He was never married, though once on the point of being so, but the match was prevented by the unexpected death of the lady to whom he had paid his addresses for six years, on the very morning appointed for their espousals. He died in 1612 at Paris, leaving behind him many valuable works, among which are an edition of Justin, printed in 8vo at Paris in 1581; "*Le Secretaire sans Tard*," a collection of his epistles written in French; "*Rerum Hungaricarum Scriptores*," folio, Frankfurt, 1600; "*Gestu Dei per Francos*," an account of the French crusades, 2 vols. folio, Hanau, 1611; and especially his Latin letters, which were collected after his death, and published first at Leyden in 1647, and again at the Hague in 1695. The latter is by far the best edition. These epistles have been much admired for their simplicity and elegance, and the purity of their Latinity. They have been translated into French.—*Biog. Univ.*

BONIFACE (SAINT) a zealous prelate of the seventh and eighth centuries, a native of Crediton in Devonshire, originally named Wilfrid, and born about 680. In 715 he commenced, in company with two companions, preaching Christianity to the Pagans of Friseland, and though for a time interrupted by the war raging between Radbod, king of that country, and Charles Martel, he made a second attempt in 719, having been appointed legate by Gregory II, and executed his office of missionary in Thuringia, Hesse, Bavaria, &c. with such success, that on his return to Rome in 723, the pope consecrated him bishop of Germany, and nine years afterwards archbishop. In 746 pope Zachary confirmed him in the primacy of Germany, and created him archbishop of Mentz, in which city he for some time took up his abode; but still eager for the conversion of the Friselanders, he in 752 resigned his see to his friend and scholar Lullus, and proceeded to Utrecht. For upwards of two years he continued to prosecute his design with great success in those parts, but in the summer of 755, holding a confirmation of his proselytes, he and fifty monks, his companions, were massacred by the Pagans. His bones were brought back to the abbey of Fulda which he had founded in 746, and buried there. He afterwards received the honours of a martyr, and was canonized a saint. His writings, which are only remarkable for the barbarity of his style and the ignorance they exhibit of the real nature of the doctrines he was preaching, were published in 4to in 1605, and again in 1629.—*Aikin's G. Biog.*

BONIFACIO (JOHN) a lawyer of Rovigo, born 1547. He received his education in the university of Padua, and distinguished himself by his progress in the *belles lettres*, as well as in his professional pursuits. Besides some dramatic pieces of minor importance, he published an essay on the art of writing tragedy, in 4to; a commentary on the laws of Venice,

4to; a collection of familiar epistles, in 4to; an oration on the occasion of erecting a statue to Celio Ricchiero Rodigino, 4to; a treatise on the mode of instructing the deaf and dumb, entitled "L'Arta de Cenni," 4to; "The Republic of Bees," 4to; "Storia Trevigiana," 4to, republished at Venice 1744; "Discorso sopra la sua Impresa nell' Academia Filarmónica," and "Lezione sopra un Sonetto del Petrarca," 4to. He died in 1635 at Padua. *Biog. Univ. Tiraboschi.*

BONNEFONS, or BONFONIUS (JOHN) a modern Latin poet, celebrated for his amatory compositions. He was born at Clermont in Auvergne in 1534, became a counsellor of the parliament of Paris, and in 1584 was made lieutenant-general at Bar-sur-Seine. He was the author of a poem entitled "Pancharis," in the style of Catullus, which is reckoned the most elegant production of the kind by a modern writer. He likewise wrote pieces in heroic verse, which were much admired. His poems have been often printed. Bonnefons died in 1614. He had a son, distinguished for his compositions in Latin verse.—*Nouv. Dict. Hist. Aikin's G. Biog.*

BONNER (EDMUND) an English prelate of infamous notoriety, was a peasant's son of Hanley in Worcestershire. He was educated at the expense of the Lechmere family, and in due time entered at Pembroke College, Oxford, where he was entered doctor of common law in 1525. For his skill in business he was patronised by cardinal Wolsey, from whom he received several clerical preferments in London and elsewhere. On the death of Wolsey he acquired the favour of Henry VIII, who made him one of his chaplains, and sent him to Rome to advocate the subject of his divorce from queen Catherine. Here he conducted himself with so much fury and intemperance, that the pope is said to have threatened to throw him into a cauldron of boiling lead, on which he thought proper to return. In 1533 he was nominated bishop of Hereford, being then ambassador at Paris; but before his consecration he was translated to the see of London. At the time of the death of Henry, he was ambassador to the emperor Charles V, but returned the same year, when refusing to take the oath of supremacy, he was deprived of his bishopric, to which however he was restored on making submission. Still continuing to act with contumacy, he was after a long trial once more deprived of his see, and committed to the Marshalsea; from which prison, on the accession of Mary, he was released, and once more restored by commission. During this baleful reign, the brutal prelate distinguished himself by a most sanguinary and ferocious persecution of the Protestants, two hundred of whom he was instrumental in bringing to the stake, whipping and torturing several of them with his own hands. When Elizabeth succeeded, he went with the rest of the bishops to meet her at Highgate, but at the sight of her she averted her countenance with a significant expression of disgust. He remained however unmolested until his refusal,

when called upon, to take the oath of supremacy; on which he was once more committed to the Marshalsea, where he remained a prisoner for nearly ten years, until his death in 1569. He was buried in St George's church-yard, Southwark, at midnight, to avoid any disturbance on the part of the populace, to whom he was extremely obnoxious. The character of Bonner is sufficiently represented by his actions: as to acquirements, he was deemed exceedingly well versed in the canon law, and an able diplomatist. Several of his letters, declarations, and injunctions, are to be found in various collections, among which his preface to the oration of bishop Gardiner "On True Obedience," is inserted in Fox's Book of Martyrs. In the preface to this work, written to secure the favour of Henry VIII, he formally vindicates the king's marriage with Anne Boleyn, and speaks of the "tyranny of the bishop of Rome." Some of the Roman Catholics vindicate him as having acted in all his proceedings under the authority of law; but this will not pass in favour of a wretch who did his best to pass such laws, and who personally delighted in the sufferings which he inflicted. This disgusting personage was very corpulent, which induced a punster of the day to remark, that he "abounded with guts, but was devoid of bowels."—*Biog. Brit.*

BONNET (CHARLES) an eminent naturalist, of a French family, born at Geneva in 1720. He was destined for the legal profession, but the accidental perusal of a work on natural history gave him such a predilection for that science, as to induce him to make it the chief object of his attention. When only eighteen, he entered into a correspondence with the French naturalist Reaumur, and communicated to him some curious entomological discoveries. In the spring of 1740 he developed, by careful experiments, some singular facts relating to the production of the aphid (pucceron) a green insect found in numbers on the rose-tree. These discoveries were followed by others concerning worms, polypes, and caterpillars. In 1743 he took the degree of LLD. though he had relinquished all intention of engaging in professional practice. The same year he was chosen a fellow of the Royal Society of London; and in 1744 he published an account of his preceding researches, together with some theoretical speculations, under the title of "Insectology." He next engaged in experiments on vegetable physiology, the result of which appeared in his "Inquiries into the use of the Leaves of Plants," printed at Leyden in 1754, to which he afterwards added supplements. His future productions refer chiefly to speculative science. In 1755 he published in London, anonymously, an "Essay on Physiology," which he did not acknowledge till nearly thirty years afterwards; being apprehensive that the freedom with which he had canvassed existing opinions might involve him in controversy, which he particularly disliked. This work was followed by an "Analytical Essay on the Faculties of the Soul," 1760; "Considerations on Or-

gatzed Bodies," 1762; "The Contemplation of Nature," 1764, 2 vols. 8vo, intended as a popular exposition of his principles, which has been translated into several European languages, and commented on by various writers. Bonnet's last work was his "Philosophical Palingenesis, or Thoughts on the Past and Future State of Animal Beings," 1769, 2 vols. 8vo, attached to which was "An Inquiry into the Evidences of the Christian Revelation and the Doctrines of Christianity," which, together with a tract "On the Existence of God," was separately published in 1770, and has been translated into English and German. He afterwards resumed his attention to natural history, and in 1783 he was elected one of the foreign associates of the Parisian Academy of Sciences. The latter part of his life was spent in retirement, several years being devoted to the correction and revision of his works, which were all written in French, and were printed at Neufchatel, in 9 vols. 4to, and 18 vols. 8vo. Bonnet died of dropsy in the chest, May 20, 1795. He married in 1756 a lady of the family of De la Rive, whose nephew, the celebrated philosopher M. de Saussure, pronounced a funeral eulogy at the interment of his illustrious relative.—*Aikin's G. Biog.*

BONNEVAL (CLAUDIUS ALEXANDER, count of) a very singular adventurer, was born in 1672, of an ancient and noble family of that name in Limousin. He entered early into the French army, and served with distinction under Catinat and Vendome. Some causes of discontent however induced him in 1706 to enter the service of the emperor, for which the minister Chamillart procured a sentence against him of losing his head. Notwithstanding this proscription, he ventured to return to Paris, where he married the daughter of marshal Biron. In 1716 he served under prince Eugene against the Turks, and fought bravely at the battle of Peterwaradin; but in 1720 having treated that general with disrespect and sent him a challenge, he was deprived of all his employments, and condemned to a year's imprisonment. Instigated by revenge on the recovery of his liberty, he went over to the Turks, when turning Mussulman, his services were very acceptable. He immediately received the dignity of a pacha of three tails, and served the grand signior in Arabia, and afterwards against the emperor, over whose forces he gained a victory on the banks of the Danube. Notwithstanding these services he was soon in disgrace, being first imprisoned, and then banished to Chio. He was however still regarded with favour by the sultan, who finally recalled him to Constantinople, and made him topigi bachi, or master of the ordnance. In this situation he made himself exceedingly useful by the introduction of European improvements, and died at the age of seventy-five much esteemed both by prince and people. He was a man of quick parts, great courage, and no great share of principle; who spoke of his conversion to Mahometanism as the change merely of a night-cap for a turban. He was also according to

his own account, one of those constitutional philosophers who are self-satisfied in all situations. He died in 1747, leaving behind him memoirs of his own life, which were published in London in 1755, 2 vols. 12mo.—*His own Memoirs. Nouv. Dict. Hist.*

BONNYCASTLE (JOHN) professor of mathematics at the Royal Military Academy at Woolwich, was born of respectable parents at Whitechurch in Buckinghamshire. Though his education was not neglected, yet he was chiefly indebted to his own exertions for the various and extensive knowledge which he acquired. While young he became an inhabitant of the metropolis; and married when only nineteen a lady named Rolt, on whose death, soon after, he became private tutor to the two sons of the earl of Pomfret, for which office he is said to have been extremely well qualified. After residing two years at Easton in Northamptonshire, he quitted that situation on being appointed one of the mathematical masters at Woolwich. Here, for more than forty years, he devoted his time to the duties of his profession, and to the composition of elementary works on various branches of mathematical science. His first production was "The Scholar's Guide to Arithmetic," which has passed through many editions. His guides to algebra and mensuration have also long been ranked among the most useful school-books extant. He likewise wrote "A Treatise upon Astronomy," 8vo, which was extremely well received; "The Elements of Geometry," 8vo; "A Treatise on plane and spherical Trigonometry," 8vo; "A Treatise on Algebra," 2 vols 8vo; and he was the author of a translation of Bossut's history of the mathematics; and of various articles in the early part of the last edition of Dr Rees's Cyclopædia. He died at Woolwich, May 15th, 1821.—*New Month. Mag.* vol. iii.

BONOMI (JOSEPH) an Italian distinguished for his taste and genius in architecture and the fine arts, who spent a considerable part of his life in England, and died in London in March 1808. He was an associate of the Royal Academy, and was much connected with Sir Joshua Reynolds, Sir Joseph Banks, Richard Payne Knight, and other cultivators of science and art. The Roman Catholic chapel near Manchester-square, was erected from the design of Bonomi.—*Gent. Mag.*

BONTEMPI (GIOVANNI ANDREA ANGELETTI) a musician of the seventeenth century, born at Perugia. He was an excellent composer for the age in which he lived, and published a history of music, folio, Perugia, 1695. In this work he proves the ignorance of the ancients in respect to counterpoint, and gives a curious exhibition of the ancient diatonic system, as applied to the key of a minor exactly corresponding to that of Pythagoras. His other work is "Nova quatuor vocibus componendi Methodus," printed at Dresden in 1660, at which period he was master of the chapel to the elector of Saxony. The time of his death is uncertain.—*Biog. Dict. of Music.*

BONTEMS (MADAME) a native of Paris,

born 1718. She is principally known for a very elegant translation of Thomson's Seasons into her native language. She died in 1768. *Biog. Univ.*

BONTIUS (JAMES the son of Gerard Bontius, professor of medicine at Leyden. He was born at Rotterdam, and after a medical education, went to Batavia as a physician towards the middle of the seventeenth century. In the course of his practice he collected many valuable observations on the diseases and natural history of India. These he published in his "Historiæ Naturalis et Medicæ Indiæ Orientalis Libri vi," and other tracts, which were reprinted in Piso's account of India, Amsterdam 1638, folio.—*Aikin's G. Biog.*

BONJOUR (GUILLAUME) an Augustine friar, a native of Foulouse, born 1670. His reputation for talent and piety obtained him the patronage of cardinal Noris, at the age of twenty-five. He was employed by Clement XI in correcting the Gregorian calendar; and being an excellent Oriental scholar, was afterwards dispatched by that pontiff to China, on a mission of a nature partly religious and partly scientific, in the course of which he commenced a map of the "Celestial Empire," but he did not live to complete it, dying in that country in 1714. He published a grammar of the Coptic tongue, and an account of the manuscripts written in that language and preserved in the Vatican library; a Roman calendar; and dissertations on the scriptures, folio, 1755; and on the name assigned by Pharaoh to the patriarch Joseph, folio.—*Moreri.*

BOON (DANIEL) an officer in the service of the United States of America, who was the founder of Boonsborough, the first settlement in Kentucky. Such was the singular predilection of this gentleman for a solitary life, that, when the province began to be stocked with inhabitants, and other settlements took place in his neighbourhood, he plunged deeper into the wilderness, as if to avoid the society of man. His death was as remarkable as his life. Accustomed to wander alone in the woods with his gun, he continued this practice till he was quite old and infirm, and was at length found dead at a distance from his residence, some time towards the close of the year 1822 or the beginning of 1823.—*New Monthly Mag.* vol. viii.

BOOTH (BARTON) an actor of great celebrity in the reigns of queen Anne and George I, was a native of Lancashire, and born in 1681. His father, who was a man of some property, placed him under Dr Busby at Westminster school, with a view towards sending him to college. An early attachment for the drama on the part of young Booth, fostered not a little by the applause he met with while performing a part in one of Terence's plays at the annual exhibition in that seminary, frustrated this design, the object of it eloping from school at the age of seventeen, and joining Ashbury's company of strolling players with whom he went to Dublin. After performing three years in the Irish capital with great applause, he returned in 1701 to London, and engaging with

Betterton, met with similar success. On the death of that manager he joined the Drury-lane company, and on the production of Cato in 1712 raised his reputation as a tragedian to the highest pitch, by his performance of the principal character. It was on this occasion that lord Bolingbroke, actuated by party motives, presented him from the stage-box with the sum of fifty guineas, an example which was immediately followed by that nobleman's political opponents. Declamation, rather than passion, appears to have been his forte, though Cibber speaks of his Othello as his finest character. He became a patentee and manager of the theatre in 1713, in conjunction with Wilks, Cibber, and Doggett, and survived till May 1733, on the 10th of which month he died, and was buried in Westminster abbey, where there is a monument to his memory. He was the author of "Dido and Eneas" a mask, various songs, &c.; and the translator of several of the odes of Horace.—*Biog. Brit. Cibber's Apology.*

BOOTH (GEORGE) baron DeLamere, so created at the restoration of Charles II. He was the son of William Booth, Esq. heir to a baronetcy enjoyed by an ancient Cheshire family. His father dying before his grandfather, Mr. Booth succeeded the latter in the title during the civil wars, and being defeated while in arms for the king, and taken prisoner by the Parliamentary general Lambert, was committed to the Tower, and continued in confinement till the death of Cromwell broke his bonds. He was now appointed one of the twelve delegates sent to the new king with the tender of the crown, and for his good services received a present of 10,000*l.* and a seat in the house of Peers. His death took place in 1684.—*Biog. Brit.*

BOOTH (HENRY) earl of Warrington, son of the preceding, was born 1651. This nobleman sat in several parliaments during his father's life-time, as knight of the shire for the palatinate of Chester, and in his senatorial capacity took a decided part against the court, especially in voting for the exclusion of the duke of York; a circumstance which was not forgotten on the accession of the latter to the crown, when he was arrested of high treason, and committed to the Tower. On being brought to trial however, a jury of his peers, in spite of the efforts of Jefferies, pronounced him *not guilty*, when he retired awhile from public life, till an opportunity offered for calling in the prince of Orange, an event of which he was an active promoter. William III appointed him a privy counsellor, with the lord-lieutenancy of his native county, and the chancellorship of the exchequer. Falling soon after into disgrace, in consequence of his endeavours to circumscribe as much as possible the royal prerogative, he received an honourable dismissal from office, being allowed to retire with a pension of 20,000*l.* and the earldom of Warrington. Besides several speeches and political tracts, which have been collected and printed in 1694 in one volume, 8vo, he published some "Oo-

servations on the Case of the Lord Russel, &c." 1689, folio. He died January 2, 1694, and was succeeded by his son George, known as the anonymous author of a treatise on "The Institution of Marriage," in which he argues for the legality of divorce in cases of uncongeniality of temper, &c. printed in 8vo. in 1739; and of a pamphlet written against bishop Burnet's censures on his father's character. He died in 1758.—*Ibid.*

BORDA (JOHN CHARLES) an eminent mathematician and astronomer of the eighteenth century. He was a native of Dax in Gascony, and was educated under the Jesuits. His friends designed him for some legal situation, but his strong attachment to mathematical studies induced him to forego the advantages it might have afforded, that he might adopt a more congenial employment. He accordingly became an engineer, and having served as aide-de-camp to M. de Maillebois, at the battle of Hastenbeck in 1757, he was on his return to France appointed inspector of the dockyards. The preceding year he had been chosen a member of the Academy of Sciences, in consequence of a memoir on the motion of projectiles, which he presented to that society. In his new situation he occupied himself in making experiments on the resistance of fluids, the velocity of motion, and other topics relating to dynamical science. In 1767 he published a dissertation on hydraulic wheels, and afterwards one on the construction of hydraulic machinery. He was then sent, in conjunction with Pingre, on a voyage to the South Sea, the object of which was to make experiments on time-keepers, in order to ascertain the value and utility of such instruments in determining the longitudes of places. Of this undertaking he published an account entitled "Voyage fait par ordre du Roi en 1771, 1772," 2 vols. 4to, 1778. When the French government took part in the war between Great Britain and the states of America, Borda served in the squadron of the count d'Estaing, and during the expedition he made many observations on the construction of ships, which led to important improvements in naval architecture. To his ingenuity also mathematicians are indebted for the invention of the astronomical instrument called the *circle of Borda*, relative to which he published a tract entitled "Description et usage d'un cercle de reflexion," 4to. On the establishment of the National Institute he became one of its members; and he was occupied with other men of science in framing the new system of weights and measures, adopted in France under the republican government. Among the latest of his labours was a series of experiments to discover the length of a pendulum which should swing seconds in the latitude of Paris. Besides the works already noticed, Borda published "Tables trigonometriques decimales," 4to, since augmented and reprinted by Delambre. He died at Paris in May 1799, at the age of sixty-four.—*Edinburgh Encyclop. Biog. Univ.*

BORDE (ANDREW) a physician and misc. Biog. Dict.—No. XLX.

cellaneous writer of very eccentric character in the sixteenth century. He was born at Pevensey in Sussex, and educated at Oxford. He left the university without a degree, and entered a Carthusian convent near London. After returning to Oxford he "travelled," as he himself says, "through and round about Christendom, and out of Christendom into some parts of Africa." In 1542 he resided at Montpellier, where he graduated in physic. He afterwards came home, and obtained a doctor's degree at Oxford, and settled at his native place; thence he removed to Winchester, and finally to London, where he is said to have become a fellow of the college of physicians, and physician to Henry VIII. But notwithstanding these honours, he died in the Fleet prison in 1559. Bale and other Protestant writers not only abuse Borde as a quack or a mountebank, but also accuse him of grossly immoral conduct; for which charge there appears to be no just foundation, and it may be ascribed to that spirit of religious animosity by which *bilious Bale*, as Fuller quaintly styles him, was too often actuated. Among the works of this writer are "A Book of the Introduction of Knowledge, the which doth teach a Man to speak Part of all Manner of Language," Lond. 1542, 4to; "The Breviary of Health;" "The merry Tales of the Madman of Gotham;" and "A right pleasant and merry History of of the Mylner of Abington, with his Wife and his fair Daughter, and of twoo poor Scholars of Cambridge." The first of these publications contains thirty-nine chapters, to which are prefixed wood-engravings, representing the inhabitants of different countries. Before that which treats of the English is a figure of a man naked, having a bundle of cloth under his arm, and a pair of shears in his hand. Below are some verses beginning thus—

"I am an Englishman, and naked I stand here,

Musing in my mind what rayment I shall wear."

The wit of this satirical censure is neither very clever, nor very appropriate; and it is more-over said to have been borrowed from an old Venetian caricature of a Frenchman.—*Aikin's G. Biog. Memoirs of Medicine. Berkenhout's Biog. Liter.*

BORDE (JOHN BENJAMIN DE LA) an eminent miscellaneous writer, was born at Paris in 1734. He was first valet-de-chambre to Louis XV, at whose death he was appointed farmer-general, which unsatisfactory office he fulfilled with assiduity, employing his leisure moments in literature and music, in the latter of which his compositions are much esteemed, particularly his "Recueil d'Airs," and a successful opera, entitled "Adela de Ponthieu." His principal works are "Essais sur la Musique ancienne et moderne," 1780, many passages of which are extracted from Dr Burney and others, without any acknowledgement; "Memoirs de Courcy;" "Pieces interessantes pour servir à l'histoire des regnes de Louis XIII et de Louis XIV;" "Lettres sur lu

Suisse," &c. He was gullotined in 1794. His wife also wrote some poems imitated from the English, printed by Didot in 1785.—*Nouv. Dict. Hist.*

BORDEU (**THEOPHILUS DE**) an ingenious French physician, who was a native of the province of Bearn, and was educated at Montpellier. Going to Paris, he soon became eminent in his profession, and was appointed physician to the hospital of La Charité. He was the author of several works which attracted much notice. Among these are "Recherches anatomiques sur la position des Glandes, et sur leur action," 1751; "Recherches sur le Pouls par rapport aux crises," 1756, which was translated into English; "Recherches sur quelques points de l'histoire de la Médecine," 1764; and "Recherches sur le Tissu muqueux et l'Organe cellulaire," 1766. He died of apoplexy in 1776, aged fifty-four.—*Nouv. Dict. Hist.*

BORELLI (**JOHN ALPHONSO**) a celebrated mathematical and medical writer of the seventeenth century. He was a Neapolitan by birth, and studied at Rome, after which he became professor of mathematics at Messina in Sicily. He then travelled for improvement through various parts of Italy, and joined to his former studies that of physic. Subsequently he was professor of natural philosophy and mathematics at Pisa and Florence; and was elected a member of the academy del Cimento. He distinguished himself by his philosophical experiments and researches, especially those relating to the gravity of the air. Notwithstanding he was much favoured by the princes of the Medici family, his love of change induced him to return to Messina in 1667. He continued there till 1674, when he was banished for being concerned in some political commotions which took place in that city. He retired to Rome, and was patronised by Christina, the ex-queen of Sweden, who made him a member of her academy of learned men. He engaged as mathematical teacher in the convent of the regular clergy of St Pantaleon, called the *pious schools*. In this situation he continued till his death, which was occasioned by pleurisy, and took place December 31st, 1679, at the age of seventy-two. His principal work is a treatise "De motu Animalium," finished shortly before his death, and published at the expense of queen Christina; the first volume in 1680, and the second in 1681. It was afterwards republished in Holland. Borelli has in this work attempted to apply mathematics to the illustration of the animal economy; and he has demonstrated by curious calculations the immense force of muscular action. He left many other publications on astronomy, mathematics, and medicine.—*Tiraboschi. Aikin's G. Biog.*

BORGIA (**CÆSAR**.) This conspicuous example of steady and remorseless ambition was the second son of cardinal Rodrigo, afterwards pope Alexander VI, by his celebrated mistress Vanozza. The year in which he was born is not recorded, but destined for the church, he was, while a child, anointed archbishop of

Pampeluna, and then sent to pursue his education at Pisa, where he not only studied with a view to his future profession, but practised also the martial and manly exercises. On the nomination of his father to the pontificate, he was made archbishop of Valentia, and in 1493 was advanced to the purple. This ecclesiastical promotion however did not accord with the inclination of Cæsar, who would have preferred the secular dignities bestowed on his elder brother, Francis duke of Gandia, another of the five children of Alexander by Vanozza. For this reason, and, as it is also asserted, in consequence of the duke of Gandia being his rival in an incestuous attachment to their common sister Lucretia, Cæsar resolved to get his brother assassinated, which murder accordingly took place one evening after they quitted her house together; the wounded body of the duke being found some days afterwards in the Tiber. Public opinion immediately attributed the assassination to Cæsar, and as the pope somewhat suspiciously stopped further enquiry, historians have possibly somewhat too readily taken the fact for granted. On the accession of Louis XII to the throne of France, pope Alexander entered into a negotiation with him, the basis of which was the advancement of his son, who resigned his cardinalate, and was secularised. Louis then created him duke of Valentinois, pensioned him, gave him a command of cavalry, and married him to the daughter of a peer of France. The pope now formed the design of recovering the territory of Romagna to the holy see, with a view of ultimately forming it into a principality for his son; and in consequence the latter came from France at the head of a force of lancers and Swiss, and began his campaign with the sieges of Imola and Forli, which surrendered. He then subdued Pesaro, Rimini, and Faenza, and sent the young lord of the latter fief to Rome, where he was mercilessly put to death. In 1501 he was created duke of Romagna, and proceeded in a course of conquest and usurpation until the Italian states took the alarm, and a confederacy was formed, which Cæsar had the address to dissolve, as usual not without murder, for contriving to get three of the leaders to Senigaglia on the plea of a conference, he caused them to be strangled; and a fourth partisan, cardinal Ursini, after signing an order for the delivery of all the places held by his family to Cæsar, was nevertheless poisoned. At length his detestable father, who co-operated with him in all his plans, and in the murders which were continually occurring, either to remove enemies or procure successions, fell a victim to a concerted scheme to poison cardinal Corneto at a banquet; where, by a mistake, the pope and his son took the poison intended for the cardinal. Alexander in consequence expired; and it was a long time before Cæsar recovered; who now could scarcely appear in Rome without an armed force, owing to the hatred of the people and the enmity of the Ursini family. The countenance of France however supported him, until at length he quitted the French party

and joined that of Spain. In the mean time the Venetians recovered many towns in Romagna; and Julius II imprisoned Cæsar to make him resign the rest. He however escaped to Naples, and was at first well received by the famous Gonsalvo Cordova, who however, by order of king Ferdinand, sent him a captive into Spain, where he was condemned to imprisonment for life; but after two years' confinement, again contrived to escape and reach his brother-in-law, John d'Albert king of Navarre. Accompanying the latter in an expedition against some insurgent subjects, this extraordinary combination of talent and iniquity was killed in a skirmish before the castle of Viana in 1507. Such was the end of a man, whose talents, courage, and perseverance were equal to the greatest attempts; and who in the pursuit of his object, overlooked or overleaped all consideration, and was equally dangerous in the way both of fraud and force. Machiaval, possibly on the disguised plan of satire which has been with some plausibility ascribed to him, speaks of Cæsar Borgia as a perfect specimen of a *great man*. The best answer to the doctrine is supplied by his ultimate fate, even allowing with Roscoe that his crimes have been exaggerated; and that he must have possessed some popular virtues to maintain himself so long at the head of an army, and so strongly to ingratiate the affections of the people whom he subdued. After his death too his talents and accomplishments were loudly celebrated by the poet Strozza: but who have not poets praised?—*Tomasi. Vit di Cesare Borgia. Tiraboschi.*

BORGIA (STEPHEN) an eminent cardinal, was born of a noble family at Velletri in 1731; and from his birth was destined for the church. In 1770 he was appointed secretary to the congregation of the Propaganda, an institution for the propagation of Christianity among the heathens; and a better person for this office could not have been chosen, both on account of his zeal and learning. It was about this time that he laid the foundation of the family museum at Velletri, of a part of which he published a description in 1782, under the title of "Musæum Cusicum." In the same year he caused a capuchin named Gabriele to learn the Armenian language, and sent him on a mission to Astracan to preach in that tongue, and to avail himself of the opportunity to compile an Armenian-Italian dictionary. In 1783 he published a "Vindication of the Rights of the Holy See on the Kingdom of Naples," and in 1789 was promoted to the rank of cardinal, and appointed prefect of the congregation of the Indies. He continued to be the liberal patron of those who were connected with him or his literary pursuits, until Italy was invaded by the French, when he lost all his benefices, though he was soon released from his personal difficulties by a liberal pension from the court of Denmark. On the death of Pius VI, he was chosen to attend the new pope to Paris, to assist at the coronation of the emperor, but being taken ill on his way thither died at Lyons Nov 23 1804 His

literary productions are "Monumento di Giovanni XVI summo Pontifice illustrato," Rome 1750, 8vo; "Breve Istoria dell' antica città di Tardino nell' Umbria," &c. 1751; "Dissertatione sopra un' antica Iscrizione rinuenta nell' Isola di Malta nell', anno 1749," and "Dissertatione Filologica sopra un' antica gemma intagliata." The Borgan MS. as it is styled, is a fragment of a Coptic-Greek manuscript, consisting of about twelve leaves brought from Egypt by a monk, and sent to Borgia. It is printed in "Georgii Fragmentum Græco-Copto Thebaicum," Rome, 1789, 4to.—*Athenæum*, vol. v.

BORLASE (WILLIAM) an eminent English antiquary and topographer. He was born in Cornwall in 1696, and was educated at Exeter college, Oxford, where in 1719 he took the degree of MA. and the same year entered into holy orders. He was presented to the rectory of Ludgvan in Cornwall in 1722, where he resided during the remainder of his life, as the only additional preferment he ever obtained was the vicarage of St Just in the same county. The parish of Ludgvan is rich in fossils, and the whole county of Cornwall exhibits antique monuments, usually supposed to be Druidical. To the investigation of these local curiosities of nature and art, Borlase dedicated all the time he could spare from his professional duties. In 1749 he was chosen a fellow of the Royal Society in consequence of his having communicated to that learned body an essay on the crystal spar, called Cornish diamonds. In 1754 he published "The Antiquities historical and monumental of the County of Cornwall," in folio, of which an enlarged edition appeared in 1769. This was succeeded by "Observations on the ancient and present State of the Islands of Scilly;" and in 1758 was published "The Natural History of Cornwall," folio, a work comprising much curious information relative to the civil history of the county, the stannary courts, boroughs, and Cornish dialect, besides the accounts of its natural productions. In 1766 he received from the university of Oxford the diploma of LL.D. He died in 1772, leaving prepared for the press a "Treatise on the Creation and Deluge," which was never published. As an antiquary, Dr Borlase has the merit of having described with accuracy the objects of his speculations, and of dealing less in fanciful and far-fetched hypothesis than most preceding writers on British antiquities.—*Biog. Brit.*

BORIS GUDENOW, a Russian chief, who was grand-master of the horse to Theodore or Feodor Ivanowitz, emperor of Russia, during whose reign, from 1584 to 1597, Boris governed the state in his name. He is supposed to have contrived the murder of prince Demetrius, the infant brother of Theodore, on whose death, which he is also charged with having procured by poison, Boris was chosen emperor. He banished those whom he supposed to be disaffected to him, and formed foreign alliances to strengthen his authority. but a dreadful famine which occurred in the

fourth year of his reign, caused discontent among his subjects, and soon after Russia was invaded by a Polish army, accompanied by a person who professed to be prince Demetrius, who asserted that he had escaped from the assassins employed to kill him. This pretender, who is supposed to have been a young monk named Griska, was recognised in several parts of the empire, and at length obtained the throne on the sudden death of Boris in 1605, variously reported to have been caused by a violent fit of anger, or by poison. Boris Gudenow displayed much political foresight and ability during his regency, and in the earlier part of his reign, but his inordinate ambition incited him to the commission of crimes, which have disgraced his memory, and left him the character of an unprincipled usurper and assassin.—*Modern Univ. Hist.*

BORN (IGNATIUS, BARON) an eminent mineralogist and miscellaneous writer, born at Carlsburg in Transylvania in 1712. He studied at the Jesuits' college at Vienna, and afterwards at the university of Prague. He then travelled through various parts of Europe, and on his return devoted his attention to natural history, particularly as connected with the art of mining. In 1770 he obtained a situation in the department of mines at Prague. Making a professional tour, he descended into a mine, the air of which was so contaminated with arsenical vapours, as nearly to have occasioned his death; and from the effects of this he never entirely recovered. In 1772 he printed a catalogue of his collection of fossils, which he afterwards sold to the hon. Charles Greville for 1,000*l.* This work gained him great reputation, and was the cause of his being admitted into the Royal Society of London, and other scientific associations. In 1776 he was called to Vienna by the empress Maria Theresa, to arrange and describe the Imperial cabinet of natural history; in consequence of which he published a magnificent work relating to the shells in that cabinet; but the death of the empress prevented the further progress of the undertaking. Born was however patronised by her successor Joseph II, who made him actual counsellor of the mines, and employed his talents in improving the processes for the extraction of metals from their ores. In 1786 he published his treatise on the process of amalgamation, of which there is an English translation by Raspe. His next work was an arranged catalogue of Mad. Raab's collection of Fossils, published in 1790. He was engaged in writing a history of the reign of the emperor Leopold II, and a treatise on mineralogy, at the time of his death, which happened in August 1791. Baron Born was the founder in 1775 of a literary society at Prague, which has produced several volumes of memoirs. He was a zealous member of the association of the *illuminati*, and extremely hostile to the clergy and the monastic orders. Against the latter he wrote a satirical work entitled "*Monachologia*," in which he has parodied the classification and language of natural history, in a descriptive catalogue of the

various orders of monks.—*Townson's Travels in Hungary. Aikin's G. Biog.*

BORRI (JOSEPH FRANCIS) an adventurer of the seventeenth century, who alternately acted the part of a religious fanatic, an alchemist, and a physician. He was the son of a medical practitioner at Milan, and was educated at the Jesuits' college at Rome. After injuring his character, and exposing himself to punishment by his dissolute conduct, he set himself up for an inspired reformer of Christianity, teaching among other strange doctrines the divinity of the Virgin Mary, whom he represented as the fourth person of the Godhead, according to Sorbiere, or as others tell us, an incarnation of the Holy Ghost. Apprehending danger from the Inquisition, he went to Milan, and attracted a number of followers, with whose aid he appears to have formed designs against the government. Some of his associates being imprisoned he took the alarm, and fled to Inspruck, while the Inquisition proceeded against him as a contumacious heretic, in consequence of which he was burnt in effigy at Rome in 1661. Borri contrived by his pretensions to alchemy to impose on the archduke of Austria, and thus obtained money to enable him to travel to Amsterdam, in which city he assumed the character of a physician, or rather a charlatan, who could cure all diseases. Such was his success that he set up a splendid equipage, and lived for some time in a corresponding style of extravagance. At last, finding his credit decline, he set off by night for Hamburg, taking with him all the money and other valuables he could collect. Christina the Swedish queen was his next dupe, whom he cheated of considerable sums under pretence of discovering the philosopher's stone. He then went to Denmark, and was even more successful in imposing on the king, Frederic III, on whose death in 1670, fearing to be called to account, he left the country intending to go to Turkey. Passing through Hungary, just after a conspiracy had been discovered against the Austrian government, he was arrested on the frontiers as a suspected person. Not being concerned in the plot he would have been discharged, but the pope's nuncio at Vienna hearing he was in custody, demanded him in the name of his holiness, as an heretical offender; and the emperor acceded to the requisition, merely stipulating for the life of the criminal. Borri was then taken to Rome, forced to make an abjuration of his errors, and shut up in the prison of the Inquisition. Here he continued for several years, till the French ambassador, the duke d'Estrees, being seized with a complaint which his physicians could not cure, and having derived relief from the prescriptions of Borri, procured him the favour of being removed to the castle of St Angelo, where he was permitted to amuse himself with chemical experiments, and in which he died at an advanced age in 1695. Two tracts were printed in his name at Geneva in 1681; one entitled "*La Chiave del Gabinetto*," the key of the cabinet consisting of letters on alchemy; the other,

"Istruzioni Politiche," political reflexions. Some medical pieces are also ascribed to him.—*Bayle. Sorbriere. Voyage en Angleterre.*

BORRICHIVS (OLAVUS) or Olof Borch, a learned Danish physician, who was the son of a Lutheran minister, and was educated at the university of Copenhagen. After he had commenced the practice of medicine, he was induced to undertake the tuition of the children of the prime minister Gerstorff. In this situation he continued five years, and then set off on his travels through foreign countries, having had the honour to be previously nominated professor of philosophy, poetry, chemistry, and botany at Copenhagen. After having visited England, France, and Italy, he returned home and entered on the duties of his office. He was appointed first physician to the king; in 1686 created counsellor of the supreme court of justice; and in 1689 counsellor of the royal chancery. He died at the age of sixty-three in 1690, after undergoing an unsuccessful operation for the stone in the bladder. Borrichius distinguished himself as an author chiefly by his philological works, among which are "Conspicuum præstantiorum scriptorum linguæ Latinæ;" "Cogitationes de variis linguæ Latinæ ætatibus;" "Analecta philologica et judicium de lexicis Latinis Græcisque;" "De antiqua Urbis Romæ facie Dissertatio." He wrote on chemistry, or more properly on alchemy, tracing its origin from the Egyptians, in his treatises "De ortu et progressu Chemicæ," and "Hermetis, Ægyptiorum ac Chemicorum sapientia ab Hermanni Conringii animadversionibus vindicata." It appears that he was a believer in the transmutation of metals, and other reveries of the alchemists, in support of which he has lavished a great deal of learned research. He likewise was the author of many works on medicine. He wrote an account of his own life, published by Fred. Rostgaard.—*Aikin's G. Biog. Moreri.*

BORROMEIO (CHARLES) a celebrated Roman saint and cardinal, was born at Arena in the Milanese, in 1538. He was sent for to Rome by his uncle Pius IV, who created him cardinal in 1560, and afterwards archbishop of Milan. Notwithstanding his youth, for he was then but twenty-two years of age, he conducted the affairs of the church with great zeal and prudence, and became a liberal encourager of literature. The young cardinal lived in great splendour, and his uncle delighted with his magnificence, furnished him with ample means to support it. He very soon became at once grand penitentiary of Rome, arch priest of St Mary Major, protector of several crowns and various orders, both civil and military, legate of Romagna, Bologna, and of the marche of Ancona. It was about this time that the famous council of Trent was held, at which much was said about the reformation of the clergy, of which Charles immediately gave an example in himself, by discharging eighty livery servants, leaving off silk apparel, and imposing upon himself a weekly fast of bread and water. He converted his house into a seminary of bishops, established schools and

colleges, and interested himself in all works of public utility, particularly such as had charity for their object. He attempted to reform many of the monastic orders, and amongst others, that of the Humiliati, which so exasperated a wretched friar belonging to it, that he fired a gun at him while at prayers with his domestics. He fortunately escaped with a slight wound, but the assassin was punished with death, and his order abolished. He wrote a great number of works upon doctrinal and moral subjects, which were printed at Milan in 1747, in five volumes folio; thirty-one volumes of his manuscript letters are contained in the library of St Sepulchre in that city. He died in 1594, at the early age of forty-seven, and was canonized in 1610 by Paul V.—*Life by Touron.*

BORROMEIO (FREDERIC) also a cardinal and archbishop of Milan, was cousin-german to the preceding, by whom he was placed in his newly-founded college at Pavia, and whose virtues he imitated. He was the founder of the celebrated Ambrosian library at Milan, which during his life was enriched with ten thousand manuscripts, collected by Antony Oggiate, whom he created librarian. He died in 1632, leaving several pious works, which are now very scarce, but of which the principal are—"Sacri Ragionamenti," Milan, 1632-1646, 4 vols. folio; "Ragionamenti Spirituali," *ibid.* 1673-1676; and "De Piacere della mente Christiana," *ibid.* 1625.—*Moreri.*

BORROMINI (FRANCESCO) the son of an architect of Bissona, born 1599. His father brought him up to his own profession, placing him at Rome under Muderno, the architect of St Peter's, to whom he was distantly related; and on his death in 1629 under his successor Bernini. The reputation of the pupil soon rose so high, that it equalled that of the master, whose open rival he became. The king of Spain rewarded him magnificently for a design which he made for the enlargement of his palace at Rome, and made him a knight of St Jago. He also received a pension and the order of Christ from the pope; but the caprices to which he at length gave way in the construction of some of his edifices, remarkable for their whimsicality and the incongruous appearance of their ornamental parts, rendered him obnoxious to criticism, as being offensive to true taste, and his old opponent Bernini being appointed to the superintendance of a building for which he had furnished the designs, the consequent mortification threw him into a state of frenzy, in which suddenly seizing a sword, he inflicted on himself a mortal wound, and died in 1667. The college of the Propaganda and the oratory of the Chinese Nona are reckoned among his best productions.—*Novv. Dict. Hist.*

BOS (LAMBERT) an eminent scholar, son of the rector of the college at Worcum in Holland, born in 1670. He completed his education under his relation Vitringa, at Franeker, where he became Greek professor in 1704, and continued in that situation till his death in 1717. His edition of the Septuagint with

Prolegomena and various readings, printed in 1709 at Franeker, in 2 vols. 4to, displays deep erudition. Among his other works are—"Exercitationes Philologicæ, &c." 8vo, 1700, reprinted in 1715; "Antiquitatum Græcarum Descriptio;" "Animadversiones ad Scriptores quosdam Græcos;" "Thomæ Magistri Eclogæ cum Notis;" an improved edition of Viterius' Greek grammar, and a treatise in great estimation with grammarians, entitled "Mysterii Ellipseos Græcæ expositi Specimen," a variorum edition of which appeared at Leipsic in 1809. His decease is said to have proceeded from consumption, the progress of which was much hastened by intense application.—*Ibid.*

BOSC (PETER DU) an eminent Calvinist divine of the seventeenth century, the son of a lawyer of Rouen, born February 21, 1625, at Bayeux, and educated at Montauban and Saumur. Having taken orders in 1646, he was appointed preacher to the Protestant congregation at Caen, where he distinguished himself by the boldness of his doctrines and the eloquence with which he defended them. In 1664 an attack made by him on auricular confession, drew down the resentment of the Catholics, who succeed in getting him banished to Chalons; but before the expiration of the year, from the interference of powerful friends, he was permitted to return to his ministry. His talents and address even gained him the favour of Louis XIV himself, towards whom he always expressed the most unbounded loyalty; and his intercession with that monarch was on more occasions than one powerful enough to procure considerable indulgences for the persons of his own persuasion. At length however the feeling of the court against the Protestants became too strong for him to be able any longer to avert the storm from their heads. A decree of the parliament of Normandy prevented him in 1685 from any longer exercising his ministry in that province, and the revocation of the edict of Nantes drove him to Holland, when he settled at Rotterdam, and died in that city January 2, 1692. He published four octavo volumes of discourses, some of which exhibit fine specimens of pulpit oratory; and left behind him in manuscript a variety of orations, letters on controversial subjects, poems in several languages, and other miscellaneous pieces, which after his death his son-in-law, Monsieur Le Gendre, collected and published in 2 vols. 8vo.—*Life by Le Gendre.*

BOSCAGER (JOHN) a celebrated French lawyer of the seventeenth century. He was a native of Beziers, who going to Paris when young, studied under his uncle La Forest, an eminent professor of law in that city. Such was his application, that at the age of twenty-two he gave lectures himself, during the illness of his relative, whom he afterwards succeeded. His mode of teaching was peculiar. He reduced the whole of legal science to certain fixed principles, whence he drew consequences comprehending all the particulars of each topic. He wrote a treatise on Roman and French law, and another entitled "De

Justitia et Jure," published after his death which took place in 1687, in consequence of an accident, at a very great age.—*Moreri.*

BOSCAN (JOHN ALMOGAVER) a Spanish poet, was born 1490, of a noble family at Barcelona, and is supposed to have died about 1543. He was originally intended for the profession of arms, but being an excellent scholar, proved greatly successful in the education of Ferdinand, the able but execrable duke of Alva, whose tutor he became. His works are published with those of his poetical coadjutor Garcilaso, under the title of "Obras de Boscan y Garcilaso," 4to, 1544. He also left a prose translation of the courtier of Castiglione, no less admirable than his poetry. It is to Boscan that Spanish poetry owes the introduction of the hendecasyllabic verse.—*Antoni's Bibl. Hisp.*

BOSCAWEN (HON. EDWARD) a British admiral of the last century, conspicuous for his nautical skill and bravery, a native of Cornwall, and second son to Hugh viscount Falmouth. He was born in 1711, and having entered the royal navy early in life, was appointed in 1740 to the Shoreham, in the command of which vessel he distinguished himself at Porto Bello and at Carthagena, where he stormed a battery at the head of a part of his crew. In 1744 he was promoted to the Dreadnought, a sixty gun ship, in which he took the Media, commanded by M. Hocquart. Three years afterwards he signaled himself under Anson at the battle of Cape Finisterre, in which action he again captured his old antagonist Hocquart, who had been exchanged. Towards the close of this year, he was raised to the rank of rear-admiral, and dispatched with a squadron to the East Indies. In these parts, though failing in an attempt on the settlement of Pondicherry, he succeeded in making himself master of Madras, and returned to England, where, during the ensuing peace, he obtained a seat at the Admiralty-board. In 1755 he again sailed for North America, and in an action with a French squadron, the evil fortune of Monsieur Hocquart compelled him a third time to strike to the conqueror, who had singularly enough subdued him twice before. On this occasion two ships of the line fell into his hands. In 1758, in conjunction with lord Amherst, who commanded the land forces, he succeeded in reducing Louisbourg and Cape Breton; and the year following, having then the command in the Mediterranean, pursued the Toulon fleet under De la Clue through the straits of Gibraltar, and coming up with it in Lagos Bay, completely defeated it, burning two ships and taking three. For these services he received the thanks of parliament and 3000*l.* a year, with the rank of general of marines in 1760. He did not long enjoy his honours, but died in the January of the following year of a bilious fever. He had married, about the age of thirty, the daughter of W. E. Gianville, Esq. and sat in the parliament of 1743 as member for Truro in his native county.—*Campbell's Lives of the Admirals.*

BOSCAWEN (WILLIAM) nephew of the

admiral of that name, and son to his younger brother, general George Boscawen, born 1752. From Eton he was placed at Exeter College, Oxford, for a few terms, and thence removed to the Middle Temple, where he studied under Mr (afterwards judge) Buller, till he was called to the bar. He obtained a commissionership of the victualling board and of bankrupts, and died in 1811, leaving a large family by his wife, the daughter of archdeacon Ibbetson. In addition to a professional work on convictions upon penal statutes, he published an essay on the progress of satire, and a translation of Horace, besides occasional contributions to various periodical reviews and magazines.—*Gent. Mag.* 1811.

BOSCOVICH (ROGER JOSEPH) an astronomer and geometrician of distinguished eminence in the eighteenth century, who was a native of Ragusa in Dalmatia. He was educated among the Jesuits, and entering into their order, was appointed professor of mathematics in the Roman College, before he had entirely completed the course of his studies. He was employed by pope Benedict XIV in various undertakings, and in 1750 began the measurement of a degree of the meridian in the ecclesiastical states, which operation occupied him for two years. He afterwards visited the Pontine marsh, to give advice respecting its drainage. He was then entrusted by the republic of Lucca with the defence of its interests, in a dispute about boundaries with the government of Tuscan. This affair obliged Boscovich to go to Vienna, and having terminated it with success, he visited Paris and London. He was elected a fellow of the Royal Society, and to that learned body he dedicated a Latin poem on eclipses. Returning to Italy, he was appointed mathematical professor in the university of Pavia; whence in 1770 he removed to Milan, and there he erected the celebrated observatory at the college of Brera. On the suppression of the order of Jesuits, he accepted an invitation to France from Louis XV, who gave him a pension of 8000 livres, with the office of director of optics for the navy. This appointment induced him to pay particular attention to that part of optical science which treats of the theory of achromatic telescopes; on which subject he wrote a treatise of considerable extent. He was obliged to leave Paris in 1783, on account of ill health, when he retired to Milan, where he died February 12, 1787. A collective edition of the works of father Boscovich was published by himself in 5 vols. 4to, 1785. His "Theoria Philosophiæ Naturalis reducta ad unam legem virium in Natura existantium," first published in 1758, is a curious production, containing speculations of which Dr Priestley has availed himself, in his writings in favour of materialism. *Novv. Dict. Hist. Aikin's G. Biog.*

BOSSU (RENE LE) an eminent French critic, was born at Paris in 1631. He received his early education at Nanterre, and years afterwards entered a member of the religious fraternity of St Genevieve. He at first studied philosophy and theology, but was afterwards

made professor of *belles lettres*, and taught in that capacity in several of the houses of the society. At length allowed to live in lettered tranquility at St Genevieve, he published his "Parallel of the Philosophy of Descartes and of Aristotle," which was followed by his popular "Treatise on Epic Poetry." Many of his compositions remain in MS. at the abbey of St John at Chartres, of which he was superior. Bossu possessed a penetrating mind, and his treatise on the epic contains many acute and sensible remarks; but he refined too much in his discoveries, and his theory, that Homer first fixed on a moral, and then composed a narrative to illustrate it, has been justly exposed by Drs Blair and Warton. The best edition of this work is that of the Hague, 1714, edited by Courayer.—*Moreri. Blair's Lectures on Rhetoric, &c.*

BOSSUET (JAMES BENIGNUS) bishop of Meaux, celebrated for his eloquence as a pulpit orator, and his strength and acumen as a controversialist, was born in 1627 at Dijon, of an ancient family much distinguished in the long robe. He was placed very young under the care of the Jesuits, who, as usual on the discovery of his abilities, sought to gain him for the order, but were defeated by the care of his uncle. He was then removed to Paris, and entered at the college of Navarre, and in 1652 took his degrees in divinity, and went to Mentz, where he was made a canon. Here he applied himself chiefly to the study of the Scriptures and of the writings of the fathers, especially of St Augustin; and shortly becoming a celebrated preacher, was invited to Paris, and appointed in 1661 to preach before the king. It was about this time that he excited so much attention by his funeral orations, which are still considered as surpassing every production of the kind in the French language, for sublimity and pathos, although the admiration of the foreign reader will not always correspond with native enthusiasm, as to all the beauties enumerated. His style of preaching was lofty, free, and animated; and he seldom wrote more than a few heads, but trusted to his copious and commanding eloquence. At court he fully maintained the dignity of character his abilities were calculated to establish, and without any solicitation on his own part was created bishop of Condom; a dignity which he resigned on being appointed preceptor to the dauphin in 1670. In this situation he wrote for his pupil his celebrated "Discourse on Universal History," regarded as the most masterly of his performances. When the prince's education was completed, Louis XIV raised him to the see of Meaux, and appointed him a counsellor of state, and almoner to the dauphiness and duchess of Burgundy. He was also equally honoured by the learned world, being made a member of the French academy and superior of the Royal college of Navarre. The comparative leisure which he now enjoyed, was devoted to the defence of the Catholic church, both against infidels and Protestants. Some years before his death he however retired to his diocese and devoted

his leisure to the duties of his episcopal and pastoral functions, in the comfort, instruction, and relief of the unlettered, the afflicted, and the indigent of his diocese. He died while thus engaged in 1704, at the age of seventy-seven. As an historian, or rather reviewer of history, this eminent prelate has displayed considerable genius, but it has been justly observed, that he dwells with too much complacency upon the Israelitish theocracy as a system, and has treated history more like a churchman than either a philosopher or a politician. As a controversialist he is distinguished by great logical acuteness, and infinite dexterity in exposing the weak points of an opponent and concealing his own. These qualities are particularly exhibited in his celebrated "Exposition of the Roman Catholic Faith," addressed principally to Protestants, which however was nine years waiting the approbation of the pope. The points on which he chiefly lays stress, are the antiquity and unity of the churches, the accumulated authorities of fathers, councils, and popes, and the necessity of a final umpire in affairs of faith and discipline. In all these points however, he was ably answered by Claude and other ministers of the French Calvinists, as also by archbishop Wake, who in his "Exposition of the Doctrine of the Church of England," exposes much management and artifice in the suppression and alteration of Bossuet's first edition. Bossuet was very zealous for the reunion of the churches, but nothing was to be yielded as a matter of right; but he thought that the sacramental cup might be extended to the laity as in favour. He was not however an advocate for the infallibility of the pope, or for his assumed right of deposing kings. On the contrary, he resisted these doctrines with energy, and lost a cardinal's hat by opposing Innocent XI in claims contrary to the independence of the crown of France, and to the liberties of the French clergy. He also attacked Quietism, and triumphed over the amiable Fenelon with some harshness on that account. He was however a professed enemy to persecution, but does not appear to have remonstrated with Louis against his merciless treatment of the Hugonots. On the whole, Bossuet was a man of great genius, lofty spirit, and extraordinary vigour of mind; which high qualities were alloyed by pride and a deficiency of simplicity and candour, his character forming a moral contrast to that of the excellent archbishop of Cambray. His works were published in 1743, in 20 vols. 4to, and many of them have been often reprinted in various forms. His discourse on universal history and his funeral orations, are however the only productions which are now much attended to. His French style, although occasionally unequal, is excellent, and the French Academy long deemed him a member from whom the body derived very high honour.—*Eloge par Alembert. Nouv. Dict. Hist.*

BOSTON (Joun) a monk of St Edmund'sbury, who early in the fifteenth century drew up a catalogue of manuscripts in the libraries

of the English universities and monasteries, with the lives of the authors. It is extant in manuscript, and is curious as being the earliest work on literary history produced in this country. He also wrote a treatise on monachism, entitled "Speculum Cœnobitarum," printed at Oxford in 1722.—*Tanneri Bibliot. Britannico-Hibernica. Berkenhout's Biog. Lit.*

BOSWELL (JAMES) a Scottish gentleman of a good family, who was educated for the bar, well known as the friend and biographer of the celebrated Dr Samuel Johnson. He was the son of a justice of the court of session, designated from his estate lord Auchinleck, and was born at Edinburgh in 1740. After some previous instruction at the high-school of his native city, he studied the civil law at this university there and at Glasgow. In 1763 he visited London in his way to the Continent, and it was at this time that he formed an acquaintance with Dr Johnson. Soon after he went to Utrecht to pursue his legal studies. Thence he proceeded to Switzerland, Italy, and Corsica, where he became intimate with general Paoli, at that time engaged in supporting the struggle of his country for political independence. Boswell returned in 1766 to Scotland, and was admitted an advocate in the courts of law. At that time a lawsuit was carried on relative to the Scottish titles and estate of the duke of Douglas, which was claimed by a person whose legitimate filiation was disputed, but whose claim, as nephew and heir of the last possessor, was ultimately established by a decision of the house of peers. In this affair Boswell took an active part, and published a pamphlet, entitled "The Essence of the Douglas Cause," which gained him a great deal of credit. In 1768 appeared his "Account of Corsica, with Memoirs of General Paoli," 8vo, a work containing a good deal of interesting information, but displaying the ardent character and amusing egotism of the author, in a manner so highly singular, as to expose him to the satirical censure of the critics. In 1773 he was chosen a member of a literary club in London, a circumstance which, together with his passionate admiration of the society and conversation of Dr Johnson, induced him to spend much of his time in the metropolis of England, though he continued to practise at the Scottish bar. The same year he accompanied his friend Johnson on a tour to the Scottish Highlands and Hebrides, of which excursion he published "A Journal," in 1785. Succeeding to the family estate on the death of his father in 1782, he soon after removed to London, and was called to the English bar, but he never obtained much practice as a counsellor. Dr Johnson died in 1784, and Boswell began to prepare for the press memoirs of his "illustrious friend," for which he had been collecting materials during nearly the whole course of their intimacy. This work, entitled "The Life of Samuel Johnson, LL.D.," was published in 2 vols. 4to, in 1790, and has been repeatedly reprinted. The stores of literary anecdote which are contained in this production, the minute and ap-

parently accurate information which it displays relative to the habits, manners, and conversation of Johnson, and the romantic attachment of the author to his subject, render this book one of the most entertaining pieces of biography in the English language. The only appointment Boswell obtained in the line of his profession was that of recorder of Carlisle. He seems indeed to have neglected legal occupation for the sake of his great literary connexion. Besides the works mentioned he was the author of a political pamphlet, a series of essays in the London Magazine entitled "The Hypochondriac," and several fugitive pieces in prose and verse. He died May 19, 1795, leaving two sons and three daughters by his wife, whose maiden name was Montgomery.—*Chalmers' Biog. Dict.*

BOTH (JOHN and ANDREW) two eminent painters, were natives of Utrecht, and pupils of Abraham Bloemaert. To perfect themselves in their art they went to Rome, where they remained several years. Claude Lorraine became the model of the elder John, and Andrew excelled in figures after the manner of Bamboccio; and thus qualified, they continued to assist each other until the death of Andrew, who was unfortunately drowned in a canal at Venice. John returned to Utrecht, where he continued to paint landscapes, until the death of his brother continually preying upon his mind, he died in 1650, five years after him. Their pictures are much admired all over Europe, and are purchased at very high prices.—*Pilkington.*

BOTTONER. See WORCESTER, (WILLIAM of)

BOTT (JOHN DE) a French engineer and architect, born 1670, of Protestant parents. His religion proving an obstacle to his success in his own country, he repaired to the Netherlands, and entered into the military service of William prince of Orange, whom he attended on his English expedition. On the decease of his patron he joined the Prussian army, and obtained the commission of major-general in that service, but quitted it in 1728 for that of the elector of Saxony. Several strong fortifications on the Wesel, the arsenal at Berlin, and some of the principal public buildings at Dresden, attest his architectural skill. He died in the last-mentioned capital, a general of engineers, in 1745 in his seventy-fifth year.—*Nouv. Dict. Hist.*

BOTTICELLI (ALEXANDER) a Florentine artist, born 1437. He studied painting under Lippi, whose manner he successfully imitated, and was one of the earliest engravers, having learned the art from Baldinni, and applied it to the illustration of an edition of Dante's works, printed 1488. Two pictures of his, Venus rising from the sea, and the same goddess adorned by the Graces, are highly spoken of, and those from his easel on the walls of Sixtus the Fourth's chapel at Rome were much admired. Though in the receipt of considerable sums, he died poor at Rome in 1515.—*Bryan's Dict. of Paint. and Eng.*

BOUCHARDON (EDMUND) an eminent

sculptor, was the son of a sculptor and architect at Chaumont in Bassigny, where he was born in 1698. After passing some time at Paris under the younger Coustou, and gaining the prize at the Academy in 1722, he went to Rome at the king's expense. On his return from Italy, where he was much improved, he adorned Paris with his works; a list of which are published in his life by count Caylus, who relates an anecdote of him, which says more for his taste than his erudition. The count found him one day in his workshop, with a book in his hand, in unusual agitation; and on seeing him he exclaimed: "Since I have read this book, men seem to be fifteen feet high, and all nature appears enlarged." It was an old miserable French translation of Homer. He died in 1762.—*Ibid.*

BOUCHER (JONATHAN) an English divine, a native of Bleucogo, Cumberland, born 1738, and educated at Wigton grammar-school. Having taken orders, he crossed the Atlantic, and obtained the living of Hanover in Virginia. Being a royalist from principal, the success of the Revolution drove him once more to England, where he became first curate, and eventually vicar of Epsom, Surrey. His works consist of a series of discourses on the American revolution, a reply to bishop Watson's letter to the archbishop of Canterbury, 1783, 4to; a small work, entitled "The Cumberland Man," with a few assize and other sermons. He was fond of antiquarian pursuits, and besides contributing to Hutchinson's history of his native county, had made some progress in an archaeological and provincial glossary; the first part of this work was printed after his death, which took place in 1804.—*Gent. Mag.*

BOUCICAULT (marshal) or JOHN LE MAINGRE, count of Beaufort, and (by marriage) viscount of Turenne, a celebrated French warrior of the fifteenth century. He was the son of the first marshal Boucicault, and was instructed in the use of arms when very young. At the battle of Bosbec in 1382, he served as page of honour to Charles VI, and obtained the rank of knighthood. In 1396 he went with the count de Nevers, afterwards duke of Burgundy, on a crusade against the Turkish sultan Bajazet. At the battle of Nicopolis, Boucicault, the count, and most of his officers were taken prisoners. The captives in general were massacred, but Nevers and Boucicault were saved and allowed to return home. The latter, in 1400, was sent with a small body of French troops to assist in defending Constantinople against Bajazet, when he distinguished himself by his conduct and bravery; but after a year's service he was obliged to return to France. He then became governor of Genoa, which post he held for several years, during which time he engaged in an expedition to Syria, and afterwards added to the French dominion Pisa. In 1409 he seized on the city of Milan, whither he had been invited by the Guelph faction, one of the two grand political parties, whose quarrels at that period interrupted the peace of Italy. Their enemies, the Ghibelines, took advantage of the absence of

marshal Boucicault to expel the French from Genoa, and he was obliged, after suffering a defeat, to make his retreat to France. In 1415 he commanded the vanguard at the battle of Agincourt, where he was taken prisoner. He was removed to England, where he continued till his death in 1421. This great commander was fond of music and poetry; and is said to have composed ballads, rondeaus, and virelays, in the fashionable taste of the age in which he lived.—*Moreri. Aikin's G. Biog.*

BOUFFLERS (LOUIS FRANCIS, duke of) a distinguished peer and marshal of France, was born in 1644. He early showed great military talents and distinguished himself as a colonel of dragoons under Crequi and Turenne. After many signal exploits, he gained extraordinary honour by the defence of Lille in 1708. The siege lasted four months, and when at length obliged to submit, prince Eugene observed to Boufflers: "I am very vain in having taken Lille, but I should still prefer the glory of having defended it like you." The king of France rewarded him for this service, by creating him a peer of France, and giving the reversion of the government of Flanders to his son. Boufflers was as distinguished for generosity of character and munificence as for bravery and military skill, and not only indignantly rejected a half proposal to unfairly kill prince Eugene during the siege of Lille, but even threatened to confine the person who had ventured to make the observation. It is related in the continuation of the history of England by Rapin, that when king William took Namur in 1695, he made Boufflers prisoner, in violation of the articles of capitulation. On his remonstrance against this conduct, he was answered that it was in the way of reprisal, because the French having detained the garrisons of Dixmude and Deuise in the same manner. "In that case," replied the marshal, "my garrison ought to be arrested, and not I." "Sir," he was answered, "you are valued at more than ten thousand men." He died at Fontainebleau in 1711, aged sixty-eight.—*Moreri. Nouv. Dict. Hist.*

BOUGAINVILLE (JEAN PIERRE DE) the son of a notary at Paris, born December 1, 1722. He received his education at Beauvais, and first distinguished himself by his translation of Polignac's "Anti-Lucretius," printed in two octavo volumes. The patronage of Freret, secretary to "L'Academie des Inscriptions, &c." obtained him admission into that society, where he ultimately succeeded his friend in the secretaryship. Although at first repulsed with some harshness in his attempt to be elected into the French Academy, Duclos their secretary remarking, in allusion to the state of his health, that it "was not the business of the academy to administer extreme unction," he eventually carried his point, and became a member of that society in 1754. His other works, besides occasional papers of value in the memoirs of the academy, are a clever and eloquent, but somewhat inflated parallel between Thamas Kouli Khan and Alexander the Great, and a tragedy, entitled "Philip

of Macedon." He also translated the hymn of Cleanthes, and edited Freret's great work on chronology. He died June 23, 1763, at the castle of Loches, of an asthma, brought on by intense application.—*Ibid.*

BOUGAINVILLE (Louis —) a celebrated French navigator of the eighteenth century. In 1768 he had the command of an expedition of discovery fitted out by the French government, with which he went to the South Sea, visited the Society Islands, the New Hebrides, New Guinea, and several neighbouring islands, and after sailing round the world, returned home in 1769. In the course of this voyage he made several important discoveries, and obtained much curious information relative to the countries he explored, and the manners and customs of the people by whom they were inhabited. His "Voyage round the World," translated from the French, was published in London 1772, 4to. He also published an account of a voyage to the Falkland Islands. This enterprising seaman, after escaping the numerous perils which necessarily attended his professional pursuits, was destined to become the victim of popular fury. He was killed by a mob at Paris, August 10th, 1792.—*Biog. Univ.*

BOUGEANT (GUILLAUME HYACINTHE) a French Jesuit, born Nov. 4, 1690, at Quimper. He became connected with the *Journal de Trevoux*, in which he printed various miscellaneous papers, till publishing a *jeu d'esprit* in one 12mo vol. entitled "Amusement Philosophique sur le Language des Betes," in which he feigned that brutes are animated by evil spirits, certain matter-of-fact personages about the court conceived him to be serious, and procured his banishment to La Fleche, for the heterodoxy of his opinions. His exile however was but short, the ridicule of the thing becoming apparent. His other works are a "History of the Wars, &c. of Louis XIII," which led to the Treaty of Westphalia," 2 vols. 12mo; "An Exposition on the Christian Doctrines by question and answer," 4 vols, 12mo; "Anacreon and Sappho," in Greek verse, 8vo; "Recueil d'observations Physiques tirees des meilleurs eccrivains," 12mo; three comedies, and a romance entitled "The Wonderful Voyage of prince Fan-Feredin," &c.; but his most esteemed work "The History of the Treaty of Westphalia," in two quarto volumes, did not appear till some time after his decease, which took place at Paris, Jan. 7, 1743, and is said to have been accelerated by the irritation arising from perpetual attacks of his literary opponents.—*Nouv. Dict. Hist.*

BOUGUER (PIERRE) an eminent mathematician, hydrographer, and geometrician, a native of Lower Brittany, born at Croisic in that province, Feb. 10, 1698. He was placed by his father John Bouguer, hydrographer to the king, at the Jesuits' college in Vannes, when only eleven years old, at which early age his proficiency in mathematics was so great that in less than two years after, he publicly defeated the professor of that science upon an abstruse proposition, which the latter is said

to have taken so much to heart that he resigned his chair. His father dying when he was fifteen, though so young he was considered fully capable of succeeding to his office, and after a severe examination received the appointment. In 1727, being then under thirty, and in the two following years, he gained the prizes of the Royal Academy of Science for improved methods of masting ships, taking the elevation of the stars at sea, and ascertaining the variation of the compass; and in 1729 published an optical treatise on the gradation of light. He now removed to Havre, and having become in 1731 associate geometriician of the Academy of Sciences, by the cession of Maupertuis, proceeded in 1635 as pensioner-astronomer, in company with Condamine, Jussieu, and Godin, to measure a degree of the meridian among the Cordilleras in South America, an undertaking which occupied the party about ten years. While on this expedition Bouguer was very successful in making many philosophical discoveries not immediately connected with its object, concerning the expansion and contraction of metals, the refraction and density of the atmosphere, the reciprocation of the pendulum, the mode of measuring the force of light, &c. and invented a new barometer, and other useful philosophical apparatus. Besides his writings in the *Journal des Savans*, to which he contributed during three years, he published a treatise "On Navigation and Pilotage," 1752, 4to; "The Figure of the Earth determined by Observations made in South America," 4to, Paris, 1749; a treatise "On the Construction of Ships," &c. 1756, 4to. In 1768 La Cuille abridged his "Navigation and Pilotage," in one vol. 8vo, which is considered a very valuable treatise. Though rough in his manner from the little acquaintance he had with the world, he was keenly alive to his literary reputation, and his constant disputes with his coadjutor Condamine are attributed to that feeling. He died August 15, 1758.—*Nouv. Dict. Hist.*

BOUIER (JEAN) an eminent French scholar, remarkable for the variety and profundity of his literary attainment. He was born in 1673 at Dijon, and being bred to the legal profession succeeded his father in the office of president à mortier, in the parliament of his native city. In 1727 his literary reputation caused him to be unanimously elected a member of the French Academy, which circumstance, combined with his increasing infirmities from reiterated attacks of gout, induced him to resign his official situation at Dijon. In 1746 this disorder getting into his stomach, carried him off in the seventy-third year of his age. He is reported to have met the approaches of death with great tranquillity, intimating to the bystanders that he was watching its symptoms in his last moments. Besides two professional treatises on "Custom of Burgundy," and on "Divorce by reason of Impotence," he published "Letters on the Therapeutæ," "Dissertations on Herodotus," &c. He also translated the civil war of Pectronius, with part of the works of Ovid and

Virgil into French verse, and the third and fifth parts of Cicero's Tusculan questions; the abbé D'Olivet completing the work. *Nouv. Dict. Hist.*

BOUHOURS (DOMINICK) a celebrated man of letters, and critic in the French language, was born at Paris in 1628, and entered into the society of Jesuits' at the age of sixteen. The first work by which he distinguished himself, was "Les entretiens d'Ariste et d'Eugene," a pleasant miscellany on matters of criticism and taste; although exhibiting no small portion of affectation. In this work, with the mixture of vanity and vivacity so natural to Frenchmen, he much offended the Germans, by making it a question "Whether it be possible that a German can be a wit?" a query which has long since been very adequately replied to. This production so pleased the minister Colbert, that he made father Bouhours preceptor to his son, the marquis de Seignelai. His remaining principal works are "Remarques et Doutes sur la Langue Française," 3 vols. 12mo, exhibiting much grammatical refinement; "Maniere de bien penser sur les Ouvrages de l'Esprit," which production is much commended by Voltaire; "Pensées ingénieuses des Anciens et des Modernes," 12mo; "Pensées ingénieuses des Pères de l'Eglise;" and the lives of d'Aubusson, St Ignatius, and St Xavier, the latter of which was translated by Dryden, to please the queen of James II, who attributed the birth of the pretender to the intercession of that saint. Bouhours was a man of great amenity and elegant manners; but was necessarily involved by his criticisms in much literary contention.—*Nouv. Dict. Hist.*

BOUILLE (Marquis de) lieutenant-general in the army of Louis XVI, and a knight of the order of St Esprit, born of a noble family in Auvergne, connected with that of La Fayette. During the American war he commanded successfully in the French Windward islands, and returning to Europe was governor of Mentz at the breaking out of the revolution, in which city he distinguished himself as a staunch royalist in 1790, and drew down the marked displeasure of the Jacobin party. On the king's flight to Varennes, Bouille advanced with a strong force to co-operate in carrying it into execution, but from some mismanagement was too late, upon which, finding the royal party was recaptured, he addressed a letter to the National Assembly from Luxembourg, menacing them with summary vengeance should any attempt be made on the life of the unfortunate Louis. This impotent threat served only to accelerate the event it was intended to avert, and he himself was sentenced to death *par contumace*. On the execution of the king, Bouillé proceeded to Vienna, and afterwards to Sweden; he also served for a while in the emigrant army under the prince of Conde, but on the utter failure of the royal cause retired to England, where in 1797 he published his "Memoirs of the Revolution," 8vo, a work of great interest at the period, and highly spoken of for the impartiality of its details. He died in London, Nov. 14, 1800.—*Biog. Moderne. Nouv. Dict. Hist.*

BOULAINVILLIERS (HENRY DE) *compte de St Saire*, at which place he was born in 1658. He received his education under the fathers of the oratory at Juilli; and being compelled by the impoverished state in which he found his finances, through the imprudence of his father, to quit the army, entered on a career of literature in which he attained considerable distinction as an historian, &c. His principal works are "A History of the Arabians," 12mo, and "of Mahomet," 8vo, (in which his favourable delineation of his hero's character, exposed him to a charge of indifference towards religion;) "A History of France to the Reign of Charles VIII," 3 vols. 12mo; "Historical Memoirs of the ancient Government of France till the Reign of Hugh Capet," 3 vols. 12mo; "The State of France," 6 vols. 12mo, (valuable though inaccurate;) a "History of the Peerage of France," 12mo; "Dissertations on the French Noblesse," 12mo; "A Memoir on the Administration of the Finances," 2 vols. 12mo; an ironical refutation of the errors of Spinoza, &c. Voltaire calls him the most learned *gentleman* in the kingdom, while Henault and Montesquieu have attacked the accuracy of his early historical details, the latter designating him as "possessing more wit than intellect, and more intellect than knowledge." He died in 1722. Several spurious publications have been attributed to him.—*Nouv. Dict. Hist.*

BOULANGER (NICHOLAS ANTHONY) a native of Paris, who studied mathematics and architecture, and was for some time in the army as an engineer. He afterwards became a surveyor of bridges and causeways, and executed various public works in Champagne, Burgundy, and Lorraine. He furnished to the Encyclopædia the articles *Deluge*, *Corvée* and *Société*; but he is chiefly known as a sceptical writer. His works are "Traité du Despotisme Orientale;" "L'Antiquité dévoilé par ses usages;" and "Dissertation sur Elie et Enoch." A tract entitled "Chretienisme dévoilé," has also been ascribed to Boulanger, who is said to have been a man of very extensive learning, and of a mild and amiable disposition. He died in 1759, aged thirty-seven. *Nouv. Dict. Hist.*

BOULTER (HUGH) archbishop of Armagh, a prelate highly distinguished for charity and public spirit, was born in or near London in 1671. He received his early education at Merchant Taylors' school, and was thence removed to Christ Church college, Oxford. He received the living of St Olave, Southwark, and was made archdeacon of Surrey by the patronage of the earl of Sunderland. In 1719 he accompanied George I to Hanover as his chaplain, and obtained so much favour during this visit, that the bishopric of Bristol and deanery of Christchurch were bestowed on him in the course of the same year. In 1724 he was nominated archbishop of Armagh and primate of Ireland; and from the time of his arrival in that unhappy country, he made it his business to study its interests. He also seems faithfully to have preserved those which it was

natural for him to think the true ones; attending all the public boards, and contributing with great munificence to a variety of charitable institutions. He was highly instrumental in averting the evils of famine in 1740; and expended much of his private fortune in feeding the numerous poor. He also took a very active part in establishing the Protestant charter schools, which have so inadequately supplied the instruction, and advanced the conversion for the promotion of which they were instituted. In his politics archbishop Boulter strenuously supported what is usually called the *English* interest in Ireland, in opposition to the *Irish*, and always recommended the distribution of favours and promotions in the spirit of that narrow policy. On this account he regarded Swift with no great complacency, because that eminent person espoused the perfectly contrary theory. At this time of day, archbishop Boulter may merit the character of an able, active, and benevolent prelate, under a prevalent system; but it is probable that the palm at least of Irish patriotism, will now be generally awarded to Swift. This primate was a most active man of business, and was a thirteenth time one of the lords justices of Ireland, when he died in 1742 while on a visit to England, and was interred in Westminster abbey. A collection of his letters was published at Oxford in 1769, 2 vols. 8vo, which throws considerable light upon Irish policy during his primacy.—*Biog. Brit.*

BOULTON (MATTHEW) a celebrated engineer, was born at Birmingham in 1728. After being educated at a grammar-school, he was instructed in drawing by Worlidge, and he also studied mathematics. He engaged in business as a manufacturer of hardware, and so early as 1745 he is said to have invented and brought to great perfection inlaid steel buckles, buttons, watch-chains, &c. of which large quantities were exported to France, whence they were repurchased with avidity by the English, as "the offspring of French ingenuity." In 1762 Boulton, finding his manufactory at Birmingham too confined for his purposes, purchased a lease of the Soho, about two miles distant, in the county of Stafford. This spot, then a barren heath, was gradually converted into an extensive manufactory and school of the mechanical arts, where ingenious men found ample employment for their talents from the liberal patronage of the patriotic proprietor. The introduction of that important machine, the steam-engine, at Soho, led to a connexion between Boulton and James Watt of Glasgow, who became partners in trade in 1769. Among the many great undertakings in which these gentlemen were engaged, one of the most useful and important was the improvement of the coinage. In beauty and accuracy of execution the coins struck at the Soho manufactory have rarely been surpassed, and the reform thus effected in the state of our national currency confers the highest honour on those with whom it originated. About the year 1773 was invented, at the establishment of Boulton and Watt, a method of copying, by

a mechanical process, paintings in oil, so as to produce fac-similes of the originals, sufficiently accurate to deceive a practised connoisseur. The various mechanical inventions and improvements which originated more or less directly from the genius and application of the subject of this article, are too numerous to admit of specification. His long life was almost uninterruptedly devoted to the advancement of the useful arts, and the promotion of the commercial interests of his country. He died at Soho, August 17, 1809, and was interred in the parish-church of Handsworth. Six hundred of his workmen attended his funeral, each of whom had a silver medal presented to him, which had been struck for the occasion. He was a fellow of the Royal Societies of London and Edinburgh, and an associate of several scientific institutions abroad. His manners and conversation are said to have been highly fascinating; and his private character was extremely respectable. He left an only son, who succeeded him in his establishment at Soho.—*Memoirs, published at Birmingham, 8vo.*

BOURBON (CHARLES duke of) constable of France and son of Gilbert count of Montpensier, was born in 1489. His high birth and martial qualities endeared him to Francis I, who conferred on him the constable's staff at the age of twenty-six. Being made viceroy of the Milanese, he gained the hearts of all ranks by his courteous behaviour, and proved his courage in the battle of Marignano; where he must have lost his life had it not been for the devotion of a few cavaliers who surrounded and protected him. As being one of the house of Bourbon, he unfortunately incurred the hatred of Louise, the king's mother, who infused a jealousy of the constable into the mind of her son, who recalled him from the government of Milan, and suspended his pensions. On the death of his duchess he encountered still greater persecution, for Louise suddenly changing her hatred into affection, caused a treaty of marriage between them to be proposed to him. He rejected her advances with contempt; which caused a renewal of her hatred with still greater violence, and in conjunction with the chancellor du Prat, she instituted a process against him for the estates he possessed in right of his wife, and obtained an order for their sequestration. This drove him to despair, and he renewed some former negotiations with the emperor Charles V, and on that prince promising him his sister in marriage with a large portion, he joined him and the king of England in a meditated invasion of France. This conspiracy being discovered by Francis, Bourbon made his escape into Italy, where he was declared the emperor's lieutenant-general, and in conjunction with Pescara, defeated the French forces under Bonivet in 1524. It is a curious fact that notwithstanding his enmity to Francis I, he obstinately refused to acknowledge the title of Henry VIII to the crown of France. In 1525 he gained a victory at Pavia, in which Francis was taken prisoner. On his return he was received with great distinction by Charles,

who notwithstanding did not perform his promise of giving him his sister; but on the death of Pescara, created him general-in-chief of his forces in Italy, and gave him a grant of the duchy of Milan, of which he forcibly took possession, driving out the late duke Sforza. In order to satisfy his rapacious soldiers, he was obliged to practice great oppression on the citizens of Milan. This only satisfied them for a time, and bent on a scheme of plunder he marched with his army towards Rome, the possession of which place was to repay all their toil. On the 5th of May 1527, they came in sight of that capital, and the next morning commenced the attack. Bourbon wore a white vest over his armour, in order he said to be more conspicuous both to his friends and foes. He led on to the walls, and commenced a furious assault, which was repelled with equal violence. Seeing that his army began to waver, he seized a scaling ladder from a soldier standing by, and was in the act of ascending, when he was pierced by a musket-ball and fell. Feeling that his wound was mortal, he desired that his body might be concealed from his soldiers, and instantly expired. Although a traitor to his country, he undoubtedly received great provocation, and it is to be lamented that his shining qualities were not duly fostered, and exercised in a better cause.—*Nouv. Dict Hist.*

BOURBON (NICHOLAS.) There were two eminent French poets of this name, uncle and nephew; the elder, born in 1503, was a native of Vandœuvre near Langres. Jeanne d'Albret, mother of Henry the Great, was his pupil, on the completion of whose education he retired from court to his benefice at Condé, and spent the remainder of his life in literary pursuits. He left behind him eight books of Latin epigrams, entitled "Nugæ," a didactic poem on smiths (to which trade his father belonged) called "Ferraria;" and an elementary treatise "De puerorum moribus." He was a friend of Sir Thomas More's, with whom he corresponded and occasionally visited, and died about the middle of the sixteenth century. The younger, born at Bar-sur-Aube in 1574, studied under Passerat, and was a professor of rhetoric at Paris, afterwards canon of Orleans and of Langres, professor royal of Greek, and a member of the French academy. He far exceeded his uncle as a Latin poet, and also wrote Greek verse with ease and elegance, but held the poetry of his native tongue in great contempt, comparing it, like a *bon-vivant*, to "the drinking of water." He translated St Cyril's treatise against the emperor Julian into Latin. His other works, the most admired of which is "An Imprecation against the Parricide of Henry IV," were printed in Paris in 12mo, seven years after his decease, which took place in 1644.—*Moreri.*

BOURCHIER (THOMAS) an English ecclesiastic of the fifteenth century. He was the son of William Bourchier, earl of Eu and Essex; and was educated at the university of Oxford, of which he afterwards became chancellor. In 1433 he was made bishop of Wor-

ester, whence he was translated to Ely, and in 1454 raised to the metropolitan see of Canterbury. He subsequently obtained a cardinal's hat, and in 1465 he held the office of lord chancellor. This prelate died in 1486, having during his long primacy crowned three English kings, Edward IV, Richard III, and Henry VII. To archbishop Bouchier has been erroneously ascribed the introduction of the Art of Printing into England, said to have taken place in 1464; but the first book printed by Caxton in this country, and which is probably the earliest specimen of English typography, is "The Game of Chess," dated 1474.—*Biog. Brit.*

BOURCHIER (JOHN) lord Berners, the grandson and heir of Sir John Bouchier, lord Berners, knight of the garter, and constable of Windsor castle, in the reign of Edward IV. His father, Sir Humphrey Bouchier, was killed at the battle of Barnet. He was born about 1469, and educated at Oxford; after which he travelled abroad, and on his return to England he was created a knight of the bath. In 1495 he distinguished himself in suppressing the insurrection of the Cornish rebels against Henry VII; and at the siege of Terouenne, in the war between Henry VIII and Lewis XII of France, he was employed as captain of the pioneers. He was afterwards made chancellor of the exchequer; and on the marriage of the king's sister with Louis XII, he conducted that princess to the French court. Being appointed lieutenant of Calais, he continued there till his death in 1532. Lord Berners is remarkable chiefly as a cultivator of literature at a period when such studies were very unusual among the English nobility. His works are "Froissart's Chronicle," translated into English by command of Henry VIII, printed by Pinson in 1523, folio; "The History of the most noble and valiant Knight, Arthur of Lytell Brytaine," translated out of the French; "The famous Exploits of Sir Hugh of Bourdeaux;" "The Life of Marcus Aurelius," translated from the French; "The Castle of Love," translated from the Spanish; "Ite in Vineam," called a comedy, but more probably a religious mystery, as it is said to have been frequently acted after vespers in the great church of Calais: he also wrote a book "Of the Duties of the Inhabitants of Calais." The first and second of these works were reprinted a few years ago.—*Berkenhout's Biog. Lit.*

BOURDALOUE (LOUIS) a Jesuit, one of the greatest preachers France ever produced, was born at Bourges in 1632. The extreme popularity of his sermons induced his superiors to call him to Paris to take the yearly course at their church of St Lewis, where his eloquence attracted crowds of all ranks, and he became the favourite preacher of Louis XIV, who on the revocation of the edict of Nantes, sent him into Languedoc to convert the Protestants there. His style is represented by D'Alembert as solid, serious, and above all strictly logical. Towards the latter part of his life he quitted, or rarely ascended the pulpit, and devoted himself to attending upon the sick, visiting the prisons, and other works of

charity; and died in 1704 universally lamented, and long remembered as the most attractive and eloquent of preachers. His moral character was also excellent, and for a Jesuit he was very liberal in his opinions. Two editions of his sermons were published by Father Brctonneau, of which the first in 16 vols. is considered the best.—*Moreri. Biog. Univ.*

BOURDEILLES, see BRANTOME.

BOURDELOT. There were three of this name of the same family, JOHN, the elder, born at Sens in the latter part of the sixteenth century, was bred to the French bar, and became master of requests to Mary de Medicis. He is celebrated as one of the most able and judicious critics of his time, and published in 1615 a folio edition of Lucian at Paris, his notes to which are very valuable; in 1618 he also edited the works of Petronius Arbiter, in 12mo, and the year following those of Heliodorus, 8vo, in which latter work he exhibits great erudition. His other works are a commentary on the satires of Juvenal, and a universal history. He died suddenly at Paris in 1638, bequeathing his property, which was considerable, to his sister's son, PIERRE MICHON, a physician, who in consequence assumed the name of Bourdelot, agreeably to his late uncle's request. He was born in 1609, and distinguished himself early by his skill in his profession, which introduced him to the acquaintance and patronage of Christina of Sweden, the prince of Condé, and other illustrious personages. He published an account of Mount Aetna: a clever tract on the natural history and medicinal properties of the viper; and left behind him in manuscript a catalogue of medical works, with biographical notices of their authors, and remarks on their contents. He died in 1685 at Paris, and in his turn left his fortune to his sister's son, PIERRE BONNET, imposing on him a similar condition as to the assumption of the family name. He too was a physician, and is known as the author of some annotations on Colomieu's "Bibliotheque Choisie." His death took place in 1709. There were also two brothers of this name at Paris in the early part of the last century, who commenced a history of music, which after their deaths was completed and published by Jacques Bonna at Frankfurt in 1742.—*Biog. Univ.*

BOURDON (SEBASTIAN) an eminent painter of Montpellier, born in 1616. When only eighteen he went to Rome, where he spent nine years, and on his return to France executed his chef d'œuvre, the crucifixion of St Peter, for the church of Notre Dame. In 1652, having experienced during the civil wars some inconvenience on account of his religion, which was that of the reformed church, he retired to the court of Sweden, where the queen Christina received him very favourably, and appointed him her painter. On the abdication of his patroness he returned to France and was one of the twelve persons who commenced the establishment of the Royal Academy in 1648, of which society he afterwards became the head. Like many of his brethren he added the art of engraving to that of painting, and

several of his own pictures have been engraved by other artists. He died in 1652 aged forty-six. He was the friend of Claude Lorraine, whose style, as well as that of Sacchi and Caravaggio, he occasionally imitated with great success. While at the Swedish court, the queen having made him a present of some unpacked pictures, which had been brought from among the plunder of Prague, Bourdon, on discovering that they consisted of pieces by Corregio and other first-rate masters, returned them, saying they were too valuable for a private man. These paintings afterwards formed the nucleus of the Orleans collection.—*Nouv. Dict. Hist.*

BOURDONNAYE (BERNARD FRANCIS MAHE DE LA) a French civil and military officer of considerable eminence. He was a native of St Malo in Brittany, and was at an early age in the service of the French East-India Company. Having displayed his talents in several voyages, he was at length appointed to the government of the Isles of France and Bourbon, which flourished under his administration. During the war which began in 1741 between the French and the English, he fitted out a fleet of nine ships, with which he sailed to India, and besieged and captured Madras in September 1746. A large ransom was paid to save the place from pillage, and the riches acquired in this expedition by the governor exposed him to envy and persecution. The directors of the India Company laid complaints against him before the ministry, in consequence of which, on his arrival in France, he was sent to the Bastille, and his conduct subjected to a judicial scrutiny, which was at length terminated in his favour. He was restored to his liberty and honours; but confinement and anxiety of mind had ruined his health, and he died in 1754, the victim of unjust prosecution. In 1751 was published an account of his administration, under the title of "Mémoires de Bourdonnaye ci-devant Gouverneur-Général des Isles de France et de Bourbon," 2 vols. 12m.—*Nouv. Dict. Hist.*

BOURGELAT (CLAUDE) a native of Lyons, born in 1712. He was originally intended for the law, but quitted it for the study of farriery, and established a veterinary school in his native city. He also belonged to the academy of Berlin, and communicated much valuable information respecting this branch of science to that society. He published various treatises on these and other subjects, among which are "The Elements of Horsemanship," &c.; "Nouveau Newcastle;" a treatise on cavalry, 8vo 1747; "The Materia Medica, as used in the Veterinary School;" a theoretical and practical treatise on bandages, 8vo; another on the contagious disorders of brutes, 4to; and a third on the comparative anatomy of animals, 8vo. He died in 1779.—*Biog. Univ.*

BOURGEOIS (SIR FRANCIS) descended from a considerable Swiss family, was born in London in 1756, and originally intended for the army; but being instructed when a child in the rudiments of painting, he became so attached to that art, that he devoted himself en-

tirely to it. He was placed under the tuition of Louthembourg, and having access to the finest collections, soon distinguished himself by his landscapes and sea-pieces. In 1791 he was appointed painter to the king of Poland, who at the same time created him a knight of the order of merit, which was confirmed by George III, who appointed him his landscape painter in 1794. By the will of his friend, Noel Desenfaus, a celebrated picture-dealer, he became possessed of the fine collection which he left to Dulwich college, with 10,000*l.* for the purpose of building a gallery, and keeping the pictures in order. He died in 1811, and is buried at Dulwich.—*Cent. Mag.*

BOURGUET (LEWIS) a French writer on natural philosophy in the eighteenth century. He was born at Nismes, and went with his family, who were Protestants, to Switzerland, on the revocation of the edict of Nantes. His father settled at Zurich, where Bourguet was educated. He became professor of philosophy and mathematics at Neuchâtel; and in 1728 he engaged with others in a periodical work entitled "Bibliothèque Italique," printed at Geneva, and extended to 16 vols. 8vo. He chiefly deserves notice for some ingenious speculations on chrysalization, which appeared in a tract entitled "Lettre sur la Formation des Sels et des Crystaux," 12mo. He died in 1742, aged sixty-three.—*Moreri.*

BOURIGNON (ANTOINETTE DE LA PORTE) a remarkable female fanatic, was born in 1616, at Lisle in Flanders. She came into the world so deformed, that there were some thoughts of stifling her as a monstrous birth. She however grew up less displeasing, and her family, which was opulent, wished to marry her; but such was her aversion to matrimony, that she eloped to avoid their persecutions, and underwent a variety of adventures. Early impressed with a notion of the decay of pure Christianity, she imagined herself called upon to revive it. Her fortune and her enthusiastic turn, on the death of her parents, rendered her the object of much hypocritical artifice; but with whatever other spirit she might fancy herself favoured, she was certainly endowed with the faculty of taking care of her property, which she neither spent nor bestowed in charity, but resolutely defended against pretended suitors and all the world. She became governess of the hospital at Lisle, and took the order and habit of St Augustin; but so little of the gentleness of the gospel was discoverable in her conduct, that the hospital became a scene of disgraceful disturbance, and the magistracy interfering she retired to Ghent. About this time she made a convert of Christina Bartholemew de Cordt, a Jansenist and priest of the oratory at Mechlin, and purchased of him a part of an island gained from the sea, with an intent to settle there with her disciples. In the mean time she resided at Amsterdam, and wrote several books, particularly one entitled "Of the Light of the World," in which her system is displayed as far as her own incoherent ideas could display

it. Like most visionaries of this class, she asserted that religion consisted neither in knowledge nor in practice, but in spiritual impulses and internal communions with the Deity. De Cordt dying, left her his heiress, on which she quitted Holland, and in 1671 repaired to Noordstrandt, shaking off many disciples that would have accompanied her, lest they should expect any benefit from her purse. Here she set up a printing-press, and wrote books in Dutch, French, and German, with surprising facility; but her opinions and disposition subjected her to much hostility, and her press was prohibited. In this dilemma she retired to East Friesland, where she obtained the direction of an hospital; but while she was willing to devote her time to the poor, she carefully withheld her money, never, as she said, being able to find any sufferers whose conduct deserved relief. This woman, in direct communion with the Deity, indeed, observed that she would rather throw her property, which "was consecrated to God," into the sea, than aid in the support of beastly persons who had no souls to save. She was in consequence soon obliged to quit East Friesland and depart for Holland, and ended in the same year (1680) her turbulent life at Franeker. Strange to say, the number of her disciples—always kept down during her life by her peevish, avaricious, and unamiable qualities—was increased by her miserable writings after her death; or rather a man of abilities and address, one Peter Poret, a Cartesian, thought something might be made of her vagaries, and therefore reduced them into a kind of system, in a work entitled *L'æconomie Divine, ou System Universel*, published at Amsterdam in 1686, in French and Latin, in 7 vols. folio. Her notions were also warmly adopted in Scotland, and produced much controversy; and until very lately, if not at present, candidates for holy orders in the Scottish church were explicitly called upon to renounce Bourignanism. Bayle gives some curious particulars regarding the not always decorous notions of this wretched woman.—*Mosheim. Bayle.*

BOURNE (VINCENT) a modern Latin poet, distinguished for the taste and elegance of his compositions. He was educated at Westminster school, whence he removed to Trinity college, Cambridge, and took the degree of M.A. in 1721. He occupied for some years the situation of under-master at Westminster till his death, which took place in 1747. His character was highly respectable, but his habits and manners, which were those of a retired scholar little attentive to the common affairs of life, occasionally exposed him to the pleasantry of his pupils. Few modern writers of Latin poetry have been so often or so deservedly praised as Vincent Bourne, whose works manifest a degree of classic beauty and felicity of expression almost unrivalled. His poems, consisting of originals and translations, have been repeatedly printed.—*Chalmers' Biog. Dict.*

BOWDLER (THOMAS) the son of John Bowdler, a physician at Bath, who was the

author of a political pamphlet, entitled "Reform or Ruin,—take your Choice," 1797, 8vo. He was born at Ashley near Bath in 1754. At the age of sixteen he went to St. Andrews, and afterwards to Edinburgh to study physic. He then set out on a continental tour, and after travelling through Hungary, Germany, and Italy, he returned home and commenced practice as a physician. In 1781 he went to Lisbon as a medical attendant of a friend, who died there. On revisiting his native country he relinquished his profession, which he had adopted in compliance with the wishes of his father though it was not agreeable to his own inclination, and fixing his residence in London, he was chosen a fellow of the Royal and Antiquarian Societies. In the year 1787 he made a second journey to the Continent, which gave rise to his publication entitled "Letters written in Holland in the Months of September and October 1787," 8vo. He removed in 1800 from the metropolis to the Isle of Wight, which he quitted in 1810, and went to Malta with one of his nephews. On his return he resided at Rhyddings, near Swansea in South Wales, where he died in 1825, and was buried in the churchyard of the parish of Oystermouth near Swansea. He published in 1815 a short account of the life of his friend general Villette, with letters written during a journey in France soon after the abdication of Buonaparte. But he is principally distinguished as the editor of "The Family Shakespeare," 1818, 10 vols. "in which nothing is added to the original text, but those words and expressions are omitted which cannot with propriety be read aloud in a family." Mr Bowdler, at the time of his decease, was engaged in preparing a similar expurgated edition of Gibbon's "History of the Decline and Fall of the Roman Empire," which has since been published. JANE BOWDLER, sister of the preceding, distinguished as a poetess, died in 1784. HANNAH BOWDLER, another sister, still living, has published poems and essays, *sermons*, and a memoir of Miss Elizabeth Smith. JOHN BOWDLER, jun. nephew of Thomas B., was a student at Lincoln's Inn, and died in 1815. He was the author of select pieces in verse and prose, and of theological tracts.—*Life of John Bowdler the Elder, &c.* 1825, 8vo.

BOWDICH (THOMAS EDWARD) an ingenious and enterprising man, who may be numbered among the victims to the task of exploring the interior of the African continent. He was born at Bristol in June 1793, and after some previous education at a grammar-school, he was sent to Oxford, but he staid there only a short time, and was never regularly matriculated. At an early age he married, and engaged in trade at Bristol. Finding however the details of business exceedingly irksome, he determined to seek a more congenial occupation, and he accordingly solicited and obtained the appointment of writer in the service of the African Company. In 1816 he arrived at Cape Coast Castle, where he was joined soon after by his wife. It being thought desirable to send an embassy to the negro king

of Ashantee, Mr Bowdich was chosen to conduct it; and he executed with success the arduous duties of his situation. After remaining two years in Africa he returned home, and soon after published his "Mission to Ashantee, with a Statistical Account of that Kingdom, and Geographical Notices of other Parts of the Interior of Africa," 1819, 4to. Having offended the company in whose service he had been engaged, and having therefore no prospect of further employment, yet wishing ardently to return to Africa for the purpose of visiting its hitherto unexplored regions, Mr Bowdich resolved to make the attempt with such assistance as he could obtain from private individuals. He however previously went to Paris, to improve his acquaintance with physical and mathematical science. His reception from the French literati was extremely flattering; a public eulogium was pronounced on him at a meeting of the four academies of the Institute, and an advantageous appointment was offered him by the French government. While at Paris he published an exposure of the system of the African Committee, which induced the British government to take measures for the dissolution of the company. To obtain funds for the prosecution of his favourite project, Mr Bowdich also published a translation of Mollier's Travels to the Sources of the Senegal and Gambia, and other works; by the sale of which he was enabled, with a little assistance from other persons, to make preparations for his second African expedition. He sailed from Havre in August 1822, for Lisbon; thence he proceeded to Madeira, where he was detained several months, but at length arrived in safety in the river Gambia. A disease, occasioned by fatigue and anxiety of mind, here put an end to his life, January 10, 1824. Mr Bowdich's death may be considered as a misfortune to the scientific world, as he is said to have been a profound classic and linguist, an excellent mathematician, well versed in most of the physical sciences, in ancient and modern history, and in polite literature. He was a member of several literary societies in England and abroad. His widow, whose pencil has furnished embellishments for her husband's literary productions, has published "Excursions in Maderia and Porto Sauto, during the Autumn of 1823, while on his Third Voyage to Africa, by the late T. E. Bowdich," with a continuation of the voyage, &c. till his death, 1825, 4to.—*Lit. Gaz.*

BOWER (ARCHIBALD) a Scottish writer, possessed of some talents and industry, but more remarkable on account of his singular tergiversation with regard to religion. He was born near Dundee in 1686, of Catholic parents, and after being educated at the Scot's college at Douay, he went to Rome, and became a member of the order of the Jesuits. He settled at Macerata, where, according to his own account, he was a counsellor of the Inquisition. In 1726 he was obliged to leave this place for Perugia, whence he fled secretly to England, and professed himself a convert to the Protestant faith. He obtained respectable

patronage, was engaged as a tutor in a nobleman's family, and employed by the booksellers in conducting the "Historia Literaria," a monthly review of books, and in writing a part of the "Universal History," in 60 vols. 8vo. The money which he gained by these occupations he is believed to have given or lent to the society of the Jesuits, and thus to have purchased his readmission among them about the year 1744. Subsequently repenting of the engagement he had made with his old associates, he claimed and recovered the property he had advanced. In 1748 he published the first volume of a "History of the Popes," by subscription; and the same year was appointed keeper of the queen's library, through the interest of the Hon George (afterwards lord) Lyttleton. In his history, which was continued to seven volumes, he displayed such an indiscreet zeal against popery, as exposed him to the animadversions of Alban Butler, a learned catholic; and the literary merits of his work were at the same time severely canvassed by Douglas, afterwards bishop of Salisbury. But still more unfortunately for his reputation, his money transactions with the Jesuits were brought to light, and, in spite of his spirited defences of his conduct, he was generally believed to be a man destitute of moral or religious principle; so that he had hardly a friend or patron left except lord Lyttleton, whose disapprobation alone prevented Garrick from making the apostacy and double dealing of Bower the subject of a satirical drama. He died in 1766, leaving a widow (the niece of bishop Nicholson) who shortly after published an attestation of his having died a Protestant.—*Aikin's G. Biog. Monthly Review.*

BOWLE (JOHN) an English divine of considerable literary attainments, who was educated at Oxford, where he took the degree of M.A. in 1750. Entering into orders, he was presented to the vicarage of Idmiston in Wiltshire, where he continued till his death in 1788. He assisted in detecting the conspiracy of Lauder against the reputation of Milton, and was a contributor to Granger's Biographical History of England, Stevens's edition of Shakespeare, and Warton's history of English poetry, and the author of some papers in the *Archæologia*; but he is chiefly distinguished as the publisher of a splendid edition of Don Quixote in the original Spanish 6 vols. 4to, 1781, which involved him in a controversy with Joseph Baretti, carried on without much courtesy on either side, and now deservedly forgotten.—*Nichols' Literary Anecdotes of the 18th Century.*

BOWYER (WILLIAM) an English printer and classical scholar of eminence in the last century. He was a native of London, where his father, also a printer, carried on business. The son acquired the rudiments of learning under Ambrose Bonwicke, a nonjuring clergyman, and was afterwards admitted a sizar of St John's College, Cambridge, but left the university without a degree in 1722, and became an associate in trade with his father. In

1729 he obtained the office of printer of the votes of the house of Commons, which he held nearly fifty years. He was subsequently appointed printer to the Society of Antiquarians, of which learned body he was admitted a member; and on the death of Samuel Richardson in 1761, the interest of lord Macclesfield procured him the appointment of printer to the Royal Society. In 1768 he was nominated printer of the journals of the house of Lords and the rolls of Parliament. He died in 1777, aged seventy-eight, and was interred in the church of Low Layton in Essex. By his will he bequeathed a considerable sum of money, in trust to the Stationers' company, for the relief of decayed printers or compositors. His principal literary production was an edition of the New Testament in Greek, with critical notes and emendations. He also published several philological tracts, and added notes and observations to some of the learned works which issued from his press. About ten years previous to his decease, he entered into partnership with Mr John Nichols, who shortly after that event published a small volume of biographical anecdotes of Bowyer and his learned contemporaries, which formed the basis of his "Literary Anecdotes of the 18th Century," 9 vols. 8vo. a work containing a vast mass of indigested materials for a history of English literature during the period to which it relates.—*Nichols's Life of Bowyer. Gent. Mag.*

BOYCE (WILLIAM) an eminent musical composer in the last century. He was a native of Loudon, and was a pupil of Dr Maurice Greene, organist of St Paul's, who at his death bequeathed him a valuable collection of church music, which served as the basis of a splendid publication of that class by Boyce, in 3 vols. folio. Notwithstanding he was afflicted with deafness, which increased to such a degree as to render him almost insensible of sound, he acquired an uncommon degree of skill in his profession. In 1736 he was chosen organist to the church of St Michael, Cornhill; and was also appointed organist and composer to the Chapel Royal. On his setting to music an ode performed at the installation of his patron the duke of Newcastle, as chancellor of Cambridge university in 1749, he was honoured with the degree of doctor of music, and in 1757 succeeded Dr Greene as master of the king's band. He was the author of many admired pieces for the theatre, and for other places of public entertainment; but his fame chiefly depends on his sacred compositions. Dr Burney observes, that "there is an original and sterling merit in his productions, founded as much upon the study of our own old masters as on the best models of other countries, that gives to all his works a peculiar stamp and character of his own for strength, clearness, and facility, without any mixture of styles or extraneous ornaments." Dr Boyce died of the gout in 1779, at the age of sixty-eight, and was interred in St Paul's cathedral.—*Burney's Hist. of Music.*

BOXHORN (MARK ZUERIUS) a learned and industrious scholar of the seventeenth cen-

tury. He was a native of Bergen-op-Zoom in Brabant, and was educated at Leyden, where he became first professor of rhetoric, and subsequently, on the death of Daniel Heinsius, professor of politics and history. He died in 1653, at the age of forty-one, leaving a vast number of literary works, written in Latin, among which are editions of the Augustan historians and other classical writers; a treatise on sacred and profane history; poems, and a treatise on the discovery of printing, which he would assign to his native country.—*Bayle. Morevi.*

BOYD (MARK ALEXANDER) a literary character of some eminence, was the son of Robert Boyd of Pinkhill, and was born at Galloway in 1562. He was educated at Glasgow under the superintendance of his uncle, the archbishop of that see, and was equally conspicuous for the quickness of his parts and the turbulence of his disposition. Quitting study, he went to Paris, where he reduced himself to distress by gaming, and then resuming his studies with scholastic ardour, repaired to Bourges, to attend the celebrated civilian Cujacius. To this professor he recommended himself by a compliance with his taste in Latin poetry, which gave a preference to Ennius and the elder Latin poets. After leading a wandering life on the Continent for fourteen years, he returned to Scotland, and died at his father's seat at Pinkhill in 1601. He has received much the same eulogium in regard to graces of person, powers of mind, and various accomplishments, as the *admirable Crichton*. He left various MSS. on subjects political, critical, and patriotic, but is popularly known only by his "Epistolæ Heroidiis," and his "Hymni," published in the "Delicia Poetarum Scotorum." They exhibit some tolerable imitations of Ovid, but otherwise display more learning than poetry.—*Biog. Brit.*

BOYD (HUGH MACAULY) a writer who only claims notice here as one of the reputed authors of "Junius' Letters." He was born in 1746, being the second son of a respectable Irish gentleman, who had him educated at Trinity college, Dublin. He came to London under the patronage of Mr Richard Burke, and soon became known both to the fashionable and literary world. He married a lady of good fortune, but was reduced by extravagance to the necessity of accepting the place of secretary to lord Macartney, whom he accompanied to Madras, where he died in 1791. Some political tracts which he published in the newspapers, written after the Letters of Junius and in imitation of them, formed the sole ground for attributing those celebrated epistles to his very inadequate pen. These being collected and published in two vols. 8vo, soon dispelled the illusion, which only proves the industry which certain enthusiastic theorists will occasionally use to deceive both themselves and other people.—*Month. Review, N. S. V. 27 and 36.*

BOYDELL (JOHN) an English engraver, but more distinguished as an encourager of the fine arts, than on account of his own produc-

tions. He was born in Staffordshire in 1719, and was intended for his father's occupation, which was that of a land surveyor. Accident having thrown in his way "Baddeley's Views of different Country Seats," he conceived so strong an inclination for engraving, that he determined to adopt it as a profession; and accordingly, when above twenty, he bound himself apprentice for seven years to Toms, a London engraver. In 1745 he published six small landscapes, and afterwards executed as many more views of places in and near London as formed a volume, which he published by subscription. With the profits of this work he commenced trade as a printseller, and by his liberality to artists in general, established a high reputation as a patron of ingenious men. Woollet was employed by him to engrave the celebrated pictures of "Niobe" and "Phaeton," and he furnished other eminent artists with occupation, and was thus enabled to carry on an extensive foreign trade in English prints, which tended greatly to his own emolument and to the credit and advantage of his native country. Having at length established what might be termed an English school of engraving, he next turned his attention to the improvement of the art of painting. With that view he engaged the first artists in the kingdom to furnish the collection of pictures forming the well-known "Shakspeare Gallery." The wars arising out of the French Revolution having obstructed his continental trade, he was induced in 1804 to solicit an act of Parliament to permit him to dispose of his gallery and paintings by lottery. This he obtained, and lived long enough to see every ticket disposed of, but died before the lottery was drawn, on the 12th of December 1804, of inflammation of the lungs, occasioned by standing in a damp room. Mr Boydell was an alderman of the city of London, and in 1790 held the office of lord mayor. He was succeeded in business by his nephew Josiah Boydell, who also practised the art of engraving. He too was a member of the court of aldermen, but resigned his gown some time before his decease, which occurred in 1818.—*Gent. Mag.*

BOYER (ABELL) a French refugee and miscellaneous writer, was born at Castres in 1666, and settled in England on the revocation of the edict of Nantz. He published a French and English dictionary and a grammar, both of which are still in use. He also made himself known by his "Political State," a monthly publication; "The History of King William," 3 vols. 8vo; "Annals of Queen Anne," 11 vols. 8vo; "State Trials," up to that of the earl of Oxford; "Letters French and English," and various translations. He died at Chelsea in 1729.—*Moreri. Biog. Univ.*

BOYER (JOHN BAPTIST NICHOLAS) a French physician, who distinguished himself by his skill in the treatment of infectious diseases. He was a native of Marseilles, and when that city was desolated by the plague in 1720, he displayed so much zeal and ability in resisting its ravages, that his services were rewarded with a pension from the royal trea-

sure, and he was appointed physician to a regiment of guards. His advice was sought for not only in various provinces in France, but also in Germany, Spain, and other countries. He was elected senior of the faculty of medicine at Paris in 1756, and the king bestowed on him the cross of the order of St Michael and letters of nobility. He died at Paris in 1768, aged seventy-five. He published a *Pharmacopœia*, and some tracts on contagious diseases.—*Nour. Dict. Hist.*

BOYER (JOHN BAPTIST.) See ARGENS (Marquis d'.)

BOYLE (RICHARD) earl of Cork, a statesman of note in the seventeenth century. He was descended from a Herefordshire family, but was a native of Canterbury. After studying at Cambridge he removed to the Middle Temple, which he left to become clerk to sir Richard Manwood, chief baron of the exchequer. In 1588 he went to Dublin with strong recommendations to persons in power, whose patronage he obtained. In 1595 he married a lady of fortune, whose death a few years after left him the possessor of property to the amount of 500*l.* a year. The state of Ireland at that time having rendered land very cheap, he took advantage of the circumstance to make some considerable purchases, among which was the estate of sir Walter Raleigh, consisting of 12,000 acres in the counties of Cork and Waterford, which he obtained on easy terms. He was then appointed clerk of the council under sir George Carew, the president of Munster, whom he accompanied in various expeditions against the Irish insurgents, in opposition to the English government. On these and other occasions he distinguished himself by his talents and activity, and rapidly augmented his political power and influence. King James I appointed him privy-counsellor for Munster, and afterwards for the kingdom of Ireland; in 1616 he was made a peer of that realm by the title of baron Boyle of Youghall, and in 1620 he was created viscount Dungarvan and earl of Cork. He was now in the height of his prosperity, living in his castle of Lismore in a style of grandeur more resembling that of a sovereign prince than of a private individual. In 1629 he was made one of the lords justices of Ireland, and in 1631 lord treasurer of that kingdom. Like most of the English rulers of the sister island, he seems to have employed his power rather for the subjugation than the advantage of the native Irish. He built and fortified towns and castles, and introduced among the people arts and manufactures; but he put in force the severe laws of queen Elizabeth against the Catholics, and transported multitudes of the ancient inhabitants from the fertile province of Leinster to the bogs and deserts of Kerry, supplying their place with English colonists. Such measures might be consistent enough with the views and principles of a military despot like Cromwell, who on surveying the improvements of the estates of this nobleman, is said to have declared—"That if there had been an earl of Cork in every province, it

would have been impossible for the Irish to have raised a rebellion." But few persons will now be disposed to bow to the *ipse dixit* of the conqueror of Ireland, or to doubt for a moment that the cruel and illiberal policy of lord Cork and other mistaken, but perhaps well-meaning statesmen, really contributed to cause those popular commotions which desolated Ireland in the latter years of his life. In 1641 the earl went to England as a witness against lord Strafford, then under impeachment; having quarrelled with that nobleman during his vice-royalty. Soon after his return home the insurrection of the Irish broke out; on which event he displayed his accustomed activity, enlisting his tenantry under the command of his sons, and taking other measures for the defence of the country. But he lived only to see the commencement of the calamities of his adopted country, dying in September 1643, aged seventy-six. Lord Cork is principally memorable as the founder of a family, several individuals of which have highly distinguished themselves as cultivators of literature, science, and the arts; yet it should not be forgotten that he attained a high degree of contemporary fame, and was designated in the age in which he lived—"The great Earl of Cork."—*Biog. Brit.*

BOYLE (ROGER) earl of Orrery, fifth son of the preceding. He was born in 1621, and when only seven years old was created baron Broghill, by which Irish title he is usually known. He was educated at Trinity college, Dublin; after which he travelled on the Continent, and returned home at the commencement of the Irish rebellion. He commanded a troop of cavalry raised by his father, was employed in the defence of the castle of Lismore, and displayed his courage and ability on many occasions in the service of Charles I; on the cessation of whose authority he acted under the parliamentary commissioners in Ireland. When the king was put to death, he retired for a while from public life; but being courted by Cromwell, he accepted a commission from him, and assisted him materially in reducing the Irish to subjection. He served his new master with zeal and fidelity, and few persons were more trusted or distinguished by him. Oliver becoming Protector, made lord Broghill one of his privy-council and a member of his house of Lords. In 1655 he sent him to Scotland, with a commission to govern there with absolute authority for one year; and his conduct was such as proved satisfactory both to the Scots and the Protector. On the death of Cromwell, he at first supported the interests of his son, but perceiving the instability of his government, he retired to his estates in Ireland, to watch the progress of events. Becoming aware of the approaching restoration of regal power, he exerted himself with such dexterity and success in promoting it, as to obtain much credit for his conduct. Charles II rewarded him with the title of earl of Orrery, and he was appointed one of the lords justices for Ireland. In 1667 he became involved in an unhappy dispute with the lord-lieutenant,

the duke of Ormond, which led to a charge of high treason against him in Parliament, but it was not prosecuted, and he continued to enjoy the royal favour and confidence. The concluding years of his life were partly devoted to literature, though with little advantage to the world or his own reputation. He wrote poems, plays, a romance, and tracts on controversial divinity, which have all long since passed into oblivion; but there is a collection of his "State Letters," published in 1742, which affords much interesting information. He died October 16, 1679.—*Biog. Brit.*

BOYLE (ROBERT) a natural philosopher, usually classed with Bacon, Locke, and Newton, as one of the brightest luminaries of science in the age in which he lived. He was born at Lismore in Ireland in 1627, and was the seventh son of the first earl of Cork, and brother of lord Broghill. After some previous instruction at home, he was sent to Eton college, where sir Henry Wotton was then provost. He continued there three years, and was then removed to his father's seat at Stallbridge in Dorsetshire, to improve his acquaintance with classical learning, under the tuition of the Rev. W. Douch. At this early age he wrote some memoirs of his own life, in which he records "various remarkable instances of divine goodness, in his many signal escapes from imminent danger of his life," and displays throughout those warm feelings of a religious nature, which formed so prominent a feature in his personal character. In 1633 he was placed under the care of Mr Marcombes, a French gentleman, who accompanied him and one of his elder brothers on their travels abroad. They passed through France to Geneva, where Mr Marcombes resided, and where they continued some time studying rhetoric, logic, mathematics, and political geography, to which were added the accomplishments of fencing and dancing. In September 1641, the brothers set off for Italy, through Lausanne, Zurich, and Soleure; and after visiting Venice and other places, proceeded to Florence, where they spent the winter. Here Mr Boyle made himself master of the Italian language, and became acquainted with the new astronomical discoveries of Galileo, who died near Florence at this period. In the spring of 1642 the travellers went to Rome, and after a short stay returned to Florence, whence they again set off for Leghorn, and at length reached Marseilles, where they expected to receive a supply of money from England. This they were prevented from receiving, owing to the breaking out of the Irish rebellion. In consequence of this disappointment, they were obliged to return to Geneva, and after waiting there two years, they with difficulty obtained money for their travelling expenses, and setting off, arrived in England in the middle of the year 1644. Mr Boyle now learnt the death of his father, who had bequeathed him the manor of Stallbridge, and other considerable estates. After having arranged his affairs, he took up his residence at Stallbridge in 1645, and lived there for the

ensuing five years, occupying his time with experiments in chemistry and natural philosophy. He made occasional excursions to London and Oxford, and formed an acquaintance with many men of science. Between the years 1652 and 1654 he twice went to Ireland, where he possessed landed property which required his attention. While there he studied practical anatomy under the direction of his friend Dr afterwards sir William Petty. Returning to England about 1654, he settled at Oxford, and engaged with ardour in the prosecution of researches in experimental philosophy. In this academical retreat he became a member of the association of philosophers, who held their meetings at the apartments of Dr Wilkins, warden of Wadham college, and afterwards bishop of Chester. It was during his residence here that he contrived a more perfect and manageable air-pump than that of Otto Guericke, who was the inventor of that pneumatic machine, which was still further improved in 1658 or 1659 by the celebrated Robert Hook, who then resided with Mr Boyle as his chemical operator. The discoveries he made by means of this valuable instrument, were of the first importance, and contributed materially to establish his fame as a man of science, both at home and abroad. After the Restoration in 1660, he was received with favour by the king, and the lord chancellor Clarendon strongly solicited him to enter into holy orders, for which he was well qualified by his piety and learning, and which would probably have led to his attaining the highest offices in the church; but he, from conscientious motives, rejected the chancellor's advice. About this time he published "New Experiments physico-mechanical, touching the Spring of Air," which he defended against the animadversions of Hobbes and others. In 1661 he published "Philosophical Essays and other Tracts;" and shortly after, his "Sceptical Chymist." The next year he was appointed governor of the corporation for propagating the gospel in New England, an office highly congenial to his inclination. On the incorporation of the Royal Society in 1663, which consisted chiefly of the members of the scientific association at Oxford mentioned above, Boyle was one of the first fellows, and was appointed a member of the council. He now published "Some Considerations touching the Usefulness of Experimental Natural Philosophy;" "Experiments and Considerations touching Colours, with Observations on a Diamond that shines in the Dark;" and a theological tract. In 1664 he was elected a member of the company of the royal mines. The next year appeared his "Occasional Reflections on several Subjects," a juvenile production, which though not perhaps deserving of the ironical satire bestowed on it by Swift in his "Meditation on a Broomstick," is certainly a very objectionable production, the general scope and tendency of which is well exposed by a late writer.—(See "The Indicator," No. 39.) The provostship of Eton college would have been bestowed on Mr Boyle at this time, but

he declined accepting it. In 1666 he published his "Hydrostatical Paradoxes;" "The Origin of Forms and Qualities;" as well as several papers in the Philosophical Transactions. In the year 1668 he fixed his residence in London, a circumstance advantageous to his scientific acquaintance, especially as it enabled him to attend regularly the meetings of the Royal Society, where perhaps he had previously not often appeared; for Sorbriere, in his "Travels in England," in 1664, remarks, that though he had frequented the assemblies of the Royal Society, he had not been so fortunate as to see Mr Boyle, whose philosophical discoveries rendered him an object of attraction to all learned foreigners who visited this country. Cosmo III, duke of Tuscany, who came hither in 1669, and whose travels in England were published in 1821, made a point of seeing him, and was entertained by the exhibition of curious experiments with the air-pump, chemical phenomena, and the display of optical and other philosophical instruments. This prince, or rather the writer of his travels, after noticing Mr Boyle's charitable exertions in the cause of religion, adds, "Indeed if in his person the true belief had been united with the correctness of a moral life, nothing would have remained to be desired; but this philosopher having been born and brought up in heresy, is necessarily ignorant of the principles of the true religion, knowing the Roman Catholic church only by the controversial books of the Anglican sect, of which he is a most strenuous defender and a most constant follower; his blindness therefore on this subject is by no means incompatible with his great erudition." The number and variety of philosophical treatises which Mr Boyle published during the last twenty years of his life, is so great that we can only enumerate a few of the most important; these are—"Continuation of New Experiments touching the Spring and Weight of the Air," &c. 1669; "A Discourse of absolute Rest in Bodies;" tracts about the "Cosmical Qualities of Things;" "Considerations touching the Usefulness of Experimental Philosophy," tome the second; "Tracts of a Discovery of the Admirable Rarefaction of the Air," &c.; "The Origin and Virtue of Gems;" "Tracts containing New Experiments touching the Relation between Flame and Air," &c.; "Experiments on the Weighing and Coercion of Fire and Flame;" "Tracts on the Saltness of the Sea, on a Statical Hygroscope, on the Natural and Preternatural State of Bodies, and on the Positive or Privative Nature of Cold;" "Experiments and Notes about the Mechanical Origin of Particular Qualities;" "An Historical Narrative of a Degradation of Gold, made by an Anti-elixir;" "The Aërial Noctiluca;" "New Experiments and Observations on the Icy Noctiluca," &c. "Continuation of New Experiments Physico-mechanical, touching the Spring and Weight of the Air, with a large Appendix;" "The Natural History of Human Blood;" "A Disquisition about the final Causes of Natura

Things, wherein it is enquired whether, and if at all, with what caution a Naturalist should admit them; to which are subjoined, by way of appendix, some uncommon Observations about viuated Sight;" " *Medicina-Hydrostatica*; or Hydrostatics applied to the *Materia Medica*," part the first; " *Experimenta et Observationes Physicæ*, wherein are briefly treated of severaⁿ Subjects relating to Natural Philosophy in an experimental way; to which is added a small Collection of strange Reports," part the first. Of the last two works the continuation never appeared. The preceding imperfect list of Mr Boyle's philosophical productions may suffice to show how far science is indebted to his exertions. His writings derive their principal value from the large portion which they contain of experimental knowledge and observation of the works of nature, wherefore they have proved a fertile storehouse of facts, whence have been derived many subsequent discoveries. His fame depends principally on his labours as a natural philosopher, and in that point of view enough has been stated to give a general idea of his merits and character. Much however of his fortune was spent, and a large portion of his time employed in writing religious tracts, and publishing translations of the Bible, and numerous works tending to the promotion of piety and virtue. He died universally lamented December 30, 1691, and was on the 7th of January following interred in the church of St Martin's in the Fields. By will he bequeathed a revenue of 50*l.* a year for the endowment of a lecture in defence of Christianity, whence have originated treatises of various merit against atheism and infidelity. He died unmarried, but is said early in life to have formed an attachment to the beautiful daughter of Henry Carey, earl of Monmouth; a circumstance which is supposed to have given a romantic tinge to some of his theological publications. His works have been repeatedly printed, separately and collectively. *Birch's Life of Boyle*, 1743. *Martin's Biog. Philosophica*. *Aikin's G. Biog.*

BOYLE (RICHARD) third earl of Burlington and fourth earl of Cork, was another branch of the noble family of Boyle. He was born in 1695, and was married in 1721 to one of the coheirs of Savile, marquis of Halifax. He was in 1730 installed Knight of the Garter, and was a prosperous courtier, and very popular from his generosity and munificence. In 1731 he resigned his place of captain of the band of gentlemen pensioners, and employed himself in beautifying his garden at Chiswick, and constructing various pieces of architecture, for which art he had a great taste and predilection. His enthusiasm in this way was so conspicuous, that he even contributed his own money to public edifices, and repaired St Paul's Church, Covent-Garden, because it was the work of Inigo Jones. His house at Chiswick, the plan of which was borrowed from a well-known villa of Palladio, and Burlington-house, which he new-fronted, fell to the Devonshire family by the marriage of his only daughter to the then duke. Pope dedicated to Lord Bur-

lington his fourth epistle, and he is also honoured as the first patron of bishop Berkeley. He died much esteemed in 1753, when the title of Burlington became extinct.—*Biog. Brit. Walpole's Painters.*

BOYLE (CHARLES) the second son of Roger earl of Orrery, was born in 1676 at Chelsea, and at fifteen entered a nobleman at Christchurch, Oxford, under the care of Dr Atterbury. While there, he published a new edition of the epistles of Phalaris, of which Dr Bentley questioning the authenticity, he wrote an answer entitled "Dr Bentley's Dissertation on the Epistles of Phalaris examined," which produced the famous controversy alluded to in the article Bentley, in which the wit was all on one side and the truth on the other. On leaving the university in 1700, he was chosen member for Huntingdon; and on the death of his brother succeeded to the earldom, and was soon after elected a knight of the thistle, and received the command of a regiment. In 1709 he was promoted to the rank of a major-general, and sworn of the queen's privy council; he was also envoy extraordinary from the queen to the states of Flanders and Brabant, at the critical period of the treaty of Utrecht; and on his return was raised to the dignity of a British peer, under the title of lord Boyle. He retired from court soon after the accession of George I, and in 1722 was sent to the Tower on suspicion of being concerned in Layer's plot, but was discharged after six months' imprisonment. He constantly attended the house of Peers as before, but never spoke, though he was often employed in drawing up protests. Besides the edition of Phalaris, he published a comedy called "As you find it;" a copy of verses to Dr Garth upon his dispensary; and a prologue to Southerne's play of the siege of Capua. He died in 1731. His name of Orrery was given to an astronomical Instrument, invented by Mr George Graham, whom he patronised.—*Biog. Brit.*

BOYLE (JOHN) earl of Cork and Orrery, only son of the subject of the preceding article, was born in 1707. His early tutor was Elijah Fenton the poet, and at a proper age he was sent to Westminster, and thence to Christchurch, Oxford. In 1723 he married lady Harriet Hamilton, daughter of the earl of Orkney; and in 1732 took his seat in the house of Peers, and distinguished himself as the opponent of Sir Robert Walpole. He however attached himself more to literature than to politics, and a temporary residence on his estate in Ireland brought him acquainted with Dr. Swift. He published in 1739 an edition of the dramatic works of his great grandfather, Roger earl of Orrery, and in 1742 his "State Letters." His own earliest publication was a translation of two odes of Horace in 1742, which work was followed in 1762 by his "Translation of the Epistles of Pliny the Younger, with Observations on each Letter, and an Essay on Pliny's Life." This translation advanced his reputation as a polite scholar, but has since been eclipsed by the superior version of Melmoth. In the same year he

gave the world his very popular production, entitled "Remarks on the Life and Writings of Dr Swift," in a series of letters to his second son. It takes some freedoms with an old friend, but appears to be veracious, if not flattering. In 1753 he succeeded to the earldom of Cork, by the death of the earl of Burlington and Cork, and continued to amuse himself and the world with occasional communications to the "World" and "Connoisseur." In 1754 he made the tour of Italy, and employed himself in collecting materials for a history of Tuscany, which he intended to write in a series of letters, twelve only of which have been published since his death. They are written in an agreeable manner, and contain some curious information respecting the Medici family. The remainder of his life was embittered by the death of his second wife and eldest son, added to much suffering on his own part from the gout. He died 1762 aged fifty-six, leaving behind him a very amiable character as a nobleman, a writer, and a rational and disinterested lover of liberty.—*Biog. Brit.*

BOYS (WILLIAM) an ingenious naturalist and antiquary, born at Deal in Kent in 1735. He was the son of commodore Boys, lieutenant-governor of Greenwich Hospital, who wrote "An Account of the Loss of the *Luxborough Galley* by Fire, on her Voyage from Jamaica to London." The subject of this article was bred a surgeon, and practised as such at Sandwich, and on being appointed surgeon to the sick and wounded seamen, removed to Walmer. He died in 1803. He was a fellow of the Antiquarian Society, and published, in the *Archæologia*, "Observations on *Kits-Coity House* in Kent." His principal works are a tract on conchylogy, entitled "Testacea minuta rariora nuperrime detecta in arena littoris Sanduicensis, a Gul. Boys, SAS. Multa addidit, et omnium figuras ope microscopii ampliatas accurate delineavit, Geo. Walker," 1784, 4to; and a "History of Sandwich," 1792, 4to.—*Gent. Mag.*

BOYSE (SAMUEL) an English poet of considerable ability, but more remarkable as an example of that reckless folly and imprudence which has too often characterised the votaries of the muses. He was the son of the Rev. Joseph Boyse, a Dissenting minister at Dublin, where he was born in 1703. Being intended for his father's profession he was sent, at the age of eighteen, to the university of Glasgow, which place he left within twelve months, in consequence of having contracted a marriage with a young woman as thoughtless as himself. Returning home he became wholly dependent on his father, and by his extravagance dissipated the property of his parent, who died in indigence, and was buried at the expense of his congregation. Boyse then removed to Edinburgh, where in 1751 he published a volume of poems, which gained him the patronage of some persons of rank and influence, and from whom he obtained letters of introduction to Mr. Pope and other distinguished individuals, with which he went to London.

Of these recommendations he neglected to avail himself through mere indolence; and thenceforth he supported himself partly by writing for the press, and partly on the donations extorted from charitable persons by his shameless importunity. About the year 1740 he was reduced to such a state of extreme wretchedness, that he had neither shirt, coat, nor any kind of apparel to wear. The sheets of his bed were carried to the pawnbrokers; and in this miserable condition he sat up, with a blanket wrapped round him, through which he thrust his arm, to write on a paper placed on his knee. In this way he is said to have spent six weeks, living or rather starving with a wife and child, on the miserable pittance he could gain by scribbling for the magazines. Innumerable were the shifts to which he was reduced and the sufferings he underwent, owing to his lazy, selfish disposition, and meanness of spirit. It has been asserted that when he had walked from home without a farthing, leaving his wretched consort and child without victuals, on having a guinea given him he has gone to a tavern and spent it on delicacies for his sole gratification. In 1745 he resided at Reading, where his wife died, and his behaviour becoming more decent, some hopes were entertained of his reformation. But he returned to London, relapsed into his former habits, and died in a miserable lodging in Shoe-lane in 1749. The best of his compositions is "The Deity," a religious poem, which, with others selected from his miscellaneous effusions, may be found in Dr Anderson's "Poets of Great Britain."—*Aikin's G. Biog. Dr Kenrick's London Review*, vol. ii.

BOZE (CLAUDE GROS DE) an archæological writer of eminence, born at Lyons in 1680. He obtained the office of keeper of the Royal Cabinet of Medals at Paris, which was much improved and augmented under his judicious management. In 1705 he was admitted a member of the Academy of Inscriptions and Belles Lettres, of which he became perpetual secretary; and in 1715 he was chosen a member of the French Academy. He died in 1754. Besides many papers in the memoirs of the Academy of Inscriptions, and historical eulogies of its members, he was the author of the "Medallic History of Lewis XIV.," 1723, folio; "The History of the Emperor Tetricus elucidated by Medals;" and other works on numismatics.—*Moreri. Nov. Dict. Hist.*

BRACCIOLINI (FRANCIS) surnamed Dell'Api, born at Pistoia in 1566. He was private secretary to cardinal Antonio Barberini, on the elevation of whose brother, Maffeo, to the papedom by the title of Urban VIII, Bracciolini published a poem in twenty-three cantos, which so pleased that pontiff, that he made him several very handsome presents and carried his kindness so far as to cause him to assume the armorial bearings of his own family, three bees, and cognomen above-mentioned in allusion to them. He took orders at the age of forty, and was well beneficed through the favour of his patrons. He died at Pistoia in 1645. His other works consist of "*La Croce*

Ruacquistata," an epic poem, esteemed by his countrymen only second to the "Jerusalem Delivered;" a mock-epic entitled "Lo Scher-no degli Dei," both printed in 4to; "Evan-dro," a tragedy; "L'Amoroso Sdeano," a pastoral; and several other dramatic and pastoral pieces.—*Tiraboschi. Baillet.*

BRACON (HENRY DE) one of the earliest writers on English law, flourished in the thirteenth century. He studied civil and canon law at Oxford, and about the year 1244 Henry III made him one of his judges itinerant. Some writers say that he was afterwards chief justice of England, but his fame at present is derived from his legal treatise entitled "De Legibus et Consuetudinibus Angliæ," which was first printed in 1569, folio, but of which a more correct edition was published in 1640, 4to. He is accused of being too favourable in this work to the Pope, but that was the error of his age, and it is possibly to the unsettled nature of the times, and the alternate ascendancy of the crown and barons, that we must attribute his inconsistency with regard to the royal prerogative; in one place, observing that no man must presume to dispute or control the actions of the king; and in another, that he is subordinate to the law, and may be "bridled" by his court of "earls and barons." The time of his death is unknown.—*Biog. Brit.*

BRADBURY (THOMAS) a Nonconformist divine of eminence in the last century. He was a native of Wakefield in Yorkshire, and was educated at a dissenting academy in the country, where he distinguished himself chiefly by his satirical wit and eccentric conduct. He left that seminary at the age of eighteen, and commenced preacher in the metropolis. After occupying other situations, he became the successor of Daniel Burgess, whose style of pulpit eloquence he imitated. He distinguished himself as a public writer by a controversy with Dr Isaac Watts on the subject of the Trinity, in which Bradbury showed himself a warm, but not very liberal advocate for orthodoxy. He also published two volumes of sermons, which are esteemed by the Calvinistic dissenters. In private life he is said to have been of a jovial disposition, and would occasionally carry his hilarity so far as to sing "O the roast Beef of Old England!" at a public dinner in commemoration of the Revolution. His general conduct however was irreproachable, and he was respected not only among his own party, but also by some of the episcopal clergy, particularly bishop Burnet. He died in 1759.—*Bennet and Bogue's Hist. of the Dissenters. Chalmers' Biog. Dict.*

BRADLEY (JAMES) a celebrated astronomer and mathematician, who was a native of Sbareborn in Gloucestershire. He was educated at Oxford, where he took the degree of MA. in 1717. Having taken orders he obtained the vicarage of Brilistow in Herefordshire, and subsequently the sinecure of Landewy Walfry in Pembrokeshire, which was his sole church preferment. This was principally owing to his great attachment to mathe-

tical studies, which induced him in 1721 on being chosen Savilian professor of astronomy, to resign both his benefices. He devoted himself with enthusiasm to the cultivation of science and in 1728 he published his theory of the aberration of the fixed stars, which has gained him lasting celebrity. In 1730 he was appointed lecturer on astronomy and experimental philosophy at Oxford. In 1741 he succeeded to the post of astronomer royal on the death of Dr Halley; and at the same time he had the degree of DD. conferred on him by the university of Oxford. He communicated to the Royal Society in 1747 a very important discovery which he had made relative to the nutation of the earth's axis; and having obtained from government a grant of 1,000*l.* to purchase instruments for the observatory of Greenwich, he laid out that sum in making such additions to the apparatus which he found there as enabled him to prosecute his astronomical researches with greater advantage than his predecessors. Soon after he was chosen a foreign member of the Royal Academy of Sciences at Paris; and he was also a member of the Academy of Inscriptions. Having refused to accept the valuable living of Greenwich, offered to him by the king in 1751, he had a pension of 250*l.* a-year conferred on him, which he enjoyed till his death which took place July 13th, 1763, in the seventieth year of his age. He was the author of eight papers in the Philosophical Transactions; and he left a series of astronomical observations made at Greenwich, part of which were published at Oxford, 1798, folio; and the remainder are in the possession of the Savilian professor.—*Ann. Register. Dr Thomson's Annals of Philosophy. Aikin's G. Biog.*

BRADLEY (RICHARD) a voluminous writer on botany and horticulture, chiefly deserving of notice on account of his having been stated to have forestalled Dr Brewster in the discovery of the kaleidoscope. But this is a mistake, for the contrivance proposed by Bradley in one of his books on gardening, for producing combinations of coloured surfaces, depends on principles totally different from those on which the kaleidoscope is constructed, and are calculated to produce a very inferior effect; nor does it appear that the scheme was ever executed. Bradley was a fellow of the Royal Society and professor of Botany at Cambridge, which last situation he was in danger of losing on account of some irregularity of conduct, when he died in 1732. His principal works were compilations, some of which were once popular, but have been rendered obsolete by the progress of science.—*Pref. to Martyn's Dissertat. on the Æneis.*

BRADSHAW (JOHN) president of the high court of justice which tried and condemned Charles I. Some say he was born in Derbyshire, others in Cheshire, but the first notice had of him is that he studied the law in Gray's Inn, and being admitted to the bar, obtained much chamber practice from the partisans of Parliament, to which he was zealously devoted.

In 1646 he was made joint commissioner of the great seal for six months by a vote of the House of Commons, and in the following following, both houses voted him chief justice of Chester. When the trial of the king was determined upon, the resolute character of Bradshaw pointed him out for president, which office after a slight hesitation he accepted. His deportment on the trial was lofty and unbending, in conformity to the theory which rendered the unhappy sovereign a criminal and amenable, and every thing was done, both for and by him, to give weight and dignity to this extraordinary tribunal. His character would have stood higher had his reward been less ample, but he was too munificently recompensed, both in money and laud, to entitle him to the praise of disinterested principle. He was however so far consistent in his conduct, that he rendered himself obnoxious to Cromwell when the latter seized the protectorate, and was at length deprived of the chief justice-ship of Chester. On the death of Cromwell and restoration of the long parliament again, he obtained a seat in the council, and was elected president, and would have been appointed commissioner of the great seal had his health permitted. He died in November 1659, and on his death-bed asserted, that if the king were to be tried and condemned again, he would be the first to agree to it. He was magnificently buried in Westminster abbey, whence his body was ejected and hanged on a gibbet at Tyburn, with those of Oliver and Ireton at the Restoration. Whatever the defects of this intrepid character, it is possibly good for England that it can occasionally produce men of kindred spirit; and it is well observed, both by Hume and the late Mr Fox, that the trial of Charles I, however anomalous, by no means tended to lower the national character of Englishmen in the estimation of foreigners.—*Biog. Brit.*

BRADSTREET (ANNA) an English poetess of the seventeenth century, whose works attracted much notice among her contemporaries. She was the daughter of Thomas Dudley, a gentleman who emigrated to North America in the reign of Charles I, and was governor of the colony of New England. He appears to have been a man of talents and learning, and was the author of a tract relative to the distresses of the settlement over which he presided, and a writer of occasional poetry. His death took place in 1653, in the seventy-seventh year of his age. His daughter Ann married Simon Bradstreet, one of the successors of her father in his colonial magistracy. She wrote a volume of poems, published with the following title—"The Tenth Muse, lately sprung up in America, or several Poems compiled with great variety of Wit and Learning, full of Delight, by Anna Bradstreet," 1650, 12mo. Dr Cotton Mather says, "Her poems, divers times printed, have afforded a grateful entertainment unto the ingenious, and a monument for her memory beyond the stateliest marbles." The time of her death is not known.—*Mather's Hist. of New Eng.* Book II.

BRADWARDIN (THOMAS) a learned English divine of the fourteenth century. He was educated at Merton college, Oxford, and after being chancellor of the diocese of London, attended Edward III as confessor during his wars in France. Bradwardin was made archbishop of Canterbury in 1349, but he died forty days after his consecration at Lambeth, and was buried at Canterbury. This prelate wrote several mathematical treatises, which have been published, and among them one on the quadrature of the circle. But he is best known as the author of a book against pelagianism, entitled "De Causa Dei." The fame of this work led Chaucer, in his "Nun's Priest's Tale," to rank Bradwardin with St Augustine, bishop of Hippo. An apologue in this treatise appears to have furnished Parnell with the story of his beautiful poem "The Hermit." It is however of Oriental origin, and the archbishop probably derived it from the Talmud.—*Cave. Mosheim.*

BRADY (DR NICHOLAS) a divine, best known as a translator of the "Psalms," in conjunction with Tate. He was the son of an officer in the army of Charles I, and was born at Cork in 1659, and educated at Westminster and Christchurch, Oxford. His first preferment was a prebend in Cork, and he subsequently settled in London, and ultimately became vicar of Richmond and rector of Clapham in Surrey. Besides the Psalms, he translated the Æneid of Virgil, which was published by subscription in 1726, and a very middling tragedy, called "The Rape." He also wrote three volumes of sermons. He died in 1726.—*Biog. Brit. Cibber's Lives.*

BRADY (ROBERT) a learned physician and historian, was a native of Norfolk, and admitted at Caius college in 1643, and made doctor of physic by royal mandate, and elected master of his college in 1660. In 1670 he was appointed keeper of the records in the Tower, and soon after regius professor of physic in the university of Cambridge. He is little known in his profession, which he probably did not pursue, as beside his historical labours, he sat as a member of the university of Oxford in the parliament of 1681, as also in that of 1685. His principal historical works consist of an "Introduction to the English History," and "A Complete History of England, from the Entrance of the Romans unto the End of the Reign of Richard II." The introduction is chiefly occupied in proving three points—that there were no Commons until the 49th Henry III; that William of Normandy made an absolute conquest of the kingdom; and that the crown is hereditary and not elective. The object of the history is to show that all English liberty has been concession from the crown; a position which proves little, while so evident that the crown may be virtually forced to concede. Hume however clearly borrowed his theory from Brady, and it is undoubtedly of some use to the apologist of the failings of a weak and unfortunate dynasty, whatever it may be to the genuine and unsophisticated British historian. The narra-

tive of Brady is chiefly epitomized from Matthew Paris; and considering his obligations to the crown, it is not wonderful that he passed over many things favourable to the more popular side of the question. He has however managed his arguments skilfully, and exhibited considerable research. Dr Brady was also the author of a "Treatise on Burghs." He died in 1700.—*Biog. Brit.*

BRAHE (TYCHO) a celebrated astronomer of a noble Danish family, born at Knudstorp in the province of Scania, in 1546. After some previous tuition at Copenhagen, he was sent to Leipsic to study the law. Led by inclination, he devoted himself to mathematical pursuits, to which his attention is said to have been directed by accident. He left Leipsic in 1565, and that year he had the misfortune to have a part of his nose cut off in a duel, which loss he is said so ingeniously to have supplied by an artificial nose, that the defect was not perceptible. He made some chemical experiments in hopes of finding the philosopher's stone, a common object of research among the philosophers of his time. In 1566 he left Denmark, and improved his acquaintance with astronomy in the course of his travels in Germany and France. He returned home in 1571, and began to make astronomical observations at an observatory which he erected near Knudstorp. Here it was that he signalized himself in 1573, by the discovery of a new star in the constellation Cassiopeia. He soon after violently offended his relations by marrying a country girl, when the king interposed his authority to produce a reconciliation. In 1574 he lectured on astronomy at Copenhagen; and soon after having travelled through several parts of Europe, he determined to settle with his family at Basil. The Danish king, Frederic II, unwilling to have his country deprived of a subject who was an honour to it, determined to retain him at home, by providing him with every convenience for his studies, and rewarding him according to his merits. He therefore presented him with the island of Huen or Wcen in the Sound, for the erection of an observatory, gave him an ample pension, and a canonry in the cathedral of Roschild. He enjoyed this situation and these advantages about twenty years, during which period he strenuously applied himself to the cultivation of astronomical science. The death of Frederic II interrupted his studies, and being deprived of his pension and canonry by the ill offices of envious and illiberal courtiers, he left Denmark, and ultimately settled at Prague, under the patronage of the emperor Rodolphus, who was a lover of science and learned men. This prince provided for him most magnificently; and he began to occupy himself with his usual pursuits, and gathered around him a number of mathematical students, among whom was the celebrated Kepler. He had not long enjoyed these advantages when he was seized with a disease, which terminated in death October 24, 1601. Tycho Brahe is known as the inventor of a new hypothesis to explain the motions of the planetary bodies. His scheme

was a kind of medium between the ancient system of Ptolemy and that which had been advanced by Copernicus. He supposed the earth to be fixed motionless in the centre of the universe, round which he imagined the sun to revolve in a year and the moon in a month; the other planets performing their course round the sun, and being carried with it in its revolution round the earth; and the whole of this system, together with that of the firmament or orb of the fixed stars, was supposed to have a diurnal motion also. The obvious difficulties in this scheme, and its inferiority to the simpler and now generally received system of Copernicus, have led some to undervalue the abilities of Tycho, who, it ought to be recollected, had for his object the formation of an hypothesis, which would explain the celestial phenomena without admitting the revolutionary motions of the planet we inhabit. Neither does the fame of Tycho rest upon the merits or the ingenuity of his theory, for he was a skilful practical astronomer, and made many important observations on the stars, contained in the works published by himself, and in the famous Rudolphine Tables of his disciple Kepler.—*Martin's Biography. Philosoph. Mereri. Aikin's G. Biog.*

BRAIDWOOD (THOMAS) an ingenious man, a native of Edinburgh, said to have been the first in this country who systematically attempted the arduous yet interesting task of communicating general instruction to the deaf and dumb. The art however had been previously practised by Dr John Wallis, by Henry Baker, and probably by others, though Braidwood may have invented his mode of tuition without being acquainted with the labours of his predecessors.—(See John Conrad AMMAN and Peter PONCE.)—In 1760, about the time that the abbe de l'Épée commenced a similar undertaking in France, Braidwood first conceived the idea of teaching the deaf and dumb, an art which he then supposed to be original, and the most successful realization of which he was permitted to witness, and to bequeath the advantages arising from it to his family. He removed in 1783 from Edinburgh to Hackney, where, in conjunction with his son-in-law John Braidwood, he continued for many years to pursue his profession. He died in 1806. His daughter, Mrs Isabella Braidwood, having at an early age been bereft of her husband, her first wish was to perpetuate through her family that art which she had seen so beneficially exercised by their father. Circumstances induced her to remove to Edgbaston near Birmingham, where she conducted a seminary for pupils born deaf till her death, which took place in 1819, in the fifty-seventh year of her age.—*Gent. Mag.*

BRAITHWAITE (JOHN) an ingenious and enterprising mechanic, noted for his successful employment of the *diving-bell* in recovering shipwrecked property. In 1783 he constructed a diving machine, with which he descended into the Royal George, sunk off Spithead, and brought up the sheet-anchor and many of the guns. In 1788 he obtained from the Hartwell

Fast Indiaman, lost near one of the Cape de Verd islands, dollars to the value of 33,000*l.* 7000 pigs of lead, and 360 boxes of tin. He was yet more fortunate in exploring the wreck of the Abergavenny East Indiaman off the Isle of Portland, from which he recovered property worth 105,000*l.* He died in 1818.—*Ibid.*

BRAMAH (JOSEPH) an English engineer and mechanist of distinguished ingenuity. He was a native of Yorkshire, and was bred a carpenter, in which occupation he was employed first in the country and afterwards in London, displaying in both situations much native talent and industry. He worked in the metropolis for some time as a cabinet-maker, but at length adopted the profession of an engineer, and made himself known as the author of several curious and useful inventions. Among these is an hydraulic machine, producing motion by the uniform pressure of fluids, on the principle of the hydrostatic paradox, for which he took out a patent in 1796, as he also did for an improved kind of lock, which from its general utility and application, has contributed chiefly to make his name known. In 1807 he was employed by the governors of the bank in constructing machines for printing bank-notes. He was carrying on many other plans of improvement in mechanical works at his premises at Pimlico, when he was suddenly taken off by death, December 9, 1814. He published "A Dissertation on the Construction of Locks," and "A Letter on the subject of the Cause of Boulton and Watt against Hornblower and Maberley, for an Infringement of a Patent."—*New Monthly Mag.*

BRAMANTE d'URBINO (LAZARUS) a celebrated Italian architect, born in 1444, of poor but reputable parentage. Showing an early taste for drawing, he was brought up to the profession of a painter, but he quitted it to dedicate his talents to architecture, which he cultivated with uncommon success. He first designed and commenced in 1513 the erection of St Peter's at Rome, carried on and finished by other architects after his death. He was a great favourite with pope Julius II, who made him superintendant of his buildings, and under that pontiff he formed the magnificent project of connecting the Belvidere Palace with the Vatican, by means of two grand galleries carried across a valley. He built many churches, monasteries, and palaces at Rome, and in other Italian cities, and was employed by pope Julius as an engineer to fortify Bologna, 1504. He manifested a decided predilection for the classic architecture of the Greeks, and was the instructor of Raphael in that art. He died in 1514. Bramante painted portraits with ability, and he was skilled in music and poetry. His poetical works were printed at Milan in 1756.—*D'Argenville Vies des Archit. Tiraboschi.*

BRAMHALL (JOHN) an eminent prelate, was born at Pontefract in Yorkshire, in 1593. He received his school education at the place of his birth, and in 1608 was removed to Syd-

ney college, Cambridge. After taking his degrees he quitted the university, and became chaplain to Matthews, archbishop of York, and was soon after made a prebendary of York and then of Rippon. In 1630 he took his doctor's degree at Cambridge, and was invited to Ireland by lord Wentworth, where he was employed in reforming ecclesiastical abuses, for which he was promoted to the bishoprick of Derry. In 1641 articles of high treason were exhibited against him, but through the mediation of archbishop Usher in England, the proceedings were stopped. He resided abroad during the civil war, and returned to Ireland in 1648, when finding his life still in danger, he escaped with great difficulty, and returned to the Continent. At the Restoration he was created archbishop of Armagh, and died there in 1677. He was the author of a variety of works, which were published in 1677 in one volume folio.—*Biog. Brit.*

BRANCAS LAURAGUAIS (duke de) member of the Academy of Sciences at Paris, died in October 1824, aged ninety-one. He was distinguished for his skill in chemistry, and was the worthy associate of Lavoisier, Berthollet, Chaptal, Van Mons, and other celebrated reformers of the science. To this nobleman we owe the discovery of the composition of the diamond, and some very important improvements in the manufacture of porcelain.—*New Monthly Mag.*

BRAND (JOHN) an English antiquary and book collector of eminence. He was born of mean parentage at Newcastle-on-Tyne in 1743; and after serving an apprenticeship to a shoemaker, obtained the means of prosecuting his studies at Oxford. He entered into orders, and was presented to the curacy of Cramlington in Newcastle. Here he continued till 1784, when the duke of Northumberland gave him the rectory of St Mary Hill, London; and the same year he was chosen secretary of the Antiquarian Society. He died in 1806, at his apartments at Somerset-house. His principal publications are—"Observations on Popular Antiquities, including Bourne's Antiquitates Vulgares, with copious Additions," 1777, an enlarged edition of which curious work was published after his death, in 2 vols. 4to; and "The History and Antiquities of the Town and County of Newcastle," 1789, 2 vols. 4to. His curious and valuable library, of which there is a catalogue published in two parts, was sold by auction in 1807 and 1808.—*Gent. Mag.*

BRANDER (GUSTAVUS) an antiquary and naturalist, who was of a Swedish family, but was born in London in 1720. He was engaged in business as a merchant, and was one of the bank directors. He was an active member of the Royal and Antiquarian Societies, to the transactions of both which learned bodies he contributed some papers. His chief publication is a catalogue of fossils collected in Hampshire, which he presented to the British museum, of which national institution he was a trustee. He died in 1787.—*Nichols's Lit. Anecdotes of the 18th Century.*

BRANDT (SEBASTIAN) a native of Strasburg, who became a student of the law at Basil, where he obtained a professorship. He is said to have afterwards settled at Strasburg, and to have been made count palatine and chancellor of the city. He died in 1520. Among his works are—"Varia Carmina," Basil, 1498, 4to, said to be the scarcest of his productions; "Navis Stultifera," Basil 1497, 4to, a satirical composition, of which there is a German translation, entitled "Narrenschiff," 1499, 4to, and which has been many times reprinted in both languages; and "Expositiones, sive Declarationes omnium Titulorum Juris civilis atque canonici," Basil 1514, 8vo.—*Clem. Bibliothecae Curieuse.*

BRANDT (GERARD) a Dutch poet and divine, born at Amsterdam in 1626. His father was a watch-maker, and he was designed for the same occupation, but when young he displayed such an inclination for literature, that it was thought proper to educate him for the church; and after completing his studies, he became pastor of a congregation of remonstrants at Nieukoop. When he was only seventeen he attempted dramatic composition, and he afterwards wrote a tragedy, entitled "The Dissembling Torquatus," the incidents of which bear so striking a similarity to those of Shakspeare's Hamlet, that it has been supposed Brandt must have been acquainted with the work of the English bard. He married a daughter of professor Gaspar Barlaeus, by whom he had three sons, who all embraced the clerical profession, and attained some distinction by their writings. The elder Brandt removed from Nieukoop to Hoorn, and afterwards to Amsterdam, where he died in 1685. He was the author of several historical works, the most important of which is his "History of the Reformation and other Particulars concerning the Church of the Low Countries," 4 vols. 4to, 1671, &c. This work has been abridged and translated into English and French.—*Moreri. Bourcinq's Batavian Anthology.*

BRANDT (—) a German chemist of the seventeenth century, who is usually considered as the discoverer of phosphorus. Leibnitz, in the "Melanges de Berlin," for 1710, mentions him as being a chemist of Hamburgh, who, during a course of experiments on urine, for the purpose of discovering a solvent which would convert silver into gold, accidentally produced phosphorus in 1667, or, according to others, 1669. He communicated his discovery to Kraft, another chemist, who showed it to Leibnitz and to Boyle. The former introduced Brandt to the duke of Hanover, before whom he performed the whole operation; and a specimen of the new substance was sent to Homberg, who showed it to the Academy of Sciences at Paris.—*Chaptal's Elements of Chemistry*, vol. iii. *Aikin's G. Biog.*

BRANDT (GEORGI) counsellor in the department of the mines in Sweden, was born in the province of Westmania in 1694. He studied chemistry and mineralogy at Upsal, and travelled to foreign countries to increase his

knowledge of those sciences. On his return home he was made director of the chemical laboratory established at Stockholm, where he made many important experiments, chiefly relating to metals, of which he published an account in the transactions of the Royal Society of Upsal, and the memoirs of the Swedish Academy of Sciences at Stockholm, to which he belonged. He died in 1768, leaving the reputation of having been one of the most learned and skilful chemists of his age.—*Biog. Univ.*

BRANDT (ENEVOLD count de) a minister and favourite of Christian VII king of Denmark, who was involved in the supposed conspiracy of count Struensee, and was sentenced with him to decapitation. He was executed April 28, 1772. These Danish statesmen are usually considered as having been the victims of political intrigue.—*Nouv. Dict. Hist.*—See **STRUENSEE (Count).**

BRANTOME, or PETER DE BOURDILLES, a celebrated French historian, who was born in Guienne in 1527. He devoted himself early in life to attendance on the great, in whose train, or in a military capacity, he visited various parts of Europe. He became knight of the order and gentleman of the chamber to the kings Charles IX and Henry III, and chamberlain to the duke of Alençon, with whom he went into the Netherlands. He held the barony of Richemont in Perigord, and also the abbacy of Brantome, whence he obtained his distinguishing appellation. His death took place in 1614, at his castle of Richemont. The memoirs of Brantome were printed in ten volumes, 12mo; of which four contain accounts of French captains, two of foreign captains, two of gallant women, one of illustrious women, and one of duels. A supplement, in five volumes, was afterwards published. There are few works more amusing than these memoirs, which present a faithful delineation of the state of society in France during a very interesting period, when the romantic usages of chivalry, though sinking into oblivion, still retained some influence on the manners of the great. The style of Brantome is free and lively, and not always perfectly decent, a circumstance which must be attributed to the nature of his undertaking, as the historian of a very licentious age.—*Moreri. Nouv. Dict. Hist.*

BRATHWAYTE (RICHARD) an English poet, born at Warcop near Appleby, in 1588. At sixteen he became a commoner of Oriel college, Oxford, whence he removed to Cambridge. He afterwards became deputy-lieutenant for Westmorland, captain of a company, and a justice of the peace, and died at Appleton in Yorkshire, in 1673. His works are—"The Golden Fleece, with other Poems," 8vo; "Essays on the Five Senses," 8vo; "The Poet's Willow, or the Passionate Shepherd," 8vo; "Nature's Embassy, or the Wild Man's Measures," 8vo; "The Prodigal's Tears," 8vo; "Time's Curtain Drawn, divers Poems," 8vo; "The English Gentleman," 4to; "The English Gentlewoman," 4to; "The Arcadian Princess," 8vo; "Discourse of Detraction,"

12mo; "Itinerarium Barnabii, or Drunken Barnaby's Journal;" "Time's Treasury," 4to; "Poem to Charles II on his Restoration," 4to; "Regicidium," a tragi-comedy, 8vo; "Survey of History, or a Nursery for Gentry," 4to; "A Curtain Lecture," 12mo; "Spiritual Spicery, or Tracts of Devotion," &c. &c.—*Wood. Warton. Chalmers' G. Biog.*

BRAUN (GEORGE) in Latin Braunius, flourished in the beginning of the seventeenth century, and was archdeacon of Dortmund and dean of Notre Dame at Cologne. He wrote a Latin oration against fornicating priests, and the lives of Jesus Christ and the Virgin Mary; but his principal production is a work entitled "Civitates orbis terrarum in æs incisæ et excusæ, et descriptione typographica, morali, polite illustrate," in 6 folio volumes, with coloured plates by Hohenberg and Hoeffnagel, 1572, reprinted in five volumes in 1612. He died in 1622.—*Moreri. Saxii Onom.*

BRAY (sir REGINALD) born in Worcestershire, was an able statesman and favourite of Henry VII. He was present at the battle of Blackheath in 1497, when lord Audley, who had joined the Cornish rebels, was taken prisoner, and on the execution and attainder of that nobleman, became possessed of part of his property. His conduct as a minister was such as to procure him the confidence of one of the most suspicious of monarchs, the love of the people, and the respect of historians, who style him the father of his country, a sage and grave person, and one who was not afraid to admonish the king when he did any thing contrary to justice and equity. He also rendered himself celebrated by his love of architecture, in which he was not a little skilled. He superintended the building of Henry the Seventh's chapel, Westminster, a work which will honourably carry his name down to posterity. He also finished and perfected St George's chapel at Windsor, where he was buried on his death, which happened in 1503.—*Biog. Brit.*

BREBEUF (GEORGE DE) a French poet of some celebrity, was born at Torigny in lower Normandy, in 1618. He was distinguished by a translation of Lucretius, which was much admired, and procured him great promises from cardinal Mazarin, that were never fulfilled. His other patrons being equally neglectful, he retired to Venoix near Caen, and died there at the early age of forty-three. The most popular of his works is his "Lucretius Translated," an ingenious satire against noblemen and their flatterers. After his death his works were collected in two volumes, which contain some agreeable pieces, and among the rest 152 epigrams, written in consequence of a wager, on the single topic of a lady's painting. He also wrote "Poetical Eulogies," and a "Defence of the Romish Church."—*Moreri. Nouv. Dict. Hist.*

BREDA (JOHN VAN) son of Alexander Van Breda, a painter of some merit, was born at Antwerp in 1683, and received the instructions of his father. He attached himself to the style of Wouvermans, and became

the most successful of his imitators. He visited England with Rysbrack, the sculptor, whence after a few years' residence he returned to Flanders, amply remunerated for his labours. Louis XV was so pleased with the works of this artist, that on his entry into Antwerp in 1746, he ordered four of them to be purchased for him, and many of his courtiers followed his example. He died at Antwerp in 1750.—*Bryan's Dict. of Paint. and Eng.*

BREENBERG (BARTHOLOMEW) a painter and engraver, was born at Utrecht in 1620, though he lived the chief part of his life at Rome, where he was distinguished by the name of Bartolomeo. His landscapes, which are chiefly views of Albano, Frascati, and Tivoli, are celebrated. His best works are on a small scale; the larger are less successful. He died in 1660.—*Ibid.*

BREITINGUER (JOHN JAMES) a Swiss minister, was born at Zurich in 1701. He was appointed professor of Hebrew in 1731, and soon after vice-professor of logic and rhetoric, and immediately commenced a reformation much wanted in the schools, with a treatise, entitled "De eo quod nimum est in studio grammatico," and a system of logic in Latin and German, which soon took place of that of Wundelin. He also produced the "Bibliothèque Helvétique," in conjunction with Bodmer; and edited a new translation of the Septuagint. He chiefly excelled as a teacher of youth, particularly those destined for the church, and introduced some new regulations, the benefit of which his country fully acknowledged. He continued his active exertions to the close of his life, being present at an ecclesiastical council on December 13, 1776, on his return from which he was seized with apoplexy, and died the following day.—*Dibdin's Classics. Saxii Onom.*

BRIETKOPF (JOHN GOTTLIEB IMMANUEL) an ingenious printer, letter-founder, and bookseller, was born at Leipsic in 1719. The perusal of a work of Albert Durer, in which the shape of the letters is deduced from mathematical principles, suggested to him some valuable improvements in the art of casting types. He was the first who cast musical types, now so common, and applied the same method to maps and even portraits, though neither of the latter were found very useful. He however proved more fortunate in his endeavours to print the Chinese characters on moveable types, and produced some specimens which were much admired. He also discovered some improvements in the composition of type-metal, but these he concealed. His works are—a treatise upon the origin of printing, 1774; an attempt to illustrate the origin of playing cards, and a small treatise on Bibliography, published in 1793. He died in 1794.—*Schlichtegroll's Necrology.*

BRENNER (HENRY) son of a pastor of Kronoby in West Bothnia, where he was born in 1669, and received his education at Upsal. In 1697 being appointed to attend Louis Fabricius, the Swedish envoy, to the court of Persia, he seized the opportunity of acquiring

the language of that country, and made so great a proficiency in it, that Sarug Khan, the Persian ambassador, when about to start for Stockholm, took him into his suite for the purpose of establishing a medium of communication with the Swedish government. War however having broken out between Charles XII and the Czar, the latter caused Brenner to be arrested on the road at Moscow in 1700, and kept him in confinement till the peace of Nystadt. In 1722 he returned to Stockholm, when he was appointed royal librarian, and enjoyed his situation till his death in 1732. During his imprisonment in Russia, he contrived to keep up a literary correspondence with Gavelius, Benzelier, Gripenhielm, and other learned men, part of which has been published. He also translated from the Armenian the history of that country, by Moses Armenus Choroniensis, an author of the fifth century. This work he printed at Stockholm on his return in 1723, the original having been published twenty-eight years previously at Amsterdam. His other works are—"Observations on the Expedition of the czar Peter the Great against the Persians," and an accurate chart of the Caspian sea, the river Daxia (supposed to be the ancient Iaxartes) &c. This chart is inserted, but without acknowledgement, in the "Memorabilia Orientalis Partis Asiae."—*Cezelius Dict. of Eminent Swedes.*

BREQUIGNY (LOUIS GEORGE, Oudard le Feudrix) a learned member of the French Academy, was born in the county of Caux in 1715. In 1767 he was sent to England to search for materials respecting French history, the result of which visit he published in a paper in the *memoirs* of the Academy of Inscriptions. From this account we find that he collected, in the British museum and the tower of London, a valuable treasure of letters and papers relative to the history, laws, and constitution of France. The same memoirs also give some very curious information in relation to the celebrated siege of Calais. The principal works of Brequigny are—"Histoire des Revolutions de Genes," Paris 1752, 3 vols. an edition of Strabo; "Vies des Anciens Orateurs Grecs," 2 vols. 12mo; "Diplomata Chartarum ad res Francicas spectantia," 4to; "Table Chronologique des Diplomes Chartes et Titres relatifs à l'Histoire de France," 5 vols. folio; "Ordonnances des Rois de la troisième Race." The last six volumes of this collection he enriched with copious and learned notes. He died in 1795, aged eighty.—*Nouv. Dict. Hist.*

BREREWOOD (EDWARD) a mathematician and antiquary, was born at Chester in 1565. In 1581 he was admitted a fellow of Brazen-nose college, Oxford, and fifteen years afterwards was chosen first professor of astronomy at Gresham college. Although he never published any thing during his life, yet the following works were collected and put in order after his death, which happened in 1613—1. "Enquiries touching the Diversity of Languages and Religion through the chief Parts of World," 1614, 4to; 2. "De Ponderibus et

Pretii Veterum Nummorum," 1614, 4to, 3. "Elementa Logicae," 8vo; 4. "Tractatus quidam Logici de Prædicabilibus et Prædicamentis," 8vo; 5. "Tractatus duo, quorum primus est de Meteoris, secundus de Oculo;" 6. "Two Treatises of the Sabbath," 4to; 7. "The Patriarchal Government of the Ancient Church," 4to; and "Commentarii in Ethica Aristotelis," which he wrote at the age of twenty-one.—*Ward's Gresham Professors.*

BRET (ANTHONY) a native of Dijon, who adopted the profession of literature. His writings are—a poem entitled "Quatre Saisons;" "Essais des Contes Moraux;" "La Nouvelle Cleopatre;" "Vie de Ninon de l'Enclos." He also published the works of Moliere, with commentaries, 6 vols. 8vo, reckoned superior to any other edition of that poet's dramas. Bret died in 1792.—*Nouv. Dict. Hist.*

BRETON, BECTON, or BRITTON (JOHN) bishop of Hereford in the thirteenth century, was raised to that see by Henry III, on account of his proficiency in the civil and canon law. He made a collection of the laws of England, which Leland tells us proved very useful to Edward I, and to the whole nation. He died in 1275.—*Bale and Pits.*

BRETON (NICHOLAS) a native of Staffordshire, flourished in the reign of queen Elizabeth, and distinguished himself as a writer of pastorals, madrigals, &c. He wrote with an elegant simplicity, and the ballad of Phillida and Corydon, preserved by Dr Percy, is a pleasing specimen. Dr Percy also mentions an interlude entitled "An Old Man's lesson and a Young Man's Love;" and there are many other pieces written by him, the titles of which may be seen in Winstanley, Ames's Typography, and Osborne's Harleian Catalogue. He is alluded to more than once in the plays of Beaumont and Fletcher, and is spoken of with great respect by Meres, in the second part of "Wit's Commonwealth," p. 283.—*Chalmers' Biog. Dict.*

BRETON (RAYMOND) a native of Beaune in France, who entered into the order of Friars Preachers at Paris, and in 1635 was sent with some of his brethren on a mission to the West Indies. He passed twelve years in St Domingo, visited Guadaloupe and the Antilles, and returned to France in 1654. He was afterwards sub-prior of the convent of Blainville, whence he removed to Auxerre, and then to Caen. He died in 1679. He was the author of a catechism in the Caribbean language, printed at Auxerre in 1664; and of a French and Caribbean dictionary, with historical remarks on the language of the Caribbees, 1665-67, 2 vols. 8vo. He also wrote a history of the missions of the Preaching Friars in the West Indies, which has never been published.—*Biog. Univ.*

BREUGHEL (PETER the Elder) an eminent painter, was born at the village of Breughel near Breda in 1510, and was called the droll, from the whimsical subjects which he painted. He received the instructions of Peter Koech, whose daughter he married, and on quitting him, travelled for improvement in

France and Italy, and finally settled at Brussels, where he died in 1570. His best works consist of village merry-makings, gypsies telling fortunes, &c. He also painted landscapes with banditti.—*Des Camps*.

BREUGHEL (PETER the Younger) son of the preceding, was surnamed "Hellish" Breughel, from the eccentric and frightful subjects of his pictures. He was born at Brussels, and died in 1642. He was the disciple of Gilles Coningsloo.—*Ibid*.

BREUGHEL (JOHN) surnamed from his dress, Velvet Breughel, was the younger brother of Peter, and was born at Brussels in 1565. He was instructed in oil painting by Peter Goekint, and first painted fruit and flowers, in which he excelled, but on visiting Italy he changed his subjects and painted landscapes, which were so much admired by Rubens, that he solicited him to paint the landscapes in several of his pictures. One of their finest works was a picture of Adam and Eve in Paradise, the figures painted by Rubens, in one of Breughel's finest landscapes. He died at Brussels in 1642, aged seventy-seven.—*Pilkington*.

BREULIUS or DU BREUIL (JAMES) a French antiquary, was born in 1528, and in 1549 became one of the society of Benedictines of St Germain-des-Pres. In 1601 he published an edition of Isidorus, folio, and subsequently "Le Theatre des Antiquités de Paris," 4to, 1639; "Supplementum Antiquitatum Parisiensium;" "Les Fastes de Paris," by Bouffon, improved by Du Breuil; "La Vie de Cardinal Charles de Bourbon;" and "Chronicon Abbatum Regalis Monast. S. Germani à Pratis."—He died in 1614.—*Moreri. Nouv. Dict. Hist.*

BREVAL (JOHN DURANT DE) a miscellaneous writer, son of Dr Breval, prebendary of Westminster, was educated at Westminster school, whence he was removed to Trinity college, Cambridge, of which he became a fellow in 1702. On some disagreement between him and Dr Bentley, the master, he left college, and entered the army, then in Flanders, under the duke of Marlborough, as an ensign. His learning and other qualifications soon gained him the notice of the duke, who gave him a captain's commission and employed him in several negotiations with the German princes. His works are—the history of the house of Nassau, 8vo; the art of dress, an heroic-comical poem, 1717; the hoop-petticoat, a poem, 1716; travels, in 4 vols. folio; Calpe or Gibraltar, a poem; Mac Dermot, or the Irish fortune-hunter. He was also the author of a farce called the Confederates, which exposed him to the resentment of Pope, who ridicules him in the Dunciad.—*Biog. Dram.*

BREWER (ANTHONY) a poet of the age of James I and his successor, the supposed author of several successful dramas both in tragedy and comedy. Six of them are yet remaining, the principal of which are "The Lovesick King," trag.; "The Country Girl," oin.; and "Lingua, or the Five Senses," in

which latter piece Oliver Cromwell is said to have performed in his youth as an amateur. Though highly esteemed for his wit and genius among his contemporaries, the private history of Brewer is very obscure.—*Biog. Brit.*

BREYDENBACH (BERNARD DE) dean of the church of Mayence, in the fifteenth century. He made a journey to Jerusalem and Mount Sinai, of which he published a narrative, entitled "Opusculum Sanctarum Perigrinationum in Montem Syon, ad Venerandum Christi Sepulchrum in Jerusalem, atque in Montem Synai ad Divam Virginem et Martyrem Katherinam," Mayence, 1486, folio. This work, which has been repeatedly printed, and translated into French and German, is supposed to be the earliest printed book containing the Arabic alphabet. It includes five other Oriental alphabets, though incorrect, and a vocabulary of Turkish words.—*Biog. Univ.*

BREYNIUS (JAMES) a botanist of Dantzick in the seventeenth century. He was the author of "Plantarum Exoticarum Centuria," 1678, folio, with plates; and "Fasciculus Plantarum Rariorum," 1689, 4to. He died in 1697. JOHN PHILIP BREYNIUS, probably the son of the preceding, published a treatise on the Kermes insect in 1731; a dissertation on that singular species of Fern called *Agnus Scythicus*, or *Barometz*, in vol. xxxiii of the Philosophical Transactions; and other works on natural history.—*Gronovii Bibl. Reg. Animæ. et Lapid.*

BRIENNE (LEWIS HENRY DE LOMENIE, Count de) born in 1635 of a noble French family, was for some time secretary of state, which office he was forced to resign. In a fit of chagrin he would have entered among the Carthusians, but they refused to receive him, on which he joined the Fathers of the Oratory, with whom however he did not continue long, his family having procured a *lettre de cachet*, empowering them to confine him as a lunatic in the convent of St Lazarus. Here he engaged with his fellow prisoner, the abbé Cassagnes, in writing the secret history of Jansenism. This work had advanced no further than the third book, when a dispute took place between the authors, in the course of which the abbé inveighed against the Society of Port Royal, in terms which gave such offence to the count, that he was provoked to strike him with a pair of tweezers. The blow was so far from hurting the abbé that it hardly touched his dressing-gown, but his high spirit could not brook the indignity, and he took to his bed, and died in a few days. Moreri says that the count de Brienne was put in confinement for having dared to avow a passion for the princess of Mecklenburg. He died at St Lazarus in 1698. He was the author of a book of travels, of poems, and of a critical treatise on French poetry. M. DE BRIENNE, the father of this nobleman, wrote very curious memoirs, published at Amsterdam in 1719, in 3 vols. 8vo.—*Camusat Hist. Critique des Journaux.*

BRIET or BRIETIUS (PHILIP) a Latin

of Abbeville, born 1601. He was fellow librarian with Cossart in the Jesuit's college at Paris, and is the author of several learned works, among which are a useful but unfinished treatise, entitled "Parallela Geographiæ Veteris et Novæ," 3 vols. 4to, 1648; "Annales Mundi," 7 vols. 12mo; "Xenia Delphino oblata Nomine Collegii Rothomagensis," 4to; "Theatrum Geographicum Europæ Veteris," folio; "Concordia Chronologica," 5 vols. folio, (in which he was assisted by Labbe;) a panegyric upon Father Sirmund, and a collection of the *bon-mots* of ancient Latin authors. He died in 1668, in the college of his order at Paris.—*Biog. Univ.*

BRIGGS (HENRY) an eminent mathematician, was born near Halifax, Yorkshire, about the year 1556. He received his first education at a grammar-school, and was thence sent to St John's college, Oxford, of which he was ultimately elected a fellow. He was particularly attached to the study of mathematics, and when Gresham college was established in London, was appointed the first geometry professor. About this time he constructed a table for finding the latitude, from an observation of the variation of the compass. In 1615 he was engaged on the subject of eclipses and the noble invention of logarithms, then recently discovered, the theory of which he explained to his auditors at Gresham college. He soon after paid a visit to Lord Napier in Scotland, to whom he proposed an alteration in the scale of logarithms, from the hyperbolic form of the discoverer, to that in which one should be the ratio of ten to one. This proposition was adopted, and on his return from a second visit in 1616, he published the first chilia or thousand of his logarithms in octavo. In 1619 he was appointed Savilian professor of geometry at Oxford, and settled at Merton college, where he resided for the remainder of his life, employed in the most laborious compilations of logarithms and other useful works. In 1622 he published a small pamphlet on a north-west passage, which production was followed by his great work, the "Arithmetica Logarithmica," London, 1624, containing the logarithms of 30,000 natural numbers to fourteen places of figures, besides the index. He also completed a table of logarithms, sines, and tangents, for the whole quadrant; for every hundredth part of a degree, to fourteen places of figures, besides the index, with a table of natural sines for the same to fifteen places, &c. These celebrated tables were printed at Gouda, and published at London in 1631, under the title of "Trigonometria Britannica." This great man and eminent benefactor to science died at Merton college in 1630, leaving behind him a high character for probity, as well as for genius and scientific invention. In the works already mentioned, we meet for the first time, with several important discoveries, which have been deemed of later date; such as the binomial theory, the differential method, &c. as ably pointed out by Dr Hutton, in the preface to his mathematical tables. Mr. Briggs wrote many other works besides the

foregoing, the principal of which are—"Tables for the Improvement of Navigation," 1610; "Euclidis Elementorum vi libri priores," 1620; "Mathematica ab Antiqua minus cognita;" "Commentariæ on the Geometry of Peter Ramus;" "Duæ Epistolæ ad Celeberrimum Virum;" "Animadversiones Geometricæ;" "An English Treatise of Common Arithmetic," &c. Some of these are still unpublished.—*Biog. Brit.* Hutton's *Mathematical Tables and Dict.*

BRIGGS (WILLIAMS) an eminent English physician, was born at Norwich, which city his father represented in Parliament in 1650. He finished his education at Corpus Christi college, Cambridge, of which he became a fellow and tutor. Adopting the profession of physic, he travelled for improvement, and on his return settled in London, where he gradually acquired great reputation, especially as an oculist, and became physician in ordinary to king William, and fellow of the College of Physicians and of the Royal Society. He is principally distinguished for a work published at Cambridge in 1676, entitled "Ophthalmographia, sive Oculi ejusque Partium Descriptio Anatomica, cui accessit nova Visionis Theoria," 12mo. His theory of vision, which is founded on the notion that the fibres of the optic nerves act like chords with different degrees of tension, will meet with the approbation of few modern physiologists. Dr Briggs published other papers on the eye, in the Philosophical Transactions. He died in 1704.—*Biog. Brit.*

BRIGHAM (NICHOLAS) biographer and poet, was born at Caversham in Oxfordshire, and educated at Hart-hall, Oxford, whence he removed to one of the inns of court. He passed his time in reading the best poets, and his admiration of Chaucer was such, as to lead him to the expense of beautifying his monument in Westminster abbey, and removing it to the more conspicuous place where it now stands. He died in 1559, leaving behind him a work, entitled "De venationibus Rerum Memorabilium," of which Bale has made great use; "Memoirs by way of Diary," and "Miscellaneous Poems."—*Wood's Athen. Oxon.*

BRILL (MATTHEW) an eminent painter, was born in 1550, and was employed by pope Gregory XIII in the Vatican, where he painted in fresco several landscapes in the Loggia, for which the pope allowed him a pension. He would probably have reached a high rank in the list of landscape painters, but he died in the prime of life at Rome in 1581, aged thirty-four.—*Dict. of Painters.*

BRILL (PAUL) younger brother of the preceding, was born at Antwerp, and was originally a painter of the tops of harpsicords, which were then so ornamented. In this humble occupation he might have passed his life, had not the reputation of his brother awakened his emulation, and led him to place himself under his tuition. He assisted his brother in his works in the Vatican, and on the death of that artist, his pension was continued to him. On the accession of Sixtus V, he was

engaged in the Sistine chapel, St Maria Maggiore, and the Scala Santa of St John of Lateran. By the direction of Clement VIII, he painted his great work in the Scala Clementina, a landscape of grand scenery, sixty-eight feet wide, in which he introduced the subject of St Clement thrown into the sea with an anchor fastened to his neck. This eminent artist died at Rome in 1626, aged seventy-two.—*Bryan's Dict. of Paint. and Engr.*

BRINDLEY (JAMES) a native of Tunsted near Wormhill, Derbyshire, an eminent engineer and mechanic of the last century, born in 1716. The poverty of his family, brought on by his father's imprudence, prevented his receiving more than the mere rudiments of education, and at seventeen he became apprenticed to a millwright near Macclesfield, Cheshire, where his abilities very early developed themselves. On the expiration of his indentures he commenced business for himself, as an engineer, and in 1752 displayed great talent in contriving a water-engine for draining a coal-mine at Clifton in Lancashire. Three years after, a silk-mill which he constructed on a new plan for Mr Patterson at Congleton, and other works of the same description, established his reputation, and introduced him to the acquaintance and patronage of the duke of Bridgewater, then occupied in planning his great undertaking of establishing a communication between his estate at Worsley with Manchester and Liverpool by water. This immense work, the idea of which was ridiculed by most of the scientific men of the period, as impracticable, Mr Brindley undertook, and by means of an aqueduct over vallies, rivers, &c. completed, extending it so far as to form a junction with the river Mersey. The success of this bold attempt caused him to be employed in 1766 in a plan to unite the Trent and Mersey, which he also commenced by a canal, called the "Grand Trunk Navigation Canal," but dying before its completion, the work was finished in 1777 by his brother-in-law, Mr Henshaw. From this main branch, Brindley also cut another canal near Haywood in Staffordshire, uniting it with the Severn in the vicinity of Bewdley, and finished it in 1772. From this period scarcely any work of the kind in the kingdom was entered upon without his superintendence or advice; among other designs he drew out one for draining the fens in Lincolnshire and the Isle of Ely, and another for clearing the Liverpool docks of the mud which had accumulated; this latter plan was especially successful. The variety of his inventions and the fertility of his resources were only equalled by the simplicity of the means with which he carried his expedients into effect. He seldom used any model or drawing, relying entirely on the vigour of his conceptions and the retentiveness of his memory, but when any material difficulty intervened, generally retired to bed, and there meditated on the best mode of overcoming it. On such occasions he has been known to seclude himself for days, and so partial was he to the scheme of inland navigation which has

Biog. Dicr.—No. XXI.

immortalized him, that he is said, to a question humourously put to him on his examination before the house of Commons, "For what purpose did he consider rivers to have been created?" at once to have replied, "Undoubtedly to feed navigable canals." In 1774 the intensity of his application to business brought on a hectic fever, which carried him off on the 27th September in that year, in the fifty-sixth year of his age, at Turnhurst in Staffordshire.—*Biog. Brit.*

BRINVILLIERS (MARGUERITE D'AUBRAI, Marchioness of.) The singular atrocity of this woman gives her a species of infamous claim to notice in this collection. She was born at Paris in 1651, being the daughter of D'Aubrai, lieutenant-civil of Paris, who married her to N. Gobelin, marquis of Brinvilliers. Although possessed of attractions to captivate lovers, she was for some time much attached to her husband, but at length became madly in love with a Gascon officer, named Goden St Croix, who had been introduced by the marquis, who was adjutant of the regiment of Normandy. Her father being informed of this affair, imprisoned the officer, who was altogether an adventurer, in the Bastille, where he was detained a year, a circumstance which induced the marchioness to be more outwardly circumspect, but at the same time to nourish the most implacable hatred to her father and her whole family. While in the Bastille, St Croix learnt from an Italian, named Exili, the art of composing the most subtle and mortal poisons, and the result on his release was the destruction by this means, in concurrence with his mistress, of her father, sister, and two brothers, all of whom were poisoned in the same year, 1670. During all this time the marchioness was visiting the hospitals, outwardly as a devotee, but as afterwards strongly suspected, really in order to try on the patients the effect of the poisons produced by her paramour. The discovery of these monstrous criminals was produced in a very extraordinary manner: while at work in distilling poison, St Croix accidentally dropped the glass mask which he wore to prevent inhaling the noxious vapour, and the consequence was his instant death. Nobody claiming his effects, they fell into the hands of government, and the marchioness had the imprudence to lay claim to a casket, and appeared so anxious to obtain it, that the authorities ordered it to be opened, when it was found to be full of packets of poison, with ticketed descriptions of the different effects which they would produce. Informed of the opening of the casket, the execrable woman made her escape to England, whence she passed to Liege, where she was arrested and conducted to Paris. Being tried, she was convicted of the murder of her father, sister, and brothers, and condemned to be beheaded and burnt. In this dreadful situation she evinced extraordinary courage, amounting almost to nonchalance. On entering the chamber in which she was to be put to the question by the torture of swallowing water, she observed three buckets full prepared, and c.

claimed, "It is surely intended to drown me; for it is absurd to suppose one of my dimensions can swallow all that." She listened to her sentence without exhibiting either weakness or alarm, and showed no other emotion on her way to execution, than to request that she might be so placed as not to see the officer who had apprehended her. She also ascended unaided and barefoot up the ladder on to the scaffold. This woman after all possessed some sense of religion; she went regularly to confession, and when arrested at Leige, a sort of general form was found in her possession, which sufficiently alluded to her criminality to form a strong presumption against her. What adds to the atrocity of this wretch's character, she was proved to have had connexions with many persons suspected of the same crimes, and to have provided poisons for the use of others. Many persons of quality lost their lives about this period; and the investigation seemed likely to lead to the discovery of so much guilt in this way, that it was politically, but disgracefully put an end to. It was supposed that the indifference of the marquis of Brinvilliers to his wife's conduct, induced her to spare one so much in her power. She suffered on the 17th July, 1676.—*Nouv. Dict. Hist.*

BRISSON or BRISSONIUS (BARNABAS) an eminent French lawyer and philological writer of the sixteenth century. He was a native of Poitou, and became a counsellor of the Parliament of Paris. Henry III made him advocate-general, counsellor of state, and in 1580 president-a-mortier. He was highly esteemed by that prince, who employed him in various negotiations, and sent him ambassador to England. On his return he was ordered by the king to make a collection of all his own ordinances and those of his predecessors, which task Brisson accomplished with great expedition. He composed several other learned and professional works, the best known and most esteemed of which is a treatise "De Regio Persarum Principatu." The ultimate fate of this learned man was very unfortunate. Continuing in Paris while it was besieged by Henry IV in 1589, he was compelled by the partisans of the league to take the office of first president of the Parliament. His conduct as a magistrate was made a pretext for an accusation against him, in consequence of which he was hanged in November 1591. Several persons were afterwards punished for their share in this transaction.—*Moreri. Nouv. Dict. Hist.*

BRISSON (MATHURIN JAMIS) a French naturalist and chemist of the last century, a native of the same province, and probably of the same family with the subject of the foregoing article. He was destined for the ecclesiastical profession, which he relinquished to become the assistant of the celebrated Reaumur, in the chemical laboratory of the Academy of Sciences. He afterwards was elected a member of that learned body, and read a course of lectures on physics and natural history, in conjunction with the abbé Nollet. He

died in 1806, aged eighty-three, having had the misfortune for a few years to survive his faculties. Brisson published several useful works on natural history, particularly a systematic treatise on ornithology in 1763. He also wrote the "Principles of Chemistry," translated and published in English in 1801, 8vo.—*Biog. Univ.*

BRISSOT (PIERRE) a physician who enjoyed great reputation about the commencement of the sixteenth century. He was a native of Fontenai le Comté in Poitou, born 1478. Having gone through the necessary studies in the university of Paris, he took his degree in physic in 1514, and soon after read a course of lectures, in which he defended the ancient Greek practitioners against the Arabian school of medicine, then principally followed. In conformity with the same opinions, he published a new edition of Galen's work "De Curatione Morborum," but getting afterwards into a controversy with the Parisian physicians, respecting the propriety of phlebotomy in cases of pleurisy, the cry was raised so strongly against him, as to induce him to retire to Eboræ in Portugal. In this country however he found antagonists even more hostile than in his native land. Denys, physician to the king, not only attacked him with great virulence, but found means to enlist the bigotry of the priesthood on his side, who stigmatized him as a Lutheran or reformer in the science. The court took up the question, and forbade bleeding in the cases alluded to, while on the other hand the university of Salamanca declared in favour of the practice. On this occasion Brisson wrote a tract which was not printed till after his decease, but has since gone through several editions; it is entitled "De Venâ Secandâ tum in Pleuritide, tum in aliis Viscerum Inflammationibus Libellus Apologeticus," 1725. He died in 1592.—*Bayle. Haller. Bibl. Med. Pract.*

BRISSOT (JEAN PIERRE) the son of a traitor of Chartres in the Orleanois, born 1754. He was originally intended for the law, and served five years as a clerk in the profession, but quitting it abruptly in the pursuit of politics, incurred the resentment of his father, and was compelled for a time to rely on the kind offices of some friends of the family for subsistence. Thrown thus upon his own resources he engaged as editor of the "Courier de l'Europe," a revolutionary journal then carried on at Boulogne. The boldness of his opinions soon produced the suppression of the paper by the government, and in the leisure now afforded him, he published the "Theory of Criminal Law," in two 8vo vols. 1780, and two further essays on the same subject, which gained him the prize of the Academy of Châlons-sur-Marne. He also commenced about the same period a work, afterwards completed in ten volumes, called "A Philosophical Library of Criminal Law," and a small treatise "On Truth." Having married Mademoiselle Dupont, a young lady employed under Madame de Genlis, in instructing the daughters of the notorious Philip Egalite, duke of Orleans, he

took his wife to England, where he projected the establishment of a journal favourable to liberty, to be called "An universal Correspondence on Points interesting to the Welfare of Man," intending to circulate it secretly in France. The scheme however failed, and his circumstances becoming involved, he returned to Paris, where he was sent to the Bastille in July 1784, on a charge of writing a libel in concert with Monsieur de Pelleport. The Orleans interest, obtained through the intercession of his wife, soon procured his liberation, on a promise of renouncing politics, and he obtained the situation of secretary to the chancery in the service of the duke, but unable to refrain, he published a pamphlet against the archbishop of Sens, called "No Bankruptcy," &c. which again occasioned an order for his arrest. This he avoided by once more quitting France, and becoming for a time the conductor of "Le Courier Belge," at Mecllin. In 1788 he went to America with the view of organizing a republican colony of Frenchmen in that country, and on his return printed his travels, which attracted much attention at the time. The state of public affairs now induced him to write "A Plan of Conduct for the Deputies of the People," in contemplation of the assembling of the States General, and shortly after he became president of the jacobin club. In 1791 he was elected one of the members of the legislative assembly, to which body he soon afterwards was appointed secretary, and by his activity and talent placed himself at the head of a party composed principally of members from the department of the Gironde, whence they were indifferently denominated Girondists or Brissotines. During a short period he was unquestionably at the summit of power, but the secession of Dumourier shook his party, and quarrelling with the jacobin club, Brissot was expelled, on which occasion he published his "Address to all Republicans." The prospect of the fatal issue of the king's trial appears to have shocked him, and he attempted to save his life by a proposal of deferring his execution till the constitution should be perfected. The rapid increase of the influence of Robespierre hastened his downfall; in 1793 the ruin of his party was complete; many of them fled, among the rest Brissot himself, but he was prevented in his attempt to escape into Switzerland, and brought to trial with twenty-one of his friends on the 24th of October in that year; at this period to be brought to trial and to be condemned were synonymous terms. The evidence not being conclusive against them, the convention decreed that "The jury might at any time declare themselves convinced without waiting for further proceedings." They were of course convicted, and the whole number perished the next morning with great fortitude upon the scaffold. The political faults of Brissot seem to have consisted more in vanity, enthusiasm, and precipitation, than in bad intentions, although by no means untainted with the vices attendant on ambition. In private life his character was irreproachable,

and he was proof against pecuniary temptation under very narrow circumstances at all times.—*Aikin's G. Biog. Dict.*

BRITTON (THOMAS) better known as "the musical small-coal-man," a trade he followed till his death, which happened in his sixtieth year, in September 1714. He was a native of Higham Ferrers, Northants, and having served his time in London, converted a stable next to St John's Gate on Clerkenwell Green into a house, in which he set up for himself, and where he once gave a concert which was attended by many persons of the first consequence, Handel and Dr Pepusch both performing at it. In addition to his passion for music, which was very early developed, and led him to purchase every musical volume that came in his way, his acquaintance with Dr Gareniers, his neighbour, turned his attention to chemistry, in which he became a proficient, constructing himself for his own use a moveable laboratory. His death was occasioned by a silly joke; a ventriloquist being introduced at the club of which he was a member, in a seemingly supernatural voice announced his immediate dissolution, commanding him to fall on his knees and repeat the Lord's prayer; this the poor old man immediately did, but was so terrified, that though the trick was explained to him, he took at once to his bed and died in a few days. His collection of music sold for upwards of 100*l*.—*Biog. Dict. of Mus.*

BROCKLESBY (RICHARD) an eminent physician of the eighteenth century. He was of an Irish family, but was born at Minehead in Somersetshire in 1722. He was educated at Ballytoe in the north of Ireland, under the same master with Burke, though he was not a school-fellow of that statesman. He afterwards went to Edinburgh university, and thence to Leyden, where he took the degree of MD. in 1745. He soon after settled in London, and in 1751 was admitted a licentiate of the College of Physicians. Having obtained a diploma from Cambridge, he became in 1756 a fellow of the college; and in 1758 he was appointed physician to the army, in which capacity he served in Germany during the seven years' war. In October 1760 he was made physician to the hospitals for the British forces, and returned home a little before the conclusion of peace in 1763. Establishing himself in the metropolis he soon acquired extensive practice, and a general acquaintance with the principal literary characters and statesmen of the age, which last circumstance contributed much to the high reputation which he enjoyed for a long series of years. He died in 1797. His medical writings consist of a few small tracts; and some papers in the Philosophical Transactions, and in a medical journal. It may be observed that he was also the author of "A Dissertation on the Music of the Ancients," which was translated in German.—*Hutchinson's Biog. Med.*

BRODEAU (JOHN) in Latin Brodæus, an eminent critic, was descended from a noble French family, and born at Tours in 1500. He was liberally educated and intended for a civi-

lian, but he soon forsook that line of study and gave himself up wholly to languages and polite literature. He travelled into Italy where he came acquainted with Sadolet, Bembo, and other eminent characters, and on his return, led a retired learned life, to the production of many able works, the principal of which are—"Miscellanea," a collection of criticisms and remarks; "Annotationes in Oppianum, Q. Calabrum at Colothum," Basil 1552, 8vo; "Annot. in Xenophontem, Gr. et Lat.," *ibid.*, 1559, folio; "Notæ in Martialem," *ibid.*, 1559, folio; "Epigrammata Græca cum Annot. Brodæi et H. Steph." Frankfort, 1600, folio.—*Bayle. Moveri.*

BROECKHUYSE (JOHN) in Latin Broeckhusius, a distinguished scholar, was born at Amsterdam in 1649, where his father was a clerk in the admiralty. He made an early progress in Latin and polite literature, but his father dying while he was young, he was taken from literary pursuits, and placed with an apothecary. Disliking this profession, he entered the army, and in 1674 sailed to America with his regiment, in the fleet under admiral de Ruyter. On his return, he went into garrison at Utrecht, where he contracted a friendship with the celebrated Grævius, which led to his resumption of literary pursuits. He subsequently became a captain of one of the militia companies at Amsterdam, which placed him in easy circumstances, and allowed him leisure to follow his inclination. His works are—"Carmina," 1684, 12mo, Amsterdam, 1711, 4to; "Acti Sincerii Samazarii Opera Latina accedunt vitæ, &c.," Amsterdam, 1727; "Aonii Palearii Verulani opera," *ibid.*, 1696, 8vo; "S. Aurelii Propertii Elegiarum," *ibid.*, 1727, 4to; "Albii Tibulli quæ extant, &c.," *ibid.*, 1708, 4to. His Dutch poems, with the life of the author, were published by Hoogstraaten, Amsterdam, 1722, 8vo. His editions of the classics are deemed valuable. He died in 1707.—*Saxii Onom. Dibdin's Classics.*

BROME (ALEXANDER) an English writer of songs and burlesque poetry, who exerted his talents on the side of Charles I, in ridicule of the puritans, whose credit he is said to have in no slight degree affected by the exertion of his talents. He was born in 1620, and died in 1666, his occupation being that of an attorney in the court of the lord-mayor of London. Baker observes, that he was author of the greater part of the songs and epigrams published against the rump, and three editions of his poems have been printed, the latest being that of 1661. He also wrote a congratulatory poem on the Restoration, and was concerned in translations of Horace and Lucretius. He was likewise the author of a comedy, called "The Cunning Lovers," and edited the plays of his namesake Richard Brome.—*Biog. Dram. Ellis' Specimens.*

BROME (RICHARD) an English dramatist, contemporary with Ben Jonson, Ford, Shirley, Decker, &c. to the first of whom he was originally only a servant. He however wrote himself into considerable repute, being exclusively devoted to the composition of comedies, of

which there are fifteen still remaining. His pieces were acted in his own days with considerable applause, and one of them, entitled "The Jovial Crew," has been acted with approbation a few years ago. He died in 1632.—*Biog. Dram.*

BROMFIELD (WILLIAM) an English surgeon of eminence, who was a native of London, and a pupil of Ranby, the surgeon of Greenwich hospital. After completing his studies, he settled in the metropolis, and in 1741 he became a lecturer on anatomy. In conjunction with the Rev. Martin Madden he founded the Lock hospital, of which he became a surgeon. To increase the funds of this charity he produced an alteration of an old comedy, "The City Match," which was performed for the benefit of the hospital at Drury-lane theatre. He was one of the surgeons of St George's hospital, and also of the queen's household. He died at a very advanced age in 1792. Bromfield was the author of "Chirurgical Observations and Cases," 1773, 2 vols. 8vo; and a few professional tracts of little importance.—*Nichols' Lit. Anecd. of the 18th Century.*

BROMPTON (JOHN) a Cistercian monk and abbot of Jorevall in Yorkshire. "The Chronicle," that goes under his name, but which Selden says he only procured for his monastery, begins at the year 588, when the monk Augustin came to England, and is carried on to the death of Richard I in 1198. This historian, whoever he was, lived after the beginning of the reign of Edward III, as he digresses in order to speak of the contract between Edward's sister Joan, and David, afterwards king of Scotland. This chronicle is printed in the "Decem Script. Hist. Angliæ," London 1652, folio.—*Selden. Tanner.*

BRONGNIART (AUGUSTUS LEWIS) apothecary to Lewis XVI, and an eminent professor of chemistry, who distinguished himself by giving courses of lectures on physics and chemistry, at a period when those sciences were but little cultivated at Paris. He was appointed professor at the college of Pharmacy, succeeded Rouelle the younger as professor of chemistry applied to the arts, and was afterwards colleague with Fourcroy at the republican Lyceum and the Garden of Plants. During a part of the period succeeding the Revolution he was apothecary to the army, and at length he became professor at the museum of Natural History. He died at Paris, February 24th 1804. Brongniart published a valuable work entitled "Tableau Analytique des Combinaisons et Décompositions de différentes Substances," Paris, 1778, 8vo. He assisted Hassenfratz in 1792, in the Journal des Sciences, Arts, et Metiers; and was engaged in other periodical works.—*Biog. Univ.*

BROOCMAN (CHARLES ULRIC) a Swedish writer on the subjects of education and pædagogical literature. Born in low life, he raised himself into notice, and obtained the patronage of the king, who supplied him with the means of prosecuting his early studies, and afterwards sent him to Germany, for the purpose

of investigating the various systems of elementary instruction adopted in that country. From these Broocman formed a system of his own on eclectic principles. Returning home he published an account of the different educational institutions in Germany, from the earliest periods to the time at which he wrote; a work composed in an agreeable style, and abounding in learning and ingenious observation, but not displaying those comprehensive views of general principles which the subject demands. He was then appointed rector of the German school at Stockholm; and about the same time he commenced a pædagogical journal, in which may be found many interesting papers on subjects connected with education. He died in the flower of his age in 1812, a short time after he had been appointed a member of a committee for reforming the state of education and schools in Sweden.—*Literary Chronicle*.

BROOKE (JAMES) an ingenious writer of the last century, who continued the publication of the "North Briton" after it was relinquished by Wilkes, till its termination. He was a man of wit and talent, and was particularly intimate with Johnson, Garrick, Churchill, Lloyd, Murphy, and other literary characters of distinction. He was the author of a great number of political pamphlets, prologues, epilogues, songs, and other light pieces, many of which are said to have been spirited and humorous effusions. His general acquaintance with the world, and the fund of wit and anecdote which he possessed, rendered him a most agreeable and entertaining companion. He died after a short illness in Rathbone-place, London, in 1807, at the age of eighty.—*Monthly Mag.*

BROOKE (RALPH) York herald in the time of James I. He distinguished himself by his attacks on the accuracy of the Britannica of Campden, in two works, the second of which he was not allowed to publish, but which has been since given to the world by Anstey. He was a man of profligate and unprincipled conduct, and twice imprisoned and suspended for scandalous misbehaviour. His only production of any character is a work dedicated to James I, entitled "A Catalogue and Succession of Kings, Princes, Dukes, Marquises, Earls, and Viscounts, of this Realm, since the Norman Conquest until 1619," small folio. He died in 1625.—*Noble's College of Arms*.

BROOKE or BROKE (sir ROBERT) an eminent lawyer, appointed chief-justice of the Common Pleas in the first year of the reign of Mary I. He had been previously common serjeant and recorder of the city of London, and speaker of the house of Commons, and was highly valued for his skill and integrity in his profession. He wrote "La Graunde Abridgment," an abstract of the "Year Books," to the reign of Mary, which has passed through several editions, among which the first is reckoned the best. He also collected the most remarkable cases adjudged in the court of Common Pleas from the 6th Henry VIII to the fourth of queen Mary, under the title of

"Auscun's Novel Cases," of which there have also been several editions. He was likewise the author of "A Reading on the Statute of Limitations, 22d Henry VIII, cap. 2," London, 1647, 8vo. He died in 1558.—*Gen. Dict.* vol. x. *Tanner*.

BROOKE (FRANCES) novelist and dramatist. Her maiden name was Moore, and she was the daughter of a clergyman who married the Rev. John Brooke, rector of Colney in Norfolk, and clackplain to the garrison of Quebec. She was as remarkable for the suavity and gentleness of her manners, as for her literary talents. The first known literary performance of Mrs Brooke was the "Old Maid," a periodical work published weekly, from November 1755 to July 1756. In the same year she published "Virginia," a tragedy, and in 1763 the novel of "Lady Juliet Mandeville," which excited considerable attention. She is also the author of "Emily Montague," and the "Memoirs of the Marquis of St Forlaix," in 4 vols. each; as also of the "Excursion," 2 vols. and the "Siege of Sinope," a tragedy, which added little to her reputation. She was more fortunate in the pleasing musical piece of "Rosina," which is still popular. Her concluding work was a similar drama, entitled "Marian." She died a few weeks after her husband in 1789.—*Biog. Dram.*

BROOKE (HENRY) an ingenious writer, was the son of a clergyman in Ireland, where he was born in 1706. He was educated under Dr. Sheridan, and thence removed to Trinity college, Dublin. In his seventeenth year he was entered at the Temple, where he was much noticed for his genius and vivacity, and among his early friends, he numbered Pope and Swift. Being recalled to Ireland, he was entrusted with the guardianship of a juvenile female cousin, whom he privately married, and the young lady became a mother before she had attained the age of fourteen. He lived for some time in domestic retirement, until his increasing family induced him to visit London, with a view to profit by his abilities. Here, under the eye of Pope, he wrote his poem "On Universal Beauty." Returning to Ireland, he unwillingly practised as a chamber council, and again visiting London, wrote his tragedy of "Gustavus Vasa," which government would not allow the theatres to perform; a refusal which rendered it so popular, that he obtained more by its publication than in the usual way would have been gained by its performance. He then attached himself to Frederic prince of Wales, but finding his means inadequate to his support in the style in which he moved, was induced by his wife to return to a life of privacy in his native country. He there wrote his "Earl of Westmoreland," a tragedy, which was followed by his "Farmer's Letters," addressed to the people of Ireland, with a view to promote the principles of liberty and patriotism. This was during a period of rebellion, and the lord-lieutenant, the earl of Chesterfield, to reward both his poetry and politics, gave him

the post of barrack-master. In 1747 he assisted in More's fables for the female sex; various minor productions followed, and in 1749 he produced his "Earl of Essex," a tragedy. Once more seeking retirement in company with a brother, possessed of a family almost as numerous as his own, in 1762 he wrote a prose work, entitled "The Trial of the Roman Catholics," in which he generously endeavoured to remove a portion of the heavy prejudices entertained against that part of the Irish population. His celebrated novel of "The Fool of Quality," appeared in 1766, and attracted considerable attention, for some admirable strokes relative to the formation of the heads and understandings of young people, although wild and strongly tinged with a methodistical spirit of religion. His thoughtlessness in money matters, about this time, much embarrassed him, and, under the necessity of selling his paternal lands, he first rented a house in Kildare, and subsequently a farm near his old abode, where the loss of a beloved wife, after an union of nearly fifty years, gave an irreparable shock to his intellects, which ended in total imbecility. Previous to this catastrophe, his work of "Juliet Grenville," announced his mental decay, and a poem on "The Redemption," although containing many poetical beauties, exhibited so much of the extravagance of Bohemianism, as to add to the melancholy conviction, that his intellects were irreparably injured. He died in 1783, leaving only two survivors out of his seventeen children. His dramatic and other works (his novels excepted) were published in 4 vols. 8vo. 1792, by his daughter Miss Brooke.—*Life prefixed to his Poems.*

BROOME (WILLIAM, LL.D.) an English divine and poet, born of humble parentage in the palatinate of Chester, and educated at Eton, whence, being superannuated for King's college, Cambridge, he removed to St John's. Having acquired considerable reputation for talent as well as learning, he engaged with Ozell and Oldisworth in a prose translation of Homer; after which Pope employed him to extract from Eustathius notes for his version of the Iliad, and subsequently associated him with himself in the translation of the Odyssey. Broome on this occasion took for his share the second, sixth, eighth, eleventh, twelfth, sixteenth, eighteenth, and twenty-third books. On the conclusion of the work however, a quarrel ensued, respecting the smallness of his remuneration (viz. 300*l.* and 100 copies) which Broome thought too little: and in consequence of this disagreement, a niche was assigned him in the Ducinal. Having obtained the rectory of Sturston, Suffolk, he resigned it shortly after for the livings of Eye and Oakley Magna, in the same county, and died November 16, 1745, at Bath, where he lies buried in the abbey. A translation of the odes of Anacreon and a volume of miscellaneous poems are also extant from his pen.—*Bing. Brit.*

BROSCHI (CARLO) possibly the greatest singer on record, much better known by the name of Farinelli, bestowed on him in com-

pliment by the Farina family. He was born at Naples in 1705, and is said to have been emasculated by an accident received in riding, and not with a view to his future profession. He received his early musical education under his father, and subsequently studied under the celebrated Porpora. At the age of seventeen he visited Rome, where he at once established his wonderful physical superiority as a singer, by a triumphant contest in an opera with an extraordinary performer on the trumpet. After displaying his great powers in other continental capitals he came to London in 1734, where he met with presents and encouragement that produced much invective and sarcasm at the period; but to which exalted genius and ability in every line may very duly lay a claim; and according even to the sober testimony of Dr Burney, the musical powers of Farinelli had scarcely ever met before in any human being. In 1757 he left England with an intention to return again, but visiting Spain his talents were found so serviceable in alleviating the diseased mind and melancholy temperament of Philip V. that a large pension was settled upon him, and he was totally appropriated to the service of the court. Since the time of the Roman emperors no administrator of amusement had been rewarded like Farinelli, who became the channel of court favour, and was in consequence courted by even the proudest grandees. His conduct in this trying situation did him the highest honour: far from assuming airs of patronage or consequence, he behaved with so much decorum and propriety, that he even conciliated the regard of those who would naturally hate and oppose him. Various anecdotes of his greatness of mind and prudence in this respect are related, as also of his general liberality, freedom from mean jealousy of kindred talent, and great kindness of nature. After the death of Philip V. he enjoyed the same favour with Ferdinand VI. but was released from the tedious uniformity of his former life, and made sole director of the opera. The honour of the knighthood of Calatrava was also conferred upon him, and he was much employed as a political agent by the ministers of the courts opposed to France. On the death of Ferdinand a change of politics following, Farinelli was honourably dismissed with the retention of all his pensions: on which he retired to Bologna, where he built a superb mansion and enjoyed the evening of his life in cultivated leisure. He always exhibited a most grateful sense of the favours which he had received, and was particularly attentive to the English of rank who visited him on their travels. This highly gifted and amiable man died in 1782, at the age of seventy-eight.—*Burney's Hist. of Mus. and Musical Tour.*

BROSSARD (SEBASTIAN DE) a celebrated French musician, canon of Meaux, in which cathedral he was also chapel master and grand chaplain. He was well versed in the theory as well as in the practice of the science on which he wrote several treatises. The most valuable is a "Dictionary of Music," with explanations of the ancient and foreign terms made use of

in it, and containing a list and classification of 900 writers on the subject. This production was first published at Amsterdam in folio, 1703, and reprinted in 1708. Grassineau in 1740 published an English translation of it, as his own original work. Brossard's other writings are—"Prodomus Musicalis," folio, a second part to which appeared in 1698, under the title of "Elevations and Motets à 2 et 3 Voix, &c." He also composed various pieces, both of vocal and instrumental music. At his death, which took place in 1730, he bequeathed his valuable musical library to Louis XIV, from whom he had for some time enjoyed a pension.—*Biog. Dict. of Mus.*

BROSSE (GUY DE LA) a botanist, who was physician in ordinary to Louis XIII. He obtained from that king in 1626, letters patent for the establishment of the royal garden of medicinal plants at Paris, of which he became the first director. He immediately adopted measures for completing this establishment, and furnished it with 2000 plants, of which there is a list in his "Description du Jardin Royal des Plantes Médicinales, contenant le Catalogue des Plantes qui y sont cultivées," 4to. The garden was opened for demonstrations in 1640, when he published "L'Ouverture du Jardin Royal," 12mo. He left at his death in 1751, a collection of botanical engravings.—*Moreri. Hutchinson's Biog. Med.*

BROSSES (CHARLES DE) a native of Dijon, born 1709. He was bred to the French bar, and in 1730 became a counsellor of Parliament, a president-a-mortier in 1741, and in 1774 received the appointment of president of the parliament of Burgundy. He had been a schoolfellow of Buffon's, and maintained to the last his friendship with that naturalist, who thought highly of his abilities. In the leisure afforded from his professional pursuits, he applied himself eagerly to the cultivation of polite literature, proofs of which appear in his "Letters on Herculaneum," 8vo, 1750; a "History of Voyages to the Southern Regions," (in which he strongly advocates the existence of a great southern continent) 4to, 2 vols. 1756; "A Treatise on the Formation of Languages," 12mo, 2 vols. 1755; "A Comparison between Ancient Idolatry and that of the Negroes," 12mo, 1766; and a "History of Rome by Sallust," partly translated from that author with original interpolations, supplying a connexion between these fragments of his writings which remain. This last work was printed in three 4to volumes in 1777, on the 7th May, in which year the decease of the author took place at Paris. Several essays of his are to be found in the collections of the Academies of Belles Lettres at Dijon and Paris, of both which societies he was a member.—*Biog. Univ.*

BROTIER (GABRIEL) a French Jesuit, celebrated equally for the depth and the variety of his erudition, born at Tanay, a small town in the Nivernois in 1723. He held for several years the situation of librarian to the college of his order in Paris, where incessant application and a retentive memory stored his

mind with an immense fund of knowledge on every subject, except the mathematics a science which he is said to have neglected. On the dissolution of his order, he retired to the house of M. de la Tour, an eminent printer, in whose society he passed the last twenty-six years of his life, dying at Paris February 12, 1789. His works consist of "Examen de l'Apologie de M. L'Abbé de Prades," 8vo, 1753; "Conclusiones ex universâ Theologia," 4to, 1754; a "Treatise on the Ancient Hebrew, Greek, and Roman Coins," 4to, 1760; "Prospectus of an Edition of Tacitus, in 5 vols. 4to," 1761; an improved edition of the works of that author in 4 vols. 4to, printed in 1771, and a supplement to the seventh and tenth books of his annals, 8vo, 1775; "Cl. viri de la Caille Vita," 4to, 1763. An edition of Pliny's natural history, 6 vols. 12mo, 1779; another of Rapin's poems, "On Gardens," to which he subjoined "A History of Gardening," 8vo, 1778, and a very complete one of Phædrus, with a comparison between the fables of that writer and those of La Fontaine, 12mo 1785. A nephew of his, the abbé Andrew Charles Brotier, who was himself a man of some learning, especially in the science of botany, published in 1790, a 12mo volume of memoirs, entitled "Paroles Mémoires recueillies par Gabr. Brotier," and was for some time editor of "L'Année Littéraire," a journal during the Revolution, but in 1797 becoming obnoxious to the party then in power, he was arrested in the February of that year, and banished to Cayenne, where he remained till his death in 1798.—*Nouv. Dict. Hist.*

BROUGHTON (HUGH) an eminent Hebrew scholar and polemic, born in 1549 at Oldbury, Shropshire, and educated first from charitable motives, by the learned Bernard Gilpin in his school at Houghton, and afterwards sent at the expense of that amiable man (whom he has nevertheless been accused of treating with ingratitude) to Christ's college, Cambridge, of which society he became a fellow. On quitting the university, he distinguished himself as a preacher in the metropolis, and having in 1588 published a work on Scriptural chronology and genealogy, under the title of "The Consent of Scriptures," read weekly lectures in defence of his system in St Paul's cathedral, till the opposition of the clergy compelled him to remove them into a private house. In 1589 he travelled into Germany, and in the course of his journey maintained a public argument with a Jewish rabbi on the subject of their respective faiths. During the remainder of Elizabeth's reign, he lived on the Continent, where he obtained the favour of the archbishop of Mentz; and an improbable story has been related, that he was even offered a cardinal's hat, on condition of abjuring the Protestant religion. This proposal he is said to have declined, and he settled for a while as pastor to an English congregation at Middleburg in Zealand, but quitted his situation from ill health, and returning to England in 1611, died in the August of the following year at Tottenham High Cross. The

greater part of his works, which are numerous, and all on theological subjects, were collected and printed at London in 1662, in one large folio volume.—*Biog. Brit.*

BROUGHTON (THOMAS) the son of a clergyman, who enjoyed the rectory of St Andrew's, Holborn, London, in which city he was born in 1704. He was placed at Eton, but failing, from superannuation, to gain a fellowship at King's, he entered at Caius college, Cambridge, where he graduated, and having taken orders, became, through the patronage of the Russel family, rector of Stibington, Huntingdonshire, in 1739. On this small piece of preferment however he did not reside, but obtaining the readership at the Temple church in London, acquired while in that situation the favour of bishop Sherlock, by whom he in 1744 was colated to the vicarage of Bedminster near Bristol, and that of St Mary Redcliffe in the same city. The same prelate's interest afterwards procured him a stall in Salisbury cathedral. Among the most valuable of his works are—"Christianity distinct from the Religion of Nature," 8vo; "Bibliotheca historico-sacra, a Dictionary of all Religions," 2 vols. folio; "A Defence of the commonly received Opinion of the Human Soul," 8vo; "The First and Third Olynthiacs and Four Philippics of Demosthenes revived," 8vo; "A Translation of the Mottoes to the Spectator, Tatler, and Guardian," 12mo; "Part of Bayle's Dictionary Corrected;" an answer to Tindal's "Christianity as old as the Creation;" "The Bishops of London and Worcester on the Sacrament Compared," 8vo, "Hercules," a musical drama; four "Dissertations on the Prospect of Futurity," and various articles in the *Biographia Britannica*, of which work he was one of the principal compilers. He died in 1774 at Bristol.—*Biog. Brit.*

BROUNCKER (WILLIAM, viscount) of Castle Lynn in Ireland, was born about the year 1620, being the son of sir William Brouncker, made a viscount in 1645. His place of education has not been recorded, but his ability and success in mathematical knowledge, constituted him the first president of the Royal Society, on its incorporation by Charles II. He filled the station with great credit, and was also appointed chancellor to queen Catherine, and a commissioner of the admiralty, and master of St Catherine's hospital, near the tower of London. His writings are not numerous, but several of his mathematical papers are in the Philosophical transactions, and his letters to archbishop Usher are published at the end of that primate's life by Dr Parr. Lord Brouncker died at Westminster in 1584, aged sixty-four years.—*Biog. Brit.*

BROUSSONET (PETER AUGUSTUS MARTIA) a French naturalist, was born at Montpellier in 1761. He was early appointed a professor in the university of his native place, and in 1785 was admitted a member of the Academy of Sciences. He soon after visited England, and was chosen a member of the Royal Society, and during this

visit, he began his elaborate work on fishes. On his return to Paris, he was appointed secretary to the Agricultural Society, and in 1789 chosen member of the Electoral college. In 1791 he quitted France, and went to Madrid and Lisbon, and, by the interest and pecuniary assistance of sir Joseph Banks, was appointed physician to the embassy sent by the United States to the emperor of Morocco. He subsequently became French consul at Teneriffe, and in 1796 returned to France, was made professor of botany at Montpellier, where he died in 1807. His works are—"Varia positiones circa respirationem;" "Ichthyologia, sive Systema Piscium descriptionum et iconum;" "Année Rurale, ou Calendrier à l'usage des Cultivateurs," 2 vols. 18mo; "Notes pour servir de l'Histoire de l'Ecole de Médecin de Montpellier," 8vo; "La Feuille du Cultivateur," 3 vols. 4to.—*Nouv. Dict. Hist.*

BROWALLIUS (JONS) bishop of Abo in Finland, an eminent naturalist, who was member of the Academy of Sciences at Stockholm. He was born at Westeras in Sweden, in 1707, and died in 1755. He wrote several botanical tracts in defence of the sexual system of Linnaeus; but his most remarkable publication is a treatise in Swedish on the diminution of the waters, 1755, intended as a refutation of the opinion of Andrew Celsius, that the level of the sea is continually sinking. Linnaeus, who espoused the theory of Celsius, resented the opposition of the bishop of Abo in a very scientific manner. He had bestowed on a genus of plants the name of *Browallia*, the first species of which he denominated *Browallia exaltata*; but afterwards, when offended, he called a second species *demissa* or base, and a third species *alienata*.—*Biog. Univ.*

BROWN (CHARLES BROCKDEN) an American novelist and writer on general literature. He was born in 1771, and, like most persons who have attained literary distinction in the United States, he was educated for the bar. He resided in Philadelphia during the prevalence of the yellow fever in 1793, and afterwards went to New York, where he suffered an attack of that disease. In that city he wrote his novels, and also established a magazine. He composed with remarkable rapidity, generally carrying on two or three stories at the same time. The first novel he wrote was entitled "Carwin, or the Biloquist;" but the first he published was "Alcuin," a fragment. His other tales appeared in the following order—Wieland, Ormond, Arthur Mervyn, Edgar Huntley, Clara Howard, (published here first, under the title of Philip Stanley,) and Jane Talbot, (published here in 1804). He was also the author of two political pamphlets, of a system of geography, which was never completed; and was editor of the American Register, a work of real worth, five volumes of which were completed under his inspection. He died February 22, 1810. He was married, but not till after his novels were written, so that his wife could not, as has been supposed, have been concerned in their composition, however she might have assisted in his pam-

phlets or periodical works. He left two sons, who were twins.—*Dunlop's Memoirs of Charles B. Brown*, 1822.

BROWN (JOHN, DD.) a divine of the church of England and a writer of talent, was born in 1715 at Rothbury in Northumberland, where his father, a native of Scotland, was curate. He was educated at St John's college Cambridge, and in 1735 took orders, and was settled as a minor canon and lecturer in the city of Carlisle. His attachment to the principles of the Revolution procured him the friendship of Dr Osbaldistone, bishop of Carlisle, who obtained him a living in Westmorland, and he soon after made himself known as a nervous and correct versifier by a poem, entitled "Honour," and by an "Essay on Satire," addressed to Dr Warburton, which the latter prefixed to his edition of the works of Pope. In 1751 he published a piece which ranks among the most distinguished of his productions, entitled "Essays on the Characteristics of the Earl of Shaftesbury." This work being ably and elegantly written, reached a fifth edition, and produced many pamphlets in reply. In 1755 he took the degree of DD. and ventured his powers in the drama by the production of the tragedy of "Barbarossa," which, by the powerful aid of Garrick, was tolerably successful. Another less popular tragedy, entitled "Athelstan," was written by Dr Brown the succeeding year, but he put his name to neither of his dramas. In 1757 appeared his celebrated "Estimate of the Manners and Principles of the Times," written during a period of national apathy and despondency, and while an universal dissatisfaction with men and measures prevailed. Dr Brown took that opportunity to publish a warm and severe invective against the English character, which he represented as sunk in effeminacy, frivolity, and selfishness; and all liking to hear of failings in which none supposed themselves to participate, the "Estimate" became highly popular, and seven editions were sold off in a year. It however received many answers, the best of which, as Voltaire in his epigrammatic way observes, was, that the English immediately began to beat their enemies in every quarter of the globe. In fact, general national censures are seldom accurate, besides possessing the dangerous tendency of attributing palpable, ministerial, and political mismanagement to vague and general causes. In 1758 Dr Brown published a second volume of the "Estimate," and afterwards an "Explanatory Defence" of it, which comparatively excited but little attention; the vanity and self-consequence of the author, together with his unhappy propensity to quarrel with his friends and patrons, having by this time become conspicuous. He however obtained the vicarage of Newcastle-upon-Tyne, and the post of king's chaplain, which lounded his ecclesiastical preferment. In 1760 he published an "Additional Dialogue of the Dead between Pericles and Cosmo," intended to vindicate the character of the then great minister William Pitt, and in 1763 wrote

"The Cure of Saul," a sacred ode, which was set to music, and performed as an oratorio. During the same year his fertile pen produced another work, entitled "A Dissertation on the Rise, Union, and Power, the Progressions, Separations, and Corruptions of Poetry and Music," which is an ingenious and elegant, although somewhat fanciful performance. This work gave much scope to pamphlets, in attack and defence, and apparently led to the next work produced by Dr Brown, which was published in 1774, under the title of a "History of the Rise and Progress of Poetry." This piece was rapidly followed by a volume of sermons, three of which were expressly levelled against the educational maxims of Rousseau in his "Emile." In 1765 this indefatigable writer published his "Thoughts on Civil Liberty, Licentiousness, and Faction," in which the liberal tendency of his early opinions were obviously superceded by a strong bias towards authority. His proposition therein, of a prescribed code of education to be adopted and enforced by government, elicited much animadversion, and in particular called up an able opponent in Dr Priestley. His labours in the perfection of a national code of education having excited the attention of Dr Dumaesque, then in Russia, the latter mentioned Dr Brown to the empress Catharine, who in consequence authorised him to draw up a grand scheme of education for Russia, and subsequently invited him to visit St Petersburg, to assist in its execution. Ill health prevented him from undertaking the journey, after receiving a liberal sum for his expenses and emolument, which he very honourably returned. This negotiation considerably agitated his spirits, and its issue, with the reports and remarks it occasioned, hurt and disappointed him. His last publication was "A Letter to Dr Lowth," in answer to one in which that divine had called him one of the flatterers of Warburton. A dejection of spirits soon after seized him, apparently produced by wounded feelings and a too lofty sense of his own importance. The melancholy result of this disorder was suicide, by the means of a razor in September, 1766, in the fifty-first year of his age. Dr Brown left behind him an unfinished work on "The Principles of Christian Legislation," the publication of which he particularly directed by his will. Like most of his other productions, it exhibits great speculative talent, with too little reference to obstacles and practicability.—*Biog. Brit.*

BROWN (JOHN) an ingenious painter, was the son of a goldsmith and watchmaker of Edinburgh. He travelled into Italy at an early age, and during a ten years' residence in that country, obtained a correct knowledge of its language and music, in addition to a high degree of improvement in the fine arts. On his return to Scotland, he contracted a particular intimacy with lord Monboddo, to whom he wrote his "Letters on the Poetry and Music of the Italian Opera," published by that learned judge in 1789. The fine taste and simplicity of these letters, which were not intended

By the author for publication, have been much admired. As an artist, his latest productions were two beautiful drawings, one of the bust of Homer from the Townly antiques, and the other of Pope, both of which have been engraved. He died at Edinburgh in 1787.—*Chalmers' Biog. Dict.*

BROWN (JOHN, MD.) the founder of a modern sect in physic, which for a time considerably influenced medical opinions, was born at Burcle in Derwickshire, in 1735. His parents, who were honest working people, apprenticed him to a weaver, but on discovering that he possessed abilities superior to his occupation, an effort was made to change his destination, and he was sent to the grammar-school of the neighbouring town of Dunse. Here he much distinguished himself by his arduous and success in study, and having imbibed a considerable portion of religious enthusiasm, he looked forward to the ministerial office, among the strict sect of seceders. Upon some disgust, he however changed his mind in this respect, and after acting as tutor in a gentleman's family, came to Edinburgh, and in 1756 entered himself as a student of divinity in that university. His theological predilection gradually forsaking him, after officiating as the usher of the school in which he had been educated, he returned to Edinburgh in 1759, and commenced the study of physic. He was admitted by the professors as an indigent and ingenious scholar, to a gratuitous attendance on their lectures: and in particular, he obtained the patronage of Dr Cullen, who employed him as a tutor in his own family. During this course of study and improvement he married and set up a boarding-house, but through negligence and unskillfulness in the common affairs of life, he failed and became bankrupt. Soured by this misfortune, and irritated at being foiled in an attempt to obtain a medical chair in the university, he quarrelled with Dr Cullen, and became a bitter and sarcastic opponent of the doctrines both of him and all the rest of the professors. About this time, by a long course of meditation on the animal system, and the vigour of his own mind, directed by some reading, but seconded by little or no aid from practical observation, he elaborated a new theory of medicine, which was to supersede all that had hitherto prevailed, and to introduce certainty into an art avowedly imperfect and conjectural. The result was the publication of his "Elementa Medicinæ," which he further explained in a course of private lectures, that were attended by a great number of medical students: some induced by a fondness for novelty and ingenious speculation, and others by the idea held out of an abridgment of the ordinary course of study, which this system would render useless. Brown scrupled no means to push his doctrines: a new medical language was introduced; ideas totally at variance with former opinions were maintained: and the most virulent abuse of the regular professors of the university, was perseveringly uttered. The new theorist, vulgar in manners and intemperate in

conduct, was a very unfavourable object for imitation and example in all respects, yet he contrived to get a doctor's degree from St Andrews, and carried on the contest for some years; until at length ruined in reputation, and involved in his circumstances, he repaired in 1786 to London. Here he endeavoured in the first instance to excite public attention by publishing "Observations on the Old Systems of Physic," but without success, and when about to commence a course of lectures, he was suddenly taken off by apoplexy, most likely produced by a dram of laudanum, which he was in the habit of taking, when common spirits failed of the desired excitement. By this event, which occurred in October 1788, the numerous family of this unfortunate and imprudent man was left in absolute want. The opinions of Brown, indisputably a man of strong powers, although not admitted to the extent and in the form in which he proposed them, made a considerable change in medical language and doctrines, not only in Great Britain, but in the principal schools of Europe, his "Elementa" and "Observations" having been translated and published at more than one place on the Continent. His object was to simplify medicine, by arranging both diseases and remedial powers, into large and strongly marked classes. All diseases are divided into sthenic and asthenic, in which excitement is either too great or too little, and all curative means into an increase or diminution of excitement. The system has been useful in overturning false and trifling analogies, and in leading to a full trial of vigorous remedies; but in practice it is found impossible to act on ideas so general and abstract. The best edition of the English translation of the "Elementa" is that revised and corrected by Dr Beddoes, from whose biographical preface the foregoing particulars are principally compiled. *Life by Beddoes. Aikin's G. Biog. Dict.*

BROWN (JOHN) a landscape engraver of distinguished eminence. He was a fellow pupil with Woollet to a person named Tinney, and he worked for some time in conjunction with the former, whose style and manner he imitated, and whose excellence he very nearly approached. His prints, from the paintings of Salvator Rosa and other great artists, are executed with extraordinary brilliancy, spirit, and effect, admirably characteristic of the originals. Brown, who was an associate of the Royal Academy, died October 2, 1801, aged sixty.—*Critical Review.*

BROWN (LANCELOT) a celebrated horticulturist and planter of garden and pleasure-grounds, who obtained the name of Capability Brown, from his frequent use of that word in reference to the scites submitted to his arrangement. He was born at Kirkharle in Northumberland in 1715, and came early to London, where he soon obtained great reputation as an ornamental gardener, and was employed by lord Cobham at Stowe, as well as by many other persons of distinction. His merit consisted in a much nearer approach to nature than was displayed by his predecessors; and by

his management and taste, he realized a good fortune. In 1770 he served the office of high-sheriff for the county of Huntingdon, and died in 1773 in great respectability.—*Gen. Mag.*

BROWN (ROBERT) the founder of a religious sect, first called Brownists and afterwards Independents, was born of an ancient family in Rutlandshire, nearly allied to that of lord-treasurer Cecil, and studied at Cambridge, where he soon showed a disposition towards innovation, and in 1580 began openly to attack the government and liturgy of the church of England, which he reprobated as anti-Christian. He first ascended the pulpit at Norwich in 1581, where he succeeded in converting a number of Dutch, who had a congregation there, to his opinions, for which he was brought before the ecclesiastical commissioners, to whom he behaved so rudely that he was sent to prison, but through the interposition of lord Burleigh, soon obtained a release. He then went to Middleburgh in Zealand, with his followers, where they obtained leave to erect a church after their own model, and he wrote a book called "A Treatise of Reformation without tarrying for any Man." In 1585 he returned to England, and was cited to appear before the archbishop of Canterbury, who took great pains to reason him out of his opinions, but in vain; and on his still labouring to gain converts, he was excommunicated by the bishop of Peterborough. This censure, joined perhaps with the evaporation of his zeal, induced him to submit, and in 1590 he was presented to the living of Achurch in Northamptonshire, of which he received the emoluments, without discharging the duties. In other respects too his morals were licentious, so that he retained little of the austerity of the founder of a sect. After leading a turbulent life, this extraordinary character died in 1630 in Northampton goal, where he was sent for assaulting a constable and insulting a magistrate. The sect of Brownists was far from expiring with their founder, but spread so as to become a great object of alarm; and a bill was brought into Parliament which inflicted on them very severe pains and penalties. In process of time however the name of Brownists mingled into that of congregationalists or independents; under the latter of which titles they formed a powerful party in the commonwealth, and were very obnoxious to the Presbyterians, whose successors, it is remarkable, have, for the most part, gradually adopted Brownist principles, in relation to church government.—*Biog. Brit. Mosheim.*

BROWN (THOMAS) a coarsely humorous and facetious writer, better known by the familiar appellation of Tom Brown, was the son of a considerable Shropshire farmer, who gave him a good education, and entered him of Christchurch college, Oxford, where he distinguished himself by his talents and literary attainments. His libertinism and irregularity would not however allow him to remain at the university, and when obliged to quit it, instead of returning to his father he repaired to London, and after enduring excessive priva-

tions, obtained the situation of schoolmaster at Kingston-upon-Thames. His morals and conduct soon however deprived him of this employment, and returning to London he became an author, and partly indeed, a libeller, by profession. He published a great variety of pieces under the name of dialogues, letters, poems, &c. in all of which he discovered no small portion of erudition, and a considerable vein of humour, exceedingly debased by coarseness and scurrility. Both in conversation and his writings however he showed himself an able buffoon, and certainly merited the poor title of a "merry fellow," to obtain which, seemed the sole object of his ambition. He died in 1704, and in 1707 his works were collected and printed in 4 vols. 12mo.—*Cibber's Lives. Biog. Dram.*

BROWN (Dr THOMAS) an ingenious writer on metaphysics and morals. He was born in Scotland in 1778, and was educated at the high-school, and subsequently at the university of Edinburgh, where he obtained the professorship of moral philosophy. He distinguished himself at a very early age, by an acute review of the medical and physiological theories of Dr Darwin, in a work entitled "Observations on Darwin's Zoonomia," 8vo. He also published some poems which displayed considerable talent. But he chiefly deserves notice on account of his metaphysical speculations and his last work on the "Philosophy of the Human Mind," affords ample proof of his merit as a profound and original thinker. He died at Brompton near London, April 2d, 1820.—*Ann. Biog.*

BROWN (WILLIAM) an eminent gem-engraver, whose works in conjunction with Marchant and Burch, will hand down his name to posterity. He was much patronised in early life by the empress Catharine of Russia, for whose cabinet he had an unlimited order, and there the principal specimens of his art are preserved. He afterwards made Paris his abode, and was much employed by Louis XVI till the breaking out of the Revolution drove him to England, where he engraved a series of portraits of illustrious personages now in possession of his Majesty George IV. He died in John-street, Fitzroy-square, July 20, 1825, in his seventy-seventh year.—*Original.*

BROWNE (Sir ANTHONY) an eminent lawyer in the reigns of Mary and Elizabeth, the latter of whom, though she deposed him from the office of lord chief justice of the Common Pleas in favour of Sir James Dyer, yet suffered him to retain his seat upon the bench, as a puisne judge, in the same court until his death. He was a native of Essex, and having received a university education at Oxford, became afterwards a member of the Middle Temple. Being of the Roman Catholic religion he wrote two treatises, neither of which were published, the one "A Discourse on certain points touching the Inheritance of the Crown," the other "A Book against Robert Dudley earl of Leicester," in both which he strongly advocates the title of Mary Stuart to the English succession, and his arguments were afterwards

adopted and made public by Lesley bishop of Ross, in his work in favour of that Princess's claims. Sir A. Browne died in 1867.—*Biog. Brit.*

BROWNE (GEORGE), archbishop of Dublin in 1585, was the first Irish prelate who embraced the reformed religion, which he promoted with great zeal to the displeasure of queen Mary, who on her accession deprived him of his see, on pretence of his being married. He had been an Augustin friar, and was educated at Oxford, but took his degree abroad. He died in 1586. A sermon of his is contained in the first volume of the Phoenix.—*Biog. Brit.*

BROWNE (ISAAC HAWKINS), an elegant poet in the Latin and English languages, was born in 1706 at Burton-upon-Trent, of which parish his father was minister. He received his early education at Litchfield, whence he was removed to Westminster school, and in due time to Trinity college, Cambridge, where he wrote a poem on the death of George I. which appeared among the university productions, and gained him much credit. In 1767 he settled in Lincoln's Inn as a student of law, but although he pursued the profession for some time, being possessed of a moderate but adequate fortune, he finally relinquished it, and dedicated himself entirely to literary occupation. While at Lincoln's Inn he addressed a poem of some length to Highmore, the painter, on the subject of "Design and Beauty," in which he adopted the ideas of the Platonic philosophy. Among his smaller poems, one entitled "The Pipe of Tobacco," obtained great popularity. It consisted of an imitation of the styles of six poets, all then living—Gibber, Ambrise Phillips, Thomson, Young, Pope, and Swift, and is composed in a very happy strain of humour and skilful adaptation, of different modes of thought and language. In 1744 he married, and in 1748 was brought into Parliament for the borough of Wenlock in Shropshire, by the interest of the Forrester family. In that capacity he supported the Pelham administration, but never accepted of post or employment; nor, although possessed of happy education, would his timidity ever allow him to become a parliamentary speaker. In 1784 he published his principal work, a Latin poem entitled "De Animi Immortalitate," in two books, modelled upon the style of Lucretius, and the more perfect versification of Virgil. This work which abounds with poetical beauties, and is otherwise able and vigorous, became very popular, and underwent several translations, the last of which is that of Soame Jenyns. The author designed a third book, but left only a fragment of it. Mr. Browne, after passing a life of distinguished private virtue, and graced by a variety of accomplishments, died in 1766, in the fifty-fifth year of his age. His only son, Mr. Hawkins Browne, published an elegant edition of his poems in 1768, in large octavo. Many of them are also in Dodsley's Collection.—*Biog. Brit. Aldin's G. Biog. Diet.*

BROWNE (PATRICK MD.) an eminent naturalist. He was the fourth son of Edward Browne, a gentleman of respectable family, and was born at Woodstock, in the county of Mayo, about 1720. After receiving a good education, he went to a relation at Antigua, but the climate disagreeing with him he returned to Europe, and after a due course of study obtained his degree of MD. at Leyden. Here he formed an intimacy with Gronovius and Muschenbroech; and opened a correspondence with Linnæus and other learned men. Returning to London he practised there for ten years, and then proceeded to Jamaica, where he spent his time in forming a collection of natural curiosities. Being a good mathematician and astronomer, he also collected materials, and made observations for a map of Jamaica, which he published in 1755. In March 1755 he published his "Civil and Natural History of Jamaica." He also wrote a catalogue of plants growing in the sugar islands, which he sent before his death to Sir Joseph Banks, and published in Eashaw's Gentleman and London Magazine, catalogues of the birds and fish of Ireland. Dr. Browne died at Mayo August 1790.—*Europ. Mag. 1795.*

BROWNE (SIMON), a learned and ingenious dissenting divine, remarkable for an extraordinary species of mental derangement, was born at Sleaford in Leicestershire about 1680. He received a regular education at Bridgewater, and early commenced as a preacher, officiating for some time in that capacity at Portsmouth, and afterwards at the Old Jewry, one of the principal congregations of Dissenters in the metropolis. In London he extended his reputation both as a pastor and author, in which last character he published a volume of "Hymns" and another of sermons. In 1723 the loss of his wife and only son threw him into a state of dejection, which ended in a settled melancholy, attended with the firm persuasion "that God had in a gradual manner annihilated in him the thinking substance, and utterly divested him of consciousness; and although he retained the human shape, and the faculty of speaking in a manner that appeared to others rational, he had all the while no more notion of what he said than a parrot." He therefore no longer thought himself a moral agent or subject of reward or punishment; and desisting from his functions, could not be prevailed upon to join in any act of worship, public or private. This persuasion, which remained with him to the end of his life, at first tempted him to suicide; but he at length became calm, and only expressed uneasiness when his friends appeared to doubt the truth of his assertions. Notwithstanding this alienation, his intellectual faculties in other respects were in full vigour, which he proved by various publications, including the compilation of a dictionary, which it is but candid to remark here, he observed was "nothing that required a reasonable soul." Towards the close of his life he published several clearly written theological pieces, and among the rest, a defence of revelation against the work entitled "Chris-

tianity as old as the Creation." So strong however was his mental delusion all this time, that in a dedication to queen Caroline, (which his friends would not allow to appear, but which is printed in the eighty-eighth number of the *Adventurer*;) he describes his deprivation of a soul with great force of expression, and even pathos. This subject of one of the most remarkable recorded aberrations of the human mind, died in 1732, at the age of fifty-five.—*Biog. Brit.*

BROWNE (Sir THOMAS) a physician and very celebrated writer, was the son of a merchant of London, where he was born in 1605. He lost his father early, and was defrauded by one of his guardians; but his mother, who married Sir Thomas Dutton, had him educated at Winchester school, whence he was at a proper time removed to Oxford, where he took the degree of MA. and practised as a physician for some time in Oxfordshire. He subsequently accompanied his father-in-law to Ireland; and afterwards visiting the Continent, received the degree of MD. at Leyden. On his return to England he settled as a physician at Norwich, where he married, and acquired extensive practice and reputation. In 1642 he published his famous work entitled "Religio Medici," which excited the attention of the learned not only in England, but throughout Europe, and was translated into various languages. In 1646 his literary character was still further exalted by the appearance of his "Pseudodoxia Epidemica," or "Treatise on Vulgar Errors," a work of extraordinary learning, and accounted the most solid and useful of his literary labours. Owing probably to his extent of practice, it was not until 1658 that his "Hydriotaphia, or Treatise on Urn-burial" appeared, conjointly with his "Garden of Cyrus." These works ranked him very high as an antiquary; and he maintained a wide correspondence with the learned, both at home and abroad. In 1665 he was constituted an honorary member of the college of physicians, and in 1671, king Charles II visiting Norwich, conferred on him the honour of knighthood, with great marks of esteem. Of a most amiable private character, he was singularly happy in the affection of his large family and numerous friends; and after passing through a remarkably tranquil and prosperous literary and professional life, he died in October 1682, aged seventy-seven. The literary character of Sir Thomas Browne, as exhibited by his productions, was very remarkable. His "Religio Medici," is no way professional, but may be described as the creed of an individual, upon morals, religion, and metaphysics. It is a curious production, and its excessive orthodoxy and submission to authority, might in later days, at least in expression, be held ironical. He deems it "no vulgar part of faith to believe a thing, not only above, but contrary to reason, even against the arguments of our proper senses." Fancy and feeling in fact predominated in him over judgment; he believed in the existence of guardian angels, in the reality of witchcraft,
